Credit Hours: 3.00. The capstone course aims to provide students with an opportunity to integrate their accumulated knowledge, technical, and social skills to identify and solve a realistic or real-world artificial intelligence problem, with an emphasis on the application domain. The capstone course for the MSAI provides students with practical experience applying the collective set of skills developed through the MSAI program to complete a professional project in support of a private, public, or non-profit partner. Students, in teams, will select a target beneficiary, arrange a consultation, develop a problem statement, a project plan that will yield benefits, and a strategy

for measuring the outcome of the project compared to a baseline.

Learning Outcomes: 1. Identify the public, non-profit, or business objectives in a complex problem. 2. Evaluate and define an applied problem using AI that requires practical analysis and recommendations / and analytic output to a stakeholder. 3. Design a professional-level applied project that provides meaningful input to a targeted beneficiary. 4. Evaluate the proposed solution and interpret results concerning the "business" objectives. 5. Demonstrate an understanding of translational communication skills by communicating technical information to both technical and non-technical audiences. Credits: 3.00

GRAD 59000 - Special Topics

Credit Hours: 1.00 to 3.00. Hours and credits to be arranged. For the use of interdisciplinary programs and in other situations when appropriate departmental courses are not available or general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School.

Credits: 1.00 to 3.00

GRAD 59500 - Independent Study

Credit Hours: 1.00 to 6.00. This course provides a means of independent study of a special problem or research topic. Although not required, it is likely that a major result of the course will be a conference or journal publication. This course does not substitute for master's research credit on the plan of study. Permission of instructor required.

Learning Outcomes: 1. Outcomes will depend upon the agreed deliverables for the course. Credits: 1.00 to 6.00

GRAD 59800 - MS Non-Thesis Research

Credit Hours: 1.00 to 18.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Permission of instructor required.

Learning Outcomes: 1. Outcomes defined at the time of offering. Credits: 1.00 to 18.00

GRAD 60000 - Mentoring Intercultural Growth: Theory And Application

Credit Hours: 3.00. The ability to mentor intercultural competence, the capacity to interact effectively across differences of many kinds is a key expectation of today's leaders. This course supports your ability to mentor others' intercultural development by building your own and by engaging in experiential learning, reflective practices, and knowledge acquisition. Topics explored include mentorship, learning theories, facilitation, assessment, and frameworks for intercultural competence and diversity, equity, and inclusion.

Learning Outcomes: 1. Articulate new self-awareness (e.g., of your own cultural identity and habitual behaviors) as an intercultural mentor, noting areas for potential growth. 2. Demonstrate foundational knowledge of models, frameworks, and practical approaches to bridging differences from the intercultural/global and diversity/inclusion realms. 3. Design and implement learning interventions for the development of intercultural competence. 4. Utilize appropriate formative and summative methods of assessing learners' intercultural development. Credits: 3.00

GRAD 60200 - Peer To Peer Mentoring For ESE IGP Students

Credit Hours: 1.00. This Peer-to-Peer (P2P) mentor experience is geared to enhance the professional development of our ESE students and foster enhanced success and professional development for our first year students. The P2P mentors meet once a week with Independent of GRAD 59000 and also meet with GRAD 59000 . P2P mentors have to shape the syllabus for each semester including identifying readings; develop, lead, and facilitate classroom activities through both traditional and innovative and creative strategies; and provide verbal and written input on weekly student critiques. Permission of instructor required.

Learning Outcomes: 1. Learning to develop creative and innovative teaching strategies. 2. Develop skills for fostering student written and oral communication. 3. Develop skills for fostering an inclusive and safe environment. 4. Develops skills for selecting course materials, planning course activities, and grading student performance. Credits: 1.00

GRAD 61000 - Grant Training Program I

Credit Hours: 1.00 to 3.00. This variable topic course is designed to be used by any department at WL needing to offer a training program associated with research grants such as those required by certain NIH, NSF or other grant agencies or programs. Permission of instructor required.

Learning Outcomes: 1. Learning outcomes for the course will be variable based upon the specific instance of the course. Outcomes will

be required to meet the expectations laid out for 600-level courses. Credits: 1.00 to 3.00

GRAD 61100 - Grant Training Program II

Credit Hours: 1.00. This variable topic course is designed to be used by any department at WL needing to offer a training program associated with research grants such as those required by certain NIH, NSF or other grant agencies or programs. Instructor permission required. Prerequisite: GRAD 61000.

Learning Outcomes: 1. Learning outcomes for the course will be variable based upon the specific instance of the course. Outcomes will be required to meet the expectations laid out for 600-level courses. Credits: 1.00

GRAD 61200 - Responsible Conduct Of Research

Credit Hours: 1.00. Overview of values, professional standards, and regulations that define responsible conduct in research. Students learn the values and standards of responsible research through readings and lecture/discussion and practice application of these values and standards to research situations through class discussion of case studies from life sciences research. Students must be registered for M.S. or Ph.D. thesis research in their home department.

Credits: 1.00

GRAD 68900 - Special Seminars

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. For use in interdisciplinary seminars and in other cases where general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School.

Credits: 0.00 to 18.00

GRAD 69000 - Special Topics

Credit Hours: 1.00 to 8.00. This variable topic course focuses on advanced study of technical and professional research topics, primarily for doctoral students.

Learning Outcomes: 1. Learning outcomes for the course will be variable based upon the specific instance of the course. 2. Outcomes will be require to meet the expectations laid our for 600-level courses. Credits: 1.00 to 8.00

GRAD 69300 - Interdisciplinary Internship/Practicum

Credit Hours: 0.00 to 18.00. For the use of interdisciplinary programs and in other situations when appropriate departmental courses are not available or general Graduate School identification is desirable. To be used only with the consent of the dean of the Graduate School.

Credits: 0.00 to 18.00

GRAD 69500 - Doctoral Independent Study

Credit Hours: 1.00 to 6.00. This course provides a means of independent study of a special problem under the guidance of a graduate faculty member who holds a terminal degree. It is assumed that projects in this course are research projects independent of one's doctoral research. Although not required, it is likely that a major result of the course will be a conference or journal publication. This course does not substitute for dissertation research credit on the plan of study. Permission of instructor required.

Learning Outcomes: 1. Learning outcomes will be dependent on the content of the course. Credits: 1.00 to 6.00

GRAD 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Learning Outcomes: 1. Outcomes defined at the time of offering. Credits: 1.00 to 18.00

GRAD 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Greek

GREK 10100 - Ancient Greek Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to the grammar of Attic Greek of the Classical period, and first forays into the reading of connected prose. Emphasis on accidence, syntax, and vocabulary building.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explain foundational Ancient Greek grammar and demonstrate familiarity with core vocabulary. 2. Bring together their knowledge of Ancient Greek grammar and vocabulary, creating clear English translations by analyzing basic texts adapted from Ancient Greek literature. 3. Apply this knowledge of grammar and vocabulary to writing simple sentences in Ancient Greek, and translating from English to Ancient Greek.

Credits: 3.00

GREK 10200 - Ancient Greek Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of the study of Attic Greek grammar and reading of connected prose of the Classical period.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Learn basics of reading and translating ancient Greek, completing their

introduction to core vocabulary, grammar, and syntax. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending their vocabulary through etymological connections. Credits: 3.00

GREK 10500 - Accelerated Introductory Ancient Greek

Credit Hours: 4.00. This course is an accelerated beginning-level course designed to develop language proficiency in Ancient Greek. The course will help students progress toward competence in reading and writing, as well as toward knowledge of Ancient Greek culture. The course focuses on developing deep understanding of Greek syntax and morphology and building strategies for fluent and accurate reading of ancient texts. Primary language of instruction is English.

Learning Outcomes: 1. Differentiate the syntactic structures used in Ancient Greek sentences and longer texts based on the study of model sentences. 2. Compose sentences in Ancient Greek by focusing on a set of grammatical rules and standards in the language. 3. Recite Ancient Greek aloud with accuracy and fluency and demonstrate their ability in in-class text readings and recordings. 4. Infer the meaning of unknown vocabulary in context by reading stories. 5. Identify and analyze grammatical forms in the Greek contexts in which they are used. 6. Generate smooth-flowing and elegant English translations of the Greek, attending to inherent differences in style and structure. Credits: 4.00

GREK 20100 - Ancient Greek Level III (UCC: HUM)

Credit Hours: 3.00. Intermediate reading course in New Testament Greek, designed to strengthen students' grasp of grammar and syntax, broaden vocabulary, and develop skills in reading and translation.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Learn how to apply foundational knowledge of ancient Greek grammar and syntax to readings in the New Testament. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending vocabulary through etymological connections. Credits: 3.00

GREK 20200 - Ancient Greek Level IV (UCC: HUM)

Credit Hours: 3.00. Upper intermediate reading course in ancient Greek, designed to consolidate students' knowledge of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Reinforce and extend skills as readers and translators by studying archaic, classical or post-classical Greek literature. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending vocabulary through etymological connections. Credits: 3.00

GREK 34300 - Greek Oratory

Credit Hours: 3.00. A study of ancient Greek (Attic) orators from textual, historical, and social perspectives.

Credits: 3.00

GREK 34400 - Greek Epic

Credit Hours: 3.00. Readings and discussion of the Greek epic, including selected passages from Homer and Hesiod.

Credits: 3.00

GREK 35300 - Greek Tragedy

Credit Hours: 3.00. Reading and discussion of selected Greek tragedies of the 5th century BCE.

Credits: 3.00

GREK 35400 - Greek Comedy

Credit Hours: 3.00. Readings and discussion of selected Greek comedies of the 4th and 5th centuries BCE.

Credits: 3.00

GREK 44600 - Greek Historians

Credit Hours: 3.00. A study of the writings of the classical historians in the original Greek.

Credits: 3.00

GREK 49000 - Directed Reading In Classical Greek

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Permission of instructor required.

Credits: 1.00 to 3.00

GREK 59000 - Directed Reading In Classical Greek

Credit Hours: 1.00 to 4.00. Directed Reading In Classical

Greek. Permission of instructor required.

Credits: 1.00 to 4.00

Health and Kinesiology

HK 10000 - Foundations Of Kinesiology

Credit Hours: 3.00. This course will provide an introduction to the physical and behavioral sciences underlying kinesiology, the study of human movement. The course will cover foundational concepts in exercise physiology, biomechanics, motor behavior, sport and exercise psychology, and sociology and history of physical activity. The course will take an interdisciplinary perspective, exploring both key concepts in each of these sub-areas of kinesiology, and how they are integrated to understand problems in human movement, exercise, physical activity, sport, and healthy lifestyles.

Learning Outcomes: 1. Explain basic concepts in exercise physiology, biomechanics, motor behavior, sport and exercise psychology, and sociology and history of physical activity. 2. Apply and integrate concepts from the sub-disciplines of kinesiology to better understand human behavior. Credits: 3.00

HK 13500 - Introduction To Health And Kinesiology

Credit Hours: 1.00. Overviews the disciplines of health and kinesiology. Students explore skills and academic interests in theses areas. Describes career opportunities and options for graduate study. Provides strategies for professional and portfolio development. Students complete five hours of community service per semester. Permission of instructor required.

Credits: 1.00

HK 21000 - History And Philosophy Of Physical Education

Credit Hours: 2.00. Introduction to the history and philosophy of physical education to prospective teachers. Emphasis is placed on the impact of societal history on physical education and the role of philosophic thinking in curricular activities. For majors and minors only.

Credits: 2.00

HK 21300 - Clinical Field Experience In Health And Fitness

Credit Hours: 0.00 to 3.00. This course is a coordinated clinical/professional experience designed to expose students to various positions within the wellness community and how clinical interactions are embedded within fitness centers. In addition to weekly in-person class meetings, students will observe and practice professional and foundational skills at different clinical sites. Professional communication, interdisciplinary interactions, and self-reflection are key skills developed in this practicum.

Learning Outcomes: 1. Describe effective and critically assess client-provider interactions, including professionalism in physical presentation and verbal/written communication. 2. Demonstrate the following personal/professional competencies needed in future clinical roles: communication skills, teamwork, customer service, leadership, independence, and initiative. 3. Professionally carry out all expected duties/responsibilities and identify individual strengths and areas for improved growth. 4. Develop a personalized health, fitness, and wellness philosophy, based on interactions with individual clients. Credits: 0.00 to 3.00

HK 22200 - Foundations For The Health And Fitness Professional

Credit Hours: 3.00. Designed to introduce the emerging Health and Fitness professional to current trends in health and physical activity and provide effective hands-on methodology for implementation of physical activity and exercise in different settings. Students will be able to identify the role of a clinician, coach, trainer, etc. Students will obtain skills in client consultation, program design and strategies for implementing programs to the general population. Students will also be introduced to the skills and knowledge required for working with clinical populations. This course is designed to help students prepare for future clinical practice and certification.

Learning Outcomes: 1. Review current national health and physical activity status, guidelines, and implications. 2. Learn basic health screenings and fitness assessments. 3. Discover effective interaction and consultation skills with patients/clients in different settings. 4. Establish a knowledge base for basic cardiorespiratory fitness and muscular conditioning exercise prescription. 5. Assess, instruct, evaluate, and apply various exercise techniques. 6. Develop comprehensive exercise programs for general population and begin developing a working framework to modify exercise programs for clinical population. 7. Establish and practice basic instruction /coaching skills to implement as a clinician. 8.

Obtain knowledge and skills related to methodologies and practices for alter professional application. Credits: 3.00

HK 25300 - Principles Of Motor Development

Credit Hours: 3.00. This course provides an introduction to motor development from a life-span perspective. Students will learn how infants develop from mainly reflexive beings into children and adults that are capable of interacting with the world in a goal-directed manner. This course specifically examines how changes in physical growth, aging, and maturation of the central nervous system influence motor performance. Finally, the decline of motor skills associated with advanced age is discussed.

Learning Outcomes: 1. Students will be able to describe how motor skills develop in children and decline in older adults. 2. Students will be able to apply the principles of motor development to clinical, education, and sport sciences settings. Credits: 3.00

HK 25800 - Foundations Of Motor Skill Learning

Credit Hours: 3.00. Concepts and principles of motor skill learning, with emphasis on the acquisition and retention of gross movement and sport skills.

Credits: 3.00

HK 26300 - Biomechanical Foundations Of Motor Skills

Credit Hours: 3.00. Fundamental anatomical and mechanical concepts and procedures for analyzing motor skills, with particular reference to sport, dance, and aquatic activities.

Learning Outcomes: 1. Describe motion with mechanical and anatomical terminology. 2. Quantify linear and angular characteristics of motion. 3. Describe and quantify the cause and effect relationship between force and motion. 4. Collect, analyze and interpret biomechanical measures of human movement. Credits: 3.00

HK 26400 - Principles Of Motor Learning, Development, And Biomechanics

Credit Hours: 3.00. This course surveys the fundamental processes and variables related to motor development, motor learning, and biomechanics. Students will be exposed to concepts relevant to teaching motor skills and critical issues to increase knowledge of human movement.

Learning Outcomes: 1. Describe motion with mechanical and anatomical terminology. 2. Describe the linear and angular characteristics of motion. 3. Describe the relationship between force and motion. 4. Define terms of motor control. 5. Define the optimal conditions for learning new skills. 6. Describe how factors related to the individual, task, and environment affect the learning of skills movement. 7. Define terms of development, growth, and maturation. 8. Describe reflexes and motor milestones. 9. Describe the development of body control, reaching and locomotion. Credits: 3.00

HK 28500 - Fieldwork In Athletic Training - Collegiate

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an intercollegiate setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include history of athletic training, governance, and professional foundation and ethics.

Learning Outcomes: 1. Define athletic training and the athletic training profession. 2. Know the location of athletic facilities, athletic training supplies and equipment. 3. Demonstrate proper opening and closing procedures of the Purdue athletic training rooms. 4. Properly perform cleaning and maintenance of facility athletic training room equipment. 5. Learn proper inventory and equipment check-out procedures. 6. Articulate the history of the profession and important milestones and prominent individuals who shaped the profession. 7. Describe the governance of the profession and the advantages and disadvantages associated with the current governance structure. Credits: 1.00

HK 28600 - Fieldwork In Athletic Training - Secondary School

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in secondary school setting. Under supervision of the certified athletic trainer, students will observe facility operation and duties of the athletic trainer. Topics of instruction include basics of taping and wrapping, selection and fitting of protective equipment, and principles of risk management.

Learning Outcomes: 1. Discuss the differences in wound care techniques. 2. Select the appropriate technique to dress and care for a

wound. 3. Select and apply basic taping and wrapping procedures commonly used in athletic training on a simulated patient. 4. Discuss the legal principles of equipment liability. 5. Select and apply protective equipment commonly used by patients in contact-collision sports. Credits: 1.00

HK 28700 - Fieldwork In Athletic Training - Clinic/Industry

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an emerging athletic training setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include basics of wound care, setup and operation of therapeutic modalities, and basic rehabilitation principles.

Learning Outcomes: 1. Define risk management and discuss how it applies to athletic training settings. 2. Inventory an athletic training facility and appraise the risk management strategies used. 3. State the differences between different methods of stretching. 4. Demonstrate proper flexibility and stretching techniques. 5. Match the appropriate stretching technique to a patient condition or injury. 6. Discuss correct application techniques for basic cryotherapy and thermotherapy modalities. 7. Administer a simulated treatment for a patient using the appropriate modality. Credits: 1.00

HK 30200 - Applied Clinical Anatomy

Credit Hours: 3.00. An introduction to the regional anatomical study of the human body for undergraduate allied health students. Lectures will be supplemented by observation and demonstration of prosected cadaver material, radiographs, osteology, and surface anatomy.

Credits: 3.00

HK 30500 - Injury Assessment I

Credit Hours: 4.00. A guided lecture and laboratory experience designed to teach the student injury assessment techniques normally required of an athletic trainer. Topics include splinting and transportation, equipment fitting and fabrication, lower extremity injury evaluation, taping and bracing.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the lower extremities and spine. 2. Identify different methods of prevention for many injuries commonly seen in the lower extremities and spine. 3. Identify common risk factors and causes of injury commonly seen in athletics and the physically active. 4. Explain gender differences in the musculoskeletal system and the impact on injury management for the lower extremities. 5. Identify anatomical growth and development characteristics of males and females in the following stages: pre-adolescent and adolescent. 6. Demonstrate general treatment and rehabilitation protocols to use with injuries in the lower extremities. 7. Demonstrate general treatment and rehabilitation protocols to use with injuries in the spine. 8. Identify the role and function of commonly used prescription and non-prescription pharmacological agents in the treatment of injuries/illness commonly seen in the upper extremities and spine. 9. Demonstrate through low fidelity simulation sound evaluation techniques of lower extremity and spinal conditions. 10. Explain the different psychomotor test characteristics - validity, reliability, sensitivity, specificity, likelihood ratios, odds ratios, etc., as they relate to selection of special tests. 11. Synthesize test psychometric data to select appropriate tests and measures during assessment. 12. Formulate a clinical question and perform a literature search to answer the question. Credits: 4.00

HK 30800 - Athletic Health Care

Credit Hours: 3.00. Provides students with foundational knowledge and skills for the prevention, recognition, and management of common athletic injuries and illnesses, as well as emergency conditions encountered by sports medicine professionals.

Learning Outcomes: 1. Identify basic components of an athletic injury/illness prevention program. 2. Acquire knowledge related to athletic protective equipment and

prophylactic braces. 3. Develop an understanding of the physiological effects of injury in order to provide proper treatment and care. 4. Develop practical knowledge of the mechanisms, signs, and associative anatomy for common athletic injuries associated with the upper extremity, lower extremity, head, spine, and thorax. 5. Develop practical knowledge related to the recognition and treatment of environmental conditions. This will include an understanding of appropriate hydration requirements for physical activity. 6. Develop an understanding of the acute care and emergency management of athletic injuries. Credits: 3.00

HK 31300 - Clinical Field Experience In Healthcare

Credit Hours: 3.00. This course will provide students with observation in various clinical settings. Students will establish a mentor with at least 1 site. Students may choose to pursue observations in various patient care environments, such as, physical therapy, occupational therapy, physician clinics, cardiac rehab, etc. Permission of department required.

Learning Outcomes: 1. Observe patient/practitioner interactions and patient centered care. 2. Demonstrate basic skills related to medical practices in the field (i.e., therapy techniques, treatment modalities, medical procedures, patient assessment/screening, etc.). 3. Describe how skills and content learned in previous courses can be applied to a clinical setting. 4. Explain current best practices and scope of care necessary in their clinical setting. 5. Model the behaviors and skills appropriate to the profession and clinical setting. Credits: 3.00

HK 31500 - Group Fitness Leadership

Credit Hours: 2.00. This course is designed to provide students with an overview of the educational concepts, program design, and instruction/leadership skills needed to design and teach instructor-led exercise programs for small (2-3 individuals) and large (10+) groups with and without music. The course will include basic analysis and application of safe and effective exercise procedures for all fitness levels. Students will be expected to lead group classes throughout the semester as assigned by the course instructor. Preparedness and ability to execute will be assessed. This course is designed to help students prepare of future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist.

Learning Outcomes: 1. Develop an appropriate sequence of movement in an instructor-led exercise program: to include methods of linear transitions, combination techniques, and building sequence development. 2. Modify instructor-led exercise programs for special health and physical concerns. 3. Develop, design and implement group based muscle conditioning programs for healthy adults. 4. Develop the ability to lead/coach components of a group physical activity sessions. Credits: 2.00

HK 31600 - Foundations Of Strength And Conditioning

Credit Hours: 2.00. This course will provide students with an in-depth analysis of strength and conditioning principles, and application strategies to cardiorespiratory conditioning, strength training, and flexible exercise. Students will assess the foundational application of anatomy, physiology, and biomechanics to various forms of exercise training based on standards of the American College of Sports Medicine, National Strength and Conditioning Association, and the National Academy of Sports Medicine. A major focus of this class will also prepare students to instruct and coach on an individual level to ensure proper mechanics, engagement, and execution of exercise movement. This course is designed to help students prepare for future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist.

Learning Outcomes: 1. Identify and define skeletal and muscle anatomy, physiology, and biomechanics as related to cardiorespiratory activity, resistance training, and flexibility. 2. Identify and define the Human Movement System and causes of dysfunction/impairment that can effect exercise outcomes. 3. Perform, assess, and instruct various resistance training exercises. 4. Develop a program for cardiorespiratory health, strength and flexibility. Credits: 2.00

HK 31800 - Strength And Conditioning And Exercise Instruction Across The Lifespan

Credit Hours: 3.00. This course is designed to provide students with an overview of educational concepts, program design and instructional/leadership skills for designing and instructing exercise programs. Students will obtain hands-on experience conducting exercise programs for strength and conditioning,

cardiorespiratory fitness, and flexibility throughout the semester. Students will learn to work with a variety of populations throughout the semester. Students will be evaluated on their effectiveness in designing and instruction exercise sessions for both individual and group-led scenarios. This course is designed to help students prepare for future clinical practice and certifications, such as the ACSM Certified Clinical Exercise Physiologist. Must have CPR/AED, First Aid certifications.

Learning Outcomes: 1. Describe musculoskeletal anatomy, physiology and biomechanics related to exercise and the effects of resistance training, cardiorespiratory training and flexibility. 2. Perform fitness assessments and client intake interviews to acquire clients' baseline fitness, health history, exercise background and goals, to allow for proper exercise program development. 3. Develop and administer group exercise and/or group personal training classes incorporating muscle conditioning, aerobic training, HIIT, circuit training, etc. 4. Develop and implement resistance training programs for client/s based upon initial assessment data and intake information, and adjust the program throughout the semester. 5. Describe modifications and appropriate precautions required when developing and instructing exercise programs for populations with special health/physical concerns. Credits: 3.00

HK 32700 - Introduction To Sports Management

Credit Hours: 3.00. This course introduces the foundations and principles of sport management, focusing on the leadership, administration, business practices, and operation of sport organizations at all levels. This course offers students the opportunity to gain information and an understanding of the various practices and procedures associated with sport management and the sport industry. Students are presented with an overview of the business of sport, including a variety of different career opportunities in a multitude of sport settings as they explore the value of professional management within sport organizations. Finally, this course uses a semester-long major project that allows students to use the skills and knowledge gained from lectures, readings, and discussions to develop a comprehensive business plan integrating the various modules and topics from the semester into a cohesive administrative plan.

Learning Outcomes: 1. Describe the career possibilities in sport management, as well as the skills and strategies necessary to be successful in the field. 2. Explain the development of the sport business industry and the defining characteristics of the modern sport business industry. 3. Identify concepts of management theory and how these concepts help managers and sport organizations succeed. 4. Explain the central role that leadership plays in sport organizations and how leadership theories apply to management. 5. Identify the characteristics, similarities, and differences among various sport management sites (community, interscholastic), intercollegiate, professional, and international sport). 6. Recognize the unique characteristics of sport marketing and how a marketing plan is linked to an organization's mission, values, and strategy. 7. Recognize the necessary steps in managing a facility and a corresponding risk management plan. 8. Demonstrate the components and workings of sport media and its interaction with the sport industry, including the increasing influence of social media and the internet within the sport industry. 9. Describe the basic principles of economics as they pertain to the sport industry and be able to describe the business structure of sport organizations. 10. Discuss the social and cultural significance of sport in our society. Credits: 3.00

HK 32800 - Business Of Professional Sports

Credit Hours: 3.00. This course examines the rise and growth of professional sport into a multibillion-dollar industry worldwide that is both an economic giant as well as a pop cultural phenomenon. The course takes a look at the historical development of professional sport while also examining current trends that continue to shape the industry. Students learn the basics of how pro leagues and teams operate by participating in an interactive and engaging fantasy sports simulation that sees them create their own league and manage and operate their own team. In the simulation, students deal with issues real-life pro sports managers have to address every day, including roster construction and management, pricing their product, and marketing and branding their franchise and league overall.

Learning Outcomes: 1. Explain fundamental economic concepts, particularly as these concepts relate to the sports industry. 2. Analyze differences in organizational structure across the major American sports leagues, such as the generation and distribution of revenues, restrictions on player salaries, and the promotion of competitive balance. 3. Discuss the interplay between sports leagues and antitrust policy and the seminal court cases that have led to full and/or partial exemptions to federal antitrust laws for certain leagues. 4. Compare and contrast the various funding mechanisms state and local municipalities have used to attract and/or keep a sports franchise as well as critically analyze the economic benefits of a sports franchise to a city. 5. Explain the labor market in professional sports, particularly the determination of player salaries and key disputes between player unions and league management. Credits: 3.00

HK 34500 - The Coaching Of Interscholastic Sports

Credit Hours: 2.00. Discussion and practical experience in organizing, training, and coaching interscholastic athletes in a selected sport. A partial list of sports that may be selected: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling.

Credits: 2.00

HK 34600 - Field Experience In Coaching

Credit Hours: 2.00. Students will be assigned to assist in coaching a team in a public-, parochial-, or selected university-sponsored program. A partial list of sports available: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling. Permission of instructor required.

Credits: 2.00

HK 36800 - Exercise Physiology I

Credit Hours: 3.00. Physiological concepts and principles underlying human responses and adaptations to exercise stress. Included are selected methods and techniques of assessing physiological function in the laboratory setting.

Credits: 3.00

HK 37200 - Sport And Exercise Psychology I

Credit Hours: 3.00. This course focuses on social and psychological factors related to participation in sport, exercise, and physical activity. The class explores both (a) how social and psychological factors influence participation and performance in physical activity, and (b) how sport, exercise, and physical activity participation affects psychological well-being. Topics include personality, socialization, learning and feedback, stress and coping, self-perceptions, motivation, and psychological methods for enhancing personal development and physical performance.

Learning Outcomes: 1. Develop an understanding of social and psychological processes that operate in physical activity. 2. Acquire the knowledge to successfully apply social psychological principles within a variety of physical activity settings. Credits: 3.00

HK 37600 - History Of Sport

Credit Hours: 3.00. A prior course in American or world history is recommended but not required. A survey of historical events that have shaped classical and modern sport, with a focus on recent history of American sport.

Learning Outcomes: 1. Examine the historical themes, factors, and particular events influencing the nature of sport within the larger context of United States history and culture. 2. Describe how sport shaped aspects of American culture and identify the critical place of sport in the emergence of American culture. 3. Investigate the ways gender, race, ethnicity, and class have influenced sporting experiences in the past and present, and determine the cultural and human diversity within sports in the United States. Credits: 3.00

HK 40900 - Seminar In Sports Medicine

Credit Hours: 3.00. A review of selected medical aspects of sports. Liberal use of guest medical professionals. A broad look at the field of sports medicine.

Learning Outcomes: 1. Explain the various professional disciplines within the sports medicine profession and those healthcare providers that interact with athletic training. 2. Explore current trends at the state, district and national level in athletic training involving clinical practice or education. 3. Develop athletic training students' understanding of contemporary medical information required in different sports medicine practice settings.

Credits: 3.00

HK 41500 - Exercise As Medicine

Credit Hours: 3.00. Provide students with the concepts, techniques, and skills to investigate the scientific evidence on physical activity and health; and to design and implement interventions to make physical activity a part of daily campus culture. Permission of instructor required.

Learning Outcomes: 1. Recognize and describe the consequences of regular physical activity (PA) and inactivity on individual and community health. 2. Recognize and describe the causes of and solutions for health disparities in communities. 3. Develop activities to promote physical activity on campus. 4. Develop activities to promote physical activity through social media and online content. 5. Evaluate the success of activities promoting physical activity. Credits: 3.00

HK 42100 - Health Screening And Fitness Evaluation And Design

Credit Hours: 3.00. This course provides the learner with the knowledge and skills to successfully administer and interpret the results of health evaluations and fitness assessments for the purposes of analysis and the development of individualized exercise programs.

Learning Outcomes: 1. Apply specific physiological principles to individual physical health prescription: Cardiovascular Health, Body Composition, Posture, Muscular Strength, Muscular Endurance, Flexibility, ROM. 2. Explain verbally identified fitness assessment tests as would to a client indicating what, why, and how they are each performed. 3. Administer pre-exercise screening questionnaire/informed consent and identify needs for a medical clearance. 4. Administer accurately identified fitness assessment tests to a client and classify results. Credits: 3.00

HK 42200 - Basic Concepts In Exercise Program Design

Credit Hours: 3.00. Introduces basic program design concepts and rationale to design fitness programs for healthy adults emphasizing cardiovascular training, strength training, flexibility training, and balance.

Learning Outcomes: 1. Design and implement a safe and effective warm up and cool down protocol specific to the individual. 2. Create and implement well-planned, individualized, and progressive resistance training programs. 3. Develop progressive and individualized cardiovascular training programs. 4. Describe the role of exercise in healthy weight management. 5. Apply the scientific concepts to design exercise programs to improve athletic performance and optimize fitness in non-athlete healthy persons. Credits: 3.00

HK 42700 - Sports Marketing

Credit Hours: 3.00. This course introduces and examines marketing within various levels of the sport industry, with an emphasis on consumer behavior, branding, and sponsorship. This course first introduces students to the marketing of sport services, sport teams, and sport programs by examining basic marketing strategies as they relate specifically to sport settings. Second, the course examines key consumer behaviors regarding sport fans and sport fan communities. Finally, the course enables students to formulate original and creative sport marketing mixes to provide students with the hands-on practice necessary to become an effective sport marketer.

Learning Outcomes: 1. Explain the unique characteristics of sport marketing. 2. Recognize what motivates individuals to engage in sport-related consumer behavior. 3. Identify practices for developing and socializing sport fans and sport fan communities. 4. Interpret data sources for segmenting, targeting, and positioning strategies within sport. 5. Synthesize existing marketing ideas in original ways. 6. Formulate and analyze sponsorship proposals. 7. Design and implement sport marketing strategies characterized by high degrees of innovation, divergent thinking, and risk-taking. Credits: 3.00

HK 42800 - Sports Facility And Event Management

Credit Hours: 3.00. This course is meant to introduce students to the foundations and principles of effective facility and event management. Sport facilities and the types of events they can host are essential components to understanding the field of sport management. In this course, we will explore the concepts of facility design, planning, systems, risk management, marketing, and ownership. In terms of event management, we will explore the concepts of event creation, impact on hosts, marketing/sponsorship, and the potential positive and negative

outcomes of sport events.

Learning Outcomes: 1. Define and apply key facility and event management terminology and concepts to the sport and recreation industry. 2. Engage critically with facility and event management sites and evaluate the potential positive and negative outcomes associated with sport facility and/or sport event development. 3. Display the ability to organize, coordinate, and execute operational plans for various sizes of facilities and events. Credits: 3.00

HK 44300 - Neuroscience Of Movement

Credit Hours: 3.00. In this course students will learn about the neuroscience behind the control, sensation and perception of human movement. The course is divided into five sections. In the first section, students learn about the sensory systems with human movement. In the second section, students learn about the basic CNS building blocks underlying movement control and perception. In the third section, the control of balance and locomotion is the central topic. In the fourth section, students learn about the higher brain functions involved in cognition. The final section of the class examines issues regarding learning, development, and brain plasticity.

Learning Outcomes: 1. Able to describe basic principles of the neuroscience behind the control of human movement. 2. Able to apply principles of the neuroscience of movement to clinical, educational, research, and sports science setting using specialized laboratory equipment. Credits: 3.00

HK 44400 - Balance Rehab In Older Adults

Credit Hours: 3.00. In this course, students learn about the decline in motor function that occurs in older adults and techniques to improve motor function in an older population. Topics include decreased balance control, loss of muscle strength, and declines in adaptive locomotion as a function of age. Students enrolled in this class also participate in an off-campus lab. In the lab, students are paired with an older adult and use the knowledge gained in lecture to improve the motor function of the older adult. This class provides students with a unique opportunity to gain hands-on experience working with an older population. Permission of instructor required.

Learning Outcomes: 1. Describe the declines in motor function that occur in older adults. 2. Critically assess intervention research with aims to improve motor function in older adults. 3. Describe and evaluate types of interventions and their effectiveness. 4. Use quantitative equipment to assess balance and mobility of younger and older adults. Credits: 3.00

HK 45300 - Motor Coordination And Development

Credit Hours: 3.00. An advanced undergraduate motor development course that examines the processes and coordination principles related to motor behavior development across the life span. Material and concepts are concentrated around specific skills areas and SPAN a broad range of ages and theoretical approaches.

Learning Outcomes: 1. Describe how motor abilities develop in infancy and childhood both in typically developing and clinical populations. 2. Apply basic research designs in motor developments to clinical populations. Credits: 3.00

HK 45800 - Principles Of Motor Control And Learning

Credit Hours: 3.00. Discussion of the principles of motor learning and control. Relevant research literature will be surveyed with an historical perspective. Students will be expected to design and/or conduct a mini research project.

Credits: 3.00

HK 46300 - Analysis Of Human Motion

Credit Hours: 3.00. An analytic approach to the mechanical analysis of human motion, including modeling procedures and computer-generated display techniques.

Credits: 3.00

HK 46500 - Research Methods

Credit Hours: 3.00. This course will be conducted in a lecture/lab format. The lectures will introduce the basic knowledge necessary to understanding the entire research process as it is found in health and kinesiology. The laboratories will be designed to give students practice in discovering research questions, preparing research proposals, evaluating existing research, and applying research to practical problems.

Learning Outcomes: 1. Describe the nature of research and the scientific method. 2. Describe the different types of research conducted within health and kinesiology, and the value of each type of research. 3. Provide an overview of the ethical, conceptual, and logistical considerations involved in designing, conducting, and critically evaluating research in basic and applied settings. 4. Identify a potential topic/issue to examine and conduct a review of the existing

research literature and summarize and critically evaluate a research article. 5. Describe the steps involved in developing a research proposal, collecting and analyzing data, and reporting the results of a research project.

Credits: 3.00

HK 46800 - Advanced Exercise Physiology II

Credit Hours: 3.00. An advanced undergraduate course in the area of exercise and human performance. Further examination of the physiological mechanisms and theories involved in the exercise response.

Credits: 3.00

HK 46900 - Exercise Testing And Prescription In Special Populations

Credit Hours: 3.00. Examines responses to exercise testing and prescription in healthy adults compared to exercise responses and special considerations for individuals with chronic diseases and conditions and issues of concern to pregnant women, children, and older adults, among others.

Learning Outcomes: 1. Identify the difference in testing and prescription for individuals with chronic conditions. 2. Evaluate critically the risks and benefits associated with exercise participation. 3. Apply appropriate emergency procedures in various exercise settings. 4. Deliver unique exercise programs to special populations. Credits: 3.00

HK 47200 - Sport And Exercise Psychology II

Credit Hours: 3.00. Course presents topics not covered in PE 37200 and emphasizes application of psychological principles in sport and exercise settings. Topics include group dynamics, psychological benefits of exercise; exercise addiction; body image; leadership and communication; and performance enhancement principles and techniques.

Learning Outcomes: 1. Describe the basic principles of the psychological processes in sport and exercise contexts. 2. Synthesize and apply theoretical and empirical knowledge in sport and exercise psychology through active learning processes and interaction with fellow students. 3. Apply critical thinking, group interaction, public speaking, research, and writing skills. Credits: 3.00

HK 47600 - Olympic Games: Ancient And Modern

Credit Hours: 3.00. A historical study of the nature and significance of the ancient and modern Olympic Games. Topics include genesis of the games; evolution of events; the amateur ideal; social, economic, and commercial influences; politics; modern controversies; and various reform movements.

Credits: 3.00

HK 47700 - Sport And Exercise Psychophysiology

Credit Hours: 3.00. The purpose of this course is to give students an understanding of the psychological, behavioral, and social processes as related to and revealed through physiological principles and events underlying human movements in the context of sport and exercise. This course will utilize traditional lectures combined with student-led group discussions to examine topics including, but not limited to, the following: (1) introduction, principles, and measurements of psychophysiology, (2) psychophysiological characteristics of optimal mental state and superior performance, (3) biofeedback and neurofeedback training in performance enhancement, and (4) acute and chronic effects of sport and exercise participation on cognition and emotion.

Learning Outcomes: 1. Describe and explain the study of psychophysiological processes that operate in the context of human movements in sport and exercise. 2. Describe and explain the methods and theories in the study of sport and exercise psychophysiology. 3. Evaluate major sport and exercise psychophysiology studies on topics such as enhancements in athletic performance, cognition, and emotion in terms of their methods, results, conclusions, and implications. 4. Analyze and synthesize concepts and theories across topics, readings, and discussions. 5. Communicate ideas in writing and group discussion in a clear, coherent, and logical style. 6. Acquire the knowledge to apply psychophysiological principles within sport and exercise settings.

Credits: 3.00

HK 49000 - Special Topics In Health And Kinesiology

Credit Hours: 1.00 to 3.00. Individualized readings, topics, or projects in health and kinesiology appropriate for undergraduate students. Permission of instructor required.

Credits: 1.00 to 3.00

HK 49100 - Research Experience In Health & Kinesiology

Credit Hours: 1.00 to 3.00. Individualized activities related to a

faculty member's research in health and kinesiology appropriate for undergraduate students; no project presentation required. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 3.00

HK 49500 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the university. Permission of department required.

Credits: 1.00 to 3.00

HK 49600 - Mentored Research In Kinesiology

Credit Hours: 1.00 to 3.00. Students are engaged in a research project under the guidance of a faculty member in one of the areas of inquiry in the kinesiology major. Permission of instructor required.

Credits: 1.00 to 3.00

HK 50000 - Introduction To Athletic Training Practice

Credit Hours: 3.00. This course covering the roles and responsibilities of an athletic trainer as well as the history, governance structure, and regulation of the athletic training profession. Instruction and practical application of taping, wrapping, bracing techniques, and protective equipment is also included. Permission of department required.

Learning Outcomes: 1. Identify and evaluate the role of the NATA, BOC, CAATE, Foundation, and state practice acts in athletic training governance and practice regulation. 2. Compare and differentiate the role of a certified athletic trainer and other professionals in the health care of patients and in the broader health care system. 3. Describe and critique safe athletic training practices (e.g. OSHA standards). 4. Evaluate the fundamental role of evidence-based practice as it relates to athletic training and its use in the clinical decision making process. 5. Explain the theoretical foundation of clinical outcomes assessment (e.g., disablement, health related quality of life) and apply common methods of outcomes assessment in athletic training clinical practice (generic, disease-specific, region-specific, and dimension-specific outcomes instruments). 6. Analyze mechanisms of injury/etiology, recognition, and treatment associated with common injuries and illnesses. 7. Develop skills in adhesive taping and acute injury management. 8. Develop skills in protective pad fabrication and implementation. 9. Develop technical skills in the appropriate management of athletic medical emergencies. 10. Have a working understanding of athletic and medical protective equipment/materials and be able to evaluate patient needs in athletic medical situations. 11. Construct a preparticipation examination as it pertain to the prevention of injuries. Credits: 3.00

HK 50600 - Evidence Based Practice In Athletic Training

Credit Hours: 2.00. Introduction to research methodology, and qualitative and quantitative data analysis as related to evidence-based practice of athletic training. The course addresses formulating clinical questions; searching, reading and appraising research; understanding levels of evidence; and citing and referencing works to become consumers of and designers of evidence. The course introduces students to the selection, application, and interpretation of basic descriptive, correlational, and interferential statistics. Permission of department required.

Learning Outcomes: 1. Understand and compare the types of research commonly undertaken by researchers within the field of athletic training. 2. Appreciate and understand the ethical considerations within the research process. 3. Conduct a review of literature on the research topic allowing the student to organize and interpret the findings while writing of the review of literature of a paper for publication. 4. Consider the mechanics of designing the research process which allows the student to begin writing an introduction of a paper for publication. 5. Evaluate the concepts of internal and external validity of research design. 6. Weigh the importance of reliable and valid measurements in athletic training research. 7. Distinguish between experimental and non-experimental research designs and the advantages and disadvantages with each type of design. 8. Critique the typical measures utilized by athletic training researchers to report strength, proprioception and kinesthesia,

balance, stability, range of motion, etc. results in athletic training research. 9. Create all the different components of the research design concluding with the writing of a methods section of a paper for publication. 10. Understand and apply basic statistical measures such as: descriptive, inferential and probability statistics. 11. Understand and apply the common applied statistical decision making techniques in athletic training research analysis of variance, repeated measures analysis of variance, and correlation analysis, etc. 12. Organize and construct the results section of the research project for both thesis chapter and manuscript formats. 13. Understand the importance of and methods associated with obtaining research funding through grant writing and other mechanisms. Credits: 2.00

HK 51100 - Electrocardiogram And Exercise Testing

Credit Hours: 3.00. This course is designed to provide students with competencies related to electrocardiogram and exercise testing. Students will develop skills to interpret a 12-lead ECG, prep and execute a resting 12-lead ECG, complete appropriate pre-screening for graded exercise testing and develop an understanding and initial skills for administering a diagnostic exercise test. Additionally, students will explore various cardiac, pulmonary and/or metabolic testing common to the clinical exercise testing setting. The course is designed to help students prepare for future clinical practice and certifications, such as the ACSM clinical exercise physiologist certification.

Learning Outcomes: 1. Explain the application of ECG and rationale of its utilization in preventative, diagnostic and prognostic settings. 2. Establish fundamental knowledge of ECG interpretation, identification of abnormalities, and the clinical significance of findings. 3. Utilize critical thinking skills to identify anatomical and physiological reasons for ECG changes and potential diagnoses. 4. Demonstrate abilities to execute a resting 12-lead ECG and ECG with stress testing and communicate results (recognizing both normal and abnormal responses to exercise). 5. Explore and differentiate various assessments/tests common to the clinical exercise testing setting. 6. Appraise different test characteristics - reliability, validity, sensitivity, specificity, etc., and its relevance with test selection. 7. Synthesize knowledge obtained from pre-screening information and test characteristics to select appropriate assessments/tests and protocol. 8. Display proficient application of various exercise test protocols, their utilization and associated best practices. Credits: 3.00

HK 51500 - Emergency Medical Management In Athletic Training

Credit Hours: 4.00. This course is designed to teach management concepts and skills used by athletic trainers in emergency situations. Topics addressing prevention, recognition, and management of life-threatening and/or severe injury and illness are included. Application of skills that include the environment, CPR/AED, airway management, immobilization, bleeding control and sudden illness management are also addressed. Students will become certified in CPR/AED. Permission of department required.

Learning Outcomes: 1. Analyze typical administrative policies and procedures that govern first aid and emergency care. 2. Distinguish the different hospital trauma levels and the role of the system in the transportation decision making process. 3. Perform a primary and secondary patient assessment, as well as an assessment of the scene. 4. Obtain and interpret vital signs including pulse, respirations, blood pressure, core body temperature, and oxygen saturation. 5. Distinguish the different types of airway adjuncts and demonstrate airway management skills. 6. Evaluate the indications, application, and treatment parameters for supplemental oxygen administration for emergency situations, and be able to administer supplemental oxygen. 7. Apply proper management strategies for external hemorrhage. 8. Compare different proper positioning, immobilization and transfer techniques for a patient using a spine board. 9. Evaluate and select proper techniques for

removing equipment and clothing to access an airway or evaluate an injured part. 10. Evaluate and choose techniques to immobilize injuries to the extremities. 11. Explain and demonstrate the management of medical and sudden illness such as sudden cardiac arrest, asthma, shock, diabetic emergencies, burns, anaphylaxis, and internal bleeding. 12. Recommend strategies to manage environmental emergencies. 13. Distinguish and recommend techniques for infectious control regulations including Universal Precautions. 14. Attain Basic Life Support for Healthcare Providers certification. Credits: 4.00

HK 51700 - Governance In Sport

Credit Hours: 3.00. This course is an examination of sport organizations focused both on professional and amateur governance structures and processes, with a focus on the NCAA. The study of policy in educational, non-profit, professional and international sport venues will also be addressed.

Learning Outcomes: 1. Identify governing bodies in professional and amateur sport. 2. Recognize policy components and processes in major sport governing bodies. 3. Recognize the influence of governmental bodies and commissions on sports. 4. Identify the organizational structure of various sport governing bodies. 5. Assess the authority and functions of various sport governing bodies. 6. Identify the membership requirements of various sport governing bodies. 7. Identify the sanctions and appeal processes utilized by sport governing bodies. 8. Understand American sport policy and governance in comparative and international context. 9. Understand different forms of sport policy and governance internationally. Credits: 3.00

HK 51800 - Analytics And Technology In Sport

Credit Hours: 3.00. This course is designed to acquire the fundamentals of sports performance analytics. It provides a basic understanding of the different key performance indicators within sports performance analytics including load management, injury prevention, drafting and scouting. The course also provides an understanding of how business analytics can drive decisions in the sport world.

Learning Outcomes: 1. Apply data science principles to sports performance, referred to as sports analytics. 2. Apply measurement and statistical modeling to professional athletes in sports. 3. Examine professional athletes' performance and implication of injuries on market value. 4. Present data to different pro sports industry audiences: players, coaches, and front office management. 5. Apply the processes that take place from the inception of a research question, identification of key performance indicators, data collection, statistical analyses, and data visualization, also termed the sports science data protocol. Credits: 3.00

HK 52000 - Evaluation And Management Of The Lower Quarter

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the lower extremities, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and management techniques for injuries commonly seen will be included. Permission of department required.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the lower extremities. 2. Apply different methods of prevention for many injuries commonly seen in the lower extremities. 3. Differentiate common risk factors and causes of injury commonly seen in athletics and the physically active. 4. Evaluate gender differences in the musculoskeletal system and their impact on injury management for the lower extremities. 5. Consider anatomical growth and development characteristics of males and females in the following stages: preadolescent and adolescent. 6. Develop general treatment and rehabilitation protocols to use with injuries in the lower extremities. 7. Summarize the role and function

of commonly used prescription and non-prescription pharmacological agents in the treatment of Injuries/illness commonly seen in the lower extremities. 8. Demonstrate through low fidelity simulation sound evaluation techniques of lower extremity. 9. Appraise the different psychomotor test characteristics validity, reliability, sensitivity, specificity, likelihood ratios, odds ratios, etc., as they relate to selection of special tests. 10. Synthesize test psychometric data to select appropriate tests and measures during assessment. 11. Formulate a clinical question and perform a literature search to answer the question. Credits: 3.00

HK 52100 - Sport Administration

Credit Hours: 3.00. This course is designed to provide students with a deeper understanding of variety of areas within Sport Management. Students will learn about youth, college and professional sport and the various ancillary roles and departments that are attached to each. Students will also engage in a focused book reading and current event reading to further understand the roles in sport.

Learning Outcomes: 1. Develop group leadership skills through discussions and presentations. 2. Acknowledge the historical ramification of the creation of the NCAA and of professional leagues how this impacts today's sport setting. 3. Recognize the management functions that exist in a contemporary sport organization. 4. Understand the major factors affecting today's world of professional, collegiate, and amateur sport. 5. Develop a personal philosophy regarding organizations within the sport industry. 6. Develop a greater knowledge of intercollegiate athletics administration. 7. Acknowledge the historical, socio-cultural, and ethical factors facing today's college and professional sport. Credits: 3.00

HK 52200 - Sport Law And Ethics

Credit Hours: 3.00. This course explores legal problems facing sport. Students will learn fundamental legal principles including employment law, ADA requirements, hazing, sexual harassment, and Title IX application. Both past and current legal cases related to sport, recreation and fitness industries are examined. Concerns and problem-solving for issues of risk management are also explored.

Learning Outcomes: 1. Develop an understanding of the history and development of the American legal system and courts. 2. Analyze and apply ethical and legal literature in case law, statutes, periodicals, and texts. 3. Explain the basic understanding of terminology and procedures used in legal proceedings. 4. Discuss legal aspects most important to sport management including tort law, contract law, physical activity situations, constitutional law, Title VII and Title IX. 5. Create a comprehensive understanding of risk management and other legal theories to minimize or avoid legal liability in sport settings. 6. Gain a deeper understanding of the ethical reasoning/decision-making process and develop the knowledge, skills, and abilities to apply moral reasoning in dealing with ethical dilemmas in sport. Credits: 3.00

HK 52400 - Managing Health, Fitness, And Sports Organizations

Credit Hours: 3.00. An overview of the major principles, considerations, and techniques involved in managing health, fitness, and sports (HFS) organizations. Emphasizes the skills and competencies involved in the planning, organization, and control of opportunities, resources, and facilities in HFS settings. Permission of instructor required.

Credits: 3.00

HK 52500 - Marketing And Promotion In Health, Fitness, And Sports Organizations

Credit Hours: 3.00. An overview of marketing and promotion in health, fitness, and sports organizations. Emphasizes the skills necessary to develop marketing and promotion plans and to develop materials and approaches for carrying out these plans in health, fitness, and sports settings. Permission of instructor required.

Credits: 3.00

HK 52600 - Communication And Media In Sport

Credit Hours: 3.00. This course is designed to provide students with a deep understanding of the unique role and importance of internal and external communications in relation to sport. Furthermore, it examines the important role the media plays in the sport universe. The intermingling of sport organization and sport media is also examined, especially within the context of

the changing nature of the relationship in the 21st century.

Learning Outcomes: 1. Explain why it is essential to learn about technology today and discuss several ways technology has been integrated into our business and personal lives. 2. Discuss the organizational and societal impact of implementing technology; including some benefits and risks related to the prominence of computerized technology in our society. 3. Explain the impact of computerized communications (blogs, podcasting, viral marketing, etc.) on businesses, personal lives, and the sports Industry. 4. Describe social networking (including some computerized elements) and how it can be used to enhance and expand customer relationships for businesses and the sports Industry. 5. Define web-based multimedia and list some of the advantages and disadvantages of using multimedia and demonstrate how to utilize web-based media to create Marketing and Public Relations products; some examples include (a) newsletter, (b) press release, (c) podcast, (d) web pages, interactive training presentation, and (f) social media. Credits: 3.00

HK 52800 - Sport Event Management And Operations

Credit Hours: 3.00. Introduces students to the planning and management of national and international sport events through the strategic and systematic process of event management, exploring the phases and structural domains associated with the model.

Learning Outcomes: 1. Apply the event management process to sport events. 2. Develop sustainable sport events. 3. Create risk management solutions to minimize, transfer, avoid, or accept risks for sport events. 4. Respond appropriately to managerial challenges facing sport event managers. Credits: 3.00

HK 52900 - Venue Management

Credit Hours: 3.00. This course will examine all aspects of the management of sport facilities, including development, planning, staffing, operations, and evaluation. Students will study the relationships between the respective parties in terms of ownership, management, and the event.

Learning Outcomes: 1. Develop a basic understanding of the managerial issues (e.g., building planning, hospitality, employee and event recruitment, selection, and negotiating) that are specific to sport event and facility management. 2. Schedule, promote, market, and maintain events and facilities. 3. Develop an appreciation of the legal liability associated with events and facilities management and emergency crowd control. 4. Understand the basic principles of facility design and construction. 5. Seek to discuss issues centered on preventive maintenance, facility planning, event administration, box office management, concessions, house and ground management, systems management, marketing, finance, and personnel administration. Credits: 3.00

HK 52950 - Sport Practicum

Credit Hours: 1.00 to 3.00. This course is designed to provide students with a deeper understanding of the variety of different areas within Sport Management. Students will learn through practical experience in the field. Students will also engage in a focused book reading and current event reading to further understand the roles in sport.

Learning Outcomes: 1. Apply classroom experiences to the real world through specific projects and experiences. 2. Examine how the practice of various activities varies from the ideal taught in a classroom. 3. Lead others in moving a project from start to conclusion. 4. Present to faculty and students in the classroom how the real-world experience improved their understanding of necessary skills. Credits: 1.00 to 3.00

HK 53000 - Evaluation And Management Of The Upper Quarter

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the upper extremities, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and

management techniques for injuries commonly seen will be included. Permission of department required.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the upper extremities. 2. Apply different methods of prevention for many injuries commonly seen in the upper extremities. 3. Differentiate common risk factors and causes of injury commonly seen in athletics and the physically active. 4. Evaluate gender differences in the musculoskeletal system and their impact on injury management for the upper extremities. 5. Consider anatomical growth and development characteristics of males and females in the following stages: preadolescent and adolescent. 6. Develop general treatment and rehabilitation protocols to use with injuries in the upper extremities. 7. Summarize the role and function of commonly used prescription and non prescription pharmacological agents in the treatment of Injuries/illness commonly seen in the upper extremities. 8. Demonstrate through low fidelity simulation sound evaluation techniques of upper extremity. 9. Appraise the different psychomotor test characteristics validity, reliability, sensitivity, specificity, likelihood ratios, odds ratios, etc., as they relate to selection of special tests. 10. Synthesize test psychometric data to select appropriate tests and measures during assessment. 11. Formulate a clinical question and perform a literature search to answer the question. Credits: 3.00

HK 53200 - Musculoskeletal Adaptations

Credit Hours: 3.00. This course will utilize traditional lecture combined with small group, student-lead learning to study the impact of acute and chronic exercise on skeletal muscle and tendon. Topics covered will include muscle growth, muscle metabolism, structural and functional changes in skeletal muscle and tendon, the impact of age and sex on exercise adaptations, and the impact of exogenous agents on skeletal muscle and tendon adaptations to exercise. Other topics may include the impact of unloading (e.g., bedrest) and spinal injury on skeletal muscle and tendon. This course will be relevant to those interested in exercise physiology, athletic training, physical therapy, occupational therapy, medical school, nutrition science, engineering, and similar programs of study. Permission of department required.

Learning Outcomes: 1. Analyze and synthesize research in the area of musculoskeletal adaptations to exercise - including the effects of exercise on skeletal muscle, tendon, and bone - and how aging, sex, and lack of activity influence exercise adaptations. 2. Critically evaluate research data in the context of exercise, human health, and rehabilitation. 3. Develop a strong base knowledge of the current state of the literature regarding musculoskeletal adaptations to exercise. 4. Gain experience presenting research findings in oral and written format. Credits: 3.00

HK 53500 - Athletic Training Interventions

Credit Hours: 3.00. This course is designed to provide the student with the foundational theory and techniques related to injury and illness intervention. Included are topics addressing tissue healing, theories of pain and pain control, concepts of kinetic chain stability and mobility, as well as principles related to the use of therapeutic medications. Students will discover how to plan and implement a comprehensive reconditioning program for injuries and conditions sustained by physically active individuals. Permission of department required.

Learning Outcomes: 1. Distinguish the role and types of clinical outcome assessments/measures utilized in clinical practice to determine patient progress. 2. Compare the phases of tissue healing and its implications on intervention design, implementation and progress. 3. Compare common pain control theories and evaluate methods to control pain. 4. Evaluate common indications and contraindications to common therapeutic interventions. 5. Compose a comprehensive rehabilitation program including: determination of therapeutic goals and objectives, selection of therapeutic modalities and exercise, methods of evaluation and documenting rehabilitation progress, and development of criteria for progression and

return to activity. 6. Demonstrate and instruct therapeutic exercises and implement a rehabilitation plan. 7. Analyze local, state, and federal standards/law for the safe application of therapeutic modalities, rehabilitation equipment and medications. 8. Generalize concepts related to the administration of therapeutic administration of medication. 9. Use peer reviewed resources to examine a common condition presented to a rehabilitation professional and construct an evidence based injury rehabilitation protocol for return to competitive activities. 10. Perform a professional oral presentation using professional communication skills. Credits: 3.00

HK 53600 - Cardiopulmonary Physiology

Credit Hours: 3.00. This course will provide a comprehensive overview of the characteristics and regulatory mechanisms underlying the cardiorespiratory adjustments to exercise. The effects of chronic diseases, including chronic obstructive pulmonary disease, peripheral artery disease and chronic heart failure, on the cardiovascular and respiratory responses to exercise will also be discussed in detail. Permission of department required.

Learning Outcomes: 1. Describe and compare the cardiovascular and respiratory responses to incremental, submaximal and prolonged exercise. 2. Define and analyze the role of muscle afferents and central command on the regulation of cardiovascular and respiratory adjustments to exercise. 3. Delineate and evaluate the effects of exercise training on the cardiovascular and respiratory systems. 4. Synthesize recent research findings on the consequences of chronic disease on the cardiovascular and respiratory adjustments to exercise. Credits: 3.00

HK 54000 - Evaluation And Management Of The Spine And Head

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the spine and head, including joint structure and musculoskeletal/nervous systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering the assessment and management techniques for injuries commonly seen will be included. Permission of department required.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the spine and head. 2. Apply different methods of prevention for many injuries commonly seen in the spine and head. 3. Differentiate common risk factors and causes of injury commonly seen in athletics and the physically active. 4. Evaluate gender differences in the musculoskeletal system and their impact on injury management for the spine and head. 5. Consider anatomical growth and development characteristics of males and females in the following stages: pre-adolescent and adolescent. 6. Develop general treatment and rehabilitation protocols to use with injuries in the spine and head. 7. Summarize the role and function of commonly used prescription and non-prescription pharmacological agents in the treatment of Injuries/illness commonly seen in the spine and head. 8. Demonstrate through low fidelity simulation sound evaluation techniques of lower extremity. 9. Appraise the different psychomotor test characteristics -validity, reliability, sensitivity, specificity, likelihood ratios, odds ratios, etc., as they relate to selection of special tests. 10. Synthesize test psychometric data to select appropriate tests and measures during assessment. 11. Formulate a clinical question and perform a literature search to answer the question. Credits: 3.00

HK 54100 - Athletic Training Practicum I

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required.

Learning Outcomes: 1. Demonstrate active listening skills and a positive attitude when receiving constructive feedback on performance. 2. Identify own strengths and weaknesses in professional behavior. 3. Modify behavior based on self-evaluation and feedback from others. 4. Demonstrate active listening, neutral body language, and sensitivity to difference in age, gender, and culture. 5. Demonstrate flexibility and timely completion of tasks. 6. Write legibly, using correct grammar, terminology, and spelling. 7. Arrive punctually and dresses appropriately for clinic activities. 8. Practice in a safe manner that minimizes risk to patient, self, and others. 9. Demonstrate professional behavior at all times. 10. Practice in a manner consistent with established legal and professional standards and ethical guidelines. 11. Communicate in ways that are congruent with situational needs. 12. Adapt delivery of athletic training services with consideration for patients' differences, values, preferences, and needs. 13. Participate in self-assessment to improve clinical and professional performance. 14. Apply current knowledge, theory, clinical judgement, and the patient's values and perspective in patient management. 15. Demonstrate the patient's need for further examination or consultation by an athletic trainer or referral to another health care professional. 16. Fit and apply prophylactic protective equipment to a patient, such as shoulder pads, helmet, custom orthoplast splints, etc. in accordance with established manufacturers' guidelines to prevent injury. 17. Fit and apply standard protective equipment to a patient, such as crutches, cane, pneumatic walking boot, ankle braces, etc. in accordance with established manufacturers' guidelines following an injury. 18. Apply upper and lower extremity taping and wrapping procedures consistent with biomechanical principles and appropriate for prophylactic treatment or in accordance with stage of healing. 19. Demonstrate the ability to evaluate a patient with an emergency injury or condition. Credits: 2.00

HK 54200 - Athletic Training Practicum II

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required.

Learning Outcomes: 1. Demonstrate active listening skills and a positive attitude when receiving constructive feedback on performance. 2. Identify own strengths and weaknesses in professional behavior. 3. Modify behavior based on self-evaluation and feedback from others. 4. Demonstrate active listening, neutral body language, and sensitivity to difference in age, gender, and culture. 5. Demonstrate flexibility and timely completion of tasks. 6. Write legibly, using correct grammar, terminology, and spelling. 7. Arrive punctually and dresses appropriately for clinic activities. 8. Practice in a safe manner that minimizes risk to patient, self, and others. 9. Demonstrate professional behavior at all times. 10. Practice in a manner consistent with established legal and professional standards and ethical guidelines. 11. Communicate in ways that are congruent with situational needs. 12. Adapt delivery of athletic training services with consideration for patients' differences, values, preferences, and needs. 13. Participate in self-assessment to improve clinical and professional performance. 14. Apply current knowledge, theory, clinical judgement, and the patient's values and perspective in patient management. 15. Demonstrate the patient's need for further

examination or consultation by an athletic trainer or referral to another health care professional. 16. Perform an athletic training examination using evidence-based tests and measures. 17. Evaluate data from the patient examination to make clinical judgements. 18. Determine a diagnosis and prognosis that guides future patient management 19. Educate others using relevant and effective teaching methods. 20. Produce quality documentation in a timely manner to support the delivery of athletic training services. 21. Fit and apply prophylactic protective equipment to a patient, such as shoulder pads, helmet, custom orthoplast splints, etc. in accordance with established manufacturers' guidelines to prevent injury. 22. Fit and apply standard protective equipment to a patient, such as crutches, cane, pneumatic walking boot, ankle braces, etc. in accordance with established manufacturers' guidelines following an injury. 23. Apply upper and lower extremity taping and wrapping procedures consistent with biomechanical principles and appropriate for prophylactic treatment or in accordance with stage of healing. 24. Demonstrate the ability to evaluate injuries and conditions of the lower quarter, including the foot and ankle, knee, and hip. 25. Produce documentation of the patient encounter consistent with contemporary athletic training practice using appropriate terminology and complying with all applicable regulatory standards. Credits: 2.00

HK 54300 - Athletic Training Practicum III

Credit Hours: 2.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required.

Learning Outcomes: 1. Demonstrate active listening skills and a positive attitude when receiving constructive feedback on performance. 2. Identify own strengths and weaknesses in professional behavior. 3. Modify behavior based on self-evaluation and feedback from others. 4. Demonstrate active listening, neutral body language, and sensitivity to difference in age, gender, and culture. 5. Demonstrate flexibility and timely completion of tasks. 6. Write legibly, using correct grammar, terminology, and spelling. 7. Arrive punctually and dresses appropriately for clinic activities. 8. Practice in a safe manner that minimizes risk to patient, self, and others. 9. Demonstrate professional behavior at all times. 10. Practice in a manner consistent with established legal and professional standards and ethical guidelines. 11. Communicate in ways that are congruent with situational needs. 12. Adapt delivery of athletic training services with consideration for patients' differences, values, preferences, and needs. 13. Participate in self-assessment to improve clinical and professional performance. 14. Apply current knowledge, theory, clinical judgement, and the patient's values and perspective in patient management. 15. Demonstrate the patient's need for further examination or consultation by an athletic trainer or referral to another health care professional. 16. Perform an athletic training examination using evidence-based tests and measures. 17. Evaluate data from the patient examination to make clinical judgements. 18. Determine a diagnosis and prognosis that guides future patient management 19. Establish an athletic training plan of care that is safe, effective, patient-centered, and evidence-based. 20. Perform an athletic training intervention in a competent manner. 21. Educate others using relevant and effective teaching methods. 22. Produce quality documentation in a timely

manner to support the delivery of athletic training services. 23. Collect and analyzes data from selected outcome measures in a manner that supports accurate analysis of individual and patient group outcomes. 24. Participate in the financial management of athletic training consistent with regulatory, legal, and facility guidelines. 25. Fit and apply prophylactic protective equipment to a patient, such as shoulder pads, helmet, custom orthoplast splints, etc. in accordance with established manufacturers' guidelines to prevent injury. 26. Fit and apply standard protective equipment to a patient, such as crutches, cane, pneumatic walking boot, ankle braces, etc. in accordance with established manufacturers' guidelines following an injury. 27. Apply upper and lower extremity taping and wrapping procedures consistent with biomechanical principles and appropriate for prophylactic treatment or in accordance with stage of healing. 28. Demonstrate the ability to evaluate injuries and conditions of the upper quarter and spine, including the shoulder, elbow and forearm, wrist and fingers, cervical spine, thoracic spine, lumbar spine, and pelvis. 29. Demonstrate the ability to perform a comprehensive clinical examination of common illnesses and conditions and provides the appropriate referral as indicated. 30. Produce documentation of the patient encounter consistent with contemporary athletic training practice using appropriate terminology and complying with all applicable regulatory standards. Credits: 2.00

HK 54500 - Therapeutic Modalities

Credit Hours: 3.00. Course covering the physiological effects, indications, contraindications, and precautions of contemporary therapeutic modalities. Students will design and plan therapeutic interventions. Focus will be on the application of therapeutic modalities according to evidence-based protocols. Included in this course will be the role of equipment safety and maintenance of therapeutic modalities. Permission of department required.

Learning Outcomes: 1. Explain the inflammatory response to acute and chronic injury. 2. Select the appropriate modality according to treatment goals and objectives. 3. Compare the prevailing pain control theories and associated rationale for the selection and use of therapeutic modalities for the control of acute and chronic pain. 4. Evaluate the physical properties, biophysics, set-up, indications, contraindications, and specific physiological effects associated with the application of superficial cold and heat; stimulating electrical currents; diathermy; therapeutic ultrasound; intermittent compression units; iontophoresis; traction; massage; biofeedback; and LASER. 5. Administer contemporary therapeutic modalities to a patient using clinically acceptable procedures including patient preparation, set-up, determination of dosage, and operational procedures according to established guidelines. 6. Inspect therapeutic equipment and the treatment environment. 7. Identify various standards that influence the approval, operation, inspection, maintenance and safe application of therapeutic equipment. 8. Use a systemic approach to create and answer a clinical question. 9. Summarize differences between narrative reviews, systematic reviews, and meta-analysis. 10. Search for, find, and document the best evidence to support a problem or clinical problem. 11. Develop a Critically Appraised Topic (CAT) that includes a PICO, creating a search strategy (search terms), using databases to find evidence, appraising evidence, determining levels of evidence, analyzing and synthesizing evidence, and determining a clinical bottom line. 12. Present a Critically Appraised Topic using professional communication skills. Credits: 3.00

HK 54600 - Lifestyle Medicine

Credit Hours: 3.00. This graduate-level course reviews the principles and practices of lifestyle medicine. Students will explore the evidence-based application of lifestyle medicine in

preventing, managing, and treating chronic disease. Students will learn about the application of all six pillars of lifestyle medicine: physical activity, nutrition, sleep, stress management, substance avoidance, and health relationships / social well-being. Students in this course will obtain knowledge, skills, and tools via lectures, research reviews, group discussions, and experiential learning. Throughout the course, students will learn to comprehensively apply lifestyle medicine to healthy individuals and those with chronic diseases across the community. Upon completing the course, students will be empowered to promote healthy lifestyle change with clients/patients in their future healthcare professions. This course can be taken as part of a course series that will prepare students for a health coaching certification and the potential to sit for the National Board of Health and Wellness Coaching (NBHWC) health coaching certification exam.

Learning Outcomes: 1. Explore the application of evidence-based lifestyle medicine and its effectiveness in long-term health outcomes. 2. Assess the six pillars of lifestyle medicine and the impact and potential benefits of optimizing different variables, such as physical activity/exercise, nutrition, stress management, sleep, emotional well-being, social connectivity, etc. 3. Evaluate literature in lifestyle medicine critically and assess the utilization of different disease prevention and management strategies. 4. Appraise various health conditions and the power of lifestyle medicine on disease management and quality of life. 5. Integrate lifestyle medicine concepts into behavior change models and coaching techniques, such as the transtheoretical model, motivational interviewing, appreciative inquiry, strengths-based approach, goal setting, and more. 6. Explore the importance and impact of self-care and positivity for health and wellness professionals. Credits: 3.00

HK 54700 - Principles Of Health And Wellness Coaching

Credit Hours: 3.00. This is a graduate-level course that will assist students in refining patient/client communications and applying lifestyle behavior change strategies in practice. This course provides a comprehensive introduction to health and wellness coaching principles, practices, and theories. Topics include core components and scope of health coaching, behavior change models and theories, coaching structure, screening and assessment, building rapport, motivational interviewing, and more. This course is part of a series that will prepare students for a health coaching certification and the potential to sit for the National Board of Health and Wellness Coaching (NBHWC) health coaching certification exam.

Learning Outcomes: 1. Explain the role and scope of the health coach professional and core coaching competencies. 2. Explore and understand the theoretical foundations of coaching psychology, behavior change models & theories. 3. Establish fundamental knowledge within coaching applications and techniques, such as motivational interviewing, cognitive behavioral coaching, appreciative inquiry, and SMART goals techniques. 4. Evaluate current literature and research in the field of health and wellness coaching. 5. Demonstrate understanding of different assessments, screening tools, and health coaching techniques implemented through observation and peer-to-peer practice. Credits: 3.00

HK 54800 - Advanced Concepts And Application Of Health And Wellness Coaching

Credit Hours: 3.00. This course is a graduate-level skills-based course designed to provide practical applications of health and wellness coaching. Topics include advanced theories in health and wellness coaching, the application of effective coach-to-client communication techniques, legal considerations of the profession, and a health coach's professional scope of practice. Students in this course will complete peer-mentored coaching sessions and practical skills evaluations. This course is part of a series that will prepare students for a health coaching certification and the potential to sit for the National Board of Health and Wellness Coaching (NBHWC) health coaching certification exam.

Learning Outcomes: 1. Explore and practice behavior change models & theories. 2. Utilize evidence-based coaching techniques in practice. 3. Demonstrate efficiency in reviewing assessments and screening tools in the health coaching practice. 4. Display understanding and application of the core components of a coaching session, as well as the techniques and skills employed for successful sessions. 5. Synthesize knowledge from various coaching practices and techniques learned and

demonstrate skill in implementing these within coaching sessions. 6. Apply ethical principles and guidelines in the practice of health and wellness coaching. Credits: 3.00

HK 54900 - Health Coaching Practicum

Credit Hours: 1.00 to 3.00. This graduate-level practicum course affords students who have completed the two health and wellness courses (HWC), Principles of Health and Wellness Coaching (HK 54700) & Advanced Concepts and Application of Health and Wellness Coaching (HK 54800), pragmatic application of health coaching skills through ongoing coach-client interactions. Students will gain experiential mastery of communication, building client rapport, motivational interviewing, goal development, and other health coaching skills learned in HK 54700 & HK 54800. Students will work with a mentor(s) to complete health coaching hours through their identified site(s). Students will predominantly complete coaching sessions at the Purdue Recreation and Wellness and The AH Ismail Center. The class is designed to help students complete the 50 health coaching sessions required before applying to sit for the National Health and Wellness Coaching Board exam. Students in the HWC course series can complete required coaching sessions independently or by taking this practicum to obtain the coaching hours.

Learning Outcomes: 1. Demonstrate proficiency in the application and practice of health coaching techniques and skills. 2. Explore the utilization of motivational interviewing, cognitive behavior coaching, behavior change, and SMART goals techniques. 3. Administer and interpret health assessments and screenings in the health coaching practice. 4. Demonstrate an understanding of common conditions (cardiovascular disease, diabetes, hypertension, cancer, obesity, arthritis, etc.), the implications of lifestyle behavior on these conditions, and synthesize this understanding into health coaching practice. 5. Recognize signs/symptoms of mental health conditions (i.e., depression, anxiety, etc.) and when a referral is recommended. 6. Evaluate their coaching presence, the effectiveness of sessions administered, and implement practices to enable continued growth and 'mastery'. Credits: 1.00 to 3.00

HK 55000 - Evaluation And Management Of Medical Conditions

Credit Hours: 3.00. Course covering an in-depth study of the normal anatomical structures in the thorax and abdomen, including the cardiovascular, digestive, urinary, reproductive, endocrine, and lymphatic systems. Also discussed are common risk factors and causes of injuries as identified by contemporary epidemiological studies, common injuries to each body part, typical symptoms, and common clinical signs associated with injuries and illnesses with the physically active. A lab covering injury assessment techniques of common illnesses and disease most often encountered by allied healthcare professionals will be included. Permission of department required.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the thorax and abdomen. 2. Apply different methods of prevention for many injuries commonly seen in the thorax and abdomen. 3. Differentiate general treatment and rehabilitation protocols to use with injuries in the thorax and abdomen. 4. Identify the role and function of commonly used prescription and non-prescription pharmacological agents in the treatment of Injuries/illness commonly seen in the thorax and abdomen. 5. Demonstrate through low fidelity simulation sound evaluation techniques of the thorax and abdomen. 6. Explain modifiable and non-modifiable risk factors pertaining to general medical conditions across the life span in the physically active and special populations. 7. Explain and identify the etiology, prevention, recognition and management of conditions leading to sudden death. 8. Explain and identify the etiology, prevention, recognition and management of general medical conditions associated with the systems of the body across the life span in the physically active and special populations. 9. Demonstrate the ability to assess and interpret findings in the evaluation of general medical conditions, using diagnostic accuracy and clinical prediction rules, associated with the systems of the body. 10. Explain the general therapeutic strategy, including drug categories for the treatment of

general medical conditions. 11. Use available resources to identify indications, contraindications, precautions, and adverse reactions of prescription and non-prescription medications. 12. Develop a clinical question, search for, assess, and synthesize evidence related to general medication conditions and pharmacology. Credits: 3.00

HK 55500 - Principles Of Manual Medicine

Credit Hours: 2.00. This course will provide students with the theory, skills, and clinical application of manual medicine. The emphasis will be placed on passive and dynamic joint mobilizations, connective tissue massage, deep friction massage, lymphatic massage, myofascial release, passive range of motion exercises, muscle energy techniques, and nerve mobilization. All skills will be introduced through onsite demonstration and hands-on practice. Permission of department required.

Learning Outcomes: 1. Describe the basic theories and principles of various types of manual medicine. 2. Evaluate the patient indications and contraindications, treatment efficacy, and clinical applications of each kind of manual medicine technique. 3. Summarize and select appropriate manual medicine techniques to match injury pathophysiology. 4. Choose and apply manual medicine treatment techniques, including passive and dynamic joint mobilizations, connective tissue massage, deep friction massage, lymphatic massage, myofascial release, passive range of motion exercises, muscle energy techniques, and nerve mobilization. 5. Create a plan of care including manual medicine in preparation for exercise and recovery from exercise. 6. Compare the role of manual medicine in a multi-disciplinary approach to treatment of soft tissue injuries. Credits: 2.00

HK 56000 - Advanced Procedures In Athletic Training

Credit Hours: 2.00. This course aims to provide students with advanced psychomotor skills in athletic training, such as wound closure, orthopedic casting, orthotic fabrication, biometrics and other emerging techniques and technologies. Skill integration into practice will be considered and practice act concerns will be discussed. Permission of department required.

Learning Outcomes: 1. Recognize different types of wounds and which require advanced management, including wound closure. 2. Compare wound closure techniques to determine appropriate applications. 3. Summarize the differences between casting methods. 4. Evaluate casting techniques relative to patient indications and pathology present. 5. Explain the purpose of foot orthotics as related to the pathomechanical model. 6. Apply wound closure techniques, orthopedic castings, and fabricate orthotics in simulated patients. 7. Consider and summarize emerging technologies and practices in athletic training, such as the use of biometrics to determine use and efficacy in a clinical setting. Credits: 2.00

HK 56300 - Business Of Sport

Credit Hours: 3.00. This course focuses on the application of financial management tools used to assist managers in the sport industry. Financial concepts will be examined as they relate to management decision-making. Emphasis will be on interpreting financial data and communicating results to operation managers.

Learning Outcomes: 1. Apply finance and business concepts effectively in a sport or entertainment setting. 2. Analyze financial data and make recommendations to management concerning financial position and produce a budget for your department or organization. 3. Explain in detail key public sources of finance for sport organizations and the advantages and disadvantages of each. 4. Explain in detail how sporting events create an economic impact for various locals. 5. Appreciate the current financial status of diverse segments of the sport industry. Credits: 3.00

HK 56700 - Epidemiology For Public Health Practice

Credit Hours: 3.00. This course presents the fundamental principles, methods, and applications of epidemiology, including the quantification of morbidity, mortality, and disease risk. Epidemiologic study designs and the use of public health vital statistics, disease transmission evidence, and risk assessment data are explored. Historically significant epidemiological cases

provide a framework for the application of ethical principles to epidemiologic research. This course meets the epidemiology core competency requirement for the Master's in Public Health (MPH) degree.

Credits: 3.00

HK 56800 - Advanced Exercise Physiology

Credit Hours: 3.00. The study of selected concepts and principles of physiology as they relate to the exercising human.

Credits: 3.00

HK 57400 - Advanced Exercise Psychology

Credit Hours: 3.00. This course is designed to examine psychological issues and theories related to exercise, the promotion of regular physical activity and active lifestyles. Emphasis is placed on the factors related to physical activity, health behavior theories, and the psychological and emotional consequences of exercise and physical activity. Key methodological considerations in behavioral health research will also be highlighted.

Learning Outcomes: 1. Discuss the feasibility, utility, and challenges of using theories in exercise psychology. 2. Compare and contrast several prominent health behavior theories, especially those with relevance to encouraging physical activity behaviors. 3. Identify research methodology criteria for evaluating the quality of exercise psychology and behavioral medicine studies, and appraise the quality of the research literature based on these criteria. 4. Acquire knowledge of the research literature and be able to have an informed and critical discussion of current perspectives and challenges in exercise psychology. 5. Design and develop their own questionnaire to assess health behaviors and psychological constructs for a given population. 6. Understand how psychological principles and theories are applied in exercise and physical activity contexts. 7. Develop graduate-level writing and oral presentation skills through course assignments. Credits: 3.00

HK 57600 - Diversity And Health

Credit Hours: 3.00. This course is designed to examine the health status and the politics of representation of the U.S. ethnic minorities (e.g., African Americans, Latinos, Asian Americans, Native Americans, Alaskans, etc.). Emphasis is placed on factors that influence health and health-related behaviors. The course is intended to provide students with an overview of historical, political, social, and cultural factors related to the health behavior and status of minority groups in American society.

Credits: 3.00

HK 57700 - Marketing, Branding, And Sales In Sport

Credit Hours: 3.00. This course is designed to provide students with (1) a deep understanding of theories and concepts in sport marketing, (2) an up-to-date understanding of them as they are currently being applied to solve marketing problems and issues in various sport business contexts, (3) strategies of making effective decisions concerning the marketing of sport products and brands, (4) a foundation for advanced study and work in marketing, consumer behavior, and related fields.

Learning Outcomes: 1. Articulate the factors that make sport marketing a unique enterprise. 2. Demonstrate an understanding of various research methodologies utilized in sport marketing. 3. Assess the value of segmentation in sport marketing. 4. Design, implement, and evaluate a sport marketing research plan. 5. Appreciate the elements of the sport product that contribute to its uniqueness in the marketplace. 6. Analyze the growth in importance of licensing, brand equity, and fan identification in sport marketing. 7. Differentiate among the unique factors that impact sport product pricing strategies. 8. Understand and evaluate the effectiveness of the key components of effective promotional programs and campaigns within the sport market. 9. Devise a promotional and sales plan within the sport marketplace. 10. Understand the scope and nature of sponsorship and the rationale for their use by corporations and the sport enterprise. 11. Analyze the importance of public relations and its unique role in the marketing mix within the context of sport. 12. Consider the future directions of sport marketing, giving special attention to the growth of electronic media and its parts. Credits: 3.00

HK 57800 - Organizational Behavior And Leadership In Sport

Credit Hours: 3.00. This course is an introduction to the basic concepts and topics in organizational behavior (OB) and

leadership. The course focuses on OB at three levels: individual, interpersonal, and collective. We will cover decision-making, relationships, motivation, personality, influence, and groups. Permission of department required.

Learning Outcomes: 1. Learn of and develop an understanding of the fundamental theories and principles of employee and organizational behavior in the context of professional, college, and amateur sports by reading the assigned textbook and related articles, listening to lectures, videos, and engaging in other course materials. 2. Identify and apply learned theories and approaches to address and resolve organizational and personnel issues encountered by management in sports organizations by analyzing and problem-solving weekly case studies based on real-life organizational behavior examples in sports settings. 3. Demonstrate knowledge of the principles and practices associated with the following areas of organizational behavior in sports including leadership, organizational culture, internal and external organizational conflict, and diversity and inclusion. 4. Apply the information learned in weekly modules and through the completion of individual personality assessments in class to understand students' individual work styles and create a personal plan to employ work traits in a practical manner as future employees. 5. Develop personal growth through assessment activities where students have the opportunity to reflect on their own style of work in light of the course material as it aligns with their career goals. Credits: 3.00

HK 57900 - Strategic Case Reviews: Lessons From The Sport Management Field

Credit Hours: 3.00. The focus of this course is to merge the application of leadership and management theory to various issues arising in Sport Management including organizational behavior, strategic planning, and human resources management. This course will utilize case studies based on true events and connect theoretical ideas with practical experience and outcomes. Permission of department required.

Learning Outcomes: 1. Learn of and develop an understanding of the fundamental theories and principles of employee and organizational behavior in the context of sports by reading the assigned textbook chapters and related articles, listening to lectures, and fully engaging in all course materials and assignments. 2. Identify and apply learned theories and approaches to address issues encountered by management in organizations by analyzing and problem-solving weekly case studies based on real-life examples in a variety of sports settings. 3. Demonstrate knowledge of the principles and practices associated with organizational behavior in sports including leadership, organizational culture, and internal and external conflict. 4. Using information learned in weekly case studies, and through the completion of individual personality assessments, gain a better understanding of individual leadership and work styles. 5. Develop personal growth through a variety of assessment activities whereby students reflect on their own leadership style. Credits: 3.00

HK 58300 - Patient Care Simulation In Athletic Training I

Credit Hours: 2.00. This course is designed to refine psychomotor skills and apply specific athletic training proficiencies integrating cognitive concepts and skills into progressively higher-level practical application. Skill integration will be achieved through successful completion and evaluation of patient care scenarios with emphasis placed on clinical reasoning skills of the student while making point-of-care decisions. Permission of department required.

Learning Outcomes: 1. Evaluate a patient and then select and apply appropriate taping applications for injury reduction and prevention. 2. Select and apply protective equipment for use by active individuals participating in sport. 3. Apply specialty taping procedures in response to patient indications and treatment goals. 4. Perform a primary and secondary patient assessment for a patient in an emergency situation. 5. Obtain and evaluate

vital signs including pulse, respirations, blood pressure, core body temperature, and oxygen saturation. 6. Differentiate and select from the different types of airway adjuncts to demonstrate airway management. 7. Use the indications and treatment parameters in an emergency situation to determine appropriateness of supplemental oxygen administration. 8. Administer supplemental oxygen to patients in an emergency situation. 9. Create a management plan of external hemorrhage and apply this emergent and non-emergent situations. 10. Consider and select proper immobilization and transfer techniques for a patient using a spine board. 11. Evaluate techniques for removing equipment and clothing to access an airway or evaluate an injured part and select the most appropriate for a given situation. 12. Apply corrective intervention techniques for the management of medical and sudden illness such as sudden cardiac arrest, asthma, shock, diabetic emergencies, burns, anaphylaxis, and internal bleeding. 13. Analyze patients and institute a management plan for patients in an environmental emergency. Credits: 2.00

HK 59000 - Special Topics In Health And Kinesiology

Credit Hours: 1.00 to 3.00. Individualized readings, topics, or projects in health and kinesiology appropriate for graduate students. Permission of instructor required.

Learning Outcomes: 1. Learning outcomes vary due to special topics nature of course. Credits: 1.00 to 3.00

HK 60000 - Individual Research And Study

Credit Hours: 1.00 to 3.00. Each student studies a problem of interest related to physical education, health, or recreation. Permission of instructor required.

Credits: 1.00 to 3.00

HK 60100 - HK PhD Seminar

Credit Hours: 2.00. This course is the first of a required two-course sequence for first-year health and kinesiology doctoral students. The course is designed to socialize students into the worlds of science, graduate education, and health and kinesiology research and practice. Particular emphasis is placed on the responsible conduct of research, shared and unique expectations of graduate students and mentors across various health and kinesiology subdisciplines, professional development, and the nurturing of academic community. Prerequisite: Incoming health and kinesiology doctoral students qualify for and are required to complete this course. Permission of department required.

Learning Outcomes: 1. Develop an appreciation for philosophical and scientific issues of relevance to all health and kinesiology scholars. 2. Develop an understanding of successful and less successful approaches to graduate education, department citizenship, pursuit of scholarly endeavors, and professional development. 3. Develop an understanding of how to obtain effective mentoring. 4. Become an active member of the HK intellectual and professional community. Credits: 2.00

HK 60200 - HK PhD Seminar II

Credit Hours: 2.00. This course is the second of a required two-course sequence for first-year health and kinesiology doctoral students. The course is designed to expose students to classic works in health and kinesiology subdisciplines, address professional development issues, and help students formulate a curricular and research program to structure the doctoral experience. Particular emphasis is placed on the interdisciplinary nature of health and kinesiology and becoming an active member of the research community. Permission of department required.

Credits: 2.00

HK 61000 - Research Methods In Health, Physical Education, And Recreation

Credit Hours: 3.00. Application of research methodology to problems in health, physical education, and recreation. Prerequisite: 3 credit hours in Statistics. Permission of instructor required.

Credits: 3.00

HK 61100 - Data Analysis In Health And Kinesiology

Credit Hours: 3.00. This student-driven course addresses a variety of data analysis issues in health, kinesiology, and related fields (e.g., education, psychology). The course will overview the types of data prominent in health and kinesiology research, how these data are obtained and handled by researchers, measurement/evaluation issues, and ways to present and analyze data. Heavy emphasis is placed on matching research questions and conceptualization with data analysis techniques, obtaining familiarity with widely-used data analysis software, analyzing multivariate data sets, and constructing high-quality

results sections in journal manuscript format. Prerequisites: STAT 50100 , STAT 50200 and access to a data set pertaining to one's area of research are expected. Permission of instructor required.

Credits: 3.00

HK 63000 - Administration Of Athletic Training Programs

Credit Hours: 2.00. Course covering management and supervision of personnel, financial resources, as well as the preparation in planning, designing, developing, organizing, implementing, directing, and evaluating an athletic training health care program and facility. Legal concerns, risk management, insurance, and reimbursement will be discussed. Prerequisites: Completion of HK 50000 with a grade of B- or better. Permission of department required.

Learning Outcomes: 1. Summarize the components associated with professional development and regulation of athletic trainers. 2. Distinguish the roles and responsibilities of health care professionals in the field of sports medicine. 3. Compare the current initiatives, missions, objectives, and professional activities of other allied health and medical organizations and professions. 4. Analyze the major elements of the National Athletic Trainers Association (NATA) Code of Ethics against published case report. 5. Recognize the importance and complexity of the ethical and legal issues associated with medical information, authorization to participate, record keeping, and confidentiality. 6. Appraise and recommend medical and professional liability insurance policies. 7. Develop administrative policy and procedures for operation of an athletic medical facility. 8. Develop a system of records for athletes and general facility operations. 9. Develop a comprehensive pre-participation medical exam. 10. Develop a basic architectural design of an athletic medical facility that is safe and efficient. 11. Develop a budget for operation of an athletic medical facility. Credits: 2.00

HK 63500 - Injury Prevention And Health Promotion

Credit Hours: 3.00. This course emphasizes theory and strategies for behavioral change relating to healthy lifestyles and specific health conditions. Analyses of major injury problems affecting patients in the workplace, community, at home, and in activity along with basic principles of nutrition and exercise as they pertain to individual health and activity are included. Prerequisite: HK 53500 with a grade of B- or better. Permission of department required.

Learning Outcomes: 1. Develop and implement strategies to mitigate the risk for long-term health conditions across the lifespan. 2. Develop, implement, and assess the effectiveness of programs to reduce injury risk. 3. Plan and implement a comprehensive pre-participation examination process to affect health outcomes. 4. Develop, implement, and supervise comprehensive programs to maximize sport performance that are safe and specific to the clients activity. 5. Educate and make recommendations to clients/patients on fluids and nutrients to ingest prior to activity, during activity, and during recovery for a variety of activities and environmental conditions. 6. Educate clients/patients about the effects, participation consequences, and risks of misuse and abuse of alcohol, tobacco, performance-enhancing drugs/substances, and over-the-counter, prescription, and recreational drugs. Credits: 3.00

HK 64000 - Leadership In Athletic Training

Credit Hours: 2.00. This course is designed to prepare students to embark on paths of personal leadership development. The course will examine leadership theory and research and emphasize the development of leadership and interpersonal skills. Understanding various methods of bringing about change will be provided and researched by learners, and then discussed in our time together. Students in this course will apply foundational business concepts in athletic training through self-assessment case studies and professional experiential exercises. Permission of department required. Prerequisite: HK 63000 with B- or better.

Learning Outcomes: 1. Compare key organizational behavior theories and concepts related to leadership and management. 2. Evaluate the unique of structures, processes, and interactions in health care organizations as they relate to leadership, management and policy. 3. Distinguish the different roles and

specific challenges for leadership and management in health care. 4. Differentiate personal leadership orientation, styles and strengths. 5. Practice, hone, and demonstrate teamwork skills (e.g., leadership, collaboration, communication, etc.) in consulting team assignments and case analyses. 6. Develop a professional development plan for long term development as a professional. 7. Evaluate the value model to develop a business case to supply athletic training services. Credits: 2.00

HK 64100 - Athletic Training Practicum IV

Credit Hours: 8.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required. Prerequisite: HK 54300.

Learning Outcomes: 1. Demonstrate active listening skills and a positive attitude when receiving constructive feedback on performance. 2. Identify own strengths and weaknesses in professional behavior. 3. Modify behavior based on self-evaluation and feedback from others. 4. Demonstrate active listening, neutral body language, and sensitivity to difference in age, gender, and culture. 5. Demonstrate flexibility and timely completion of tasks. 6. Write legibly, using correct grammar, terminology, and spelling. 7. Arrive punctually and dresses appropriately for clinic activities. 8. Practice in a safe manner that minimizes risk to patient, self, and others. 9. Demonstrate professional behavior at all times. 10. Practice in a manner consistent with established legal and professional standards and ethical guidelines. 11. Communicate in ways that are congruent with situational needs. 12. Adapt delivery of athletic training services with consideration for patients' differences, values, preferences, and needs. 13. Participate in self-assessment to improve clinical and professional performance. 14. Apply current knowledge, theory, clinical judgement, and the patient's values and perspective in patient management. 15. Demonstrate the patient's need for further examination or consultation by an athletic trainer or referral to another health care professional. 16. Perform an athletic training examination using evidence-based tests and measures. 17. Evaluate data from the patient examination to make clinical judgements. 18. Determine a diagnosis and prognosis that guides future patient management 19. Establish an athletic training plan of care that is safe, effective, patient-centered, and evidence-based. 20. Perform an athletic training intervention in a competent manner. 21. Educate others using relevant and effective teaching methods. 22. Produce quality documentation in a timely manner to support the delivery of athletic training services. 23. Collect and analyze data from selected outcome measures in a manner that supports accurate analysis of individual and patient group outcomes. 24. Participate in the financial management of athletic training consistent with regulatory, legal, and facility guidelines. 25. Fit and apply prophylactic protective equipment to a patient, such as shoulder pads, helmet, custom orthoplast splints, etc. in accordance with established manufacturers' guidelines to prevent injury. 26. Fit and apply standard protective equipment to a patient, such as crutches, cane, pneumatic walking boot, ankle braces, etc. in accordance with established manufacturers' guidelines following an injury. 27. Apply upper and lower extremity taping and wrapping procedures consistent with biomechanical principles and appropriate for prophylactic treatment or in accordance with stage of healing. 28. Demonstrate the ability to screen a medical

record(s) or an individual or group of individuals to allow for safe physical activity and make appropriate recommendation and/or referrals as necessary. 29. Demonstrate the ability to evaluate injuries and conditions of the lower quarter, including the foot and ankle, knee, and hip. 30. Demonstrate the ability to evaluate injuries and conditions of the upper quarter and spine, including the shoulder, elbow and forearm, wrist and fingers, cervical spine, thoracic spine, lumbar spine, and pelvis. 31. Demonstrate the ability to perform a comprehensive clinical examination of common illnesses and conditions and provides the appropriate referral as indicated. 32. Locate community-based resources for psychosocial intervention. 33 Demonstrate appropriate communication skills and use ethnic and cultural sensitivity in communication. 34. Produce documentation of the patient encounter consistent with contemporary athletic training practice using appropriate terminology and complying with all applicable regulatory standards. Credits: 8.00

HK 64200 - Athletic Training Practicum V

Credit Hours: 6.00. Fieldwork experiences designed to integrate acquired knowledge and skills through live or scenario-based applications. Students will gain clinical experiences under the direct supervision of an athletic training preceptor either on or off campus. Emphasis will be placed on professional and ethical conduct, patient-centered care, interprofessional collaborative practice, evidence-based practice, quality improvement, and healthcare informatics. Permission of department required.

Learning Outcomes: 1. Demonstrate active listening skills and a positive attitude when receiving constructive feedback on performance. 2. Identify own strengths and weaknesses in professional behavior. 3. Modify behavior based on self-evaluation and feedback from others. 4. Demonstrate active listening, neutral body language, and sensitivity to difference in age, gender, and culture. 5. Demonstrate flexibility and timely completion of tasks. 6. Write legibly, using correct grammar, terminology, and spelling. 7. Arrive punctually and dresses appropriately for clinic activities. 8. Practice in a safe manner that minimizes risk to patient, self, and others. 9. Demonstrate professional behavior at all times. 10. Practice in a manner consistent with established legal and professional standards and ethical guidelines. 11. Communicate in ways that are congruent with situational needs. 12. Adapt delivery of athletic training services with consideration for patients' differences, values, preferences, and needs. 13. Participate in self-assessment to improve clinical and professional performance. 14. Apply current knowledge, theory, clinical judgement, and the patient's values and perspective in patient management. 15. Demonstrate the patient's need for further examination or consultation by an athletic trainer or referral to another health care professional. 16. Perform an athletic training examination using evidence-based tests and measures. 17. Evaluate data from the patient examination to make clinical judgements. 18. Determine a diagnosis and prognosis that guides future patient management. 19. Establish an athletic training plan of care that is safe, effective, patient-centered, and evidence-based. 20. Perform an athletic training intervention in a competent manner. 21. Educate others using relevant and effective teaching methods. 22. Produce quality documentation in a timely manner to support the delivery of athletic training services. 23. Collect and analyze data from selected outcome measures in a manner that supports accurate analysis of individual and patient group outcomes. 24. Participate in the financial management of athletic training consistent with regulatory, legal, and facility guidelines. 25. Fit and apply prophylactic protective equipment to

a patient, such as shoulder pads, helmet, custom orthoplast splints, etc. in accordance with established manufacturers' guidelines to prevent injury. 26. Fit and apply standard protective equipment to a patient, such as crutches, cane, pneumatic walking boot, ankle braces, etc. in accordance with established manufacturers' guidelines following an injury. 27. Apply upper and lower extremity taping and wrapping procedures consistent with biomechanical principles and appropriate for prophylactic treatment or in accordance with stage of healing. 28. Demonstrate the ability to evaluate injuries and conditions of the lower quarter, including the foot and ankle, knee, and hip. 29. Demonstrate the ability to evaluate injuries and conditions of the upper quarter and spine, including the shoulder, elbow and forearm, wrist and fingers, cervical spine, thoracic spine, lumbar spine, and pelvis. 30. Demonstrate the ability to perform a comprehensive clinical examination of common illnesses and conditions and provides the appropriate referral as indicated. 31. Locate community-based resources for psychosocial intervention. 32. Demonstrate appropriate communication skills and use ethnic and cultural sensitivity in communication. 33. Produce documentation of the patient encounter consistent with contemporary athletic training practice using appropriate terminology and complying with all applicable regulatory standards. Credits: 6.00

HK 64500 - Psychosocial Interventions In Athletic Training

Credit Hours: 2.00. The focus of this course is on identification, referral, and treatment options for patients with organic and non-organic mental health conditions commonly seen in athletic training. The course will also address cultural competence in patient care and the role of various mental healthcare providers that comprise the mental health referral network. Permission of department required. Prerequisite: HK 535 with B- or better.

Learning Outcomes: 1. Explain the theoretical background of psychological and emotional response to injury and forced inactivity. 2. Identify and select psychosocial techniques into a patients treatment or rehabilitation program. 3. Evaluate which psychosocial techniques are appropriate for a patient in a given clinical scenario. 4. Identify at-risk individuals with psychosocial disorders and/or mental health emergencies. 5. Distinguish appropriate patients requiring referral to mental health care providers. 6. Develop a management plan for at-risk individuals. 7. Explain and demonstrate processes of effective interpersonal and cross-cultural communication. 8. Construct psychological techniques and interventions that are used to facilitate and motivate the patient for return to play. 9. Summarize the importance of Cultural Competence when providing healthcare. 10. Evaluate how psychosocial considerations affect clinical decision-making related to return to activity or participation. Credits: 2.00

HK 65000 - Seminar In Athletic Training

Credit Hours: 3.00. This course is a culminating experience in athletic training that will provide the student with a comprehensive review of athletic training foundational and specific knowledge regarding the Domains of Athletic Training. This course will help the student to prepare for athletic training practice. Permission of department required. Prerequisite: HK 53000 with B- or better.

Learning Outcomes: 1. Access, analyze, and differentiate between the essential documents of the national governing and regulatory bodies, including, but not limited to, the NATA Athletic Training Educational Competencies, BOC Standards of Professional Practice, the NATA Code of Ethics, and the BOC Role Delineation Study/Practice Analysis. 2. Produce a self-assessment of professional competence and create a professional development plan to maintain necessary credentials and promote life-long learning. 3. Summarize the tasks required for entry-level proficiency of athletic

trainers within the five domains of the BOC Role Delineation Study/Practice Analysis. 4. Evaluate the recommendations found in the NATA Position Statements, Official Statements, and Consensus Statements against current practice patterns. 5. Appraise current trends at the state, district and national level in athletic training involving clinical practice and education. Credits: 3.00

HK 66000 - Diagnostic Imaging In Athletic Training

Credit Hours: 1.00. This course provides students with an intensive study of radiology. Students will understand the types of diagnostic images commonly used in sports medicine, as well as basic interpretive techniques used in radiology. The course will emphasize the systematic approach for diagnostic images and interpretation of various diagnostic reports. Permission of department required. Prerequisite: HK 58000 with B- or better.

Learning Outcomes: 1. Understand the importance of imaging technology used in musculoskeletal care. 2. Evaluate the differences and capabilities of radiography, MRI, CT, bone scintigraphy, and ultrasonography. 3. Understand the importance of communicating with other healthcare providers regarding radiological studies. 4. Describe a radiological report and evaluate the findings related to a rehabilitative plan of care. 5. Use terms commonly found in diagnostic radiography, MRI, CT, bone scintigraphy, and ultrasonography. 6. Summarize the fundamental physical principles of radiography, MRI, CT, bone scintigraphy, and ultrasonography. 7. Categorize basic positions utilized for radiography. 8. Identify basic anatomy in routine radiography, MRI, CT, bone scintigraphy, and ultrasonography. 9. Compare the three types of densities usually seen on a radiograph and their significance. 10. Discuss the importance of correlating the study with the patient's history and physical exam. 11. Describe and then compare the different patterns of pathologic processes; including fractures, sprains, strains, effusions, stress reactions, DVT. 12. Differentiate the genetic anomalies commonly seen on radiographs. 13. Interpret routine radiographs and identify abnormalities. Credits: 1.00

HK 66800 - Seminar In Exercise Physiology

Credit Hours: 3.00. Review of literature; design and conduct of research in an area of current interest in exercise physiology. Permission of instructor required.

Credits: 3.00

HK 66900 - Exercise Metabolism And Biochemistry

Credit Hours: 3.00. This course is designed to provide students with practice using basic laboratory skills which can then be applied to more sophisticated techniques in biochemical analysis. The course is a laboratory-based class and will provide considerable "hands-on" experience. Lectures will focus on laboratory procedures, calculations, common lab problems and solutions, and laboratory safety procedures. Most of these measures will be made using an exercise context, i.e., standard exercise physiology tests (VO2 max, Wingate tests, etc.) will be performed to allow us to acquire blood samples for analysis. Prerequisites: HK 56800 or permission of the instructor.

Learning Outcomes: 1. Accurately weigh, measure and make calculations for mixing, diluting, and preparing solutions and buffers for use in the laboratory. 2. Safely perform hemoglobin, creatine kinase, cholesterol, glucose, lactate, mononuclear cell isolation, glycerol and citrate synthase assays. Credits: 3.00

HK 67000 - Advanced Topics In Motor Control

Credit Hours: 3.00. Selected topics in motor control. The subject matter will be data-based and drawn from research literature encompassing behavioral and physiological experimental paradigms. Students will critically evaluate and synthesize research to better understand the integration of individual systems in sensorimotor processing. Permission of instructor required.

Credits: 3.00

HK 67200 - Stress And Coping In Sport, Exercise And Physical Activity

Credit Hours: 3.00. This course examines stress, coping, and emotional processes as they relate to sport, exercise, physical activity, and the physical self. We will explore theoretical perspectives on stress and coping processes, examine the empirical evidence related to sport/exercise/physical activity/rehabilitation/physical self, and discuss applications of this knowledge. Course readings will cover topics including the

history and conceptual issues of psychosocial stress, conceptual and methodological issues of coping, individual differences in stress and coping, the influence of sociocultural and contextual factors, and vulnerability and resilience. Prerequisite: HK 57400 .

Learning Outcomes: 1. Be able to understand and explain major theories of stress, coping, and emotional processes, and how individual and contextual factors influence these process as they related to physical activity and the physical self. 2. Be able to critically evaluate research articles on stress, coping and emotion related to physical activity and the physical self. 3. Propose applications based on theoretical and empirical knowledge of stress/coping/emotion in physical activity settings. 4. Develop and refine critical thinking, writing, oral communication, and group facilitation skills. Credits: 3.00

HK 67400 - Special Topics In Sport And Exercise Psychology

Credit Hours: 3.00. An in-depth analysis of specific areas of theoretical and empirical work in sport or exercise psychology. Emphasis is placed on the critique, integration, and application of the literature reviewed. Rotating topics. Prerequisite: HK 57400 .

Credits: 3.00

HK 67800 - Motivational Processes In Sport And Exercise

Credit Hours: 3.00. Seminar focused on motivation in sport and exercise settings. Antecedents and consequences of motivated behavior are examined from theoretical, research, and application perspectives. Topics include participation motivation in sport, intrinsic/extrinsic orientations, achievement goals, causal attributions, group processes, and exercise motivation. Prerequisite: HK 57400 .

Credits: 3.00

HK 68300 - Patient Care Simulation In Athletic Training II

Credit Hours: 3.00. This course is designed to refine psychomotor skills and apply specific athletic training proficiencies integrating cognitive concepts and skills into progressively higher-level practical application. Skill integration will be achieved through successful completion and evaluation of patient care scenarios with emphasis placed on clinical reasoning skills of the student while making point-of-care decisions. Permission of department required. Prerequisite: HK 56300 with a B- or higher.

Learning Outcomes: 1. Evaluate common orthopedic conditions of the axial and appendicular skeleton, formulate a differential diagnosis, and recommend appropriate treatment strategies. 2. Evaluate patients with medical conditions involving the cardiovascular system, gastrointestinal system, dermatological system, endocrine system and determine a differential diagnosis with appropriate interventions, including potential for referral. 3. Evaluate general medical conditions and common non-orthopedic conditions of the head and face and determine a differential diagnosis with appropriate interventions, including potential for referral. 4. Screen a patients' general health and wellness, fitness, nutrition, gait, posture, and movement to address deficiencies in order to develop treatment strategies and referrals (where indicated). 5. Design an overall program to include fitness and wellness, nutrition, and general injury prevention strategies (including ergonomics). 6. Use baseline evaluation data of mobility, stability, strength, and balance to compose a therapeutic exercise program to address known deficits. 7. Select and incorporate therapeutic modalities into the rehabilitation plan of care. 8. Formulate a progressive rehabilitation plan using evidence-based interventions for common musculoskeletal injuries and conditions. 9. Instruct a patient in corrective exercise and a home exercise program. 10. Use patient and clinician oriented outcomes to make clinical decisions, including recommended interventions, activity progressions, and return to play decisions. 11. Educate and instruct a patient on general health and wellness behaviors and in the program to address deficiencies identified on a comprehensive fitness evaluation. 12. Communicate patient care status with stakeholders involved on the

healthcare team (other providers, parents, coaches, administrators). Credits: 3.00

HK 68600 - Theories And Concepts Of Stress Management

Credit Hours: 3.00. Development of a conceptual understanding of stress and stress management. A seminar focused on the review of literature regarding psychophysiology of stress, relationship between stress and disease, and methods of preventing/relieving stress, models of stress research, and issues surrounding stress research methodology. Prerequisite: BIOL 20300 , BIOL 20400 . Permission of instructor required.

Credits: 3.00

HK 69000 - Advanced Studies

Credit Hours: 1.00 to 6.00. Topic and credit to be arranged. Individual study for the doctoral student. Permission of instructor required.

Credits: 1.00 to 6.00

HK 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

HK 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Health Sciences

HSCI 10100 - Introduction To The Health Sciences Professions

Credit Hours: 2.00. This course will present an overview of the fields in both the preventive, Public Health, as well as the clinical, Private Health, sides of the Allied Health Science Professions as it presents the holistic nature of health maintenance. Students will have the opportunity to hear from health professionals practicing in the allied health and preprofessional concentrations as well as from School of Health Sciences faculty in their areas of expertise in the fields of industrial hygiene, ergonomics, radiological sciences, toxicology and environmental health science.

Credits: 2.00

HSCI 11000 - Careers And Research In Occupational And Environmental Health

Credit Hours: 1.00. The goal of this course is to familiarize students to the variety of research and careers available within the broad field of environmental and occupational health. The course will focus on two areas: current research in occupational and environmental health and careers in occupational and environmental health. This content will be delivered through interactive lectures and discussions with a variety of guest speakers as well as HSCI faculty. Advice and guidance on applying for internships/jobs in the field will also be provided. A highlight of the event is a student/professional networking event which will be coordinated towards the end of the program.

Learning Outcomes: 1. Understand and apply key terms within occupational and environmental health. 2. Describe current research in occupational and environmental health. 3. Describe the extent and variety of careers available in occupational and environmental health. 4. Deliver an oral presentation about a contemporary issue in occupational and environmental health. Credits: 1.00

HSCI 13000 - Introduction To Medical Laboratory Science

Credit Hours: 1.00. An introduction to career opportunities in medical technology. Preprofessional and professional requirements. A survey of the major clinical laboratory departments and their applications to patient care and management. Discussion and interpretation of some of the major diagnostic tests, i.e., for cardiac enzymes, cholesterol, blood cells, diabetes, and drug monitoring.

Learning Outcomes: 1. Have a clearer and more in depth understanding of the field of medical laboratory science. 2. Have an appreciation for the diverse disciplines and thus career opportunities within this field. 3. Have an opportunity to engage in and contribute to your own knowledge gain. 4. Have the ability to translate a simple job description into an exciting professional career. Credits: 1.00

HSCI 13100 - Introduction To Medical Terminology

Credit Hours: 3.00. This self-paced learning course is designed to familiarize the student with terms used in medicine. Each body system will be studied individually. Word roots, prefixes, and suffixes will be used to build words relating to the system. Diagnostic and symptomatic terms will be introduced. CTL:IPO 1820 Medical Terminology

Learning Outcomes: 1. Offer a comprehensive vocabulary that can be used in the medical field. 2. Become proficient in the medical language. 3. Build confidence with this vocabulary that will open new doors to each student. Credits: 3.00

HSCI 19000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for

freshmen students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 19501 - School Of Health Sciences Freshman Honors Seminar

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting designed to orient and familiarize Freshman HSCI Honors students with the School of Health Sciences including research areas and current topics in public health and biomedical research. Students will interact with guest speakers and expand their knowledge base in health science research. In addition to the seminar, students will be matched to a faculty mentor in a research area of their interest during the fall semester. Students will develop and design a research project with their faculty mentor (to be conducted in HSCI 19601 during the spring semester). In the spring semester, students will enroll in the seminar series (HSCI 19501) and in the research project course (HSCI 19601) to complete their project. Each student will be responsible for presenting and reporting on their research project during the spring seminar series. Permission of departmental required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Learn basic research skills such as how to do a literature search and report research findings. 3. Learn how to give and evaluate a research presentation. Credits: 1.00

HSCI 19601 - School Of Health Sciences Freshman Honors Project

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. In this course students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course during the spring semester concurrently with HSCI 19501 . During the fall semester in HSCI 19501 , students will be matched to a faculty mentor in the research area of their choice and complete a Project Description Form based upon the work to be completed during this course. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 20100 - Principles Of Public Health Science (UCC: STS)

Credit Hours: 3.00. This course begins with a definition of public health and a review of its history and its role in disease prevention. The basic tools of public health practice, vital statistics and epidemiology, are then presented. After gaining an understanding of how these tools are used in assessing the health status of a community, the etiology and control of infectious and non-infectious threats to our health will be examined. The course concludes with risk analysis as a basis for public health policy determination.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HSCI 20200 - Essentials Of Environmental, Occupational, And Radiological Health Sciences (UCC: STS)

Credit Hours: 3.00. This course is designed to introduce the essential concepts of Environmental, Occupational, and Radiological Health Science. The principles of these three fields including the environmental impacts on human health and disease, environmental toxicology, occupational health concerns, contemporary occupational health issues, radioactivity, and the human health effects of exposure to ionizing radiation will be discussed.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HSCI 22500 - Healthcare Leadership And Safety

Credit Hours: 3.00. This course will present topics related to effective leadership and management strategies within an organization. The course will focus on implementation of these strategies from a health and safety perspective. Specific leadership and management topics to be discussed include communication strategies, motivation, conflict management, negotiation, ethics, and professional development. In addition, important safety topics, such as fire & life safety, workplace violence, terrorism, hazard communication, and slip & fall hazards will also be addressed.

Learning Outcomes: 1. Discuss principles of and various levels of leadership. 2. Explain ethical issues in health & safety and justify a response to those issues. 3. Explain principles of motivation and effective application to health and safety leadership. 4. Relate conflict

management approaches to workplace issues. 5. Develop a fire and life safety plan for the workplace. 6. Recognize situations in which violence may occur in the workplace and identify strategies to prevent incidents from occurring. Credits: 3.00

HSCI 26000 - Clinical Urinalysis And Body Fluid

Credit Hours: 1.00 to 10.00. Clinical Urinalysis And Body Fluid.

Credits: 1.00 to 10.00

HSCI 29000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for sophomore students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 29501 - School Of Health Sciences Sophomore Honors Seminar

Credit Hours: 1.00. This course is for sophomore students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 29601 - School Of Health Sciences Sophomore Honors Project

Credit Hours: 1.00. This course is for Sophomore students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both fall and spring semesters (concurrently with HSCI 29501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 30500 - Basics Of Oncology

Credit Hours: 3.00. This course will introduce the student to the biology of cancer and some basics of oncology. Focus will be placed on what makes cancer different from normal tissues and how those differences can be leveraged for diagnostic and treatment purposes. This course will touch on topics of epidemiology, cancer biology, common therapeutic and diagnostic approaches, and other considerations of cancer care.

Learning Outcomes: 1. Identify the major risk factors of cancer. 2. Understand the difference between cancer and normal tissue. 3. Enumerate the major hallmarks of cancer. 4. Explain the link between cancer biology and diagnostic imaging. 5. Describe how cancer therapies target the hallmarks of cancer. Credits: 3.00

HSCI 31000 - Imaging In Medicine

Credit Hours: 3.00. This course will introduce students to develop essential understandings of all primary medical imaging techniques utilized in hospitals such as Computer tomography, X-ray imaging, MRI, Ultrasound and Nuclear medicine imaging modalities. The course will cover basic scientific principles of each modality and introduce their underlying clinical requirements and applications. In addition, this course introduces the student to human anatomy as seen in the transverse, coronal, and sagittal planes. Anatomy of the brain, thorax, abdomen, and pelvis will be studies using CT and MRI images. Normal anatomy, anatomic variants, and selected pathologies will be discussed in the various body regions.

Learning Outcomes: 1. Understand (at an elementary level) the physical basis and limitations of diagnostic imaging techniques and correctly distinguish between the following imaging techniques: plain X-rays, CT scans, MRI scans, PET scans and ultrasound. 2. Differentiate major anatomical regions and identify major anatomical structures in the transverse, coronal, and sagittal plane. 3.

Acquire basic knowledge of the fundamental principles and techniques of all the major imagine modalities including, CT, MRI, Ultrasound and nuclear medicine (PET and SPECT). 4. Understand basic sectional (transverse, sagittal and coronal) anatomy in medical imaging. Credits: 3.00

HSCI 31200 - Radiation Science Fundamentals

Credit Hours: 3.00. This course introduces principles and concepts related to nuclear energetics, radioactive decay, the interactions of ionizing radiation with matter, and the human health effects of exposure to ionizing radiation. Fundamental concepts related to atomic and sub-atomic physical processes as well as relevant aspects of modern physics are briefly reviewed. Students gain practical experience and enhance their understanding of radiation protection by participating in a radiological emergency response exercise (RERE).

Learning Outcomes: 1. Have a sense of scale for the atomic and sub-atomic world with regard to size and energies involved. 2. Recognize the major types of radioactive decay, calculate the rates of particle emission, and apply the theory of radioactive decay to decay chains, medical imaging applications and radio dating. 3. Describe and apply the mechanisms of interactions of radiation with matter. 4. Explain and apply mechanisms of radiation detection and quantification. 5. Know and quantify the biological effects of exposure to radiation using dosimetry principles. 6. Be proficient at manipulating the physical quantities and systems of units used in the radiological sciences and at applying critical thinking and problem-solving skills. Credits: 3.00

HSCI 31300 - Principles Of Radiation Detection And Measurement

Credit Hours: 2.00. Course presents an introduction to the principles of radiation detection and measurement, including statistical models, counting statistics, error analysis, detection limits, ionization chambers, proportional counters, GM counters, scintillation counters, gamma-ray spectroscopy, solid-state detectors, TLDs, track-etch and bubble detectors.

Learning Outcomes: 1. Understand the fundamentals of 3 types of ionization radiation. 2. Understand radiation safety. 3. Understand how to choose the radiation detection devices that fit for a specific purpose. 4. Understand what their capabilities and limitations are. 5. Understand how to interpret and use the output from radiation detectors. 6. Understand medical applications of radiation or radioactive materials. 7. Understand basic principles to detect the radioactive materials injected into human or animal subjects. 8. Understand different nuclear imaging procedures. 9. Understand fundamentals of molecular imaging. 10. Understand the receptor-based radiotracers for imaging and radiotherapy. Credits: 2.00

HSCI 33300 - Introduction To Immunology

Credit Hours: 3.00. Introduction to Immunology will meet twice weekly and provide an overview of this evolving field of science with an emphasis on the clinical implications and application of learned knowledge. The immunologic mechanisms associated with the normal and abnormal immune response will be discussed and students will put this knowledge into practice by directing their own case study. In addition, a number of common clinical concerns with respect to immunity will be reviewed. Furthermore, we will explore the critical role our knowledge of this branch of science plays in patient diagnosis, treatment and care both now and in the future.

Learning Outcomes: 1. Have solid understanding of the science of Immunology and the Immune Response. 2. Have an appreciation for the complexity of the immune system, its cellular components, its regulation and implications of its dysfunction. 3. Have a clearer understanding of the clinical applications and implications of the immune response. 4. Have enhanced knowledge of the course material. 5. Have the ability to transfer the written word into practical application of its principles. Credits: 3.00

HSCI 33400 - Lung Physiology And Medicine

Credit Hours: 2.00. This course will explore the normal functioning of the respiratory system, along with a variety of diseases and disorders affecting this system. Special emphasis will be placed upon diseases which result from, or are aggravated by, environmental pollutants. The course will begin with discussing the anatomy and physiology of the respiratory system. Individual lung disorders will then be discussed with consideration of the sources of air pollution contaminants and

the interaction of those contaminants with normal lung tissue.

Learning Outcomes: 1. Describe the normal anatomy and physiology of the respiratory system. 2. Identify the lung volumes and how lung volumes relate to lung capacities. 3. Describe the pathophysiology of major types of lung disorders. 4. Relate lung disorders to air pollution contaminants. Credits: 2.00

HSCI 33500 - Heart Physiology And Medicine

Credit Hours: 2.00. This course will provide a discussion about diseases affecting the heart and cardiovascular system. The normal anatomy and physiology of the heart and blood vessels with be discussed. Various diseases of the heart and vasculature, including atherosclerosis, cardiomyopathies, valvular heart disease, hypertension, and stroke will be explored. Included in the discussion of each disease process will be environmental agents, which are associated with disease development and progression.

Learning Outcomes: 1. Describe the normal anatomy of the hear. 2. Discuss the cardiac steps of the cardiac cycle. 3. Describe disease processes of the heart and blood vessels. 4. Identify environmental exposures associated with an increased risk of heart disease. Credits: 2.00

HSCI 33600 - Eye Physiology And Disease

Credit Hours: 2.00. This course will cover the fundamental structure and function of the eye and visual nervous system. Brief review lectures will be provided on basic cell biology and neuroscience to provide a strong foundation for topics such as phototransduction, retinal neural circuit function, and disease etiology. The first half of the course will be focused on the normal and healthy anatomy and physiology of the eye. The second half the course will be focused on eye and visual diseases and their associated pathophysiology and clinical manifestations. This part of the course will include lessons on eye imaging techniques and cutting-edge treatments used for detection and treatment of eye diseases. This course will be beneficial for any student interest in clinical or medical research, and highly recommended for those interested in optometry, ophthalmology, and visual research careers. Permission of department required.

Learning Outcomes: 1. Describe the normal anatomy of the eye and visual pathways in the brain. 2. Discuss neural circuit and cell signaling pathways in phototransduction. 3. Describe the cellular etiology of ocular disease processes. 4. Understand the basic approaches to studying and assessing eye function. Credits: 2.00

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed.

Learning Outcomes: 1. Discuss the historical background of the fields of occupational and environmental health and events leading to the establishment of current related regulations. 2. Understand the major principles and terminology of toxicology, epidemiology, and environmental exposure assessment as they are applied to environmental and occupational health. 3. Understand the units of airborne contaminant concentration, and be able to perform basic calculations and conversions involving these concentrations. 4. Identify classes of environmental contaminants, their major health effects, and typical environments where they are of concern. 5. Understand the operations of OSHA, NIOSH, EPA, ACGIH, their important interactions with industry, and their principle types of regulations and/or guidelines. 6. Understand the use of different types of respiratory protective equipment. Credits: 3.00

HSCI 34600 - Industrial Hygiene Engineering Control

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Describe/understand different approaches for controlling exposures in the occupational environment, and give hypothetical and real situations in terms of the

best control methods. 2. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a complete ventilation system. 3. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 4. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to prevent it in the workplace. 5. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 6. Synthesize and apply knowledge of the IH paradigm (AREC) in analyzing practical industrial hygiene/occupational health problems. Credits: 4.00

HSCI 34800 - Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. Sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Explain the rationale of the sampling strategy. 2. Perform basic sampling procedures for certain gases, vapors, particulates, noise, and heat, including proper selection, set-up, and operation of equipment. 3. Summarize the basic principles of the sampling procedures and explain why they function as they do. 4. Describe the limitations of sampling and analysis in real-world situations and how to deal with them. 5. Collect, analyze, interpret, and summarize laboratory data into a well-written report. 6. Describe the advantages as well as the difficulties of working together on a team. Credits: 3.00

HSCI 35300 - Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and frontline employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the frontline employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the frontline employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the frontline employees and upper management together in their vision of a safe and healthy workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. 6. Demonstrate group and team building strategies as it relates to health and safety. Credits: 3.00

HSCI 36000 - Everyday Toxicology: Poisonings From Clinics To Courtrooms

Credit Hours: 2.00. Exposure to chemicals happens every day in human life through the living environment and diet; yet the health impact and toxicological consequences of these exposures are often unknown to general populations. This 300-level course examines basic concepts of toxicology in human health as they apply to the exposure of environmental agents, e.g., chemicals, metals, and poisons in daily life and attempted poisoning in criminal cases and political assassins. With an emphasis on historical accounts of poisonings and case analyses, the course describes commonly encountered chemicals and poisons, their symptoms, clinical diagnosis, basic toxicological mechanisms, and medical interventions. Students will also learn some of the large-scale environmental and occupational incidents that have led to legal actions, and the role of toxicology in forensic investigation of purposed poisoning. The course is ideal to students who are inspired to become a future healthcare professional in any of the health-oriented pre-professional programs or students with majors in

biomedical health sciences, environmental and occupational health sciences, medical laboratory science, and/or public health.

Learning Outcomes: 1. Define the concepts of poisoning, forensics, and toxicology. 2. Describe the dose-response relationship and routes of exposure for common chemicals. 3. Discuss common poisons from a historical perspective. 4. Explain signs and symptoms, diagnosis, and treatments related to typical poisons. 5. Illustrate basic biological mechanisms leading to adverse health outcomes. 6. Understand professions and duties involved in the field of clinical toxicology. Credits: 2.00

HSCI 39000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for junior students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 39501 - School Of Health Sciences Junior Honors Seminar

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 39601 - School Of Health Sciences Junior Honors Project

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both the fall and spring semesters (and concurrently with HSCI 39501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of departmental required.

Learning Outcomes: 1. Gain an understanding of the research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

HSCI 40000 - International Special Topics

Credit Hours: 1.00 to 8.00. Courses taken during an International experience that is recognized by the University. Permission of Department required.

Credits: 1.00 to 8.00

HSCI 41500 - Introduction To Nuclear And Radiological Source Security

Credit Hours: 3.00. The course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the state and facility level, establishing nuclear security culture in different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. Group exercises and simulations in applied nuclear security scenarios will complement lectures. This course is designed for both "technical" (engineering and science) and "non-technical" (policy) students and the interaction between students of different backgrounds is encouraged.

Learning Outcomes: 1. Obtain a broad picture of nuclear security components and their interconnections, and of the planning of nuclear security activities at the state and facility level. 2. Learn the basic concept of nuclear security. 3. Learn the basics of nuclear security planning

at the facility and state level. 4. Learn proliferation efforts, framing them within the historical and security-related context. 5. Create a foundational understanding of relevent security, safeguards and nonproliferation treaties and agreements. 6. Leverage existing technical knowledge in coming to policy conclusions. 7. Develop both a regime and state specific knowledge base. 8. Illustrate understanding through technical and policy oriented exercises. 9. Expand relevant technical knowledge base as well as introduce students to new instrumentation and concepts. Credits: 3.00

HSCI 42000 - Applied Anatomy For Medicine

Credit Hours: 4.00. With a focus on preparing students to be practitioners of health sciences, Applied Anatomy for Medicine (HSCI 42000) will build upon the foundational knowledge of form and function obtained in prerequisite courses through enhancement of the relationship between bony structures, musculature, innervation, vascular perfusion, and interconnectedness with respect to human health. The significance of regional anatomy and important anatomical landmarks from a clinical perspective will be learned. The incorporation of student driven dissection will promote a more comprehensive understanding of the correlation between structure, function, dysfunction and disease signalments. The integration of clinical application and case study investigation will facilitate the transition from learner to practitioner.

Learning Outcomes: 1. Identify the bones, associated bony prominences, muscles, innervation, action and vascular perfusion. 2. Identify and demonstrate the relationship between superficial and deep structures including dermatome maps. 3. Identify regional anatomy and important clinical landmarks, and aid in deciphering imaging diagnostics. 4. Identify anatomical design both in health as well as modifications due to disease. 5. Understand the critical role anatomical design plays in the maintenance of health, development and manifestation of disease, diagnostic assessment, intervention and treatment. Credits: 4.00

HSCI 44400 - Exposure Assessment In OEHS

Credit Hours: 3.00. Exposure assessment is an essential component of Environmental Health Science and industrial hygiene. This course provides students basic scientific knowledge of exposure assessment, with emphasis on practical aspects of exposure science, including study design, data and measurement collection, data analysis, and results interpretation and presentation. Course topics include major exposure media and pathways (air, water, food, soil, etc.) and important exposure routes (inhalation, ingestion, dermal absorption); exposure measurement and assessment; strengths and weaknesses of various exposure assessment techniques, how to link exposure assessment with environmental health, and human subject research in exposure studies. The course includes case studies and group projects. Students are expected to develop entry-level skills for designing exposure studies applicable to human exposure monitoring, epidemiologic investigations and health risk assessment.

Learning Outcomes: 1. Describe basic components of exposure assessment studies. 2. Design a study to conduct basic assessments of exposure to chemical hazards at workplace or in a community setting. 3. Obtain and analyze existing data, collect and analyze measurement data, prepare technical reports, and present results. 4. Discuss ethical and professional responsibilities in exposure studies. 5. Function effectively on a team that identify, evaluate and solve problems related to exposures in occupational and environmental settings. Credits: 3.00

HSCI 44500 - Industrial Hygiene Internship

Credit Hours: 2.00. Discussion class based on applied work experience as an industrial hygiene assistant or technician at an industrial, consulting, hospital, government, or education and research institution. Topics covered also include professional and ethical aspects derived from students' work experiences. Written and oral reports as well as other classroom assignments. Restricted to industrial hygiene majors who have completed an acceptable industrial hygiene work experience.

Credits: 2.00

HSCI 44600 - Applied Industrial Hygiene

Credit Hours: 3.00. This course allows the student to synthesize his or her basic industrial hygiene fundamentals to understand how they apply in the real world. Issues faced by industrial hygienists will be addressed by a variety of guest speakers. Class projects add to the diversity of this senior capstone course.

Credits: 3.00

HSCI 44700 - Global Workplace Health

Credit Hours: 2.00. This course will examine health and safety

issues, particularly those which occur in the work setting, in various countries around the world. A particular focus will be toward developing countries in which the regulatory environment and resources to control hazards are less than those of more developed countries. Students will participate through an established professional organization. They will virtually work on specific projects in various countries, with the goal of improving the health and safety environment.

Learning Outcomes: 1. Identify exposures to harmful environmental agents which may adversely affect human health. 2. Apply their knowledge and skills of occupational health to recommend methods to reduce exposure to harmful environmental agents. 3. Be able to function as part of team to address issues involving human health. 4. Be able to describe the differences in exposure to hazardous agents for different parts of the world. 5. Obtain a knowledge of current events and identify how the events relate to disparities in human health across different cultures and countries. 6. Obtain an understanding of professional ethics in relation to differing health and safety policies.

Credits: 2.00

HSCI 45100 - Clinical Biochemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide principles of biochemistry for clinical application for medical technologists. The course encompasses an introduction to carbohydrate, amino acid, and lipid metabolism. Also included are lectures on basic endocrinology, enzymes, and biosynthesis of steroid hormones. Physiological principles are stressed with respect to liver, lung, and kidney function. Special emphasis is placed on correlation of the theoretical and clinical areas.

Credits: 1.00 to 10.00

HSCI 45200 - Clinical Chemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide the medical technologist with the principles and application of clinical chemistry. Methods of instrumental analysis include a variety of automated procedures, electrophoresis, immunoelectrophoresis, immunodiffusion, radioisotopes, steroids, hormone assay, and toxicology. Quality control for clinical chemistry is included. Supervised clinical laboratory experience is offered, with students rotating through the various areas of clinical chemistry on a sequential rotational basis.

Credits: 1.00 to 10.00

HSCI 45300 - Clinical Hematology

Credit Hours: 1.00 to 10.00. Study of the functions, maturation, and morphology of blood cells. Blood cells, platelets, and reticulocyte counting procedure. Experiences in the study of cellular content of other body fluids are offered. Lectures and laboratory are designed to teach techniques of sedimentation rates, hematocrits, corpuscular indices, hemoglobin red cell fragility, and special staining procedures. Also, routine and special coagulation studies are taught. Supervised experience in clinical hematology offers opportunities for study in routine and special hematology and coagulation procedures.

Credits: 1.00 to 10.00

HSCI 45400 - Clinical Immunohematology

Credit Hours: 1.00 to 10.00. A review of serologic principles and technical fundamentals of transfusion practice; a comprehensive consideration of all blood groups, with emphasis on ABO and Rh-Hr blood group systems. Extensive practice is gained in pre-transfusion techniques and antibody identification in the laboratory. Other blood types and antigen-antibody relationships are taught in laboratory and lectures. Also included are blood donor room procedures; preparation of blood components; correlation of blood component therapy with disease states; quality control of all reagents, procedures, and equipment used; and laboratory safety measures, all of which offer the best patient care and protection of laboratory personnel.

Credits: 1.00 to 10.00

HSCI 45500 - Clinical Microbiology

Credit Hours: 1.00 to 10.00. Lectures and clinical laboratory experience in diagnostic procedures as aids to the diagnosis of human disease. Proper selection of techniques for the isolation and identification of medically important bacteria. Special emphasis is placed on newer methods for anaerobic bacteria identification. Also includes lectures and laboratory identification in the fields of mycology and microbacteriology, with emphasis on isolation and identification. Practical applications of fluorescent antibody tests are performed.

Credits: 1.00 to 10.00

HSCI 45700 - Clinical Parasitology

Credit Hours: 1.00 to 10.00. Techniques of specimen examination, identification of cysts and ova, life cycles of parasites.

Credits: 1.00 to 10.00

HSCI 45800 - Clinical Serology

Credit Hours: 1.00 to 10.00. Lectures and a laboratory experience in serology, including the preparation of antigen, flocculation tests for syphilis, heterophile antibody tests, creative proteins, RA test, FTA, rubella testing. Also included are lectures in immunology that include classifications of immunoglobulins; mechanism of antibody formation; immune response; types of antigen-antibody reactions; and theories of radioimmunoassay.

Credits: 1.00 to 10.00

HSCI 46000 - Clinical Urinalysis

Credit Hours: 1.00 to 10.00. Routine analysis, chemical tests, sediment identification, renal function tests, pregnancy tests.

Credits: 1.00 to 10.00

HSCI 46500 - Introduction To Laboratory Education And Management

Credit Hours: 1.00 to 3.00. A study of the principles and techniques of clinical instruction, and inservice and continuing education as well as administration and supervision.

Credits: 1.00 to 3.00

HSCI 48500 - Health Physics Internship

Credit Hours: 1.00 to 8.00. Applied work experience as a health physics assistant or technician at a nuclear power generating station, government laboratory, hospital, or education and research institution. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 49000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for senior students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 49200 - Professional Experience In Health Sciences Internship

Credit Hours: 0.00 to 3.00. Professional experience in Health Sciences. This experiential offering is coordinated by Health Sciences in cooperation with participating employers. Students will submit company evaluations related to the experience or summary reports and assignments related to professional development in Occupational, Environmental or other Health Sciences areas. Permission of department is required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in a professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase knowledge of the application of occupational, environmental or other areas of health sciences in a professional capacity.

Credits: 0.00 to 3.00

HSCI 49501 - School Of Health Sciences Senior Honors Seminar

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 49601 - School Of Health Sciences Senior Honors Project

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students will enroll in this course in both fall and spring semesters (and concurrently with HSCI 49501 in the spring semester). An updated Project Description Form will be at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 51400 - Radiation Instrumentation Laboratory

Credit Hours: 2.00. Laboratory techniques required for the application of radiation and radionuclides.

Credits: 2.00

HSCI 51500 - Introduction To Nuclear And Radiological Source Security

Credit Hours: 3.00. This course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the State and facility level, establishing nuclear security culture in different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. The integration of safety and security and the use of alternative technologies will also be

covered. Group exercises and simulations in applied nuclear security scenarios will complement lectures given by a number of national and international experts. This course is designed for both "technical" (engineering and science) and "non-technical" (policy) students and the interaction between students of different backgrounds is encouraged.

Learning Outcomes: 1. To introduce students to the basic concept of nuclear security. 2. To introduce students to the basics of nuclear security planning at the facility and state level. 3. Introduce students to proliferation efforts, framing them within the historical and security-related context. 4. Create a foundational understanding of relevant security, safeguards and nonproliferation treaties and agreements. 5. Leverage existing technical knowledge in coming to policy conclusions. 6. Develop both a regime and state specific knowledge base. 7. Illustrate understanding through technical and policy oriented exercises. 8. Expand relevant technical knowledge base as well as introduce students to new instrumentation and concepts. Credits: 3.00

HSCI 51600 - Molecular Imaging-Nuclear Medicine

Credit Hours: 2.00. This course is related to molecular imaging by SPECT (single-photon emission computed tomography) and/or PET (positron emission tomography). This course is particularly useful for graduate and senior undergraduate students in the medical physics programs. It has been offered to MP and HP graduate students over the last 4 years (2014 - 2018) as a part of the 3-credit molecular imaging course with magnetic resonance spectroscopy (MRS: 1-credit) taught by Dr. Ulrike Dydak, computed tomography (CT: 1-credit) taught by Dr. Keith Stantz, and nuclear medicine (NM: 1-credit) taught by Dr. Shuang Liu. In the future, it will be expanded the "Nuclear Medicine" section as a 2-credit course on the basis on the previous lectures. This course focuses on recent development in nuclear medicine techniques for noninvasive imaging of brain diseases, cancer, and heart diseases. This course is delivered as 50-min lectures twice a week. Students are expected to spend more time for homework and literature reading.

Learning Outcomes: 1. Understand the basic concept of molecular imaging, techniques for isotope production, and the use of radiolabeled biomolecules (e.g. antibodies and small biomolecules) for diagnosis of brain diseases, cancer and heart diseases, and for target-specific radiotherapy with the receptor-based radiotracers. Credits: 2.00

HSCI 52000 - Risk Assessment In Environmental Health

Credit Hours: 3.00. Risk assessment as used in environmental health is the scientific process used to determine the extent of human exposure to an environmental hazard, and the type and quantify of health effects that are likely to result from these exposures. Information derived from risk assessments are used as the basis for setting regulatory guidelines, determinations of whether a given situation is "safe" or "hazardous" throughout government and industry. This course will cover the process and steps needed to performing a risk assessment, how risk communication can be used to discuss results of a risk assessment, and the use of risk management as a tool to translate results of a risk assessment into policy.

Learning Outcomes: 1. Define risk assessment and describe the general processes and methods used for risk assessment. 2. Discuss and analyze how issues such as variability and uncertainty impact risk assessments. 3. Define risk communication and describe what features improve (or worsen) its effectiveness. 4. Describe the process of hazard management including its strengths and weaknesses in terms of ensuring protection of human health. 5. Perform a risk assessment on an environmental hazard and communicate the results of this assessment. Credits: 3.00

HSCI 52500 - Introduction To Statistical And Computational Approaches For Health Sciences

Credit Hours: 3.00. Statistical methods are important for data analysis and understanding the trends in the dataset.
This course will provide an introduction to the analysis of biological data in a statistical framework using standard computational methods. The course will have a lecture and hands-on component to introduce students to topics and then utilize them to solve typical problems in Health Sciences. In addition to learning the statistical concepts, the students will also be introduced to computational approaches for data analysis. The combination of statistical and computational concepts along with the hands-on experience will help students in their research projects. The topics covered include data representation, sample statistics, probability, common discrete and continuous distribution, confidence interval estimation, experimental design, analysis of variance, statistical methods for hypothesis testing, linear and logistic regression, correlation, power analysis, graph theory, network analysis, omics-based

analysis, and data visualization. The course is ideal for Health Sciences students who perform data analysis and are interested in implementing these approaches in their research. Permission of department required.

Learning Outcomes: 1. Describe the fundamentals of statistics and computational concepts useful for research. 2. Think critically and analyze methods of data collection, statistical tools for data analysis, and presentation of results. 3. Evaluate systematically statistical procedures and summaries. 4. Learn methods for computational analysis and data visualization. 5. Participate actively in developing projects to apply statistical and computational approaches. Credits: 3.00

HSCI 52600 - Principles Of Health Physics And Dosimetry

Credit Hours: 3.00. Principles of health physics, radiation dosimetry, and radiation shielding. Topics covered include natural and man-made radiation environments, operational radiation quantities and units, radiation protection philosophy, risk and dose limits, dose-response models, mortality estimates and risk calculations.

Credits: 3.00

HSCI 53400 - Applied Health Physics

Credit Hours: 3.00. Lecture and case studies related to the application of radiation dosimetry and shielding principles to the practice of health physics, including environmental and in-plant monitoring, emergency response, decommissioning and decontamination, operational criteria for meeting ALARA exposure limits, and the transport, disposal and treatment of radioactive waste. Epidemiological studies related to radiological accidents and nuclear power are also examined.

Credits: 3.00

HSCI 54000 - Radiation Biology

Credit Hours: 3.00. Effects of ionizing radiation on living systems at the molecular, cellular and tissue levels. Biological basis for radiation therapy treatment planning and radiation protection.

Learning Outcomes: 1. Understand the interaction of radiation with cells. 2. Understand the biological, chemical, and physical factors that modulate the interaction of radiation with cells. 3. Understand the mechanisms of cell killing by radiation. 4. Understand the repair of radiation damage. 5. Understand the genetic effects of radiation. 6. Understand the carcinogenic effects of radiation. 7. Understand the effects of radiation on different tissues. 8. Understand the effects of acute whole body irradiation. 9. Understand the use of radiation in cancer therapy. 10. Understand the effects of radiation on development. 11. Understand the biology of radiation carcinogenesis. 12. Understand the risk of cancer in populations exposed to low doses of radiation. Credits: 3.00

HSCI 54100 - Human Sectional Anatomy

Credit Hours: 2.00. This course connects anatomy and physiology with medical imaging. The primary focus is on anatomic imaging methods such as Computed Tomography (CT) and Magnetic Resonance Imaging (MRI) but includes Positron Emission Tomography (PET) and Ultrasound (US) images when applicable or are in common use as part of clinical care.

Learning Outcomes: 1. Identify and label the anatomy associated with the topical outline in diagnostic CT/MRI images. 2. Critique CT/MRI images for the presence or absence of anatomy and pathology to decide whether the image is appropriately positioned and diagnostic for radiological assessment. 3. Locate anatomical systems and possible pathology based on background knowledge of typical anatomical locations and identify normal course of system function for appropriate positioning, patient instructions, and CT/MRI imaging. Credits: 2.00

HSCI 54400 - Advanced Topics In Exposure Assessment

Credit Hours: 2.00. The course will prepare students to use techniques of exposure assessment as it relates to environmental and occupational epidemiological studies as well as regulatory compliance at workplace and in community settings, risk science, and susceptibility factors. It will include exposure assessment study design, the strengths and weaknesses of various exposure assessment techniques, and how to link exposure assessment with occupational and environmental health. Core concepts to be covered include exposure variability and its implications for reconstructing historical exposures, the choice of exposure metric, surrogate measures and measurement errors, exposure modeling, and biomarkers of exposure. The course emphasizes critical and analytical discussions of seminal exposure assessment literature. Students are required to critically evaluate exposure

assessment strategies in selected epidemiological studies from the peer-reviewed literature. Students participate in the class through presentations, class discussions, and a semester project.

Learning Outcomes: 1. Explain the nature of exposure problems in reconstructing historical exposures in occupational and non-occupational settings. 2. Recognize the implications of sparse and missing data and the choice of the exposure-response relationship. 3. Design a testable hypothesis and execute research activity to investigate exposure to environmental contaminants at workplace or in a community, and interpret data obtained from such studies. 4. Be aware of the modeling tools for quantifying exposures. 5. Evaluate critically exposure assessment strategies in occupational and environmental epidemiological studies and risk assessments. Credits: 2.00

HSCI 54600 - Advanced Industrial Hygiene Control Technology

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros & cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand potential sources of indoor air quality problems, physical symptoms which may be experienced by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a small ventilation system. Credits: 4.00

HSCI 54601 - Advanced Industrial Hygiene Control Technology Project

Credit Hours: 1.00. Students study the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Permission of instructor required.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating recognition, evaluation and control of occupational hazards in the workplace. Credits: 1.00

HSCI 54700 - Fundamentals Of Epidemiology

Credit Hours: 3.00. This course is an introduction to epidemiology, which is the study of the patterns, causes, and impact of disease in populations. Epidemiology is increasingly important for public health and clinical medicine research and policy. This course will discuss the basic principles and methods of epidemiology, including measurements of disease occurrence and association, study designs, and determination of causality. Contemporary examples will be used to illustrate the application of these concepts, with an emphasis on environmental causes of disease.

Learning Outcomes: 1. Describe major models

of disease causation and prevention. 2. Calculate the extent of disease in populations. 3. Identify and utilize appropriate epidemiologic study designs. 4. Estimate the association between exposure and disease. 5. Differentiate between association and causation. 6. Explain and employ the use of epidemiologic tools in public health and clinical practice. 7. Review and critique basic epidemiology studies.

Credits: 3.00

HSCI 54800 - Advanced Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros and cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand the potential sources of indoor air quality problems, physical symptoms which may be experiences by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans and balance/test such systems, culminating in the ability to design a small ventilation system.

Credits: 3.00

HSCI 54801 - Advanced Industrial Hygiene Instrumentation Techniques Project

Credit Hours: 1.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data. Permission of instructor required.

Learning Outcomes: 1. Understand the limitations of sampling and analysis in real world situations and learn how to deal with them. 2. Collect, analyze interpret and summarize laboratory data into a well-written report. 3. Appreciate the advantages as well as the difficulties of working together on a team.

Credits: 1.00

HSCI 55100 - Physical Agents In Environmental Health

Credit Hours: 3.00. Physical characterization and biological interactions of non-ionizing radiation with emphasis on the adverse effects of human exposure. Topics include source characterization, environmental exposure assessment, measurement instrumentation, toxicological and epidemiological findings, control strategies.

Credits: 3.00

HSCI 55200 - Introduction To Aerosol Science

Credit Hours: 3.00. The principles of aerosol behavior and sampling, with particular emphasis on applications in the health sciences. Topics include aerosol aerodynamics, aerosol filtration, pulmonary deposition of aerosols, methods of environmental sampling, and generation of laboratory aerosols.

Credits: 3.00

HSCI 55300 - Advanced Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization, protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often

forms a bridge between upper management and front line employees. As such, the successful health and safety manager needs to skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the front line employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the front line employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the front line employees and upper management together in their vision of a safe and health workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. Credits: 3.00

HSCI 55301 - Advanced Occupational Safety Management And Culture Project

Credit Hours: 1.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and front-line employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. Permission of instructor required.

Learning Outcomes: 1. Identify, review, and critically evaluate current literature in the field of occupational safety management and culture. 2. Collaborate the peers on a group project to review a real safety management program. Credits: 1.00

HSCI 56000 - Toxicology

Credit Hours: 3.00. (MCMP 56000) Introduction to general principles of toxicology, target organ toxicity, and safety evaluation. Covers toxicity of metals, solvents, pesticides, gases, dusts, and food additives.

Credits: 3.00

HSCI 56200 - Analytical Toxicology And Pathology

Credit Hours: 3.00. Historically, toxicology has been defined as the study of the adverse effects of xenobiotics. Today, toxicology encompasses much broader areas, including the study of endogenous compounds, physical agents, and even using toxicants as research tools. Basic and introductory toxicology courses cover the principles of toxicant metabolism and target organ toxicity. This course, Analytical Toxicology and Toxicologic Pathology is focused on the research and clinical applications of these principles. Two major areas will be covered: (1) principles of toxicant detection in biological matrices and (2) the assessment of pathological effects caused by toxicant exposure in biological systems. Laboratory sessions associated with each major topic allow students to have hands-on experience in these advanced analytical and pathological technologies. This course provides a unique opportunity for students to learn techniques that research and clinical toxicologists use daily in scientific or clinical laboratories. The course is suitable to both graduate and upper-class undergraduate students who are interested in toxicology, forensic science, veterinary medicine, environmental and occupational health, food toxicity, pharmaceutical drug testing, medical laboratory science, and general human and children's health.

Learning Outcomes: 1. Have a basic understanding of how to measure toxicant levels. 2. Have essential knowledge in evaluating histopathological alterations of major organs and tissues upon exposure to typical toxicants. 3. Be able to assess and interpret the adverse effects of toxicants in mammalian systems. Credits: 3.00

HSCI 57000 - Introduction To Medical Diagnostic Imaging

Credit Hours: 3.00. This course teaches the fundamentals of medical imaging, including the basic physics and engineering associated with each imaging modality (CT, MRI, PET, and ultrasound), as well as mathematics and computational tools associated with image reconstruction and image processing. The course is intended for students in health sciences, biomedical engineering, physics, and life sciences.

Credits: 3.00

HSCI 57100 - Basics Of Magnetic Resonance Spectroscopy

Credit Hours: 3.00. Students will learn the basics of Magnetic Resonance Spectroscopy (MRS), practicalities of the MRS exam including hands-on experience, as well as examples of several clinical and research applications of MRS. The course teaches theory, practical aspects and applications of MRS and

is intended for graduate students who either specialize in the field of medical imaging, or who would like to use MRS as a tool for their research. A thorough basis will be provided to understand signal generation and signal processing in MRS with particular emphasis on current techniques used in human in vivo MRS. Students will become familiar with the most relevant metabolites and their physiological functions detectable by MRS in the brain and other organs (mostly liver, kidney, muscle, prostate, breast). Further, students will learn different approaches for analysis and quantification of MRS data and become familiar with several different analysis tools available. Permission of instructor required.

Learning Outcomes: 1. Describe the basics of signal generation and detection in MRS. 2. Distinguish between several localization techniques and when to apply each. 3. Implement and apply MRS parameters and protocols for specific applications. 4. Compare and contrast the similarities and differences of different nuclei used in MRS (1H, 31P, 23Na). 5. Implement and apply several MRS processing tools. 6. Summarize the techniques and challenges of MRS signal quantification. 7. Compare and contrast the advantages and limitations of MRS to other imaging modalities. 8. Implement and apply several MRS analysis tools (e.g. LCModel). 9. Set up and acquire human subject MRS data (using a 3T Siemens Prisma scanner). Credits: 3.00

HSCI 57200 - Radiation Oncology Physics

Credit Hours: 3.00. An introductory course to the physical principles, equipment, processes, imaging guidance, and clinical techniques involved in the treatment of cancer patients with external radiation beams and radioactive sources. Various external radiation beam types and their energy deposition characteristics are described. Treatment planning dose calculation algorithms and point dose calculations are discussed. The use of international dosimetry protocols for radiation beam calibration are covered in detail.

Learning Outcomes: 1. Perform dose calculations used in radiation therapy and to derive output factor (MU) to obtain these point dose calculations. 2. Describe the fundamentals of computer-based treatment planning in 1, 2, and 3 dimensions. 3. Understand and apply techniques used to plan treatment when using photons, electron, and proton beams. 4. Describe the rationale and fundamentals of common methods and special techniques used in radiation therapy, including static accelerators, IMRT, Tomotherapy, Gamma knife, CyberKnife, Brachytherapy, TBI, SBRT, and similar. Credits: 3.00

HSCI 57400 - Medical Health Physics

Credit Hours: 2.00. This course introduces the legislation and international and national recommendations relevant to the practice of radiation protection in medicine. Principles for the design of radiation use monitoring programs and shielding for radiation facilities is covered. Radiation risk avoidance and management for staff, patients and their families, and members of the public are discussed.

Learning Outcomes: 1. Introduce the student to the application of health physics in medicine and the role of the health physicist and medical physicist in this environment. Real-life experiences will be provided by lecturers to connect the professional and technical aspects of medical health physics to the clinical environment. 2. Identify issues and problems that would not normally be taught in the pure academic setting. Credits: 2.00

HSCI 57500 - Introduction To Environmental Health

Credit Hours: 3.00. An introduction to chemical, physical and biological factors in the environment that affect the health of the community. This course examines health issues, scientific understanding of causes and approaches to the control of major environmental health problems in industrialized and developed countries. This is a core course for the Masters in Public Health (MPH) degree at Purdue.

Learning Outcomes: 1. Define the major sources and types of environmental agents. 2. Discuss the transport and fate of these agents in the environment. 3. Identify the carriers or vectors that promote the transfer of these agents from the environment to the human. 4. Describe how these agents interact with biological systems, and the mechanisms by which they exert adverse health effects. 5. Explain and use models for prediction of the magnitude of adverse effects in biological systems. 6. Identify and define the steps in the

risk-assessment and risk-management processes. 7. Describe the steps in the regulatory process in terms of risk assessment and risk management and identify current legislation and regulation regarding environmental issues. 8. Identify significant gaps in the current knowledge base concerning the health effects of environmental agents and identify areas of uncertainty in the risk-assessment process. Credits: 3.00

HSCI 58000 - Occupational Biomechanics And Ergonomics

Credit Hours: 2.00. Occupational safety is a cross-disciplinary area concerned with protecting the safety, health and welfare of people engaged in work. Occupational ergonomics is a branch of science that focuses on optimizing the relationships between workers and their work environment. This course focuses on the principles and applications of safety and ergonomics as it applies to workers. The first part of the course will consist of lectures on the fundamentals of safety standards and liability and the development of work-related musculoskeletal disorders, ergonomic risk factors including work practices, tools and workstation design. The last part will consist of identification and use of safety and ergonomic controls to reduce and prevent work-related fatalities, injuries, and musculoskeletal disorders.

Learning Outcomes: 1. Describe ergonomic risk factors in the workplace. 2. Analyze work stations and identify ergonomic risk factors. 3. Develop solutions to minimize identified ergonomic risk factors. 4. Describe cumulative trauma disorders which may occur due to exposure to poor ergonomic conditions. 5. Explain how people perceive & understand information, and use this knowledge to improve work flow. Credits: 2.00

HSCI 58001 - Occupational Biomechanics And Ergonomics Laboratory

Credit Hours: 1.00. This course will be the laboratory component for HSCI 58000. Occupational Biomechanics and Ergonomics. Laboratory exercises will accompany and illustrate each topic discussed during the lecture course. An ergonomic project will allow the students to evaluate an individual performing a job and provide ergonomic recommendations to improve the work situation. The course will also emphasize report writing, teamwork, and communication skills.

Learning Outcomes: 1. Evaluate scientific literature to identify the strengths & weaknesses of study designs, interpretation of results, and implications for the future. 2. Display techniques for performing ergonomic measurements. 3. Evaluate ergonomic hazards of the workplace and make recommendations to correct the identified hazards. 4. Write professional quality reports summarizing laboratory procedures, clearly display experiment results, and interpret those results in the context of the principles learned in the HSCI 58000 lectures. Credits: 1.00

HSCI 59000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for seniors and graduate students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 61300 - Professionalism And Professional Development In Health Sciences

Credit Hours: 1.00. Professionalism is a skill set necessary for graduate student success and future career development. Professionalism consists of multiple attributes allowing for the development of effective and productive careers while also contributing to positive workplace environments. Specifically, these skill sets benefit all disciplines and career paths. This course will provide students with an overview of career development, soft skills, responsible conduct of research, and diversity, equity, and inclusion. This 1-credit course is specifically designed to supplement initial RCR training students receive in GRAD61200. The course is designed to support additional RCR training to meet expectations for best practices by NIH and other funding agencies. It will focus on professionalism and professional development for new students in their MS and Ph.D. programs across the Health Sciences. It will be delivered as a 50-min. combined lecture and class discussion once a week. All Ph.D. and thesis-based MS students in the School of Health Sciences are expected to take this course, typically in the Spring of their second or third year. Permission from department required. Prerequisite: GRAD 61200.

Learning Outcomes: 1. Describe the fundamentals of professionalism and professional conduct as both a trainee and within one's own career. 2. Demonstrate responsible conduct of research and diversity, equity, and inclusion through participation in course discussions. 3. Actively participate in the development of multiple soft skills including

networking, negotiation, interview, leadership, conflict resolution, networking, and social media management. 4. Critically think and analyze complex professional situations often occurring in scientific careers. Credits: 1.00

HSCI 62500 - Grant Writing For Health Sciences

Credit Hours: 1.00. The ability to clearly communicate research concepts, ideas, and hypotheses is an essential skill for all researchers. Specifically, concise expression of complex research rationale, experimental design, and innovation through the grant application process benefits all disciplines and career paths. This course will provide students with an overview of the entire grant writing process through expert lectures, active discussion, writing activities, and peer-review processes.

Learning Outcomes: 1. Describe the federal funding systems and grant submission process. 2. Demonstrate scientific writing and critique skills as applied to grant proposals. 3. Develop a National Institute of Health R21 grant proposal. 4. Actively participate in the grant proposal review process by critiquing other's work. Credits: 1.00

HSCI 67100 - Biochemical Toxicology

Credit Hours: 2.00. Toxicologists in all fields are concerned with mechanism of action or how a specific toxicant or class of toxicants produces toxicity. Introductory toxicology courses typically focus on the adverse effects exerted by a specific compound, with some examination of mechanisms. The entire focus of this upper-level graduate course is on the "how" and the "why", or a detailed examination of biochemical mechanism of toxicity. There will be some lectures, but the majority of the course will consist of student-led discussions on specific mechanisms of action. Further, students will write a review-style article on a chosen mechanism of action. Prerequisite: HSCI 56000 .

Learning Outcomes: 1. Orally describe mechanisms of action for major classes of toxicants. 2. Draft a written manuscript that critically assesses data on a specific mechanism of action. Credits: 2.00

HSCI 67200 - MRI Quality Assurance Internship I

Credit Hours: 3.00. This internship course provides didactic training and practical experience in clinical diagnostic medical physics. Students will spend 3-4 hours per week learning the responsibilities of a medical physicist in MRI quality assurance (QA) such as MRI system performance testing, setting up weekly MRI QA procedures, analysis of MRI QA data, and annual clinical system evaluations. In Part I students will observe and review the weekly MRI QA tests performed by the MR Technologists on clinical MRI scanners and be involved with data analysis of these tests (image quality assessment, reporting). Annual MRI system performance evaluations of different clinical scanners will be observed and discussed. This includes assessing magnetic field homogeneity, slice position accuracy and slice thickness accuracy, and performance of radio frequency coil tests on the various coils available at different clinical MRI sites in the Indianapolis area. Students will also work as a team with the instructors on a course project to develop and evaluate advanced MR QA methods and procedures. Prerequisites: HSCI 57000. Having documented experience in running an MRI scanner, e.g., having primary operator status on one of the research scanners at Purdue or IU. Level II MRI Safety Training: http://www.indiana.edu/~mri/safety_nonIU/safety.html. Permission of instructor required.

Learning Outcomes: 1. Understand the basic elements and clinical rationale in the QA program for MRI scanners. 2. Understand the significance of frequency and transmitter gain stability, geometric accuracy, slice position accuracy, high contrast resolution, low contrast detectability and artifacts, etc. 3. Understand the requirements for weekly and annual QA tests as required by ACR. Credits: 3.00

HSCI 67300 - MRI Quality Assurance Internship II

Credit Hours: 3.00. This internship course provides didactic training and practical experience in clinical diagnostic medical physics. Students will spend 3-4 hours per week learning the responsibilities of a medical physicist in MRI quality assurance (QA) such as MRI system performance testing, setting up weekly MRI QA procedures, analysis of MRI QA data, and annual clinical system evaluations. In Part II of the course, MRI system performance evaluations of different clinical scanners will be performed by the students independently following the ACR guidelines. This includes assessing magnetic field homogeneity, slice position accuracy and slice thickness accuracy, and performance of radio frequency coil tests on the various coils available at different clinical MRI sites in the Indianapolis area. Students will also work as a team with the instructors on a course project to develop and evaluate advanced MR QA methods and procedures. Prerequisites: HSCI 67200. (This course provides the theoretical basis and opportunity to observe MRI QA on clinical scanners, and forms the basis for this course, Part II). Permission of instructor required.

Learning Outcomes: 1. Understand the requirements for weekly and annual QA tests as required by ACR. 2. Become proficient at performing weekly and annual MRI QA

procedures. Credits: 3.00

HSCI 67400 - Radiological Diagnostic Imaging Internship

Credit Hours: 3.00. This internship course provides the student with hands-on experience with clinical imaging equipment, lectures on the fundamental operation of the equipment, and quality assurance/control methods/assessment of this equipment. Students will learn the safety and imaging performance of flat panel digital x-ray system, fluoroscopy, CT scanner, Ultrasound system, and MRI scanner. Lectures will provide fundamental physics and operation of each system, perform quality assurance methods employed by board certified Medical Physics, and subsequent analysis of these methods. This course is to be delivered as a 50-minute lecture, a 150-minute lab, which includes additional time for image analysis (computational lab). The goal of this course is to provide the necessary information as part of CAMPEP/ABR and ACVR. Prerequisite: HSCI 570 Introduction to Medical Imaging.

Learning Outcomes: 1. Communicate results to the faculty in charge, both verbally and in writing through their lab report. 2. Develop procedures that will provide the required measurement. The protocol they implement will require careful consideration and have a physical understanding of the result. 3. Understanding the quality of the measurements and potential procedural errors. 4. Synthesize many forms of information to understand image artifacts, characterize the cause of these artifacts, and a means to remediate them. 5. Resolve problems, requiring research and ultimately improvements in procedure or protocol. Credits: 3.00

HSCI 67600 - Radiation Therapy Clinical Competencies I

Credit Hours: 3.00. The course is a clinical practicum course for Medical Physics graduate students enrolled in the Purdue-Indiana University School of Medicine joint CAMPEP accredited program. Students will spend approximately 4 hours in the clinic on a weekly basis for 10 weeks. Prerequisite: HSCI 57200.

Learning Outcomes: 1. Understand the role of the Medical Physicist in the Radiation Oncology clinic. 2. Perform specific quality assurance tasks with limited supervision. 3. Identify and critically evaluate key publications for quality assurance pertaining to Radiation Oncology. Credits: 3.00

HSCI 67700 - Radiation Therapy Clinical Competencies II

Credit Hours: 3.00. This is a clinical practicum course for Medical Physics graduate students enrolled in the Purdue CAMPEP accredited program. Students enrolled in this course will participate in the Radiation Oncology clinic, which will provide similar experiences as junior medical physicists in training. Students will meet with the course instructor prior to spending time in the clinic to be assigned mentors and to arrange schedules. Students will spend approximately 3 hours in the clinic on a weekly basis. Absences/vacations are allowed but must be arranged with approved by the mentor with sufficient notice. Prerequisite: HSCI 67600.

Learning Outcomes: 1. Understand the role of the Medical Physicist in the Radiation Oncology clinic. 2. Perform quality assurance tasks with limited supervision. 3. Understand the roles of other professionals in the Radiation Oncology clinic. 4. Identify and critically evaluate key publications for quality assurance pertaining to Radiation Oncology. Credits: 3.00

HSCI 69000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for graduate students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 69600 - Seminar In Health Science

Credit Hours: 0.00 or 1.00. Selected topics in health sciences presented by staff, students, and invited speakers.

Credits: 0.00 or 1.00

HSCI 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

HSCI 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Health, Services, Outcomes & Policy

HSOP 45200 - Social Aspects Of Pharmacy Practice

Credit Hours: 2.00. A survey of selected social and behavioral models and related issues that affect the contemporary practice of pharmacy. Special emphasis is given to the interdependent roles of the patient, the pharmacist, and the physician.

Credits: 2.00

HSOP 46800 - Community Pharmacy Management

Credit Hours: 3.00. Principles, practices, and case studies

related to the organization, operation, and control of community pharmacies.

Credits: 3.00

HSOP 48200 - Marketing Pharmaceutical Products

Credit Hours: 2.00. Examination of the channels of distribution for pharmaceutical products, including research-intensive and generic manufacturers, drug wholesalers, independent and chain community pharmacies, non-pharmacy retailers, prescription benefit managers, and third-party payers. Areas of special emphasis include new product development, product distribution, advertising and promotion, Rx-to-OTC switching, and product pricing and payment policies.

Credits: 2.00

HSOP 49000 - Special Topics

Credit Hours: 1.00 to 3.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required.

Credits: 1.00 to 3.00

HSOP 50100 - Food And Drug Law I

Credit Hours: 3.00. A systematic study of the structure and function of the major federal (USA) laws and regulations governing the manufacturing, distribution, and marketing of foods, drugs, cosmetics, and devices. Permission of instructor required.

Credits: 3.00

HSOP 50200 - Food And Drug Law II

Credit Hours: 3.00. Detailed study of statutes and regulations applied to discovery, development, and marketing pharmaceutical and devices in the United States.

Credits: 3.00

HSOP 55600 - Healthcare Economics And Public Policy

Credit Hours: 3.00. Principles and theories of healthcare economics applied in analysis of the U.S. healthcare system. Perspectives are presented on the differential roles of economic analysis and policy analysis. Topics include medical care as an input to health, pharmaceutical service market, adequacy of health manpower supply, health associations and demand for legislation. Healthcare reform, the pharmaceutical industry, and social values that guide policy are explored.

Credits: 3.00

HSOP 69000 - Special Problems

Credit Hours: 0.50 to 3.00. Individual investigations in pharmacy marketing, retailing, and management. Permission of instructor required.

Credits: 0.50 to 3.00

HSOP 69600 - Seminar In Pharmacy Administration

Credit Hours: 1.00. Selected topics on current research, teaching methods, and contemporary problems in management and marketing.

Credits: 1.00

Healthcare Engineering Technology Management

HETM 22500 - Healthcare Technology Diagnostics And Repair

Credit Hours: 3.00. This course will explore fundamental repair theory and applications of technology used in the clinical setting, switching logic and controls, and systems repair in medical devices.

Credits: 3.00

HETM 24000 - The Technology Of Patient Care

Credit Hours: 3.00. This course provides an overview of medical equipment used in the hospital and other medical environments to diagnose and treat patients. Sensors and physiological signals will be explained. Equipment found in various hospital departments and medical specialties will also be discussed. Patient safety and regulations will be emphasized.

Credits: 3.00

HETM 31500 - Introduction To Imaging Modalities

Credit Hours: 3.00. The fundamentals of diagnostic imaging equipment will be explored. The principles of x-ray based systems will be explored. Components and features of MRI, ultrasound, PET, and nuclear medicine will be discussed. Image storage and communication protocols will be presented.

Credits: 3.00

HETM 40200 - Healthcare Device System Security

Credit Hours: 3.00. Students explore the clinical applications of computer networks, integrated medical devices, interoperability, and electronic medical records. Special emphasis will be on security and HIPAA compliance associated with physiological data. Hands-on learning will involve campus-area hospitals.

Credits: 3.00

HETM 44000 - Codes, Regulations And Patient Safety

Credit Hours: 3.00. This course explores applicable NFPA 99, JCAHO, CLIA, FDA and other regulatory agencies and their regulations governing medical equipment in the clinical environment. Case studies will be used to provide examples of interpretation and application.

Credits: 3.00

HETM 46000 - Systems Engineering Technology For Healthcare

Credit Hours: 3.00. Participants will gain insight into the analysis of multiple-entity clinical systems involving healthcare technology. Focus will include process analysis and improvement to satisfy clinical customer needs. Course content will explore the interdisciplinary efforts related to support the development, verification, deployment, integration, operations and user training of complex systems involving healthcare technology, as well as the creation of information about system performance associated with management decision making.

Credits: 3.00

HETM 49000 - Project Planning And Design

Credit Hours: 1.00. Students are expected to prepare an individual design in collaboration with industry and/or the clinical setting. This course will introduce the applications of project management to the student's design. Topics include project scope, scheduling, resource limitations, stakeholder interactions, delivery and quality assurance.

Credits: 1.00

HETM 49300 - Healthcare Engineering Technology Management Ethics And Professionalism

Credit Hours: 1.00. Students will explore ethical, social, political, legal and ecological issues that practicing BMET's may encounter. Particular emphasis will be placed on patient safety and privacy issues.

Credits: 1.00

Hebrew

HEBR 10100 - Modern Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to Modern Hebrew: the writing and sound systems, and systematic presentation of basic structures. All language skills - reading, writing, speaking, and comprehension - are emphasized. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 10200 - Modern Hebrew II (UCC: HUM)

Credit Hours: 3.00. Continuation and extension of the first semester. The course aims to develop fluency in reading, comprehension, and spoken language. Knowledge of grammar and vocabulary is expanded.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 12100 - Biblical Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. The first semester of biblical Hebrew will present the basic elements of the language, including alphabet, vocabulary, and grammar. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 12200 - Biblical Hebrew Level II (UCC: HUM)

Credit Hours: 3.00. The second semester of biblical Hebrew will continue the study of reading, vocabulary and grammar, based on selections from the Hebrew Bible.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 20100 - Modern Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading both in the modern language.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 20200 - Modern Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading in the modern language.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 22100 - Biblical Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. The third semester of biblical Hebrew focuses on reading and translation of extended passages form the Pentateuch and the use of textual criticism.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 22200 - Biblical Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. The fourth semester of biblical Hebrew exposes the student to both narrative and poetic sections of the Bible.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 28400 - Ancient Near Eastern History And Culture

Credit Hours: 3.00. This course is a survey of the development of the ancient Near East, from its pre-history to Alexander the Great. It emphasizes the evolutions of various Near Eastern cultures in their many manifestations; art, government, agriculture, economics, philosophy, religion, ethics, and science. Taught in English.

Learning Outcomes: 1. Understand the difference between pre-history and history. 2.

Understand various ancient and modern ideas of the purpose of writing history. 3. Understand how the invention of writing and the origins of cities were coordinate developments. 4. Understand something of the flow of empires that succeeded each other, eventually displaced by the empire of Alexander the Great, whose conquests shaped the contours of the world much as we know it. 5. Become aware how art reflects the development of thought and idealism; how ideas of human government evolved; how religion, science, agriculture, and much else developed as empires built onto those they displaced. Credits: 3.00

HEBR 38000 - Israel And The Modern World: Cinema, Literature, History And Politics (UCC: HUM)

Credit Hours: 3.00. Critical survey/exploration of major traits of Israeli culture through a variety of media: literature, film and music, in the larger context of Judaism, Zionism, as well as the creation of a new state and culture. Conducted in English; no knowledge of Hebrew is necessary.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand the depth of Modern Israel cultural, political and historical complexity. 2. Understand the richness of Israeli culture. 3. Understand Israeli political-social problems and its influence on world affairs. 4. Development of modern Israeli cinema and literature in reference to their historical and political groundings. 5. Mastery of major historical events, major films, major literary figures, and major social/political problems. Credits: 3.00

HEBR 38300 - Kabbalah And Jewish Mysticism: Secret Knowledge In Judaism

Credit Hours: 3.00. This course critically explores the roots, history, symbolism and major characteristics of the Jewish mystical tradition known as Kabbalah.

Learning Outcomes: 1. Identify and describe the key terms, concepts, texts, and figures in Jewish mysticism. 2. Consider the case of Jewish mysticism in the general context of religious mysticism and evaluate the applicability of general concepts to specific, tradition-based examples, and vice versa. 3. Gain insight into the inner world of esoteric religiosity and its texts. 4. Learn the crucial influence of Jewish mysticism on Christianity, Islam and on European history as well as on the evolvement of Western civilization. 5. Become familiar with the symbolic, phenomenological approach to mystical texts and experiences as practiced in the academic study of religions. 6. Learn the art of hermeneutics: interpretation and unpacking of original, historical and hagiographical texts, and the dramatic ramifications of reading these kinds of texts in translation. 7. Develop critical thinking and oral communication skills through course readings and class discussions, presentations and through work on directed individual projects. 8. Develop writing and research skills by writing weekly papers and a research paper. Credits: 3.00

HEBR 38500 - The Holocaust In Modern Hebrew Literature

Credit Hours: 3.00. This course critically examines the Holocaust and the ways in which it has influenced modern Hebrew literature, the role it plays, and how it is represented in modern Hebrew literature. Conducted in English; no knowledge of Hebrew is necessary.

Credits: 3.00

History

HIST 10001 - Issues In African-American History

Credit Hours: 3.00. Study and analysis of selected historical issues and problems of general import. Topics will vary from semester to semester but will usually be broad subjects that cut across fields, regions, and periods. May be repeated with different topics for a maximum of 9 credit hours.

Credits: 3.00

HIST 10300 - Introduction To The Medieval World (UCC: HUM)

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 12300 - History At Work

Credit Hours: 1.00. Students will learn how history majors' distinctive skills and expertise can help them achieve success in many different careers. Participants will explore the value of historical thinking in daily life, including causality, contingency, and contextualization, and will refine practical reading, thinking, and communication skills crucial to career success. Permission of department required.

Learning Outcomes: 1. Summarize the arguments of a historical journal article (secondary source) and apply their understanding of how historical research is produced and evaluated to an analysis of that source's significance to the discipline. 2. Identify professional opportunities such as jobs, internships, and calls for conferences, prizes, and article proposals. 3. Create CVs/resumes and cover letters/personal statements that highlight their skills and accomplishments, and that are tailored to the professional opportunities for which they are applying. 4. Investigate different career paths available to history majors, and assess their own strengths and interests in relation to those career options. 5. Discuss and advocate for the importance of historical thinking in the workplace and in daily life. Credits: 1.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 20100 - Special Topics In History

Credit Hours: 3.00. This variable title course deals with broad historical topics that transcend and telescope traditional analytical, chronological, and geographical boundaries. Content will vary with the instructors teaching the class.

Credits: 3.00

HIST 21000 - The Making Of Modern Africa (UCC: HUM)

Credit Hours: 3.00. This course provides students with a comprehensive introduction to modern African history from 1800 to the present. Using a variety of films, novels and scholarly resources, we will examine the major historical forces that have shaped African lives over the last two centuries. Emphasis will be placed on African experiences of slavery, colonialism, liberation struggles, and post-independence national building. Students will also learn to analyze contemporary African issues within a larger historical context.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand modern African history and the state of Africa today. 2. Learn how to interpret historical texts from a number of different epistemic positions (i.e. paying attention to race, class, gender, sexuality, nation and other axes of ""difference""). 3. Expect to develop stronger writing skills, as well as to improve on critical thinking and oral articulation. Credits: 3.00

HIST 21100 - The Global Field: World Soccer And Global History (UCC: HUM)

Credit Hours: 3.00. This is an introductory course to the history of soccer, on and off of the pitch. It studies the history of the game itself as well as the international economic, political,

social, and cultural trends that shaped it.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand a major global phenomenon and its relationship with nations and societies around the world. 2. Learn how to look critically at the same problem (soccer) from the perspective of more than one discipline. 3. Develop communication, writing skills and critical thinking. Credits: 3.00

HIST 22100 - History Behind The Headlines

Credit Hours: 3.00. This course introduces undergraduate students to the study of history and provides an overview of the various ways history is communicated outside the academy in narrative nonfiction, journalism, museum exhibitions, policy documents, political speeches, advertising, podcasts, television, film, and social media.

Learning Outcomes: 1. Identify and assess the ways in which history is presented to the public. 2. Produce a compelling historical argument based on a thorough assessment of primary and secondary sources. 3. Design a history communication project for public and non-expert audiences. Credits: 3.00

HIST 22800 - English History To 1688

Credit Hours: 3.00. This course is designed to survey the growth and development of English society from its beginning through the seventeenth century. Emphasis is put upon those institutions and events that influenced the establishments of the English legal system.

Credits: 3.00

HIST 22900 - English History Since 1688

Credit Hours: 3.00. A continuation of HIST 22800 . Emphasis is placed upon Great Britain as a world and imperial power. Attention is given particularly to the industrial revolution, the growth and achievements of democratic institutions, and the role Britain has played in Western civilization in recent times.

Credits: 3.00

HIST 23005 - Hitler's Europe

Credit Hours: 3.00. This course will examine the rise, seizure, and consolidation of power by the Nazi Party and will trace the development of Adolf Hitler from a provincial Austrian to dictator of Nazi Germany.

Learning Outcomes: 1. Explain how and why Adolf Hitler and the Nazis seized and exercised power, and the consequences for Germany and Europe. 2. Distinguish between secondary and primary sources and critically read both types of sources; synthesize information and arguments from both types of sources. 3. Evaluate biography as a historical genre; engage in independent historical interpretation with the use of primary and secondary sources. 4. Compose analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. Credits: 3.00

HIST 23800 - History Of Russia From Medieval Times To 1861 (UCC: HUM)

Credit Hours: 3.00. This course explores the main characteristics of early Russian society, culture and politics. Topics include: the Kievan principalities, Orthodox Christianity, the Mongols, the rise of Moscow, the Petrine reforms, peasant and national rebellions, revolutionary movements, and the Tsarist empire to the Crimean War.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the major geographical features of the Russian homeland, the Baltics, Belarus, Ukraine, the Caucuses, Central Asia, the Volga-Urais, Siberia, and the Far East. 2. Trace and describe the main historical characteristics of Russian culture, social structure, and political life from the earliest origins under the Viking conquests to the emancipation of the serfs in 1861. 3. Analyze what the Russians both gave and took from the hundreds of Caucuses, Siberian, Central Asian, and European peoples, whom they gathered into the all-Russian state. 4. Understand the sources of Russia's triumphs and tragedies through the empire's consolidation of autocracy and serfdom. 5. Create a game-style simulation on the topic Russia's Circular Frontier and the Rise of Muscovy. Credits: 3.00

HIST 23900 - History Of Russia From 1861 To The Present (UCC: HUM)

Credit Hours: 3.00. This course surveys the paths of the Russian empire through economic modernization, social transformation, and World War I; the revolutionary regimes of Bolshevism, Leninism, and Stalinism; World War II and the Cold War; the collapse of the USSR; and the new Eurasian states.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify the major geographical features of the Russian land empire from its European borders, through the Caucasus and Central Asian frontiers, to the steppes and forests of Asia. 2. Trace and describe the main historical characteristics of Russian culture, social structure, and political life from the Great Reforms of the late empire (1861) to the present regime. 3. Analyze why, twice in recent times (1917 and 1991), the state collapsed under the weight of its own contradictions, driven in part by the pace of European and American modernization. 4. Understand how Russian history is a metaphor for global history, a study of the crises posed by the world revolution of western values. 5. Create a game-style simulation of the topic The Genesis and Structure of the Stalinist State. Credits: 3.00

HIST 24000 - East Asia And Its Historic Tradition (UCC: HUM)

Credit Hours: 3.00. Survey of the great historic traditions of China, Japan, and Korea from earliest times to approximately 1600, with special attention to state formation, society, intellectual, philosophical, and religious developments, and the visual, musical, and literary arts.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24100 - East Asia In The Modern World (UCC: HUM)

Credit Hours: 3.00. The response of China, Japan, and Korea to the coming of the West in modern times, with special stress on the effect of Western ideas and machines. Approximately 1600 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24300 - South Asian History And Civilizations (UCC: HUM)

Credit Hours: 3.00. Survey history of India, Pakistan, and Bangladesh, from the origins of South Asian civilization to the present. Topics include ancient India, the Mughal Empire, the colonial experience, the independence movement, and conflict and popular culture.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24600 - Modern Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 25000 - United States Relations With The Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course examines US relations with the Middle East and North Africa since World War II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gained a deeper understanding of the patterns and processes shaping US relations with the Middle East and North Africa. 2. Thought historically and critically about approaches to the study of US relations with the Middle East and North Africa. 3. Used primary source evidence to analyze fundamental issues in US relations with the Middle East and North Africa. 4. Sharpened critical reading, thinking, writing, and discussion skills in order to defend an independent argument. Credits: 3.00

HIST 27100 - Introduction To Colonial Latin American History (1492-1810) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate a grasp of the historical forces that in many ways laid the foundation for present-day Latin America. 2. Express understanding of how these major political, social, economic, and cultural issues unfolded in different ways in Latin America, with respect to region, time, and culture. Credits: 3.00

HIST 27200 - Introduction To Modern Latin American History (1810 To The Present) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the study of the major economic,

political, social, and cultural processes that shaped modern Latin American nations since independence. No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a broad understanding of the modern history of Latin America. 2. Become familiar with the major economic, political, social, and cultural processes that shaped the nations of the continent. Credits: 3.00

HIST 27800 - Money, Trade, And Power: The History Of Capitalism

Credit Hours: 3.00. This course examines the origins of capitalist institutions and their changes over time, including banks, joint-stock companies, and modern corporations -- all viewed with respect to their impact on industrialization, colonial expansion, business cycles, and the emergence of a global economy.

Learning Outcomes: 1. Explain the history of capitalism based on a combination of readings, course lectures, and course discussions. 2. Develop compelling historical arguments and demonstrate your understanding of the course material through examinations. 3. Write clear and concise analytical papers based on templates and feedback supplied by the professor. Credits: 3.00

HIST 28000 - Science And Society In Western Civilization I (UCC: HUM/STS)

Credit Hours: 3.00. A survey of the main lines in the development of science and society in Western civilization from earliest times to Newton's discovery of gravitation. Beginning with prehistory and Egyptian and Mesopotamian civilizations, the course treats in more detail the Greeks and Romans. The course then considers science during the Middle Ages, examining the transmissions of ancient science and its incorporation into the body of Christian doctrines. The course concludes with the new efforts of physicians and astronomers to free their studies from the influence of the Church and antiquity, and the new accommodations between science and society during the Scientific Revolution.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 28100 - Science And Society In Western Civilization II (UCC: HUM/STS)

Credit Hours: 3.00. This course considers Western science and society from the time of Newton to the present. Beginning with Copernicus to Newton, topics next include biological classification, modern chemistry, and the onset of the industrial revolution. For the nineteenth century the course stresses the maturation of biology. Darwinian evolution, the dynamic synthesis and electromagnetic studies, and the second industrial revolution. In the twentieth century, the course covers modern physics, the life sciences, the understanding of the universe, and the interaction between pure and applied science. The course concludes with some of the modern social and political problems which science caused by its success.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and

explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 28200 - Science And Society In The Twentieth Century World (UCC: HUM/STS)

Credit Hours: 3.00. An introductory survey emphasizing cultural contexts, relationships with other institutions, and the lives of major figures. Covering selected major achievements as well as the problems these generate. Neither science nor engineering background is required.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society during the Twentieth Century. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society during the Twentieth Century. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contributions of different social groups in science and society during the Twentieth Century. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science during the Twentieth Century. Credits: 3.00

HIST 28400 - The Computer Age From Babbage To The Blockchain

Credit Hours: 3.00. In this course we will explore the history of computing-from the pre-electronic days through the computer's ascent in the twentieth century to the various electronic computing and communications technologies that surround us today. This course will investigate why there was a desire to create computing machines in the first place, the economic and political arrangements that brought computers into existence, the debates over what computers could (and should) be used for, the development of the IT profession, and the gradual shift from computers being room-sized specialty machines to everyday objects that people carry around in their pockets.

Learning Outcomes: 1. Identify social, economic, political, and historic factors that have shaped the development and application of computer technology. 2. Describe the history of computing and its relevance for the world today. 3. Locate primary source materials, critically analyze those sources by considering their context and the reasons for their creation. 4. Examine work produced by, and arguments made by, historians. 5. Discuss the role that computers play in everyday life with an expansive view of the wide breadth of computerized systems that surround us. Credits: 3.00

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century (UCC: HUM)

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 30105 - Big History: Time And Scale

Credit Hours: 3.00. This course explores Big History, a new form of world / global history. Like all forms of world history, Big History transcends the limitations of nation-centered perspectives. Drawing on the history of science and environmental history, Big History considers the many forces (physical, biological, environmental, social, and political) that drive change across time.

Learning Outcomes: 1. Examine, interpret, and explain trends in Big History / World History at multiple scales. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to Big History. 3. Identify and explain the major themes of Big History. 4. Write about the role of Big History and social implications of science. Credits: 3.00

HIST 30200 - Historical Topics

Credit Hours: 3.00. This variable-title course deals with broad historical topics that transcend and collapse traditional analytical, chronological, and geographic boundaries. Content

will vary with faculty member teaching the class.

Learning Outcomes: 1. Students will acquire a perspective on and basic understanding of the course content. 2. Students will engage in integrative learning as they examine the course content that transcends and collapses traditional analytical, chronological, and geographic boundaries. 3. Students will develop their creative and critical thinking skills. 4. Students will strengthen their information literacy and improve their writing skills. Credits: 3.00

HIST 30305 - Food In Modern America (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the kitchen as an architectural space, a place of labor and food production, and an arena for technological innovation in modern American history. Cooking and eating reflect cultural sentiments about modernity, progress, ethnicity, and family, and the politics of how society nourishes bodies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Think historically and critically about the cultural consequences of technologies related to eating and food preparation. 2. Think historically and critically about approaches to the study of national identify and culture expressed through food. 3. Appreciate the circumstances and history of kitchen design in relation to raced and gendered identities, home space, and food preparation. 4. Understand and recognize how assumptions about food production during the late 19th and 20th centuries in the United States reflected notions about labor, modernity, and progress. 5. Understand the difference between secondary and primary sources. Students will analyze and interpret primary documents related to kitchens, cooking, and food preparation. They also will understand the competing and conflicting nature of historical interpretation. 6. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 30400 - America In The 1960s (UCC: HUM)

Credit Hours: 3.00. Surveys the turbulent history of the 1960s America. Topics include: the Kennedy, Johnson, and Nixon presidencies; postwar liberalism and conservatism; insurgent political and social movements; the counterculture; the sexual revolution; rock 'n roll; and the Vietnam War.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 30505 - The United States In The World 1898-Present (UCC: HUM)

Credit Hours: 3.00. This course explores the central issues and themes of American foreign relations during the twentieth century with a primary focus on the expansion of American political military, economic, and cultural power.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand how and why the United States transformed from a relatively minor regional power in the nineteenth century into the global power we recognize today. 2. Understand innovative ways in which historians are expanding our understanding of Americans' role in the world. 3. Understand the often competing and conflicting nature of historical interpretation and encourage assessment of various forms of primary source evidence to form conclusions about the United States' place and experience in the world. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5.

Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

HIST 30701 - History Of Artificial Intelligence: Minds And Machines

Credit Hours: 3.00. This course examines the long history of efforts in automating human cognition. Historically, the attempts to automate human cognitive functions - from the mere reckoning of numbers to complex decision-making have been entangled with heated debates about what counts as good, proper, and desirable thinking; whose thinking machines should emulate; and whether the thinking of some humans is inferior to that of machines. In this course, we will examine how the invention of calculating machines - analogue and then digital - has developed in tandem with philosophical and scientific theories of human thinking and intelligence. In their turn, the latter developed as a response to changing social, political, and economic currents.

Learning Outcomes: 1. Critique the epistemological foundations and ethical implications of past and present approaches to the automation of human cognition. 2. Use primary sources to make arguments about the role of social, political, economic, and cultural currents that have historically provided the impulses for research and development in the automation of human cognition. 3. Assess historical scholarly arguments about social, economic, and political power asymmetries surrounding artificial intelligences. 4. Create websites to use text, imagery, and video content and effectively communicate how social factors have historically shaped the development of artificial intelligence. Credits: 3.00

HIST 30705 - History Of Data: How Data Became Big

Credit Hours: 3.00. This course offers a long history of Big Data. The first module focuses on how states collected data from the 16th to 19th centuries. Here we will focus on mortality bills, census, statistics, and accounting tables. In the second model, we will pay special attention to data collection and privacy in the 20th century. In the third module, students will explore how previous developments in data collection were applied to the new developments in analog and digital computing. The final weeks of the course will focus on present-day artificial intelligence, big data, their technical limitations, and the ways they often amplify, exploit, and contribute to a wide array of social problems.

Learning Outcomes: 1. Understand a variety of historical contexts that have shaped how we use, collect, and analyze data in the 21st century. 2. Assess historical arguments about the place of data in the growth of state bureaucracies, colonialism, eugenics, national security, warfare, and scientific research made in scholarly secondary sources. 3. Use primary sources to make arguments about the historical contingency of the ways practitioners have been using data to solve state problems. 4. Develop critical thinking about data-empowered algorithms and envision a human-centered and ethical way of creating and implementing data technologies. Credits: 3.00

HIST 30801 - American Eugenics

Credit Hours: 3.00. This course explores the pre-history and history of American eugenics, as well as its afterlives. It analyzes how Americans have used scientific ideas to grapple with questions of heredity and human worth from the Early Republic to the present. We will explore the social and political uses of phrenology, physiognomy, and eugenics, and consider how those scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering.

Learning Outcomes: 1. Read and discuss primary sources. 2. Interpret how scientific knowledge has been applied in human lives and society from the 18th century to the present. 3. Analyze major themes in the history of eugenics. 4. Investigate how and why specific ideas about human value and genetic worth arise in specific historical contexts. 5. Critique the extent to which scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering. Credits: 3.00

HIST 30805 - History Of Life Sciences

Credit Hours: 3.00. This course will examine the development of life sciences from 1750 to the present, introducing students to critical problems related to biology and society through the study of primary and secondary sources. The "life sciences" include all the sciences that deal with life as an organic entity. A prominent

theme in this historical treatment is the impact of social and political ideas on the life sciences. Topics will include theories of life, the origin of life, taxonomy and classification, theories of development, natural selection, genetics, eugenics, science and religion, the evolutionary synthesis, biodiversity, ecology and environmentalism, sociobiology, the discovery of DNA, cognition and the brain, and gender in science. Students will develop crucial skills in the interpretation of primary and secondary sources, research, analysis, and presentation.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical material. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 30902 - History Of Biotechnology

Credit Hours: 3.00. This class examines historical intersections between engineering and biology in the Western world. The course begins by considering several possible meanings of "biotechnology." It examines how and why different biotechnologies from the life sciences, biology, and medicine have arisen in specific historical contexts, changed over time, and affected society from the late 19th century to the present. We will study vaccines and beer-making in the 19th century, cell culture, birth control pills, and DNA sequencing in the 20th century, and 21st-century genome editing and synthetic biology, for example. Overall, this course argues that biotechnologies have always forced human beings to consider whether living and non-living entities are made up of the same fundamental "stuff," the implications of manipulating living things, and the nature of life itself.

Learning Outcomes: 1. Identify and describe examples of biotechnologies. 2. Describe the role of biotechnology in history and its relevance for society today. 3. Explain major themes in the history of biotechnology, such as how biotechnologies have changed through time and impacted society by way of their interactions with (for example) ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class. 4. Investigate the history and social impacts of a biotechnology of their choosing that has not been discussed in depth in this class. 5. Explain how and why this biotechnology arose in a specific historical context, changed over time, and impacted (or impacts) society (using historical methods). Credits: 3.00

HIST 30905 - History Of Environmental Science

Credit Hours: 3.00. This course introduces students to various approaches to environmental science through time. It considers critical problems related to the environment and society. The "environmental sciences" include all the sciences that deal with the Earth's physical and organic environments.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical materials. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 31000 - Historical Geography

Credit Hours: 3.00. Survey of historical geography.

Learning Outcomes: 1. Analyze geographical sources for historical information, and historical sources for geographical information. 2. Explain how historical processes act across space. 3. Synthesize temporal and spatial information into original conclusions about history. Credits: 3.00

HIST 31005 - The Civil War And Reconstruction, 1850 To 1877 (UCC: HUM)

Credit Hours: 3.00. A survey of the American Civil War and Reconstruction, covering the intense sectional conflict of the 1850s; the military, social, economic, and political aspects of the war; and the political and economic reconstruction that followed.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify and explain the causes, fighting, and outcomes of the American Civil War and Reconstruction. 2. Understand, analyze, and evaluate different interpretations of the war. Credits: 3.00

HIST 31205 - The Arab-Israeli Conflict

Credit Hours: 3.00. This class traces the emergence of political fault lines in Ottoman Palestine, the immigration of European

Jews in the Interwar Era and after World War II, the divisive policies of the British Mandate, the establishment of a Jewish state and the subsequent wars between Israel and surrounding Arab countries. In the end, students study religion as one part of a complex struggle for control over regional resources.

Learning Outcomes: 1. Increase understandings of the political, economic and cultural forces that acted as a catalyst for the Arab-Israeli conflict and continue to underpin and stir them. 2. Reflect on the symbols (monuments, songs, literature, film, language) of Israeli and Palestinian nationalism in order to understand culture productions within conflict. 3. Assess narratives of the Arab-Israeli conflict in film, memoir and other documents in order to develop the skills necessary to read and argue about the past, particularly in a conflict in which historical interpretation itself can be skewed due to political aims. 4. Improve written and oral communication skills while improving analytical skills pertaining to complex issues. 5. Increase global fluency, or student knowledge about diverse cultures. Credits: 3.00

HIST 31305 - Medical Devices And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of material cultures of health care in the United States. The class will analyze how technological innovation has become central to medicine over the last two centuries and how we are coping with the consequences, both intended and unintended, of our reliance upon such medical devices. We will look at identities associated with medical devices, the ways in which disease is constructed, how technologies contribute to the naming of maladies, and implications for emergent bioengineering and biotechnologies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to medicine. 2. Understand and recognize how assumptions about health influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 31405 - Science, Technology, Engineering And Mathematics (STEM) And Gender (UCC: HUM/STS)

Credit Hours: 3.00. Scientific and technological innovation has been a cornerstone of American identity. How science and technology matters to gender, and gender matters to science and technology, will be explored through studying amateur and professional scientists and engineers, industrialization, education, sexual division of labor, and home and work spaces in twentieth-century America. Examining technological, scientific, and engineering innovation through the lens of gender reveals changing relationships between men and women in modern America.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to gender. 2. Understand and recognize how assumptions about gender may influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 31505 - American Beauty (UCC: HUM)

Credit Hours: 3.00. This course explores twentieth-century gender history in the United States through the concept of beauty. Ideals about beauty intersect with politics, economics, technological developments, medical innovations, and nation building. A critical examination of beauty as seen through advertising, pageants, and material culture, yields insight about modern womanhood, everyday life, and identify formation in the twentieth-century United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Appreciate the ways that beauty has been pursued by individuals, health practitioners, corporations, and media cultures since 1900. 2. Understand and recognize how assumptions about gender have influenced the

way that beauty is constructed and experienced at different places and times. 3. Think historically and critically about the culture consequences of technologies related to beauty. 4. Think historically and critically about approaches to the study of beauty in modern American history. 5. Understand the difference between secondary and primary sources. 6. Analyze and interpret primary documents related to beauty cultures. 7. Understand the competing and conflicting nature of historical interpretation. 8. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 31700 - A History Of The Christian Church And The Expansion Of Christianity I

Credit Hours: 3.00. A history of the emergence of Christianity, the development of the Christian church, and the impact of Christian thought and institutions upon western Europe prior to the Reformation.

Credits: 3.00

HIST 31905 - Christianity In The Global Age

Credit Hours: 3.00. This course examines the social, cultural, economic, legal, and religious dynamics of global Christianity in its emerging centers of Latin America, Asia, and Africa during the 20th and 21st centuries.

Learning Outcomes: 1. Understand key issues in the global Christianity in 20th and 21st centuries. 2. Distinguish between secondary and primary sources, and be able to critically read both types of sources. 3. Synthesize information and arguments from both types of sources. 4. Engage in independent historical analysis with the use of primary and secondary sources. 5. Write analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. 6. Research a contemporary topic using a variety of international sources and write a report analyzing the issue in the context of longer historical developments. Credits: 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture.

Learning Outcomes: 1. Assess the mechanisms that made the Spanish imperial system successful and, likewise, appraise its inherit weaknesses. 2. Distinguish the different stages in the development of the Spanish empire. 3. Judge the extent of the Spanish empire's impact on international politics and regional histories. 4. Evaluate the substantial cultural output of the period. Credits: 3.00

HIST 32300 - German History (UCC: HUM)

Credit Hours: 3.00. A survey of German history from the earliest times until the present. After a brief description of the medieval empire, we will turn to the Germany of Bismarck and Hitler and its successor states. A recurring theme will be the struggle between forces of liberalism and democracy and those of authoritarianism and militarism.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 32400 - Modern France (UCC: HUM)

Credit Hours: 3.00. A survey of modern France since 1789, including political, social, industrial, and institutional development. Emphasis is also placed upon the colonial and international aspects of French history.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 32501 - Twentieth Century Europe Through Autobiography

Credit Hours: 3.00. Merits and limitations of autobiographies as sources for 20th-century European history.

Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the

different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33205 - The Nuclear Age (UCC: HUM/STS)

Credit Hours: 3.00. Once seen as a revolutionary and exceptional, nuclear technologies have become central to many aspects of life in the U.S. This course uses the history of nuclear technologies to trace how American society has grappled with technological change.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Write a persuasive essay evaluating nuclear energy as a source of power, using primary and secondary historical sources to support your claims. 2. Create a compelling argument about how societies cope with technological change, using the history of nuclear technologies as a central example. 3. Summarize the importance of nuclear technologies in US history, drawing on primary and secondary historical sources introduced in the course. Credits: 3.00

HIST 33505 - Nationalism And Socialism In East Central Europe

Credit Hours: 3.00. This course examines how the peoples of East Central Europe engaged and coped with the most influential ideologies of the 20th century; with special attention to the weaknesses of the interwar and postwar regimes, strategies of modernization, survival, and dissent.

Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities which have shaped modern east central European society, culture, and politics. 2. Think historically and critically about approaches to the study of East Central European history, including the outcomes of ideological experimentation, and perspectives on how this region fits into a broader global context. 3. Use primary source evidence to analyze fundamental problems in modern East Central European history in individual writing and group work. 4. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33605 - Global LGBTQ History

Credit Hours: 3.00. This course will examine sexual and gender diversity during the last two centuries of accelerating global interconnectivity. Although the US-derived framework of LGBTQ+ identities has become increasingly popular, people around the world have and continue to understand themselves in a multitude of ways that extend beyond this current acronym. This course will discuss the rich complexity of sexual cultures across the world as well as how they connect through global processes, such as colonialism, warfare, and migration, that have defined the nineteenth and twentieth centuries.

Learning Outcomes: 1. Identify ways different societies under examination have understood gender and sexual diversity in the past. 2. Differentiate lines of scholarly analysis in the field of LGBTQ+ history. 3. Apply queer theory to primary source analysis. 4. Develop original research projects based in/relating to existing scholarship. 5. Connect contemporary concerns to historical study. 6. Develop research projects for a public audience. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political

protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media formats. Credits: 3.00

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world. Credits: 3.00

HIST 33900 - Traditional China

Credit Hours: 3.00. Chinese civilization from its origins to the end of the Ming Dynasty. Attention is divided equally between political and cultural history, giving emphasis to the development of traditional institutions in Chinese society as well as to art, literature, religion, and philosophy.

Credits: 3.00

HIST 34000 - Modern China (UCC: HUM)

Credit Hours: 3.00. Chinese history from the Qing Dynasty (1644) to the present, with emphasis on the period since 1800. Attention given to internal developments and China's response to Western thought and material accomplishments. Nationalism and communism in the twentieth century are examined.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34300 - Traditional Japan (UCC: HUM)

Credit Hours: 3.00. The course considers Japanese civilization from its origins to the establishment of the Tokugawa Shogun (1603). Divided between political and cultural history, it will emphasize the development of traditional institutions in Japanese society, religion, philosophy, art, and literature.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34400 - History Of Modern Japan (UCC: HUM)

Credit Hours: 3.00. A survey of Japanese history from the nineteenth century to the present, including Japan's response to Western expansionism, the formation of the modern state, political parties, industrialization, the Pacific War, the American Occupation, the postwar "economic miracle," and Japan today.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34505 - Arabs in American Eyes

Credit Hours: 3.00. This course explores Arab-American relations over the past 300 years, using American writings on the Middle East and North Africa as a prism for viewing evolving conceptions of national identity and global power in the United States.

Learning Outcomes: 1. This course will improve students' ability to communicate their ideas in a small classroom setting. 2. The assigned course materials will encourage them to think more broadly in terms of primary sources, for students will be required to analyze classic works of literature, films and art. 3. Their writing skills will improve, because students will be required to synthesize and analyze assigned course materials in thematic essay questions

designed to improve their ability to define a thesis statement and also to defend it. Credits: 3.00

HIST 34705 - History Of Religion In America

Credit Hours: 3.00. This course examines the history of religion in the United States from the colonial period to the present. It traces the evolution of religious life in America and religion's influence on American politics, society, and culture.

Learning Outcomes: 1. Summarize and compare American religious movements and analyze their significance in American history and society. 2. Distinguish between secondary and primary sources and critically read both types of sources; synthesize information and arguments from both types of sources. 3. Engage in independent historical interpretation with the use of primary and secondary sources; research an historical religious figure, movement or event, and evaluate its influence on American religious history. 4. Compose analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. Credits: 3.00

HIST 34901 - The First World War (UCC: HUM)

Credit Hours: 3.00. This course is designed to explore the origins, course, meaning, and lasting legacy of World War I.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students are expected to understand the origins, course, and results of World War I. 2. Students are expected to understand the consequences that the war had on today's world. Credits: 3.00

HIST 35100 - The Second World War (UCC: HUM)

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 35205 - Death, Disease And Medicine In Twentieth Century American History (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of disease, dying, and medicine in the United States in the 20th century.

University Core Curriculum (UCC): (UCC: HUM/STS)

Learning Outcomes: 1. Identify and explain the relationship between science and culture and interdisciplinarity. 2. Analyze texts and cultural artifacts about medicine. 3. Identify medical practice and how it is informed by context and culture. Credits: 3.00

HIST 35305 - Sports In America

Credit Hours: 3.00. Today sports virtually dominate American culture. From fantasy leagues and 24-hour a day news shows to business decisions and off-the-field troubles to the games themselves, sports entertain Americans at the same time as they define American culture and social norms. This course will look at the growth of the sport industry in the 20th Century. It will examine the lives and importance of Babe Ruth, Joe Louis, Jackie Robinson, Muhammad Ali, and other athletes, as well as the economic, social, and medical impact of the games we watch.

Learning Outcomes: 1. Comprehend the role that sports has played in American society. 2. Analyze the centrality of race in sports and in America more broadly. 3. Apply their course knowledge to a range of professions in one of the largest industries in America; namely, in television and other media, marketing, management, etc. 4. Hone their active writing skills for effective professional application. Credits: 3.00

HIST 35500 - History Of American Military Affairs (UCC: HUM)

Credit Hours: 3.00. Surveys American military policy from the colonial militia to the atomic age. Covers major wars and limited wars. The course also investigates the peacetime military functions, i.e., the Navy's role in diplomacy and the Army's involvement in Indian affairs.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 35900 - Gender In East Asian History (UCC: HUM)

Credit Hours: 3.00. Examination of the construction of tradition and modernity in East Asia through the lens of gender. Topics include the influence of "Confucian" ethics; gender and imperialism, nationalism and revolution; and social change in the aftermath of war and decolonization.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society in pre-modern East Asia. 2. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 3. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 4. Investigate the diversity of human experience in pre-modern East Asia, explain how social factors such as ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, have shaped the development or application of science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. 5. Identify and explain the major themes of the history of science, technology, and environment, write about the role of science in society, and describe ethical implications of technological and scientific developments. Credits: 3.00

HIST 36305 - The History Of Medicine And Public Health (UCC: HUM/STS)

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S. University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Understand how and why public health has evolved over the course of the past two centuries. 2. Identify and analyze how scientific beliefs and social anxieties contribute to policies and practices of medicine and health. 3. Develop critical thinking skill to assess the impact of public health reforms on everyday life. Credits: 3.00

HIST 36405 - Patient Voices In The History Of Medicine

Credit Hours: 3.00. This course examines the history of medicine in the United States from the early twentieth century to the present by starting with patient voices, which provide a glimpse into the experience of illness. Using patient reflections as the primary lens through which to examine the history of medicine, topics covered include historical changes and historical decision making related to the diagnostic process, therapeutic interventions, access to care, and medical institutions. The course also examines how assumptions about gender, race, and class have shaped differential health outcomes such as mortality rates, time to diagnosis, and determination of treatment approach and efficacy.

Learning Outcomes: 1. Identify in written and oral communication key features of the U.S. medical system by examining how patient experiences have changed over time and in different contexts. 2. Analyze how assumptions about race, gender, and class can affect the experience of illness, access to care, and health outcomes. 3. Engage with primary sources such as journal entries, memoirs, newspaper articles, artwork, and audiovisual material to identify patient perspectives and place them in historical context, and to illustrate how social, cultural, political, and economic factors have shaped the practice of medicine. 4. Reflect on the ethical issues that have arisen in medicine using patient voices as a lens to examine the impact of technology on the illness experience. 5. Examine patient experiences to make an argument about the history of medical practice, such as the diagnostic process or therapeutic approaches, using historical methods. Credits:

3.00

HIST 37005 - Queens And Empresses In Early Modern Europe

Credit Hours: 3.00. This course explores the lives and legacies of queens and empresses in early modern Europe within the wider context of gender, political authority, culture, and monarchy. Students will be introduced to new scholarly approaches to the study of female rulership.

Learning Outcomes: 1. Compare the legal, cultural, and symbolic aspects of queenly authority across monarchies and centuries applying the relevant vocabulary and conceptual frameworks. 2. Evaluate the political intervention of various individual queens and empresses taking into account the many variables that shaped their rule. 3. Distinguish the ways in which queens and empresses shaped national histories as well as European international politics and culture. Credits: 3.00

HIST 37100 - Society, Culture, And Rock And Roll (UCC: HUM)

Credit Hours: 3.00. Surveys American society and culture through the prism of rock and roll music. Looks at politics, gender, race, and class in the postwar era to examine and explain the social, economic, and technological forces that shaped rock and roll.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37200 - History Of The American West

Credit Hours: 3.00. This course explores the history of the trans-Mississippi and Pacific west from the early 17th century to the late 19th century. The diverse experiences of the inhabitants and the environmental transformations are the central themes of the course.

Learning Outcomes: 1. Understand the environmental and human history of the American west. 2. Be aware of the complicated and overlapping experiences of the inhabitants of the west including, but not limited to, the diverse indigenous population and the myriad groups of settlers from Asia, South and Central America, Europe, and the US. 3. Gain a new appreciation of how diverse populations interacted with multiple environments of the American west and the ongoing impact of that legacy on our modern times. 4. Build upon and improve skills as critical thinkers and readers. 5. Enhance skills in oral communication and analytical writing. Credits: 3.00

HIST 37500 - Women In America Since 1870 (UCC: HUM)

Credit Hours: 3.00. A survey of the history of women in the United States from 1870 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37600 - History Of Indiana

Credit Hours: 3.00. Economic, political, and social history of Indiana from the state's earliest beginnings as a part of the old Northwest Territory to the present.

Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37901 - The Corporation In East Asia, 1600-Present

Credit Hours: 3.00. This course explores the rise of major corporations in modern East Asia, including China, Japan, Korea, Taiwan, and Vietnam, from 1600 to the present. Students will develop skills in contextualizing primary sources and scholarly works to form their own insights into the interactions between corporations, society, and the state. This course provides invaluable insights into the intersections of economic power, political authority, and social change in the modern era.

Learning Outcomes: 1. Examine case studies of major East Asian corporations, to understand their role in shaping regional economies and global markets. 2. Analyze the historical trajectory of corporations, their socio-economic impact and political ramifications in East Asia, from 1600 to the present. 3. Evaluate the complex relationships between corporations, society, and state in East Asia critically, considering factors such as industrialization, colonialism, and globalization. 4. Develop advanced skills in source evaluation, analytical

thinking, and academic writing through choosing appropriate primary sources and scholarly literature. Credits: 3.00

HIST 37902 - The Silk Road And Pre-Modern Commerce

Credit Hours: 3.00. This course introduces the history of the Silk Road - a complex network of trade routes that connected China with the rest of Eurasia over land and sea - and its role in fostering cultural and material exchanges between the peoples it connected. It will revisit key moments of the Silk Road in pre-modern history to understand how Eurasia was connected through vast networks of traders and caravans, and will situate temporally and geographically the main states, actors, objects, religions, and ideas that have populated the roads, oasis towns, and steppe territories constituting the Silk Road.

Learning Outcomes: 1. Demonstrate a basic understanding of historical contexts, major concepts, and theoretical perspectives in the history of pre-modern Silk Road trading routes across time and place. 2. Identify diverse historical groups, cultures, and commercial interests on Silk Road networks. 3. Compare and contrast the strengths and weaknesses of contending scholarly interpretations of the conflicts and connections along the Silk Road. 4. Develop advanced skills through source evaluation, analytical thinking, and academic writing through choosing appropriate primary sources and scholarly literature. 5. Evaluate how historical knowledge informs and can shape global decisions and responsibilities in today's world. Credits: 3.00

HIST 38001 - History Of United States Agriculture (UCC: HUM/STS)

Credit Hours: 3.00. This course surveys the main development in North American agricultural history, emphasizing the continental United States. Topics include early American agriculture, the plantation system, land policy, scientific and technological change, agrarian politics, water rights, migrant labor, and agricultural policy.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain a broad understanding of the major economic, social, political, scientific and technological development in the history of American agriculture. 2. Analyze the causes, consequences, and significance of the major events and issues that have influenced the agricultural history of the United States. Credits: 3.00

HIST 38105 - American Indians And Film

Credit Hours: 3.00. This course investigates ways that Hollywood filmmakers influenced public perceptions of Native American history and culture through feature films. Students explore issues of race, gender, class, ethnicity, ideology, and nature, as well as the work of indigenous filmmakers.

Learning Outcomes: 1. Recognize aesthetic and narrative practices in modern film through discussion and written analysis. 2. Recognize and understand the genesis and impact of stereotypes of Native Americans perpetuated through film in classroom discussions and written assignments. 3. Articulate key trends in American filmmaking and the evolving representations of Native Americans through in-class presentations. 4. Investigate and critically analyze films produced by non-Native and Native filmmakers in a research essay. Credits: 3.00

HIST 38200 - American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38300 - Recent American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38505 - Media, Politics And Popular Culture (UCC: HUM)

Credit Hours: 3.00. This class examines the relationship of media, politics, and popular culture over the course of the twentieth century in American history. Students trace how new media shaped political institutions and practices and afforded opportunities for political change.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the historical development in American political, cultural, economic, and social structures by examining primary and secondary sources. 2. Analyze primary and secondary sources to explain how and why these historical developments happened. 3. Pursue original primary research about a specific topic in American history and synthesize primary and secondary materials to advance on original arguments about the roots, shape, and implications of a historical moment. 4. Interrogate modern media myths with an analysis of primary sources that will allow students to go beyond popular narratives of history and understand a more complicated historical reality. 5. Recognize the historical roots of contemporary political debates. 6. Understand the relationship between politics and popular culture in ways that will allow students to navigate the contours of the mass media, entertainment, and the American political process more effectively. Credits: 3.00

HIST 38605 - Land Of The Indians: Native Americans In Indiana

Credit Hours: 3.00. This course offers a survey of Native American and Indigenous history and culture in the historic region encompassing the modern state of Indiana. The course opens in the pre-Columbian era and is organized chronologically to the present day.

Learning Outcomes: 1. Read, analyze, and synthesize archeological data and research through written analyses and discussions. 2. Read, analyze, and synthesize primary historical documents and research through written analyses and discussions. 3. Demonstrate increased knowledge and cultural awareness of the significance of Native Americans in Indiana's history through examination and written analyses. 4. Critique both scholarly and popular accounts of the history of indigenous people in the region and state and express those ideas through oral presentations and classroom discussion. Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 39400 - Environmental History Of The United States (UCC: HUM)

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming historical arguments. It is a writing-intensive course and counts as one of the major requirements.

Learning Outcomes: 1. History majors will learn historical skills such as primary source research and analysis and how to form historical arguments. 2. Acquire analytical skills sufficient to distinguish between primary and secondary sources, to analyze arguments and interpretations, and to recognize interpretive conflicts. 3. Engage in integrative learning. 4. Develop the ability to recognize, analyze and incorporate primary source material into scholarly investigations and analyses. 5. Improve their information literacy and enhance

their creative thinking. 6. Strengthen skills in critical thinking and oral communication. 7. Improve their writing skills. Credits: 3.00

HIST 39600 - African American History To 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

HIST 39800 - African American History Since 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history from 1877 that focus on Black Americans' struggle to overcome social, economic, and political oppression and to win basic civil and human rights while making valuable contributions to American society.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

HIST 40000 - Great Books And The Search For Meaning

Credit Hours: 3.00. This intellectual-history course discusses the meanings of the Great Books within their particular historical contexts and the universal quest for self-understanding, focusing on good and evil; mystery and reason; the nature of power; and what it means to be human.

Learning Outcomes: 1. Read and think critically about a wide variety of texts that are significant in the history of civilization. 2. Write and speak with intelligence and eloquence. 3. Gain a greater understanding of history, of their humanity, and of social and political relationships. 4. Become culturally literate, better able to understand the varied cultural models of their world, and better prepared to meet the needs of global citizenship. Credits: 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World.

Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

HIST 40600 - Rebels And Romantics: Europe 1815-1870

Credit Hours: 3.00. Examines the dramatic social, cultural, and political developments in Europe following the defeat of Napoleon through various rebellious and romantic personalities, as well as figures who supported conservative or reformist solutions to the upheavals of industrialization, revolution, and nationalism.

Credits: 3.00

HIST 40700 - Road To World War I: Europe 1870-1919

Credit Hours: 3.00. Studies the increase in Europe's wealth and power through conquest, industrialization, and nation-state rivalries, along with the social stress and cultural anxiety that culminated in World War I; examines the war from the perspectives of both combatants and civilians.

Credits: 3.00

HIST 40800 - Dictatorship And Democracy:

Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 41005 - History Of The American Presidency (UCC: HUM)

Credit Hours: 3.00. Using a historical perspective, examines the shifting role of the presidency in the American imagination and the cultural, social, and economic changes that have wrought political developments in public functions and expectations of the modern presidency.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the historical development in American political, cultural, economic, and social structures by examining primary and secondary sources. 2. Analyze primary and secondary sources to explain how and why these historical developments happened. 3. Pursue original primary research about a specific topic in American history and synthesize primary and secondary materials to advance an original argument about the roots, shape, and implications of a historical moment. 4. Interrogate the role of the modern American presidency in American political life with an analysis of primary sources that will allow students to go beyond popular biographies of presidents and understand a more complicated historical reality of the debate about the responsibilities and nature of the office. 5. Recognize the historical roots of contemporary political debates about the presidency and the constitutional authority of the institution. 6. Understand the modern American presidency in ways that will allow students to better navigate the American political process more effectively. Credits: 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history.

Learning Outcomes: 1. Contextualize and compare important events and moments in the history of European imperialism and decolonization. 2. Analyze and evaluate how historians interpret the past, and examine how this past continues to shape the present. 3. Analyze an array of historical sources and types of evidence, historical narratives, first-person accounts and commentaries, scholarly interpretations, visual imagery and fictional portrayals, as well as the setting in which these sources were produced. 4. Craft original arguments supported by historical and textual evidence in class discussions and weekly writing assignments. Credits: 3.00

HIST 41505 - Gender And Politics In Early Modern Europe

Credit Hours: 3.00. This course explores the role of gender (its discourse as well as its practice) in the emergence, consolidation, and centralization of European political systems from the Renaissance to the French Revolution, such as princely courts, republics and monarchies.

Learning Outcomes: 1. Appraise the role of men, women, and gender discourse in the evolution of the main political systems of early modern Europe from the fifteenth to the eighteenth centuries. 2. Evaluate the mechanisms and power structures that included or excluded early modern women and men in the political process. 3. Apply the conceptual framework of gender and politics to a specific case study in 10-12-page analytical paper. Credits: 3.00

HIST 42100 - Honors Historical Methods

Credit Hours: 3.00. Designed as a prequel to Honors Thesis; this course introduces the Honors students to various advanced interpretative approaches to history and methods of historical research. Students also choose their topic for their Honors Thesis and begin research.

Credits: 3.00

HIST 42200 - Honors Thesis In Historical Research

Credit Hours: 3.00. Designed as a sequel to HIST 42100 (Honors Historical Methods); this course is intended as the culminating academic experience for students in the Department of History Honors Program. It will require the completion of an undergraduate thesis in history. Permission of instructor required.

Credits: 3.00

HIST 42300 - Advanced Topics In Modern Germany

Credit Hours: 3.00. This course offers a reading-intensive study of a specific period or theme in modern German history. Semester-long topics might include Imperial Germany; Weimar Germany; Divided Germany (1945-1990); or thematic studies on culture, religion, or military affairs.

Learning Outcomes: 1. Convey an understanding of the course material. 2. Designed to improve students' ability to communicate their ideas in a small classroom setting. 3. Enhance students' ability to analyze historical monographs critically. 4. Teach students to synthesize a semester's worth of reading in thematic essay questions. Credits: 3.00

HIST 43900 - Communist China

Credit Hours: 3.00. The evolution of the Communist movement (1921-1949) and the development of the Communist government (since 1949) in China. Attention is given to political, economic, social, and cultural changes.

Credits: 3.00

HIST 44100 - Africa In The Twentieth Century

Credit Hours: 3.00. A problem-oriented course in the modern history of Africa from 1880 to 1975. It analyzes origins of African nationalism, European colonialism, racial conflict, and war leading to the independence revolution of the 1960s and 1970s.

Credits: 3.00

HIST 45000 - The English Landscape:Integrating History, Horticulture & Landscape Architect

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Permission of instructor required.

Credits: 3.00

HIST 46000 - American Colonial History

Credit Hours: 3.00. An investigation of the foundation of the American colonies, their place in the British imperial structure, and the eventual conflict of imperial exigencies with colonial self-interest and national feeling.

Credits: 3.00

HIST 46100 - The Revolutionary Era, 1763 To 1800

Credit Hours: 3.00. An analysis of the origins, nature, and consequences of the American Revolution; of the achievements and difficulties of the new nation under the Articles of Confederation; of the drafting and adoption of the Constitution; and of the initial political, economic, and social progress of the United States under the Federalists.

Credits: 3.00

HIST 46700 - The Emergence Of Modern America

Credit Hours: 3.00. Examines the changes in American society between 1877 and 1932. The course covers such issues as the rise of industry, the growth of consumerism, the shift to a multi-ethnic society, imperialism, Populism, Progressivism, World War I, and the 1920s.

Credits: 3.00

HIST 46800 - Recent American History

Credit Hours: 3.00. Examines the issues that shaped American society, politics, foreign policy, and culture from 1932 to the present. Covers the Great Depression, World War II, the Cold War, and the Vietnam War as well as the social, cultural, and economic impact of those events.

Credits: 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture.

Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

HIST 47300 - History Of The South

Credit Hours: 3.00. Geographic, economic, cultural, social, and political aspects of the South. The significance of such figures

as Jefferson, Jackson, Calhoun, Jefferson Davis, and Woodrow Wilson. The emphasis is on the evolution of the intellectual climate.

Credits: 3.00

HIST 47600 - The Civil War In Myth And Memory

Credit Hours: 3.00. This seminar will explore how the Civil War has been celebrated and/or remembered from 1865-present.

Credits: 3.00

HIST 47700 - Native American Women's History

Credit Hours: 3.00. This course studies the history of indigenous women in North America from pre-contact to the present era, examining their roles through the experience of colonization and decolonization underscoring issues of sovereignty, identity, activism, kinship, public images, and stereotypes.

Credits: 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses.

Learning Outcomes: 1. Gain knowledge of some of the major debates in the history of insanity. 2. Be able to identify a research question, conduct primary source research, and form a thesis. 3. Use a variety of databases to assemble a range of primary sources. 4. Learn to interrogate and compare primary sources for viewpoint and implicit value system. 5. Gain knowledge of some of the major theoretical approaches and frameworks used for studying the history of insanity. 6. Be able to discuss ideas and research in formal writing and in seminar discussion. Credits: 3.00

HIST 48500 - Topics In American Political History

Credit Hours: 3.00. This course deals with broad thematic and chronologically defined topics in American political history from the Revolutionary Era to the late twentieth century. Content will vary with the faculty member teaching the class.

Credits: 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States.

Learning Outcomes: 1. Students will be able to articulate verbally and in writing what they have learned about the nineteenth and twentieth century history of sexual regulation. 2. Students will be able to identify and analyze the cultural and religious values which informed sexual regulation. 3. Students will develop a deeper understanding of how regulations and reform worked by conducting primary source research and synthesizing it into written arguments.

Credits: 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical

methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 49900 - History Internship

Credit Hours: 1.00 to 3.00. This course allows students to earn credit for internships. Examples of qualified internships would include work with museums, historical societies, and various units of government. Credit and course requirements arranged with the instructor. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

HIST 51200 - England Under The Stuarts

Credit Hours: 3.00. This intensive study of seventeenth-century England focuses on the political, religious, and economic tensions under the early Stuarts; the Civil War; Cromwell's Protectorate; and The Glorious Revolution. Topics discussed include parliament, puritanism, radicalism, the Restoration, and the Whig Oligarchy.

Credits: 3.00

HIST 57600 - Problems In Latin American History

Credit Hours: 3.00. A detailed examination of specific topics in Latin American history. Topics offered vary between colonial and national periods.

Credits: 3.00

HIST 57700 - Contemporary Latin America

Credit Hours: 3.00. A topical and regional approach to recent political, social, and economic movements in Latin America.

Credits: 3.00

HIST 59000 - Directed Reading In History

Credit Hours: 1.00 to 3.00. A reading course directed by the instructor in whose field of specialization the content of the reading falls. Approval of each reading project must be secured from the department. Permission of instructor required.

Credits: 1.00 to 3.00

HIST 59500 - The Holocaust And Genocide

Credit Hours: 3.00. (POL 59500) History and analysis of the Nazi attempt to destroy the European Jews, with comparisons to other instances of genocide.

Credits: 3.00

HIST 60100 - Reading Seminar In European History

Credit Hours: 1.00 to 3.00. Bibliography and historiography of selected fields of topics in European history; may vary in subject matter from semester to semester. Prerequisite: Master's student standing.

Credits: 1.00 to 3.00

HIST 60200 - Seminar In European History

Credit Hours: 3.00. Individual and group study of topics in European history from the medieval period to the modern era. Topics reflect the research, teaching, or historiographical specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing.

Credits: 3.00

HIST 61000 - History: Theory And Methods

Credit Hours: 3.00. This is the first part of an introductory two-course sequence for new graduate students intended to acquaint them with some important issues regarding the modern professional practice of history. This semester concentrates on historiography, theoretical questions, and methodological debates that today's working historians inevitably encounter. Students read about the practice of historical scholarship and read several important example texts representing different approaches to the discipline over the past 200 years. Students

write several short book reviews, position papers, and a mock grant proposal during this semester. The course is required of incoming graduate students in history. It usually will be followed by HIST 61100 , Research Practicum.

Learning Outcomes: 1. Become familiar with current trends in historical writing and argumentation. 2. Master a certain amount of knowledge about the evolution of the historical profession (historiography) but more importantly the recognition of problems inherent in asking and answering historical questions using documentary evidence and other sources available to scholars. 3. Able to formulate a research question and situate it within a context of existing historical scholarship, arguing for its significance to the community of scholars to whom it is addressed. 4. Develop critical thinking and communication skills. 5. Learn ethical research conduct and the appropriate use of historical investigation will be explored in the course of the seminar. Credits: 3.00

HIST 61100 - History: Research Practicum

Credit Hours: 3.00. The second half of a two-semester sequence for new graduate students intended to acquaint them with important issues regarding the modern practice of historical scholarship. This course is a research seminar in which students shape and execute their own research projects resulting in original article-length historical essays. In addition, matters relating to ethical conduct of research and problems of historical writing and argumentation are discussed. Prerequisites: HIST 61000 or 59800. Permission of instructor required.

Learning Outcomes: 1. Learn the process of shaping and executing a historical research project. 2. Learn the production of an original article-length historical essay. 3. Articulate their research question, propose strategies for finding appropriate evidence and sources, and discuss ways of constructing arguments to most effectively communicate the answers they find to their questions. Credits: 3.00

HIST 64100 - Reading Seminar In Global History

Credit Hours: 3.00. Individual and group study of topics in global history. Topics reflect the research, teaching, or historiographic specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing.

Credits: 3.00

HIST 64200 - Seminar In Global History

Credit Hours: 3.00. Individual and group study of topics in global history. Topics reflect the research, teaching, or historiographic specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing.

Credits: 3.00

HIST 65000 - Teaching The History Survey Course

Credit Hours: 3.00. This course provides an introduction to the literature on teaching history at the college level, especially the literature on pedagogy, theory, and conceptualization needed for the undergraduate survey course. Students will become familiar with the professional literature, develop their own syllabus for the survey course, and produce an extensive historiographical essay supporting and justifying the contents of the syllabus. Class discussions will expose students to a number of teaching strategies, concepts, and exercises. Prerequisite: Master's student standing. Permission of instructor required.

Learning Outcomes: 1. Have effective communication through written and oral modes. 2. Have critical and creative thinking skills in acquiring a broad base of knowledge and applying it to complex issues. 3. Have competence in a major area of study. 4. Have appreciation for and understanding of an expanded world perspective by engaging respectfully with a diverse range of individuals, communities and viewpoints. Credits: 3.00

HIST 65100 - Reading Seminar In American History

Credit Hours: 1.00 to 3.00. Bibliography and historiography of selected fields or topics in American history; may vary in subject matter from semester to semester. Prerequisite: Master's student standing.

Credits: 1.00 to 3.00

HIST 65200 - Seminar In American History

Credit Hours: 3.00. Individual and group study of topics in American history from the colonial period to the present. Topics reflect the research, teaching, or historiographical specialties of the faculty offering the course. Subtitles indicate the focus of the research seminar. Prerequisite: Master's student standing.

Credits: 3.00

HIST 67000 - Seminar In Latin American History

Credit Hours: 3.00. Research or reading seminar in Latin American History on a selected topic in colonial or national

period of Latin American History. Topics vary. It may be repeated once with change of topic. Students must have been admitted into M.A. or Ph.D. history programs or any other graduate program at Purdue. Also, adequate knowledge of languages pertinent to research topic is expected. No prior knowledge of Latin American History is required.

Learning Outcomes: 1. Become familiarized with the historical process in Latin America from 1492 to the present. 2. Understand the complexities of doing research in the area (e.g., the type of documentation, archives, and scholarly community that exist in Latin America). 3. Develop critical thinking and research abilities. Credits: 3.00

HIST 68000 - Entering The History Profession

Credit Hours: 3.00. This seminar is for advanced graduate students who are in the final two years of the program. In your earlier courses, you have become proficient in various methodological approaches and have gotten well acquainted with the historiography in various fields of study. You also have pursued original research and have navigated the classroom challenges. Now is the time to prepare for the job market, thinking critically about the skills you have acquired during graduate school and discerning strategies to communicate your credentials to a hiring committee. During this seminar, we will focus on how to structure a curriculum vitae, write a cover letter, create a teaching portfolio, craft a diversity statement, and select writing samples. We will also hold mock interviews to prepare you to orally communicate your skills, experiences, and expertise. Graduate students will also meet with professionals outside academia to learn about navigating the world of business, journalism, politics, non-profits, and public history. Permission of department required. Prerequisites: HIST 61000 and HIST 61100.

Learning Outcomes: 1. Gain a deeper understanding of the job market, inside and outside academia. 2. Foster stronger writing skills to present their research and qualifications. 3. Gain stronger oral communication skills and gain interview experiences. 4. Expand their professional networks by meeting with professionals inside and outside academia. 5. Create a research and teaching portfolio. Credits: 3.00

HIST 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

HIST 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Honors

HONR 12000 - Introduction To Research

Credit Hours: 3.00. In this course you will take an idea and blow it up. You will "blow it up" to better understand its elements, and its connections to various ways of creating knowledge. Then you will take the resultant pieces and use them to construct a research plan that's inclusive of at least two forms of inquiry.

Learning Outcomes: 1. Create a research proposal from some idea, observation, or problem that interests you, so that you can implement the plan as you launch your undergraduate academic journey. Credits: 3.00

HONR 19900 - Interdisciplinary Honors - Introductory Seminar

Credit Hours: 1.00 to 6.00. These introductory topic seminars are designed to open intellectual horizons and allow opportunities for learning by inquiry in a collaborative environment. Courses are limited to 20 participants or less, may be team-taught, and emphasize close interaction between the professor(s) and the students.

Learning Outcomes: 1. Sharpen critical thinking skills and interdisciplinary understanding. 2. Learn project-based inquiry, research thinking, and collaborative skills. Credits: 1.00 to 6.00

HONR 19901 - Honors First Yr Experience I

Credit Hours: 1.00. All JMHC students take this 1 credit course each semester (fall and spring) of their first year. This "Honors First Year Experience" is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. In fall, students explore interdisciplinary topics in small seminars with dedicated faculty and work in groups with JMHC student mentors in "world readiness" labs.

Learning Outcomes: 1. Identify and analyze complex and global issues/events/perspectives. 2. Identify approaches to interdisciplinary scholarship. 3. Evaluate and summarize literature from multiple disciplines. 4. Practice strategies for inclusive and equitable engagement across differences through in-class discussions and group activities. 5. Recognize the mission of the JMHC - what the college stands for, what it offers to students, and what

students can offer the JMHC community. 6. Develop inclusive and equitable collaborative and teamwork skills. Credits: 1.00

HONR 19902 - Honors First Yr Experience II

Credit Hours: 1.00. All JMHC students take this course each semester (fall and spring) of their first year. This course is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. This course is the second half of the required course sequence taken by all students entering the Honors College. Restricted to Honors College students.

Learning Outcomes: 1. Identify and analyze complex and global issues/events/perspectives. 2. Identify approaches to interdisciplinary scholarship. 3. Evaluate and summarize literature from multiple disciplines. 4. Practice strategies for inclusive and equitable engagement across differences through in-class discussions and group activities. 5. Recognize the mission of the JMHC - what the college stands for, what it offers to students, and what students can offer the JMHC community. 6. Develop inclusive and equitable collaborative and teamwork skills. Credits: 1.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

HONR 22000 - Community Of Inquiry

Credit Hours: 2.00. This course is for new members of the Honors College community, who entered as continuing Purdue students or transferred to Purdue. It, being your first or one of your first courses in the Honors College, is designed to help you hone some of the fundamental learning outcomes of an honors education: interdisciplinary thinking, critical thinking, problem-solving, research thinking, collaboration, and global awareness. You will also engage with the pillars of the Honors College and develop community within the Honors College. To accomplish these objectives, the course is simultaneously project-based and experiential. You will work in multi-disciplinary teams on applied research that emphasizes critical and multi-dimensional thinking about real-world problems. Through project-based learning, you will move your skills beyond identifying and understanding a problem to identifying and formulating solutions to that problem. The problem addressed in the course is local or global in scope and has social, economic, political, and/or environmental implications for our local and/or global community as well as begs a multi-disciplinary, innovative solution. Continuing in the vein of experiential learning and of building your honors ethos, you will attend events (some as a class, others individually) and participate in programs in the Honors College and across campus that embody the Honors College's pillars: Community and Global Engagement, Leadership, Research, and Interdisciplinary Academics. You will curate a schedule of events that take place during the semester and reflect on these experiences. Permission of department required.

Learning Outcomes: 1. Develop interdisciplinary thinking, critical thinking, problem solving, research thinking, collaboration, and global awareness. Credits: 2.00

HONR 22100 - Exploring Place (UCC: BSS)

Credit Hours: 3.00. "Exploring Place" is an examination of the cultural, social and historical dynamics that influence communities and relationships of a site. Blending independent study and distance learning, in this experiential learning course, the student and the instructor work together to design an individualized, in-depth study of the place in which the student is located. This study will be attentive to the social, cultural, political, economic, and other forces that have shaped this place historically and today, while also focusing on community life and the relationships between residents, institutions, organizations, and others. Exploring Place offers students the opportunity to better understand the people and places around them, expand their worldviews, and increase their self-awareness as they engage within these spaces and understand their place in them.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Create a plan of study that will serve as a guide for all of your activities in this course. 2. Identify and distinguish among different worldviews that shape how individuals or groups behave or perceive the world. 3. Identify and develop another intercultural competency for which you would like to accomplish personal growth. 4. Synthesize pertinent scholarly literature in order to establish a theoretical framework for understanding selected topic. 5. Collect and analyze primary data in order to describe and explain relationships among groups and culture of a place. Credits: 3.00

HONR 22200 - Solutions Lab Global

Credit Hours: 2.00. In this course, students from Purdue University (West Lafayette, Indiana) and at universities abroad will collaborate virtually in interdisciplinary teams to identify solutions to a major global challenge. Each semester, the theme of the global challenge changes. At the start of the course, students at both universities will meet together as a class to learn about the topic from a range of disciplinary perspectives through guest lectures, assigned readings, and class discussions. Students will then be divided into interdisciplinary teams with members from both universities and provided a prompt related to the semester's theme. Teams will spend several weeks of the course focused on researching, developing, and packaging their solutions, before presenting them publicly at the end of the term. In addition to increasing knowledge of the topic and improving teamwork skills, students in this course will advance in intercultural knowledge, skills, and attitudes through their international collaborative experience.

Learning Outcomes: 1. Increase basic knowledge of global pandemics and their effects on societies. 2. Gain new perspectives on the social implications of design emerging from multiple academic disciplines. 3. Analyze global issues and challenges, as well as potential solutions, from multiple cultural perspectives and the positions of multiple stakeholders around the world. 4. Advance research and teamwork skills through the completion of a group project and presentation addressing real-world problems. 5. Practice intercultural communication skills and other intercultural competencies through in-class activities and discussions, and through group work completed in international, cross-cultural teams. 6. Develop deeper intercultural self-awareness through reflective thinking and journaling. Credits: 2.00

HONR 29500 - Interdisciplinary Honors - Independent Experience

Credit Hours: 1.00 to 3.00. Individual experiential projects undertaken with faculty supervision. Permission of instructor required.

Credits: 1.00 to 3.00

HONR 29900 - Interdisciplinary Honors - Experiential Learning

Credit Hours: 1.00 to 6.00. These interdisciplinary topics seminars are designed to offer experiential learning on campus, in the community, and around the world. Courses are limited to 20 participants or fewer, may be team-taught, and emphasize close interaction between the professor(s) and the students. Students will participate in active learning exercises that may include study away and study abroad, workshops, research and creative skill building, community collaboration, and/or service learning. Seminar topics will vary from semester to semester.

Credits: 1.00 to 6.00

HONR 29901 - Interdisciplinary Honors - Honors Mentors

Credit Hours: 2.00. This hands-on course provides leadership training to the continuing Honors College students selected to work as mentors for the required, first-year honors course. Students work closely with a faculty instructor. Restricted to Honors College students. Department permission required.

Learning Outcomes: 1. Demonstrate self-understanding and continuous learning. 2. Demonstrate communication skills. 3. Demonstrate systems thinking, planning, and solving. 4. Demonstrate teamwork and collaboration. 5. Demonstrate ethics and personal responsibility. Credits: 2.00

HONR 31000 - Space-Time!

Credit Hours: 3.00. In Space-time!, we will explore how our relationship to space and time has changed over human history. We will focus primarily on the last two centuries and how interconnected changes in science, technology, and culture altered our sense of the scope, age, and nature of the reality around us. The ideas around space and time offer us an occasion to see how arts, philosophy, sciences, and our own experiences shape the way we see the world. Students, too, will explore the cross-influences of arts, philosophy, and sciences, as they write their own creative works, engage complex ideas from new perspectives, and expand their imaginations.

Learning Outcomes: 1. Develop an appreciation for how the progression of science is intertwined with culture and how certain creative genres -- like science fiction -- explore, interrogate, and even progress scientific ideas. 2. Develop skills for exploring new ideas, engaging multiple perspectives, and synthesizing diverse ideas to create more a complex or nuanced understanding of the world around them. 3. Develop skills for raising novel questions, exploring multiple perspectives, and synthesizing divergent ideas. Credits: 3.00

HONR 31100 - Replicants

Credit Hours: 3.00. From ancient mythology to Blade Runner 2049, the creation of artificial bodies has captured the human imagination. This course asks: how do the materials we use to re-create the human body affect the way that we construct our humanity? We will examine the different materials people have used to replicate the body throughout history. The course is organized thematically by materials such as wood, wax, silicone, and digital media. This course emphasizes hands-on learning; we will cast wax masks, sculpt clay figurines, and create automata, among other experiential activities. The types of replicants we will study in this course range from voodoo dolls to Real Dolls, death masks to Deep Fakes, and statues to cyborgs. For the final project, you will choose a case study of a replicant to write about in an exploratory paper.

Learning Outcomes: 1. Understand core concepts of materiality theory, including the material turn and theories of the body, and compare how these concepts are used by multiple scholarly disciplines. 2. Apply these concepts to your own academic discipline and interests. 3. Evaluate and apply diverse cultural and historical practices of material use and reproduction of the human form across cultures and over time. 4. Have developed your own imaginative and complex perspective on the course material. 5. Have developed critical reading, analytical, and communication skills through engagement with scholarly writing, group discussion, small group work, leading discussion, and writing assignments. Credits: 3.00

HONR 31200 - Jazz

Credit Hours: 3.00. Jazz artists "speak to each other in the language of music." In Jazz, we will explore the nature of this artistic conversation with many of its cultural influences, geographical variations, and temporal iterations. Throughout our time together we will interrogate varying facets of the social impact such a conversation facilitates. Furthermore, we will explore the musical language of jazz with its power to make collective performance stronger. And we will investigate the ways in which this artists' talk became the "talk of the town" and country as a medium through which people could break from dominant cultures. We will make sense of and process our journey by creating our own jazz ensemble, featuring the layered textures of our lives as inspiration for the note and lyric.

Learning Outcomes: 1. Articulate jazz conceptually. 2. Create connections between jazz and a democratic community. 3. Represent jazz creatively. Credits: 3.00

HONR 31300 - Science, Technology, & Society (UCC: STS)

Credit Hours: 3.00. Science and technology are deeply intertwined with the distribution of costs and benefits in human society, underscoring the need for critical perspectives. This project-based course will examine the social and ethical implications of science and technology using interdisciplinary methodologies/approaches. Students will have the opportunity to address questions such as: How have particular scientific discoveries and technologies emerged or evolved? How have they shaped society, and how has society shaped science and technology? How have science and technology compounded social inequalities (race, class, gender), and how can they be changed to reduce inequalities? Topics that will be explored will vary each semester.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 2. Describe ethical implications of technological and scientific developments. 3. Explain how social factors have shaped the development and application of science. 4. Explain how social factors have shaped the development science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. Credits: 3.00

HONR 31400 - The Human Epoch (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the entangled relations between humanity and the environment

from multiple social contexts and time periods. Throughout the class, students will read, analyze, and discuss interdisciplinary scholarship from the social and behavioral sciences. Classroom activities will take the form of discussion, projects and group assignments, and writing assignments, with an emphasis on peer-to-peer learning. Students will create a project aimed at a public audience that demonstrates knowledge about key course topics and communicates connections between social/behavioral knowledge and personal, civic, ethical, or global decisions and policies. As a result of taking this course, students will be able to understand and evaluate critical questions about humanity and its ecologies, recognize the importance of those questions for various audiences, and draw connections between course materials and their own perspectives about the world.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Demonstrate knowledge of major concepts, theoretical perspectives, empirical patterns, and/or historical contexts within a given social or behavioral domain. 2. Identify the strengths and weaknesses of contending explanations or interpretations for social, behavioral, or historical phenomena. 3. Recognize the extent and impact of diversity among individuals, cultures, or societies in contemporary or historical contexts. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. Credits: 3.00

HONR 31500 - Across Differences (UCC: HUM)

Credit Hours: 3.00. To understand and combat systemic injustices, our students must be equipped to engage with the historical and present-day racial and ethnic "reckonings" that define the United States, and large parts of the globe. This course offers students an opportunity to focus on cultural landscapes/contexts, to learn how race and ethnicity permeate cultural texts, genres, and industries. The course trains students to recognize how race-and-ethnicity-based inequities intersect with issues of class, gender, and/or sexuality, and how these intersections articulate themselves in/through culture. Students will grapple with the colonial, national, transatlantic, trans-cultural, and diasporic underpinnings of culture. Topics that will be explored will vary each semester, but to attend to the diverse ways in which students learn and demonstrate their learning, all sections will use interdisciplinary materials like songs, films, video games, sporting events, poems, neighborhood maps, photographs, fine art pieces, oral histories, interviews, and newspapers, in addition to traditional/scholarly publications.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize and describe humanistic, historical, or artistic works or problems and patterns of the human experience, especially those related to matters of race, ethnicity, and difference. 2. Apply disciplinary methodologies, epistemologies, and traditions of the humanities and the arts to better engage with historical and present-day debates about race and ethnicity. 3. Analyze and evaluate texts, works, objects, events, or ideas in their cultural, intellectual, or historical contexts to recognize how race and ethnicity-based inequities intersect with issues of class, gender, and/or sexuality. 4. Create, interpret, or reinterpret artistic and/or humanistic works through performance, analysis or criticism to grapple with how difference is inscribed onto cultural landscapes and contexts. 5. Analyze diverse narratives and evidence in order to explore the complexity of colonial, national, transatlantic, trans-cultural, and diasporic human experiences across space and time. Credits: 3.00

HONR 39500 - Interdisciplinary Honors - Independent Study

Credit Hours: 1.00 to 3.00. Individualized course of study undertaken with faculty supervision. Permission of instructor required.

Credits: 1.00 to 3.00

HONR 39900 - Interdisciplinary Honors - Special Topics Seminar

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of honors seminars that stress interdisciplinary understanding, intellectual flexibility, creative thought, and group discussion. Topics vary by semester. Open to students at all levels.

Credits: 1.00 to 6.00

HONR 46000 - Technological Justice (UCC: STS)

Credit Hours: 3.00. In this course, students will study interdisciplinary approaches to technology ethics for responding to today's pressing technological dilemmas in a range of contexts, from healthcare, mass incarceration, and airport security to social media, smart cities, and space travel. Students will grapple with how historical and present-day inequalities,

institutional environments, decision-making cultures, and regulatory systems impact the technological design process and distribution of technology's risks and rewards in society. We will ask ourselves how relations of power inform the ways technologies are designed and experienced, as well as how power shapes dominant and insurgent approaches to achieving technological justice. The primary deliverable in this class is for you to conceive of and carry out your own "Technological Justice" Project, based on your interests, passions, and personal and/or professional goals.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain an interdisciplinary understanding of critical interventions into tech ethics from both scholarly and popular culture perspectives. 2. Recognize and critically analyze how values, goals, assumptions, and ideas of social differences are embedded in technological designs and shape ethics discourse (with particularly attention to race, gender, class, and ability). 3. Analyze and reflect critically on the societal impacts of technologies in a variety of contexts. 4. Conceive, conduct, and present an original interdisciplinary research project that demonstrates a sophisticated understanding of the relationship between technology, social issues, and justice. Credits: 3.00

HONR 46100 - Well-Being

Credit Hours: 3.00. Copenhagen, Zurich, Helsinki, Stockholm, and Tokyo are the five most livable cities in the world according to MONOCLE's 2021 Quality of Life Index. They are the highest-ranking cities when using metrics to measure crime, emergency services' response time, transportation networks, cycling culture, food, drink, retail, and the number of independent bookshops. MONOCLE's Quality of Life survey is one among the many that exist to rank the world's best cities, but wealth is one theme that emerges from among the varying indices and their respective results. The metrics, indeed the participants responding to the metrics, represent populations of people with high levels of discretionary income. How might the metrics reflect different values if these indices include a different kind of participant, such as the urban poor?

Learning Outcomes: 1. Investigate indicators of community well-being related to quality of life with urban poor communities. Credits: 3.00

HONR 46200 - Protein Design With FoldIt

Credit Hours: 3.00. The protein folding problem is a grand challenge in biology. How does a protein's amino acid sequence dictate its three-dimensional structure? FoldIt is an online game in which players determine the most stable folded structure of hypothetical proteins that have been predicted by unique computer algorithms to perform specific functions in the cell. Students in this course will be introduced to the mechanics of the FoldIt software to fold computer-predicted proteins into their native structures as well as design novel proteins that can bind and deactivate the COVID-19 spike protein.

Learning Outcomes: 1. Demonstrate knowledge of the fundamental principles underlying protein folding and design. 2. Demonstrate knowledge of the protein structure prediction and design problems. 3. Design novel 3D protein structures using the FoldIt software. 4. Develop responsible and ethical research practices. 5. Read, summarize, and analyze scientific research articles. 6. Construct a literature review. 7. Create, present, and evaluate scientific research posters. 8. Develop strategies to translate research to the general public. 9. Critically reflect upon and articulate their learning and growth as a researcher. Credits: 3.00

HONR 46300 - Research Thinking Portfolio

Credit Hours: 2.00. This course establishes a new pathway for Honors completion through a critical engagement with the Undergraduate Research pillar of the college. This course will empower Honors students to leverage their research, scholarly, and creative experiences in curricular as well as co- and extra-curricular experiences toward completing the HC curriculum. Our course will combine workshops, hands-on laboratories, group discussion, and one-on-one meetings. The major assignment is a reflective portfolio, which will serve as a record of your past experiences and an opportunity to reflect on the ways in which your time as an Honors College student has shaped your research thinking and helped prepare you for life beyond the university. Successful completion of the course fulfills the scholarly project requirement of the HC curriculum.

Learning Outcomes: 1. Understand the place of research in institutions of higher education and society. 2. Identify a question, the answer to which makes a contribution to an existing body of knowledge or creative practice. 3. Read, analyze, and synthesize information from scholarly literature and/or traditions of creative practice. 4. Demonstrate knowledge of disciplinary and/or interdisciplinary skills,

methods, and abilities appropriate for the research/creative question. 5. Recognize and respond to ethical responsibilities of their research projects. 6. Communicate their findings in both oral and/or written formats. Credits: 2.00

HONR 46400 - Scholarly Project

Credit Hours: 3.00. This course fulfills the scholarly project requirement of the Honors College curriculum. Students will engage in original research projects that produce new knowledge.

Learning Outcomes: 1. Identify a question, the answer to which makes a contribution to an existing body of knowledge or creative practice. 2. Read, analyze, and synthesize information from scholarly literature and/or traditions of creative practice. 3. Demonstrate knowledge of disciplinary and/or interdisciplinary skills, methods, and abilities appropriate for their research/creative question. 4. Evaluate and interpret their findings. 5. Recognize and respond to ethical responsibilities of their research/creative projects. 6. Communicate their findings in both oral and/or written formats. Credits: 3.00

HONR 49500 - Honors Independent Research

Credit Hours: 1.00 to 6.00. Individualized research under faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Improve research skills. 2. Develop research thinking. 3. Create new knowledge. Credits: 1.00 to 6.00

HONR 49900 - Honors Research Project

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of faculty-led collaborative research projects. Topics will vary by semester. Permission of department required.

Credits: 1.00 to 6.00

HONR 59901 - Research Mentorship Development Program

Credit Hours: 3.00. The Research Mentorship Development Program is designed for Purdue based on a nationally recognized curriculum and prepares graduate students or postdocs to mentor undergraduates in research. Effective mentoring of undergraduate researchers requires specific skillsets and approaches. Implementation of these strategies can lead to a productive and mutually beneficial experience for both students and their mentors. The course is designed for graduate students who plan to work with new researchers in their labs or research groups and who plan to enter academia or pursue careers in which they will mentor others in scholarship or research. Graduate students or postdocs selected for the program are matched with honors students who are interested in research. Permission of department required.

Learning Outcomes: 1. Communicate more effectively with mentees. 2. Align mentor and mentee expectations. 3. Assess their mentee's understanding of core concepts and technical skills in the research field. 4. Foster their mentee's confidence and ability to conduct independent research. 5. Implement concrete strategies for addressing issues of diversity. 6. Articulate and constructively review their own approach to mentoring. 7. Cultivate research ethics with their mentees. 8. Promote professional development of their mentees. 9. Build a community of practice with other mentees. Credits: 3.00

Horticulture

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great

activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 12100 - Medicine In The Garden (UCC: STS)

Credit Hours: 1.00. A survey of the uses and properties of horticultural plants for human health and well-being. Topics will focus on the close relationships between plants and human physiology, nutrition, medicines, mind-altering drugs, poisons, and beverages.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 4. Demonstrate the ability to work effectively as part of a problem-solving team. 5. Demonstrate skills necessary for lifelong learning. Credits: 1.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 21100 - Fundamentals Of Turfgrass Culture Laboratory

Credit Hours: 1.00. (AGRY 21100) Companion lab to AGRY 21000. Laboratory exercises will focus on turfgrass and seed anatomy, morphology, identification as well as the hands-on basic principles of turfgrass culture. Designed for the student who intends to pursue a career in turfgrass management and plans to enroll in AGRY 51000. Enrollment preference will be given to Turfgrass Science Majors.

Credits: 1.00

HORT 21200 - Greenhouse And Landscape Fundamentals For Educators

Credit Hours: 3.00. (ASEC 21200) This course will prepare future educators in using a greenhouse and landscape as teaching tools. The key focus will be preparing students to apply greenhouse and landscape management fundamentals in order to teach these concepts in the classroom. Laboratories will explore how to identify and produce both woody and herbaceous plants while safely maintaining and operating greenhouse technologies. Students will also explore how to implement landscape design technologies and identify tools, equipment, and landscape plants. Permission of instructor required.

Learning Outcomes: 1. Identify and apply basic propagation techniques. 2. Identify and describe plant species specific to greenhouse and landscape plantings. 3. Interpret funding for greenhouses, greenhouse technologies, and landscape design equipment. 4. Apply IPM,

irrigation, and propagation techniques while safely maintaining and operating a greenhouse. 5. Analyze and utilize landscape design software and tools to design a landscape. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

HORT 27000 - Floral Design And Interior Plant Management

Credit Hours: 3.00. Elements and principles of floral design, as well as the identification, culture, and propagation of indoor plants. Topics in the art of floral design from both the florist's and the consumer's perspective, as well as information on growing houseplants. A variety of creative, hands-on lab projects include fresh flowers & foliage, silk, and dried materials.

Learning Outcomes: 1. Recognize and use the elements and principles of design as they apply to the art of arranging flowers. 2. Develop the skills necessary to create floral designs. 3. Correctly select and use flowers, containers, and color harmonies. 4. Properly condition cut flowers and greens for use in everyday flower arrangements. 5. Identify indoor foliage plants and flowers and problems of interior plants. 6. Better understand the factors involved in growing and maintaining plants. 7. Know the cultural requirements of 30 popular interior plants. 8. Properly manage interior plants and floral arrangements. 9. Properly evaluate floral designs used for decorating and gift giving. 10. Receive greater enjoyment from plants and flowers and increased awareness of their design qualities. Credits: 3.00

HORT 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first- and second-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required.

Learning Outcomes: 1. Have critical thinking. 2. Have communication. 3. Have cultural understanding. 4. Know civic responsibilities. 5. Have professional preparation. 6. Know scientific principles. 7. Know social science principles. 8. Able to teamwork. Credits: 1.00 to 4.00

HORT 29100 - Selected Topics In Horticulture

Credit Hours: 1.00 to 3.00. This variable-credit, lower-level selected topics course will be used for lower-division undergraduate research projects, for development of new lower-division courses and for temporary courses for lower-division students. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking,

problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

HORT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 30600 - History Of Horticulture (UCC: STS)

Credit Hours: 3.00. The origins and development of agriculture, with specific emphasis on horticulture from prehistory to the present in relation to civilization and modern culture.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HORT 31110 - Aquaponics

Credit Hours: 1.00. (SFS 31100) (FNR 31300) There has been a significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia; and our impending food crisis has kindled an interest in developing aquaponics systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. The waste disposal problem of the fish can become the nutrient supply to the plants.

Learning Outcomes: 1. Understand the nature of interactions among organisms, in particular those involving plants: mutualism, commensalism, parasitism, herbivory. 2. Understand the relationships among host, environment and pathogen for development of plant disease. 3. Know principal pathogens of Midwestern crops. 4. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 5. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 6. Understand the importance of energy in society and in agricultural production systems. 7. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 8. Have a broad awareness of the role of agriculture in global society. 9. Understand the advantages and disadvantages of different approaches to food production. 10. Understand the principles of food marketing and sales. 11. Understand the principles of post harvest food storage and pest management. Credits: 1.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural

crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 31900 - Controlled Environment Production Of Horticultural Crops

Credit Hours: 3.00. This course combines production principles with environmental concepts and advances in technology to provide a comprehensive training in sustainable production of herbaceous ornamentals and vegetables in controlled environment systems. The laboratory instruction provides hands-on experience with the practice of growing crops under controlled environments by combining the learning from lab prep with the use of technology to control environment during production.

Learning Outcomes: 1. Become familiar with best management practices for growing herbaceous ornamentals and vegetables that improve sustainability in controlled environments. 2. Learn how above and below ground environments interact with crop production. 3. Learn basics about the state-of-the-art technologies used in controlled environment agricultural production to monitor and control environments. 4. Interact with industry professionals to gain first-hand knowledge about careers and development in commercial horticulture. 5. Gain sufficient background in science, technology and regulations required to become entrepreneurs, next generation growers and researchers in the controlled environment agriculture industry. Credits: 3.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

HORT 37000 - Professional Floral Design

Credit Hours: 3.00. Principles and techniques of commercial-scale floral design for weddings, funerals, hospitals, personal, and parties. Design construction for fresh, dried, and silk materials. Survey of retail florist management. Permission of department required.

Credits: 3.00

HORT 39000 - Cooperative Program In Horticulture

Credit Hours: 0.00. Supervised work experience in horticultural industry. Programs must be preplanned and conducted under the direction of the departmental coordinator with the cooperation of an employer. Students must submit a summary report. Permission of department required.

Credits: 0.00

HORT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

HORT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

HORT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in horticulture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

HORT 40000 - Horticulture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

HORT 40300 - Tropical Horticulture

Credit Hours: 3.00. An introduction to the agriculture of the tropics and subtropics, emphasizing horticultural crops. Offered in even-numbered years.

Credits: 3.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research. 2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research

activity might improve. Credits: 1.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

HORT 45000 - In The English Landscape: Integrating History, Horticulture, And Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required.

Credits: 3.00

HORT 47500 - Honors Course - Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third- and fourth-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required.

Learning Outcomes: 1. Have critical thinking. 2. Have communication. 3. Have cultural understanding. 4. Know civic responsibilities. 5. Have professional preparation. 6. Know scientific principles. 7. Know social science principles. 8. Able to teamwork. Credits: 1.00 to 4.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 49900 - Thesis Research

Credit Hours: 1.00 to 6.00. For students doing individualized research on horticultural problems; report required. Arrange with academic advisor and honors research advisor before registering. Admission to the honors program. Permission of instructor required.

Credits: 1.00 to 6.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 51400 - Sensors And Automation For Horticultural Crop Production

Credit Hours: 3.00. This course is designed to provide undergraduate (senior level) and graduate students with the knowledge of a wide range of environmental and plant sensors and automation devices for horticultural crop production, especially controlled environment production. Lectures will focus on the theory and application of different plant and environmental sensors, electronic devices and computer programming for automation and environmental control using sensors while the laboratory activities provide hands-on experience on the application of sensors and automation devices to control below and above-ground environment during production.

Learning Outcomes: 1. Examine theory associated with different environmental and plant sensor measurements. 2. Implement methods to interface sensors to measurement devices such as dataloggers and micro-controllers and program them for automated and continuous sensor measurements. 3. Examine digital sensing technologies based on image analysis. 4. Demonstrate knowledge and practice hands-on experience with precision

environmental control using datalogger and microcontrollers. Credits: 3.00

HORT 52500 - The Plant Microbiome

Credit Hours: 3.00. Students will learn about the latest methods to collect and analyze root and shoot exudates, quantify the composition and activity of microbes associating with plants, and determine how these associations influence plant health and productivity. Critical reviews of the primary literature and development of a research proposal will help students acquire the skills needed to conduct research on this rapidly emerging topic.

Learning Outcomes: 1. Describe basic processes regulating plant-microbial interactions in the rhizosphere and phyllosphere, and the implications of these interactions on plant and environmental health. 2. Critically evaluate and discuss primary literature in the field. 3. Compare and contrast methods used to study processes mediating plant-microbial relationships. 4. Identify questions that remain unanswered in the field and develop a research proposal to address one of these questions. Credits: 3.00

HORT 53000 - Introduction To Computing For Biologists

Credit Hours: 3.00. This course will teach the basic skills and knowledge required to operate in UNIX environment and program in Python. The course is designed to teach graduate, and advanced undergraduate students in plant and animal sciences the skill set required to analyze and interpret their own datasets. The lectures and associated lab section will provide students hands-on experience in working within a high-performance computing environment to analyze genome-scale datasets.

Learning Outcomes: 1. Define their biological data analysis as a computational problem. 2. Identify portions of the analysis that will benefit from parallelization. 3. Write one or more scripts that use the computational power provided by compute clusters to analyze large biological data sets in a speedy manner. Credits: 3.00

HORT 53100 - Applied Plant Genomics

Credit Hours: 2.00. This course aims to provide students an introduction to the theory and practice of functional genomics in plants. The course is centered around the many forms in which DNA sequencing technologies are applied to understand plant genomes, their variation and their function. The course will cover concepts in plant genome sequencing, transcriptome profiling and functional enrichment analyses in sets of genes. This is a full semester course that meets twice a week for: 1. A lecture that covers the rationale and theory of the topic and 2. A hands-on lab section that provides experiential learning with the computational tools and packages used in plant genomics and transcriptomics.

Learning Outcomes: 1. Describe and compare the chemistry, data yield, and cost of first generation, next generation and third generation sequencing technologies, and their applications in plant genome sequencing. 2. Obtain and understand the information on genome sequences and gene annotations for a sequenced plant genome. 3. Design and perform a transcriptome analysis pipeline. 4. Describe the statistical basis of gene enrichment analysis. 5. Apply standard gene group analysis tools to perform GO term analysis, motif analysis, pathway analysis, gene list overlapping and gene regulatory network analysis to interpret a gene list resulting from a functional genomics project. Credits: 2.00

HORT 54100 - Postharvest Technology Of Fruits And Vegetables

Credit Hours: 1.00. (FS 54100) Theoretical and applied aspects of methods being used for enhancing the quality and shelf life of harvested fruits and vegetables. Factors that affect the longevity of produce and technology used to control these factors and reduce deterioration of produce between harvest and consumption/processing will be emphasized. Weeks 11-15.

Credits: 1.00

HORT 55100 - Plant Responses To The Environment

Credit Hours: 3.00. Future agricultural production and the environment will encounter multifaceted challenges from global climate change, heat and drought incidence and severity, and limited land and resources. An understanding of how plant responds to these changes is essential to develop new technologies and systems approaches to mitigate the negative impacts and enhance agricultural crop productivity. This is an advanced plant biology course covering the present state of understanding of phenological, physiological, and molecular and genetic mechanisms and processes by which plants acclimate to transient and chronic environmental extremes.

Learning Outcomes: 1. Demonstrate an enhanced understanding of scientific principles.

2. Exhibit critical thinking. 3. Have a better understanding of the expectations of a professional scientist. 4. Increase the ability to evaluate and communicate scientific concepts. 5. Better understand scientific collaborative processes. 6. Understand some of the social and cultural interactions that come to play in scientific research. 7. Understand some of the ethical issues involved in the conduct of scientific research. 8. Understand the necessity for continuous learning that characterizes the scientific research process. Credits: 3.00

HORT 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Demonstrate knowledge of a variety of participatory and facilitation techniques. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

HORT 59000 - Special Studies In Horticulture

Credit Hours: 1.00 to 3.00. Special studies in horticulture not covered in regular coursework. The field in which work is offered will be indicated in the student's record. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 60100 - Planning And Presenting Plant Science Research

Credit Hours: 1.00. The purpose of this course is to acquaint students with the culture of scientific research and the processes of scientific discovery and review. This course will: (1) acquaint students with techniques used in presenting short scientific talks, as e.g., at national meetings, (2) expose students to procedures used in preparing scientific papers, proposals, etc., (3) introduce students to the outcomes expected to be achieved by graduate education and the processes by which students are mentored and evaluated, (4) help students begin formulating their research project proposal, (5) acquaint students with guidelines for biosafety and responsible conduct of research and provide a forum for discussion of ethical issues confronting researchers, particularly those inherent in participating in extramurally-funded research, (6) acquaint students with intellectual property issues involved in scientific research, (7) acquaint students with core research facilities across campus, and (8) expose students to discussions regarding the importance of diversity and an atmosphere of mutual respect to research excellence. This course is taken for a letter grade and carries one hour of credit.

Credits: 1.00

HORT 60200 - Horticulture Research Seminar

Credit Hours: 1.00. Weekly attendance at the Horticulture and Landscape Architecture Departmental seminars to help graduate students develop an appreciation for attending seminars and learning appropriate and effective presentation skills. HORT 602 compliments HORT 60100 and HORT 60300 by extending the presentation and project development approaches learned, so that students are better ready to prepare and defend their project proposals in HORT 60300. Prerequisite: BCHM 56100.

Credits: 1.00

HORT 60300 - Grants And Grantsmanship

Credit Hours: 1.00. Focuses on funding opportunities in agricultural research and techniques of writing successful scientific grant proposals. Students will write a proposal on a research topic of their choice during the course, and they will gain experience in the peer review process by preparing written reviews of proposals and participating in a panel meeting in which proposals are discussed and ranked.

Credits: 1.00

HORT 64000 - Metabolic Plant Physiology

Credit Hours: 3.00. (BCHM 64000, BTNY 64000) Topics include photosynthesis, respiration, carbohydrate and lipid metabolism, and nitrogen, sulfur, and secondary metabolism. This course is the third in a series of core courses in the Purdue Plant Biology Program graduate curriculum. Prerequisite: BCHM 56100, BTNY 55300 or HORT 55300, Prerequisite: BIOL 55100 or HORT 55100.

Learning Outcomes: 1. Knowledge in basic principles of plant metabolism. 2. Skill in presenting complex ideas. 3. Critical and creative thinking skills in evaluating the primary literature. Credits: 3.00

HORT 69500 - Horticulture Seminar

Credit Hours: 0.00. Topics of current interest to staff and students.

Credits: 0.00

HORT 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

HORT 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Hospitality and Tourism Management

HTM 10010 - Exploring Transformational Experiences In Hospitality And Tourism

Credit Hours: 1.00. In an age where experiences have become the new currency, businesses must adapt and thrive in the experience economy to succeed. This course introduces students to the concept of transformational experiences within the experience economy, providing them with the knowledge and skills needed to navigate this dynamic landscape. Students will gain a better understanding of where their passions lie within the broader scope of hospitality and tourism, preparing them for academic and career-related success.

Learning Outcomes: 1. Describe transformational experiences that drive business success in the experience economy. 2. Outline current and trending transformational experiences in hospitality, tourism, and affiliated industries. 3. Identify potential career paths within hospitality, tourism, and affiliated industries. Credits: 1.00

HTM 10100 - Hospitality And Tourism Student Seminar

Credit Hours: 1.00. Course assists the student new to Purdue to become acquainted with the Purdue system and with the HTM department and program. Information presented to assist students with developing strategies for academic and career-related success at Purdue.

Learning Outcomes: 1. Describe the curriculum of the Hospitality and Tourism Management Department; the Purdue University registration process and apply that knowledge to plan their academic program and develop a schedule each semester at Purdue. 2. Use the principles of time management in planning their time commitments. 3. Demonstrate individual skills and interests related to career choice. 4. Define and apply civic engagement principles in the local community in service to a non-profit hospiitality or tourism related business. 5. Create a professional resume and understand the interview process in searching for employment. Credits: 1.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

HTM 16200 - Introduction To Event And Meeting Planning Industry

Credit Hours: 3.00. Upon completion of this course, students will have a comprehensive overview of the event and meeting industry. Topics will include the supply and demand side of event and meeting management, the basic planning process needed for any event or meeting, sustainability, business ethics, and keeping pace with current industry trends through guest lectures from event and meeting planners.

Learning Outcomes: 1. Develop a comprehensive overview of the essential supply and demand components of the event industry including corporations, associations, and the government in terms of organization, type, decision makers, attendees, and marketing efforts. 2. Compare and contrast the advantages and disadvantages of major venues of hotels, convention centers, conference centers, cruise ships, and unusual venues to those who demand and plan events. 3. Identify the key players and pioneers of the event planning industry. 4. Identify the basic needs of

event planners and consumers. 5. Identify the basic principles and concepts of sustainability as applied to the event management industry. 6. Summarize the major characteristics of event planning with respect to planning, directing, organizing, controlling and assessing events. 7. Identify ethical business practices associated with the event industry. Credits: 3.00

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries.

Learning Outcomes: 1. Explain the tourism system including the roles of travelers, tourism businesses and destinations, and other tourism system components. 2. Describe the impacts of tourism and the basic components of sustainable tourism practices. 3. Identify the key principles of destination marketing and management. 4. Describe key factors that influence consumer travel behavior including personal, interpersonal, and environmental factors. 5. Describe how to apply experience design principles to develop tourism products, services, and experiences. Credits: 3.00

HTM 18000 - Hospitality Operations

Credit Hours: 3.00. Hospitality leaders require a deep understanding of the fundamental principles and practical aspects of managing operations within the dynamic and fast-paced hospitality industry to effectively run a business. This course will address topics including principles of management, organizational structures, managerial decision-making, hospitality metrics, and the responsibilities of managers. Through these topics, the course will strengthen students' understanding of the hospitality industry as it exists today while preparing them for the industry of the future.

Learning Outcomes: 1. Describe the key principles of management. 2. Identify organizational structures, including brands, management, and ownership. 3. Compute key hospitality metrics. 4. Explain how work groups in major types of hospitality businesses interconnect. 5. Understand the responsibilities of leaders in hospitality operations. Credits: 3.00

HTM 18100 - Introduction To Lodging Management

Credit Hours: 3.00. History, features, operation procedures and management of lodging facilities both in the United States and in other parts of the world. The course involves an experiential learning component.

Learning Outcomes: 1. Describe the evolution of the lodging sector in the United States (U.S.) and around the world. 2. Identify hotel types, brands as well as management and ownership structures in 21st century lodging business. 3. Describe how work is organized in hotels. 4. State the duties and responsibilities of positions within lodging business. 5. Describe and critically evaluate front office and housekeeping procedures in hotels. 6. Identify internal and external reports (such as the STR Report) commonly used in lodging business. 7. Compute basic key performance indicators (KPIs) (such as occupancy percent, ADR, RevPar). 8. Discuss some of the latest technological advances in lodging business. 9. Describe common unethical practices and innovative strategies in reducing such practices in lodging business. 10. Describe other tourism business sectors that interconnect with lodging. Credits: 3.00

HTM 18101 - The Union Club Hotel Experience

Credit Hours: 1.00. Hospitality businesses are complex operations requiring unique managerial approaches to deliver exceptional guest and employee experiences. The Union Club Hotel is ideally positioned to expose students to managerial roles in a multi-million-dollar asset. Students will shadow managers who oversee hotel departments and interact with corporate leaders through this experiential course while learning how managers ensure an exceptional guest experience, provide a positive employee experience, and execute efficient hospitality operations. The knowledge gained in this course is transferable to all hospitality businesses, making this course valuable for all.

Learning Outcomes: 1. Identify principles of

management as demonstrated by managers of a hospitality operation. 2. Describe how various departments of a hospitality business interconnect to deliver the guest experience. 3. Describe the importance of fostering a positive work environment for hospitality employees. Credits: 1.00

HTM 19100 - Sanitation And Health In Foodservice, Lodging, And Tourism

Credit Hours: 3.00. This course introduces students to the foodservice component of the Hospitality and Tourism industry and explores food safety and other health-related issues. Application of sanitation principles in restaurants, hospitals, schools, hotels, cruise ships, airlines, and international travel are covered. Students must pass a National Sanitation Certification Examination to receive credit.

Learning Outcomes: 1. Identify the causative agents, symptoms, contributing factors to foodborne illnesses, and the processes used to prevent foodborne illnesses from occurring. 2. Describe how food should be safely handled from purchasing through service to the customer. 3. Describe the role and responsibilities of federal and state governments, local regulatory agencies, and foodservice managers in promoting and maintaining consumer food safety. 4. Describe the overall foodservice inspection system, how inspections are conducted, and how managers should use inspections to improve their food safety. 5. Describe additional health issues relevant to the foodservice, lodging and travel industries and what these industries should do in regards to these health issues. 6. Describe how to effectively communicate with government agencies and the general public as part of normal operations and during crisis management. 7. Describe what and how food safety training of employees should be done. Credits: 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

HTM 20200 - Hospitality And Tourism Work Experience

Credit Hours: 1.00. This course is a supervised paid industry work experience in the hospitality and tourism industry. Students are required to present a signed agreement from their employer prior to initiating employment. Students are also required to prepare a series of work and reflective reports. A minimum of 320 work hours is required for completion during either a summer or semester period. Permission of department required.

Learning Outcomes: 1. Develop skills necessary to seek their first positions in a hospitality organization. 2. Develop skills to analyze issues in a hospitality organization through the use of various required work experience reports. 3. Analyze the culture and work environment in an organization and determine its strengths and weaknesses. 4. Identify the functions of the various departments within the specific type of operation in which they work. 5. To be able to distinguish between engaged employees and those employees who are disengaged. 6.

Describe effective customer service encounters versus those which were not handled properly by their organization. Credits: 1.00

HTM 21200 - Leading For Success In Service Industries

Credit Hours: 3.00. Effective leaders possess knowledge of organizational behavior and skills which provide the capacity to enhance organizational performance. Drawing upon leadership and organizational behavior theories, this course will provide students with the tools necessary to lead teams in service industries. Areas of focus include understanding individual differences and team dynamics, motivating and developing employees, effective decision-making, communication, influence, diversity, and leading change. This course will include preparation for a leadership development certificate, such as the Dale Carnegie Leadership certificate, to be earned upon successful completion of the course.

Learning Outcomes: 1. Describe the roles of managers and leaders in hospitality and tourism and the concepts of organizational efficiency and effectiveness. 2. Identify and explain basic management principles of planning, organizing, directing and controlling as applied to the hospitality and tourism business. 3. Identify basic leadership skills that effective managers in the hospitality and tourism industry possess, including business communication, motivation, decision making, and change management. 4. Identify contemporary management and leadership issues facing the hospitality and tourism industry. 5. Explain the basics of human behavior in organizations, including individual behavior and team dynamics. 6. Discriminate between ethical and non-ethical behaviors on the part of individuals inside and outside the organization. 7. Analyze the impacts of culture and diversity on organizations. Credits: 3.00

HTM 21800 - Creating Experiences For A Diverse Society

Credit Hours: 3.00. This course will provide students with knowledge and skills related to diversity, equity, and inclusion (DEI), and provide students an opportunity to actively increase their cultural competence to help them work with others effectively in professional settings. The course provides frameworks, terminology, and tools for engaging in productive conversations around difficult topics related to DEI. Students use critical and reflective thinking, as well as effective problem solving to create inclusive experiences for all stakeholders.

Learning Outcomes: 1. Define and apply terminology and concepts related to diversity, equity, and inclusion (DEI). 2. Develop awareness and knowledge of DEI best practices to create inclusive experiences for all stakeholders. 3. Demonstrate an understanding of issues related to DEI within the White Lodging-J.W. Marriott, Jr. School of Hospitality and Tourism Management disciplines. 4. Engage in inclusive and interdisciplinary collaborations. 5. Apply best practices to address and propose solutions to current DEI topics within students' academic disciplines. 6. Demonstrate effective oral, written, and visual communication. Credits: 3.00

HTM 23100 - Marketing In Service Industries

Credit Hours: 3.00. Marketing plays a crucial role in service industries, addressing unique service challenges. Its importance lies in engaging customers, establishing trust and credibility, distinguishing from competitors, boosting revenue, and fostering sustainable growth and success. This course equips students with a customer-centric approach to service industry marketing, emphasizing the integral role of marketing in a service organization's strategic planning. The course exposes students to service marketing principles, components, and marketing practices.

Learning Outcomes: 1. Explain the unique challenges in marketing and managing services. 2. Describe the role of marketing in supporting the strategic direction of a service organization. 3. Evaluate the role of the service marketing mix in solving marketing related problems and promoting the overall success for service organizations. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial

statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

HTM 25500 - Advanced Spreadsheet Techniques For Hospitality And Tourism Management

Credit Hours: 2.00. This course builds upon information and skills obtained in an entry-level-computing course. It will take students to the next level by introducing them to more advanced techniques used in Hospitality, Tourism, Retail, and Sales Management.

Learning Outcomes: 1. Demonstrate proper utilization of spreadsheet techniques to effectively organize and analyze data for management presentations. 2. Explain the purpose of selected spreadsheet techniques and describe how they are used in Hospitality, Tourism, Retail, and Sales Management. 3. Demonstrate advanced spreadsheet techniques, such as: Advanced Spreadsheet Formulas; Statistical Analysis; Validating Data Entry; Conditional Formatting; Advanced Charting Techniques; Pivot Tables; Spreadsheet Dashboards; Recording and Using Spreadsheet Macros; Power Query; Advanced Cell/Column/Row/Table Formatting; Creating Templates. Credits: 2.00

HTM 25501 - Fundamentals Of Excel And Data Analytics In Service Industries

Credit Hours: 3.00. The proper application of data analytics is important for optimizing the performance of service enterprises. Spreadsheet programs make it easy to manage and visualize data as well as perform basic data analyses. Microsoft Excel is one of the primary tools used for business reporting and decision-making tasks. In this course, students will receive hands-on training in a wide range of Excel functionalities including using functions and formulas, working with tables, creating charts, and analyzing data using PivotTables. This course will use practical, real-world applications to train students how to make business decisions.

Learning Outcomes: 1. Apply built-in Excel functions and create formulas necessary to analyze data. 2. Apply data visualization techniques to identify and communicate business issues. 3. Demonstrate proficiency using Excel to formulate and solve business problems. Credits: 3.00

HTM 26200 - Festivals And Special Events

Credit Hours: 3.00. This course offers a comprehensive overview of the theory and procedures associated with the coordination of festivals and special events. Essential topics will include the conceptualization, planning, coordination, sponsorship, marketing, funding, staffing, legal issues, and assessment of festivals and special events. Students will gain hands-on experience by volunteering to work a minimum of six hours to set up, help coordinate, or tear down a large-scale festival or special event.

Learning Outcomes: 1. Classify the types and purpose of festivals and special events. 2. Compare and contrast traditional events and meetings to festivals and special events. 3. Develop a basic understanding of the size and scope and the employment potential of festivals and special events. 4. Describe the key steps necessary to plan, manage, staff, organize, and assess the stated objectives of a festival or special event. 5. Knowledge of economic, financial, and accounting principles and practices of festivals and special events. 6. Apply the principles of sustainability to festivals and special events. 7. Read relevant research and apply it to festival and special events management. 8. Differentiate between ethical and non-ethical business practices. Credits: 3.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology,

processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

HTM 29102 - Introduction To Foodservice Management

Credit Hours: 3.00. An introduction to food preparation methods and service techniques in quantity food settings. Students become familiar with ingredients and culinary terminology, and learn to read, write and evaluate menus. Recipe conversion, inventory and costing skills are developed. Production methods, equipment, and product flow are examined. Front-of-the-house service techniques as well as front-and-back-of-the-house interactions will be studied.

Learning Outcomes: 1. Describe kitchen operations including culinary terminology, basic cooking methods, equipment and technology, and basic food handling skills, such as food preparation, safety, and quality. 2. Describe service techniques including a la carte and buffet setup and service, cycle of service (ordering through payment), tableside cooking and service recovery. 3. Describe and demonstrate proper kitchen management systems, such as cost control, inventory control, sales history, and menu development. 4. Explain the importance of timing and quality production in regards to the distribution of goods and services. 5. Describe the relationship between international foods and factors, such as geography, climate, and culture. 6. Identify current foodservice trends, such as: healthy food, menu labelling, and sustainability. 7. Discriminate between ethical and non-ethical behavior on the part of individuals and organizations. Credits: 3.00

HTM 29700 - Introduction To Honors Research

Credit Hours: 1.00. Introduces students to the design and implementation of an honors research project.

Credits: 1.00

HTM 30000 - Semester Internship Experience In Hospitality And Tourism

Credit Hours: 0.00. Mechanism to recognize students in the Purdue system the semester they are off campus participating in an approved semester internship program with a hospitality company. Permission of department required.

Credits: 0.00

HTM 30200 - Hospitality And Tourism Industry Internship I

Credit Hours: 1.00 or 2.00. Opportunities for learning through professional work experience that is practical, meaningful, and aligned with career aspirations are important for career development, planning, and goal setting. As part of the professional development curriculum, this internship course provides students with entry-level experience within the hospitality and tourism industry, broadening their exposure and understanding of the industry to explore potential career paths. Guided by the Ray Kavanagh Career Center and the National Association of Colleges and Employers (NACE) Career Readiness Competencies, students apply what they are learning in the classroom to the workplace.

Learning Outcomes: 1. Develop and apply interviewing and negotiating skills during the

process of seeking and being hired into an internship. 2. Recall and explain the strengths and weaknesses of departments and work units from the hospitality operation in which they interned. 3. Describe and explain interactions with the hospitality operation's guests and the development of a positive service oriented attitude. 4. Compare and contrast the differences and similarities of management styles and leadership skill of the supervisors they worked with; evaluate the effectiveness of supervisor or manager; analyze which type of style or skill fits best with their style. 5. Identify new and different experiences encountered during the internship; distinguish the positive and negative aspects of the experience, and appraise these experiences as to their value to their future Hospitality management career. 6. Recall coursework related knowledge and apply and demonstrate this knowledge in areas of Human Resource Management, Finance, Management, Law, and other applicable areas in a hospitality organization. 7. Synthesize the total internship learning experience by completing comprehensive management reports. Credits: 1.00 or 2.00

HTM 31100 - Procurement Management For Foodservice

Credit Hours: 3.00. Identifies and describes food, supplies, and related merchandise used in the foodservice industry. Provides methods and criteria for recognizing quality, evaluating, specifying, purchasing, and inspecting these products. Discusses the use of technology in the purchasing component of the foodservice industry.

Learning Outcomes: 1. Explain foodservice procurement principles such as steps in the procurement process, procurement-menu relationship, quality standards, and vendor relations. 2. Explain factors impacting procurement decisions such as ethics, government regulations, global economic conditions, sustainability, distribution sales channels, technology, competitors, consumer behavior, and skills and knowledge of buyers. 3. Apply foodservice procurement principles, factors, and data analysis to formulate decisions related to product, quantity, price, supplier/producer/manufacturer, and inventory management. Credits: 3.00

HTM 31200 - Talent Management For Service Industries

Credit Hours: 3.00. Service organizations are labor-intensive, requiring effective talent management to be successful. Managers must be able to attract, develop, motivate, and retain employees to deliver exceptional service. Building on leadership skills and management principles, this course will emphasize the strategic role of human resource management with topics that span the lifecycle of a job (e.g., recruitment, selection, training, performance management, compensation, etc.). Students will explore the science behind effective talent management, developing knowledge and skills that will prepare them to manage a growing and diverse workforce.

Learning Outcomes: 1. Explain the importance of the various elements of strategic human resource management and their contribution to organizational performance. 2. Critique human resource practices by applying theories and research. 3. Create solutions that would address current human resource issues in service industries such as associate engagement, diversity, ethics, and employee well-being. Credits: 3.00

HTM 31400 - Franchising

Credit Hours: 3.00. The study of franchise administration, operations, and marketing, with a special emphasis on hospitality-related franchises. Includes a study of the legal regulation of franchises, the franchisee-franchisor relationship, and unique problems in operating a franchise.

Credits: 3.00

HTM 31500 - Club Management And Operations

Credit Hours: 3.00. A study of the organization, administration, operation, and opportunities within the private club industry, with emphasis on the manager's duties.

Learning Outcomes: 1. Describe the various types of clubs, and the job of a club manager, including attributes of successful club managers. 2. Describe the career prospects in managing clubs; the issues facing clubs today and prospects for the future of the club industry.

3. Explain the fundamentals of good human resource management as it applies to clubs. 4. List issues that are unique or particularly significant to clubs, including legal, technological and financial issues. 5. Explain the differences and similarities between clubs and public hospitality operations. 6. Describe and discuss the products, activities and services in the club industry and how a manager works toward identifying, understanding and improving these in their club. Credits: 3.00

HTM 31700 - Business Etiquette For Managers

Credit Hours: 1.00. A review of contemporary standards of human interaction in the workplace. How manners, etiquette and style affect and enhance everyday dealings with others.

Credits: 1.00

HTM 32200 - Hospitality Facilities Management

Credit Hours: 3.00. Technical and managerial issues relating to the operation and maintenance of the physical plant and equipment in hospitality industry facilities.

Learning Outcomes: 1. Develop systematic solutions to a wide range of facility management problems and evaluate those potential solutions to ensure they are fiscally sound. 2. Explain how systems within a facility function, and what is involved in keeping them functioning properly. 3. Describe what's involved in operating a maintenance department and evaluate their efforts. 4. Describe how to make facilities more sustainable reduce its negative environment impact both during construction and operation. 5. Describe the different regulatory requirements that apply to hospitality facilities such as building codes, licensing, and permit requirements and state the importance of compliance with those requirements. Credits: 3.00

HTM 33100 - Hospitality And Tourism Sales And Service

Credit Hours: 3.00. Application of sales and customer service methods used to generate revenues for hospitality and tourism businesses. Emphasis is placed on a hands-on assignment which requires students to identify a product that they will market and sell, as well as participate in a sales blitz.

Learning Outcomes: 1. Develop systematic solutions to a wide range of facility management problems. 2. Explain how systems within a facility function, and what is involved in keeping them functioning properly. 3. Describe what's involved in operating a maintenance department and evaluate their efforts. 4. Describe the functions of the major pieces of food service equipment and how to purchase each. 5. Describe how operations can conserve utilities and the basic criteria for LEED certification. 1. Apply marketing principles to the sales process in hospitality and tourism industry. 2. Distinguish between ethical and non-ethical behaviors on the part of sales professionals. 3. Identify the buying style of the customer and adapt sales pitch and pace to maximize sales potential. 4. Design a strategy to work with others to accomplish sales goals. 5. Identify, market, and sell a tangible product to the general public. 6. Apply professionalism and customer service principles to the sales process. 7. Apply fundamental accounting skills to formulate, monitor, and accomplish self-imposed sales goals. 8. Apply sales techniques in an actual hospitality and tourism business setting. Credits: 3.00

HTM 34100 - Operations Control And Analysis In The Hospitality Industry

Credit Hours: 3.00. Applications of the control process and quantitative analysis to effectively manage an efficient and profitable hospitality business. The emphasis is on planning budgets, controlling operational activities, and evaluating performance.

Learning Outcomes: 1. Explain the importance of control process to the success of an operation. 2. Describe behavior of costs and evaluate their effects on the operating income in the hospitality industry. 3. Analyze and interpret financial statements. 4. Establish appropriate cost standards and procedures in each state of the product cycle. 5. Construct a labor schedule that will satisfy customer demand, meet

employee requests, and keep labor cost down. 6. Apply regression, moving average, and exponential smoothing to forecasting revenue and customer counts. 7. Identify and eliminate excessive food and beverage costs and describe how to eliminate them. 8. Develop an operating budget based on revenue and expense forecasts. 9. Apply revenue management concepts to create demand and maximize revenue for the given demand in restaurants. 10. Prepare visual representations of operational and financial data. Credits: 3.00

HTM 34200 - Financial Management For Service Industries

Credit Hours: 3.00. To create value for owners, managers need to understand the implications of long-term investment and the importance of securing finance to ensure sustainable growth. The primary purpose of this course is to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, and capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Demonstrate proficiency in using Excel to model cash flows and calculate returns in the capital budgeting process. 3. Explain how the risk-return relationship affects cost of capital and stocks/bonds valuation. 4. Explain how capital structure affects firm value and dividend decisions. Credits: 3.00

HTM 35700 - Disruption And Innovation In Hospitality & Tourism

Credit Hours: 3.00. Hospitality and tourism businesses face unprecedented industry shifts requiring proactive leaders. Through this course students will develop an innovative mindset, rethink the status quo, and amplify their creative thinking in designing solutions to current and future business challenges.

Learning Outcomes: 1. Describe innovation theories and trends. 2. Explain how building and sustaining a culture of innovation is a competitive advantage. 3. Describe the core aspects of an end-to-end innovation process. 4. Develop and evaluate innovative solutions to product and service challenges. Credits: 3.00

HTM 36200 - Event And Meeting Management

Credit Hours: 3.00. The principles and practices of event and meeting management will be covered in this course, including: strategic event planning process, project management, risk management, financial management, human resources, stakeholder management, meeting or event design, site location and management, marketing, professionalism, and ethics. Students will gain hands-on experience planning, directing, organizing and controlling a small-scale event.

Learning Outcomes: 1. Determine the purpose of a meeting and identify the relationship of a meeting to organizational strategy. 2. Develop and manage a budget for a meeting/event. 3. Develop the complete plan to meet the goals and objectives of the event (such as reserving rooms, securing meeting space, transportation, and food and beverage). 4. Review the event to determine if the goals and objectives were met. 5. Differentiate between ethical and non-ethical business practices. 6. Work with a team to plan, direct, organize and control a small scale event. Credits: 3.00

HTM 37000 - Sustainable Tourism And Responsible Travel

Credit Hours: 3.00. This course will examine issues associated with sustainability in the hospitality and tourism industry. It will examine how principles of sustainable development and the triple bottom line (economic, social and environmental) are applied to hospitality and tourism. The course will address sustainability across a variety of tourism sectors including destination management, lodging, restaurants and meetings. The course will also examine consumer issues associated with sustainability.

Learning Outcomes: 1. Define sustainability and describe its applications in the tourism and hospitality system. 2. Explain the relationship between tourism and the UN Sustainable Development Goals/Grand Challenges. 3. Describe the components of sustainability programs in tourism and hospitality organizations. 4. Analyze sustainability programs in various tourism sectors to determine their effectiveness in achieving social

and environmental goals. 5. Apply and evaluate environmental performance programs in the hospitality industry. 6. Explain the major consumer issues associated with sustainability in the tourism and hospitality industry. 7. Identify and explain principles of ethics as applied to the tourism industry. 8. Identify career opportunities associated with sustainability in tourism and hospitality. Credits: 3.00

HTM 37200 - Global Tourism Geography (UCC: BSS)

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify and explain the interactions of tourism with the culture, economy, and environment of global destinations. 2. Identify international travel patterns and explain their impact on tourism management in promoting cultural understanding and global peace. 3. Locate various countries, major cities, natural wonders, historic sites and other tourism attractions, both man-made and natural. 4. Describe how the physical environment in specific geographic regions affects the ability of humans to live there and influences inbound and outbound travel. 5. Explain how political, economic, and environmental factors affect travel both positively and negatively. 6. Explain international travel patterns and identify the major travel generating and travel receiving areas. 7. Compare and contrast different cultures throughout the world with your home culture. Identify and explain key differences and their influence on travel. 8. Identify and explain the key elements of interdependence required for the existence of modern day world travel. Credits: 3.00

HTM 38110 - Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management plays a vital role in guiding service businesses to allocate resources efficiently, understand customer behavior, stay competitive, and achieve long-term sustainability and profitability. This course provides students with the theoretical foundation and practical applications of revenue management in service industries. The course cultivates students' revenue optimization mindset and analytical skills. Students will have the opportunity to earn an industry-recognized certification.

Learning Outcomes: 1. Describe the evolution of revenue management in lodging business. 2. Explain commonly used terms in revenue management. 3. Describe the duties and responsibilities of the hotel revenue manager. 4. Demonstrate knowledge of common revenue management activities. 5. Apply the concepts of constrained capacity, market segmentation, and differential pricing when setting prices. 6. Forecast demand. 7. Explain the trade-off between dilution and spoilage when allocating capacity. 8. Set Booking limits with overbooking policies. 9. Explain the role of distribution channels in market competition. 10. Apply revenue management fundamentals to other areas of lodging business such as to food and beverage and meeting and events in hotels. 11. Differentiate between ethical and unethical practices in revenue management. 12. Identify latest technologies used in revenue management. 13. Discuss contemporary issues affecting revenue management." Credits: 3.00

HTM 38600 - Fundamentals Of Hotel Asset Management

Credit Hours: 3.00. The value of a hotel is based on both its operation and the real estate holding. A successful manager needs to understand the relationship between operations and the management of the real estate asset. Hotel asset management involves overseeing operating performance and real estate planning with the goal of achieving long-term profitability and enhancing the value of the hotel property. This course will introduce students to the principles and practices of hotel asset management including real estate management,

contracts, as well as the planning and execution of hotel investments. Students with an interest in hospitality finance and real estate investment are encouraged to take graduate-level courses in this area and explore the finance and real estate minors following the successful completion of this course.

Learning Outcomes: 1. Explain the foundations and process of asset management. 2. Identify the key issues related to planning and managing real estate and physical assets. 3. Analyze the effects of contracts on hotel operations and asset value. 4. Apply financial theories and concepts in planning and executing hotel investments. Credits: 3.00

HTM 39000 - Undergraduate Special Problems

Credit Hours: 0.00 to 6.00. Individual or group participation in supervised reading, laboratory experiences, field experiences, or research in special areas of the field. Permission of instructor required.

Credits: 0.00 to 6.00

HTM 39001 - Undergraduate Research In Hospitality And Tourism Management

Credit Hours: 1.00 to 3.00. This course allows undergraduate students to gain valuable experience and knowledge through research in the hospitality and tourism industry. Permission of instructor required.

Learning Outcomes: 1. Demonstrate a basic understanding of research by participating in a research project under the supervision and guidance of a HTM faculty member. Credits: 1.00 to 3.00

HTM 39200 - Classical Cuisine

Credit Hours: 1.00. Supervised hands-on cooking experience to enhance competencies needed in professional cooking. Permission of instructor required.

Credits: 1.00

HTM 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for CFS Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Credits: 1.00 to 3.00

HTM 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 6.00

HTM 39900 - Special Topics In HTM

Credit Hours: 1.00 to 6.00. Various topics that may change from semester to semester are presented by HTM faculty.

Credits: 1.00 to 6.00

HTM 40000 - Career Mastery: Navigating Your Career And Professional Development Seminar

Credit Hours: 1.00. Successful professionals possess a strong sense of self and the ability to observe the world around them, reflecting, synthesizing, and responding effectively. As the capstone to the professional development curriculum, students have the ability to refine these skills through discussion and reflection in this seminar-style course. Guided by the National Association of Colleges and Employers (NACE) Career Readiness Competencies, this course focuses on honing various aspects of personal and professional development, with a focus on contemporary issues in the workplace, ensuring students are prepared to be effective leaders. Students will be confident, proactive, and well-prepared professionals with a mindset required to successfully transition into the professional world.

Learning Outcomes: 1. Demonstrate a strong sense of professional self-awareness, leadership competencies, and areas for future development. 2. Refine personal brand that best positions self in the competitive job market. 3. Critique complex workplace issues to formulate effective leadership strategies. 4. Formulate a career plan trajectory to achieve identified career goals post-graduation. Credits: 1.00

HTM 40200 - Hospitality And Tourism Industry Internship II

Credit Hours: 1.00. Career development is an ongoing process of refinement and reflection of professional aspirations as one moves along their career path accumulating work experience. As part of the professional development curriculum, and building on the HTM 30200 entry-level internship experience, this course provides students with a graduate-ready experience in their chosen field, focusing on leadership skill development. Through hands-on experiences and guided learning, students gain real-world professional experience while refining their leadership abilities. Students reflect on their performance to foster personal growth in preparedness for careers post-graduation.

Learning Outcomes: 1. Apply theoretical knowledge gained in the classroom to the workplace. 2. Practice career readiness competencies as defined by National Association of Colleges and Employers (NACE) to entry-level management experience. 3. Demonstrate proficiency in effective leadership skills and styles relevant to an entry-level management position. 4. Assess leadership skill

development and strengths through self-reflection. Credits: 1.00

HTM 41100 - Hospitality And Tourism Law

Credit Hours: 3.00. Legal issues can damage or even destroy businesses. The primary goal of this course is to educate students to identify behaviors and situations that are likely to result in legal liability for themselves and their operation. By identifying potential legal liabilities, students will be able to develop strategies to reduce their exposure and better determine when to involve a lawyer. Topics include court procedures, civil rights, contracts, negligence, legal and ethical relationships with patrons, employment law, real estate law, ethics, and risk management. Students will use critical thinking and effective problem-solving to analyze cases and determine potential ways to reduce the likelihood of similar legal problems in the future.

Learning Outcomes: 1. Discuss the framework of the legal system and how a case progresses. 2. Analyze legal and ethical standards for hospitality and tourism enterprises including interactions with guests, other patrons, tenants, suppliers, and employees to determine potential consequences if they have not been met. 3. Analyze torts impacting hospitality and tourism enterprises and describe their legal impacts. 4. Describe the dynamics of risk management and develop strategies to mitigate losses. Credits: 3.00

HTM 42200 - Hospitality Facilities Design And Management

Credit Hours: 3.00. The facility is the largest asset for most hospitality operations and profoundly impacts guest experience. How it is designed and managed can be the difference between operational success and failure. The primary goal of this course is to foster student understanding of facility design and physical plant maintenance. Students will learn standard language and concepts along with problem-solving and project management techniques to enable cost-effective decisions in creating a physical environment that maximizes the guest experience.

Learning Outcomes: 1. Explain how systems within a facility function and are maintained in a cost-effective, environmentally friendly manner that meets regulatory requirements and promotes a welcoming, safe environment for employees and guests. 2. Analyze a wide range of facility design and physical plant problems and improvement opportunities to develop cost-effective solutions using systematic problem-solving techniques. 3. Apply standard project management tools and techniques to design a hospitality facility space, including physical plant elements, that promotes a positive guest experience that is ergonomically friendly to guests and employees. Credits: 3.00

HTM 43600 - Customer-Centric Service Design And Management

Credit Hours: 3.00. This course explores and informs the design, management, and innovative strategies of customer-centric firms through the theoretical and empirical services management literature. The course uses conceptual frameworks and cases from a variety of industry sectors.

Learning Outcomes: 1. Describe and apply basic service management principles. 2. Identify strategies that satisfy both customer needs and business performance. 3. Create a service blueprint and use it to inform service design or redesign. 4. Explain how service management differs from customer service. 5. Perform a service audit. 6. Design service strategies. 7. Describe how to develop a service centric culture. 8. Develop strategies that optimize tangible and intangible returns on service excellence. Credits: 3.00

HTM 44100 - Financial Management For The Hospitality Industry

Credit Hours: 3.00. This course deals with subjects and issues facing a financial manager in the hospitality and tourism industry. The primary purposes of this course are to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Explain financial statements and perform financial statement analysis. 3. Utilize financial concepts/tools such as the time value of money. 4. Apply applicable capital budgeting techniques to the hospitality and tourism industry. Determine initial investment cash flows. 5.

Explain the concepts of risk/return, and risk preference, investment portfolio, and the Capital Asset Pricing Model (CAPM). 6. Explain the cost of capital concept, cost of debt and stock, weighted average cost of capital, and marginal cost and investment decisions. 7. Explain a firm's capital structure and describe how to choose optimal capital structure. 8. Explain dividend fundamentals and describe factors affecting dividend policy. 9. Describe interest rates, bond valuation, and stock valuation.
Credits: 3.00

HTM 44300 - Hospitality Operations Control And Analysis

Credit Hours: 3.00. To be successful, a business must maximize revenue and efficiently control costs. This course will equip students with the knowledge and skills needed to plan, analyze, and control service operations. Students will learn essential managerial skills such as establishing operational standards, forecasting sales, budgeting, controlling, and evaluating performance throughout the product cycle.

Learning Outcomes: 1. Identify and monitor operational standards at each stage of the product cycle. 2. Analyze financial statements to identify the strengths and weaknesses of a business. 3. Make business decisions based on the cost structure and business environment. 4. Forecast future demand based on historical and advanced booking data. 5. Develop operational plans and incorporate in operations budgeting.
Credits: 3.00

HTM 46200 - Advanced Event And Meeting Management

Credit Hours: 3.00. Advanced aspects of meeting and event management principles and practices will be covered in this course. A focus is placed on: strategic planning, project management, finance and risk management, event design, site management, and ethics.

Learning Outcomes: 1. Formulate mission, goals and objectives to ensure effective meeting management and monitor and evaluate activities to ensure they meet desired outcomes and contribute to event effectiveness and sustainability. 2. Management meeting or event to achieve mission, goals and quality standards within the meeting's scope, time and budget. 3. Prepare and determine program components and sequence; development selection criteria for, negotiate and execute contracts for speakers; determine food and beverage requirements; design environment (themes and decor) and requirements for staging and technical equipment and production; develop admittance credential systems and related crowd management control systems. 4. Develop, monitor and revise project budget; monitor revenue streams and cash flow; make ongoing effective decisions and wise resource allocations; manage registration processes. 5. Identify and analyze risks for a specific meeting. 6. Develop and implement risk management plans to reduce the probability and impact of undesirable situations. 7. Differentiate between ethical and non-ethical business practices.
Credits: 3.00

HTM 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required.

Credits: 1.00 to 4.00

HTM 49110 - Wine Sommelier Certification

Credit Hours: 1.00. This course involves the application of previously learned information about the principles of wine including vine growing, wine production, sensory evaluation of wine and practices involved in selection and sales of wine in a foodservice establishment. Students are immersed in the analysis and application of the principles and practices of the Guild of the Master Sommelier Program including Level one Certification. Student must be at least 21 years of age.

Learning Outcomes: 1. Describe the historical role of the wine sommelier and the purpose of the International Guild of the Master Sommelier. 2. Identify the major global wine producing regions in terms of Terroir, wine grape growing and wine making practices and traditions specifying whether the region is an Old World or New World area. 3. Identify wine production methods, quality standards, merchandising and pairing with food items for any given wine product. 4. Identify, describe and apply the

Guild of the Master Sommelier Wine Evaluation process to specific wine types. 5. Identify and describe (given a specific wine producing region) the quality control system for that region or area and the wine production factors that are controlled through those regulations; a representative wine for each specific wine producing sub-region and/or district of that region, and specific production steps and wine production terms for the wine produced there. Credits: 1.00

HTM 49111 - Beverage Operation Management

Credit Hours: 1.00. This course teaches students the historical background and modern day principles and management practices regarding the production, selection, purchasing, storage, and service of beverage alcohol in all aspects of the hospitality industry. Students must pass the ServSafe Responsible Service of Alcohol certification examination to earn course credit.

Learning Outcomes: 1. Describe the historical role of alcoholic beverages and the beverage operation in our society. 2. Describe and explain the strategies involved in management of a modern day operation selling beverage alcohol including the design and layout of the operation. 3. Identify the components necessary to manage a successful beverage operation, including purchasing, distribution, and security of beverage alcohol; cost control and pricing strategies; maintaining and controlling inventory. 4. Identify and describe how legal, ethical and social responsibilities impact the management of a beverage alcohol operation. 5. Identify, describe and apply the principles, policies and actions necessary to serve beverage alcohol in a responsible manner. 6. Identify the role of marketing and merchandising in the overall management of a beverage operation. Credits: 1.00

HTM 49112 - Management And Service Of Beverage Alcohol

Credit Hours: 2.00. This course introduces the principles and practices associated with the production of beverage alcohol in the hospitality industry. Lectures and structured tastings will guide students in identifying and describing the unique characteristics of fermented beverages commonly found in the hospitality industry. Course fee. Students will be tasting alcohol as part of this course, they need to be at least 21 years of age to do so legally. Department permission required.

Learning Outcomes: 1. Identify and describe the categories of beverage alcohols including spirits, wine, beer, and ale including the factors involved in the fermentation and distillation of beverage alcohols. 2. Describe and explain the major global wine producing regions and production practices, product varieties, characteristic flavors, service styles, and appropriate food pairings associated with wine. 3. Identify and describe the agricultural principles associated with viticulture, such as geography, climate, harvesting, and dominant grape varietals, and their impact on wine production. 4. Describe and explain regional differences in the labeling of wine. 5. Identify and describe the specific factors unique to wine, through structured tastings. 6. Describe and explain the production methods, styles and characteristics associated with the production of beers, ciders, ales, and distilled beverage alcohols. 7. Identify and describe the specific factors unique to beer, ciders and ales, through structured tastings. 8. Identify and describe the specific factors unique to distilled beverage alcohols, through structured tastings. Credits: 2.00

HTM 49200 - Advanced Foodservice Management

Credit Hours: 4.00. Utilize managerial skills and techniques with planning, organizing, directing and controlling a full-service restaurant operation. Management teams of two to three students develop, market, and operate a restaurant that is open to the public. Emphasis is placed on utilizing effective management skills to create a high-quality, profitable operation with well planned systems and highly motivated, organized employees.

Learning Outcomes: 1. Identify and apply the principles of idea generation and brainstorming in the development of a restaurant concept; demonstrate the ability to design a menu and

marketing campaign responsive to the economic and aesthetic requirements of the concept. 2. Demonstrate the ability to forecast production schedules and staffing needs; explain and demonstrate the ability to work cohesively in a team environment, and demonstrate an appropriate level of professional supervision of a restaurant concept. 3. Apply principles of production flow and timing; demonstrate facility and equipment operation and maintenance and demonstrate competency in utilizing a POS system in the current restaurant concept. 4. Apply principles of purchasing and selection of materials; product storage and rotation and service quality appropriate to the current restaurant concept. 5. Demonstrate the ability to analyze and effectively decrease food costs and increase contribution margins to the current restaurant concept. 6. Identify and apply principles of safety and sanitation (in accordance with Indiana law), and principles of quality food production and wine service to the current restaurant concept. 7. Describe and apply an appropriate ethical standard of conduct in dealings with customers, staff, fellow students and instructors in all parts of the lab and classroom experience. Credits: 4.00

HTM 49201 - Hospitality Operation Management And Leadership

Credit Hours: 4.00. Students apply managerial skills and techniques in organizing, directing and controlling a full-service restaurant operation as they rotate through a variety of managerial positions. Students will also participate in lectures, assignments, and projects on topics related to leadership, such as interpersonal communications (emphasis on culture, gender and age differences), ethical leadership (emphasis on integrity and credibility), public speaking, teamwork and critical thinking. Permission of department required.

Learning Outcomes: 1. Design and implement a marketing campaign targeting one or more of the food service operations. 2. Work cohesively in a team environment, and demonstrate an appropriate level of professional supervision of a restaurant. 3. Coordinate production flow and sequence of service to maximize service quality. 4. Demonstrate facility and equipment operation and maintenance in the restaurant. 5. Apply principles of purchasing and selection of materials, product storage, and rotation appropriate to the restaurant. 6. Identify and apply principles of food safety and sanitation, responsible alcohol service, and quality food production in the restaurant. 7. Describe and apply appropriate ethical standards in dealings with customers, staff, fellow students and instructors in all parts of the lab and classroom experience. 8. Demonstrate the ability to analyze and effectively decrease food costs and increase contribution margins to the current restaurant concept. 9. Compare and contrast issues associated with leading employees from different cultures, ages and genders. 10. Practice interpersonal communication skills by delegating, coaching, and presenting feedback. 11. Evaluate leadership issues in terms of ethics, integrity, and credibility. Credits: 4.00

HTM 49700 - Honors Research Project

Credit Hours: 1.00 to 4.00. The completion of the independent honors research project for CFS Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Credits: 1.00 to 4.00

HTM 49900 - Feasibility Studies And Business Development In Hospitality And Tourism

Credit Hours: 3.00. The study of business development. The course will cover all stages in the feasibility and development process. Emphasis will be on strategic planning, design of systems, models and problem analysis, leading to the opening of a successful hospitality or tourism business.

Learning Outcomes: 1. Review, prepare and present the various components that are involved in a feasibility study. 2. Assess the various aspects of and create a situational/operational analysis for a hospitality or tourism operation. 3. Explain the various perspectives and operations philosophies. 4. Assess various management and operations

philosophies. 5. Analyze and evaluate project planning and project management activities from conceptualization to completion. 6. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting feasibility studies to potential investors and interested others. Credits: 3.00

HTM 49901 - Strategic Management In Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. By analyzing internal and external forces, students develop strategies to help a service organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy development and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of a service organization. The course is structured to enhance students' analytical, critical thinking, and communication skills by integrating their academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Integrate and apply prior knowledge areas from the HTM curriculum in developing a business. 2. Develop and analyze the feasibility, situational, and operational aspects of a hospitality and tourism business. 3. Select and implement an appropriate business model in development of a business plan. 4. Describe the characteristics of a successful business and apply that knowledge to mitigate situational and operational risks. 5. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting a business development plan to potential stakeholders. 6. Prepare and present a business development plan. Credits: 3.00

HTM 50100 - Research Methods In Hospitality And Tourism

Credit Hours: 3.00. Introduction to behavioral and economic research design, and the development of research proposals.

Credits: 3.00

HTM 50101 - Statistical Laboratory

Credit Hours: 1.00. Introduction to the use of software used in behavioral research projects.

Credits: 1.00

HTM 50200 - Management Information Systems For The Hospitality Industry

Credit Hours: 3.00. Analysis and design of management information systems for hotels, restaurants, and the travel industry. Topics include cost and value information, data management, local area and wide area networks, implementation of system and impact of information systems on hospitality organizations.

Credits: 3.00

HTM 50400 - Consumer Behavior

Credit Hours: 3.00. Understanding how and why consumers make decisions about purchasing goods, services, and experiences allows companies to tailor their business strategies, product development, and customer service efforts to meet the specific needs and preferences of their target customer base. This course addresses the growing demand for professionals to better understand psychological, social and situational influences of consume behavior. This course provides students not only with an understanding of consumer behavior concepts and theories, but also with the tools and methodologies that can be directly applied to real-world scenarios to navigate dynamic markets, effectively engage customers, and drive business success in today's competitive marketplace.

Learning Outcomes: 1. Explain how consumer behavior contributes to customer acquisition, satisfaction, and retention for relevant businesses and organizations. 2. Evaluate psychological, social, and situational influences on consumer behavior. 3. Interpret and predict consumer behavior in diverse industry contexts. 4. Synthesize current trends in consumer behavior to identify opportunities for creating customer satisfaction, engagement, and enriched experiences. 5. Formulate effective strategies to build and maintain consumer loyalty. Credits: 3.00

HTM 50500 - Hotel Asset Management & Investment

Credit Hours: 3.00. Asset management is an indispensable discipline in the hospitality industry, aimed at maximizing the value of hotel properties in alignment with the owners' and investors' strategic objectives. A competent manager in the industry needs to possess basic understanding of asset management principles and practices for operational and strategic decisions. This course exposes students to the multifaceted world of representing ownership interests in managing hotel investments, and helps students to establish a

robust corporate finance foundation to become a competent manager in the industry. Through this course, students develop a nuanced understanding of the intricate interplay among operational issues, real estate management, and financial decisions, and effectively apply the learned knowledge to hotel real estate investment and operation strategies.

Learning Outcomes: 1. Describe the role of an asset manager in the dynamic relationships among various hotel investment stakeholders. 2. Analyze the impacts of operational decisions, such as revenue management, leases, management contract, and franchise agreement, on asset valuation. 3. Explain the effects of development and management of physical assets on hotel operations and valuation. 4. Compare and apply various hotel valuation approaches. 5. Evaluate the effects of capital structure decisions on hotel investment returns. Credits: 3.00

HTM 50600 - Leading People In Service Industries

Credit Hours: 3.00. Leadership requires an understanding of human behavior, organizational culture, and strategy. In this class, students are exposed to leadership theory through the extant literature. Facilitated by readings and class discussion, students develop critical and analytical understanding of how theory informs and connects to practice. The course topics include human resources functions, organizational and human behavior, human values and motivations, team dynamics, decision-making, and change management. This course takes an interdisciplinary approach, with student learning drawn from different fields.

Learning Outcomes: 1. Understand the role of leadership in successful organizations. 2. Explain how human resource practices contribute to organizational effectiveness. 3. Analyze theories and practices in human resources, organizational behaviors, and leadership. 4. Connect leadership theories to organizational practices. 5. Synthesize different theoretical perspectives within/across service industries. Credits: 3.00

HTM 50700 - Integrated Marketing Communications For Service Industries

Credit Hours: 3.00. This course addresses the unique challenges and opportunities in marketing the intangible, inseparable, variable, and perishable service products. Balancing theoretical research and practical applications, this course provides a systematic review of key components and processes for an effective integrated marketing communication for service industries. Students will learn how to leverage both long-standing and emerging marketing communication approaches (e.g., strategic marketing and promotion, branding, public relations, digital marketing, social media, influencer marketing and artificial intelligence application) to create customer awareness, manage customer expectations, build customer relationships, and ensure customer satisfaction and loyalty.

Learning Outcomes: 1. Evaluate the role of marketing communications in achieving success for service organizations. 2. Identify critical metrics to understand customer expectations and manage customer perceptions. 3. Apply customer-centric approach to leverage various marketing communication methods and tools to meet customer needs, wants and demands. 4. Develop, promote, and manage service promises through both external and internal marketing. Credits: 3.00

HTM 50800 - Cultivating A Service Excellence Mindset

Credit Hours: 3.00. Understanding the fundamental principles of service management is essential to successfully manage service organizations in a complex market environment. This course utilizes major theoretical frameworks, such as Service-Dominant Logic, to address key issues in managing service organizations, including creating service culture, motivating a service-minded workforce, co-creating service value, and achieving service excellence. Students develop managerial skills through a thorough understanding of service strategies, systems, and processes to optimize service value.

Learning Outcomes: 1. Demonstrate an understanding of the strategic implications for managing the service experience. 2. Explain the critical role of managing the employee-customer interface in the service delivery process. 3. Evaluate various service management strategies to enhance service excellence. 4. Construct key service management systems and processes to solve issues in complex service environments. Credits: 3.00

HTM 50900 - Service Experience Design

Credit Hours: 3.00. The success of service organizations requires well-planned design of the service environment and customer experience journey to enhance operational efficiency

and excellence, drive customer satisfaction and loyalty, and differentiate from competitors. Addressing the importance of developing and providing optimal customer experience in service industries, this course aims to inspire a design-thinking approach to create contemporary customer experiences in various service settings. By gaining insights from the service design theories, students will gain knowledge to effectively manage the physical environment, service interactions, and service delivery processes to enhance the overall service experience quality. Learning by practice, students will apply the learned design tools to envisage, blueprint, and devise innovative service experience solutions.

Learning Outcomes: 1. Articulate the role of service experience design for the strategic success of service organizations in the marketplace. 2. Conduct critical quantitative and qualitative analyses of customer service experience. 3. Design service experiences for customers by utilizing various experience design tools. 4. Communicate the service design process to service industry professionals and relevant stakeholders. Credits: 3.00

HTM 51000 - Strategic Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management is a vital strategic tool enabling decision-makers to coordinate various functions leading to company-wide profit maximization. This course empowers students with analytical tools to generate optimal revenue solutions in a competitive marketplace. In the course, students learn economics of pricing and market competition, models and algorithms for capacity allocation, overbooking, and forecasting through a variety of real-world contexts.

Learning Outcomes: 1. Solve for optimal prices given capacity constraints and market segmentation. 2. Calculate optimal protection and overbooking levels. 3. Forecast demand based on time series models and advanced booking models. 4. Formulate strategies to manage consumer responses to revenue management practices across various service industries. 5. Address challenges in revenue management implementation in service industries. Credits: 3.00

HTM 51100 - Hospitality Business Law And Risk Management

Credit Hours: 3.00. This course provides an overview and analysis of the legal aspects of managing a hospitality and tourism business. Risk management principles will be utilized to develop liability mitigation plans. Discussion board and case studies will be utilized to facilitate students' understanding and application of legal concepts for managing and owning businesses. Topics covered include: the rights and responsibilities of hospitality businesses and owners in the areas of civil rights, employment law, negligence, contract law, relationships with guests and others, licensing, real estate law, and product liability; the principles of risk management; and the fundamentals of business insurance.

Learning Outcomes: 1. Apply basic legal principles to evaluate a situation and determine the most likely legal outcome then use the principles of risk management to create a corrective plan to reduce liability. 2. Describe legal and ethical relationships standards for interactions with guests, other patrons, tenants, suppliers, and employees. 3. Determine if legal and ethical relationship standards have been breached and what liability if any is faced by each party. 4. Utilize the dynamics of risk management to develop a comprehensive risk management plan for a hospitality and tourism operation. 5. Describe and define the different types of insurance options available to hospitality and tourism operations and define why and how certain insurance options are applicable to specific operations. Credits: 3.00

HTM 51200 - EXPIRED - Leadership In Hospitality And Tourism

Credit Hours: 3.00. This course will focus on the knowledge and skills required for effective leadership. Topics will draw upon an extensive body of research on leadership theory and practice and cover organizational behavior and team dynamics, business communication, decision-making, motivation and change management. In addition, specific skill development in the areas of problem-solving, written and oral communications, leading teams and goal setting, it will include models for examining personal career paths, ethical decision-making and the role or organizational change agents. This course will take an interdisciplinary approach and analyze leadership through different lenses and how leadership insights can be effectively applied to hospitality organizations. Students will examine leadership examples where individuals moved an organization from normal to exceptional functioning and extraordinary results.

Learning Outcomes: 1. Apply knowledge of organization behavior, including the impacts of

personality, motivation, and emotional intelligence, to leadership situations in a hospitality business. 2. Evaluate and apply leadership theories and approaches to business situations. 3. Practice effective team building within hospitality organizations. 4. Prepare and deliver effective business communication in a variety of settings (written and oral). 5. Implement change processes within organizations and lead change management. 6. Explain how leadership values and ethics effect the overall functioning of the organization, and perform an ethical evaluation of leaders' behaviors. 7. Apply self-analysis techniques to develop a personal leadership development plan to guide them throughout their careers. Credits: 3.00

HTM 51300 - Strategy In Service Industries

Credit Hours: 3.00. Strategic management plays a pivotal role in helping industry leaders gain a competitive advantage and accomplish business goals in an ever-changing marketplace. This course centers on the exploration of various theories, frameworks, and models to understand contemporary issues and challenges in service industries. Through the application of strategic management principles and strategy-oriented tasks, students comprehend essential topics in strategic management, including environmental and competitor analysis, strategic planning, strategy formulation, strategy execution, and strategic evaluation and control.

Learning Outcomes: 1. Articulate the theoretical principles and tactical practices in strategy management. 2. Analyze external and internal factors to effectively manage service organizations. 3. Evaluate the strategic planning process for service organizations. 4. Apply strategic theories, frameworks, and models to management practices in service organizations. Credits: 3.00

HTM 51400 - Business Analytics For Service Industries

Credit Hours: 3.00. In today's highly dynamic business environment, decision-makers often encounter problems that are complex and data intensive. This course focuses on a variety of techniques from the field of business statistics and exposes students to statistical and decision analytics to solve data-driven decision-making problems. The course adopts a practical spreadsheet-based approach to facilitate decision-making and explores the practical applications of these techniques across various functional fields, with a specific focus on service industries.

Learning Outcomes: 1. Identify and evaluate managerial problems requiring data-based decision-making. 2. Apply quantitative methods to model and analyze real-world situations. 3. Employ analytic software tools to solve problems from various functional fields. 4. Communicate solutions and managerial implications across different stakeholders. Credits: 3.00

HTM 53100 - Hospitality And Tourism Marketing II

Credit Hours: 3.00. This course will examine marketing strategy in tourism and hospitality organizations. Students will actively engage in the application, analysis, and evaluation of marketing principles as they are applied to tourism and hospitality.

Learning Outcomes: 1. Define marketing strategy and describe its use in the hospitality industry. 2. Detail the components of marketing strategy and marketing plan for a hospitality and tourism organization. 3. Evaluate the strengths and weaknesses of hospitality or tourism organization's marketing strategy and plan. 4. Evaluate metrics designed to measure marketing strategy effectiveness. 5. Explain the major market trends in the hospitality industry. 6. Distinguish between major marketing research techniques and explain their advantages and disadvantages. Credits: 3.00

HTM 53600 - EXPIRED - Advanced Service Management In Hospitality And Tourism

Credit Hours: 3.00. Approximately two-thirds of U.S. economic activity resides in the service sector. Subsequently, service firms' foci on the needs of their customers are rewarded by positive customer outcomes such as behavioral loyalty and positive word of mouth. This course explores and informs the design, management, and innovative service strategies of firms who operate in the service sector through the theoretical and empirical services management literature.

Learning Outcomes: 1. Describe and apply basic service management principles. 2. Understand how to determine customer needs and simultaneously manage business

performance. 3. Create a service blueprint and use it to inform service design or redesign. 4. Identify excellence in service from a variety of sectors across the globe. 5. Describe and apply basic service management principles. 6. Distinguish service management from customer service principles. 7. Perform a service audit for an organization. 8. Design sustainable service strategies and approaches. 9. Understand the mechanisms necessary in developing a service culture. 10. Craft the necessary elements in funding service excellence. Credits: 3.00

HTM 54100 - Advanced Hospitality Accounting And Finance Systems

Credit Hours: 3.00. Specialized accounting and finance systems as related to the hospitality industries. Applications of budgeting and pricing models, performance evaluations and incentives systems, and short-term asset management are discussed, as well as other current subjects.

Learning Outcomes: 1. Interpret and analyze financial statements. 2. Calculate present value and future value of multiple cash flows. 3. Value assets based on the discounted cash flow method. 4. Utilize capital budgeting techniques. 5. Understand the concepts of risk, return, and cost of capital. 6. Describe capital structure theories. 7. Describe the relationship between economy and hospitality businesses. 8. Explain the concept of diversification. 9. Calculate the present value of a franchise and a leasing contract. Credits: 3.00

HTM 55300 - Cultivating A Service Excellence Mindset For Healthcare Professionals

Credit Hours: 3.00. Notwithstanding the importance for healthcare services to prioritize clinical outcomes for patients, there is a growing need to think about the patient experience beyond science-driven, evidence-based practices. The healthcare sector is being transformed by consumerism and transparency that demands a more holistic approach to managing the patient experience. In order to promote patient engagement and to enhance their experience, an intentional strategic intent, as reflected in a service excellence mindset, is required. This course seeks to establish the foundation of this mindset for healthcare professionals that are driven to make a difference in their patients' lives. The aim of the course is for students to develop a greater appreciation for the complexity of providing excellent service in the healthcare industry. The course will stimulate students to think differently and more deeply about the patient experience through a service management lens. In doing so they will develop the necessary skills to make effective decisions in the constantly changing patient experience landscape. Permission of department required.

Learning Outcomes: 1. Demonstrate an understanding of the strategic implications for managing the patient experience (patient expectations, drivers of satisfaction, service quality measurement, creating a service culture). 2. Examine the critical role of managing the employee-patient interface in delivering patient-centric services. 3. Recognize and evaluate various service management practices to enhance the patient experience. 4. Recommend key service management systems and practices to improve or solve problems in the complex healthcare environment. Credits: 3.00

HTM 55400 - Designing The Patient Experience For Contemporary Healthcare Systems

Credit Hours: 3.00. In the rapidly evolving healthcare industry, optimizing the patient experience remains a fundamental focus of practice. Addressing the practical challenge and complexity of providing excellent healthcare services, this class aims to inspire a design-thinking approach to reimagine and reinvent the patient experience in the contemporary healthcare systems. Learning by practice, students will apply the design tools to envisage, blueprint, and devise a patient experience solution. Gaining insights on experience-centric innovations in the healthcare domain, students will develop capabilities to better manage the service interactions, facility, and processes to enhance the quality of the patient experience and ease the stress of a hospital stay. Permission of department required.

Learning Outcomes: 1. Demonstrate an understanding of the role of experience design for healthcare organizations' strategic success in the contemporary market environment. 2. Conduct critical quantitative and qualitative analysis of the healthcare service experience. 3. Apply various experience design tools to innovatively design healthcare service experiences for the relevant stakeholders (e.g., patients, service providers). 4. Communicate

effectively the design product in both written and verbal manners to healthcare professionals. Credits: 3.00

HTM 55500 - Investing In Healthcare Human Capital

Credit Hours: 3.00. The modern work environment is increasingly focused on working with people in teams - working with people and for people. In seeking to motivate and lead people, it is imperative to acknowledge individuals have different backgrounds, perspectives, and viewpoints. In successfully balancing the challenges of working with people in the labor intensive, diverse and high-stakes nature of the healthcare industry, this class seeks to provide knowledge on organizational behavior concepts (e.g., employee performance, satisfaction, engagement, and motivation; group behavior, teamwork; emotional labor, stress, work-life balance) and the skills to practice this knowledge as a healthcare professional. This course will provide students with the foundational building blocks to adapt to the changing landscape of the work environment, applying theories and exercising critical thinking skills to realize a transformative healthcare workforce experience. Permission of the department required.

Learning Outcomes: 1. Demonstrate an understanding of knowledge, skills, and abilities (KSA's) needed by successful leaders in the healthcare industry. 2. Apply organizational behavior theories and the role of managers in the context of the healthcare work environment. 3. Evaluate the role of leadership and management of personnel - individuals, groups, and teams - within the healthcare industry. 4. Recommend various leadership and management practices to improve and provide solutions for issues in today's healthcare workforce. Credits: 3.00

HTM 57100 - Economics Of Travel And Tourism

Credit Hours: 3.00. This course includes the asset theory of tourism, cost-benefit analysis, tax policy impacts, and other economic and statistical aspects of tourism. The course will examine research designed to determine economic impacts of the hospitality and tourism industries.

Learning Outcomes: 1. Acquire an understanding of the economic aspects of tourism, including the definitions of tourism and the size, persuasiveness, and data available on the industry, both internationally and domestically. 2. Develop an understanding of the importance and impacts of tourism and the marketing segmentation, supply, demand, and monetary exchange rates that impact the economies of tourism destinations. 3. Develop working knowledge of the various issues, problems, forecasts and types of research common in the tourism industry to include economic impact analysis such as input output analysis and multipliers, forecasting models and other tools used to analyze the tourism industry. Credits: 3.00

HTM 58100 - Advanced Hotel Management

Credit Hours: 3.00. A study of current service management theories as they apply to hotel management. Theory topics include strategic planning, hotel organization and communication, organizational leadership, and control systems. Topics will be discussed from the viewpoint of the hotel's general manager.

Credits: 3.00

HTM 59000 - Problems In Hospitality And Tourism

Credit Hours: 1.00 to 4.00. Individual study in advanced subject areas. A course plan must be submitted to the supervising professor. Permission of instructor required.

Learning Outcomes: 1. Vary by topic due to the nature of the course. Credits: 1.00 to 4.00

HTM 59001 - Graduate Professional Industry Internship

Credit Hours: 1.00. The Graduate Professional Industry Internship allows graduate students to gain valuable experience through paid employment with a company in the hospitality and tourism industry or a related industry. In addition, each student will research an issue and provide a potential solution to a problem faced by the employer. This course is not repeatable without special permission from the HTM Graduate Policy Committee and is only open to HTM graduate students who have completed a minimum of two semesters and 16 hours of graduate coursework in HTM. Credit is not allowed for both HTM 59001 and HTM 59002. Permission from Graduate Professional Industry Internship Coordinator is required to enroll in this course. Permission of instructor required.

Learning Outcomes: 1. Understand how to effectively manage a service industry business. 2. Develop critical thinking, creativity, and problem solving skills. Credits: 1.00

HTM 59002 - Graduate Professional Industry Research

Credit Hours: 3.00. The primary emphasis of the Graduate

Professional Industry Research is research on a relevant issue within the hospitality and tourism industry. To enhance the research project, it is anticipated that the research will typically be linked to a paid employment experience in the hospitality and tourism industry or a related industry. This course is not repeatable without special permission from the HTM Graduate Policy Committee and is only open to HTM graduate students who have completed a minimum of two semesters and 16 credit hours of graduate coursework in HTM. Credit is not allowed for both HTM 59001 and HTM 59002. Permission from the Graduate Professional Industry Research Coordinator is required to enroll in this course. Permission of department required.

Learning Outcomes: 1. Gain industry experience while applying research skills and techniques to address hospitality and tourism industry issues. Credits: 3.00

HTM 59100 - Research Issues In Food Service Management

Credit Hours: 3.00. The course will focus on research issues related to the food service industry and their short- and long-term implications. Topics will include essential issues in food safety, product development, food service consumer interests, food production, and waste management. Exposure to quantity food production and purchasing.

Credits: 3.00

HTM 60100 - Research Development And Design

Credit Hours: 3.00. This course will equip doctoral students to think like a scholar and develop the ability to design rigorous research. Students will learn research philosophy, research idea development, and the development and evaluation of research processes and methods. Emphases are placed on developing students' confidence in conceptualizing, developing, designing, and writing empirical and theoretical research.

Learning Outcomes: 1. Demonstrate an understanding of theoretical, methodological, and ethical issues inherent in conducting research. 2. Evaluate various research processes, methodologies, and recent trends. 3. Develop rigorous research ideas, translate ideas into theory-supported research questions, and formulate analytical strategies to best address research questions. Credits: 3.00

HTM 60200 - PhD Professional Development Seminar

Credit Hours: 1.00. The goals of this course are to (1) introduce and provide professional development resources, practices, and current trends in the areas of research, learning, and engagement, and (2) empower graduate students to pursue an academic career by developing a continuous growth mindset. Open to PhD students. No pre-requisite.

Learning Outcomes: 1. Explain the expectations for university faculty in research, learning, and engagement. 2. Create a career plan for the first five years as a university faculty. 3. List the resources and skills needed for a successful academic career in the long term. Credits: 1.00

HTM 61200 - HTM Management Challenge Analysis

Credit Hours: 3.00. A course designed to discuss specific management problems in the hospitality and tourism industries. Through the use of case studies, students study current challenges, management analysis, the process of decision-making, and the impacts of corporate decisions. Prerequisite: basic management organization class.

Learning Outcomes: 1. Gain exposure and knowledge of strategic management topics in preparation for graduate coursework, applied projects, and future research. 2. Critically consider and assess the merits and weaknesses of specific strategic management concepts and theories. 3. Develop analytical skills through tasks such as critical analysis and discussion of cases. Credits: 3.00

HTM 61400 - Theory Of The Consumer

Credit Hours: 3.00. This course will examine concepts and theories that have been developed for understanding consumer choices and behaviors in society and marketplaces. Students will learn classic and modern consumer theories, such as behavioral economics and applied psychological and sociological theories. It will discuss how these theories can help explain consumer tendencies such as preferences, choices, and other consumption-related behaviors.

Learning Outcomes: 1. Demonstrate an understanding of the scope of consumer theory literature. 2. Evaluate the consumer theories and their implications in society and marketplaces. 3. Apply theories of consumer behavior to research. Credits: 3.00

HTM 61500 - Theory Of The Firm

Credit Hours: 3.00. In this course, students examine concepts, models, and theories developed for the understanding of firm and organizational behavior. This course equips students with knowledge of classic and contemporary theories, such as those related to managerial economics, pricing and price

discrimination, organizational structure and culture, employee productivity, firm financial behaviors, marketing management, and operations management.

Learning Outcomes: 1. Demonstrate a foundational understanding of the scope of firm-theory literature. 2. Apply firm theory to research. 3. Analyze and synthesize firm theories with other leading or discipline-specific theories. Credits: 3.00

HTM 63100 - Strategic Marketing In Hospitality And Tourism

Credit Hours: 3.00. Evaluates the role of marketing strategy within overall corporate strategic planning. Segmentation theory, brand segmentation, niche marketing, program life cycles, and positioning approaches are discussed. Emerging concepts, such as visioning, relationship marketing, strategic alliances, and database marketing are studied. Prerequisite: HTM 53100 .

Credits: 3.00

HTM 64200 - Advanced Personnel Systems In Restaurants, Hotels, And Institutions

Credit Hours: 3.00. Examination of the philosophical and operational alternatives related to establishing and directing human resource systems in complex restaurant, hotel, and institutional organizations. Prerequisite: HTM 34100, 41100; 6 credit hours at the upper division undergraduate level in Business, Management, Marketing.

Learning Outcomes: 1. List leading issues impacting human resource management in hospitality businesses nationally and globally. 2. Suggest appropriate business responses to those HR issues. 3. Explain the role of the human resource office at the corporate level in multi-unit hospitality companies. 4. Craft strategies that would successfully recruit, select, train, develop, compensate and manage the performance of assignees working in multi-unit hospitality businesses. 5. Develop strategies that would sustain a hospitality business' corporate culture across national and international borders. 6. Describe ways used by large multi-unit hospitality companies to effectively communicate and engage its subsidiaries. Credits: 3.00

HTM 68100 - Seminar On Hospitality And Service Business Research

Credit Hours: 3.00. This seminar focuses on contemporary topics in hospitality and service business research and guides students to produce work that meets the standards of top-tier journals. Key topics include corporate strategy, consumer behavior, branding, marketing, human resource management, and the application of big data and technology. Through classroom discussions and research project development, students will critique existing literature, formulate research problems, and develop a theoretically robust and methodologically sound research, with a focus on solving real-world problems in hospitality and service industries.

Learning Outcomes: 1. Identify research gaps in the hospitality and service business literature and formulate research questions to address these gaps. 2. Evaluate various quantitative and qualitative research methodologies to determine their appropriateness for addressing the research questions. 3. Compile insights from corporate strategy, consumer behavior, and technology applications to develop comprehensive research frameworks. 4. Create a research project that is theoretically robust and methodologically sound to meet the standards of top-tier journals. Credits: 3.00

HTM 69000 - Hospitality And Tourism Research Problems

Credit Hours: 1.00 to 4.00. Development of an individual research project for doctoral students. Projects are designed to broaden understanding of specific research techniques or to add to subject matter knowledge necessary for completion of the doctoral thesis. A paper worthy of submission to a refereed journal is expected upon project completion. Prerequisite: Doctoral student standing. Permission of instructor required.

Learning Outcomes: 1. Vary by topic due to the nature of the course. Credits: 1.00 to 4.00

HTM 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Learning Outcomes: 1. Vary by topic due to the nature of the course. Credits: 1.00 to 18.00

HTM 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Learning Outcomes: 1. Vary by topic due to the nature of the course. Credits: 1.00 to 18.00

Human Development and Family Science

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 22500 - Human Development Across Cultures

Credit Hours: 3.00. This course provides a basis for interdisciplinary exploration of cross-cultural human development and family relations throughout the lifespan. Key topics include international variation in cultural understandings of parent-child relationships, gender roles, education, work, social relationships, and health/wellness. Students will explore professional applications in an increasingly globalized world.

Learning Outcomes: 1. Understand and respect the diversity of children, youth and families around the world. 2. Identify how family values and traditions vary across cultures and how these variations have emerged within broader ecologies (e.g., economics, treaties, history) of the culture. 3. Articulate processes of intergenerational transmission of culture with a particular focus on parent-child relationships. 4. Compare and contrast various cultural responses to issues important to children and families, such as conceptions of childhood, gender roles, education, and work-family relationships. 5. Describe how individual characteristics such as friendship, altruism, leadership, academic achievement, delinquency, conflict management, aggression, and morality vary across cultures. 6. Analyze the reasons for migration and immigration and their impacts on children and families. 7. Develop skills for working across cultures,

including cross-cultural communication and adapting to culture contrasts when interacting with those from a culture different from one's own. Credits: 3.00

HDFS 26000 - Young Children With Exceptional Needs

Credit Hours: 3.00. A broad overview of learner characteristics and service delivery models for young children (birth-8 years) who are at-risk or have identified disabilities. Students gain understanding of disabilities in young children, of laws relating to persons with disabilities, and roles of special and general educators in providing services to students with identified disabilities.

Learning Outcomes: 1. The student will demonstrate knowledge of: (a) Philosophical, historical, and legal foundations of special education. (b) How principles of development, motivation, behavioral and cognitive learning theories are related to learner differences. (c) Characteristics of learners with exceptionalities, including individual and group diversity that may impact learning. (d) Issues related to environmental and personal barriers that hinder accessibility and acceptance of persons with disabilities and their families. (e) Applicable laws, rules and regulations, and procedural safeguards regarding the planning and implementation of early children special education interventions, including management of behaviors, of children with special learning needs. (f) Issues related to teacher professionalism and ethical practice. 2. The student will demonstrate skills to: (a) Articulate current issues in special education. (b) Define and describe and characteristics of learners with exceptionalities. 3. The student will demonstrate appropriate dispositions regarding: (a) The right of all children through the age of 21 to receive a free and appropriate public education. (b) Access to the natural environment and to the general curriculum as the starting point for special education and early intervention services. Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 30500 - Biosocial Foundations Of The Family

Credit Hours: 3.00. Family ties and family processes in the promotion of individual health and management of disease across the life course are covered. Course reviews research on families and health from multiple disciplinary perspectives.

Learning Outcomes: 1. Describe evolutionary and biosocial theory as the basis of development, using a life course perspective from conception through old age. 2. Identify the key biological systems involved in behavior, and how they are measured in biosocial research. 3. Explain the direct implications for biological and environmental interactions for families, children, adolescents, and adults. Credits: 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B.

Learning Outcomes: 1. Understand the primary components of child guidance at different developmental stages. 2. Plan and implement developmentally appropriate methods of child

guidance and discipline. 3. Understand the influential theoretical perspectives of child guidance/discipline. 4. Modify expectations and guidance strategies appropriately for children with diverse abilities, family demographic characteristics, and cultural backgrounds. 5. Promote and create environments and lessons that prevent challenging behaviors. 6. Demonstrate desirable modeling of behavior. 7. Increase understanding and skills surrounding effective communication with children and parents about child guidance. 8. Gain critical knowledge of the importance of understanding diverse family and community characteristics and how they influence child behavior. 9. Increase understanding and skills for engaging with families, other educators,
and practitioners on child guidance. 10. Demonstrate growth in professionalism as early childhood educators. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

HDFS 31200 - Adult Development

Credit Hours: 3.00. An in-depth study of developmental processes from the transition to adulthood through old age. Particular emphasis is placed on understanding the influence of contexts on adult development.

Learning Outcomes: 1. Identify biological, psychological, social, and demographic aspects of adult development and how they interact over time. 2. Identify theoretical perspectives on human development, and apply them in understanding life trajectories. 3. Understand and apply the process of doing research in adult development. 4. Communicate academic ideas clearly and effectively. Credits: 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment.

Learning Outcomes: 1. Critically evaluate popular conceptions of adolescence and adolescents. 2. Compare and contrast theoretical perspectives on normative development during adolescence. 3. Identify the diversity in the developmental pathways during adolescence. 4. Acquire a framework for assessing the connections between interpersonal development and the larger social context. Credits: 3.00

HDFS 31400 - Atypical Child Development

Credit Hours: 3.00. Atypical child development from conception to adolescence can emerge from genetic, medical/health, educational, psychological, and/or contextual factors. This course will survey factors (e.g., premature birth, obesity, neurodevelopmental disorders, learning difficulties, child abuse, and war) that contribute to atypical child development. It will assess how and when typical and atypical developmental trajectories diverge and the roles of measurement and intervention.

Learning Outcomes: 1. Describe at least three theories of atypical child development. 2. Differentiate typical and atypical child development and describe the roles measurement/assessment may play in this

distinction. 3. Identify biological and contextual factors that may promote resilience or atypical development during the following developmental periods: prenatal, infancy, early to middle childhood, and adolescence. Credits: 3.00

HDFS 31801 - Developmental Assessment

Credit Hours: 3.00. This course provides an introduction to the variety and characteristics of developmental assessments for young children, birth to age 8. Students learn formal and informal strategies for documenting individual development and learning; linking assessment and instruction; and, the use of assessment for determining eligibility for early intervention/early childhood special education. Students learn partnering with families, other professionals, as well as cultural and ethical issues in assessment.

Learning Outcomes: 1. Explain appropriate uses of assessment with young children, birth - 8 years of age, for instruction and intervention. 2. Describe the appropriate use of standardized and non-standardized approaches to assessment with young children, including family-centered assessment strategies. 3. Describe and be able to apply the linked systems of assessment, intervention, and evaluation, including in the context of IEP/IFSP development, progress monitoring, and program evaluation. 4. Conduct assessments, accurately interpret results, and critically evaluate assessment data. 5. Explain approaches to inclusion of family members in assessments, including identification of resources and priorities, and strategies for communicating assessment results to families. 6. Describe ethical considerations in assessment as well as cultural, language, and developmental differences that effect assessment implementation and outcomes. 7. Exhibit growth in professional behavior related to assessment of young children and for the field of early childhood education / early childhood special education. Credits: 3.00

HDFS 32500 - Health And Health Care For Children And Families

Credit Hours: 3.00. This course discusses leading causes of child health problems as well as examines the child and family reactions and adjustment to illness and disability. A developmental perspective on coping with health problems from early childhood through adolescence is presented. An overview on global child health disparities is also addressed.

Learning Outcomes: 1. Discuss the impact of illness on children, adolescents, and families. 2. Examine and analyze the leading causes of child and adolescent health. 3. Examine and compare health disparities among national and international children. 4. Determine the complexities and implications of health care policy and barriers to access to care on children, adolescents and families. 5. Determine the importance of implementing family centered care and interdisciplinary collaboration while providing care for children and adolescents. 6. Identify professional opportunities in child and family health. Credits: 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals, couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents.

Learning Outcomes: 1. Construct a basic knowledge of human sexuality as it pertains to family relations in the personal and professional settings. 2. Compare and describe social, cultural, historical, and technological trends and the interrelationships between these trends and their impact on sexuality, family relations, and personal values and attitudes. 3. Differentiate and examine the many different aspects of sexuality including biological, developmental, medical, cultural, historical, and interpersonal. 4. Demonstrate knowledge that helps to develop a better understanding of students' own feelings and attitudes related to sexuality and how those attitudes and feelings influence their beliefs about individuals, couples, and families. Credits: 3.00

HDFS 33100 - Skills For Helping Professionals In

Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

HDFS 33200 - Stress And Coping In Contemporary Families

Credit Hours: 3.00. Examines theoretical perspectives related to family stress and resilience in multicultural and diverse family settings, and connects these perspectives to empirical work on family dynamics, coping, and dysfunction across the lifespan. Topics such as economic stress and poverty, immigrant families, single-parent families, homeless families, adoption, military families, maltreatment, and families coping with illness are explored. The class focuses on environmental, cultural, as well as biological contributions to both risk and resilience processes in individuals and families.

Learning Outcomes: 1. Describe theory and research concerning family stress, coping and social support. 2. Understand how an individual's or family's context plays a role in his/her exposure to and coping with stressors. 3. Explain how individual, familial and environmental processes contribute to risk and resilience in individuals and families. 4. Apply the principles of Family Stress Theory and Risk and Resilience Theory to case studies of families. 5. Demonstrate an ability to understand and empathize with total life experiences (physical. psychological, social) of others by identifying possible motivations/explanations for individual and family behavior. Credits: 3.00

HDFS 34100 - Working With Parents

Credit Hours: 3.00. This course focuses on developing and maintaining effective relationships between parents and professionals working with children, within the context of family-centered practices. Issues related to cultural, linguistic, economic, and developmental differences that affect relations between families and professionals are examined.

Learning Outcomes: 1. Demonstrate an understanding of the development tasks and concerns of parents across the life course. 2. Demonstrate an understanding of the content and design of innovative professional practices and program strategies that seek to promote positive parenting outcomes or reduce/prevent unhealthy parenting outcomes in each developmental stage of parenting. 3. Demonstrate an understanding of how diverse family characteristics and circumstances shape the developmental tasks, concerns, and needs of parents. 4. Demonstrate an understanding of the implications of diverse family characteristics and circumstances for professional practices and program strategies aimed at supporting parents. 5. Demonstrate an understanding of how to creatively work with students colleagues to develop an original program idea that supports parents during a particular developmental stage. Credits: 3.00

HDFS 34300 - Assessment And Case Management

Credit Hours: 3.00. This course is an introduction to case management as a service delivery approach for helping individuals and families in need. This course provides opportunities to practice basic helping and case management skills such as building rapport, assessing client needs, developing intervention plans, professional ethics, and professional writing.

Learning Outcomes: 1. Explain the case management approach to addressing the health and human service needs of children, adults, and families. 2. Differentiate among the various

phases and task responsibilities of case management. 3. Analyze how individual differences in human development and motivation for change influence case management work. 4. Apply basic assessment and case management skills in practice interviews with individuals and families. 5. Demonstrate professional documentation and writing ability through the preparation of assessment reports, case notes, and intervention plans. 6. Demonstrate professional helping capacities such as ethical behavior and reflective practice. Credits: 3.00

HDFS 34600 - Research Design And Program Evaluation

Credit Hours: 3.00. This course is an introduction to research methods as used in community programs for children and families including review and application of existing research literature, generating research questions, conducting program needs assessments, evaluating processes and outcomes of existing programs, designing and interpreting applied research studies, and understanding ethical responsibilities in the use and application of research. Instruction has been designed to provide the skills necessary to use existing research and generate new data to benefit programs.

Learning Outcomes: 1. Understand the role of research (and the necessity of using strong research methodology) in the acquisition of knowledge. 2. Acquire knowledge, skills, and professional perspectives for the comprehension, application, analysis, synthesis, interpretation, and evaluation of research/finding. 3. Become familiar with the methods and tools of research, including common research search engines. 4. Develop the basic knowledge and skills needed to understand the research process, including generating a research question, designing a study, analyzing data, and interpreting results. 5. Understand the ethics of conducting and using/not using empirical research findings in academic and professional practice settings. 6. Demonstrate an ability to apply research results to ethical decision making practice. 7. Develop an appreciation for the value of research in improving the quality of professional practice. 8. Write a critical and comprehensive review of the literature on a topic of educational or professional significance and design a research study (using the APA formatting style) as part of a research proposal. 9. Effectively present research studies and findings to a group. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

HDFS 39000 - Special Topics In HDFS

Credit Hours: 1.00 to 6.00. Supervised readings, discussion, lectures and/or research on special topics in family and individual development. Permission of instructor required.

Credits: 1.00 to 6.00

HDFS 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 6.00

HDFS 40000 - Social Studies In Preschool And Primary Grades

Credit Hours: 2.00. This course focuses on teaching social studies in preschool and primary grade classrooms. It covers

the developmental foundations and curriculum applications of social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.

Learning Outcomes: 1. Describe the purposes and importance of social studies in early childhood, including supporting children's understanding of themselves and the diverse nature of their communities, history, economics, citizenship, leadership, and civics and government. 2. Explain appropriate strategies for facilitating children's development of social studies skills. 3. Plan, implement, and evaluate developmentally appropriate instruction in social studies, including responding to the needs of diverse learners. 4. Demonstrate an understanding of Indiana State Standards for social studies for children from birth-3rd grade. 5. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 2.00

HDFS 40500 - Language, Literacy, And Social Studies In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching language, literacy and social studies in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of language, literacy and social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English.

Learning Outcomes: 1. Understand the purposes and importance of reading and writing in early childhood classrooms and homes, including the importance of supporting children's vocabulary, language comprehension, alphabet knowledge, phonemic awareness, and concept and functional use of print. 2. Understand the purposes and importance of social studies in early childhood, including supporting children's understanding of themselves and the diverse nature of their communities, history, economics, citizenship, leadership, and civics and government. 3. Understand strategies for facilitating children's development of language, literacy, and social studies skills. 4. Plan, implement, and evaluate developmentally appropriate instruction in language, literacy, and social studies, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for literacy and social studies for children from birth-3rd grade (www.doe.in.gov/primetime/foundations and http://dc.doe.in.gov/Standards/AcademicStandards/index.shtml). 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus. Credits: 3.00

HDFS 40510 - Literacy In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching literacy in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of literacy teaching in pre-kindergarten and primary grades and includes ways to plan, implement, and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.

Learning Outcomes: 1. Describe the purposes and importance of reading and writing in early childhood classrooms and homes, including the importance of supporting children's vocabulary, language comprehension, alphabet knowledge, phonemic awareness, and concept and functional use of print. 2. Explain the science of reading, particularly the current state of reading research and implications of research for reading instruction. 3. Practice strategies for facilitating children's development of literacy skills. 4. Plan, implement, and evaluate developmentally appropriate instruction in literacy including responding to the needs of diverse learners. 5. Describe the importance and demonstrate the use of Indiana State

Standards for literacy for children from birth-3rd grade. 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus. Credits: 3.00

HDFS 40600 - Mathematics In Preschool And Primary Grades

Credit Hours: 4.00. This course focuses on teaching mathematics in preschool and primary grade classrooms. It covers the developmental foundations and curriculum applications of mathematics teaching and includes ways to plan, implement and evaluate developmentally appropriate mathematics instructions for children with and without disabilities and children who are learning English. Field-based experiences in preschool or primary-grade classrooms are included.

Learning Outcomes: 1. Describe principles of developmentally appropriate early childhood education and intervention as they relate to teaching mathematics. 2. Demonstrate an understanding of how children think about mathematical concepts. 3. Identify key mathematics knowledge that children need to learn during the early childhood and primary years 4. Critically and creatively plan, implement, and evaluate developmentally appropriate instruction in mathematics, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for Mathematics for children from birth-3rd grade (www.in.doe.gov/primetime/foundations.html and http://dc.doe.in.gov/Standards/AcademicStandards/index.shtml). 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Note: A 3 hour/week field experience provides students the opportunity to apply knowledge to practice as reflected in objectives 4-6 above. Credits: 4.00

HDFS 40800 - Early Intervention / Early Childhood Special Education: Issues And Professional Practices

Credit Hours: 4.00. An introduction to the field of early intervention / early childhood special education including its origin, services, and practices in working with young children ages birth through eight with or at risk for developmental delays and disabilities and their families. Designing curriculum, environments, and services where all children are included, have equal opportunity for access and engagement, and feel a sense of belonging is addressed. For Early Childhood Education and Exceptional Needs majors only. A field experience in preschool or primary-grade classrooms is included.

Learning Outcomes: 1. Discuss origins of early intervention / early childhood special education including key legislation affecting young children (0-8) who have or are at risk for developmental delays and disabilities and their families. 2. Describe the value of and process for fostering family participation and professional-family collaboration in order to plan and implement family concerns, priorities, and access resources in intervention and education of young children (0-8) who have or are at risk for developmental delays and disabilities and their families. 3. Explain considerations including individualized and culturally / linguistically appropriate service delivery models, assessment, and curriculum for designing and organizing learning environments and experiences for young children (0-8) who have or are at risk for developmental delays and disabilities. 4. Evaluate, select, implement, and reflect on individually and culturally/linguistically appropriate evidence-based instructional strategies and interventions for young children (0-8) who have or are at risk for developmental delays and disabilities. 5. Utilize appropriate teaming and collaboration models, skills, processes, and strategies to engage with families and other professionals in the development of individualized intervention and transition plans. 6. Discuss current issues in providing effective early intervention / early childhood special education services for young children

and their families. 7. Exhibit growth in professional behavior related to the field of early intervention / early childhood special education. Credits: 4.00

HDFS 40900 - Science In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching science in preschool and primary grade classrooms. Developmental foundations and curriculum applications of science teaching including ways to plan, implement and evaluate developmentally appropriate science instruction for young children with and without disabilities and those who are learning English.

Learning Outcomes: 1. Describe principles of developmentally appropriate early childhood education and intervention as they relate to teaching science. 2. Demonstrate an understanding of how children think about science concepts at developmental levels between birth and 8 years. 3. Demonstrate understanding of critical approaches to scientific thinking. 4. Understand key science knowledge and skills that children need to learn from Pre-K to Grade 3 as represented in current science education standards. 5. Assess children's science knowledge, skills, and dispositions, and use the assessment data to plan science education activities. 6. Plan, implement, and evaluate developmentally appropriate classroom science activities, including responding to the needs of diverse learners. 7. Demonstrate positive dispositions and skills of an early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 3.00

HDFS 41200 - Professionalism And Music And Movement In Early Childhood

Credit Hours: 3.00. This course focuses on foundations of professionalism in early childhood education and early childhood special education. Additionally, this course discusses music and movement in early learning environments. It covers the developmental foundation and curriculum applications of music and movement activities and includes ways to plan, implement and evaluate developmentally appropriate music and movement instruction for children with and without disabilities and children who are learning English.

Learning Outcomes: 1. Demonstrate a comprehensive understanding of the ethical and professional standards in early childhood education, including the importance of maintaining confidentiality, respecting diversity, teaming will colleagues, and upholding the well-being of children and families. 2. Describe principles of developmentally appropriate early childhood education and intervention as they relate to music and movement in early childhood and primary grades. 3. Demonstrate an understanding of children's development of creative expression through music and movement. 4. Plan, implement, and evaluate developmentally appropriate visual music and movement instruction, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for Physical Education and Health and Music for children from birth-3rd grade. 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 3.00

HDFS 41500 - Approaches To Early Childhood Education

Credit Hours: 3.00. The historical and theoretical basis for early childhood education and early intervention is emphasized. Relations between theory and practice are examined and illustrated with model early childhood programs. Addresses cultural/developmental diversity, ethics, and standards in early childhood education and intervention.

Learning Outcomes: 1. Discuss recommended practices in early childhood education and early intervention, including historical and theoretical sources and reasons for these practices with young children. 2. Describe, evaluate, and apply ideas from influential early childhood curriculum models while incorporating cultural and developmental diversity among young children, families, and the profession. 3. Clearly articulate to others your theoretical assumptions, goals, and practices as an early childhood professional. 4. Describe ethical guidelines and

best practice recommendations for early childhood teachers and early interventionists and be able to apply those principles to everyday problems in early childhood education and early intervention. 5. Read, think, speak, and write about the course material, demonstrating your development as a professional, with increased confidence that what you do every day as a teacher is grounded in theory, recommended best practices, cultural sensitivity, and research-based knowledge. Credits: 3.00

HDFS 41800 - Understanding Autism

Credit Hours: 3.00. (PSY 41800, SLHS 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associated with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society.

Learning Outcomes: 1. Describe and explain the behavioral characteristics used to diagnose ASD. 2. Describe and explain the strategies and symptoms used in the early identification of ASD. 3. Describe and explain the current theoretical perspectives about the causes of ASD and the increasing prevalence of the disorder. 4. Describe and explain the current scientific knowledge on the genetic and neurobiological underpinnings of ASD and how these are related to behavioral symptoms. 5. Describe and explain the range of available evidence-based and non-evidenced-based interventions for ASD. 6. Critically evaluate the empirical research findings as well as media reports related to ASD. Credits: 3.00

HDFS 42000 - Developmental Foundations Of Infant And Toddler Curriculum

Credit Hours: 3.00. Study of typical and atypical development in infants and toddlers as well as implication for practice. Focuses on infant toddler developmental assessment and designing and implementing learning activities in all developmental areas and enhancing parent/professional relationships. Includes a practicum experience with infants and toddlers.

Learning Outcomes: 1. Acquire knowledge of the needs, normal development patterns, and important variations in development (including delays and disabilities) of children from prenatal period to 3 years. 2. Acquire skills in designing, maintaining, and evaluating safe, supportive, stimulating environments for infants and toddlers. 3. Acquire knowledge and skills in implementing developmentally-appropriate and culturally-appropriate assessment and programming for infants and toddlers. 4. Acquire skills providing basic care, education, and guidance for children under 3 years that may be applied in child care settings, family homes, or health care settings. 5. Acquire skills in developing supportive caregiving relationships with infants and toddlers. 6. Acquire skills in collaborating with key adults in infants' and toddlers' lives, including parents, other family members, and allied professionals. Credits: 3.00

HDFS 43030 - Human Development And Family Studies Student Mentors

Credit Hours: 1.00 to 3.00. Advanced undergraduate students selected for this opportunity to serve as mentors to beginning and prospective HDFS students in the department's orientation course (HDFS 10000). Mentors will be matched with a small group of students with similar major/career interests. Mentors will lead small group discussions, provide guidance and feedback, and otherwise serve as a role model to the students. Mentors will receive support and training to be effective in this role. Permission of instructor required.

Learning Outcomes: 1. Develop and communicate a thorough understanding of what

they have done to achieve success throughtout their college career. 2. Act as role models to beginning and prospective HDFS students. Credits: 1.00 to 3.00

HDFS 44000 - Expanded ECEEN Student Teaching

Credit Hours: 1.00 to 3.00. This is a full semester of supervised expansion of student teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will occur the semester prior to full-time student teaching and be supervised by an HDFS faculty member and the classroom cooperating teacher. Monthly HDFS sponsored professional development seminars will also be required.

Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Division for Early Childhood of the Council for Exceptional Children. 3. Engage in developmentally appropriate instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. Credits: 1.00 to 3.00

HDFS 45000 - Supervised Teaching In Inclusive Programs For Young Children (UCC: OC)

Credit Hours: **16.00.** This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Council for Exceptional Children. 3. Design developmentally appropriate instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the student teaching environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. 5. Create and conduct one-to-one, small group and/or large group instruction, guidance, intervention, and developmental activities in the student teaching environment. 6. Design and implement appropriate child assessment and evaluation procedures that influence the teaching and learning process. 7. Evaluate their own teaching practices through self-reflection and the analysis of child learning Credits: 16.00

HDFS 45010 - Supervised Teaching In Inclusive Programs For Young Children

Credit Hours: 12.00. This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.

Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Council for Exceptional Children. 3. Design developmentally appropriate

instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the student teaching environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. 5. Create and conduct one-to-one, small group and/or large group instruction, guidance, intervention, and developmental activities in the student teaching environment. 6. Design and implement appropriate child assessment and evaluation procedures that influence the teaching and learning process. 7. Evaluate their own teaching practices through self-reflection and the analysis of child learning. Credits: 12.00

HDFS 45100 - Internship & Career Preparation For Human Services

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship. 5. Develop and apply professional interview skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

HDFS 45400 - Internship & Career Preparation For Developmental And Family Science

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship search. 5. Develop and apply professional interviewing skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

HDFS 45500 - Human Services Capstone Internship

Credit Hours: 6.00 or 12.00. Supervised full-time or half-time internship in human services, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in human services. Students will use and enhance their skills in direct service to client or indirect service. Students will work in the placement setting secured during HDFS 45400. Example field placement sites include: government or community agencies; social service agencies; hospitals; and recreational settings. Permission of Department required. Must be a student in good academic standing during the internship semester.

Learning Outcomes: 1. Synthesize previously acquired and new knowledge about individual development, family processes, and broader social contexts and apply it to their responsibilities in their internship setting. 2. Demonstrate skills in direct service to children, adults, and/or families in the planning, evaluation, management, or support of human services programs. 3. Exhibit professional work attitudes and behavior. Credits: 6.00 or 12.00

HDFS 45800 - Development And Family Science Capstone Internship

Credit Hours: 6.00. Supervised internship for the Developmental & Family Science major, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in developmental and family science. Students will use and enhance their skills in child development, family and community health, or another area related to developmental and

family science. Students will work in the placement setting secured during HDFS 45400. Must be a student in good academic standing during the internship semester. Permission of Department required.

Learning Outcomes: 1. Synthesize previously acquired and new knowledge about individual development, family processes, and broader social contexts and apply it to responsibilities in the internship setting. 2. Demonstrate relevant workplace skills including direct service to clients, program development and evaluation, and/or other appropriate tasks. 3. Exhibit professional work attitudes and behavior. Credits: 6.00

HDFS 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required.

Credits: 1.00 to 4.00

HDFS 49101 - Mentored Research In Human Development And Family Studies I

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member. Involves developing a research proposal, beginning the project, and submitting a summary of the project plan and progress. First semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required.

Learning Outcomes: 1. Critically and creatively synthesize knowledge and skills gained as a DVFS major, using them in a research project of the student's interest. 2. Synthesize and apply previously acquired and new knowledge of the HDFS field through in-depth exploration of a topic of interest. 3. Observe and participate in the research process, including generating a written report of the project. 4. Work collaboratively with a research mentor and/or research team. 5. Make decisions using the logic of the scientific method. Credits: 3.00

HDFS 49102 - Mentored Research In Human Development And Family Studies II

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member. Involves completing a research project, writing up the results, and presenting the results to a new audience. Second semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required.

Learning Outcomes: 1. Critically and creatively synthesize knowledge and skills gained as a DVFS major, using them in a research project of the student's interest. 2. Synthesize and apply previously acquired and new knowledge of the HDFS field through in depth exploration of a topic of interest. 3. Observe and participate in the research process, including generating a written report of the project. 4. Work collaboratively with a research mentor and/or research team. 5. Make decisions using the logic of the scientific method. Credits: 3.00

HDFS 59000 - Special Problems

Credit Hours: 0.00 to 5.00. Special subjects for investigation and experiment according to the individual student's interest and need. Permission of instructor required.

Credits: 0.00 to 5.00

HDFS 60000 - Families And Health Across The Life Course

Credit Hours: 3.00. Interpersonal processes of family members and close others in the promotion of individual health choices and management of disease across the life course are covered. Course topics include involvement of family and close others in: health promotion and disease prevention; disease management; interactions with healthcare providers; and informal caregiving in the family context.

Learning Outcomes: 1. Evaluate research linking family ties with individual health and well-being across the life course. 2. Examine how interpersonal processes contribute to promoting health and managing illness of individuals across the life course. 3. Understand the role of family members in interactions with the healthcare system. 4. Differentiate diverse disciplinary approaches to families and health research across the life course. Credits: 3.00

HDFS 60100 - Advanced Child Development

Credit Hours: 3.00. This course provides an overview of foundational and current developmental research on changes that occur within the individual throughout infancy, childhood, and early adolescence. Emphasis is given to processes and mechanisms that have been proposed to explain developmental changes. This course includes attention to social and cultural contexts within which individuals develop. Prerequisite: Graduate-level coursework in Child Development or

Psychology.

Credits: 3.00

HDFS 60200 - Advanced Family Science

Credit Hours: 3.00. Integrative and comprehensive assessment of both classic and recent contributions in the field of family science. Other topics include major theory and research, historical, current, and future critical issues in family science.

Learning Outcomes: 1. Describe and critique classic and emerging theoretical and conceptual frameworks in family science, with attention to refinements over time. 2. Demonstrate critical thinking skills through exploring and discussing diverse theoretical viewpoints and recent research in family science. 3. Apply theoretical and conceptual frameworks when developing empirical research in family science. Credits: 3.00

HDFS 60400 - Developmental And Family Approaches To Diversity And Oppression

Credit Hours: 3.00. In this course, we will utilize an intersectional lens throughout the course to critically examine the development of individuals oppressed due to their minority status in the United States. We will review current research and literature across disciplines to: 1) understand the origin, meaning, and purpose of race and racism; 2) learn about the history of oppression and resilience of minoritized groups; 3) analyze systems of discrimination; 4) introduce theoretical frameworks for studying the unique, intersectional experiences of minoritized populations and examples of their application to empirical research, and 5) discuss how research can be used to advance social justice. Permission of department required.

Learning Outcomes: 1. Define concepts such as discrimination, race, racism, gender (beyond binary definitions), cissexism, heterosexism, neurodiversity, and ableism as they pertain to diverse populations in the U.S. 2. Present their own intersectionality and demonstrate how personal intersections can inform bias and actions. 3. Discuss the diversity that exists in the US and identify systemic factors that interact with this diversity (including but not limited to socioeconomic factors). 4. Explain the major concerns regarding minoritized groups' experiences and the factors that promote positive outcomes for marginalized individuals and families. 5. Evaluate critically the theoretical foundation of empirical studies conducted with diverse individuals/families and apply diversity-focused theory to student research content areas of interest. Credits: 3.00

HDFS 60600 - Advanced Human Development

Credit Hours: 3.00. This course provides an overview of human development and serves as a graduate-level introduction to HDFS. Relevant theories and models will provide the structure for consideration of the nature, processes, and mechanisms of developmental change. Particular attention will be paid to diversity in developmental influences and trajectories, including atypical development. Students will gain specific knowledge and professional skills through the pursuit of individual research interests, culminating in a written grant proposal and class presentation of the proposal.

Learning Outcomes: 1. Ability to articulate and apply knowledge of theories and empirical research central to the field of human development. 2. Demonstration of understanding of diverse paths through the human life course and important determinants of those paths, including racism, ageism, ableism, sexism, and other forms of social stratification. 3. Ability to think critically about developmental theories and research, notably the ability to integrate developmental theory with research interests. 4. Ability to communicate conceptual and substantive ideas clearly and cogently. Credits: 3.00

HDFS 61300 - Quantitative Methods I: Inferential Statistics And ANOVA

Credit Hours: 3.00. This course provides a basic understanding of foundational concepts and tools used in statistical analysis and inference in the behavioral sciences, including data preparation, sample description, hypothesis testing, univariate and bivariate statistics, and ANOVA. Emphasis is placed on the conceptual and interpretive understanding of statistical methods. Prerequisite: Undergraduate coursework in Statistics.

Learning Outcomes: 1. Understand the basics of probability, sampling, and inferential theory underlying statistical methods. 2. Understand univariate and bivariate statistics and ANOVA modeling methods. 3. Formulate testable hypotheses. 4. Apply proper statistical tests to

evaluate hypotheses. 5. Analyze data using univariate and bivariate statistics, ANOVA, and statistical software. 6. Properly interpret the statistical estimates and tests covered in the course. 7. Use statistical methods to test your research questions using empirical data. 8. Produce written communication of analytic methods and interpretation of results. Credits: 3.00

HDFS 61500 - Research Methods In Child And Family Study

Credit Hours: 4.00. Basic research methods employed in the study of children and families are examined, including quantitative and qualitative designs, data collection, analysis, and interpretation. In the laboratory component, students are afforded supervised practice in the application of various methods using selected statistical analysis programs. Prerequisite: Graduate course in Statistics. Permission of instructor required.

Credits: 4.00

HDFS 61700 - Quantitative Methods II: Regression

Credit Hours: 4.00. This course has two primary goals: 1) provide students with foundational knowledge related to linear regression statistical analyses, and 2) provide students with the opportunity to practice writing, interpreting, and presenting regression analyses for the purposes of dissemination. Prerequisite: HDFS 61300 or PUBH 60100 or STAT 50100 or PSY 64600. Permission of instructor required.

Learning Outcomes: 1. Understand the foundations of linear regression statistical analyses, including multiple regression. 2. Understand mediation and moderation hypotheses and associated testing in linear regression. 3. Derive research questions and hypotheses testable in linear regression. 4. Analyze data using linear regression modeling and statistical software. 5. Properly interpret the statistical estimates and tests covered in the course. 6. Apply regression modeling to your research questions using empirical data. 7. Produce written communication of analytic methods and interpretation of results. Credits: 4.00

HDFS 61900 - Adolescent And Youth Development In Context

Credit Hours: 3.00. This graduate-level course examines the major developmental issues of adolescents and youth with attention to their familial, cultural, and socio-economic backgrounds. Topics include health and well-being; biological, socio-emotional, and cognitive development; sexual and racial/ethnic identity; risks and resilience; peer and family relationships; civic engagement and activism; positive youth development; and the transition to adulthood. Course readings focus primarily on adolescents and youth in the United States, although international contexts are also incorporated across the class.

Learning Outcomes: 1. Evaluate empirical studies assessing the major developmental themes of adolescence and the transition to adulthood. 2. Apply and understand major theoretical perspectives relevant to adolescent and youth development. 3. Demonstrate understanding of the contexts that impact development during adolescence and the transition to adulthood. 4. Demonstrate accurate knowledge of physical, cognitive, social, and psychological development of adolescents and youths. 5. Understand how adolescent and youth development is impacted by diverse backgrounds and experiences. Credits: 3.00

HDFS 62000 - Current Issues In Early Childhood Education

Credit Hours: 3.00. Emphasis on current issues in early childhood education as they are affected by contemporary social change with observation and analysis of a variety of programs for young children. Prerequisite: HDFS 60100 .

Credits: 3.00

HDFS 62200 - Child Development Within The Family Context

Credit Hours: 3.00. This course provides an overview of (1) foundational and current child development theories and (2) research on typical individual change throughout infancy and childhood within the family context. Emphasis is given to milestones, and to the processes and mechanisms proposed to explain developmental change. The course takes a chronological age-approach to study development within the family context and covers the following stages: prenatal and infancy, early childhood, and middle childhood. Initially the course places the individual within the larger family context and then delineates development/growth within the realms of physical growth, brain, motor, sensation, perception, language, social, cognitive, feeding/eating, sleep, self-regulation, attachment, and temperament/personality development. Across

these realms diversity and historical standards around typical development expectations will also be incorporated. Permission of instructor required.

Learning Outcomes: 1. Demonstrate an understanding of basic tenets of influential child development theories. This foundational knowledge will include (but is not limited to) life-history theory, genetics, developmental neuroscience, attachment theory, bioecological theory, social domains theory, and Piaget. 2. Analyze, discuss, and critique information about child development theories and research using empirical evidence. 3. Demonstrate an understanding of the normative developmental progression (from fetus to middle childhood) in the domains of: Physical growth, brain maturation, language, social, cognitive, feeding/eating, sleep, self-regulation, attachment, and temperament/personality development. 4. Think critically about how historic patterns of research, family systems, and isms (e.g., racism, weightism, ableism) influence our standards of typical/normative development for developmental domains. 5. Demonstrate an understanding of the family factors that influence variability in typical developmental trajectories. Family factors will include (but are not limited to) individual characteristics (e.g., child gender, innate capacities, and age), dyadic features (e.g., marital conflict / union dissolution, contingent responsivity), and contextual elements (e.g., socioeconomic resources, culture). Credits: 3.00

HDFS 62500 - Child And Family Social Policy

Credit Hours: 3.00. An examination of selected issues related to child and family policy relevant to scholars of CDFS. These issues include: (1) influences of research on children and families on the policy process; (2) the role of child and family specialists as advocates and analysts; (3) policy formulation, enactment, and evaluation; and (4) child and family policy in cross-national perspective. Prerequisite: HDFS 60100 and HDFS 60200 .

Credits: 3.00

HDFS 62700 - Multilevel Modeling In Developmental And Family Research

Credit Hours: 3.00. This course gives students a basic grounding in the class of statistical techniques known as multilevel modeling (MLM), also known as hierarchical linear modeling (HLM), mixed models, or random coefficient models. Primary discussions will be on applications of these models to the study of marriages, relationships, families, aging, and child and adult development, but also will touch on biomedical, educational, and economic examples. The focus is on three types of multilevel models: growth-curve models, organizational models, and daily experience models. Students will also learn how to use SAS Proc Mixed for conducting MLM analyses. Students are assumed to have taken at least two graduate statistics courses and have a solid understanding of regression analysis. Prerequisites: STAT 50100 and STAT 50200 or HDFS 61300 and PSY 63100 .

Learning Outcomes: 1. Acquire a basic-to-intermediate understanding of the logic of multi-level modeling, grasp the underpinning statistics of MLM, and develop a sense as to when (and when not) to use the model. 2. Apply MLM to relevant questions in their area of research interest. 3. Critically read and evaluate empirical journal articles that use MLM. 4. Acquire basic programming skills for conducting MLM. 5. Select the appropriate methods of data analysis, given multivariate data and study objectives. 6. Employ statistical software to carry out statistical analyses, 7. Interpret and explain the results of statistical analyses, and 8. Write concise and effective summaries of results using APA style. Credits: 3.00

HDFS 62800 - Structural Equation Modeling

Credit Hours: 3.00. This course provides an introduction to classic structural equation models with latent variables (SEM). The primary steps of implementing SEMs will be covered to include: model specification, model identification, parameter estimation, and model evaluation (model fit). Background training in statistical regression is required. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of structural equation models including proper application, interpretation, and evaluation of the models. 2. Develop an understanding of the underlying statistics including parameter identification and

estimation as well as model fit measures. 3. Learn the benefits of SEMs including when it is advantageous to use this modeling approach. 4. Learn the limitations of the model and the most common mistakes in using SEMs. 5. Be able to apply the method to a topic relevant to your own research. 6. Be able to analyze SEM models using a SEM software package. Credits: 3.00

HDFS 62900 - Interventions Across Developmental And Family Contexts

Credit Hours: 3.00. This course will focus on the scientific foundations of designing and conducting interventions for improving the human condition across diverse developmental and family contexts. A particular emphasis in this course will be on experimental and quasi-experimental designs for making causal inferences and understanding mechanisms of intervention effects. Students will gain specific knowledge of intervention design, implementation and fidelity, and scale-up of interventions, as well as how to evaluate proposed or existing interventions. Co-design processes with intervention users and qualitative methods for understanding intervention needs and implementation will also be examined. Prerequisite: none.

Learning Outcomes: 1. Read and critique the literature on interventions across developmental and family topical areas. 2. Acquire skills in understanding culture, diversity, equity, and bias as they apply to intervention design, implementation, and evaluation. 3. Identify, critique, and communicate about methods to design, implement, evaluate, and scale up interventions. 4. Understand strengths and limitations of interventions relative to the mechanisms of change, implementation processes, fidelity of implementation, and contextual (both setting and population) factors that may affect intervention success. 5. Demonstrate understanding of methods and limits of causal inference using interventions. 6. Acquire skills to obtain external funding by practicing grant writing and reviewing. Credits: 3.00

HDFS 64400 - Biosocial Processes In Developmental And Family Research

Credit Hours: 3.00. In this course we discuss theoretical models and empirical research regarding the interplay between biology and context in development, focusing on the unique interactions that occur within families. Prerequisite: HDFS 60100 and HDFS 60200 .

Learning Outcomes: 1. Identify basic genetic, neuroanatomical, and neuroendocrine processes involved in major aspects of physiological regulation (e.g. the stress response). 2. Describe the dynamic interaction between physiology and the environment. 3. Explain implications of normative and non-normative experiences for physiological regulation. 4. Critically evaluate biosocial research. Credits: 3.00

HDFS 64900 - Multidisciplinary Gerontology

Credit Hours: 3.00. A multidisciplinary overview of aging that provides a background for graduate studies on aging. An examination of sociological, psychological, and biological theory and research in the field of aging. The aging process from cells to social security will be covered. Projects will assist students in developing appropriate professional skills in their field of study. Students are expected to have basic research and writing skills in their field of study. The course serves as a graduate-level introduction to the field of gerontology. There are several options for course projects.

Learning Outcomes: 1. Describe and critique major theoretical and empirical foundations and advances in gerontological research. 2. Examine and discuss the ways influences at different levels of function (e.g., biological, social) and from different academic disciplines (e.g., psychology, sociology) interact to shape the aging process and related outcomes. 3. Use existing literature to construct and support novel research ideas. 4. Practice and produce cogent, compelling writing. Credits: 3.00

HDFS 65800 - Attachment Relationships

Credit Hours: 3.00. This graduate course studies child-parent relationships theory and research from the respective of Attachment Theory. Prerequisite: CDFS 60300. Permission of instructor required. Prerequisite: HDFS 60100 and a basic graduate-level statistic course.

Learning Outcomes: 1. Identify the history and the historic context in which attachment theory was proposed. 2. Identify and analyze the central characteristics and constructs of attachment theory, and the model of

development (4 phases) that Bowlby proposed. 3. Describe and analyze the empirical evidence provided by Ainsworth in support of attachment theory. 4. Analyze and critique the literature on the context sensitivity of attachment relationships (e.g., influence of quality of care, infant/child temperament, family characteristics, socio-economic conditions, and culture). 5. Identify and critique the relations between infant security and later socialization outcomes. 6. Survey and analyze the research literature on child-parent attachment relationships during early and middle childhood, adolescence, and adulthood. 7. Critique the hypothesis concerning the intergenerational transmission of attachment patterns from parents to offspring. 8. Identify, analyze, and critique age appropriate methodologies in the study of offspring-parent attachment relationships. 9. Develop and present (orally and in writing) a 10-page research proposal on attachment relationships.

Credits: 3.00

HDFS 67900 - Qualitative Research On Families

Credit Hours: 3.00. Provides an introduction to qualitative research theory and methods and prepares graduate students to conduct and evaluate qualitative family research. Students conduct observations, interviews, and basic data analysis. Prerequisite: a course in research methods.

Credits: 3.00

HDFS 68000 - Professional Issues For Child And Family Specialists

Credit Hours: 3.00. Professional issues involved in working with children and families. Questions of ethics, legal relationships, and value problems may be pursued, as may such pragmatic inquiries as the role of professional organizations and labor unions in these fields.

Credits: 3.00

HDFS 68500 - Current Research Topics In Child Development And Family Studies

Credit Hours: 1.00 to 3.00. Consideration of current subjects in child development and family studies research. Particular emphasis will be placed on one topic each semester according to the research interests of the instructor.

Credits: 1.00 to 3.00

HDFS 68501 - Developmental Seminar

Credit Hours: 1.00. Consideration of current subjects in child development and family studies research. Particular emphasis will be placed on one topic each semester according to the research interests of the instructor.

Credits: 1.00

HDFS 69000 - Directed Research In HDFS

Credit Hours: 1.00 to 4.00. Directed research and supervised research on a topic in student's area of specialization. Permission of instructor required.

Credits: 1.00 to 4.00

HDFS 69700 - Graduate Student Colloquium

Credit Hours: 1.00. Research presentations by faculty members, graduate students, and invited speakers. Includes attention to: (1) the responsible conduct of research, (2) professional/scholarly and teaching development, and (3) diversity, equity, and inclusion.

Learning Outcomes: 1. Expose students to a wide swath of HDFS-related research across the life course. 2. Provide a rotation of professional development trainings (e. g., vita, job talk, and conference presentation development). 3. Foster teaching development through presentations, workshops, or trainings. 4. Generate internal and external networking opportunities for graduate students. 5. Address issues of diversity, equity, and inclusion (DEI) in HDFS by (a) providing a platform for increased representation in presenters, (b) critically considering how research in HDFS serves diverse (i. e., underrepresented/underserved/historically marginalized) populations, and (c) increasing our competencies related to DEI as part of professional development. Credits: 1.00

HDFS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

HDFS 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Industrial and Molecular Pharmaceutics

IMPH 10000 - Pharmaceutical Sciences Orientation

Credit Hours: 1.00. An orientation course for incoming freshmen or CODO students enrolled in the Bachelor of Sciences in the Pharmaceutical Sciences program. Provides an introduction to the scope of the program, the career opportunities for graduates, the curriculum rationale, and the faculty and staff support structure.

Credits: 1.00

IMPH 45100 - Industrial Practical Training

Credit Hours: 1.00. Course allows students to gain practice-related employment experience in industrial pharmacy. Students receive credit for practical experience in the session when they participate in the practical experience and complete the course paper requirement. Pre-approval of enrollment through ISS is required prior to employment experience. Permission of instructor required.

Learning Outcomes: 1. Ensure pharmaceutical science students receive early exposure to the most common career paths taken by today's graduates and gain a first-hand perspective of industry responsibilities and activities in their roles. This contributes to a foundation for gaining appreciation of the strategies for continually evolving requirements and skills in industry. 2. Provides pharmaceutical science students with opportunities to have early in their program observation of scientists providing services, particularly those that address Pharmaceutical Science Outcome Ability Goals. These include Conceptual Competence, Scientific Comprehension, Mathematical Competence, Integrative Competence, Critical Thinking and Decision Making Abilities, Communication Skills and Abilities, Responsible Use of Professional Values and Ethical Principles, Social Awareness and Social Responsibility, Professional Abilities and Habits, and Group Interaction and Citizenship. See the ""Student Handbook"" for specific descriptions of the components of these outcome abilities. 3. Provide pharmaceutical science students with early industry exposure that illustrates the reasons they need in-depth learning of the basic and applied sciences and a commitment to lifelong learning for professional effectiveness. 4. Provide pharmaceutical science students with experiences and learning in applications that are essential to evolving professional responsibilities in an industrial setting. 5. Contribute to pharmaceutical science student development as well as providing the vision and motivation to become a positive scientific influence or change agent. 6. Broaden students' perspectives on career pathways and foster initiatives to enhance career planning. Credits: 1.00

IMPH 49000 - Special Topics

Credit Hours: 1.00 to 6.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest, utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 6.00

IMPH 56200 - Introduction To Pharmaceutical Manufacturing Processes

Credit Hours: 4.00. A course intended to provide the student with basic understanding of both the theoretical and practical aspects of pharmaceutical manufacturing by combining a thorough classroom treatment of the underlying principles of each pharmaceutical unit operation with hands-on execution of these activities in the laboratory. Permission of instructor required.

Learning Outcomes: 1. Demonstrate ability to effectively communicate their field of study. 2. Demonstrate ability to conduct research in an ethical and responsible manner. 3. Demonstrate ability to think critically, creatively, and solve problems in their field of study. 4. Demonstrate ability to identify and conduct original research, scholarship, and creative endeavors. Credits: 4.00

IMPH 57400 - Pharmaceutical Biotechnology

Credit Hours: 3.00. Pharmaceutical biotechnology is the array of scientific and engineering principles used to develop, manufacture, and regulate biologic drugs. Biologic drugs - also known as "biologics", "biopharmaceuticals", or "large molecule drugs" - are medicinal agents derived from living systems, in contrast to more conventional "small molecule drugs" produced by organic chemical synthesis. Since the approval of the first recombinant human insulin in 1982, biologics have grown from niche products to occupy a prominent place in the

pharmaceutical armamentarium. Today, biologics provide innovative treatments for a host of previously intractable diseases, including cancers, autoimmune disorders, and diabetes. The global biologics market was more than $300 billion in 2019, accounting for 20-25% of all pharmaceutical sales. This course introduces students to pharmaceutical biotechnology. The five didactic sections of the course present: (i) the biotech drug market, (ii) cellular and molecular biology foundations, (iii) formulation and stability of biotech drug products, (iv) analytical methods for quality assurance, and (v) manufacturing methods. In the sixth and final section of the course, students will present case studies on currently approved biotech drugs, integrating and applying what they've learned. The course is intended for beginning graduate students in the Departments of Industrial and Physical Pharmacy, Chemical Engineering, and Biomedical Engineering. The course may also be suitable for well-qualified upper-division undergraduates. Permission of department required.

Learning Outcomes: 1. Understand and be able to describe the current state of the biopharmaceutical industry, including major drug classes, top-selling biotech drugs, innovative biotech drugs under development, and leading pharma biotech companies. 2. Understand and be able to describe the fundamental cellular and molecular biology principles and interrelationships that undergird pharmaceutical biotechnology, including (e.g.) the roles of cells as protein factories, drug targets, and vehicles for gene delivery; the roles of viral vectors as drug delivery and cell transfection agents; the roles of proteins as drugs, drug targets, and products of mRNA vaccines. 3. Understand and be able to describe the mechanisms of chemical and physical degradation of peptide/protein and nucleotide therapeutics. Be able to suggest formulation strategies to control various types of degradation. 4. Understand and be able to describe various chromatographic and electrophoretic methods used to analyze biologics. Be familiar with other types of chemical and biophysical methods used for these drugs. 5. Understand and be able to describe the manufacturing methods used for different classes of biologics, with a more detailed understanding of the methods used for recombinant proteins. 6. Develop a detailed knowledge of one current biotech drug product, including methods of manufacturing, analytical methods for quality control and assurance, formulation approaches and any instabilities, indications, and current market. Credits: 3.00

IMPH 58000 - Physical Chemical Principles

Credit Hours: 3.00. Applications of physical chemical principles to pharmaceutical systems.

Credits: 3.00

IMPH 58300 - Advanced Biopharmaceutics

Credit Hours: 3.00. A comprehensive course dealing with the interaction of biological and physicochemical considerations relating to drug effectiveness and dosage form design.

Credits: 3.00

IMPH 58700 - Pharmaceutical Solids

Credit Hours: 2.00. Provides students with the ability to identify and characterize polymorphs and hydrates and to understand their behavior in the presence of water. Both classical methods and new techniques for the study of pharmaceutical solids and their interaction with water are included. Scientific principles are blended with practical examples to provide a conceptual basis for understanding particular problems.

Credits: 2.00

IMPH 59000 - Special Topics In Industrial And Molecular Pharmaceutics

Credit Hours: 1.00 to 6.00. Special topics in selected areas of industrial and molecular pharmaceutics. Permission of instructor required.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 6.00

IMPH 68000 - Pharmacokinetics And Biopharmaceutics

Credit Hours: 3.00. Pharmacokinetics (PK) is the study of the time course of the absorption, distribution, metabolism and excretion (ADME) of a drug, compound or new chemical entity (NCE) after its administration to the body. Biopharmaceutics examines the relationship between the physical/chemical nature of a drug, the dosage form and the route of administration on the rate and extent of systemic drug absorption. Knowledge of the pharmacokinetic and biopharmaceutics properties of an NCE are critical to its selection as a lead candidate in a drug discovery program, its use as a functional research tool, and its use as a therapeutic agent. This course will be an overview of the development of pharmacokinetic principles, including guidelines for conducting clinical studies, and equations required to characterize the disposition of drugs and their metabolite(s). Students will develop the ability to probe the mechanisms and physiological processes responsible for

ADME. Pharmacodynamics, the relationship between drug concentration and effect, and the issues surrounding stereospecific PK will presented. Prerequisites: Admission to the IMPH graduate program and at least one course in pharmacology and one course in mammalian or human physiology. Permission of instructor required.

Learning Outcomes: 1. Probe the mechanisms and physiological processes responsible for ADME. Credits: 3.00

IMPH 69000 - Special Problems

Credit Hours: 0.50 to 6.00. Individual research topics selected from the areas of industrial pharmacy, physical pharmacy, or biopharmaceutics. Permission of instructor required.

Learning Outcomes: 1. Vary by topic. Credits: 0.50 to 6.00

IMPH 69600 - Seminar In Industrial And Physical Pharmacy

Credit Hours: 0.00 or 1.00. Discussion of recent research developments in physical pharmacy, industrial pharmacy, and biopharmaceutics related to the physicochemical properties, availability, effectiveness, and safety of drugs and drug products. Topics are presented by staff, students, and invited speakers.

Credits: 0.00 or 1.00

IMPH 69699 - IMPH Professional Practice Internship

Credit Hours: 0.00. A one-semester course for graduate students going out for Professional Internships to register to keep their graduate student status. Permission from department is required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional setting related to their research context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and practice of ethical responsibility in professional work. Credits: 0.00

IMPH 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Industrial Engineering

IE 20000 - Industrial Engineering Seminar

Credit Hours: 0.00. An orientation course to inform students of the major options in the industrial engineering program, assistance in selection of appropriate electives to meet career objectives, introduction to the faculty, and selection of an academic advisor.

Credits: 0.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 30000 - Honors Program Seminar

Credit Hours: 0.00. An orientation course intended for juniors who have demonstrated exceptional academic ability and desire to conduct meaningful independent research or solve unique engineering design projects during their senior year of study.

Credits: 0.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and

experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

IE 33200 - Computing In Industrial Engineering

Credit Hours: 3.00. Introduction to computing in industrial engineering. Reinforcement of scientific programming skills on typical IE tasks, together with introduction to simulation and related computer tools.

Credits: 3.00

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs.

Credits: 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38300 - Integrated Production Systems I

Credit Hours: 3.00. Basic concepts in the design and operational control of integrated production systems. Includes topics on facility layout and material handling, material flow and information flow, resource and capacity planning, and shop floor control and scheduling.

Credits: 3.00

IE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

IE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business and a comprehensive written report of this practice. Permission of department required.

Credits: 0.00

IE 43100 - Industrial Engineering Design

Credit Hours: 3.00. Capstone design experience for industrial engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations. Prerequisite: all 30000-level industrial engineering courses required for the BS IE degree.

Credits: 3.00

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools.

Learning Outcomes: 1. Create any object using 3D CAD design software (modeling, texturing, and animation). 2. Evaluate and optimize 3D designs for different manufacturing processes and materials. 3. Apply the principles of engineering tolerance to 3D CAD design. 4. Use rapid prototyping techniques (laser cutting, laser engraving, injection molding, and 3D printing) to manufacture 3D CAD designs. Credits: 3.00

IE 47400 - Industrial Control Systems

Credit Hours: 3.00. Introduction to automatic controls with reference to automation of industrial machines and processes, including linear dynamic systems, feedback control, and elements of systems analysis. Introduction to digital control.

Learning Outcomes: 1. Able to design basic control systems using block diagrams. 2. Able to determine the feedback equation of block diagrams. 3. Able to interpret state-space models. 4. Able to compute state-spaced equations. 5. Able to conduct basic dynamic modeling of a control system. 6. Able to classify a linear time-invariant system into known classes. 7. Able to compute the dynamic

response of a control system. Credits: 3.00

IE 48100 - Introduction To System Simulation

Credit Hours: 3.00. The course presents a general introduction to simulation concept and methodology. It covers simulation modeling in specialized simulation environments. Practical application of simulation to diverse systems will be discussed. Proper design and analysis of the simulation experiment is emphasized. Permission of department required.

Learning Outcomes: 1. Construct discrete-event simulation models using a representative simulation software package. 2. Identify different types of simulation models and determine scenarios where each would be appropriate. 3. Perform analysis of data for the development of input models. 4. Design simulation experiments and conduct statistical analysis. 5. Verify and validate a simulation model. Credits: 3.00

IE 48400 - Integrated Production Systems II

Credit Hours: 3.00. Extensions of topics on the design and operational control of integrated production systems. Includes production databases, facility layout, material handling, advanced control and scheduling, and physical distribution. Case studies, lab assignments, and projects.

Credits: 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600 . Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems.

Credits: 3.00

IE 49000 - Special Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Special topic courses and projects of contemporary importance or of special interest that are outside the scope of the standard undergraduate curriculum. Permission of instructor required.

Credits: 1.00 to 6.00

IE 49500 - Industrial Practices Seminar

Credit Hours: 1.00. Solution of industrial engineering problems, with particular emphasis on current industrial experience obtained through the cooperative engineering education program. For cooperative program students only.

Credits: 1.00

IE 49900 - Research In Industrial Engineering

Credit Hours: 1.00 to 6.00. Individual research projects for students with honors standing, or other students with the approval of their advisors. Permission of instructor required.

Credits: 1.00 to 6.00

IE 52500 - Healthcare Delivery Systems

Credit Hours: 3.00. This course is to introduce the interconnected sectors in the complex U.S. healthcare delivery systems, including in-patient care, emergency departments, surgical services, out-patient clinics, long-term care, pharmacies, laboratories, as well as supporting industries such as insurance, food services, information technologies, etc. The course focuses on the management of healthcare services by the industrial engineering principles and quantitative decision-making methodologies.

Learning Outcomes: 1. Understand current performance assessment for healthcare. 2. Develop skills in decision making and problem solving by quantitative analytical tools and system/process modeling. 3. Develop proficiency in selecting analytical methods that are appropriate for addressing specific problems for healthcare providers. Credits: 3.00

IE 53000 - Quality Control

Credit Hours: 3.00. Principles and practices of statistical quality control in industry. Control charts for measurements and for attributes. Acceptance sampling by attributes and by measurements. Standard sampling plans. Sequential analysis. Sampling inspection of continuous production.

Credits: 3.00

IE 53200 - Reliability

Credit Hours: 3.00. Reliability of components and multi-component systems. Application of quantitative methods to the design and evaluation of engineering and industrial systems and processes for assuring reliability of performance. Economic and manufacturing control activities related to product engineering aspects of reliability. Principles of maintainability. Product failure and legal liability.

Credits: 3.00

IE 53300 - Industrial Applications Of Statistics

Credit Hours: 3.00. The application of statistics to the effective design and analysis of industrial studies relating to manufacturing and human factors engineering in order to optimize the utilization of equipment and resources. Emphasis on conducting these studies at the least cost.

Credits: 3.00

IE 53500 - Linear Programming

Credit Hours: 3.00. Optimization of linear objective functions subject to linear constraints. Development of theory and algorithmic strategies for solving linear programming problems.

Credits: 3.00

IE 53600 - Stochastic Models In Operations Research I

Credit Hours: 3.00. An introduction to techniques for modeling random processes used in operations research. Markov chains, continuous time Markov processes, Markovian queues, reliability and inventory models.

Credits: 3.00

IE 53700 - Discrete Optimization Models And Algorithms

Credit Hours: 3.00. An introduction to classic models and algorithms for discrete optimization. Basic theory and computational strategies for exact and heuristic solution of integer, combinational, and network problems in the context of classic models.

Credits: 3.00

IE 53800 - Nonlinear Optimization Algorithms And Models

Credit Hours: 3.00. Survey of computational tools for solving constrained and unconstrained nonlinear optimization problems. Emphasis on algorithmic strategies and characteristic structures of nonlinear problems.

Credits: 3.00

IE 54100 - Nature-Inspired Computation

Credit Hours: 3.00. This course is about algorithms that are inspired by naturally occurring phenomena and applying them to optimization, design and learning problems. The focus is on the process of abstracting algorithms from the observed phenomenon, their outcome analysis and comparison as well as their "science". This will be done primarily through the lens of evolutionary computation, swarm intelligence (ant colony and particle-based methods) and neural networks.

Learning Outcomes: 1. Describe the natural phenomena that motivate the discussed algorithms. 2. Understand the strengths, weaknesses and appropriateness of nature-inspired algorithms. 3. Apply nature-inspired algorithms to optimization, design and learning problems. 4. Understand fundamental concepts of NP-hardness and computational complexity. 5. Prove algorithm convergence rates using probabilistic arguments. 6. Perform appropriate analyses on and between the outputs of stochastic algorithms. 7. Analyze search space structure using statistical and information theoretic measures and explain its impact on algorithm behavior and output. Credits: 3.00

IE 54500 - Engineering Economic Analysis

Credit Hours: 3.00. Analysis of engineering costs and capital investments. Applications of classical optimization, mathematical programming, and the theory of production to the analysis of investment proposals. Evaluation and selection of individual projects and formulation of capital investment programs.

Credits: 3.00

IE 54600 - Economic Decisions In Engineering

Credit Hours: 3.00. Topics in decision-making and rationality including decision analysis, decision-making under uncertainty, and various descriptive and prescriptive models from operations research, economics, psychology, and business. Applications are drawn from engineering decision-making, public policy, and personal decision-making. Attention also is paid to designing aids to improve decision-making.

Credits: 3.00

IE 54900 - Machine Vision In Intelligent Robotic Systems

Credit Hours: 3.00. Introduction to machine vision and learning algorithms from a human-machine interaction standpoint, and application of machine vision techniques to the design of human-integrated cybernetic systems, such as, robotic systems, flexible automation, and wearable electronics.

Learning Outcomes: 1. Analyze and write computer programs to analyze images for tasks such as filtering, edge detection, segmentation, object recognition, and template matching. 2. Describe and use image filtering methods for image processing. 3. Describe and use edge detection methods for image processing. 4. Use morphological operations to perform shape recognition and template matching. 5. Use optical flow methods to study motion. 6. Apply techniques for object tracking and motion detection to analyze multiple images or video. 7. Apply learning methods such as neural networks, clustering, and linear regression for object recognition. 8. Apply a computer vision technique to the control of a robotic arm. 9. Plan and develop a working prototype machine vision interface. Credits: 3.00

IE 55600 - Job Design

Credit Hours: 3.00. (PSY 55600) Task analysis, personnel selection and training, job and organization design, and criteria development and use. Human factors related to job design in order to increase job satisfaction and productivity.

Credits: 3.00

IE 55800 - Safety Engineering

Credit Hours: 3.00. Application of human factors and engineering practice in accident prevention and the reduction of

health hazards are presented. The objective of this course is to provide an understanding of the safety and health practices which fall within the responsibilities of the engineer in industry. Special attention is devoted to the detection and correction of hazards and to contemporary laws and enforcement on occupational safety and health.

Credits: 3.00

IE 55900 - Cognitive Engineering Of Interactive Software

Credit Hours: 3.00. Theory and applications of software design to improve productivity and job satisfaction on information processing and cognitive tasks in the workplace. Human information processing models and cognitive theories will be used to provide a theoretical basis for how to choose and display information to the user. Other topics include user-friendly displays and empirical approaches to software design. Applications of the design theory are stressed by class projects.

Credits: 3.00

IE 56100 - Introduction To Convex Optimization

Credit Hours: 3.00. (AAE 56100) Introduction to convex analysis, convex optimization problems, algorithms of convex optimization and measures of their complexity, and application of convex optimization in aerospace engineering. Recognition of convex optimization problems that arise in scientific and engineering applications. Introduction to software tools to solve convex optimization problems.

Learning Outcomes: 1. Understand the basics of convex analysis and convex optimization problems. 2. Understand and develop algorithms for convex optimization and measures of their capacity. 3. Apply convex optimization to solve engineering problems.

Credits: 3.00

IE 56600 - Production Management Control

Credit Hours: 3.00. Background and development of production management, plus current concepts and controls applicable to production management functions. Not open to Industrial Engineering students with a minor in management.

Credits: 3.00

IE 57000 - Manufacturing Process Engineering

Credit Hours: 3.00. Theories and applications of materials forming and removal processes in manufacturing, including product properties, process capabilities, processing equipment design, and economics. A systems approach to all aspects of manufacturing process engineering.

Credits: 3.00

IE 57400 - Industrial Robotics And Flexible Assembly

Credit Hours: 3.00. Lab by arrangement. Design, analysis, and operation of robotic systems. System components and their control. Languages for robot control. Application design and analysis. Part feeders and tooling for robot workstations and automated assembly. Methods for planning robotic and assembly applications.

Credits: 3.00

IE 57700 - Human Factors In Engineering

Credit Hours: 3.00. (PSY 57700) Survey of human factors in engineering with particular reference to human functions in human-machine systems, and consideration of human abilities and limitations in relation to design of equipment and work environments.

Credits: 3.00

IE 57800 - Applied Ergonomics

Credit Hours: 3.00. Analysis, modeling, and design of jobs and systems to be consistent with human factors and ergonomic principles.

Learning Outcomes: 1. Analyze and design work to fit human anthropometric requirements. 2. Analyze and design work to meet human physiological limitations, including lifting tasks. 3. Conduct time studies and use predetermined time system modeling. 4. Perform task analysis and process mapping. 5. Analyze and design work to meet human cognitive limitations. 6. Determine function allocation between automation and human tasks. 7. Model basic human performance at movement, detection, and control tasks. 8. Identify common human errors and perform human reliability analysis. 9. Design displays that meet basic human-computer interaction principles. 10. Write technical reports describing the results of human factors analysis. 11. Present technical material describing the results of human factors analysis. Credits: 3.00

IE 57900 - Design And Control Of Production And Manufacturing Systems

Credit Hours: 3.00. Design and control of discrete part manufacturing systems in contemporary production environments, with emphasis on flexible, demand-driven, product-based manufacturing. Currently used planning and control methodologies, such as MRP, OPT, and JIT are reviewed and integrated with appropriate facility design methodologies, including cellular design algorithms. Introduction to Computer Integrated Manufacturing (CIM) architecture and reference models and relevant control procedures, including

basis approaches to appropriate data management methodologies.

Credits: 3.00

IE 58000 - Systems Simulation

Credit Hours: 3.00. Philosophy and elements of digital simulation language. Practical application of simulation to diverse systems. Computer simulation exercises and applications are required.

Credits: 3.00

IE 58100 - Simulation Design And Analysis

Credit Hours: 3.00. An introduction to simulation of stochastic systems on digital computers. Emphasis is on the fundamentals of simulation as a statistical experiment. Topics include uniform random numbers, input modeling, random variate generation, output analysis, variance reduction, and optimization.

Credits: 3.00

IE 58200 - Advanced Facilities Design

Credit Hours: 3.00. Study of the theoretical and applied aspects of manufacturing systems layout. Emphasis on contemporary manufacturing, including the layout of cellular systems, automated material handling systems, and storage systems.

Credits: 3.00

IE 58300 - Design And Evaluation Of Material Handling Systems

Credit Hours: 3.00. Analysis for design and evaluation of material handling systems with emphasis on material flow control and storage. Analytic models and simulation used. Economic justification models for material handling systems.

Credits: 3.00

IE 58800 - e-Work And e-Service

Credit Hours: 3.00. e-Work is defined as the collaborative, computer-and-communication-supported work in highly distributed organizations of humans/robots/autonomous systems. This course is devoted to learning the basic principles, theories, and applications for the design of effective e-Work and e-Service systems. Relevant discoveries at Purdue and elsewhere are also presented.

Learning Outcomes: 1. Understand fully the theory and design principles of collaborative e-Work and e-Service systems. 2. Model correctly workflow, protocols and agents for e-Work and e-Service systems. 3. Design, specify, evaluate and optimize e-Work and e-Service applications correctly. 4. Discuss benefits, limitations, and emerging trends of e-Work and e-Service systems critically and correctly. Credits: 3.00

IE 59000 - Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Selected topics in industrial engineering for seniors and graduate students. Permission of instructor required.

Credits: 1.00 to 6.00

IE 63000 - Multiple Objective Optimization

Credit Hours: 3.00. Theory and applications of multiple objective optimization and multiple criteria decision making. Existence and specification of single and multiple attributive value and utility functions. Risk aversion. Characterization and generation of efficient (Pareto optimal) solutions to vector optimization problems. Domination cones. Interactive algorithms. Prerequisite: IE 53500 .

Credits: 3.00

IE 63200 - Scheduling Models

Credit Hours: 3.00. Development and discussion of mathematical and simulation models for scheduling and sequencing the flow of jobs or activities in manufacturing environments. Techniques include dynamic programming, branch and bound, linear and integer programming, heuristics and stochastic network simulation. Prerequisite: IE 57900 ; IE 53500 or IE 53700 .

Credits: 3.00

IE 63300 - Dynamic Programming

Credit Hours: 3.00. Theory and applications of finite and infinite stage sequential decision processes, including Markovian decision problems, efficient computational methods, and computer software package. Prerequisite: IE 53500 , IE 53600 .

Credits: 3.00

IE 63400 - Integer Programming

Credit Hours: 3.00. An advanced course on theory and algorithms for integer and mixed integer optimization problems. Convergence of integer programming algorithms, dual relaxations, Benders decomposition, cutting plane theory, group theory of integer programs, and linear diophantine equations. Prerequisite: IE 53500 , IE 53700 .

Credits: 3.00

IE 63500 - Theoretical Foundations Of Optimization

Credit Hours: 3.00. An advanced course in theoretical foundations of mathematical programming. Convex analysis, global and local duality and optimality, general algorithmic convergence. Offered in alternate years. Prerequisite: IE 53500 .

Credits: 3.00

IE 63900 - Combinatorial Optimization

Credit Hours: 3.00. An advanced course in combinatorial optimization. Emphasis on the theory and strategies of combinatorial algorithms including complexity theory, advance issues in network flows, matching, matroids, and combinatorial polyhedra. Prerequisite: IE 53500 .

Credits: 3.00

IE 64600 - Advanced Decision Theory

Credit Hours: 3.00. An advanced course on the theory and models of decision-making and rationality. Material includes advanced topics in decision analysis, models of probabilistic reasoning, decision-making in competitive situations, and models of human and computer reasoning (including artificial intelligence). Prerequisite: IE 54600 .

Credits: 3.00

IE 65600 - Research Seminar In Human Factors

Credit Hours: 3.00. An in-depth study of topics of special interest in human factors. A variable title course where topics change from semester to semester. Possible topics include cognitive engineering in expert systems, human resource management, skills acquisition and retention, knowledge elicitation, and knowledge representation. Permission of instructor required.

Credits: 3.00

IE 65900 - Human Aspects In Computing

Credit Hours: 3.00. Advanced topics in ergonomic, cognitive, and social aspects of using computerized systems are discussed with regard to comfort and user satisfaction, ease and productive use of computerized systems, and effective implementation of computerized technologies in the workplace. Prerequisite: IE 55900 .

Credits: 3.00

IE 67000 - Advanced Topics In Manufacturing Engineering

Credit Hours: 3.00. Advanced research topics and approaches in manufacturing engineering, including processes and equipment. Research methodology, nontraditional processes, manufacturing systems, and competitive aspects of manufacturing. Prerequisite: IE 57000 .

Credits: 3.00

IE 67400 - Cyber Methods For Advanced Production Control

Credit Hours: 3.00. The study of the theoretical foundation and relevance of advanced cyber methods in the planning and control of intelligent production operations; manufacturing operating systems; synchronization in decentralized systems; recovery in decentralized systems; parallel processing; distributed databases; factory networks; reasoning and logic for production control. Prerequisite: IE 57400 or 57500 or 57900.

Learning Outcomes: 1. Know theoretical foundation and relevance of advanced cyber, real-time control, computing, communication, and brain models for robotics. 2. Know automation of planning and decisions in distributed production and supply installations, global supply, logistics, and service systems/networks. 3. Know the current and emerging functions, algorithms, protocols, and models and how to apply them to research projects and presentations in the field. Credits: 3.00

IE 68000 - Advanced Simulation Design And Analysis

Credit Hours: 3.00. An introduction to the literature of simulating stochastic systems, with emphasis on probabilistic and statistical aspects. Prerequisite: IE 58100 .

Learning Outcomes: 1. Gain in-depth understanding of simulation for use in research or in preparation for conducting research in the area of simulation methodology. Credits: 3.00

IE 69000 - Advanced Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Advanced study in various fields of industrial engineering for graduate students. Credits and hours to be arranged. Permission of instructor required.

Credits: 1.00 to 6.00

IE 69600 - Graduate Professional Practice

Credit Hours: 0.00. Practice in industry and comprehensive written reports of this practice. Permission of instructor required.

Credits: 0.00

IE 69700 - Seminar

Credit Hours: 0.00. Industrial engineering problems with particular emphasis on current research.

Credits: 0.00

IE 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

IE 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Industrial Engineering Technology

IET 10400 - Industrial Organization

Credit Hours: 3.00. A detailed survey of organizational structures, operational, financial, marketing, and accounting activities; duties of management, planning, control, personnel, safety, wages, policy, and human factors necessary for effective management. Not open to students taking, or with credit in, IE 36600.

Credits: 3.00

IET 11100 - Introduction To Manufacturing And Supply Chain Systems

Credit Hours: 3.00. A survey of organizational units and their function within an enterprise, including a brief history of

organizations. The course emphasizes a systems perspective and how decisions in one area impact the entire system. Topics include operations, financial, marketing, planning, quality control, process strategy, logistics, and safety.

Learning Outcomes: 1. Explain the purpose and function of various organizational units within an enterprise. 2. Describe how the enterprise is a system of interrelated parts. 3. Explain the impact of risk on the enterprise system. 4. Critically analyze current processes to identify areas of improvement. 5. Predict how a suggested change impacts the system. Credits: 3.00

IET 15000 - Quantitative Methods For Technology

Credit Hours: 3.00. Application of statistical techniques to typical problems in technology. Topics include data collection, descriptive statistics calculation, hypothesis testing, sampling, continuous and discrete distribution, probability, ANOVA, and related topics. The course also introduces the use of spreadsheet and other software to solve statistical calculations. Introduction to SPC is included. Basic metrology, concepts of gage and meter calibration calculations, instrument linearity, repeatability, reproducibility, sensitivity, precision, and instrument control are included.

Credits: 3.00

IET 19000 - Topics In Industrial Technology

Credit Hours: 1.00 to 3.00. Hours, credit, and subject matter to be arranged by staff. This is not for independent study. Permission of instructor required.

Credits: 1.00 to 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 28100 - Industrial Safety

Credit Hours: 3.00. A course designed to develop understanding of, and insight into, the basic aspects of accident prevention and safety. Specific attention will be given to (1) the psychological aspects of accident prevention; (2) the principles of accident prevention; (3) the practical aspects of planning, implementing, and maintaining a safe environment; and (4) standards, current laws, and regulations. Field trips may be required.

Credits: 3.00

IET 31300 - Technology Innovation And Integration: Bar Codes To Biometrics

Credit Hours: 3.00. This course provides the foundation for automatically capturing data in a system. The content covers an introduction to technology used in automatic identification and data capture systems, including: bar codes; radio frequency identification; smart cards, and biometrics. Topics also include an immersive semester project that examines the integration of these technologies, as well as advanced problem-solving.

Learning Outcomes: 1. Describe the essential components of an AIDC system. 2. Evaluate and propose solutions to AIDC system-related problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles of integrating and managing AIDC systems. 5. Identify opportunities for system improvement. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33100 - Advanced Industrial Safety And Health Management

Credit Hours: 3.00. An introduction to OSHA and standards development for occupational health in general industry. Special emphasis is on fire protection and egress, flammable and combustible liquids, electrical, personal protective equipment, machine guarding, industrial hygiene/blood-borne pathogens, ergonomics, and ISO 9000/14000 integration.

Learning Outcomes: 1. Explain the purpose of the Occupational Safety and Health Administration (OSHA). 2. Describe the fundamental requirements of each of the General Industry Regulations in 29 CFR 1910. 3. Apply the General Industry Regulations in real-life scenarios within the workplace. 4. Explain how to prepare for the OHSA workplace inspection. 5. Create an adequate training plan for workplace employees. 6. Identify readily available resources for creating a workplace free from recognized hazards. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

IET 33520 - Human Factors For Technology Systems

Credit Hours: 3.00. This course provides the foundation for examining the intersection of people, technology, policy, and work across technology systems. Topics include the evaluation, analysis, and design recommendations for improving the safety and efficiency of human-technology interactions.

Learning Outcomes: 1. Describe the relationship between human factors and technology systems. 2. Solve human-machine interaction problems, using appropriate human factors principles. 3. Recommend actions to correct safety deficiencies in existing environments. 4. Apply principles of innovation to design, conduct, and document a human factors study. Credits: 3.00

IET 33610 - Risk Analysis And Assessment

Credit Hours: 3.00. This course introduces the tools for identifying and analyzing inherent risks associated with the decision-making process. The challenges of quantitative risk assessment are introduced using decision trees, influence diagrams, and probability models. The concepts of risk index, options, avoidance, prevention, and reduction are discussed in the context of technology systems.

Learning Outcomes: 1. Identify and characterize organizational threats. 2. Assess the vulnerability of critical assets to specific threats. 3. Determine the probability and consequences of events. 4. Identify methods to reduce risks. 5. Prioritize risk reduction measures. Credits: 3.00

IET 33620 - Total Productive Maintenance

Credit Hours: 3.00. This course emphasizes the importance of effective maintenance planning and execution for efficient and economical operation of service or technology systems. A systems approach to maintenance planning is taken. Maintenance activities are discussed from reliability and productivity perspectives in the context of technology systems. Semester-long, team-based research project is typically

required.

Learning Outcomes: 1. Differentiate among the various types of maintenance activities. 2. Calculate failure rate, mean time between failures, reliability, and maintenance cost versus profit. 3. Identify various state-of-the-art technologies and applications in PM and PDM maintenance management. 4. Evaluate maintenance management philosophies, organization, and practices of a manufacturing entity. 5. Articulate maintenance management philosophies and practices for manufacturing entities. Credits: 3.00

IET 34200 - Warehouse And Inventory Management

Credit Hours: 3.00. A course designed to develop understanding of types of warehouses, methods of organizing the warehouse environment, and determining efficient inventory control procedures. Technology applications related to the management of warehouse and inventory stock-keeping units (SKU) are investigated. Storage of inventory, placement of inventory, picking, packing, shipping, and other internal logistics management topics will be explored.

Learning Outcomes: 1. Identify activities associated with inventory and warehouse management. 2. Explain the relationship of inventory and warehouse management to supply chain management with other various functional areas, including corporate strategy. 3. Design various warehouse activities under given circumstances. 4. Describe material/distribution requirements planning (MRP/DRP) systems. Credits: 3.00

IET 34250 - Purchasing And Contract Management

Credit Hours: 3.00. This course examines the processes by which goods and services are acquired through purchasing and contract management. Topics include procurement, contract strategies, source selection, identifying contract type, product liability and risk, the bid process and response evaluation; contract risk assessment, contract negotiation, and contract law.

Learning Outcomes: 1. Classify key components of the purchasing and contract processes. 2. Explain product and service selection methods. 3. Identify key documents used in the purchasing and contract processes. 4. Explain negotiation roles and processes. 5. Describe key legal and ethical considerations for purchase orders and contracts. Credits: 3.00

IET 34300 - Technical And Service Selling

Credit Hours: 3.00. A study of sales models and techniques for technical and service sales in business-to-business environments, including development of channel relationships, long-term sales agreements, customer relationship management efforts, total cost of ownership tools and complex sales presentations. Covers critical sales skills such as e-economy sales and marketing, lead management, building credibility, consultative selling, ethical negotiations, and sustainable product management.

Learning Outcomes: 1. Explain the roles of technical and service sales in business to business channels. 2. Describe the relationship between personal selling and marketing. 3. Describe critical influencing factors on organizational buyer behavior. 4. Describe various types of buying situations and typical sales agreements. 5. Demonstrate a personal selling communication model. 6. Describe customer relationship management. Credits: 3.00

IET 34350 - Business To Business Sales Management

Credit Hours: 3.00. This course covers key topics in sales management while emphasizing customer relationship management, sales productivity, and the effects of technology on the sales function. Topics include analyzing multiple channel models; establishing sales plans; incentivizing and motivating the sales force; and evaluating, monitoring, and managing the effectiveness of the sales force.

Learning Outcomes: 1. Describe the responsibilities and challenges of sales in the management role. 2. Describe strategic sales planning; supporting sales recruitment, hiring, and training, evaluation and performance feedback. 3. Demonstrate a variety of data analytic techniques to forecast sales, establish sales goals, and create budgets. 4. Explain sales productivity measures used to establish and manage sales territories. 5. Describe the appropriate use of technology in managing sales. Credits: 3.00

IET 35000 - Engineering Economy

Credit Hours: 3.00. Examines the concepts and techniques of analysis useful in evaluating the worth of systems, products, and services in relation to their cost. The objective is to help students grasp the significance of the economic aspects of engineering and to become proficient in the evaluation of engineering proposals in terms of worth and cost. Project analysis will require computer proficiency. Not open to students who have credit for IET 25000.

Credits: 3.00

IET 36400 - Total Quality Control

Credit Hours: 3.00. This course is aimed at determining customer needs and wants and interpreting these into design during production, follow-up on field performance, and feeding back quality information to further improve the quality system.

Credits: 3.00

IET 41100 - Applications Of Lean And Six Sigma Methodologies

Credit Hours: 3.00. This hands-on course focuses on emerging business practices that are geared toward making an organization more effective and efficient. Highlighted topics will include use of lean and six sigma methodologies in today's business environments. These methods are used for achieving long term profits through customer satisfaction, waste elimination, and elevation of employee skills to eliminate waste and defects at the source. Application of these methods in various environments such as service, health care and manufacturing organizations will be explored. Students are expected to work in teams to apply systematic problem solving processes to solve case studies and/or real-world issues. Supporting concepts such as implementation of new business practices and culture change will also be explored.

Credits: 3.00

IET 41400 - Financial Analysis For Technology Systems

Credit Hours: 3.00. The course provides students with financial tools needed by managers in technical and service fields. Topics include financial statement analysis, using common-sized statements and financial ratios; the strategic profit model; total cost of ownership; pricing for profitability; margin management; cash flow cycles; and budgeting. A corporate financial analysis project is typically required.

Learning Outcomes: 1. Describe the key components of income statements and balance sheets. 2. Calculate financial ratios necessary to evaluate corporate performance. 3. Calculate typical complex business transactions. 4. Prepare a cash budget for a company. 5. Recommend courses of action for maintaining a stable cash flow. 6. Calculate and interpret the strategic profit model. 7. Evaluate and select the best corporate investment opportunity. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Learning Outcomes: 1. Calculate various elements of time study and Takt time. 2. Apply various flow analysis tools. 3. Apply the principles of line balancing. 4. Calculate the efficiency of an assembly line. 5. Calculate facility space requirements. 6. Develop a systematic approach to layout and resource planning, incorporating basic material handling systems. Credits: 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of experiments. The course examines the difference between

single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.

Learning Outcomes: 1. Formulate null and alternate hypotheses. 2. Apply appropriate statistical tests. 3. Design an appropriate experiment to test a hypothesis. 4. Differentiate between main effects and interaction effects. 5. Distinguish between factorial and fractional factorial designs. 6. Apply response surface methodology. Credits: 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam.

Learning Outcomes: 1. Explain how Lean Six Sigma principles are used for process improvement. 2. Apply the DMAIC method to solve technical systems problems. 3. Design/conduct experiments. 4. Analyze/interpret experiment results. 5. Communicate experiment findings. Credits: 3.00

IET 44275 - Global Transportation And Logistics Management

Credit Hours: 3.00. A study of the various aspects of logistics. The development, implementation, and control of physical transportation systems, product distribution, warehousing, and inventory policy models will be emphasized. A working knowledge of third and fourth-party logistics and transportation strategies will be analyzed. The impact of logistics and transportation in the global environment will be discussed.

Learning Outcomes: 1. Describe the role of logistics and its relationship to other functional areas of business within a single firm and within the supply chain. 2. Explain various management and control techniques in logistics. 3. Apply statistical principles to evaluate the relative worth of cost-savings initiatives in the logistics industry. 4. Describe how enterprise resource planning (ERP) systems are used to manage logistics and transportation functions. Credits: 3.00

IET 44500 - Strategic Supply Chain Management

Credit Hours: 3.00. A course designed to build upon previous courses with subjects related to managing a distribution enterprise. Modules in sales management, financial analysis, strategic planning, logistics, purchasing, and the legalities of distributor and manufacturer relationships will be combined with case studies to provide students with practice in establishing policy and making decisions from the manager's point of view. Field trips may be required.

Learning Outcomes: 1. Develop, evaluate, and implement business strategies needed to successfully manage supply chain operations. 2. Describe a strategic planning model appropriate for use in supply chain operations. 3. Apply concepts, models, and methods that are useful in strategic development. 4. Apply analytics and techniques for strategic decision-making. 5. Develop business evaluation and critical thinking skills. 6. Describe the basic philosophies underlying ethical decision making. Credits: 3.00

IET 45400 - Statistical Process Control

Credit Hours: 3.00. Online process control including design and analysis of process control charts and sampling plans.

Learning Outcomes: 1. Know Operating Characteristics and Average Run Length curves. 2. Apply advanced control chart methods like short run, EWMA, CUSUM and DNOM charts. 3. Determine process capability indices, Cp, Cpk, Pp, Ppk, and Cpm. 4. Apply Taguchi loss function. 5. Apply design of experiments methodology. 6. Have knowledge of statistical tolerancing. Credits: 3.00

IET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology

problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

IET 48390 - Industrial Engineering Technology Capstone I: Problem Identification And Analysis

Credit Hours: 3.00. This is the first semester of a two-semester capstone sequence, which focuses on an industry-based, team approach to problem-solving. An array of qualitative and quantitative tools is used to identify and analyze an industrial or business process. Data collection, process maps, flow analysis, Pareto chart, computer simulation, and other optimization tools will be used to identify problem areas and possible solutions.

Learning Outcomes: 1. Use appropriate research/design processes to identify problems or areas for improvement. 2. Participate effectively in teams. 3. Collect sufficient data to qualitatively and quantitatively describe/evaluate the problem. 4. Identify learning needs/knowledge gaps needed in order to complete projects(s). 5. Propose and properly document a potential design solution or process improvement. 6. Demonstrate ethical conduct, describing societal, environmental, and economic implications of proposed solutions. Credits: 3.00

IET 48395 - Industrial Engineering Technology Capstone II: Project Design

Credit Hours: 3.00. This is the second course of two-semester capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution to the project/problem.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final design recommendations. Credits: 3.00

IET 48490 - Supply Chain Management Technology Capstone I: Strategic Planning

Credit Hours: 3.00. This course is the first of two integrative capstone courses for senior-level students. The focus is on how firms formulate, implement, and evaluate strategies. Teams of students will integrate program knowledge, coupled with strategic-management techniques learned, to make decisions and help chart the future of different organizations. The major responsibility of students in the capstone courses is to make objective strategic decisions and to justify them through oral and written communication.

Learning Outcomes: 1. Develop, evaluate, and implement business strategies needed to successfully manage supply chain operations. 2. Describe a strategic planning model appropriate for use in supply chain operations. 3. Apply concepts, models, and methods that are useful in strategic development. 4. Apply analytics and techniques for strategic decision-making. 5. Develop business evaluation and critical thinking skills. 6. Describe the basic philosophies underlying ethical decision making. Credits: 3.00

IET 48495 - Supply Change Management Technology Capstone II: Strategic Analytics

Credit Hours: 3.00. This course is the second of two integrative capstone courses for senior-level students. Students will continue working in teams using a variety of planning and decision-making models to work with organizations to solve problems and make sound decisions. The major responsibility of students in the capstone courses is to make objective strategic decisions and to justify them through oral and written communication.

Learning Outcomes: 1. Develop, evaluate, and implement business strategies needed to successfully manage supply chain operations. 2. Describe a strategic planning model appropriate for use in supply chain operations. 3. Apply concepts, models, and methods that are useful in strategic development. 4. Apply analytics and techniques for strategic decision-making. 5. Develop business evaluation and critical thinking skills. 6. Describe the basic philosophies underlying ethical decision-making. Credits: 3.00

IET 49000 - Special Topics In Industrial Engineering Technology

Credit Hours: 1.00 to 3.00. Supervised individual research in industrial engineering technology topics. Permission of instructor required.

Learning Outcomes: 1. Learning outcomes will vary for each instance the course is offered.

Credits: 1.00 to 3.00

IET 49900 - Industrial Engineering Technology

Credit Hours: 1.00 to 9.00. Hours and subject matter to be arranged by staff. Course may be repeated for credit.

Credits: 1.00 to 9.00

IET 50700 - Measurement And Evaluation In Industry And Technology

Credit Hours: 3.00. An introduction to measurement strategies in industrial, technical, and human resource development environments. The evaluation of measurement outcomes will be the primary focus of the course.

Credits: 3.00

IET 50800 - Quality And Productivity In Industry And Technology

Credit Hours: 3.00. Examines the contemporary issues of continuous improvement in quality and productivity in manufacturing and service industries. Includes a close examination of the evolving philosophies bearing on the scope, improvement, and costs of quality assurance programs in industry and technology.

Credits: 3.00

IET 53410 - Implementation And Advanced Topics Of Enterprise Six Sigma

Credit Hours: 3.00. This course is designed to expose master's and doctoral students to the theory behind implementation of Six Sigma at the Enterprise level. Students will develop their own research with regard to the future of the discipline through particular assessments. Topics include structure and methodology of Six Sigma deployment, including: systems thinking, change management, business process management, competitive intelligence through international standards, and the future of the discipline. Students will learn the methodology of Six Sigma at the project level for technical skill building in addition to practices of implementing and managing Six Sigma at an organizational level. Permission of Instructor required.

Learning Outcomes: 1. Define Six Sigma by describing the various technical aspects of the DMAIC methodology. 2. Have a knowledge basis suitable to pass an external Six Sigma certification exam. 3. Have the ability to recognize the organizational opportunity for the implementation and management of Six Sigma at the enterprise level. 4. Exhibition of knowledge needed to introduce and champion Six Sigma strategically to the organization. 5. Conduct applied or use inspired research in Six Sigma discipline by identifying current boundaries of the discipline, identify novel applications, and appraise the standardization of the body of knowledge. Credits: 3.00

IET 54500 - Global Supply Chain Management

Credit Hours: 3.00. The objective of this course is to provide in-depth knowledge of global supply chain management and its application in industries. This course explores supply chain management, expanding beyond the linkage between producer and distributor to include other enterprises in the product life cycle, beginning with concept design and ending in disposal. Learning methodologies include lecture, case study, and collaborative student group activities in applied research. Permission of department required.

Learning Outcomes: 1. Demonstrate knowledge of supply chain management terminology, issues, and models. 2. Construct supply chain models and identify advantages and limitations. 3. Critically evaluate supply chain management techniques in applied case studies. 4. Independently develop in-depth knowledge of a supply chain and present the findings in a coherent and informative manner. Credits: 3.00

IET 58100 - Workshop In Industrial Engineering Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education.

Learning Outcomes: 1. Mastery of diverse topics related to Industrial Engineering Technology. 2. Integrate the concepts from various topics related to Industrial Engineering Technology. Credits: 0.00 to 8.00

IET 59000 - Special Problems In Industrial Engineering Technologies

Credit Hours: 1.00 to 6.00. Intensive individual study of selected current developments and issues in Industrial Engineering Technology. A faculty sponsor is required for this course. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required.

Learning Outcomes: 1. Vary by course offering. Credits: 1.00 to 6.00

IET 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of Instructor required.

Learning Outcomes: 1. Identify a business or

industry relevant solution to a technology related problem 2. Define and/or validate a business or industry relevant problem. 3. Address a technological problem in a systematic and replicable manner. 4. Effectively use technical/professional research and/or development procedures. 5. Identify criteria for success/solution of the problem. 6. Gather information appropriate to the problem by employing business research procedures. 7. Document the research and development activity in a manner that permits replication and assessment of key decisions and alternatives. 8. Write effectively in a form customary to business and industry, using APA format. 9. Prepare and deliver a presentation in a form customary to business and industry. Credits: 1.00 to 3.00

IET 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Learning Outcomes: 1. Vary by course offering due to individual research topics. Credits: 1.00 to 18.00

Industrial Technology

IT 54000 - Biometric Performance And Usability Analysis

Credit Hours: 3.00. An introduction of test methodologies from disciplines outside of biometrics, which include: usability, ergonomics, human factors, and human-computer interaction, in order to demonstrate how biometric data analysis can benefit from understanding how humans interact with biometric sensors during the testing and evaluation of biometric systems. The course explores test methods, case studies, and prior biometric testing reports in order to develop a test methodology that includes information on how users interact with biometric systems. Permission of department required.

Learning Outcomes: 1. Understand the operation of biometric systems. 2. Understand how people use biometric systems in operational settings (both controlled and uncontrolled). 3. Understand traditional technology, scenario, and operational testing methodologies. 4. Understand traditional ergonomic and usability testing methodologies. 5. Understand and analyze the limitations of biometric systems. 6. Understand basics of quantitative and qualitative research. 7. Evaluate the issues in designing a biometric system, including but not limited to: the impact of language and culture (instructions and symbols), ergonomics and anthropometrics (heights-angles, positioning), training and habituation or accessibility, affordance, and perception. 8. Interpret results from reports on: biometric technologies evaluation methods, ergonomic and usability methods, and statistical methods. 9. Appraise and critically evaluate prior scenario and operational test reports and case studies of biometric technologies to examine where the application of Human-Biometric Sensor Interaction principles, such as usability, human factors, and ergonomics could have provided additional data on system performance. 10. Transfer knowledge and understanding of usability, ergonomic, and usability evaluation methodologies to the testing and evaluate biometric devices and systems. 11. Establish a test methodology and collect data using a Human-Biometric Sensor Interaction based methodology (usability, ergonomic, human factors) to investigate a current problem facing industry. 12. Perform the appropriate data analysis and report findings in a report. 13. Students will produce final reports, conference papers, etc., based on their course project. Credits: 3.00

IT 54500 - Biometrics Technology And Applications

Credit Hours: 3.00. Examines biometrics technology as it relates to security, access control, and the authentication of individuals. The course will examine biometric technologies including iris, face, finger, hand geometry, dynamic signature verification, skin print analysis, and voice recognition. Permission of instructor required.

Credits: 3.00

IT 57100 - Project Management In Industry And

Technology

Credit Hours: 3.00. The factors influencing decisions during the initiation, implementation, and termination of industrial and manufacturing projects are examined. Students work as project teams, using project management tools to develop implementation strategies. Permission of instructor required.

Learning Outcomes: 1. Understand and learn latest tools and techniques used in projects. 2. Develop a system perspective for understanding projects. 3. Align projects with strategic objectives. 4. Develop and think analytically in order to successfully apply knowledge and technical expertise to the solution of real business problems. Credits: 3.00

IT 59000 - Special Problems In Industrial Technology

Credit Hours: 1.00 to 6.00. Independent study of a special problem under the guidance of a member of the staff. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required.

Credits: 1.00 to 6.00

IT 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of department required.

Credits: 1.00 to 3.00

Information and Library Science

ILS 10000 - Introduction To Information Studies

Credit Hours: 3.00. This course will provide a foundation for navigating and engaging with the information-rich world. Students will define and assess information in order to address real-world situations; map their information landscape and effectively engage with information systems as well as human sources of information; develop a practice of critical and ethical information use; and conceptualize, apply, and examine the strategies for information and knowledge management, production, and dissemination. Students will examine the societal impact and implications of information and information privilege to explore the applications and consequences of information, in addition to examining data practices and methods. This will provide students with an opportunity to strengthen their research and information literacy skills, reflect in an informed and critical manner, and give them the tools to successfully make ethical, evidence-based decisions in the academic and professional context.

Learning Outcomes: 1. Identify different types of primary and secondary information formats and how they are created. 2. Analyze the societal, historical, and political significance of information. 3. Identify and explain different types of information-seeking behaviors. 4. Demonstrate ethical attribution of sources in their own information production. 5. Critically evaluate information. 6. Synthesize information in order to make ethical and evidence-based decisions. 7. Identify interested parties, such as scholars, experts, archives, organizations, governments, and industries, who might produce or house information about a topic and then determine how to access that information. 8. Match information needs and search strategies to appropriate search tools. 9. Design and refine needs and search strategies. 10. Understand how information systems (i.e., collections of recorded information) are organized in order to access relevant information. 11. Understand how and why information is selected for long-term preservation and access. 12. Organize information in situationally relevant ways. 13. Explain different forms of information dissemination. 14. Explore different professional pathways and career options in relation to information. 15. Analyze and criticize forms of preservation. Credits: 3.00

ILS 10300 - Introduction To Data Lifecycle Management

Credit Hours: 1.00. Introduces concepts of the management of data throughout its lifecycle. Understanding different types of data and their functions. Managing data in the context of a particular discipline or profession. Finding and evaluating data purposefully. Using data ethically and responsibly. Creating and sharing data for reuse, accountability, and enhancement. Making decisions and communicating using data, including data analysis and visualization. Protecting and archiving data.

Learning Outcomes: 1. Describe the data lifecycle and types of data that are used in their discipline or profession. 2. Discuss the ethical and responsible use of data. 3. Locate and evaluate datasets for reuse that are relevant to

their research or work. 4. Apply a variety of introductory data collection, analysis, and visualization techniques. 5. Understand the basics of securing, archiving, and sharing data. Credits: 1.00

ILS 13200 - Introduction To Museums And Archives

Credit Hours: 3.00. This course is an introduction to the structures, history, theories, and professional practices in museums and archives. In addition to providing an overview, this course provides students with career exploration in museums and archives through analyzing opportunities in various professional tracks. Students will learn valuable skills applicable to their individual career path, such as curatorial and archival literacy, verbal and written communication, and research best practices.

Learning Outcomes: 1. Explain the historical foundations of museums and archives. 2. Identify basic organizational structures and career paths of museums, galleries, archives, and special collections libraries. 3. Analyze the value and educational mission of museums, galleries, archives, and special collections across multiple disciplines. 4. Interpret contemporary theories and practices within museums, galleries, archives, and special collections. 5. Apply learning to future opportunities in chosen specialties, majors, and career fields. Credits: 3.00

ILS 17500 - Information Strategies For Hospitality & Tourism Management (UCC: IL)

Credit Hours: 1.00. This course will provide students with a framework of information search skills and problem-solving they can utilize in their area of study and in everyday life. It will also incorporate technology literacy components with active learning. Class sessions will consist of lecture, group discussion, demonstrations, and in-class activities and out-of-class activities. The course is intended for first-semester freshman students. Department permission required.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Develop the ability to access information and determine what different sources are needed for problem solving. 2. Develop a foundation in problem-solving to use discovered information effectively and efficiently. 3. Develop a knowledge-base into the full array of information available (scholarly articles, market reports, quality websites, and other types of information). 4. Learn to prioritize sources based on credibility and relevance. 5. Accurately cite the information you find. 6. Use retrieved information to accomplish a specific purpose and present information clearly and persuasively using a range of technology tools and media. Credits: 1.00

ILS 18000 - Preparing For Your Undergraduate Research Experience

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are interested in conducting undergraduate research or creative endeavors. Purdue students who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose. Department permission required.

Learning Outcomes: 1. Identity the professional and personal goals sought from an undergraduate research experience. 2. Learn research skills such as assessing literature credibility and compiling a review of the topic important to all fields. 3. Utilize online and in-person resources and programs to assist in locating and applying to undergraduate research experiences. 4. Evaluate research programs/projects to determine how they fit within personal and professional goals. 5. Create and submit an application/proposal including a resume' and personal statement for research programs/projects. Credits: 1.00

ILS 19500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics from the practice of information and data science, varying from semester to semester. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of department required.

Learning Outcomes: 1. Examine critically and apply information and data science to various disciplines. 2. Develop practical skills and apply

them to their disciplinary research. Credits: 1.00 to 4.00

ILS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work. Permission of instructor required.

Learning Outcomes: 1. Identify various concepts and methods in digital humanities. 2. Apply a variety of methods and tools to conduct digital humanities research. 3. Research the transformative potential of digital methods through critical inquiry. 4. Create a process for developing and completing a digital project. Credits: 3.00

ILS 23000 - Data Science And Society: Ethical Legal Social Issues

Credit Hours: 3.00. This course provides an introduction to Ethical, Legal Social Issues (ELSI) in Data Science. Students will be introduced to interdisciplinary theoretical and practical frameworks that can aid in exploring the impact and role of Data Science in society. This is a writing intensive course. Students will work individually and on collaborative assignments.

Learning Outcomes: 1. Engage in current debates surrounding professional and research ethics, roles and responsibilities in Data Science. 2. Examine emerging legal and policy issues which impact Data Science. 3. Reflect critically on the relationship between Data Science and political, social and cultural change. 4. Learn collaboration, public engagement and scholarly communication skills. Credits: 3.00

ILS 23500 - SPIRaL, Part I: Commencing Information Literacy Research

Credit Hours: 2.00. Over the course of a year-long research experience, SPIRaL undergraduate researchers engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. In the first half of the semester, SPIRaL students will explore the information literacy literature to build a foundation for our research this year. In this early part of the semester, students will be introduced to the different views scholars have of information literacy, the various research approaches they employ, and the range of real-world information challenges information literacy researchers attend to with their research. Students will use the insights from the existing information literacy and information challenges research to inform the research study they will carry out over the year. In second part of the fall semester, students will commence original research that addresses a need or gap in the literature. Students will apply data collection methods and reflect on the affordances of qualitative research approaches in pursuing knowledge about information literacy's role in addressing information challenges. Across this year-long research experience, the SPIRaL research team will aim to: 1. expand what is known about the role information literacy can play in addressing significant information challenges in the world, and 2. enrich the information literacy research community by welcoming new and passionate undergraduate researchers into this work.

Learning Outcomes: 1. Analyze the range of scholarly perspectives, research approaches, and real-world information challenges information literacy researchers attend to with their research. 2. Use insights from information literacy research to conduct a qualitative research study investigating the role information literacy may play in addressing various information challenges. 3. Apply qualitative research methods to collect data for our research study that will investigate the role information literacy may play in addressing various information challenges. 4. Employ a practice of reflection and act upon reflective insights to operate effectively on team-based research. Credits: 2.00

ILS 23600 - SPIRaL, Part II: Conducting Information Literacy Research

Credit Hours: 1.00. Over the course of a year-long research experience, SPIRaL undergraduate researchers engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. The second

semester of SPIRaL builds upon the work completed in the previous semester. We will spend the first half of the semester analyzing the data collected last semester. We will then present our research approach, findings, and implications in various scholarly venues.

Learning Outcomes: 1. Analyze data collected in semester 1 to investigate the role information literacy may play in addressing various information challenges. 2. Present information literacy research (including methods/processes, findings, and insights) to diverse audiences and stakeholders (the SPIRaL research group, ILS researchers, Purdue campus). 3. Employ a practice of reflection and act upon reflective insights to operate effectively on team-based research. 4. Recognize the value of information literacy research in addressing information challenges that impact society. Credits: 1.00

ILS 24900 - Collections Management In Museums And Archives

Credit Hours: 3.00. This course provides discussion and application of collections management in museums and archives. Students will learn the systems, organizational methods, descriptive processes, ethical/legal considerations, and administration best practices within these cultural heritage institutions. Students will learn valuable skills applicable to their individual career path, such as curatorial and archival literacy, verbal and written communication, and research best practices.

Learning Outcomes: 1. Understand application of collections systems within their fields. 2. Identify current issues in collections management. 3. Compare and contrast collections management between archives and museums. 4. Demonstrate standards and best practices in collections management. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ILS 28000 - Understanding Your Undergraduate Research Experience I

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to hone skills necessary for successfully reflecting on and completing the experience. During this course, students will utilize their research experience to apply skills such as managing time with a research project, communicating your research, utilizing Purdue Libraries' resources, and providing feedback to peer researchers. Students will deliver research pitches about their own project and provide critiques to others' pitches. Department permission required.

Learning Outcomes: 1. Communicate research to various audiences with a research pitch and a research abstract. 2. Provide constructive feedback and interact with peers and apply comments to your work. 3. Define skills/attributes from your undergraduate research experience. 4. Develop and expand a network of researchers within your unit and among other peer researchers. 5. Reflect on and apply transferable skills necessary to be a successful undergraduate researcher. Credits: 1.00

ILS 29000 - Independent Study In Information Science

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue. Plan of Study and assessment method are agreed upon by faculty and student prior to course registration.

Learning Outcomes: 1. Variable but agreed upon by faculty and student before registration. Credits: 1.00 to 3.00

ILS 29500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and

organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science.

Learning Outcomes: 1. Examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

ILS 30000 - Information, Culture, And Society

Credit Hours: 3.00. Information and information systems shape our beliefs, influence decision-making, define our collective knowledge, and are integral to being an informed, responsible, and engaged citizen in our modern world. This course will examine the intricate relationship between information and society to better understand how information ecosystems, constituted by various technologies and practices, shape and are shaped by individual identities, structures of power, and ethical considerations/human values. Using an interdisciplinary and team-based approach, students will gain essential skills to navigate their information-rich world.

Learning Outcomes: 1. Identify and apply frameworks to critically evaluate the impact of information and technology on cultural norms, values, and societal structures. 2. Explore the concept of information identity, including how individuals and communities construct their identities through information consumption and production, and critically analyze the impact of information identity on culture and society. 3. Explain the components of information ecosystems, including producers, consumers, intermediaries, and technologies, and how they interact within different cultural and societal contexts. 4. Analyze the power structures in information ecosystems, including the privileged access and control of certain individuals or groups, and explain how these power dynamics intersect with social constructs like race, gender, class, and ethnicity to shape cultural and societal dynamics. 5. Articulate ethical principles related to information ownership, privacy, censorship, transparency, and research in various contexts. Credits: 3.00

ILS 30100 - Data Foundations, Tools, And Applications

Credit Hours: 3.00. Data are everywhere. Data permeates every aspect of our lives, from journalistic reporting to workplace projects to artificial intelligence applications. This course covers the basics of the data research lifecycle, including locating and managing datasets, along with applying different methods and tools a to craft compelling stories about data. Students will learn the difference between data and information and how to transform raw data into information to be communicated to a wider audience. This course offers unique skills for students from any discipline who want to discover the world of data.

Learning Outcomes: 1. Understand the differences between data and information. 2. Navigate the basics of data management, ethics, and analysis. 3. Explore different datasets and their lifecycles. 4. Apply fundamental methods--and tools--of data location, analysis, cleaning, and visualization. 5. Create an original data story with and about data. Credits: 3.00

ILS 33000 - The Age Of Mis/Dis/Malinformation

Credit Hours: 3.00. In our current moment, often known colloquially as the "Information Age," the veracity of information is of incredible importance, yet we see the viral spread and consumption of "bad" information: misinformation, disinformation, and malinformation. These three forms of information are spread globally regarding every event. Even though more people have access to information sources than ever before, we still are living in the age of mis/dis/malinformation.

Learning Outcomes: 1. Apply theoretical frameworks to think critically about our information ecosystems. 2. Respond critically, thoughtfully, and empathetically to the problematic of mis/dis/malinformation. 3. Reflect on the impact of mis/dis/malinformation on everyday people, nations, and information ecosystems. 4. Engage philosophical and critical debates about information from a range of disciplines. 5. Recognize the various ways in which prominent social-media platforms facilitate the spread of mis/dis/malinformation. Credits: 3.00

ILS 33100 - Conspiracy Theories

Credit Hours: 3.00. In the information age, we have witnessed a dramatic resurgence of paranoia and violence, fueled by the very technologies meant to provide access to knowledge and

information. In this course, we will uncover conspiracies together, seeking to understand how such strange ideas originate and spread.

Learning Outcomes: 1. Apply theoretical frameworks to think critically about conspiracy theories within American culture. 2. Respond critically, thoughtfully, and empathetically to the problematic of American conspiracism. 3. Reflect on the impact of conspiracy theories on the American public sphere, families, and information ecosystems. 4. Engage philosophical and critical debates about conspiracy theories from a range of disciplines. 5. Recognize the various ways in which prominent social media platforms facilitate the spread of conspiracy theories. Credits: 3.00

ILS 33500 - SPIRaL, Part I: Commencing Information Literacy Research

Credit Hours: 2.00. Over the course of a year-long research experience, you will engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. In the first half of the semester, you will explore the information literacy literature to build a foundation for our research this year. In this early part of the semester, you will be introduced to the different views scholars have of information literacy, the various research approaches they employ, and the range of real-world information challenges information literacy researchers attend to with their research. You will use the insights from the existing information literacy and information challenges research to inform the research study you will carry out over the year. In the second part of the fall semester, you will commence original research (IRB #) that addresses a need or gap in the literature. You will apply data collection methods and reflect on the affordances of qualitative research approaches in pursuing knowledge about information literacy's role in addressing information challenges. Across this year-long research experience, the SPIRaL research team will aim to: 1. expand what is known about the role information literacy can play in addressing significant information challenges in the world, and 2. enrich the information literacy research community by welcoming new and passionate undergraduate researchers into this work. Permission of department required.

Learning Outcomes: 1. Analyze the range of scholarly perspectives, research approaches, and real-world information challenges information literacy researchers attend to with their research. 2. Use insights from information literacy research to conduct a qualitative research study investigating the role information literacy may play in addressing various information challenges. 3. Apply qualitative research methods to collect data for our research study that will investigate the role information literacy may play in addressing various information challenges. 4. Employ a practice of reflection and act upon reflective insights to operate effectively on team-based research. Credits: 2.00

ILS 33600 - SPIRaL, Part II: Conducting Information Literacy Research

Credit Hours: 1.00. Over the course of a year-long research experience, SPIRaL undergraduate researchers engage in original research to investigate how information literacy-in its many forms-can inform real-world solutions to contemporary information challenges, such as mis/disinformation. The second semester of SPIRaL builds upon the work completed in the previous semester. We will spend the first half of the semester analyzing the data collected last semester (IRB 2024-84). We will then present our research approach, findings, and implications in various scholarly venues. Across this year-long research experience, the SPIRaL research team will aim to: 1. expand what is known about the role information literacy can play in addressing significant information challenges in the world, and 2. enrich the information literacy research community by welcoming new and passionate undergraduate researchers into this work. Permission of department required.

Learning Outcomes: 1. Analyze data collected in semester 1 to investigate the role information literacy may play in addressing various information challenges. 2. Effectively present information literacy research (including methods/processes, findings, and insights) to diverse audiences and stakeholders (the SPIRaL research group, ILS researchers, Purdue campus). 3. Employ a practice of reflection and act upon reflective insights to operate effectively on team-based research. 4. Recognize the value of information literacy research in addressing information challenges that impact society. Credits: 1.00

ILS 38000 - Understanding Your Undergraduate Research Experience II

Credit Hours: 1.00. This course is for current Purdue

undergraduate researchers to build upon the previous course and focus on research data collection, presentation, and communication for current Purdue undergraduate researchers. During this course, students will learn and discuss various forms of data and collection practices. Students will develop their own academic poster to present their research project's data and implications. Students are encouraged to present their poster at one of Purdue's undergraduate research conferences near the end of the semester. This course is the second course taken as undergraduate researchers and introduces material at this advanced level. This higher-division course is normally scheduled for juniors and seniors. Department permission required.

Learning Outcomes: 1. Learn about quantitative and qualitative research methods and discuss how to utilize both in a research project. 2. Create and present an academic poster applying data visualization best practices. 3. Reflect on and apply transferable skills of an undergraduate researcher for future success. Credits: 1.00

ILS 39500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digitals scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Department approval required.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

ILS 48000 - Beyond Undergraduate Research

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build on previous courses and focus on continuing their education in graduate or professional school. During this course, students will learn and discuss the various phases of identifying, selecting, applying to and funding graduate or professional school programs. Students will also gain a deeper comprehension of the qualities and skills that make research mentors effective while developing skills they will need to be successful mentees and peer mentors. Students will conduct research to identify potential programs of interest and develop a statement of purpose. Department permission required.

Learning Outcomes: 1. Categorize graduate or professional school qualities that fit skills and meet professional needs. 2. Identify qualities and skills necessary to act effectively as a research mentor and as a research mentee to a future graduate/professional advisor. 3. Create a statement of purpose to include in graduate/professional school applications. 4. Reflect on and apply transferable skills of an undergraduate researcher for future success. Credits: 1.00

ILS 49000 - Independent Study In Information Science

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue. Plan of Study and assessment method are agreed upon by faculty and student prior to course registration.

Learning Outcomes: 1. Variable but agreed upon by faculty and student prior to course registration. Credits: 1.00 to 3.00

ILS 49500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science.

Learning Outcomes: 1. Examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

ILS 51200 - Information Strategies For Science, Technology, And Engineering Research

Credit Hours: 1.00. This course focuses on information strategies for successful research in science, engineering, and technology disciplines. Students will learn about how scholarly information and discipline relevant grey literature (e.g., patents, technical standards) are created, organized, disseminated, retrieved, and managed. In addition, students will learn strategies to critically evaluate information and present their research effectively and ethically.

Learning Outcomes: 1. Compare and contrast various modes and models of publication relevant to science, engineering, and technology disciplines. 2. Construct and apply

search strategies to retrieve relevant information on science, engineering, and technology related topics, using information resources appropriate to the given task and the type(s) of information sought. 3. Critique information to judge whether it is appropriate and applicable to the task at hand. 4. Synthesize information from multiple sources in order to produce a clear and effective presentation, citing sources where appropriate. Credits: 1.00

ILS 51400 - Information Skills For Health Professionals

Credit Hours: 1.00. This course is designed to help you develop essential information skills to support your professional goals and prepare you to succeed in graduate or professional school in the health sciences. Learn how to navigate PubMed and other subject-specific databases, and differentiate between various types of research articles. Become adept at saving, organizing, and annotating articles so you can easily locate them, "cite while you write," and share them with your classmates or research group. Prepare for writing for publication. And avail yourself of the resources and services academic libraries provide, beyond books and journals, to support your coursework and research.

Learning Outcomes: 1. Plan for comprehensive literature searches by clearly defining your information need and mapping search terms to those concepts. 2. Find information relevant to your information needs using appropriate subject database(s), including the use of keywords or prescribed vocabulary, and available search facets. 3. Evaluate the level of evidence presented by research reports on the basis of their methodologies. 4. Save, organize, and use materials in multiple formats (journal articles, books, book chapters, web sites) using a citation management system. 5. Explain what evidence-based practice means to you in the context of your career goals. Credits: 1.00

ILS 52000 - Introduction To Systematic Review For The Health Sciences

Credit Hours: 3.00. This course will introduce systematic review methodology of published health sciences literature. Students will learn to form research questions, develop inclusion and exclusion criteria, search for evidence, manage data, and assess the risk of bias.

Learning Outcomes: 1. Analyze and articulate the sequential steps encompassing the systematic review process. 2. Construct and refine a reproducible and systematic search strategy tailored to specific research inquiries. 3. Execute the management of citation data to support systematic review processes. 4. Design a systematic review protocol adhering to established guidelines and standards. Credits: 3.00

ILS 54000 - Critical GIS: Theory And Applications

Credit Hours: 3.00. This course will provide students with a critical overview of the role power, culture, justice and injustice, and oppression have played in the practice and history of cartography. In this hands-on course students will learn the basic GIS skills and techniques that will help them understand place and space through critical theories of race, gender, sexuality, indigeneity, class, ability, colonialism, and the State. We will engage theoretical texts on mapping and social justice to identify how GIS and maps can expose and resist oppression and inequality. Students will apply critical theory through the practice of critical cartography to analyze a course-related topic of their choosing and use GIS tools to create an original project. Students will move away from the traditional research paper and engage with a digital research platform that enhances research impact and scholarship reach while applying such tools to interrogate the power dynamics contained within them. It provides the opportunity to serve as a tool for community collaborations in social activism as a shareable document. This class is designed to offer an interdisciplinary approach to place-based research and its connections to social justice.

Learning Outcomes: 1. Engage theoretical texts related to GIS, mapping, and critical theory. 2. Critique the role of GIS in resisting or reinforcing power structures. 3. Implement GIS and mapping techniques to respond to important sociopolitical issues. 4. Create original maps related to topics discussed in the course. Credits: 3.00

ILS 59000 - Independent Study In Information Sciences

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue University. Plan of study and assessment is agreed upon by faculty and student before registration. Permission of department required. Permission of

instructor required.

Learning Outcomes: 1. Variable but agreed upon by faculty and student before registration. Credits: 1.00 to 3.00

ILS 59500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science. Permission of the instructor is required for undergraduates.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

ILS 63000 - Digital Humanities Foundations

Credit Hours: 3.00. This course introduces graduate students to the core theoretical and practical components of Digital Humanities. Students engage key theoretical texts in weekly seminars and practice central methodologies in weekly work sessions.

Learning Outcomes: 1. Learn the basic vocabulary and concepts in digital humanities. 2. Gain familiarity with digital humanities projects, critical work, resources in the field, and hands-on experience of building a scholarly digital research project. 3. Gain experience working collaboratively with others on a joint project. 4. Perform critical, formal analyses of DH projects, digital media, and digital tools. 5. Write focused, analytical essays in clear, grammatical prose. 6. Employ logic, creativity, and interpretive skills to produce original, persuasive arguments. 7. Gain familiarity with digital tools and media used in in the field of digital humanities to create new knowledge of humanities subjects. Credits: 3.00

ILS 63100 - Digital And Analog Archives

Credit Hours: 3.00. Digital and Analog Archives provides an overview of archival theory and practice, including archival arrangement and description, preservation, and digitization best practices. Lab components incorporate archival research, digital reformatting, metadata creation, the creation of digital archives, and presentation of archives to users.

Learning Outcomes: 1. Analyze and think critically about archives. 2. Arrange, describe, preserve archival materials. 3. Conduct archival research; Communicate and defend a research argument. 4. Utilize digital humanities tools to create a digital archives project. Credits: 3.00

ILS 65000 - Introduction To Computational Text Analysis

Credit Hours: 3.00. This course provides an introduction to the methods, debates, and tools of computational text analysis, specifically crafted for the humanities and social science graduate students.

Learning Outcomes: 1. Recognize and assess the possibilities for computational text analysis for research. 2. Find and implement code for text analysis projects. 3. Experiment with both existing and original code. 4. Appraise and critique the limits of computational text analysis for research. 5. Design original projects using course lessons. Credits: 3.00

ILS 65100 - Introduction To Natural Language Processing

Credit Hours: 3.00. This course provides a comprehensive overview of the fundamental concepts, techniques, and applications in the field of natural language processing. Using Python programming, students will learn to implement NLP tasks from basic text processing to advanced techniques, including sentiment analysis to discern emotions from text and topic modeling to uncover latent themes within large datasets. Additionally, students will explore emerging technologies such as generative AI and Large Language Models (LLMs) and their implications for NLP. By the end of this course, students will emerge with a solid understanding of NLP principles, proficiency in Python programming for NLP tasks, and the ability to apply these skills to address diverse NLP challenges.

Learning Outcomes: 1. Describe Natural Language Processing (NLP) and its applications. 2. Apply Python programming to Natural Language Processing tasks. 3. Implement text analysis to extract information from text data. 4. Create solutions for sentiment analysis problems. 5. Build solutions for topic modeling tasks. 6. Describe generative AI and Large Language Models (LLMs) and their use

cases. Credits: 3.00

ILS 69000 - Independent Study In Information Sciences

Credit Hours: 1.00 to 3.00. Intensive study on specific topics in information or data science that are not otherwise covered by courses currently offered at Purdue University. Plan of study and assessment is agreed upon by faculty and student before registration. Permission of department required. Permission of instructor required.

Learning Outcomes: 1. Variable but agreed upon by faculty and student before registration. Credits: 1.00 to 3.00

ILS 69500 - Special Topics In Information And Data Science

Credit Hours: 1.00 to 4.00. Intensive study of selected topics varying from semester to semester, from the practice of information and data sciences. Topics may include data management and organization, digital scholarship, data visualization, computer languages for data and information science, information literacy, archival literacy, and emerging trends in information and data science.

Learning Outcomes: 1. Critically examine and apply information and data sciences to various disciplines. 2. Develop practical skills and apply them to their disciplinary research. Credits: 1.00 to 4.00

Interdisciplinary Engineering

IDE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply

probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IDE 38199 - Professional Practice Three-Session Coop I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38299 - Professional Practice Three-Session Coop II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38399 - Professional Practice Three-Session Coop III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38500 - Design Methodologies For Diverse Stakeholders

Credit Hours: 3.00. This course focuses on engineering design methodologies with a concern for the needs of diverse stakeholders. The course brings together topics drawn from a variety of disciplines (including anthropology, education, psychology, human-computer interaction and engineering) to introduce interdisciplinary engineering approaches to: (1) design tools, systems, and/or environments to support cognitive processes and (2) engage in human-centered and learner-centered design. The semester design project provides a context for students to apply these methods. Permission of Instructor required.

Learning Outcomes: 1. Learn about cognitive processes (including learning processes), how to design products, processes and environments to support cognition. 2. Learn methodologies and develop skills to be able to apply human-centered principles in the design of interfaces, every-day products and learning environments, whether in industrial or academic settings. 3. Engage in reflective practices to connect the course material to previous learning experiences as well as personal learning goals, with a goal of furthering their life-long learning skills. Credits: 3.00

IDE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39699 - Professional Practice Internship

Credit Hours: 0.00. Internship experience in multidisciplinary engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

IDE 48000 - Engineering Ethics In Interdisciplinary Contexts

Credit Hours: 3.00. The purpose of this course is to provide students with tools and strategies to reason through situations with ethical issues that they may encounter as engineering students and in their future careers. To this end, this course seeks to enhance students' awareness of ethical issues in interdisciplinary engineering contexts, ability to reason through ethical challenges in diverse engineering contexts, courage to respond to ethical issues in their future practice, ability to work effectively on teams, and the ability to communicate with others.

Learning Outcomes: 1. Identify ethical issues affecting ethical engineering practice in interdisciplinary engineering contexts. 2. Apply a consistent reasoning process toward ethical issues in an engineering context and formulate appropriate courses of action to respond to the issue. 3. Feel prepared to respond to ethical issues they may encounter in their future work. 4. Collaborate on interdisciplinary teams while considering and responding to challenging ethical scenarios. 5. Communicate ethical considerations to their peers and other key stakeholders. Credits: 3.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and

verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 49500 - Special Topics In Interdisciplinary Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for interdisciplinary engineering subject areas for which there is no specific course offered, but for which there is sufficient student interest to justify teaching a specialized course on a trial basis. May be repeated for credit as long as the topic being taught is not repeated.

Credits: 1.00 to 4.00

Interdisciplinary Studies

IDIS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work.

Learning Outcomes: 1. Identify various concepts and methods in digital humanities. 2. Apply a variety of methods and tools to conduct digital humanities research. 3. Research the transformative potential of digital methods through critical inquiry. 4. Create a process for developing and completing a digital project. Credits: 3.00

IDIS 29000 - Interdisciplinary Topics

Credit Hours: 0.00 to 6.00. Course topics and patterns will vary.

Credits: 0.00 to 6.00

IDIS 49000 - Directed Reading In Interdisciplinary Studies

Credit Hours: 1.00 to 3.00. Reading under the direction of the instructor in a particular field of study. Permission of instructor required.

Credits: 1.00 to 3.00

IDIS 49100 - Special Topics In Interdisciplinary Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization.

Learning Outcomes: 1. Formulate significant research questions and conduct research relevant to those questions. 2. Consider a topic from multiple perspectives. 3. Demonstrate

critical thinking and problem-solving abilities. 4. Demonstrate effective communication skills.

Credits: 1.00 to 4.00

IDIS 59000 - Directed Reading In Interdisciplinary Studies

Credit Hours: 1.00 to 3.00. Reading under the direction of the instructor in a particular field of study. Permission of instructor required.

Credits: 1.00 to 3.00

IDIS 59100 - Selected Topics In Interdisciplinary Studies

Credit Hours: 3.00. A study of selected topics, taught by an instructor in whose particular field of specialization the content of the course falls.

Credits: 3.00

Interior Architecture

INT 10300 - Introduction To Interior Design

Credit Hours: 3.00. An overview of the field of interior design, its history, and theory. An application of the principles and elements of interior design. Basic hand drafting. This course is for those who are seeking or considering a degree in Interior Design.

Credits: 3.00

INT 12400 - Space Planning For Interiors

Credit Hours: 3.00. Introduction to the fundamentals of design for human activity, standards for space, programming, and graphic communication. Requirements for ADA and Universal Design will be included.

Credits: 3.00

INT 12500 - Color And Lighting Of Interiors

Credit Hours: 3.00. Exploration of the physiological, psychological, and phenomenal aspects of color and light in interior spaces. Application includes specification and selection of lighting fixtures and light sources.

Credits: 3.00

INT 15100 - Textiles For Interiors

Credit Hours: 3.00. An extensive study of textiles: fiber types, yarn production, fabric construction, finishing, coloring, and printing. Application of textiles for use in residential and commercial interiors.

Credits: 3.00

INT 20200 - Interior Materials And Applications

Credit Hours: 3.00. Analyzes information related to use of surfacing materials applied as interior finishes in interior design projects. The role of green design is introduced, and ecological issues are integrated into each category of materials analyzed.

Credits: 3.00

INT 20400 - History Of Interiors And Furniture I

Credit Hours: 3.00. A survey of historical development of interiors, furniture and decorative arts from early history to 1800 (early neoclassic). Emphasis on design motifs, ornamentation and furniture styles.

Credits: 3.00

INT 22400 - Residential Interior Design Studio

Credit Hours: 3.00. This studio class will emphasize the design of residential space, recognizing design development as a process. Space design, working drawings, plans, and client presentations also will be covered. The course will utilize computer-aided drafting and design (CAD).

Credits: 3.00

INT 22600 - Commercial Interiors I

Credit Hours: 3.00. This studio course emphasizes the elements used by designers in the development of nonresidential space. Studies include technological and building requirements; building and life-safety codes; square footage and space planning standards. Organizational, ergonomic, technical, spatial and environmental factors will be considered.

Credits: 3.00

INT 30200 - Three-Dimensional Design

Credit Hours: 3.00. This studio class examines the fundamentals of three-dimensional design, detailing and documentation, along with 3D thinking and visualization of design solutions sensitive to functional, ergonomic and aesthetic objectives.

Credits: 3.00

INT 30400 - History Of Interiors And Furniture II

Credit Hours: 3.00. The continuation of a survey of historical development of interiors, furniture, and decorative arts beginning with 1650 Colonial America through the 20th century. Emphasis is on design motifs, ornamentation, and furniture styles. Adaptation and use of period styles within contemporary design are included.

Credits: 3.00

INT 32400 - Residential II: Housing Design

Credit Hours: 3.00. This studio class will emphasize the design of residential space, recognizing design development as a process. Space design, working drawings, plans, and client presentations also will be covered.

Credits: 3.00

INT 32600 - Commercial Interior Design Studio II

Credit Hours: 3.00. This studio course emphasizes the elements used in development of nonresidential space. Studies include technological and building requirements; building and life-safety codes, ADA guidelines, square footage and space planning standards.

Credits: 3.00

INT 42600 - Evidence-Based Design

Credit Hours: 3.00. This studio-based course emphasizes the principles of evidence-based design in modern practice. Students will acquire working knowledge of best practices with

relation to healthcare or similar environments based on empirical data.

Credits: 3.00

INT 42800 - Interior Design Capstone Design Project

Credit Hours: 3.00. In this B.S. Capstone course the designer tackles a semester long advanced design problem by applying the design process from project obtainment through construction documents. This class is team-taught and must be taken in conjunction with INTR 48000.

Credits: 3.00

INT 45200 - Interior Building Systems

Credit Hours: 3.00. A survey course of building systems that covers the design implications of heating, air-conditioning, plumbing and electrical systems of both residential and commercial buildings. Sustainable technologies such as solar energy for heating, cooling, or hot water heating, day-lighting, and recycling systems will be included.

Credits: 3.00

INT 45300 - Business Practices Of Interior Design

Credit Hours: 3.00. Business principles and practices as they relate to the interior design profession. Includes business formation and management, professional ethics and organization, certification and licensing issues, design liability, and project management.

Credits: 3.00

INT 48000 - Senior Portfolio

Credit Hours: 3.00. This course will assist the student with developing a professional level portfolio and related materials which may be used in interviewing for an Interior Design position, and provides an opportunity to showcase all academic work created at this institution. Topics and activities include branding, resume preparation, website design, social media management, interviewing, and the creation of various related portfolio materials.

Credits: 3.00

INT 49500 - Sustainable Design In Engineering And Technology

Credit Hours: 3.00. In this multidisciplinary course students will create industrial ecological solutions within their unique disciplines. A theoretical framework on Green Design is used to identify and apply green concepts while working on multidisciplinary teams. Environmental concerns for better air quality and global environmental issues are explored.

Credits: 3.00

Italian

ITAL 10100 - Italian Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Italian course with emphasis on communicative skills (listening and speaking), literacy (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize familiar words and very basic phrases. 2. Speak and write simple phrases and sentences. 3. Interact in a basic way, provided the other person is prepared to repeat or rephrase things at a slower rate of speech and help the student to formulate the intended thought. 4. Ask and answer simple questions in areas of immediate need or on very familiar topics. Credits: 3.00

ITAL 10200 - Italian Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of ITAL 10100.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Speak a series of simple phrases and sentences to describe commonly discussed topics. 2. Develop a basic understanding of simple social exchanges. 3. Write short, simple sentences related to areas of immediate needs. 4. Read short, simple texts, by identifying predictable information. Credits: 3.00

ITAL 10500 - Accelerated Basic Italian (UCC: HUM)

Credit Hours: 3.00. An accelerated basic Italian course that substitutes for ITAL 10100 and ITAL 10200 . Knowledge of a foreign language required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 11200 - Elementary Italian Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in Italian on various topics.

Learning Outcomes: 1. Develop listening skills and improve oral Italian proficiency. 2. Acquire new vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss relevant texts in the target language. Credits: 1.00

ITAL 20100 - Italian Level III (UCC: HUM)

Credit Hours: 3.00. A continuation of ITAL 10200 .

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 20200 - Italian Level IV (UCC: HUM)

Credit Hours: 3.00. An intermediate Italian course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 20500 - Accelerated Intermediate Italian (UCC: HUM)

Credit Hours: 3.00. An accelerated second-year Italian course with focus on furthering the development of listening, reading, speaking and writing abilities at the intermediate level.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 21200 - Intermediate Italian Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in Italian conversation to enhance communicative competence. Small group discussions in Italian on various topics. Not open to students enrolled in or having credit for ITAL 30100 or above.

Learning Outcomes: 1. Develop intermediate listening skills and improve oral Italian proficiency. 2. Acquire new vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss relevant texts in the target language. Credits: 1.00

ITAL 23100 - Dante's Divine Comedy

Credit Hours: 3.00. Reading and discussion of Dante's Divine Comedy. The major critical approaches to Dante's masterpiece will be reviewed. All readings, papers, and examinations will be in English.

Credits: 3.00

ITAL 28000 - Italian Culture And Civilization (UCC: HUM)

Credit Hours: 3.00. Course focuses on salient aspects of Italian culture and civilization from the Middle Ages to the present. In English.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of Italian culture and its legacy in the world. 2. Identify crucial developments of Italian society and culture of the time studied. 3. Situate the arts, literature, and music of Italy in their historical context. 4. Become aware of the political and national struggles that Italy faced throughout the centuries. 5. Be introduced to key figures from different fields of studies whose work, inventions, and discoveries changed and are still changing our world perspectives. Credits: 3.00

ITAL 28100 - The Italian Renaissance And Its Scientific And Cultural Impact On Western Civilization (UCC: HUM)

Credit Hours: 3.00. This course introduces students to the most important cultural and scientific writings of the Italian Renaissance, and shows the pivotal influence of the Renaissance on the development of Western civilization as a whole. Classes and readings entirely in English; no knowledge of Italian needed.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Become acquainted with the canonical works of the Italian Renaissance that have had a major influence on modern Western thought and will develop a broad understanding of the Renaissance. 2. Become familiar with different literary genres such as poetry, comedy, novellas, treatises and dialogues, and will develop the tools necessary to approach them critically within the cultural and political context that produced them. 3. Improve their critical and writing skills. Credits: 3.00

ITAL 28500 - Intercultural Migration To Italy In Film, Literature, And Art (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the complexities of recent migrations to Italy through the perspectives of film, literature, and art. The course covers a wide range of topics, from a historical and geographical overview of migrations to Italy, to the hotly debated issues of immigration policies, Italian citizenship law, human rights and social justice, and the process of reimagining the Italian identity in more diverse and inclusive terms. Course taught in English. No Italian knowledge required.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Define the historical context, geographical routes, and reasons of migration to Italy. 2. Explain the impact of migration on Italian demographics, economy, and Italian identity ("Italianità"). 3. Compare diverse cultural representations of migration to Italy with diverse representations of migration in their own cultural contexts. 4. Outline the

intersections between migration and the issues of citizenship, human rights, and social justice in Italian and their own cultural context. 5. Reflect on their intercultural learning in the domain of curiosity, openness, empathy, and global awareness. Credits: 3.00

ITAL 30100 - Italian Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Italian speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Italy from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Italian.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students will develop oral communication skills in Italian at advanced level through classroom discussions, presentations, and interpersonal communication. 2. Students will expand and refine their competence to comprehend, analyze, and interpret texts in Italian through integrated reading and discussion of different genres of authentic texts in Italian through integrated reading and discussion of different genres of authentic texts. 3. Students will expand and refine their written proficiency in Italian by producing a variety of genre-specific texts in Italian. 4. Students will expand their knowledge of Italian culture and their cross-cultural proficiency through the use of aural, visual, and written texts in Italian. Credits: 3.00

ITAL 30200 - Italian Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Italian, on the basis of materials dealing with the ideas and events that have shaped present-day Italy. Conducted primarily in Italian.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ITAL 31200 - Advanced Italian Conversation

Credit Hours: 1.00. One credit hour advanced Italian conversation course focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative competence. Discussions in Italian on various topics. Course may be taken concurrently with ITAL 30100, 30200, 34100 and 34200.

Learning Outcomes: 1. Develop advanced listening skills and improve oral proficiency. 2. Acquire advanced vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in Italian. Credits: 1.00

ITAL 33000 - The Italian Cinema (UCC: HUM)

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ITAL 33300 - The Spirit Of Italian Comedy (UCC: HUM)

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte, Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

ITAL 34100 - Italian Literature I: From The Middle Ages To The Enlightenment

Credit Hours: 3.00. This is the first course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian.

Credits: 3.00

ITAL 34200 - Italian Literature II: From Romanticism To The Present

Credit Hours: 3.00. This is the second course of a two-semester sequence presenting an overview of Italian literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Readings, discussion, and papers in Italian.

Credits: 3.00

ITAL 38100 - Italian And Italian American Food Culture (UCC: HUM)

Credit Hours: 3.00. This course provides a comprehensive exploration of the rich and diverse food cultures of Italy and

Italian American communities. Through a combination of historical, cultural, visual, and culinary perspectives, students will gain an in-depth understanding of the traditions, influences, and innovations that have shaped Italian and Italian-American cuisine.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify and articulate the historical and cultural significance of Italian and Italian American food traditions. 2. Summarize evidence, such as cookbooks, food memoirs, and other cultural artifacts, to understand the complexity of the human experience as expressed through food. 3. Interpret and critique culinary works, exploring the intersection of food, culture, and art. 4. Critically compare texts, recipes, and culinary practices within the cultural, intellectual, and historical contexts of Italy and the Italian American experience. 5. Reflect on the impact of socio-cultural and historical factors on the development of Italian and Italian American cuisine. Credits: 3.00

ITAL 39300 - Special Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will focus on particular aspects of Italian literature, cinema or culture. No knowledge of Italian required.

Credits: 3.00

ITAL 39400 - Special Topics In Italian Literature

Credit Hours: 3.00. This course studies a particular aspect in Italian literature (e.g., a theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles, and/or periods. Readings, discussion, and papers in Italian.

Credits: 3.00

ITAL 39900 - Special Study Abroad Credit It Italian

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Italian earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

ITAL 49300 - Advanced Topics In Italian Literature Or Cinema

Credit Hours: 3.00. This course will analyze in depth particular aspects of Italian literature, cinema or culture. No knowledge of Italian necessary.

Credits: 3.00

ITAL 59000 - Directed Reading In Italian

Credit Hours: 1.00 to 4.00. Directed readings in Italian. Permission of instructor required.

Credits: 1.00 to 4.00

Japanese

JPNS 10100 - Japanese Level I (UCC: HUM)

Credit Hours: 3.00 or 4.00. A basic study of standard Japanese. Students will be introduced to spoken and written forms of the language from the beginning. Language form and use are equally emphasized. Relevant cultural aspects. Hiragana, Katakana, and 85 Kanji.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Distinguish and pronounce sounds in Japanese. 2. Read and write hiragana, katakana, and 45 kanji. 3. Exchange greetings, introduce and talk about themselves. 4. Tell time. 5. Describe daily routines and leisure activities. 6. Ask about places and indicate locations and distance. 7. Recognize basic cultural aspects of social interaction. Credits: 3.00 or 4.00

JPNS 10200 - Japanese Level II (UCC: HUM)

Credit Hours: 3.00 or 4.00. A continuation of the study of elementary Japanese. Task-oriented activities will be incorporated to encourage language use as well as pattern practice for linguistic accuracy. Relevant cultural aspects will be introduced. 120 Kanji.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Express their preferences. 2. Make requests. 3. Express quantities and talk about prices. 4. Extend invitations and order food at restaurants. 5. Describe people and address family members. 6. Describe weather, seasonal holidays and annual events. 7. Read and write a total of 130 kanji. 8. Compose simple letters in Japanese on familiar topics. Credits: 3.00 or 4.00

JPNS 20100 - Japanese Level III (UCC: HUM)

Credit Hours: 3.00 to 4.00. A study of intermediate Japanese. Occasional use of authentic materials for listening and reading practice. Task-oriented exercises, communicative activities, and pattern practice are used to facilitate learning of the spoken and written language. 110 Kanji.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Express physical conditions, ask for help, and give suggestions. 2. Make and describe travel plans and work plans. 3. Express future plans and what to do to achieve future objectives. 4. Ask for favors and offer help. 5. Ask for and give directions. 6. Make polite requests. 7. Read and write a total of 250 kanji. Credits: 3.00 to 4.00

JPNS 20200 - Japanese Level IV (UCC: HUM)

Credit Hours: 3.00 to 4.00. A continuation of intermediate Japanese. Active use of authentic materials for listening and reading practice. Task-oriented exercises, communicative activities, and pattern practice for learning of the spoken and written language. 150 Kanji.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe experiences of gift giving and receiving. 2. Express preferences and selections. 3. Explain procedures and important points. 4. Describe events, make small talk, and express one's conjectures and opinions. 5. Describe customs, regulation and express appreciation, and ask for permission to do something. 6. Express complaints, request change of behavior, express apologies. 7. Express respect to social superiors. 8. Read and write a total of 350 kanji. Credits: 3.00 or 4.00

JPNS 23000 - Japanese Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected texts from major writers and genres. The course provides a broad survey of the Japanese literary tradition and its cultural and historical background. Emphasis may vary from year to year. Knowledge of Japanese not required.

Credits: 3.00

JPNS 24100 - Introduction To The Study Of Japanese Literature

Credit Hours: 3.00. Reading and discussion of selected Japanese poetry, prose, and drama; introduction to methods of literary criticism, applied to the reading of Japanese literary discourse. Texts, discussion, and written assignments largely in Japanese.

Credits: 3.00

JPNS 28000 - Introduction To Modern Japanese Civilization

Credit Hours: 3.00. A survey of modern Japanese culture. Various aspects are covered, such as geography, economy, society, the political system, family, education, traditional arts, business, and language. Current issues will be discussed in a timely manner. Lectures in English.

Credits: 3.00

JPNS 30100 - Japanese Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Japanese speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Japan from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in Japanese.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

JPNS 30200 - Japanese Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in Japanese, on the basis of materials dealing with the ideas and events that have shaped present-day Japan. Conducted primarily in Japanese.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

JPNS 31300 - Intermediate Reading In Japanese I

Credit Hours: 3.00. This course provides students with further study in reading Japanese at the intermediate level. The course also reviews and introduces 500 basic kanji.

Credits: 3.00

JPNS 33000 - Japanese Cinema

Credit Hours: 3.00. A survey of the development of Japanese cinema after World War II. The class focuses on the viewing and discussion of the films and examines a variety of directors with different styles and thematic messages.

Credits: 3.00

JPNS 34100 - Japanese Literature I: Modern Japanese Literature

Credit Hours: 3.00. Selected reading of poetry, drama, and fiction of modern Japanese literature. Students will read and discuss major authors and texts and will write critical essays on literary topics. Conducted largely in Japanese.

Credits: 3.00

JPNS 36100 - Elementary Survey Of Japanese Linguistics

Credit Hours: 3.00. This course surveys all areas of Japanese Linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics, focusing on systematizing fragmentary knowledge students are assumed to have acquired through Japanese language courses.

Credits: 3.00

JPNS 36300 - Relationship Of Japanese Language And Society

Credit Hours: 3.00. This course examines the Japanese language with reference to the way the language is being used

in the Japanese society. Particular areas include keigo (honorific language), aizuchi (backchannel), silence, gender issues, in-group vs. out-group.

Credits: 3.00

JPNS 39900 - Special Study Abroad Credit In Japanese

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Japanese earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

JPNS 40100 - Japanese Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on the development of Japanese speaking, reading, and writing abilities, focusing on materials dealing with culture and the arts of Japan. Conducted mostly in Japanese.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

JPNS 40200 - Japanese Level VIII (UCC: HUM)

Credit Hours: 3.00. This course is a continuation of Fourth Year Japanese I. It continues work on the acquisition of advanced-level proficiency in speaking, listening, reading and writing. Students are given opportunities to understand the main ideas of extended discourse, to read texts which are linguistically complex, and to write about a variety of topics.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

JPNS 44200 - Manga And Anime

Credit Hours: 3.00. In this class, students will study the globally popular art forms of Japanese comic books, known as manga, and cartoons, known as anime, from an academic perspective. We will approach the study of these media via the disciplines of literary studies, art history, visual culture studies, and the study of popular culture. While examining manga and anime as visual and literary media, we will consider topics including Japanese history, the environment, war, gender, sexuality, family, tradition, religion, philosophy, Japan's relationship to the globe, and genres of popular literature such as fantasy, horror, and science fiction. Materials to be covered include historical illustrated fiction of the 18th and 19th centuries (the prehistory of manga), foundational manga from the post-WWII era, manga by women writers, contemporary popular manga, anime films that ignited the global anime phenomenon, and anime films by the latest major directors.

Learning Outcomes: 1. Identify major writers, directors, texts, themes, and artistic traditions within the media of manga and anime. They will establish a foundation on which to support future study of Japanese culture, literature, art, and society, as well as other global traditions of literature and the arts. 2. Assess formal structures, aesthetic values, social practices, worldviews, points of emphasis, and gaps or omissions in the texts that they read. They will also learn the practice of visual analysis, or the ability to carefully describe and interpret visual details and information. 3. Compose, structure, and edit essays in the humanities. Emphasis will be placed on developing organizational and editing skills, as are widely applicable across fields of study. 4. Identify the ways in which text and image are combined to create meaning in visual-verbal narratives through the study of primary materials and academic articles. 5. Read manga in Japanese, which will introduce students to various forms of colloquial, formal, and informal linguistic registers. Practice listening to spoken Japanese by watching animated films. (Optional: For those with advanced language skills) Credits: 3.00

JPNS 48500 - Culinary Culture Of Japan

Credit Hours: 3.00. Advanced-level language and culture course about the food of Japan. It covers gastronomy, celebrations, history, art, mythology, and other aspects of daily life related to the culinary traditions of Japan. Students will further develop their speaking, listening, reading and writing abilities in Japanese. They will have the opportunity to apply their skills in practical contexts and discuss cultural considerations, as well as participate in some hands-on cooking experience. Conducted entirely in Japanese. Permission of department required.

Learning Outcomes: 1. Recognize and apply a broad range of food related vocabulary and advanced grammatical structures. 2. Communicate in Japanese about diet, cooking, eating and food culture topics. 3. Identify main cultural trends in food production and consumption. 4. Recognize the main ingredients and their historical significance. 5. Examine the Japanese food heritage and impact in the United States. Credits: 3.00

JPNS 49000 - Special Topics In Japanese

Language

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 3.00

JPNS 52100 - Teaching Japanese As A Foreign Language

Credit Hours: 3.00. Introduces a wide range of techniques used in teaching Japanese as a foreign language. Discusses theoretical issues concerned with the learning and teaching of Japanese. Permission of instructor required.

Credits: 3.00

JPNS 56000 - Survey Of Japanese Linguistics

Credit Hours: 3.00. This course is intended to provide the student with a systematic overview of the Japanese language. It covers most major areas of linguistics, from phonetics to pragmatics. Conducted in Japanese.

Credits: 3.00

JPNS 57500 - Theories Of Japanese Language Acquisition

Credit Hours: 3.00. Advanced course designed to provide an overview of major theoretical issues in Japanese language acquisition research. Permission of instructor required.

Credits: 3.00

JPNS 59000 - Directed Reading In Japanese

Credit Hours: 1.00 to 4.00. Directed readings in Japanese. Permission of instructor required.

Credits: 1.00 to 4.00

JPNS 59400 - Special Topics In Japanese Literature

Credit Hours: 1.00 to 4.00. Reading and extensive discussion of selected texts from different writers and genres. Provides in-depth research on a variety of issues related to Japanese literary and cultural traditions. Knowledge of advanced Japanese required. Permission of instructor required.

Credits: 1.00 to 4.00

JPNS 59600 - Special Topics In Japanese Linguistics.

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

JPNS 67900 - Seminar In Japanese Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in Japanese linguistics. Topic to be announced in advance. Permission of instructor required.

Credits: 3.00

JPNS 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Jewish Studies

JWST 33000 - Introduction To Jewish Studies (UCC: HUM)

Credit Hours: 3.00. An interdisciplinary course touching on the full range of Jewish experience from antiquity to the present. Several members of the Jewish Studies faculty and guest lecturers participate, representing such fields as anthropology, history, language, literature, philosophy, politics, religion, and sociology.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

JWST 59000 - Directed Readings In Jewish Studies

Credit Hours: 3.00. A reading course in aspects of Judaica directed by the instructor in whose particular field of specialization the content of the reading falls. Permission of Instructor required.

Learning Outcomes: 1. Deepen the knowledge of select topics in Judaica. Credits: 3.00

Korean

KOR 10100 - Korean Level I (UCC: HUM)

Credit Hours: 4.00. This course is the first half of the Elementary Korean language sequence. It is designed for those who have no prior (or very limited) knowledge of Korean. Lecture will introduce new material and explain conversational patterns considering grammatical, lexical, and pragmatic aspects of Korean. Some class meetings will be conducted entirely in Korean. Emphasis is placed on the fundamentals of listening, speaking, reading, and writing. In addition, students will be exposed to everyday life contexts (e.g., language use, culture, etc.) likely to be encountered in contemporary Korean society.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Assess the meaning of limited vocabulary and some simple questions or statements auditorily and visually in the context of everyday events, such as greetings, introductions, giving directions, expressing needs, and making requests in Korean. 2. Construct short statements and ask simple questions by combining grammatical and lexical items using spoken Korean in a limited number of content areas, particularly if strongly supported by the situational context. 3. Identify meanings communicated in written Hangul, a Korean writing system, related to basic language use and immediate needs, such as

prices in stores, dates on schedules, and short letters, messages, or memos relating information relevant to various aspects of student life. 4. Construct simple fixed expressions and limited memorized material by combining grammatical and lexical items in written form using Hangul. 5. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, pop lyrics, or traditional grams. Credits: 4.00

KOR 10200 - Korean Level II

Credit Hours: 4.00. This course is the second half of the elementary Korean language sequence. As a continuation of KOR 10100, the main purpose of this course is to expand on the study of the Korean language and culture. The class will introduce new material and explain conversational patterns considering grammatical, lexical, and pragmatic aspects of Korean. Some class meetings will be conducted entirely in Korean. Students continue to learn vocabulary, pronunciation, grammar, and the writing system by practicing Korean to achieve Novice High level of speaking, listening, reading, and writing.

Learning Outcomes: 1. Assess sentence-length utterances auditorily and visually that consist of recombinations of learned elements applied to a limited number of contexts, such as organizing a party, shopping, placing orders, making telephone calls, describing symptoms of illness and scheduling appointments. 2. Solve communicative problems related to uncomplicated, basic communicative tasks and social situations, such as making an apology, accepting and declining invitations, and making polite requests and suggestions by identifying linguistic meanings and producing new linguistic content. 3. Identify meanings expressed in written materials with emphasis on survival and immediate needs, such as memos, messages, postcards, journal entries, brief narratives, and short letters relating information relevant to various aspects of student life. 4. Produce simple texts of a few paragraphs such as skit, messages, short letters, and brief narratives by recombining learned material in Korean. 5. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 4.00

KOR 20100 - Korean Level III

Credit Hours: 4.00. This course is the first half of the intermediate Korean language sequence. The main purpose of this course is to expand on the study of the Korean language and culture, and develop an Intermediate Low proficiency level. Some class meetings are conducted entirely in Korean. Students practice reading and listening comprehension, grammar, vocabulary building, and conversations that require a variety of styles, pragmatic considerations, and knowledge of Korean cultural topics. Skills for simple narration and written report will be enhanced. Students rely on authentic materials for introduction of Korean culture and authentic language usage.

Learning Outcomes: 1. Assess sentence-length utterances auditorily and visually that consist of a sufficient amount of vocabulary and expressions to communicate in a variety of situations covered in the course. 2. Apply basic components of Korean grammatical structures to construct standard Korean sentences to express creative ideas and to make comparisons. 3. Solve communicative problems related to a variety of uncomplicated social situations by asking and answering questions. 4. Compose written language in Korean to meet practical writing needs, such as short personal letters and journals. 5. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 4.00

KOR 20200 - Korean Level IV

Credit Hours: 4.00. This course is the second half of the intermediate Korean language sequence. The main purpose of this course is to expand on the study of the Korean language and culture, and develop an Intermediate Mid proficiency level. Some class meetings are conducted entirely in Korean. The course provides students with further conversational and grammatical skills. Students practice reading comprehension,

grammar, vocabulary, and conversation using textbooks and authentic materials for introduction of Korean culture and authentic language usage.

Learning Outcomes: 1. Assess paragraph-length texts and oral discourse to comprehend texts and dialogue in the classroom. 2. Explain orally in Korean topics that are based on personal experiences in order to successfully interact with native speakers on a prepared topic. 3. Analyze, learn, and produce forms of polite speech, forms to describe past experience, and forms to express supposition. 4. Compose written language in Korean to meet practical writing needs that address the present, past, and some hypothetical situations. 5. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 4.00

KOR 24100 - Introduction To Korean Literature

Credit Hours: 3.00. This course will introduce students to major trends, genres, perspectives, and ideas in Korean literature, including poetry, essays, and short stories, from the early 20th century up to the present day. Covering significant historical milestones such as the Japanese Colonial Period, Liberation Day, and the post-liberation era, the literary works discussed in this course offer diverse perspectives on these time periods. By exploring prominent themes, forms, and literacy techniques, students will gain insight into modern Korean literary traditions within the evolving context of Korean culture and society. The language of instruction will be in English.

Learning Outcomes: 1. Analyze major literary themes and evaluate narrative strategies of the works of literature. 2. Interpret the use of symbolism, characteristic stylistic features, and nuances of the language's literary aspects. 3. Develop an understanding of the dynamic interplay between literary texts and their cultural and historical contexts. 4. Formulate analytical skills and learn how to research, structure, and edit essays in the humanities. Emphasis will be placed on developing organizational and editing skills, as are widely applicable across fields of study. 5. Identify literary Korean in various forms, aiming to familiarize them with the nuances of the language's literary aspects. Credits: 3.00

KOR 28000 - Special Topics In Korean Language

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on Korean language topics such as history of Korean language, Korean linguistics, Korean dialects, Korean sociolinguistic studies, applied linguistic foci in Korean language, etc.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 3.00

KOR 28200 - Korean Culture And Society

Credit Hours: 3.00. This course explores Korean culture from antiquity to the present. Students will investigate the dynamic political and social forces that have shaped Korean history, comparing and contrasting them with those of other Asian countries. Various hands-on activities include an introduction to Korean cuisine, traditional musical instruments and costumes, and other cultural artifacts and practices.

Learning Outcomes: 1. Build a solid understanding of contemporary Korean culture and social issues. 2. Construct structured arguments about Korea, utilizing academic discourse, through several assignments. 3. Identify facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 4. Establish an analytical framework for K-pop culture and their fan culture. Credits: 3.00

KOR 30100 - Korean Level V

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded.

Learning Outcomes: 1. Obtain knowledge about linguistic structures and language-related cultures through linguistic and cultural analysis and synthesis of various types of data. 2. Apply their linguistic and cultural knowledge to

comprehend (reading and listening) and produce (writing and speaking) language. 3. Assess paragraph-length texts and oral discourse to comprehend provided texts and dialogue in the classroom. 4. Explain orally in Korean topics that are based on personal experiences in order to successfully interact with native speakers on a prepared topic. 5. Analyze, learn, and produce forms of polite speech, forms to describe past experience, and forms to express supposition. 6. Compose written language in Korean to meet practical writing needs that address the present, past, and some hypothetical situations. 7. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 3.00

KOR 30200 - Korean Level VI

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas-speaking, listening, reading, and writing-in Korean at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. Emphasis will be on the appropriate use of Korean in a variety of situations including schools, companies, and formal/informal meetings. This course also enables students to understand Korean culture and history and to develop cross-cultural insights by comparing Korean society with US society. Korean history, image of Korea, and current social trends in Korea will be discussed for a solid understanding of Korean culture in which Korean language is embedded.

Learning Outcomes: 1. Obtain knowledge about linguistic structures and language-related cultures through linguistic and cultural analysis and synthesis of various types of data. 2. Apply their linguistic and cultural knowledge to comprehend (reading and listening) and produce (writing and speaking) language. 3. Assess paragraph-length texts and oral discourse to comprehend provided texts and dialogue in the classroom. 4. Explain orally in Korean topics that are based on personal experiences in order to successfully interact with native speakers on a prepared topic. 4. Analyze, learn, and produce forms of polite speech, forms to describe past experience, and forms to express supposition. 5. Compose written language in Korean to meet practical writing needs that address the present, past, and some hypothetical situations. 6. Describe facts and evidence related to Korean history, culture, and daily life through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional grams. Credits: 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles.

Learning Outcomes: 1. Appreciate how film can be understood and used as a cultural and social form that can explain Korean society and culture. 2. Build an understanding of various cinematographic techniques. 3. Learn how to interpret a broad-based understanding of contemporary Korean culture and social issues. 4. Identify elements of genre in Korean cinema through facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 5. Develop and communicate their ideas orally and in writing. Credits: 3.00

KOR 38000 - Special Topics In Korean Culture

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on traditional, historical, social, and political themes of Korea.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 3.00

KOR 38100 - Introduction To Korean Food Culture

Credit Hours: 3.00. This course is an advanced-level language and culture course that uses food as a lens for understanding

the history, cultures, and society of Korea. It covers gastronomy, history, ideologies of modern Korean cuisine, and other aspects of daily life related to Korean traditions. Through this course, students will enhance their proficiency in speaking, listening, reading, and writing in Korean. They will explore a range of topics connected to the eating, making, and representation of food. The primary language of instruction will be Korean, with some supplementary reading material in English.

Learning Outcomes: 1. Interpret the culture, history, and ideologies of modern Korea through the lens of food. 2. Discuss diet, cooking, eating and food culture topics using a broad range of vocabulary and advanced grammatical structures. 3. Identify main cultural trends in food production and consumption. 4. Recognize main ingredient, food categories and their historical significance in Korean diets. Credits: 3.00

KOR 40100 - Korean Level VII

Credit Hours: 3.00. This course aims to help students develop their language skills in four areas (speaking, listening, reading, and writing) at the advanced level. It covers grammar and vocabulary, reading comprehension, fluency, conversation manners, and public speaking. By dealing with various topics on authentic materials including news, articles on websites, and short stories, this course enables students to enhance linguistics knowledge and skills and also helps them to understand Korean culture, history, and current issues in Korea. It is expected that students will be able to discuss various topics and express opinions fluently in both spoken and written language.

Learning Outcomes: 1. Assess discourse-length texts to comprehend provided texts and dialogue in the classroom. 2. Explain the main ideas and most supporting details in connected discourse of paragraphs on a variety of general interest topics in written and spoken Korean. 3. Analyze, learn, and produce forms in informal and formal settings, provide lengthy and coherent narrations, present opinions on a number of issues, and provide structured arguments to support them. 4. Compose written language in Korean to demonstrate the ability to write about various topics with good control of frequently used structures and vocabulary, by using paraphrasing and elaboration to provide clarity. 5. Describe facts and evidence related to Korean history, culture, and society through simple authentic texts and materials such as magazines, drama skits, movies, K-pop lyrics, or traditional games. Credits: 3.00

KOR 48000 - Special Topics In Korean Studies

Credit Hours: 3.00. This course will be offered as a variable-title course focusing on topics related to contemporary Korean culture, arts, literature, etc. Or an internship totaling approximately 100-120 hours per semester or summer in Korea may also be credited through this course.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 3.00

Landscape Architecture

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

LA 10600 - Accelerated Foundations Studio

Credit Hours: 6.00. Conceptualizing, recording, and presenting site design ideas through problem-solving projects. Introduction to design and to presentation techniques fundamental to landscape architecture. Short projects give students exposure to a variety of design topics and presentation materials (pencil, ink, pastel, paper and board) and freehand lettering through two- and three-dimensional creative projects. Materials used are purchased by the student.

Learning Outcomes: 1. Demonstrate/understand fundamental tools and processes of design: spatial organizations and

relationships, analytical tools and ordering principles. 2. Demonstrate/understand basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate/understand investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Demonstrate/understand effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Demonstrate/understand roles, contributions and responsibilities of Landscape Architecture to society and to environmental health. 6. Demonstrate/understand how to be a design student: time/task management, learning and functioning in a studio environment, working independently and as a team member. Credits: 6.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student.

Learning Outcomes: 1. Develop graphic ability to clearly describe design ideas, concepts and proposals. 2. Develop an awareness of the range of graphic representations, techniques and methods available to the designer. 3. Develop a working vocabulary for graphic communication in landscape design. 4. Foster the value of CRAFTSMANSHIP and PROFESSIONALISM in the preparation of graphics. Credits: 3.00

LA 11700 - Graphic Communication In Design II

Credit Hours: 3.00. A course in graphic communication theory focusing on digital skills and processes. Project-based instruction will be used to simulate design office procedures through 2D and 3D exercises using raster and vector software.

Learning Outcomes: 1. Prepare students for internship and professional practice through office-ready digital workflows. 2. Develop and refine a personal graphic style along with a critical ""designer's eye"" through formal presentation and discussion. 3. Analyze a problem and determine the best tool(s) for the task while pursuing graphic innovation by knowing the ""why"" and ""how"" of digital tools. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

LA 16600 - History And Theory Of Landscape Architecture

Credit Hours: 3.00. A study of the historic evolution of landscape architecture to the status of a recognized profession.

The course covers the social, economic, political, climatic, and other factors that have influenced the development of design styles and theories.

Credits: 3.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.

Learning Outcomes: 1. Apply the fundamental tools and processes of design: spatial organizations and relationships, analytical tools and ordering principles. 2. Demonstrate basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate the investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Make effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Articulate the roles, contributions and responsibilities of landscape architecture to society and to environmental health. 6. Demonstrate time/task management, learning and functioning in a studio environment, working independently and as a team member. Credits: 3.00

LA 22600 - Studio II: Site Analysis And Design

Credit Hours: 4.00. Methods, principles and the process of designing in the built environment. Basic principles of site organization and composition are presented and applied in a series of exercises and studio projects. Role of the design process is reinforced both as a problem-solving tool and as a means of creativity and ideation.

Learning Outcomes: 1. Recognize and discuss theoretical design principles, identify those principles in well-designed sites, and apply those principles to their own design work. 2. Apply a robust design process to solve increasingly complex site design problems. 3. Ideate and assess appropriate program elements based on client and site needs and investigate the impact of alternate program elements on successful site design. 4. Analyze natural systems and apply that understanding to determine the appropriate design of sites. 5. Apply knowledge of the functional requirements of landscape elements to locate, size, and use these elements in the landscape. Credits: 4.00

LA 22700 - Planting I: Creating Ecologically Connected Landscapes

Credit Hours: 3.00. Review of design principles as related to plant design characteristics; design implications of plant responses to environment; review of landscape plants in fall.

Learning Outcomes: 1. Apply knowledge of plant requirements and characteristics to the design of landscape spaces using plants and plant communities as the primary design material. 2. Construct appropriate plant palettes using both native and horticultural plants to build a cohesive sense of place, including a palette that is regionally appropriate to the Midwest. 3. Explore alternative solutions and use personal judgments to select plant combinations for technical, functional, and aesthetic uses in the landscape. 4. Distinguish the differences in garden styles and know the characteristics of each style. 5. Create a planting plan and schedule, incorporating appropriate nursery standards, and understand how these elements are part of the necessary construction documents for site construction. 6. Apply design process (site, inventory, analysis, concept, schematic, and master plan) to planting design. Credits: 3.00

LA 22704 - Studio III: Planting Design

Credit Hours: 4.00. Review of design principles as related to plant design characteristics; design implications of plant responses to environment; review of landscape plants.

Learning Outcomes: 1. Apply knowledge of plant requirements and characteristics to the design of landscape spaces using plants and plant communities as the primary design

material. 2. Construct appropriate plant palettes using both native and horticultural plants to build a cohesive sense of place, including a palette that is regionally appropriate to the Midwest. 3. Explore alternative solutions and use personal judgments to select plant combinations for technical, functional, and aesthetic uses in the landscape. 4. Distinguish the differences in garden styles and know the characteristics of each style. 5. Create a planting plan and schedule, incorporating appropriate nursery standards, and understand how these elements are part of the necessary construction documents for site construction. 6. Apply design process (site, inventory, analysis, concept, schematic, and master plan) to planting design. Credits: 4.00

LA 24600 - Site Engineering: Earthwork And Stormwater

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation, and nomenclature. Methods for calculating volumes of cut and fill.

Learning Outcomes: 1. Understand three-dimensional forms in the built environment and how these forms are represented using standard graphic conventions. 2. Visualize and manipulate geomorphic and manmade terrains. 3. Articulate, utilize, and specify methods for landscape architecture earthwork manipulation and stormwater management. 4. Demonstrate an understanding of circulation systems design, including rationale, safety, and proper documentation for construction through the design of circulation systems. 5. Apply knowledge of hydrology and traditional and sustainable stormwater management techniques to the design of site-specific stormwater systems. Credits: 4.00

LA 27500 - Honors Course - Lower Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to first- and second-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required.

Learning Outcomes: 1. Have critical thinking. 2. Have communication. 3. Have cultural understanding. 4. Know civic responsibilities. 5. Have professional preparation. 6. Know scientific principles. 7. Know social science principles. 8. Able to teamwork. Credits: 1.00 to 4.00

LA 29000 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 4.00. Special topics in landscape architecture are explored. Topic selection is based on student interest. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge of the presented topic to the larger framework of landscape architecture projects, products, and practices. 2. Communicate effectively, using written, graphic, or oral communication, including delivering effective presentations where required. 3. Apply methods of investigation and inquiry that are appropriate to the subject and desired product, including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. Credits: 1.00 to 4.00

LA 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LA 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LA 30900 - Co-Op Preparation

Credit Hours: 1.00. The material presented in this course consists of a broad overview of the employment opportunities in the professional practice of landscape architecture and the ways to secure an internship. It provides the student with information about career choices in landscape architecture and an appropriate knowledge base with which to make informed internship choices. Students prepare written and graphic documents for seeking employment. Students prepare for interviews and communications leading to employment as an intern in landscape architecture. Course meets during weeks 1-8.

Learning Outcomes: 1. Prepare and critique application materials in pursuit of gaining a co-op internship. 2. Practice interview skills and research firms available for co-op internships. Credits: 1.00

LA 31600 - Studio IV: Park And Open Space Design

Credit Hours: 4.00. Design theory and meaning in landscape architecture. Past, current and emerging design theories are investigated via lectures, research assignments and studio projects. Projects gain in size, complexity and depth of meaning. Emphasis on the role theory plays both as a stabilizing force and as a catalyst for change.

Learning Outcomes: 1. Access available landscape data to summarize critical natural resource needs at the site scale and translate this into fundamental ecological design principles for parks and open spaces. 2. Analyze the activities people participate in using available community parks and open space, categorize the landscape elements necessary to support current and projected future activities, and develop a parks program recommendation based on these social conditions. 3. Design public spaces that support multi-functional landscapes that fulfill recreation, education, and conservation program goals. Credits: 4.00

LA 32500 - Ecological Landscape Performance And Planting

Credit Hours: 3.00. Study of plants and their integration with other site features (e.g., water, landform) to increase sustainability. Plants will not only be studied for their aesthetic and spatial uses in the landscape, but also their ecological functions and temporal dynamics. The relationship of plants to site planning, ecosystems, and human use will be explored. Various scales, sustainable practices, and landscape performance will be considered. Class trip may be required. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Be familiar with and able to use design principles and elements in the development of planting designs and understand the implications of plants as living things. 2. Understand the relationship of planting design, ecological functions, social factors, and sustainability. 3. Have a clear understanding of the concept and measurement methods of landscape performance. 4. Set smart and measurable sustainable goals and be able to select suitable plant material and create effective compositions appropriate for a variety of site conditions. 5. Know how to observe plants from multiple perspectives (plant needs & site/environmental conditions; human spatial needs; aesthetic responses; ecological implications) and be able to integrate these perspectives into functional designs. Credits: 3.00

LA 32600 - Studio V: Community Design And Planning

Credit Hours: 4.00. Community planning and design. Past, current and emerging planning theories are investigated via lectures, research assignments and studio projects. The interrelationship of land use, circulation, and open space are explored using environmental and sustainable principles within a framework of traditional neighborhood design.

Learning Outcomes: 1. Understand the fundamental terminologies, design strategies, and workflow of master plan community planning. 2. Distinguish the attributes and characteristics of different residential types. 3. Articulate, utilize and specify methods for spatial layout and resource Integration (open space, transportation, parking and facilities, and building blocks) in different community planning projects. 4. Develop well-reasoned design concept and defensible design decisions that best respond to site constraints and planning regulations. 5. Apply knowledge of stormwater management and sustainable practices to community design. 6. Improve the abilities to research, critical thinking, collaboration, model making (hand and digital), verbal representation, and digital rendering techniques. Credits: 4.00

LA 34600 - Site Systems II

Credit Hours: 3.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails.

Credits: 3.00

LA 34604 - Site Engineering: Materials And Construction

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails.

Learning Outcomes: 1. Demonstrate an understanding of common landscape construction materials and their application in the built environment. 2. Demonstrate an understanding of structural qualities and limitations of construction materials and systems. 3. Demonstrate an understanding of basic construction documentation. 4. Demonstrate the ability to access, evaluate, and document a variety of materials and construction systems commonly found in landscape construction. Credits: 4.00

LA 35600 - Site Engineering: Construction Documents And Advanced Systems

Credit Hours: 4.00. Methods and standards of construction documentation using current technology. Preparation and packaging of site-related technical drawings and bid packages. Methods for site layout and dimensioning. Organization and composition of planting plans, plant lists, grading plans, lighting plans, and associated detail sheets. Standards and sequence of site-related specification documents.

Learning Outcomes: 1. Develop office-ready documentation techniques toward the efficient and complete generation of legally binding CD drawings. 2. Understand and demonstrate CAD drawing standards. 3. Understand and capable of developing construction details and technical specifications to describe all project components. 4. Demonstrate a preliminary understanding of on-site construction observation work. Credits: 4.00

LA 39000 - Professional Cooperative Programs In Landscape Architecture

Credit Hours: 0.00. Supervised work experiences in landscape architectural offices and in the landscape construction or maintenance industry. Programs must be preplanned and conducted under the direction of the cooperative educational coordinator in cooperation with an employer. Students must submit a summary report of the work experience. Consent of cooperative program coordinator required. Department permission required. Additionally, student must have a C- or better average in all LA courses taken to date.

Credits: 0.00

LA 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical

responsibility in professional work. Credits: 0.00

LA 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LA 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in landscape architecture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LA 40000 - Landscape Architecture Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

LA 41600 - Studio VI: Urban Design

Credit Hours: 4.00. An intensive design studio focusing on urban issues, including environmental, social, and economic approaches to the built environment. Exploration of development history, regulatory structures, local and regional demographics, economies, and environmental systems will be expressed through detailed design proposals, case study, and presentation critiques.

Learning Outcomes: 1. Explore spatial, social, and economic issues of design in an urban context. 2. Create design proposals dealing with urban populations and systems including urban ecology and demographics. 3. Analyze existing built works and design theories for lessons learned to inform innovative design solutions. Credits: 4.00

LA 42600 - Studio VII: Landscape Architecture Capstone

Credit Hours: 4.00. This course will focus on the integration and application of accumulated knowledge of landscape architecture from the student's previous coursework and internship experience. Students will be challenged to identify and solve problems in community-based projects. The students will also communicate, through reports and presentations, their results and plan to community audiences, faculty, and other students. Students will also do directed readings and then discuss topics related to the current and future practices of landscape architecture and environmental design.

Learning Outcomes: 1. Apply a meaningful and exhaustive process of investigation along with analysis that codifies modeling and testing of design hypotheses and expression. 2. Address all critical issues in the development of the project including challenges and limitations. 3. Develop clear and precise concepts defining theoretical and practical solutions to project issues, including aesthetics; site/environmental factors; and behavioral, historic, contextual and technological elements during the process of design. Credits: 4.00

LA 45000 - In The English Landscape:Integrating History, Horticulture, and Landscape Architecture

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Offered in even-numbered years. Permission of instructor required.

Credits: 3.00

LA 47500 - Honors Course - Upper Division

Credit Hours: 1.00 to 4.00. Utilized to offer a new honors course for a maximum of three years. Variable title, credit, and instructional type. Course may be repeated for credit if content and titles are different. Offered primarily to third- and fourth-year students. Courses offered must be approved by departmental or program faculty and College of Agriculture Honors Committee. Permission of instructor required.

Learning Outcomes: 1. Have critical thinking. 2. Have communication. 3. Have cultural understanding. 4. Know civic responsibilities. 5. Have professional preparation. 6. Know scientific principles. 7. Know social science principles. 8. Able to teamwork. Credits: 1.00 to 4.00

LA 47600 - Professional Practice Of Landscape Architecture

Credit Hours: 2.00. A study of the principles and practice of landscape architecture in private and public offices. The course covers project acquisition, office management, and project implementation procedures. Preparation of a professional compendium is required.

Credits: 2.00

LA 48100 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 3.00. This variable-credit, special topics course will be used for rotating topics dealing with skills, knowledge, and experiences related to landscape architectural theory, expression, and practice. Non-Landscape Architecture students may gain enrollment with permission of instructor.

Learning Outcomes: 1. Understand and relate information about significant examples of landscape architecture in North America which illustrate key principles and concepts of physical design and the organization of space for functional and aesthetic purposes. 2. Demonstrate that important historical landscape design is the product of both the broad cultural context (social, political, economic, and philosophical trends) and, of environmental factors such as climate and topography.

Credits: 1.00 to 3.00

LA 48200 - Contemporary Issues In Landscape Architecture

Credit Hours: 2.00. Rotating topics that explore focused issues in landscape architecture theory and practice. Analysis and experience of contemporary issues, designs, and designers explored through presentation, discussion, critique, and practice of thematic content. Non-Landscape Architecture students may gain enrollment with permission of instructor.

Learning Outcomes: 1. Analyze and evaluate focused topics in landscape architecture. 2. Understand and apply contemporary issues and theories in landscape architecture towards design studio, theory, and technology projects.

Credits: 2.00

LA 49000 - Special Problems In Landscape Architecture

Credit Hours: 1.00 to 6.00. Independent in-depth study and presentation of specific research or design problems selected by the student in consultation with the instructor. Open only to advanced students. Permission of instructor required.

Credits: 1.00 to 6.00

LA 49900 - Thesis Research

Credit Hours: 1.00 to 6.00. For students doing individualized research on landscape architecture; report required. Arrange with academic advisor and honors research advisor before registering. Admission to the honors program required. Permission of instructor required.

Credits: 1.00 to 6.00

LA 50100 - Research Methods For Design Applications

Credit Hours: 1.00. The growing need for understanding the role of individuals, communities, and society in shaping the natural environment has led to a greater emphasis on landscape architectural research and the need to provide training in the research methods to support these efforts. It is an exciting time to enter this arena as landscape architects are collaborating with natural and social scientist to achieve better conservation outcomes, promote sustainable behaviors, and increase awareness and understanding of the complex environmental challenges facing our society. Non-Landscape Architecture students may gain enrollment with permission of instructor.

Learning Outcomes: 1. Understand the need for social science research in landscape architecture practice and how this informs design theory development. 2. Model conceptually the relationship between social and ecological variables and understand the types of research methods available to explore these relationships. 3. Learn how to access demographic information about communities and user groups. 4. Develop a basic understanding of analysis tools and techniques, such as the use of GIS applications, Microsoft Excel, and SPSS (Statistical Package for Social Science) to conduct analysis of quantitative data. 5. Understand the common phases of developing theory-driven research and systems design evaluation. Credits: 1.00

LA 50102 - Research Methods For Design Applications

Credit Hours: 2.00. The growing need for understanding the role of individuals, communities, and society in shaping the natural environment has led to a greater emphasis on landscape architectural research and the need to provide training in the research methods to support these efforts. It is an exciting time to enter this arena as landscape architects are collaborating with natural and social scientist to achieve better conservation outcomes, promote sustainable behaviors, and increase awareness and understanding of the complex environmental challenges facing our society. Non-Landscape Architecture students may gain enrollment with permission of instructor.

Learning Outcomes: 1. Understand the need for social science research in landscape architecture practice and how this informs design theory development. 2. Model conceptually the relationship between social and ecological variables and understand the types of research methods available to explore these relationships. 3. Learn how to access demographic information about communities and user groups. 4. Develop a basic understanding of analysis tools and techniques, such as the use of GIS applications, Microsoft Excel, and SPSS (Statistical Package for Social Science) to conduct analysis of quantitative data. 5. Understand the common phases of developing theory-driven research and systems design evaluation. Credits: 2.00

LA 58100 - Special Topics In Landscape Architecture

Credit Hours: 1.00 to 3.00. Rotating topics dealing with skills, knowledge, and experiences related to landscape architectural theory, expression, and practice.

Learning Outcomes: 1. Learning outcomes vary due to nature of special topics course. Credits: 1.00 to 3.00

LA 58200 - Contemporary Issues - Landscape Architecture

Credit Hours: 2.00. Rotating topics that explore focused issues in landscape architecture theory and practice. Analysis and experience of contemporary issues, designs, and designers explored through presentation, discussion, critique, and practice of thematic content. Permission of instructor.

Learning Outcomes: 1. Learning outcomes vary due to nature of special topics course. Credits: 2.00

Languages and Cultures

LC 10100 - Special Topics in Languages and Cultures I

Credit Hours: 0.00 to 5.00. Special topics in Foreign Languages. Permission of department required.

Learning Outcomes: 1. Varies due to nature of course. Credits: 0.00 to 5.00

LC 10200 - Special Topics In Foreign Languages II

Credit Hours: 0.00 to 4.00. Topics vary. Permission of department required.

Credits: 0.00 to 4.00

LC 20100 - Special Topics In Foreign Languages III

Credit Hours: 0.00 to 4.00. Topics vary. Permission of department required.

Credits: 0.00 to 4.00

LC 20200 - Special Topics In Foreign Languages IV

Credit Hours: 0.00 to 4.00. Special Topics in Foreign Languages IV. Permission of department required.

Credits: 0.00 to 4.00

LC 23000 - Crossing Borders: Introduction To Comparative Literature

Credit Hours: 3.00. (CMPL 23000) Foundations for comparison of works in different languages, thematic (philosophical, sociological, psychological) and structural (genre, composition, use of linguistic devices); parallel interrelation of theme and structure in works of different literatures. The importance of literary norms and systems of genres. Examination of crosscurrents in different literatures during successive periods of development.

Learning Outcomes: 1. Provide familiarity with the original languages that lie behind English translations of world literature. 2. Relate a particular culture to the larger patterns of world literature to gain an appreciative of cultural diversity and global awareness of class, ethnicity, gender, and race. 3. Provide practical experience in oral communication through class presentations and reports and projects. 4. Provide practical experience in oral communication through class presentations and reports and projects. 5. Provide appropriate

level practice in information literacy related to the study of comparative literature, including researching source materials, research methodologies, and intellectual approaches. Credits: 3.00

LC 23100 - Fairytale, Folktale, Fable

Credit Hours: 3.00. This course provides an overview of fairytale, folklore, and fable traditions across various cultures and historical periods, as well as an examination of their ongoing influence on contemporary cultures. Taught in English.

Learning Outcomes: 1. Gain an intercultural knowledge of human cultures as well as global citizenship and awareness. 2. Make comparisons and connections about the interplay and the importance of such traditional tales among various cultures of the world. 3. Enable students to develop both their written communication and their oral communication skills. 4. Develop critical thinking, creative thinking, and in some instances, ethical reasoning. 5. Develop information literacy skills and the integrative knowledge, not only through classwork, but also through assignments and projects. Credits: 3.00

LC 23500 - East Asian Literature In Translation

Credit Hours: 3.00. Reading and discussion of selected East Asian poetry, prose, and drama. Focus will be on the traditions of China and Japan, but may include works of other cultures such as Korea. Emphasis may vary yearly, stressing traditional or modern literatures.

Credits: 3.00

LC 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (CMPL 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

LC 23900 - Women Writers In Translation (UCC: HUM)

Credit Hours: 3.00. An examination of international female writers' literary creativity in the context of women's studies and feminist theory, as articulated in their specific cultural and geographical milieu. Course content will vary in terms of cultural focus. In English.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop skills in writing, reading, critical thinking, and oral expression. 2. Gain knowledge of female literary traditions in different geographical milieu and time periods. 3. Increase awareness of the ways in which women writers reflect upon and resist stereotypes of women in literature, and how this process may differ across cultures. 4. Understand fundamental concepts in women's gender and sexuality studies. Credits: 3.00

LC 26100 - Introduction To The Linguistic Study Of Foreign Languages (UCC: BSS)

Credit Hours: 3.00. Overview of linguistics and the role of language in society; fundamental concepts of linguistic analysis. The course focuses on linguistic phenomena found in French, German, Russian, and Spanish, with material, examples, and assignments drawn primarily from those languages whenever appropriate.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

LC 26300 - Introduction To Computational Linguistics

Credit Hours: 3.00. This course introduces students to computational linguistics, a subfield of linguistics that studies natural languages from a computational perspective. The course covers both the theoretical and engineering topics ranging from aspects of formal linguistic structure to tools of language technology. The course will provide an understanding

of the essential characteristics and differences between fields of inquiry such as computational linguistics, natural language processing (NLP), machine learning, and artificial intelligence (A.I.). There are no prerequisites and students are not expected to have any previous programming background, although the course introduces students to Python 3 programming language. Python is the ideal choice for NLP and AI due to its robust capabilities, strong community support, flexibility, and readability. It is a requirement for all NLP practitioners.

Learning Outcomes: 1. Identify and describe key concepts of and common methods in computational linguistics. 2. Explain the role of computational linguistics in the broader context of linguistics and artificial intelligence. 3. Implement computational linguistics tasks with robust Pythonic code using state-of-the-art NLP libraries such as natural language processing toolkit (NLTK) and spaCy. 4. Acquire the ability to write programming projects in Python. 5. Analyze linguistic patterns in a natural language using Pythonic coding skills. Credits: 3.00

LC 26500 - Introduction To Neurohumanities

Credit Hours: 3.00. This course introduces students to the main developments in the neurohumanities particularly since the 1990s, with focus on cognitive literary and cultural studies. The course emphasizes not only the role of psychology, neuroscience, evolutionary biology, and other STEM and social scientific fields in interpreting cultural artifacts, but also how literary and cultural studies contribute significantly to those fields. Students will learn skills which will enable them to consider and interpret works of art, broadly defined, through a highly interdisciplinary cognitive-studies lens as they explore how the humanities are intricately intertwined with the sciences.

Learning Outcomes: 1. Identify the main focal points of cognitive literary and cultural studies and trace their developments over the past four decades. 2. Analyze the reciprocal influence of humanistic cognitive studies and scientific fields. 3. Explain the primary debates within and surrounding cognitive studies in the humanities. 4. Implement one or more approaches from cognitive studies to analyze a literary work, film, or other cultural artifact. Credits: 3.00

LC 26600 - World Literature: From The Beginnings to 1700 A D

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

LC 26700 - World Literature: From 1700 A D To The Present

Credit Hours: 3.00. World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

LC 28000 - Special Topics In Languages And Cultures

Credit Hours: 3.00. Special topics relating to world languages and cultures.

Learning Outcomes: 1. Vary due to nature of course. Credits: 3.00

LC 28100 - Introduction To World Food Cultures (UCC: HUM)

Credit Hours: 3.00. This course introduces students to global food culture and world gastronomy. It covers different aspects of food studies such as food representations in art and literature, national identity, culinary traditions, and world trade and migration in respect to food. This course will give students a broad overview of the relation between food and many other disciplines, allowing them to connect the topics addressed to their own fields of study. Conducted in English. No prerequisites.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Recognize the central importance of food in every culture and its relation to other fields of study. 2. Compare food representations in literary texts and other

forms of art. 3. Analyze how food contributes to the creation of national identities. 4. Recognize the main challenges of global food production, circulation, and consumption. 5. Examine the food heritage and impact of different cultures in the United States. Credits: 3.00

LC 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in language and culture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LC 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in language and culture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LC 30000 - World Literature Through The Photographic Lens

Credit Hours: 3.00. The course critically explores the photographic characteristics of modern world literature. It examines the deep, dynamical, and fascinating relationship between photography and literature.

Learning Outcomes: 1. Demonstrate critical understanding of the ways and manners literary works interact with photographic images. 2. Comprehend the relationship between the sense of vision, language and thought. 3. Demonstrate ability to critically appraise cultural differences, social problems and historical changes. 4. Identify, analyze, and evaluate literary theories, art criticism, historical analysis and philosophical musings. 5. Create, develop and hone a sense of aesthetics as well as a personal writing style while engaging in literary and art criticism. Credits: 3.00

LC 32300 - Global Sustainable Engineering

Credit Hours: 1.00 or 3.00. The main goal of this course is to encourage students to think like global engineers by focusing curricular activities on engineering case studies from a humanistic-engineering perspective. The case studies examined in the course may include past, present, and hypothetical engineering successes and failures; analyses will require engineering skills combined with understanding of cultural perspectives of local communities and cultural context (i.e., sociological, anthropological, and historical information and analyses that contribute to cultural understanding). This humanities-infused approach will encourage students to develop a new mindset--a way of seeing current and hypothetical engineering plans, projects, and impacts through local communities' pasts and presents, unique values, perspectives, and daily ways of life.

Learning Outcomes: 1. Discuss various approaches to engineering problems in class meetings or online discussion boards. 2. Analyze global engineering problems from engineering and humanistic perspectives evidenced in written case study responses and assessments. 3. Apply concepts of systems thinking and design thinking and express them in individual and group activities. 4. Explain the application of humanistic fields of study to engineering problems. Credits: 1.00 or 3.00

LC 33100 - Comparative Literature In Translation

Credit Hours: 3.00. A course in the study of a special topic related to works in several foreign literatures, directed by an instructor whose particular field of specialization will be highlighted.

Credits: 3.00

LC 33200 - Global Horror Cinema (UCC: HUM)

Credit Hours: 3.00. The course introduces horror cinema across the globe, through the technical and thematic analysis of different subgenres and domestic trends. In addition to building

analytical skills regarding film concepts and theories, the course is designed to implement critical skills in film studies, cultural studies, and global studies.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Apply film studies-related terms for technical and thematic analysis of film sequences. 2. Demonstrate a deeper knowledge of horror film industries across the globe. 3. Analyze the domestic and international contexts in which films are released (history, politics, social movements). 4. Investigate intersectional questions of gender, race, and class in connection with film analysis and film production. 5. Develop critical approaches to a variety of horror subgenres.

Credits: 3.00

LC 33300 - The Middle Ages On Film (UCC: HUM)

Credit Hours: 3.00. Introduction to the Middle Ages through films in various languages and genres from the beginning of film history to the present. Reading literary, historical, legal, and film theory texts in conjunction with the films, students critically analyze representations of the Middle Ages and the cultural context from which these emerge.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LC 33800 - Language Through Films

Credit Hours: 3.00. The course critically explores language(s) via the medium of cinema where language plays a key role in the film. It is intended to introduce students to the fundamental place language occupies within human experience, to advance knowledge of some of the features of the system of language, develop a sharper ear for language, a better understanding of its nature, and a livelier interest in all its manifestations. The course will be taught in English and films will be shown with subtitles.

Learning Outcomes: 1. Identify the main building blocks of language. 2. Examine the universal characteristics of the many languages humans speak. 3. Appraise the relationship between language, cognition, emotion and world view. 4. Re-evaluate their thinking regarding the acquisition of a second language. 5. Access the significant position language plays within societies and cultures. Credits: 3.00

LC 36100 - Sound And Form In Language

Credit Hours: 3.00. Examination of the nature of sound systems (phonology) and form systems (morphology) of language, as well as techniques of phonological and morphological analysis, using material from various languages. Central focus on phonetic and phonological structure, and on inflectional and derivational morphology.

Credits: 3.00

LC 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the U.S. culture at large.

Credits: 3.00

LC 37100 - Phonetics Of Foreign Languages

Credit Hours: 3.00. Introduction to articulatory phonetics for students of foreign languages. Mechanisms of production of speech sounds. Production and discrimination of sounds of other languages; contrast with English sounds; practice in pronunciation and phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be awarded for more than one of SLHS 30600 , LING 31500 , and LC 37100.

Credits: 3.00

LC 38500 - The Holocaust In World Literature And Film

Credit Hours: 3.00. This course explores the representation of the Holocaust through a wide range of literary and historical texts and films. The course provides sociohistorical context for these works, while also grappling with philosophical questions of representation such as how - or even should - the atrocities of genocide be represented aesthetically and fictionally? Drawing on both primary and secondary sources, the course gives students a nuanced understanding of the difficulties of representations that are based in part on fallible human memory, but also of the crucial importance of giving voice to those who experienced the trauma of the Holocaust. Students will further develop their critical thinking skills by analyzing literature and film that documents a variety of ways in which this watershed event of the 20th century has been represented and interpreted.

Learning Outcomes: 1. Analyze filmic and literary representations of the Holocaust in respect to themes, historical context, and narrative and filmic strategies of representation. 2. Demonstrate knowledge of the historical events surrounding the Holocaust. 3. Discuss the Holocaust from nuanced ethical and moral perspectives, with consideration of the vantage points of its victims, traumatized survivors, perpetrators, passive bystanders, and resistance fighters. 4. Evaluate the roles of

memory, first-person and eyewitness testimony, and other types of documentation of the Holocaust, reflecting on the challenges of representing these tragic events and the implications for historiography. Credits: 3.00

LC 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in language and culture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LC 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in language and culture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LC 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in language and culture. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

LC 39900 - Special Study Abroad Credit In Foreign Languages

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in foreign languages earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

LC 47500 - Theories Of Teaching World Languages

Credit Hours: 3.00. This course is designed to assist you in the process of becoming a skilled professional who can teach world language(s). You will gain experiential hours in the secondary classroom. You will also develop an understanding of the connection between effective language teaching and successful language learning, be able to think critically about your own teaching and teaching materials and gain an understanding of various theories, methods, approaches, and techniques in world language teaching. Areas of emphasis include the nature of language learning theories, early approaches to language pedagogy, communicative language teaching methodology, the relationship between theory and practice, aspects of the interaction between speakers in the classroom, skills-based theories, sociocultural perspectives, individual differences between learners, and usage-based approaches to second language acquisition.

Learning Outcomes: 1. Identify various theories of foreign language learning. 2. Describe various theories of foreign language teaching. 3. Analyze how student learning is influenced by different types of instructional practices. 4. Recognize how theories of individual and collaborative learning strategies affect student engagement. 5. Compare and contrast how diverse learners process information and develop language learning skills. Credits: 3.00

LC 49000 - Special Topics In Foreign Languages And Literatures

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

LC 49900 - Research In Foreign Languages

Credit Hours: 1.00 to 3.00. Undergraduate research into a topic in foreign languages. Permission of instructor required.

Credits: 1.00 to 3.00

LC 51900 - Teaching Of Foreign Languages

Credit Hours: 3.00. A basic course designed to provide a forum for ideas connecting theory and research to teaching practice. Explores issues related to how learning and teaching can be enhanced and presents ideas that can be implemented in the classroom. Permission of instructor required.

Credits: 3.00

LC 56300 - Historical Linguistics

Credit Hours: 3.00. (ANTH 56300, ENGL 56300) A survey of mechanisms and motivations of linguistic change. Topics include phonological, morphological, semantic and syntactic change, comparative and internal reconstruction, linguistic variation, language contact, and linguistic typology.

Credits: 3.00

LC 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, ENGL 56500, LING 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Credits: 3.00

LC 57000 - Introduction To Semiotics

Credit Hours: 3.00. (ANTH 51900, SLHS 58900, COM 50700, ENGL 57000) The study of languages, literatures, and other systems of human communication. Includes a wide range of phenomena that can be brought together by means of a general theory of signs. The course deals with three fundamental areas: 1) verbal communication, 2) nonverbal communication (iconic systems, gestures, body language, etc.), and 3) communication through art forms.

Credits: 3.00

LC 57300 - Methods Of Experimental Research In Linguistics

Credit Hours: 3.00. The course is an overview of experimental methods used in linguistic research. The goal of the course is to introduce basic concepts, terminology, and procedures associated with experimental research in general, and to survey the types of experiments typically conducted in several major subfields of linguistics, including the associated experiment designs and approaches to data analysis. The course will focus mainly on designing and conducting the experiment, rather than on data analysis, although the data analysis techniques appropriate to the types of data will be briefly discussed whenever possible. The course will also cover additional topics such as ethics of experimental research (preparing an IRB protocol), doing background research, getting funding, choosing the right conference for presenting the results, writing a conference abstract, creating and delivering a conference presentation/poster, and writing up the results for publication.

Learning Outcomes: 1. Define experimental research and explain its differences from other types of research. 2. Explain best practices in developing research questions, hypotheses, and designing experiments. 3. Distinguish different types of data and measurement levels and select the appropriate type of data analysis for a given type of data. 4. Design and implement experimental studies independently to test hypotheses in linguistics, including determining the necessary equipment, software, facilities, and subject pool, preparing IRB protocols, and obtaining funding. 5. Summarize and present experimental results effectively both orally and in writing and in appropriate presenting and publishing outlets. Credits: 3.00

LC 57500 - Theories Of Foreign Language Acquisition

Credit Hours: 3.00. An advanced course designed to provide an overview of major theoretical issues in foreign language acquisition research. Provides a broad historical introduction to theories of acquisition that underlie these different perspectives. This course also provides an understanding of skills assessment and selection of instructional materials. Permission of instructor required.

Credits: 3.00

LC 57700 - Acoustic Analysis Of Speech

Credit Hours: 3.00. This course is an introduction to those aspects of acoustics most pertinent to understanding speech production and perception. It covers sound waves and their properties, digital signal processing, hearing and loudness, sound recording, and details of the acoustics of specific speech sounds such as vowels, plosives, fricatives, and nasals. The course includes a prominent practicum component aimed at learning to use software tools, specifically Praat, for analyzing acoustic properties of speech sounds.

Learning Outcomes: 1. Define the physical parameters of sound waves; explain how sound waves are created and how they propagate through a medium. 2. Explain the concepts of resonance and filtering as applied to speech production. 3. Explain digital signal processing as applied to the analysis of speech. 4. Use their understanding of acoustics to explain aspects of hearing and perception of speech, including the perception of loudness; explain

and apply standard methods of measuring loudness. 5. Use the tools of acoustic analysis to measure acoustic properties of speech sounds, such as duration, loudness, fundamental frequency, and other spectral properties; communicate the results effectively orally and in writing. Credits: 3.00

LC 59000 - Directed Reading In Foreign Languages

Credit Hours: 1.00 to 4.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 4.00

LC 59300 - Special Topics In Literature

Credit Hours: 1.00 to 4.00. Special topics in Literature. Permission of instructor required.

Credits: 1.00 to 4.00

LC 59600 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Special topics in Linguistics. Permission of instructor required.

Credits: 1.00 to 4.00

LC 63000 - Comparative Literature: Function And Methods

Credit Hours: 3.00. (CMPL 63000) An introduction to methods, problems, and the bibliographical tools pertaining to comparative study. Required of all students in the Comparative Literature Program.

Credits: 3.00

LC 63900 - Seminar In Comparative Literature

Credit Hours: 3.00. (CMPL 65000) Exploration of a significant topic in comparative literature, e.g., the arts of translation, thematology, genre studies, literary movements, literary relations between countries. (See Comparative Literature.) Prerequisite: ENGL 66000 or LC 63000 .

Credits: 3.00

LC 65000 - Topics In Theory

Credit Hours: 3.00. Study of theoretical approaches to literature, the arts, or general culture (e.g., cognitive science, deconstruction, feminism, hermeneutics, postmodernism, postcolonial studies, reader response, semiotics). Examines methodologies and confronts them with literary texts. Permission of instructor required.

Credits: 3.00

LC 65900 - Seminar In Literature And Culture Of The African Diaspora

Credit Hours: 3.00. An examination of the African Diaspora through the study of literatures and cultures of Latin America and the Caribbean. Prerequisites: Experience working with literatures of the African Diaspora and critical theory. Learning Outcomes: 1. Acquire knowledge of the historical shifts that affected the formation of the literary movements. 2. Use theory in their interpretation of the texts. 3. Demonstrate ability to apply literary theories in order to analyze the literature read. Credits: 3.00

LC 67900 - Seminar In Linguistics

Credit Hours: 3.00. Advanced study and research on a significant topic in linguistics. Topic to be announced in advance. Permission of instructor required.

Credits: 3.00

LC 69800 - Research MA Thesis

Credit Hours: 1.00 to 18.00. Research MA Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

LC 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Latin

LATN 10100 - Latin Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to classical Latin language. Focus on grammar, syntax, vocabulary, and elementary readings.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Learn the basics of reading and translating Latin, including the first half of the core grammar syntax. 2. Improve understanding of English by enriching their vocabulary through etymological connections and through sensitivity to grammatical structures and stylistic choices. Credits: 3.00

LATN 10200 - Latin Level II (UCC: HUM)

Credit Hours: 3.00. Second semester introduction to Latin. Focus on grammar, syntax, vocabulary, and elementary readings in classical Latin and the language of the Vulgate.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Continue to learn the basic grammar, vocabulary, and syntax needed for reading and translating Latin. 2. Improve their understanding of English by enriching their vocabulary through etymological connections and by increasing their awareness of grammatical structures and stylistic choices. Credits: 3.00

LATN 10500 - Accelerated Basic Latin

Credit Hours: 4.00. Foundational Latin grammar course designed to prepare students to read classical and post-classical Latin in a single intensive semester. Focus on grammar, syntax, vocabulary, and elementary readings. The accelerated Latin course assumes *no* previous knowledge of Latin and makes it possible for the diligent student to be able to read *any* Latin prose or poetry (with a dictionary) after a single semester. (Upon completion students will be prepared to enroll in Latin 201.)

Learning Outcomes: 1. Recite Latin texts aloud (with accurate pronunciation, meaningful phrase grouping, and appropriate voice inflection) by imitating models they have heard in class. 2. Analyze Latin texts by identifying and describing the basic elements of Latin grammar, sentence structure, and style. 3. Translate intermediate level un-adapted Latin texts into English. 4. Compose complex sentences while writing a short story in Latin. Credits: 4.00

LATN 20100 - Latin Level III (UCC: HUM)

Credit Hours: 3.00. Intermediate reading course in Latin, designed to strengthen students' grasp of grammar and syntax, broaden vocabulary, and develop foundational skills in reading and translation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Reinforce knowledge of the basic grammar, vocabulary, and syntax needed for reading and translating Latin. 2. Read and translate simple Latin literature independently and read and translate more complex literature with suitable help from commentaries and instructor. 3. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending their vocabulary through etymological connections. Credits: 3.00

LATN 20200 - Latin Level IV (UCC: HUM)

Credit Hours: 3.00. Upper intermediate reading course in Latin prose and poetry, designed to consolidate students' grasp of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Continue to reinforce knowledge of the basic grammar, vocabulary, and syntax needed for reading and translating Latin. 2. Apply foundational knowledge to selections from complex and stylistically sophisticated Latin literature. 3. Improve understanding of English by enriching their vocabulary and through increased sensitivity to grammar and style. Credits: 3.00

LATN 31500 - Latin Paleography I

Credit Hours: 3.00. This course gives students the opportunity to work with original medieval Latin manuscripts, involving transcription and translation, as well as study of the creation, care, and preservation of rare manuscripts.

Learning Outcomes: 1. Work with unedited and as yet untranslated Latin texts. 2. Transcribe Latin documents and produce original translations. 3. Address and solve complex syntactical challenges. 4. Identify fields tangential to Latin and Classics discipline, such as mediaeval history, art history, religious and biblical studies, music, etc. 5. Demonstrate an understanding of digital humanities. Credits: 3.00

LATN 34300 - Roman Oratory (UCC: HUM)

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of social, political, and rhetorical issues raised by the published versions of speeches performed in ancient Rome.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Improve skills as readers and translators of Latin. 2. Discover the importance of oratory in Roman politics and culture. 3. Develop understanding and enjoyment of Latin prose style. Credits: 3.00

LATN 34400 - Roman Epic (UCC: HUM)

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of social, political, and rhetorical issues raised by epics such as Vergil's Aeneid, Ovid's Metamorphoses, or other hexameter poetry.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Improve skills as readers and translators of Latin poetry. 2. Increase understanding of the importance of hexameter poetry in Roman culture and subsequent literary tradition. Credits: 3.00

LATN 34500 - Roman Elegy (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of selections from

Roman Elegy, including selected passages from such authors as Catullus, Tibullus, Propertius, and Ovid.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 34600 - Roman Rhetoric (UCC: HUM)

Credit Hours: 3.00. Development of advanced Latin reading skills, alongside exploration of the social, political and literary questions raised by Roman rhetorical theory.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop more advanced skills as readers and translators of Latin literature. 2. Analyze Roman perspectives on communication and will discover how influential thinkers assessed the role of literature and speech in Roman society. Credits: 3.00

LATN 34700 - Roman Comedy (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of Roman comedy, including selected works of Plautus and Terence.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Have a greater facility in translating Latin in general, and Latin verse in particular. 2. Study of texts representative of this genre will enhance their understanding and appreciation not simply of other pieces of Roman literature, but also of western comedy as a whole, whose roots are in the comedies of Plautus and Terence. 3. Focus on the background of Roman comedy will also enable students to recognize important connections between literature and its social contexts.

Credits: 3.00

LATN 44200 - Roman Lyric Poetry (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of selections from Roman lyric poetry, with special attention to Catullus and Horace.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 44300 - Roman Satire (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of Roman satire, including selected passages from Horace, Juvenal, Petronius, and Seneca.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 44400 - Roman Philosophers (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of Roman philosophical texts.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 44500 - Roman Encyclopedists (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of texts representative of Roman encyclopedism, including selected passages from Pliny the Elder, Aulus Gellius, and Nonius Marcellus.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 44600 - Roman Historians (UCC: HUM)

Credit Hours: 3.00. Readings and discussion of Roman historical texts.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

LATN 49000 - Directed Reading In Latin

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Permission of instructor required.

Credits: 1.00 to 3.00

LATN 59000 - Directed Reading In Latin

Credit Hours: 1.00 to 4.00. Directed reading of selected texts in classical and/or medieval Latin. Permission of instructor required.

Credits: 1.00 to 4.00

Latina American and Latino Studies

LALS 25000 - Introduction To Latin American And Latino Studies

Credit Hours: 3.00. Interdisciplinary and integrative presentation and examination of the historical, political, economic, and cultural processes of Latin America, from independence to the present followed by an analysis of scholarly works that include theoretical models, methodological strategies, and analytical approaches to learning about US Latinos. Special emphasis is placed on the immigrant experience and its role in the incorporation of Latinos into the US society.

Credits: 3.00

LALS 26000 - U S Latino Culture

Credit Hours: 3.00. This course uses an interdisciplinary approach to study Latino culture in the United States through art, film, literature, music and theater.

Credits: 3.00

LALS 30100 - Latin American Literary And Cultural Studies

Credit Hours: 3.00. Focuses on Latin American literatures and cultural products, such as film, music, and/or art. As a variable-topics course, individual sections may variously focus on South

and/or Central America, Mexico, the Caribbean, U.S. Latina/o populations, or any combination of the above. Individual sections may also examine major cultural and historical movements, and/or canonical and emerging authors and artists. May be repeated for credit.

Credits: 3.00

LALS 30300 - Latin American Languages And Linguistics

Credit Hours: 3.00. Focuses on the languages and linguistic practices of Latin American and/or U.S. Latina/o populations, also including the Caribbean. As a variable-topics course, individual sections may variously focus on the nature and structure of specific languages, as well as the study of their dialects, semantics, and histories; the history, structure, uses, and educational concerns of Latin American indigenous, Caribbean Creole and/or U.S. Latina/o speech communities; or any combination of the above. May be repeated for credit.

Credits: 3.00

LALS 34700 - Latin American Politics

Credit Hours: 3.00. Focuses on major aspects of Latin American and/or U.S. Latina/o politics and development. As a variable-topics course, individual sections may variously focus on U.S. foreign policy toward countries in Latin America, the U.S.'s historical role in the politics of the Western hemisphere, the impact of the military on political development, the dynamics of Latin American industrialization, Latin America's changing international role, Latinas/os's political participation in the United States, or any combination of the above. Individual sections may also Latin American political thought from the colonial period through the present day.

Credits: 3.00

LALS 35500 - Political Economy Of Latin America

Credit Hours: 3.00. Examines the salient issues of the 21st century in the political economy of Latin America. The first part introduces students to the historical evolution of the region's economy and its socio-economic and political determinants. Then it focuses on topical inquiry, analyzing key policy areas, frameworks and choices at the core of the current political economy of the region's countries: fiscal and industrial policies, monetary and financial policies and policies on trade, migration and inequality, energy and the environment.

Credits: 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester.

Credits: 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 6.00

Library and Information Science

ILS 55200 - Research Data Management For Quantitative Data

Credit Hours: 3.00. This course will provide students working with quantitative data an overview of major issues in quantitative data management such as data set organization; data versioning, backup, and archiving; computer file and directory organization; data quality control, exploration, visualization and analysis; and data sharing, publication, copyright and ownership. Students will be introduced to a wide range of public databases to serve as examples of data organization, sources of reusable research data, and possible platforms for data publication. Recent trends and emerging issues in data and information science will be discussed, but the primary focus will be on encouraging students to apply critical thinking so they can develop practical strategies to their own research data issues. Accordingly, the course places a strong emphasis on active learning with theoretical lectures and discussions reinforced by applied lab sessions using tools such as Excel, R, Unix, Git, and parallel computing. Permission of department required.

Learning Outcomes: 1. Demonstrate mastery of using a computer as their primary data management tool through online labs, a data management notebook, and discussions. 2. Demonstrate mastery of efficient use of Excel, R, and Git through the online lab exercises and data management notebook. 3. Demonstrate use of public data repositories in their discipline through written assignments and the final data management project. 4. Demonstrate preparing dataset for publication through the online lab exercises and the final data management project. 5. Demonstrate creation of a data management plan through completing a written data management plan for a specific data set.

Credits: 3.00

Linguistics

LING 20100 - Introduction To Linguistics (UCC: BSS)

Credit Hours: 3.00. Basic concepts of linguistics and methods of analysis of language; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax, and semantics, and to problem-solving techniques, with

material drawn from a variety of languages.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

LING 31100 - Fundamentals Of Phonology And Morphology

Credit Hours: 3.00. Basic concepts and tools of phonological and morphological analysis viewed through the material of American English. Current theoretical approaches to phonology and morphology, including word-formation processes and applications.

Credits: 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600.

Credits: 3.00

LING 32100 - Foundations Of Syntax And Semantics

Credit Hours: 3.00. Introduction to syntactic and semantic analysis based on American English and its dialects. Underlying structure and its relation to meaning. Analysis of parts of speech, constituent phrases, sentence structure, representations, ambiguity, and applications of current theory. Credit will not be given for both LING 32100 and ENGL 32800 .

Credits: 3.00

LING 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the United States culture at large.

Credits: 3.00

LING 39800 - Special Topics In Linguistics I

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 47000 - TENL Practicum

Credit Hours: 3.00. As the final course of the TENL program, the Practicum builds on participants' knowledge and skills of teaching multilingual learners by revisiting previous learning in the TENL program. This course requires participants to demonstrate mastery and application of concepts covered in previous courses (e.g., oral language progression, literacy development, test construction, domains/subsystems of language, language teaching methodologies, etc.) and assesses what participants currently know and believe about English language instruction, literacy acquisition, and approaches to professional development. Experiential learning or fieldwork in a classroom setting is required. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.

Credits: 3.00

LING 49000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required.

Credits: 1.00 to 4.00

LING 49800 - Special Topics In Linguistics II

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 49900 - Research In Linguistics

Credit Hours: 1.00 to 3.00. Undergraduate research into a designated topic in linguistics. Permission of instructor required.

Credits: 1.00 to 3.00

LING 50000 - Introduction To Linguistics

Credit Hours: 3.00. Fundamental concepts and methods of linguistic analysis of natural languages; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax and semantics, and to problem-solving techniques, with material drawn from a wide variety of languages. Offered in conjunction with ANTH 51400 or AUSL 58000 or ENGL 50600 or LC 56100.

Credits: 3.00

LING 50100 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual development.

Learning Outcomes: 1. Learn how languages are acquired and developmental stages of main linguistic components. 2. Know major concepts and issues relative to child language development. 3. Know major concepts and issues relative to bilingual first language acquisition. 4. Know main sociocultural constructs related to language development. 5.

Become familiar with main issues relative to methodological issues in language acquisition. 6. Know main linguistics and psycholinguistic factors related to language acquisition including age, cognitive development, and linguistics input. Credits: 3.00

LING 51100 - Phonology I: Descriptive Analysis

Credit Hours: 3.00. Foundations of phonological analysis. Development of concepts and methods for the analysis of phonological data and the phonological structures of natural languages within the framework of generative phonology. Focuses on problem solving and linguistic argumentation. Offered in conjunction with ENGL 51300 .

Credits: 3.00

LING 51101 - Methods And Materials In Tesol I

Credit Hours: 3.00. This course provides an overview and critical discussion on the profile of English language learners (ELLs), their cultural and linguistic backgrounds, features of academic language, the main language teaching theories and methods and how they inform current practices in various contexts, as well as US education policy on ELLs. The course also has an emphasis on the teaching of listening and speaking. The students are given ample opportunities to understand the integration of implicit and explicit instruction on various language concerns, e.g., phoneme-awareness, word augmentation, sentence structure, listening comprehension, oral fluency etc. Students will also apply the principles of teaching to a mini-teaching task, where they can put theories into practice, observe and share feedback. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.

Credits: 3.00

LING 51200 - Phonology II: Theoretical Approaches

Credit Hours: 3.00. Examination, comparison, and evaluation of contemporary phonological theories, with focus on the contribution of each theory to our understanding of representations and operations in phonological analysis. Primary emphasis is on autosegmental phonology, metrical phonology, lexical phonology, and optimality theory.

Credits: 3.00

LING 51201 - Methods And Materials In TESOL II

Credit Hours: 3.00. This course aims at broadening course participants' understanding of principles and practices of course & lesson planning, assessment, and materials development for English as a new or foreign language (ENL/EFL) instruction. Building on topics covered in Methods and Materials for TESOL I, we will examine explicit instructional approaches and strategies with an emphasis on developing reading and writing skills in the English language for culturally and linguistically diverse learners. While there is an emphasis on literacy instruction in this course, participants should keep in mind that all of the 4 language skills (reading, writing, listening, and speaking) are integrated and evidence of this integration is expected in the design of lesson plans. Throughout the semester, we will explore 5 major interrelated topics, which are guided by and embedded in philosophies and theories of education, language, second language acquisition (SLA), teaching, and learning: standards, curriculum, pedagogy, culture, and literacy acquisition. This course involves pre-professional education/training. Experiential learning or fieldwork in a classroom setting is required. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.

Credits: 3.00

LING 52100 - Syntax I: Syntactic Analysis

Credit Hours: 3.00. Foundations of syntactic analysis and syntactic theory within the framework of generative grammar. Focuses on the central concepts of syntactic theory and on the principles and methods of syntactic analysis and argumentation using a core of topics relevant for syntactic theory. Offered in conjunction with ENGL 51200 .

Credits: 3.00

LING 52200 - Syntax II: Issues In Syntax

Credit Hours: 3.00. Deeper examination of a wider range of syntactic phenomena and evaluation of competing theoretical analyses proposed to account for them. Constructing theoretical analyses and evaluating their explanatory adequacy for Universal Grammar. Topics include LF phenomena, functional projections, and structural representations.

Credits: 3.00

LING 53100 - Semantics I: Lexical And Sentential Semantics

Credit Hours: 3.00. Foundations of semantic analysis and survey of current linguistic semantic theories and methods. Semantics at the lexical and sentential levels. Combinatorial, truth-conditional, pragmatic, contextual, and computational semantics. Offered in conjunction with ENGL 51100 .

Credits: 3.00

LING 53200 - Semantics II: Formal And Grammatical Semantics

Credit Hours: 3.00. A formal, logic-based study of semantic relations. Semantics of individuals and objects, attributes, determiners, definite descriptions, quantifiers, events, time, and space.

Credits: 3.00

LING 54100 - Historical Linguistics And Language Change

Credit Hours: 3.00. A general examination of the ways in which languages and their subsystems change over time and of the forces that produce change. The comparative method; internal reconstruction; geographical variation; and social variation. Overview of world language families and genetic relationships.

Offered in conjunction with ENGL 56300 or LC 56300 .

Credits: 3.00

LING 56000 - Service Learning In Languages And Linguistics

Credit Hours: 1.00 to 4.00. This course aims to introduce the student to critical reflective thinking and experiential learning that address local and global needs and foster civic responsibility. This service learning course is a multifaceted method of teaching and learning that enriches a students' academic life and real life learning by engaging her/him in meaningful hands-on service to the community while gaining valuable knowledge and skills that integrate with course objectives.

Learning Outcomes: 1. Participated in socially responsible activities that would have a positive impact not only on her/his local and global community. 2. Acquired skills that are transferable to her/his future work environments. 3. Reflected on how to maximize her/his personal and academic development to help her/him achieve her/his goals in life. 4. Gained knowledge and insights that will prepare her/him for active civic engagement. Credits: 1.00 to 4.00

LING 56300 - Language Acquisition

Credit Hours: 3.00. This course offers an introduction to main linguistic, psycholinguistic and sociocultural approaches to language acquisition theory and research. Through extensive reading, students will develop a deep understanding of central issues affecting language acquisition in typically developing children, including age effects, and input and output conditions in the acquisition of syntax, semantics, phonology, lexicon and morphology. Emphasis will be made on experimental approaches and research methods in the acquisition of syntax in L1 and child bilingual develpment.

Learning Outcomes: 1. Understand how languages are acquired and developmental stages of main linguistic components. 2. Understand major concepts and issues relative to child language development. 3. Understand major concepts and issues relative to bilingual first-language acquisition. 4. Understand knowledge of main sociocultural constructs related to language development. 5. Understand main issues relative to methodological issues in language acquisition. 6. Understand main linguistics and psycholinguistic factors related to language acquisition including age, cognitive development, and linguistics input. Credits: 3.00

LING 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, ENGL 56500, LC 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Learning Outcomes: 1. Able to discuss the relationship between language and society and identify the roles of language in its social and cultural context. 2. Able to critique current theories in sociolinguistics using data sets provided in course texts. 3. Able to identify the major models for sociolinguistic analysis and suggest reformulations and refinements necessary for various societies and cultures. 4. Able to recognize the sociolinguist's responsibility in the ethical treatment of human subjects and collected data. Credits: 3.00

LING 57000 - Field Methods In Linguistics

Credit Hours: 4.00. This course deals with the basic techniques for collecting language data, and is designed to reproduce and explore the conditions and methods of linguistic fieldwork in a classroom. The course also addresses questions related to the ethics of retrieving linguistic data, the relations between the linguist and the speaking communities, and the use of the collected data. A non-Indoeuropean lesser-studied language will be examined with the help of a native speaker of the language. The main area of its grammar will be covered: phonetic and phonological system, inflectional and derivational morphology, basic syntactic structures and basic semantic phenomena. The final goal is to obtain a basic grammatical description of the language. Lab sessions will be directed towards the training in the software and audio and video tools used for the trade.

Learning Outcomes: 1. Identify the key parts of the grammar of language. 2. Formulate questions about the language that (a) can reveal the structure of language and (b) can be answered by a speaker with no knowledge of linguistics. 3. Use the tools of the trade (software, equipment, etc.) 4. Develop methodologies based on a Participatory Action Research approach. 5. Develop sensitivity about what is of relevance to the speaking

community and how to interact with the community in general and the speakers in particular. 6. Develop skills on how to transfer newly discovered scientific knowledge of the language back to the speaking community. Credits: 4.00

LING 57600 - Latin American Indigenous Languages And Cultures

Credit Hours: 3.00. This course will help students to learn the importance of understanding the diversity of Latin American indigenous languages and cultures as well as the intercultural understandings gained when these indigenous languages are valued within the global context. Moreover, this course will provide a general cultural and linguistic framework to understand the sociolinguistic status of the language within the context where it exists. In this course, students will deepen their knowledge of Latin American indigenous cultures and their historics, as a means to achieving a greater understanding of both a shared humanity and the variety of human experiences. Learning Outcomes: 1. Acquire in-depth knowledge in a chosen, specific indigenous people while demonstrating panoramic understanding of Latin American indigenous groups. 2. Explain the brief history of US interaction with a particular Latin American country of this course topic. 3. Show basic oral and auditory competency in the language; will demonstrate how to express and understand basic statements, greetings, requests for directions, for food, and general courtesy interactions in the particular language. 4. Identify the particular complex interactions of the indigenous language within the context of the dominant colonial language. 5. Identify the linguistic position of the language within the context of indigenous languages of the Americas. 6. Identify basic cultural characteristics associated with the language speaking community. Credits: 3.00

LING 59000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required.

Credits: 1.00 to 4.00

LING 59100 - Special Topics In Phonology

Credit Hours: 3.00. Investigation of an advanced topic in phonology. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59300 - Special Topics In Semantics

Credit Hours: 3.00. Investigation of an advanced topic in semantics. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59400 - Special Topics In Historical Linguistics

Credit Hours: 3.00. Investigation of an advanced topic in historical linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 59800 - Special Topics In Linguistics

Credit Hours: 1.00 to 4.00. Investigation of an advanced topic in linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 1.00 to 4.00

LING 61900 - Seminar In Phonology

Credit Hours: 3.00. Intensive study and research on a selected topic in phonology. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 62900 - Seminar In Syntax

Credit Hours: 3.00. Intensive study and research on a selected topic in syntax. Topic varies from semester to semester.

Credits: 3.00

LING 68900 - Seminar In Linguistics

Credit Hours: 3.00. Intensive study and research on a selected topic in linguistics. Topic varies from semester to semester. Permission of instructor required.

Credits: 3.00

LING 69000 - Individual Seminar

Credit Hours: 1.00 to 3.00. Under the individual guidance and supervision of a faculty member, students will select and investigate a topic and will produce a paper of professional caliber on the subject. Prerequisite: Doctoral student standing and Linguistics majors only. Permission of instructor required.

Credits: 1.00 to 3.00

LING 69800 - Research MA Thesis

Credit Hours: 1.00 to 12.00. Research MA Thesis. Permission of instructor required.

Credits: 1.00 to 12.00

LING 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Management

MGMT 10000 - Introduction To Management

Credit Hours: 1.00. An introduction to and survey of the field of management. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Required for freshman management students.

Learning Outcomes: 1. Understand the fundamental vocabulary of Business. 2. Analyze and rank different main areas of business in accordance with individual interests. 3. Apply appropriate strategies to maximize the possibility of getting the desired grade. 4. Develop a working knowledge of the many offerings that Krannert provides. 5. Become acquainted with numerous people associated with Krannert's past, current, and future endeavors. Credits: 1.00

MGMT 11000 - Introduction To Management And Information Strategies

Credit Hours: 2.00. An introduction to and survey of the field of business. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Students apply their knowledge of business in a Case Competition. Required for freshman Krannert Leaders Academy students.

Learning Outcomes: 1. Learn how to manage themselves. 2. Identify various professional development options available to them. 3. Reflect upon what type of Krannert student they would like to be. 4. Learn strategies and tactics to help them transition to college life 5. Analyze and rank different main areas of business in accordance with individual interests. 6. Learn how to manage teams. 7. Reflect upon their behavior within a group. 8. Learn how to manage a small team to be efficient 9. Compete in a freshmen case competition to explore further how to practice teamwork in a case environment. 10. Use information and fundamentals of business to make decisions 11. Understand the fundamental vocabulary of business. 12. Become aware of various resources that are available to them through the library. 13. Break down problems into segments. 14. Use information to make decisions in groups. 15. Become acquainted with numerous people associated with Krannert's past, current, and future endeavors. Credits: 2.00

MGMT 17300 - Data Mining Lab

Credit Hours: 1.00. The Data Mining Lab provides a guided Experiential Learning environment for School of Business', especially BS BAIM's, freshman and sophomore students to learn the basics of business data variety, how they are organized, and what insights may be mined for. Students will have hands-on experience to get familiar with a specific data mining tool, R, for carrying out some data mining experiments. Completion of this course will not only enable students to see how the prerequisite or accompanying foundational courses are relate to their major studies but also help them better preparing for successes in their multiple upper division course studies.

Learning Outcomes: 1. Recall examples of business data and data driven decisions. 2. Exemplify the concepts of structured business data and enterprise data management infrastructure. 3. Differentiate business applications of supervised and unsupervised data mining methods. 4. Explain data mining framework that consists of data understanding, insights derivation, and analytical result communication. 5. Use a data mining tool, R, for simple data mining related tasks. Credits: 1.00

MGMT 17500 - Information Strategies For Management (UCC: IL)

Credit Hours: 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments. Permission of instructor required.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Ability to access information and determine what different sources are needed for problem solving. 2.

Develop a foundation in problem-solving to use discovered information effectively and efficiently. 3. Develop a knowledge base into the full array of information available (scholarly articles, market reports, quality websites, and other types of information). 4. Prioritize sources based on credibility and relevance. 5. Accurately cite the information you find. 6. Use retrieved information to accomplish a specific purpose and present information clearly and persuasively using a range of technology tools and media. Credits: 1.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

MGMT 19000 - Freshman Level Problems In Management

Credit Hours: 1.00 to 4.00. Investigation into a specific topic area of Management. Arrange with instructor before enrolling.

Credits: 1.00 to 4.00

MGMT 19700 - Careers In Accounting & Finance

Credit Hours: 1.00. This course explores the various career opportunities available to accounting majors, as well as opportunities available to non-accounting majors who have a strong background in accounting. While most students believe public/private accounting are the only career options for accounting majors, we examine other avenues such as hedge funds, private equity and consulting, among others.

Learning Outcomes: 1. Identify potential career paths for both accounting and non-accounting majors with a strong accounting background. 2. Demonstrate an understanding of the various tasks employees perform in several distinct careers. 3. Develop the attributes necessary to succeed in various careers designed for individuals with an accounting major or a strong understanding of accounting (for non-accounting majors). Credits: 1.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4.

Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 22000 - Making The Business Case

Credit Hours: 3.00. This course develops one's ability to address situations faced by managers. This involves collecting information, analyzing that information to determine what decision or action is required and then selling the recommended decision or action to the management team. Selling this is done using one's persuasive skills in both telling a story and illustrating that story.

Learning Outcomes: 1. Differentiate whether a situation calls for making a decision or solve a problem. 2. Identify important facts in case studies. 3. Organize facts found in case studies into issues that factor in the analysis of alternatives. 4. Evaluate alternative solutions to a decision in terms of how they address issues. 5. Recommend an alternative solution. 6. Create a plan of action that will put the recommendation in place. 7. Create presentations that have a story line flowing through them. 8. Create a slide deck that supports the story line of the presentation. 9. Demonstrate effective speaking and body language when making presentations. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and

implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

MGMT 24200 - Contemporary Problems In Personal Finance For Minorities

Credit Hours: 3.00. This course is designed to allow students to make informed decisions regarding their current and future financial position. Utilizing basic tools such as financial statements and budgets, the students can learn how to plan effectively for continuous financial stability. Students also are able to acquire a basic understanding of different saving instruments, investments, and retirement planning methods, as well as the benefits of purchasing real assets and accumulating wealth to allow stability. Students also have the opportunity to explore other interesting topics of personal finance through presentations and voluntary participation in class discussion. Permission of instructor required.

Learning Outcomes: 1. Create a personal spending, saving, and investment plan for immediately after college. 2. Invest in desired stocks based on popular statistical measures. 3. Obtain a general understanding of careers in financial services. 4. Understand the financial impact of taxes, debt, and health. Credits: 3.00

MGMT 24300 - Contemporary Thought Of Minorities In Management

Credit Hours: 3.00. The basic goal of this course is to introduce the minority student to the vast opportunities that are available in the field of management. The logic of a business education for the minority student is a reflection of the phenomenon that many corporations today are actively seeking minorities for managerial positions. Each semester, approximately 15 Fortune 500 companies are invited to the class to give presentations about entry-level opportunities with their firms. Other topics include the interview, resume writing, dual-career couples, the work force, affirmative action, minorities in the corporate world, etc. Each student is required to give a class presentation covering a business area of interest followed by class discussion over the topic.

Learning Outcomes: 1. Develop job search strategies tailored to your career of choice. 2. Understand the largest challenges facing minority employees within corporate America. 3. Demonstrate an ability to work on a team to analyze data and provide a recommendation to a business case. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 25300 - Finance Industry Exploration

Credit Hours: 2.00. Finance Industry Exploration will introduce students to various sectors of the financial services industry through lectures, guest lectures by financial market participants and regular reading of financial publications (Wall Street Journal, Financial Times, etc.). Students will understand potential career paths, how specific financial markets operate, career success factors, employment differentiation, industry vernacular and suggested future coursework. Topics covered may include (subject to speaker availability) - Investment Banking, Mergers and Acquisitions, Corporate Finance, Corporate Development, Public Finance, Commercial Banking, Sales and Trading, Wealth Management, Asset Management, Private Equity and Private Credit, Venture Capital, Investor Relations and FinTech.

Learning Outcomes: 1. Analyze and explain the commercial landscape of the finance industry, including key firms, influential personalities, and the challenges and opportunities each face. 2. Develop and evaluate a tailored career strategy by identifying one or two industry sectors, multiple companies, and specific roles of interest, and designing a curricular and extracurricular pathway to enhance competitiveness in the job market. 3. Identify and interpret the success factors of various industry sectors and evaluate how specific roles generate value for their company and clients. 4. Demonstrate the ability to discuss industry

topics with professionals by using appropriate terminology and providing relevant historical and company-specific examples. Credits: 2.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

MGMT 25600 - Technology Landscape

Credit Hours: 1.00. Success in business requires an understanding of today's rapidly evolving technological landscape. This course provides students with an overview of emerging technologies that are shaping the future of business. Weekly meetings feature forums with technology experts and business practitioners, giving students insights into the latest technological advancements and their practical applications in diverse business contexts.

Learning Outcomes: 1. Identify and evaluate new and emerging technologies, including those associated with Computing, Digital Transformation, Automation, Biotechnology, Nanotechnology & Advanced Materials, Technology Management. 2. Integrate new and emerging technologies to promote business growth, competitiveness, and sustainability. 3. Conceive and describe applications of new and emerging technologies to tackle the challenges facing businesses over the next decade. 4. Conceive and describe applications of new and emerging technologies for a sustainable local, national, and global society. 5. Describe the political, legal, and ethical challenges resulting from the development and application of new and emerging technologies. 6. Create and deliver clear, effective, and engaging written assignments appropriate for both technical and non-technical audiences. Credits: 1.00

MGMT 26100 - Introduction To Supply Chain Management

Credit Hours: 3.00. This course seeks to introduce general concepts in supply chain management, including procurement, supply planning, demand planning, and logistics. This course is designed around a corporate partnership to provide students with the opportunity to collaborate on solving a large-scale supply chain challenge. In the first five weeks of the semester, students will be introduced to basics of SCM through lectures, cases, and assignments. Beginning in the sixth week, students will form teams to work on a real-world case presented by the corporate partner, a complex problem broken down into six learning areas, each with a corresponding deliverable.

Learning Outcomes: 1. Define, measure, and recommend improvements to an organization's supply chain. 2. Gain experience in applying these skills to a real-world business problem. 3. Learn about the different aspects of supply chain management. Credits: 3.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development

practices, including documentation.

Learning Outcomes: 1. Understand and apply basic technical knowledge to managerial problems. 2. Successfully write, test, and run computer programs designed to address managerial problems. Credits: 3.00

MGMT 28900 - Doster Leadership Conference Board Experiential Course

Credit Hours: 1.00. This experiential course focuses on developing leadership and managerial skills through the planning and execution of the Doster Leadership Conference. The course is designed for students currently in a leadership role related to the Doster Leadership Conference. The material is developed to offer evidence-based approaches to tasks and issues you will face in your role as a board member for the Doster Leadership Conference. In this course, you'll learn to tackle real-world challenges, improve communication, and foster effective teamwork. You'll also gain insights into event logistics, budgeting, and stakeholder engagement while honing your problem-solving abilities. By actively participating in the conference's development, you'll grow as a leader, event organizer, and team member and be better prepared for leadership and project management roles in the future. Ultimately, you will become a stronger, more thoughtful, more organized, and more creative board member and board committee as a whole. Permission of instructor required.

Learning Outcomes: 1. Make evidence-based decisions to address managerial issues. 2. Develop a systematic approach to fulfilling board member responsibilities and obligations. 3. Embrace a growth mindset as individuals and as a collective board. 4. Identify and address opportunities for improvement to deliver a high-quality conference. Credits: 1.00

MGMT 29000 - Problems In Management

Credit Hours: 0.00 to 4.00. Arrange with instructor before enrolling. Investigation in a specific management field. Permission of instructor required.

Credits: 0.00 to 4.00

MGMT 29050 - Professional Internship

Credit Hours: 0.00. Students should be pursuing an internship complementing their academic plans-of-study (majors, minors, and concentrations within the Krannert School of Management). The intended purpose of the internship experience is to help students clarify career interests and prepare for future roles in Accounting; Analytical Consulting; Economics; Finance; Human Resources (OBHR); Industrial Management; International Business; Management; Management Information Systems; Marketing; Supply Chain, Manufacturing, and Operations Management; Quantitative Methods; or Strategic Management. Students must be seeking a Bachelor of Science degree in the School of Management. Employment must be related to the students major, minor, or area of academic concentration. May not be taken for more than five (5) semesters. Permission of instructor required.

Learning Outcomes: 1. Identify skills, values and interests that ultimately help determine career fit and gain career preparedness. Credits: 0.00

MGMT 29110 - Integrated Business & Engineering Seminar I

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29120 - Integrated Business & Engineering Seminar II

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation.

Credits: 1.00

MGMT 29130 - Integrated Business & Engineering Seminar III

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29140 - Integrated Business & Engineering Seminar IV

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

MGMT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 29300 - Diversity In The Workplace

Credit Hours: 3.00. Diversity can be defined as real or perceived differences among people with regards to race, ethnicity, sexual orientation, religion, age, physical and mental ability, and family status that affect an individual's treatment, opportunities and outcomes. As demonstrated in the workplace,

diversity is the numerous ways that employees are viewed as being similar or different. Through this course, students will examine the historical context and the emergence of diversity in the workplace including bias, meritocracy, privilege, social identity frameworks, organizational culture, allyship and advocacy.

Learning Outcomes: 1. Demonstrate knowledge of historical policy and employment regulations that drive current workplace decisions. 2. Demonstrate awareness of social identities, values, and biases of self and of others. 3. Demonstrate perspective and skills to effectively navigate workplace groups and relationships. Credits: 3.00

MGMT 29400 - Navigating Gender In The Workplace

Credit Hours: 3.00. This course has four objectives: (1) To Increase self-awareness and understand its value in managing careers; (2) To learn how gender culture and implicit bias may affect workplace experiences; (3) To develop strategies to deal with gender related challenges; and (4) To develop competencies in leading effective, gender-aware teams. By exploring these areas, students will develop new insights for managing their careers, and they will learn new leadership strategies to help their teams achieve higher levels of performance.

Learning Outcomes: 1. Through self-assessment, increase understanding of your strengths, core values and work styles. 2. Practice behaviors that demonstrate your confidence and leadership skills. 3. Learn how men and women might behave differently in certain work situations, based on research. 4. Understand implicit bias and its potential impact on talent assessment and advancement. 5. Learn effective strategies and skills to handle common gender-related work challenges - as an individual, as a team member and as a leader. Credits: 3.00

MGMT 29450 - Women In Leadership

Credit Hours: 1.00. Ready to grow your confidence in leadership? In this one-credit course, we will explore how to develop and grow your talents, strengths and leadership while also making an impact at the school of business. We'll also explore what leadership looks like in different contexts, tools you need, and how to be a more inclusive leader.

Learning Outcomes: 1. Explore leadership theories and apply them to your experiences. 2. Develop a leadership plan for your personal leadership development and growth. 4. Assess how your MyStrengths talents make you uniquely qualified to lead. 5. Reflect on past success as you build a plan for personal leadership growth. Credits: 1.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in

corporate finance. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 31200 - Challenge X: Discovering Meaningful Problems Worth Solving

Credit Hours: 3.00. Venture creation drives progress by solving complex challenges, addressing pressing problems, and unlocking new opportunities. It begins with a deep understanding of stakeholder needs, customer pain points, and systemic challenges through rigorous observation and direct engagement. This course helps students lay that foundation by identifying a problem space they care about and embarking on a discovery journey. By the end, they will define their Challenge X?a clear, high-impact problem or opportunity that could inspire a new venture. Permission from Instructor is required.

Learning Outcomes: 1. Generate innovative venture ideas and critically evaluate their attractiveness and alignment with emerging market opportunities. [Idea Generation and Evaluation] 2. Conduct effective customer discovery processes - including secondary research, interviews and surveys - to validate problem hypotheses and refine business concepts. [Customer Discovery Skills] 3. Develop a strong understanding of problem-framing dynamics by synthesizing customer feedback into actionable insights that guide iteration and improvement of venture ideas. [Problem Framing] 4. Analyze target customers and markets using tools and frameworks to estimate market size, identify key segments, and assess competitive landscapes. [Market Analysis Competence] 5. Create and deliver persuasive presentations that effectively communicate validated business opportunities and demonstrate readiness for further entrepreneurial development. [Entrepreneurial Communication] Credits: 3.00

MGMT 31300 - Solution X - Designing And Building The Product To Address Challenge X

Credit Hours: 3.00. Once a validated problem is identified, how do we transform deep insights into impactful solutions? Building on Venture X1, this course focuses on designing, testing, and refining the right solution through rapid prototyping, business model innovation, and stakeholder engagement. Students will explore multiple solutions, iterate based on real-world feedback, and prioritize those that leverage existing technologies for maximum impact. By the end, they will have their Solution X-a validated prototype and model ready for further development and eventual venture creation. Permission of instructor required.

Learning Outcomes: 1. Design and build a Minimum Viable Product (MVP) that addresses a validated problem, and test it iteratively with customers to gather actionable feedback. [MVP Development and Testing] 2. Identify, prioritize, and validate critical assumptions about the desirability, feasibility, and viability of a business

idea through structured experimentation. [Critical Assumption Testing] 3. Develop a comprehensive business model that integrates key components such as value proposition, customer segments, revenue streams, and cost structures. [Business Model Design] 4. Formulate and evaluate a go-to-market strategy that aligns with the product offering, target customers, and competitive landscape. [Go-to-Market Strategy] 5. Deliver a compelling presentation that effectively communicates the MVP, business model, and validated assumptions to potential investors or stakeholders. [Pitching and Stakeholder Communication] Credits: 3.00

MGMT 31400 - MODEL X - Assembling And Attracting Resources For Launch

Credit Hours: 3.00. This course helps students transition from a validated solution to a scalable venture by focusing on assembling the critical resources needed for launch and long-term success. Building on X1 and X2, it shifts from solution development to securing the right team, customer traction, strategic partnerships, and sustainable funding. Through hands-on engagement with potential customers, investors, and partners, students refine their model and identify the best pathway-whether as a startup, business unit, or product extension. Over the summer, they will receive financial support, collaborate in a shared environment, and ultimately pitch their venture to attract the necessary resources for launch. Permission of instructor required.

Learning Outcomes: 1. Develop and refine a customer-validated business model with a clear value proposition that resonates with a specific cohort of paying customers. [Customer-Validated Business Model] 2. Form and manage a purpose-built co-founding team, leveraging partnerships with mentors, advisors, and subject matter experts to strengthen the venture. [Team Building and Leadership] 3. Identify and establish key partnerships with organizations and stakeholders to enhance business growth and scalability. [Strategic Partnerships] 4. Create and deliver an investor pitch that clearly communicates the value proposition, business model, and traction, while targeting the right investors for the venture. [Pitching and Fundraising] 5. Work effectively in a co-located team environment, learning from peers and leveraging the local network in downtown Indianapolis to solve real-world entrepreneurial challenges. [Collaborative Problem Solving] Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 33100 - Development And Impact of Equal Employment Law

Credit Hours: 3.00. This class will delve into the legal issues that affect women and men with regard to gender discrimination,

equality under the law, sexual harassment, the wage gap, the glass ceiling, affirmative action, family law, and more. The class will be lead through a variety of teaching formats including lectures, activities, presentations, and more. Through this course students will learn about these important areas and, in the process, develop strategies that will assist them as they pursue careers in business and management. Students will have the opportunity to delve deeply into areas that interest them and will impact their future careers. They will do this through a research topic and presentation. Sophomores and juniors are encouraged to enroll. The content may be of particular interest to women, but the course is open to all students.

Learning Outcomes: 1. Learn about the law as it relates to women in business and other areas. 2. Learn the theory related to law and women in business. 3. Practice through experiential exercises approaches to legal situations women confront in the business context. 4. Conduct research and make presentations related to class topics. Credits: 3.00

MGMT 33200 - Business World Problem Solving

Credit Hours: 3.00. The class engages students to work in cross-functional teams to analyze business problems,develop recommendations, and persuade decision makers through the presentation of compelling solutions. In the classroom students will work together in teams to solve problems that are difficult for firms to outsource and are usually solved in-house without the opportunity to engage a consultant.

Learning Outcomes: 1. Identify the critical elements of a business decision. 2. Develop a solution as a team. 3. Prepare and present a professional presentation of a business solution. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 33900 - Krannert Mentoring & Leadership Program

Credit Hours: 2.00. This course will help students learn mentoring best practices and qualities of an effective mentor while practicing and developing these qualities in themselves as they mentor incoming Krannert first-year students. Additional topics include: 1) how to implement and assess mentoring programs in companies, 2) how mentoring builds ethics and leadership skills, and 3) how to be a better cross-cultural mentor.

Learning Outcomes: 1. Learn best business mentoring practices and how to implement them. 2. Grow your awareness of your mentoring and leadership skills and challenges. 3. Develop formal mentoring relationships with

assigned mentees and informal mentoring relationships with other mentors and mentees. 4. Acclimate mentees to Krannert, college life, and business opportunities. 5. Facilitate your professional and personal growth (to mentor you) as you develop your mentees. Credits: 2.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 35000 - Intermediate Accounting I

Credit Hours: 3.00. Financial reporting for interested external parties. Emphasis on asset valuation, income measurement, and preparation of financial statements, and on appreciation of discretion available to preparers.

Learning Outcomes: 1. Understand the objectives of financial reporting. 2. Explain and apply the basic principles of accounting. 3. Describe how to prepare and analyze an income statement, balance sheet, statement of cash flows and statement of retained earnings under generally acceptable accounting principles (GAAP). 4. Understand the tradeoffs involved in standard setting, the limitations of current accounting standards, and the effects that these tradeoffs and limitations have on the quality and content of financial statements. 5. Gain an appreciation of firms' ability and incentives to choose from a wide variety of alternative measurement bases and accounting procedures and the effects that those choices have on readers of firms' financial statements. Credits: 3.00

MGMT 35100 - Intermediate Accounting II

Credit Hours: 3.00. Continuation of Intermediate Accounting I. An examination of additional problems in financial reporting, including long-term assets, liabilities, owners' equity, income taxes, earnings per share, leases, and pensions.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants

(i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

MGMT 35500 - Consulting Tools And Skills

Credit Hours: 3.00. This novel course will provide an opportunity for motivated students to gain exposure to the skills and tools necessary to succeed in the consulting industry. There will be a chance to work in small teams to define client problems, collect and analyze data, develop solution proposals, and implement recommendations. Students will also be given an insider's look into the history of consulting, common types of consulting, and professional standards in this specialized area of management. Honing skills in project management, presentation delivery, storytelling, and stakeholder engagement will form the foundation of the tools used to solve client challenges.

Learning Outcomes: 1. Effectively and confidently use specific consulting business language. 2. Critically analyze resumes and case interviews. 3. Effectively research businesses and unfamiliar industries. 4. Use a consulting approach to problem solving. 5. Present a professional, engaging, and authentic persona. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 37000 - Real Estate Fundamentals

Credit Hours: 3.00. This course introduces the basic concepts, principles, and analytic methods applied in the field of real estate. The course covers topics including legal, financial, economic and marketing concepts related to real estate. The goal of the course is to expose students to the field of real estate and prepare them for more advanced real estate courses.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Describe titles to the conveyance of real estate. 3. Review land economic principles as they relate to real estate values. 4. Identify all quantitative issues required to complete effective real estate transactions. 5. Discuss the aspects of city planning and zoning on real estate values. 6. Understand basic methods for real estate valuation. 7. Understand basic issues in real estate development. Credits: 3.00

MGMT 37300 - Accounting Information Systems & Data Analytics

Credit Hours: 3.00. Learn how to manage the design, control and operation of accounting information systems. The emphasis is on identifying the information needs of decision makers and developing appropriate business process control in the design of accounting information systems. Gain an understanding and appreciation of the accounting information system and how it is used to successfully manage, audit and develop processes to support today's evolving business environment.

Learning Outcomes: 1. Understand and apply basic tools necessary for diagrammatically analyzing and documenting organizational data flows and business processes including data modeling and flowcharting. 2. Gain an understanding of the various business processes necessary for an enterprise to successfully operate, the key controls for maintaining successful business processes, and application of the methodology for evaluating risks and controls within the given business process. 3. Explain, justify and evaluate the

components of organizational governance and associated effective internal control systems. 4. Develop a basic understanding of data analytics and emerging technologies in accounting information systems. 5. Explain and justify AIS auditing, computer fraud, and security techniques. Credits: 3.00

MGMT 37500 - Real Estate Law

Credit Hours: 3.00. The course provides an overview of real estate law and its influence on various aspects of the real estate industry. The course examines the legal issues surrounding the nature of real property, types of ownership and possession, real estate contracts, escrow and title and insurance, zoning, financing, landlord and tenant, land use regulations, environments law and regulations, and agency ethics.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Understand how the right to use land is conveyed. 3. Understand the limitations and requirements of land ownership. 4. Understand how the state controls and influences the use of property. 5. Describe the various ways of acquiring the title of real property. 6. Interpret the regulations on real estate contracts. 7. Evaluate various types of real estate ownership and financing techniques. 8. Understand the limitations which can be imposed on real property based on environmental concerns. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

MGMT 38900 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications.

Learning Outcomes: 1. Process data using R and RStudio. 2. Apply statistical and machine learning principles using R and RStudio. 3. Produce meaningful data visualization outputs using R and RStudio. 4. Examine the interaction between business principles and data analytics. Credits: 3.00

MGMT 39000 - Junior Level Problems In Management

Credit Hours: 0.00 to 4.00. The Accounting Internship provides work experience in businesses or other institutions. Permission of instructor required.

Credits: 0.00 to 4.00

MGMT 39100 - Strategic Thinking And Decision-Making

Credit Hours: 3.00. This course focuses on how to think strategically and make good business decisions. By the end of the class, you will be able to do the following: (1) Recognize biases in how people process information, conducting user tests

and interviews to gain insights from prototypes to make business development decisions; (2) Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas; (3) Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas; (4) Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders.

Learning Outcomes: 1. Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions. 2. Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas. 3. Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas. 4. Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders. Credits: 3.00

MGMT 39200 - Optimizing Personal Brand And Image

Credit Hours: 3.00. This course will focus on four areas: personal branding, social and digital media strategies, financial literacy and philanthropy. You'll gain an understanding of how to convey your image to an external audience, evaluate the proper channels to maximize and monetize that image responsibly, select advisors to help negotiate contracts and invest your money, and establish charities and events that support your personal causes. You'll learn which media and financial landmines to avoid while staying true to your personal principles and philosophies, and you'll gain leading-edge information about the technologies to keep you ahead in the game of life.

Learning Outcomes: 1. Outline the basics of developing your brand and convey your image to an external audience. 2. Evaluate the proper channels to maximize and monetize that image responsibly. 3. Explain basic financial concepts and compare advisors to negotiate contracts and invest your money responsibly. 4. Demonstrate how to establish philanthropies and events that align with your personal causes and brand. Credits: 3.00

MGMT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the

profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39699 - Professional Practice Internship

Credit Hours: 0.00 to 1.00. Professional experience in Management. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit reflective summaries and receive company evaluation. Permission of Instructor required.

Learning Outcomes: 1. Identify the practices, protocols, and key skills used for various positions of a particular organization and/or industry in which they are working. 2. Reflect on their professional growth, personal development, and the practical application of theoretical knowledge within their chosen field. 3. Refine and reassess their own career goals as a result of the experience. Credits: 0.00 to 1.00

MGMT 39799 - Professional Internship

Credit Hours: 1.00 to 3.00. Professional experience in Management. The internship must be for a minimum of 11 weeks and credit hours are determined based on worked hours per week and total hours worked. Program coordinated by the Office of Professional Practice in collaboration with Business Careers Services in the Mitch Daniels School of Business. Surveys are required to gather information on each student's experience, including details about compensation, location, and position. Along with completing work experience surveys, students are also evaluated by their supervisors. At the completion of the internship course, students are required to submit their updated resume which reflects their internship experiences. Other assignments may be required depending on the number of credits assigned to the course. Permission of instructor required.

Learning Outcomes: 1. Identify the practices, protocols, and key skills used for various positions of a particular organization and/or industry in which they are working. 2. Reflect on their professional growth, personal development, and the practical application of theoretical knowledge within their chosen field. 3. Refine and reassess their own career goals as a result of the experience. Credits: 1.00 to 3.00

MGMT 39800 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications.

Learning Outcomes: 1. Process data using R and RStudio. 2. Apply statistical and machine learning principles using R and RStudio. 3. Produce meaningful data visualization outputs using R and RStudio. 4. Examine the interaction between business principles and data analytics. Credits: 3.00

MGMT 40100 - Executive Forum

Credit Hours: 1.00. A lecture-discussion course featuring executives from business firms and other organizations. Emphasis is placed on the actual practice of management in corporate America, on career selection and mobility, on styles of management, and on other topics not normally covered in undergraduate courses.

Learning Outcomes: 1. Learn from a diverse set of speakers from a variety of institutions. 2. Understand problems and solutions and opportunities. 3. Gain the need for educational preparation of future business leaders. 4. Understand themselves, their responsibilities and their relationships with each other. 5. Understand the executive suite. Credits: 1.00

MGMT 40500 - Six Sigma And Quality Analytics

Credit Hours: 3.00. The course is an undergraduate elective offered as part of the Center for Manufacturing Management Enterprises (CMME) quality initiatives. Provides an overview of various tools and methods for total quality management.

Learning Outcomes: 1. Make data driven conclusions and decisions for quality management operations through working on various business cases. 2. Apply previously gained statistical knowledge to understand and to analyze data. 3. Gain some advanced analytical technics such as Analysis of Variances (ANOVA) and Design of Experiment (DOE) to optimize obtaining data and learnings.

4. Master a simple yet powerful MINITAB software to carry out complex tasks. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.

Learning Outcomes: 1. Understand the basic features and pricing of commonly used derivative products. 2. Develop necessary analytical tools needed to make good managerial decisions using derivatives. Credits: 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans.

Learning Outcomes: 1. Students will be introduced to financial markets and management of financial institutions through learning about determinants of interest rates, and measurement and management of financial risk, with particular attention on management of depository firms such as banks and savings and loans. Credits: 3.00

MGMT 41220 - FinTech

Credit Hours: 3.00. Dramatic development in technology is fundamentally transforming all aspects of financial intermediation including lending, payment services, investments and trading. The goal of the course is to introduce these new developments to students with the emphasis on underlying economic mechanisms. We will start with talking about fiat money but quickly delve into cryptocurrencies and their applications. We will talk about tokens, smart contracts, automated market making and how applications of these concepts are transforming financial services and financial inclusion. We will cover these topics by analyzing real companies and contrast them with traditional players in the financial system.

Learning Outcomes: 1. Understand fundamentals of blockchain and cryptocurrencies. 2. Understand tokenization, smart contracts, and automated market makers. 3. Evaluate implications of decentralized finance on banking, fund raising, financial markets and financial inclusion. 4. Develop skills to analyze various business models in the Fintech space. 5. Create a case study on a real Fintech company. Credits: 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities.

Learning Outcomes: 1. Examine management of fixed income securities. 2. Examine portfolios and risk management strategies. 3. Demonstrate use of simulation models for risk assessment. Credits: 3.00

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including

corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

MGMT 41350 - Venture Capital And Entrepreneurial Finance

Credit Hours: 3.00. This course includes descriptions of markets for start-up businesses, venture capital financial structures, valuation of start-ups, role of venture capital in economic development and business growth strategies.

Learning Outcomes: 1. Evaluate start-up ventures and understand the markets for early-stage businesses. 2. Value these companies using Discounted Cash Flow models, markets multipliers and other industry-specific valuation methods. Credits: 3.00

MGMT 41500 - International Financial Management

Credit Hours: 3.00. The course explores financial decision making in an international framework from the perspective of the management of a multinational corporation. Topics covered include the international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations.

Learning Outcomes: 1. Students will learn about financial decision making in an international framework from the perspective of the management of a multinational corporation through topics such as international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations. Credits: 3.00

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and corporate governance. The course uses a combination of lectures, readings, and case analysis.

Learning Outcomes: 1. Understand the processes of valuation, negotiation, and financial outcomes of transactions involving mergers and acquisitions. Credits: 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Outline and design new financial derivatives. 3. Develop the VIX index using options data. Credits: 3.00

MGMT 42000 - Consumer Analytics

Credit Hours: 3.00. Many firms possess extensive information about customers, their transactions, and their relationships with the firms, necessitating expertise for intelligent utilization. The objective of this course is to equip you with a scientific approach to customer marketing, featuring hands-on use of databases, analytics, and computing to collect, analyze, and act on customer information for various industries. This course specifically focuses on customer relationship analytics, including identifying promising prospects and customer acquisition, customer development through up-selling, cross-selling, and personalization, as well as managing customer attrition, retention, and evaluating customer lifetime value. It also explores advanced analytics models such as conjoint analysis, purchase forecasting, and perception analysis.

Learning Outcomes: 1. Use data analytics to improve customer engagement and elevate the overall customer experience. 2. Clarify the role of analytical customer relationship management in achieving strategic marketing goals across various industries. 3. Carry out analytical skills through practical experience with customer datasets. 4. Recognize advanced modeling techniques commonly employed in the field. 5. Summarize the financial advantages of adopting marketing strategies based on the concept of 'Customer Lifetime Value'. Credits: 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning, promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client.

Learning Outcomes: 1. Enhance the student's knowledge on Advanced Modeling Techniques, such as how and when to apply Logistic Regression, Logit, Multinomial Logit, Ordinal Logit, and Tobit. 2. Showcase situations across a variety of marketing topics (pricing, sales, advertising, new product development, etc.) where analytical methods can bring greater insight to the marketing practitioner. 3. Apply the above information to a real-world consulting project and deliver not only managerial insights, but also a data-driven presentation. Credits: 3.00

MGMT 42120 - Data & AI-Driven Marketing

Credit Hours: 3.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course offers an immersive exploration into the intersection of data science, artificial intelligence, and marketing strategies, providing students with the knowledge and skills to thrive in the digital era. It will discuss uses of data science tools and AI algorithms in marketing applications, such as personalized marketing, sentiment analysis, and ad campaign optimization. Students will also gain hands-on experience on applying the methods to real-world data.

Learning Outcomes: 1. Identify modern statistical & machine learning methods required for marketing using big data. 2. Carry out applying statistical and machine learning methods to improve major marketing decisions. 3. Implement statistical and machine learning methods in Python using real-world data. Credits: 3.00

MGMT 42130 - Consumer Behavior

Credit Hours: 3.00. Consumer behavior is the study of the processes involved when individuals or groups select, purchase, use, or dispose of products, services, ideas, or experiences to satisfy needs and desires. We will draw on research from psychology, marketing, economics and sociology to learn why consumers behave in the ways that they do. The course focuses on three general topics. 1) Consumers as individuals. We will explore basic psychological concepts like intrinsic motivation, perception, memory, and emotions to help us understand behavior. 2) Attitude change and decision-making. We will examine how consumers search and evaluate alternatives, develop attitudes, and make choices. 3) Consumers in their social and cultural settings. We will examine the interaction between the consumer and multiple external influences. We investigate how social elements (friends, family, etc.) and culture influence behavior.

Learning Outcomes: 1. Organize, explain and predict consumers judgements and choices using social science multiple concepts, frameworks and theories. 2. Identify & analyze consumer behavior issues and apply relevant theories to aid in managerial decision-making. 3. Generate basic applied experiments in consumer behavior to test relevant theories with real consumers. Credits: 3.00

MGMT 42210 - International Marketing

Credit Hours: 3.00. Most U.S. businesses, large and small, are becoming deeply involved in international business. The trend is going to grow even stronger because of the influence of World Trade Organization and regional trade blocks. Under these circumstances, it is imperative that business managers possess the skill sets to adapt their marketing strategies to the needs of international markets. This course will cover the concepts and theories pertaining to international marketing. It is aimed to

provide students with skills in formulating a marketing plan for foreign market entry and conducting business in a foreign country.

Learning Outcomes: 1. Understand the issues involved in formulating and evaluating international marketing strategies. 2. Learn about global market entry, expansion, and sustainment. 3. Be exposed to the appropriate theories, models, and other tools to make better marketing decisions in cross-cultural business settings. 4. Obtain insights into how profitable global marketing strategies can be created. Credits: 3.00

MGMT 42300 - New Product Development

Credit Hours: 3.00. Provides an overview of the new product development process. Detailed insights are provided in the "fuzzy front end" of this process. Targeting positioning, and product decisions are also covered. The second half of the course completes the marketing mix and covers various market testing and product launch issues.

Learning Outcomes: 1. Understand new product development process. 2. Analyze new product development cases. 3. Develop and test a new product idea. Credits: 3.00

MGMT 42410 - Retail Management

Credit Hours: 3.00. Understanding and executing effective sales and retail strategies are essential for achieving overall business success, impacting growth, customer relationships, and competitiveness in the market. This course combines theoretical foundations with practical applications, guiding students in integrating sales and retail management principles into comprehensive business decision-making processes.

Learning Outcomes: 1. Apply market analysis techniques to identifying customer segments, analyze sales techniques and create a strategic sales plan. 2. Demonstrate an understanding of the principles of inventory management, merchandising strategies and their impact on customer experience and profitability. 3. Analyze the alignment of sales and retail strategies with broader business objectives. 4. Apply sales and retail management concepts to diverse business scenarios. Credits: 3.00

MGMT 42420 - Sales Management

Credit Hours: 3.00. An introduction to sales force management, this course offers a comprehensive examination of the salesforce management process. Key topics include the principles and best practices of recruiting, selecting, training, compensating, and motivating sales personnel. Additionally, the course will cover strategies for effective supervision and evaluation of a sales team to ensure optimal performance.

Learning Outcomes: 1. Explain the different components/skills of relationship sales management and apply them through course assignments. 2. Compare and contrast different sales management strategies through cases and simulations. 3. Identify the appropriate balance between the theoretical, analytical, and pragmatic dimensions of professional sales management through discussions and examples of the diverse sales concepts, issues, and activities. Credits: 3.00

MGMT 42500 - Marketing Research

Credit Hours: 3.00. The purpose of this course is to develop skills in the planning and execution of market research studies designed to acquire useful information for marketing decisions. It aims to familiarize students with techniques of research design, data collection, and analysis. Emphasis is placed on evaluating the results obtained from such investigations.

Learning Outcomes: 1. Identify and prioritize marketing research needs by analyzing a firm's marketing plan. 2. Demonstrate competency using a variety of research methods, such as regression, conjoint analysis, multi-dimensional scaling, and cross-tabulation. 3. Develop a marketing research proposal that includes a problem description, associated research theory and models, a research instrument, a description of data collection procedures and protocols, and data analysis. 4. Critique different marketing research projects, identifying strengths, weaknesses and potential improvements in theory, measurement and analysis. 5. Demonstrate the ability to work in teams to design, conduct and report marketing research. Credits: 3.00

MGMT 42610 - Brand Management

Credit Hours: 3.00. This course is designed to provide an understanding of how to manage a brand, product, or product category. The course concerns issues related to customer behavior and customer decision making, with an emphasis on

how to utilize such customer-oriented knowledge for building and maintaining brand equity. This course builds on concepts and topics covered in the core marketing course.

Learning Outcomes: 1. Increase understanding of the important issues in planning and evaluating brand strategies. 2. Provide appropriate theories, models, and other tools to make better brand management decisions. 3. Provide students with insights into how profitable brand strategies can be created. Credits: 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital age. 2. Develop capabilities in designing, implementing, and evaluating digital marketing strategies. 3. Understand major tools of digital marketing by gaining hands-on learning experience of search engine advertising tools by participating in a Google sponsored online marketing challenge competition. Credits: 3.00

MGMT 42910 - Experiential Marketing

Credit Hours: 3.00. In this course, students learn to apply marketing concepts to real world marketing problems. Projects are varied and may involve marketing plan development for a start-up, market research, analysis of marketing data, digital marketing, search engine marketing, web design, and social entrepreneurship. Clients include Purdue Marketing Advisory Board members, entrepreneurs working with Purdue's Foundry and Discovery Park, Purdue Research Park start-ups, small and medium-size Indiana businesses, and non-profit organizations. Students are given flexibility in selecting projects of interest. Teams work under the direction of a faculty member. Teams meet regularly with the faculty supervisor and also the project sponsor to review project progress and discuss the next steps towards meeting project requirements. Projects are done in teams, although evaluation is individual. Permission of instructor required.

Learning Outcomes: 1. Acquire experience in applying concepts learned in marketing and other classes to real world problems. 2. Acquire practical knowledge in the stages of project management including problem formulation, selection of research approach to addressing a marketing problem, and collection of secondary and primary data. 3. Learn to integrate the project analysis and information gathered into a consistent whole and make specific recommendations for decision-making in real world situations. 4. Experience challenges of working in teams to achieve projects goals. Credits: 3.00

MGMT 42930 - Labor Relations

Credit Hours: 3.00. The course focuses on employee-employer relations. Attention is given to topics in legal aspects of union organizing and collective bargaining, labor unions history and structure in the United States, labor management negotiations, dispute resolution procedures, international labor relations, and labor-management cooperation.

Learning Outcomes: 1. Summarize what unions do and why workers join labor unions. 2. Explain how management can react when its workers decide to form a union. 3. Execute the process of collective bargaining and summarize information typically contained in a collective bargaining agreement. 4. Differentiate how disputes are resolved through mediation, arbitration, and other methods. 5. Compare how labor-management relations in the USA are versus similar relationships in other countries around the world. Credits: 3.00

MGMT 43000 - Professional Selling

Credit Hours: 3.00. The course covers all aspects of professional selling to help students develop an understanding of sales managers' goals, decisions, and challenges and learn about the tools, frameworks, and insights to diagnose and resolve strategic and tactical issues of selling. These concepts can help all employees promote their own ideas internally and more effectively work with the sales organization to achieve organizational success.

Learning Outcomes: 1. Introduce students to

the concepts, analyses, and activities that comprise professional selling. 2. Provide practice in assessing and solving problems sales professionals encounter. 3. Demonstrate how the sales function supports other marketing and strategic priorities within companies. Credits: 3.00

MGMT 43700 - Social Media Marketing

Credit Hours: 3.00. This course is deigned to equip students with tools and develop marketing skills required to address current marketing problems. The approach is to learn R software for conducting basic scraping on social media sites to understand user behavior and sentiment. In addition, Python will be used for web-scraping data from various websites and websites with dynamic content. The goal is to become familiar with such qualitative techniques as: word clouds, cluster dendrograms, sentiment analysis, and other methods. Occasional homework assignments or check points will be given to gain deeper understanding of the materials covered in class. The deliverables for this project will be a slide presentation (no more than 10 pages, excluding appendices) to showcase what you have learned. This may be included as a part of your resume to show your potential employers. These are some of the basic knowledge of useful skills in web crawling, data mining, and statistical analyses, so you may leverage your portfolio when seeking entry/junior level marketing analyst positions.

Learning Outcomes: 1. Learn how to collect and analyze consumer behavior and sentiment from social media platforms. 2. Gain experience in understanding online consumer search terms and related consumer trends. 3. Learn to become a marketing manager who would monitor competitors' products and pricing actions on the online space. 4. Exposed to the challenges of recent online platforms where websites use dynamic content to increase user interactivities. Credits: 3.00

MGMT 43800 - Pricing Strategies

Credit Hours: 3.00. In the era of Big Data, where extensive information is available at the customer level, managers benefit from an increased ability to learn from their customers' behavior. In this scenario pricing becomes a crucial lever for increasing the relationship with the customer and maximizing profits and shareholder value. In this course, students will learn how to systematically approach pricing decisions, taking the perspective of the marketing manager. The course will use a combination of lectures, case discussions and in-class exercises to leverage micro-level transaction data for pricing decisions.

Learning Outcomes: 1. Become familiar with the concepts, theory, and latest thinking bearing on the key issues in pricing, taking the perspective of the marketing manager. 2. Apply concepts and theory to the solution of real pricing problems in marketing settings. 3. Develop your business communication skills and receive feedback from your peers and the instructor. Credits: 3.00

MGMT 43901 - Real Estate Investment & Development

Credit Hours: 3.00. The course will cover two main topics: real estate development and real state investment. For real estate development, we will discuss the process of the real estate development process, including the basics of the idea conception, feasibility, planning, financing, market analysis, contract negotiation, risk management, marketing, and asset management. For real estate investment, we will discuss the process and techniques of analyzing real property investment, and the effects of market conditions, government policies, and other factors on real estate investment.

Learning Outcomes: 1. Understand the nature of real estate markets and how value is determined. 2. Understand the process of developing real estate properties. 3. Understand the basic methods for evaluating financial and other risks associated with a real estate development project. 4. Understand and utilize the underlying theory in the analysis of income-producing real estate as an investment medium. 5. Use the net present value and internal rate of return and traditional measures of investment analysis of a real estate investment. 6. Understand the basic principles in structuring real estate investments. Credits: 3.00

MGMT 43902 - Real Estate Capital Markets

Credit Hours: 3.00. In this course, students explore the world of real estate finance and capital markets from the perspectives of investors, lenders, fund managers, and other capital allocators. Diving into essential topics like deal structuring, waterfall analysis, debt management, real estate private equity, taxation and regulation, public incentives, mortgage-backed securities (MBS), and Real Estate Investment Trusts (REITs). Through hands-on experience, they will learn to model before-tax and after-tax cash flows, price various securities and deal structures, and develop strategies for managing risk and distress at both

project and fund levels. With a strong focus on case study analysis, this course will equip students with practical insights and skills to succeed in real estate finance.

Learning Outcomes: 1. Demonstrate a deep understanding of the history and composition of both debt and equity components of real estate capital markets. 2. Understand the main drivers of real estate capital flows and capital pricing. 3. Describe the structure of residential and commercial mortgage-backed securities. 4. Perform a comprehensive valuation of a REIT. 5. Structure the capitalization for a given project type. Credits: 3.00

MGMT 43905 - Real Estate Industry Project

Credit Hours: 3.00. This course gives students opportunities of working on real-world projects provided by commercial corporations or organizations. Through the experiential learning experience, students have the opportunities to develop knowledge and skills in managing real estate projects. Depending on the available projects, students will work on topics related to real estate investment and development, facility design and renovation, asset management and other issues. The focus is on developing students' ability in applying what they've learned to solve real-world challenges and receiving coaching and feedback from industry experts.

Learning Outcomes: 1. Learn how to organize your investment or development project by analyzing key characteristics and external constraints that affect schedule, budget, and outcomes. 2. Plan and manage financial and physical resources by a well-planned schedule with appropriate tasks. 3. Monitor project progress and make necessary adjustments to the project schedule manpower and costs. 4. Develop team leadership and communication skills. Credits: 3.00

MGMT 43907 - Advanced Topics In Real Estate

Credit Hours: 3.00. This course covers selected and timely topics in real estate that are not covered in other regular courses. The topics are determined by the instructor offering the course. The instructor may also include advanced analytical techniques for real estate investment decisions, real estate valuation, and other analyses. Cases and research reports may be used in this course.

Learning Outcomes: 1. Recognize and understand issues and their impacts on the real estate industry. 2. Assess the impacts of certain issues on a company. 3. Understand and apply advanced analytical methods in real estate decisions. 4. Develop a life-long learning ability for future issues in real estate. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

MGMT 44310 - China, America And Artificial Intelligence

Credit Hours: 3.00. The key to business success is to read broadly and to understand how culture, economics, history, and politics converge. Through frequent writing assignments, close readings of personal accounts, and daily class discussions, students will gain insights into how culture, economics, history, and politics intersect to influence human behavior and worldviews. Case studies and examples will be drawn from the United States, China, and Taiwan. Finally, we will apply what we have learned to the practice of global cultural dexterity. Students will identify cultural nuances and subtleties in order to share examples of how each student has adapted or failed to adapt to different cultural dynamics.

Learning Outcomes: 1. Identify and to analyze cultural, economic, historical, political, and social variables. 2. Understand how culture, economics, history, politics and society converge to influence human behavior and worldviews. 3. Gain knowledge of cultural worldview frameworks. 4. Acquire an attitude of openness. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing

world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 44363 - Confident Transitions And Leadership

Credit Hours: 1.00. In this course offered by the Brock Wilson Center for Women in Management, graduating senior women will prepare for a confident transition from student to professional. Students will focus on common issues for new employees as well as be paired with an alumni mentor. They will develop a personal plan for their transition from college student to successful professional through reading and discussing key business leadership books. Through this course, each student will build a plan for the first six months of their job and decide what a successful transition looks like for them. Permission of instructor required.

Learning Outcomes: 1. Understand the core principles of successful professionals and how they apply to a first job. 2. Explain and reflect on best practices for launching a successful career. 3. Formulate a plan for the first six months of your new position and what success will look like. 4. Utilize your unique MyStrengths as part of your plan for a Confident Transition. Credits: 1.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44429 - Talent Management

Credit Hours: 3.00. This course focuses on the employer-employee relationship at work, and how managers work with employees to improve employee performance. Attention is given to the history of labor relations and performance management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing employee performance.

Learning Outcomes: 1. Identify and understand the tools and techniques of contemporary employee relations at work. 2. Identify and understand the tools and techniques of contemporary performance management at work. 3. Ability to apply these techniques. Credits: 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on

organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Describe workforce planning implementation issues and the importance of continuous refinement of the plan. 2. Define talent acquisition and differentiate between recruiting and selection processes. 3. Understand the various talent acquisition organization models. 4. Use tangible and intangible data to build a business case for effective talent acquisition. 5. Articulate the steps in a common talent analysis and translate the analysis into selection criteria and methods. 6. Conduct a job-fit and organization-fit analysis and translate the analysis into selection criteria and methods. 7. Develop behavior-based and situation-based interview questions derived from job analysis and conduct a professional interview. 8. Design a process for final candidate evaluation. 9. Highlight various strategies to orient and onboard new acquired talent. 10. Articulate an employer's legal responsibilities in the talent acquisition process. Credits: 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys.

Learning Outcomes: 1. Evaluate the difference Total Rewards programs can make in organizations. 2. Distinguish between total rewards and compensation and identify compensation and non-compensation elements of total rewards. 3. Recognize various reward systems, their relationship and connection to a total compensation and benefits philosophy, and how they impact the quality of work life and productivity organizations. 4. Assess the practical issues in compensation and employee benefits in light of a company's management philosophy and human resources strategies. 5. Define job evaluation and its use to develop internally equitable compensation systems. 6. Identify the implications of using salary surveys to ensure externally equitable and fiscally responsible compensation systems. 7. Explain the concepts of salary administration and application of compensation programs in the business environment. 8. Better understand effective salary and wage structures in organizations today. 9. Explain the relationship between performance evaluation methods and reward systems. 10. Discuss the legal aspects of compensation, benefits and performance appraisals. Credits: 3.00

MGMT 44433 - Leading And Working In Teams

Credit Hours: 3.00. This course will explore the forces that affect behavior in teams, and the factors that lead to team success. We will use a variety of readings, cases, activities, and class discussions to build concrete skills related to leading and working in teams. The course will explore the specific challenges associated with leading teams, some of which include: building and designing teams, managing information exchange within and across teams, structuring effective group decision processes, igniting creative thinking, enabling complex problem solving, managing team diversity and conflict, and managing systems of teams. Permission of instructor required.

Learning Outcomes: 1. Identify and define concepts related to team functioning and effectiveness. 2. Apply those concepts to understand and diagnose issues associated with team effectiveness. 3. Develop a course of action to improve team functioning. Credits: 3.00

MGMT 44434 - Human Resources Analytics

Credit Hours: 3.00. This course introduces concepts, tools, and methods used in collecting, interpreting, and presenting HR data. Students will learn how to gain new insights, solve problems, and drive performance through HR analytics. A central focus of this course is the ethics of HR analytics. This course teaches students how to ask the right questions in order to intelligently use HR analytics and metrics for business

decisions. It discusses the implications of internet AI, business AI, perception AI, and autonomous AI for HR. This course will cover applications including the intelligent use of analytics related to employee engagement, healthcare expenditure, learning and development, performance management, and safety.

Learning Outcomes: 1. Gain an understanding of the different analytical approaches used by HR Professionals to solve real business problems. 2. Examine actual business cases and apply problem solving and critical thinking skills through group case studies. 3. Learn how to make impact with data by using effective storytelling techniques. 4. Build on presentation skills and demonstrate the ability to work effectively in teams. Credits: 3.00

MGMT 44630 - Innovation Management

Credit Hours: 3.00. In this course you learn why organizations struggle to innovate, how to successfully analyze and implement an innovation strategy, and you learn to manage the innovation process. The course consists of two pillars (or 'walls') that enable a company to become innovative (Innovation Strategy and Organization Design) and the innovation process itself. The innovation process contains how to generate, select, implement, protect, experiment, scale, and diffuse ideas. Consequently, this course will provide you the skills and knowledge to manage innovations. Permission of department required.

Learning Outcomes: 1. Analyze the potential and implication of ideas and innovations for an organization and environment. 2. Formulate an innovation strategy. 3. Develop an innovation process. 4. Distinguish the different approaches to designing an innovative organization. Credits: 3.00

MGMT 44670 - The Great Leaders Book Club

Credit Hours: 3.00. One way to learn about leadership and being an effective leader is to learn from other leaders past and present. Numerous articles and books have been written about leadership and/or profile one or more leaders. We will study leaders through historical and contemporary review and analysis of selected books that illustrate important leadership principles and situations. Course readings will typically include books that one would find on bookshelves of top-level leaders in organizations and institutions. Each week students and instructor meet to discuss the assigned readings and identify key leadership lessons and takeaways. These discussions are reinforced through role play and in-class exercises. Students are expected to be active co-participants and will be challenged to ask curious questions and develop critical thinking skills. This class is designed for high potential leaders who take leadership seriously and wish to develop their leadership capability to its fullest. Permission of instructor required.

Learning Outcomes: 1. Identify what leadership is and what it is not. 2. Summarize key differences between effective and ineffective leaders. 3. Deconstruct and differentiate leader attributes and behaviors that contribute to leader outcomes. 4. Identify and use influence techniques to influence others. 5. Recognize differences in situations that may call for different leadership approaches. Credits: 3.00

MGMT 44671 - Corporate Conscience

Credit Hours: 3.00. Is there a moral component to leadership? Does a moral person translate to a moral manager? What does leading ethically entail? Where have organizations and their leaders failed to act in a way that advances the interests of their employees and society at large? This course takes a case study approach to understanding ethical leadership. We look inside organizations, through case study, to evaluate an organization's corporate conscience, defined here as the extent to which a company or organization prioritizes ethics and demonstrates ethical behavior or unethical behavior. We examine the drivers of ethical decision making and the qualities of what it means to be a servant leader. Permission of instructor required.

Learning Outcomes: 1. Identify the components of ethical behavior. 2. Summarize ways of thinking about ethics. 3. Differentiate ""means"" based ethics and ""ends"" based ethics. 4. Create a personal code of ethics. 5. Identify behaviors that define what it means to be a servant leader. 6. Integrate ethical concepts in analysis of real world, organization-based case studies. Credits: 3.00

MGMT 44672 - Transformational Leadership Development Immersion Experience

Credit Hours: 1.00 to 4.00. Courses involve leadership immersion trips to develop one's leadership acumen and enable one to reflect on one's guiding principles. Immersion learning takes place in novel, inspiring settings where real leadership is/was required. Permission of instructor required.

Learning Outcomes: 1. Generate a list of strategic leadership advantages; finding the "high ground" and positioning for success. 2. Carry out communication with others and influence them for strategic advantage. 3. Differentiate both the rational and emotional

components of being a transformational leader. 4. Reflect on how transformational leadership can be utilized for strategic advantage. 5. Identify the traits and characteristics of some of history's greatest leaders during the Civil War and Battle of Gettysburg and apply their leadership principles to today's challenges, whether they be in your family, community, school, or organization. 6. Deconstruct how leadership, discipline, trust and teamwork drove many of the successes in the early history of NASA. 7. Summarize factors in an organization or team that can derail the team and lead to sub-optimal outcomes including issues of structure, process, conflict, power, politics and differing perceptions of risk. 8. Identify the root causes of failure and develop successful interventions for leading in VUCA (volatile, uncertain, complex, ambiguous) environments. 9. Differentiate the relationship between vulnerability, humility, trust, control, and credibility. 10. Use skills that will create the confidence to lead a team in novel, stressful, difficult situations. 11. Reflect on the inspirational power and natural beauty of Yosemite and appreciate how the magnificence of nature contributes to developing one's personal humility. 12. Identify team roles and use one's understanding of roles to lead by example. 13. Carry out teaming skills that develop willingness to be vulnerable to others in uncertain, challenging situations. 14. Differentiate transformational and pseudo-transformational leadership. 15. Generate a set of ethical leadership principles and compare to the actions of historical and contemporary leaders. 16. Reflect on their own leadership guiding principles and the impact a good or bad leader can have, not just on a team or organization, but civilization. 17. Summarize the principles of power and influence; Recognize the conditions under which a population (e.g., nation) could be vulnerable to and be transformed by the false promises of a highly charismatic leader. 18. Reflect upon and attempt to find inspiration in the stories of courage and sacrifice that won WWII for the Allies in Europe. Credits: 1.00 to 4.00

MGMT 44673 - Intensive Leadership Sprint

Credit Hours: 1.00. Intensives are rapid leadership development experiences condensed over a weekend, with topics focused on self-leadership, teambuilding, conflict resolution, decision-making, communication, influence, and visioning. Permission of instructor required.

Learning Outcomes: 1. Identify the connection between personality and leadership. 2. Identify the qualities of effective teaming and what it means to be a team-player. 3. Carry out effective teaming behaviors and recognize how individual personality and communication style differences affect team success. 4. Design/develop strategies that will motivate self and others. 5. Summarize the ways people resolve conflict. 6. Determine one's own conflict resolution style and its implications for leadership. 7. Differentiate the ways we get people to go along and their implications on organizational outcomes. 8. Create new ways demonstrate influence tactics and apply them to influence other team members. 9. Contribute more effectively to a team. 10. Recognize and avoid costly team mistakes that plague many teams. 11. Create a crisis management plan for an organization. 12. Use their problem solving and decision-making skills to solve team challenges and problems. 13. Deconstruct the leader's role in leading a team to effective decision-making. 14. Identify their own personal ""why"" or leader purpose. 15. Reflect upon and summarize one's own limitations and strengths as a leader. 16. Deconstruct the role of vision and strategic decision-making at various levels of leadership in an organization. 17. Create a vision for themselves and other

organizations. Credits: 1.00

MGMT 44680 - Experiential Learning And Team Consulting Projects

Credit Hours: 1.00 to 4.00. This course is for independent team experiential consulting projects. Students work on solving a real-world problem. Projects will typically involve an external corporate or alumni partner that sponsors a project and provides a problem to be solved. Student teams will work with the client to define the scope of engagement, develop a project plan, conduct a needs assessment, provide benchmark data and market analysis, solve problems, make decisions and present recommendations. In addition, students will develop professionalism skills in communicating and interacting with corporate clients through written and oral communication, including a final presentation to corporate stakeholders. Permission of instructor required.

Learning Outcomes: 1. Develop professionalism through written and verbal communication. 2. Develop teamwork skills by working in a cross-functional team. 3. Use and apply consulting methodologies and frameworks. 4. Analyze and assess current client situation. 5. Apply management tools such as SWOT analysis. 6. Conduct internal and external research and benchmarking. 7. Provide recommendations to solve real-world business problems. Credits: 1.00 to 4.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 44710 - Competitive Strategy

Credit Hours: 3.00. This course focuses on the dynamics between a firm and the marketplace including interaction with competition. Strategy implementation occurs over multiple periods and is highly dependent on choices and behavior of competition. The course material covers how these dynamics and expectations of competitor response will shape the decisions of managers. This is inclusive of signaling intent to competitors and mutual forbearance to avoid negative sum gain competition.

Learning Outcomes: 1. Improve ability at market and competitive analysis. 2. Recognize opportunities and problems for market entry that may follow from market and competitive analysis. 3. Improve decision making knowledge and skills. Credits: 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage.

Learning Outcomes: 1. Improve ability to assess technology and innovation from a competitive perspective. 2. Learn about disruptive innovation and its effects on incumbents and new firms. 3. Consider internal processes for innovation management in existing firms. 4. Improve decision-making and skills with respect to technology and innovation. Credits: 3.00

MGMT 45200 - Manufacturing Strategy And Process Innovation

Credit Hours: 3.00. This course examines the management challenges posed by the growth in worldwide manufacturing capabilities, markets, and competition and by rapid advances in technology and the concomitant decline in product life cycles. The manufacturing function is considered within a broader context encompassing design, engineering, purchasing, marketing, and customer service in an effort to assess the degree to which existing management structures successfully meet the challenges arising from the changing manufacturing environment.

Learning Outcomes: 1. Identify the tradeoffs made between operations flexibility and cost. 2. Identify proper alignment between manufacturing strategy and business strategy. 3. Identify the pros and cons of different types of plant network strategies. 4. Identify the behavioral issues associated with

implementation of rigid project management tools. 5. Identify the potential long term implications of outsourcing on the development of competition. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 45600 - Legal Foundations For Business II

Credit Hours: 3.00. A study of commercial law as prescribed by the Uniform Commercial Code, including the law of sales, documents of title, negotiable instruments, and the law relating to security interests. Additional material is presented covering the legal aspects of real estate transactions and personal property transfer.

Learning Outcomes: 1. Have a good basic understanding of the structure of the U.S. legal system. 2. Be able to understand and apply basic legal terms and concepts in almost every area of the law. 3. Be able to recognize common legal and ethical issues which will arise in the course of doing business. 4. Demonstrate your knowledge in classroom discussion and through the four (4) exams given during the semester. 5. Have the ability to more effectively communicate with and assist counsel on legal matters in your future business career. Credits: 3.00

MGMT 45900 - International Management

Credit Hours: 3.00. This course focuses on the challenges top managers face in developing strategies and management policies in multinational corporations (MNCs). Major topics usually covered include foreign market entry strategies, motivations and organizational challenges of internationalization, analyzing global industries, managing MNC/host government relations, building competitive advantage in global industries, international alliances and acquisitions, structuring and controlling MNCs, risk management, and the country manager role.

Learning Outcomes: 1. Understand the range of competitive opportunities and challenges companies and managers face in creating value worldwide. 2. Appreciate the complexities of national institutions and the dynamics of industry competition. 3. Deal with a company's multiple stakeholders including its internal constituents. 4. Integrate the concepts, principles, skills, and knowledge acquired in functional courses. Credits: 3.00

MGMT 46200 - Advanced Manufacturing Planning And Control Systems

Credit Hours: 3.00. The course examines key concepts in the planning, control, and improvement of processes in manufacturing and service operations. Specific topics covered in the course include: (i) Product/service characteristics that provide value to customers and competitive priorities, (ii) Role of processes and key operations choices to support the competitive priorities, (iii) Process analysis and scheduling, (iv) Throughput principles to deal with adverse impacts of process uncertainties and bottlenecks, (v) Managing capacity and lead times, (vi) Throughput principles to deal with wastes and errors, including the Toyota Production System and Lean Operations, and (vii) Coordinating material/order flows in supply chain - MRP, and Resources and Production Planning - Aggregate Production Planning. The class uses a combination of lectures, cases, simulations, outside speakers, experiential exercises, and student presentations. An important component of the course is a hands-on exercise where students in teams of seven or eight design and run a production process to meet demand for a quality-conscious customer. The teams then present the lessons learned to the class.

Learning Outcomes: 1. Learn the details of production planning, master scheduling, materials planning, short range capacity planning, production floor execution, and quality control. Credits: 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required.

Learning Outcomes: 1. Gain analytical insights on major supply chain tradeoffs. 2. Know supply chain functions: demand forecasting, procurement, inventory, transportation, pricing, contract, revenue management, reverse supply chain and integration of multiple functions. 3. Know a systematic set of analytical methodologies to use effectively in their future careers. Credits: 3.00

MGMT 46400 - Logistics: Concepts And Models

Credit Hours: 3.00. The course familiarizes students with main concepts and models of business logistics management. Through the course, students develop an ability to design, improve, and manage logistics operations such as Inventory, Transportation, Warehousing, and Logistics Network Design. Since logistics decisions often require certain trade-offs to be made, students develop necessary quantitative and qualitative analytical skills to improve their decision-making. At the end of the course, students should be able to analyze logistics strategy of a firm, identify problems and tradeoffs in different logistics functions, formulate the corresponding models, identify quantitative methods to solve it, obtain results and interpret them for small-size problems using standard spreadsheet software, communicate the results to a broader audience using business language, discuss issues and challenges in same-day delivery, humanitarian logistics, physical internet.

Learning Outcomes: 1. Know vocabulary of Logistics, and Supply Chain. 2. Design, improve and manage processes by learning decision making tools. 3. Become familiar with the key issues and problems facing an operations manager. Credits: 3.00

MGMT 46501 - Strategic Sourcing And Procurement Operations Analytics

Credit Hours: 3.00. This elective course will serve as an important complement to the existing OM modules (e.g., MGMT 36100 Operations Management) to introduce more in-depth knowledge about supply chain management to undergraduate students, especially those major in SC&OM, focusing on strategic sourcing and procurement operations which are the building blocks for supply chain operations. More specifically, this course will introduce procure-to-pay process, category management, supplier selection and evaluation, supplier relationship management, vertical integration, global sourcing, outsourcing, auctioning, supply contract design and negotiation, business ethics, legal and compliance issues, etc. Sourcing and procurement is the major job title for supply chain operations jobs in the industry and our course can also help students to get the professional certificate of sourcing and procurement. Hence, it may also help senior students prepare for the job placements.

Learning Outcomes: 1. Master the working knowledge and vocabulary of strategic sourcing and procurement. 2. Know how to design and manage the business process in sourcing operations. 3. Know how to align sourcing strategies with corporate strategies. 4. Know how to model the key decision-making process of sourcing operations. 5. Apply data analytics techniques to develop sourcing strategies. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

MGMT 46700 - Big Data & Cloud Computing

Credit Hours: 3.00. Cloud computing and big data technologies are rapidly enhancing an organization's business intelligence ecosystem. Two modules of the course are specially designed for students to gain valuable hands-on experience in collecting, cleaning, formatting, integrating, and storing massive amounts of data that may be structured or unstructured, archived, or streaming in a cloud platform. The first module will introduce cloud computing fundamentals, its enabling technologies, main building blocks, and hands-on experience through projects utilizing Google Cloud Platform (GCP). The second module will cover processes for creating data pipelines in GCP so that the student will be able to curate big data for training, analysis, and prediction using AI/ML and other data science techniques.

Learning Outcomes: 1. Configure rapidly GCP to meet any analytics related challenge. 2. Build Data Lakes and Data Warehouses for big data analytics. 3. Use BigQuery and related services for advanced, real-time analytics. 4. Use BigQuery ML for classification and regression.

5. Build complex data pipelines using GCP's Dataflow, Cloud pub/sub, and Cloud Function to prepare data for machine learning algorithms. Credits: 3.00

MGMT 46800 - Supply Chain Technology

Credit Hours: 3.00. The course will introduce the major SCM information systems and technologies utilized by industry leaders to integrate SCM operations and achieve coordination within and across various business functions. The students will learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. The course will provide students the opportunity to study, analyze, and observe the information systems and technology tools. Topics include Enterprise Resource Planning Systems (ERP), Blockchain, Warehouse Management System (WMS), Transportation Management Systems (TMS), Internet of Things (IOT) in retail. The students will learn how to use the SAP software to execute SCM operations. The course will review the technology implementation process and how such projects should be organized and managed.

Learning Outcomes: 1. Learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. Methods of Evaluation: HWs, Quizzes. 2. Study, analyze, and observe the information systems and technology tools. Methods of Evaluation: Case studies, lab sessions, online discussions. 3. Learn how to use the SAP software to execute SCM operations. Methods of Evaluation: Lab exercises, team workshop, games. Credits: 3.00

MGMT 46900 - Supply Chain & Operations Analytics Consulting

Credit Hours: 3.00. This supply chain experiential learning course aims to provide students opportunities to apply theories and methods learned from supply chain and operations management courses to tackle real-world supply chain problems. A salient feature of this course is that it consists of two pillars. The first pillar is the partnerships with leading companies (e.g., Wabash, Corteva and Rolls Royce) to offer project opportunities and assign internal experts to advise student teams. Students will have opportunities to visit company sites, interact with domain experts, and present their findings to leadership teams. The second pillar is the partnership with a group of Purdue alumni to leverage their extensive supply chain consulting and corporate leadership experiences to advise students the consultation approach to problem-solving: how to approach problems, engage stakeholders, and professionally manage project delivery processes as internal or external consultants for business organizations.

Learning Outcomes: 1. Apply knowledge and skills learned in classes to real-world supply chain and operations problems. 2. Identify and approach real-world supply chain problems. 3. Collect, process and analyze real-world data. 4. Communicate and interact with supply chain executives. 5. Manage supply chain projects as a consultant. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on

descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks.

Learning Outcomes: 1. Demonstrate working knowledge of relationship databases, SQL queries, and efficient sampling. 2. Demonstrate working knowledge of RStudio to perform EDA, visualization, and data mining techniques. 3. Demonstrate working knowledge of data visualization and exploration using Tableau. 4. Demonstrate practical understanding of popular unsupervised and supervised learning methods. Credits: 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests.

Learning Outcomes: 1. Generate a valid predictive analytics solution by following a structured process. 2. Demonstrate practical understanding of frequently used predictive analytics techniques. 3. Demonstrate a working knowledge of RStudio and SAS Enterprise Miner to build an access predictive models. 4. Demonstrate project poster and presentation of a predictive analytics solution to a business problem. Credits: 3.00

MGMT 47500 - Machine Learning For Business

Credit Hours: 3.00. This course concerns the latest techniques in machine learning, focusing on deep learning and reinforcement learning, with applications to computer vision, natural language understanding, speech recognition, news recommendation, and others. The course plans to cover Neural Nets, Backpropagation, Convolutional neural network, Recurrent Networks, Autoencoders and other architectures in Deep Learning in the rst half. Next, the course plans to cover multi-armed bandits, Contextual bandits, Markov decision process, and Policy gradient methods in Reinforcement Learning.

Learning Outcomes: 1. Perceive the scope and importance of machine learning. 2. Understand and evaluate modern machine learning algorithms. 3. Apply appropriate programming skills to administer a machine learning algorithm in a real-world problem. 4. Communicate the machine learning results in an appropriate level of detail for an intended audience. Credits: 3.00

MGMT 47600 - Employment Law For Business

Credit Hours: 3.00. Employment Law for Business is designed to help students navigate the complex legal challenges businesses face in employment. Students will explore key topics like defining the employment relationship, addressing discrimination and harassment, and managing technology and privacy issues in the workplace. Through real-world examples, students will learn about critical regulations, including the Fair Labor Standards Act, FMLA, OSHA, and laws governing employee benefits. By the end of the course, students will develop the skills to approach employment law issues with confidence, applying legal, managerial, and ethical perspectives to solve problems effectively.

Learning Outcomes: 1. Analyze and apply legal principles and legislation to evaluate employment decisions in business scenarios. 2. Explain and evaluate the legal protections and responsibilities of managers in various business contexts. 3. Identify and assess the fundamental components of litigation and analyze the financial and reputational costs of HR law violations. 4. Apply best practices in management, ethical frameworks, and legal mandates to resolve employment law issues effectively. 5. Develop and apply communication, analytical, and logical reasoning skills through case studies and writing exercises, demonstrating proficiency in at least three key areas. 6. Analyze the impact of public policy changes on legal frameworks, with examples of recent legislative shifts. Credits: 3.00

MGMT 47700 - Accenture Innovating Industry

Credit Hours: 3.00. Delve into the transformative role of innovation in driving industry growth and competitiveness. Students will explore how businesses can harness emerging technologies, evolving market dynamics, and disruptive business models to reshape industries. Through a combination of case studies, business world examples, and hands-on projects, the course emphasizes the importance of strategic thinking, design thinking, and creative problem-solving in identifying opportunities for innovation across sectors.

Learning Outcomes: 1. Analyze key drivers of

innovation within different industries. 2. Apply innovation frameworks to solve business world challenges. 3. Design and prototype new business models that address tech-driven industries. 4. Lead initiatives that use technology to help businesses grow by creating relevance with their customers. 5. Evaluate the impact of technological and social trends on industry evolution. 6. Deliver a solution to a corporate partner that satisfies their needs in an agile fashion. Credits: 3.00

MGMT 47800 - Experiential Project In Analytics

Credit Hours: 3.00. Most degree programs offer students an opportunity to apply the knowledge learned from their studies in an applicable area via a thesis, a research project, or capstone. This course provides such an opportunity and is designed specifically for Business Analytics & Information Management undergraduate students that will pursue analytical-type careers (e.g., Data/OR Analyst, Data Scientist, Decision Scientist, Consultant, Developer, etc.). This course is designed to polish and integrate the knowledge, skills, and abilities you have developed from your coursework by successfully developing an analytics solution with an industry partner in a structured fashion. Thus, most of your time will be devoted to working with your project teammates to provide the answers and deliverables specified by the partner over the course of many sprints. Every project team will be provided with a project description, data dictionary, and access to the dataset (or directions in where to find the necessary data), as well as an NDA to read, understand, sign, and return to your professor before you can gain access to the data. These are tasks that might be required of you to perform when you work on a new project or have a new client. Students are expected to be familiar with at least one programming language (e.g., Python, R). Permission of instructor required.

Learning Outcomes: 1. Formulate a business problem into an analytical problem. 2. Deliver an analytical solution to stakeholders in an agile fashion in programming languages. 3. Communicate effectively with stakeholders. 4. Work effectively in a team. Credits: 3.00

MGMT 47900 - Data Visualization

Credit Hours: 2.00 or 3.00. This course is an introduction to the techniques and algorithms for creating effective data visualization. Visualizations are graphical depictions of data that can improve comprehension, communication, and decision making. This course emphasizes application in business settings where visual representation methods that are covered in this course will improve our understanding of complex data and models. We focus in particular on pattern identification, difference and trends in data sets across categories, space, and time. In addition to participating in in-class discussions, students will have sufficient hands-on experience with the tools and techniques covered in this course. Students will be expected to complete several short programming and data analysis assignments. Students will also have an opportunity to work as groups on a final project. Permission of department required.

Learning Outcomes: 1. Understand the key techniques and theory used in visualization, including data models and graphical perception. 2. Apply perception and cognition principles in visualization. 3. Become familiar with a large number of data visualization tools. 4. Transform large database for visual displays using various representation techniques. 5. Critique various visualization representation and interaction techniques. 6. Read and discuss research papers from the visualization literatures. Credits: 2.00 or 3.00

MGMT 48400 - Management Of Entrepreneurial Ventures

Credit Hours: 3.00. This course teaches skills required to become an entrepreneur, succeed in a start-up venture, work in venture capital, join a family business, or develop a franchise operation. Students will learn about how to identify and shape emerging market opportunities, innovate new business models, prepare and evaluate business plans, raise capital, build a skilled founding team, network for resources, and grow an initial market.

Learning Outcomes: 1. Identify and shape emerging market opportunities. 2. Innovate new business models. 3. Prepare and evaluate business plans. 4. Raise capital. 5. Build a skilled founding team, network for resources, and grow an initial market. Credits: 3.00

MGMT 48800 - Data-Driven Decisions In Digital Markets

Credit Hours: 3.00. This course analyzes the changes in business models that have been enabled by Internet technologies, and exposes students to hands-on data analyses to quantify the impact these technologies and business models have on firms, economies, and people. A programming course such as MGMT 28800 Programming for Business Applications or MGMT 38800 Python for Business or CS 17600 Data Engineering in Python or CS 17700 Programming with Multimedia Objects or CNIT 17500 Visual Programming or CS 18000 Problem Solving & Object Oriented Programming and a

statistics course such as STAT 30301 Probability & Statistics for Business or MGMT 30500 Business Statistics is highly recommended.

Learning Outcomes: 1. Recognize the role of business models and data-driven decisions in digital markets. 2. Measure, evaluate, and improve online technology usage, advertisement campaigns, and product pricing to meet specific business objective like better serving customers, customer acquisition, quantifying network effects, etc. 3. Analyze the sheer amount of data ("traces") collected by businesses from different touch points - Google Glass, Apple Watch, smart phones, or simple computing devices - and make critical business decisions. Credits: 3.00

MGMT 49000 - Problems In Industrial Management

Credit Hours: 1.00 to 4.00. Investigation in a specific management field. Arrange with instructor before enrolling. Permission of instructor required.

Credits: 1.00 to 4.00

MGMT 49200 - Intellectual Property Management

Credit Hours: 2.00. Intellectual property (IP) has become a strategic opportunity for creating value for the firm. Firms are tasked with understanding how to utilize intellectual property as a competitive advantage in multiple market contexts. In the current economic environment, intellectual assets can be the largest portion of a firm's total wealth. Strategic management of these assets is very critical. Managing intellectual property is about transforming a firm's ideas, know-how, etc., into learning, products, and ultimately cash flow. In Managing Intellectual Property, we examine this topic by viewing intellectual property as both a legal asset (property ownership) and business asset (value-adding). The focus of Managing Intellectual Property is on the integration of IP generation, IP protection, and strategizing functions of the firm in creating value with an IP portfolio. Concepts and frameworks discussed/developed in lecture are exercised in case studies from multiple contexts.

Learning Outcomes: 1. Understand key elements in intellectual property management. 2. Aware of the different types/forms of intellectual property. 3. Understand how the difference in the types of intellectual property provides strategic opportunities. 4. Confidence in your own abilities to manage intellectual property. 5. Aware of the role of multiple functions in creating an intellectual property portfolio (e.g. R&D, Marketing, Legal, Merger & Acquisition, Business Development, Human Resources, Finance). Credits: 2.00

MGMT 49300 - Storytelling With Data

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course (Storytelling with Data) is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and effective skills to express your ideas in ways that connect.

Learning Outcomes: 1. Understand the importance of communication context, elements of good storytelling, and basic principles of human information processing as related to data visualization. 2. Apply this understanding to the communication of complex (i.e., data-driven) information. 3. Analyze data visualization design choices. 4. Evaluate the effectiveness of data communication. 5. Create a compelling story using data with the tools and skills taught in this course. Credits: 2.00

MGMT 49400 - IBE Capstone

Credit Hours: 3.00. The objective of the IBE Capstone course is to provide students with the opportunity to apply and integrate what they have learned from prior courses in "Real World" settings. There are no traditional classes. Rather, students will work in self-managed teams of 5-6 on projects that have both business and engineering elements with the support of a mentor; in many cases the mentor will be from a sponsoring company. The role of the company mentor is to provide advice and guidance to the student team as well as to expose the students to the approaches and processes used in industrial and commercial organizations. The course instructors will also meet with the student teams on a weekly basis to assess progress and provide guidance. Possible options for the projects include: 'Product Design' and 'Business Solution'. The Product Design projects would be focused on the marketing, technical, and economic feasibility of a new product concept. The Business Solution projects would be focused on technical issues in a business context and developing solutions to a "real world" problem presented by a sponsoring company. Examples of these projects might include use of 3-D printing for spare and replacement parts or incorporation of autonomous transportation into a company's operations and supply chain.

Learning Outcomes: 1. Exhibit integrity, accept responsibility, take initiative, and provide

leadership necessary to ensure project success. 2. Produce product designs or business solutions that meet important performance requirements while satisfying relevant societal, legal/regulatory, and professional constraints. 3. Establish relationships and implement practices with team members, advisors, and other stakeholders that support high performance and continuous improvement. 4. Plan, monitor, and manage project schedule, resources, and work assignments to ensure successful project completion. 5. Utilize and synthesize prior knowledge, independent research, published information, and original ideas in addressing problems and generating solutions. 6. Make decisions based on customer and user needs, product design or business solution requirements, resource availability, and associated risks. 7. Demonstrate effective use of contemporary tools for engineering and business analysis. 8. Test and defend performance of a product design or business solution with respect to key requirements. 9. Use formal and informal communications with team, advisor, and other stakeholders to document and facilitate progress and to enhance impact of design products. Credits: 3.00

MGMT 49600 - Management Consulting Practicum

Credit Hours: 3.00. Management Consulting Practicum is an elective course consisting of consulting engagements with clients and projects from the Purdue Foundry and other sources. This course uses class time for students working in teams to receive timely guidance on applying a wide range of consulting skills and tools to supplement the client engagements.

Learning Outcomes: 1. Apply core consulting skills in solving real-life problems. 2. Collaborate and build relationships with business clients. 3. Analyze and identify various sources of data, prepare deliverables, and report results. Credits: 3.00

MGMT 49700 - The Science Of Working Well

Credit Hours: 3.00. What does it truly mean to "work well"? From burnout and physical exhaustion to lack of motivation and meaning in their work, to not feeling socially connected to others-there are many factors that can influence the extent to which employees feel like they are able to thrive at work and at home. In this course, we will explore individual; relational/dyadic; organizational; and community influences on working well by diving into the common challenges employees' face in their daily work, both in managing their well-being and the well-being of others as leaders, coworkers, and community members. Together we will work towards identifying solutions to challenges that influence our ability to work well based on the scientific evidence.

Learning Outcomes: 1. Identify key definitions and theories of well-being at work and at home. 2. Distinguish antecedents of well-being at work and home stemming from individual, relational, organizational, and community-level factors. 3. Analyze data for "intervention points" to help offer improved support and programs for employees' well-being. 4. Plan habits or routines that promote your well-being at work and at home. Credits: 3.00

MGMT 50300 - Advanced Accounting

Credit Hours: 3.00. Advanced course in financial accounting. A range of contemporary issues in financial reporting, such as business combinations, investments, consolidations, inflation, multinationals, and tax allocation are covered. Both technical proficiency and user applications are emphasized.

Learning Outcomes: 1. Develop a conceptual understanding of and appreciation for the significant accounting and reporting requirements pertaining to consolidated or affiliated enterprises, foreign currency transactions and translation and other topics listed in the schedule below. 2. Provide you with the technical skills and knowledge to produce financial information that can be used by management, shareholders and stakeholders. 3. Improve your ability to interpret and use such financial reports. 4. Enhance the students' communication skills. 5. Contribute to the requisite background required for professional examinations such as CPA or CMA. However, it is not the primary goal to memorize 2019

standards or regulations, but rather to become prepared for a long-range successful accounting, auditing and/or managerial career. Credits: 3.00

MGMT 50400 - Tax Accounting

Credit Hours: 3.00. Basic tax course designed to provide an understanding of the various federal taxes, including income, gift, estate, excise, federal insurance contribution, self-employment, and unemployment taxes.

Learning Outcomes: 1. Calculate the income tax liability for individuals, understand basic tax planning strategies, and prepare individual tax returns. 2. Understand broadly how different business entities are taxed including formation, operations, distributions, and liquidations. 3. Calculate the income tax liability for C Corporations, understand basic tax planning strategies, and prepare basic C Corporation tax returns. 4. Report the results from operations for partnerships and S Corporations. 5. Understand broadly the tax treatment of property transactions encountered by individuals and business entities. Credits: 3.00

MGMT 50500 - Management Accounting II

Credit Hours: 3.00. The focus of the course is managerial decision making and the economic role of information. Topics covered include decentralized financial performance evaluation, cost analysis, and financial planning and control systems.

Learning Outcomes: 1. Students will learn the concepts and procedures of auditing, with an emphasis on independent certified public accountants as well as internal auditing. Credits: 3.00

MGMT 50600 - Auditing

Credit Hours: 3.00. A study of the concepts and procedures of auditing, which is the systematic process of objectively obtaining and evaluating evidence regarding assertions about economic actions and events. Primary emphasis is on audits conducted by independent certified public accountants, but topics covered apply to internal auditing as well.

Learning Outcomes: 1. Develop an understanding of auditing concepts and procedures. 2. Demonstrate knowledge of ethical standards of the profession. 3. Understand the nature of an internal control system, its role in a business and its significance in the auditing process. Credits: 3.00

MGMT 50900 - International Accounting

Credit Hours: 3.00. Provides insight into and an understanding of the many accounting problems and issues faced in an international business environment. The material is approached from two compatible and overlapping perspectives: the perspective of accounting or financial management in a U.S. multinational corporation and the perspective of an investor interested in understanding the international business environment.

Learning Outcomes: 1. Learn about the development of international accounting movements and implications in a globalized financial market. 2. Develop the ability to read and interpret the financial statements of companies that are prepared in accordance with International Financial Reporting Standards (IFRS) 3. Emphasize the importance of professional judgment in international accounting when assessing different accounting treatments for the same event. 4. Learn to cope with differences in financial measurement, recognition and reporting practices when performing international financial statement analyses. 5. Enhance the students' communication and presentation skills. 6. Contribute to the requisite background required for professional examinations such as CPA and to become prepared for a long-range successful accounting, auditing and/or managerial career. Credits: 3.00

MGMT 51099 - Practicum In Taxation Compliance And Consulting

Credit Hours: 1.00 to 3.00. This is an experiential course to provide real-world experience and significant community service through volunteer tax compliance and consulting. The course partners with the Internal Revenue Service Volunteer Income Tax Assistance Program to provide significant free tax preparation and consulting services to low- and middle-income families in the Greater Lafayette community with an additional focus on providing these services to international students at Purdue. Learning outcomes include technical tax abilities as well as soft skills in a professional services environment.

Learning Outcomes: 1. Develop technical tax

preparation skills and apply those skills using tax software. 2. Interact positively with clients through sometimes difficult situations. 3. Explain complex tax issues in an understandable way to clients. 4. Discuss relevant tax and client issues with other students and coordinators. 5. Learn from constructive feedback to improve your tax preparation and client interaction skills. 6. Adapt your role at the site extemporaneously to help mitigate stressful situations. 7. Serve the community through accounting knowledge. Credits: 1.00 to 3.00

MGMT 51100 - Fixed Income Securities

Credit Hours: 2.00. Introduction to fixed income securities. Discusses a variety of contracts-starting with pure discount bonds, coupon bonds, and callable bonds. Continues with options on bonds, caps, floors, and interest rate swaps. Introduces the theory of the term structure and present models for pricing fixed income securities. Topics include: spot and forward markets for debt instruments, simple models for interest rate risk management, duration, convexity, organized exchange-traded interest rate contracts, interest rate swaps, pricing relationships and the theory of the term structure, and single factor models for pricing interest rate claims.

Learning Outcomes: 1. Identify how to value and hedge commonly traded fixed income securities. 2. Demonstrate understanding of underlying economic determinants and behavior of fixed income securities. 3. Outline and structure such securities. Credits: 2.00

MGMT 51300 - Student Managed Investment Fund

Credit Hours: 0.00 to 3.00. This course provides undergraduate and graduate students with hands-on portfolio management experience by investing a $300,000 (as of 2017) portfolio in the stock market. This student-managed fund is a large time commitment, and this course is a way to give students class credit for their experiential learning through SMIF.

Learning Outcomes: 1. Gain knowledge about investing through experiential learning by managing real money. 2. Learn how to analyze stocks and create buy or sell recommendations through team meetings and presentations. 3. Gain teamwork experience and in-depth knowledge by working with industry-specific teams for stock research. Credits: 0.00 to 3.00

MGMT 51400 - Volunteer Income Tax Assistance (VITA): Practicum In Taxation

Credit Hours: 3.00. This is a one-semester experiential course where students prepare individual income tax returns for low- and moderate-income taxpayers in the Greater Lafayette community. In addition to providing a valuable service to the community, students develop their professional skills and client service skills as well as proficiency with a professional tax preparation software product and a deeper understanding of technical tax issues.

Learning Outcomes: 1. Demonstrate and apply technical tax preparation skills using tax software to accurately complete tax returns. 2. Practice and refine positive client interaction skills to handle challenging situations effectively. 3. Explain complex tax issues clearly and accurately in a manner clients can understand. 4. Engage in discussions about relevant tax and client issues with peers and coordinators to enhance collaborative problem-solving. 5. Incorporate constructive feedback to improve technical tax preparation and client interaction skills. 6. Adapt and respond effectively to changing roles and stressful situations at the site to ensure smooth operations. 7. Contribute to the community by applying accounting knowledge to provide meaningful tax preparation services. Credits: 3.00

MGMT 52020 - Analytics For Marketing Managers

Credit Hours: 2.00 or 3.00. The purpose of this course is to learn tools, technologies, applications and practices used to collect, integrate, analyze, and present raw data in order to create insightful visualization and actionable marketing information. It will cover conceptual understanding of marketing performance based on data and statistical methods. Once conceptual understanding is familiarized, students will learn common tools and techniques for marketing managers in today's industry.

Learning Outcomes: 1. Learn how to collect and analyze basic analytical concepts and tools. 2. Gain experience in understanding the importance of visualizations. 3. Learn to become a marketing manager who can provide marketing insights based on analytics. 4. Be

exposed to the challenges of resent online platforms of visualization for user interactivities. Credits: 2.00 or 3.00

MGMT 52100 - Brand Management

Credit Hours: 2.00. This course exposes students to the issues and activities in brand management. Topics include developing the brand marketing plan, design and execution of integrated marketing communications, testing, launching, and repositioning of brands, creating and managing brand equity, formulating strategies for leveraging and defending brands, product line and category management.

Learning Outcomes: 1. Identify the components of a firm's brand equity, based on weekly discussions of "Best Practice" cases assigned in the course. 2. Demonstrate an understanding of how a firm formulates, develops, and executes a firm's branding strategy. 3. Demonstrate an understanding of the key components of a firm's branding strategy. 4. Develop an understanding of how a firm manages the issues of building brand equity, measuring brand equity, and understanding how to grow a firm's brands. Credits: 2.00

MGMT 52200 - New Product Development

Credit Hours: 2.00. The course covers new product development issues including idea generation, concept testing, prototype development, patent protection, and product launch. Student teams generate a new product idea, test the idea with target customers, and develop a product launch strategy.

Learning Outcomes: 1. Understand New Product Development Process. 2. Analyze New Product Development Cases. 3. Develop and Test a New Product Idea. Credits: 2.00

MGMT 52300 - Digital Marketing Strategy

Credit Hours: 2.00. This course enables students to rethink marketing in the evolving digital age and develop capabilities in developing, implementing, and evaluating digital marketing strategies. Topics include: digital marketing strategy framework, search engine marketing, social media marketing, and location based marketing (mobile).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital and social media age. 2. Understand how digital and social media marketing strategies fit with companies' overall marketing strategy. 3. Learn to develop, implement, and evaluate digital and social media marketing plan. 4. Understand the major tools of digital and social media marketing: online ads, search engine optimization, paid search ads, organic social media, social media ads, web analytics, and social media analytics, and others. 5. Explore the future development of digital marketing. Credits: 2.00

MGMT 52500 - Marketing Analytics

Credit Hours: 2.00. This course introduces modern statistical methods for marketing using big data. Firms are increasingly facing vast amounts of data on their customers and the marketplace, thanks to the rapid development of information technology in the last couple of decades. The challenge is becoming more about how to turn the big data into information and insights to improve firms' marketing decisions and profitability. This course discusses marketing applications for which we may use econometric, statistical, and machine-learning methods to improve and optimize decisions. Students will use RStudio to analyze real-world data and gain hands-on experience on data manipulation, visualization, and analysis. Intro-level Statistics/econometrics (at the level of STAT 35000 or ECON 47200) and R coding experience (comfortable with manipulating data, plotting, defining functions, using for loops, and running linear and logistic regressions in R) are required prerequisites.

Learning Outcomes: 1. Enable students to articulate analytical process and logic for selecting a particular marketing strategy/plan 2. Enable students to do (and also evaluate/critique) good marketing research in their respective careers 3. Marketing knowledge and critical thinking Credits: 2.00

MGMT 52610 - Data And AI-Driven Marketing

Credit Hours: 2.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course introduces modern statistical methods and AI algorithms for marketing using big data. It discusses marketing applications for which we may use statistical and machine learning methods to improve and optimize decisions. Students will use Python to analyze real-world data and gain hands-on experience on data manipulation, visualization, and analysis.

Learning Outcomes: 1. Apply appropriate modern statistical and machine learning methods required for marketing using big data. 2. Implement the methods in Python using real-

world data. Credits: 2.00

MGMT 52710 - Digital Marketing Applications

Credit Hours: 2.00. Companies today expect their marketing professionals to understand what it takes to develop, implement, and evaluate digital marketing strategies and campaigns. The best way for marketing professionals to gain such expertise is for them to actually build and execute specific digital marketing programs/campaigns using various digital and social media platforms for a real world client. This course offers students a unique hands-on learning opportunity with an online marketing project, each student team is given a budget up to $300 to promote a chosen business or non-profit organization via digital advertising platforms including Google AdWords, Bing Ads, Facebook Business, LinkedIn Sponsored Ads, and Twitter Ads. Students are given flexibility in selecting projects of interest. All students are also expected to pass Google Analytics certification and Google AdWords certification.

Learning Outcomes: 1. Gain practical knowledge in web analytics, display advertising, search engine marketing (search engine optimization and pay per click), content marketing, and social media advertising. 2. Gain experience in designing, implementing, and evaluating a consistent digital marketing and social media marketing strategy through the online marketing campaign. 3. Learn how to communicate with clients, how to present an online marketing strategy, and how to deliver the outcome of an online marketing campaign. 4. Exposed to the challenges of working in teams to achieve marketing campaign goals in real world situations. Credits: 2.00

MGMT 52800 - Customer Analytics

Credit Hours: 2.00. Customer Relationship Management (CRM) refers to the selection or identification, acquisition, growth and retention of desired customers to maximize profit. CRM requires a shift in mindset from product-centric to customer-centric management and a new set of tools for understanding and predicting the behavior of current customers. This course focuses on analytical CRM: identifying good prospects and customer acquisition, customer development via up-selling, cross-selling and personalization, customer attrition, retention, and customer lifetime value. While traditional marketing relied on the three pillars of segmentation, targeting and positioning (STP), technological advances have made it possible to obtain customer-level transaction data, and also to target individual customers with a customized marketing mix that is designed to maximize individual customer value. Important strategic questions arise from such a radical shift in marketing mix options, questions such as: How to allocate resources to customer acquisition and to customer retention? Are loyal customers more profitable for firms? Related to these strategic questions are important conceptual and computational issues, such as: What metrics are best used to measure customer profitability? What techniques can be used to identify most profitable customers? How to target profitable customers with customized price, promotion, product, place? This course will equip you with the skills and tools you need to answer such strategic, conceptual and computational questions related to customer relationship management (CRM). Permission of instructor required.

Learning Outcomes: 1. Build your knowledge of a rapidly emerging marketing arena - customer-centric marketing. 2. Develop basic analysis skills using a statistical software package. 3. Increase your analytical skills and expose you to several commonly used advanced modeling techniques. Credits: 2.00

MGMT 52850 - Consumer Behavior And Marketing

Credit Hours: 2.00. Consumer behavior is the study of the processes involved when individuals or groups select, purchase, use, or dispose of products, services, ideas, or experiences to satisfy needs and desires. We will draw on research from psychology, marketing, behavior economics and other fields to learn why consumers behave in the ways that they do. The course focuses on three general topics: 1) Consumers as individuals. We will explore basic psychological concepts like intrinsic motivation, perception, memory, and emotions to help us understand behavior. 2) Attitude change and decision making. We will examine how consumers search and evaluate alternatives, develop attitudes, and make choices. 3) Consumers in their social and cultural settings. We will examine the interaction between the consumer and multiple external influences. We investigate how social elements (friends, family, etc.) and culture influence behavior. Consumer behavior is an applied discipline rooted in other social sciences, and you will therefore learn multiple concepts, frameworks and theories. Your job is to master those concepts and use them to organize, explain, and predict consumers' judgments and choices. Ultimately you should be able to identify a consumer behavior issue, select a relevant theory to examine and explain the issue, and apply the theory properly to aid in a managerial decision. You will also learn how to run basic applied experiments in consumer behavior to test your theories with real consumers.

Learning Outcomes: 1. Master multiple concepts and use them to organize, explain, and predict consumers' judgments and choices. 2. Identify a consumer behavior issue, select a relevant theory to examine and explain the

issue, and apply the theory properly to aid in a managerial decision. 3. Run basic applied experiments in consumer behavior to test your theories with real consumers. Credits: 2.00

MGMT 52900 - Marketing Consulting Projects

Credit Hours: 3.00. In this course, students learn to apply marketing concepts to real world marketing problems. Projects are varied and may involve marketing plan development for a start-up, market research, analysis of marketing data, digital marketing, search engine marketing, web design, and social entrepreneurship. Clients include Purdue Marketing Advisory Board members, entrepreneurs working with Purdue's Foundry and Discovery Park, Purdue Research Park start-ups, small and medium-size Indiana businesses, and non-profit organizations. Students are given flexibility in selecting projects of interest. Teams work under the direction of a faculty member. Teams meet once a week to review project progress and discuss the next steps generally in the presence of the faculty supervisor. Projects are done in teams, although evaluation is individual.

Learning Outcomes: 1. Acquire experience in applying concepts learned in marketing and other classes to real world problems. 2. Acquire practical knowledge in the stages of project management including problem formulation, selection of research approach to addressing a marketing problem, and collection of secondary and primary data. 3. Learn to integrate the findings from a project analysis into a consistent whole and make specific recommendations for decision-making in real world situations. 4. Exposed to the challenges of working in teams to achieve project goals. Credits: 3.00

MGMT 53000 - Financial Statement Analysis

Credit Hours: 3.00. The course is designed to help students: (a) understand the content of corporate financial reports and analyze the information therein, (b) use the information for evaluating the financial health, operating performance, and growth prospects of corporation-type companies, and (c) learn the various models available and estimate the value of such a company using those models and the information abstracted from the financial reports. The topics to be covered include the corporate financial statements and their relationships, ratio analysis for profitability and risk evaluation, assets/liabilities/owners' equality analysis, intercompany investments, forecasting financial statements, and company valuation models.

Learning Outcomes: 1. Develop analytical and quantitative skills to analyze and formulate business decisions: Students will be able to demonstrate their ability to incorporate financial statement information into commonly used firm valuation models that are widely used in business decision-making. 2. Develop current business technologies and use common business technology and software in essential tasks: Students will be able to demonstrate their ability to use spreadsheet in developing valuation models and will demonstrate their ability to retrieve financial information from Internet and evaluate its quality. 3. Students will develop effective written and oral communication skills: Students will be able to demonstrate effective oral and written communication skills through class assignments and the writing and presentation of a group project. 4. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environment. Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present a group project. 5. Develop awareness and understanding of global issues relating to financial reporting, tax accounting and business decisions. Students will demonstrate their ability to value multinational corporations and interpret their financial statements through homework assignments, examinations and a group project. 6. Achieve depth of understanding applications of financial reporting. Students will demonstrate their ability to understand and interpret financial statements and accounting choices through homework assignments, examinations and a group project. Credits: 3.00

MGMT 53100 - Government/Not-For-Profit Accounting

Credit Hours: 3.00. This course is designed to provide students with a solid understanding of the financial reporting and accounting principles used in the preparation of governmental and not-for-profit entities. Topics include, but are not limited to, fund accounting, city government accounting, state government

accounting, special funds, budgetary accounting for the general and special revenue funds, fiduciary funds and government-wide statements, university accounting, accounting for community foundations, not-for-profit accounting, and auditing not-for-profit entities.

Learning Outcomes: 1. Develop analytical and quantitative skills to analyze and formulate business decisions: Students will be able to demonstrate their understanding of generally accepted accounting Principles for government and not-for-profit entities and how accounting information is used in decision-making for those organizations through the completion of multiple projects. 2. Become familiar with the ethical issues that individuals face in organizations: Students will be able to demonstrate their understanding of ethics in reporting through team projects that analyze a government or not-for-profit's accounting system. They will also be able to demonstrate their understanding of how to properly account for fiduciary (trust) funds. 3. Students will develop effective written and oral communication skills: Students will be able to demonstrate oral and written communication skills through class participation and the writing and presentation of team projects. 4. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environmental: Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present team projects. 5. Achieve their understanding of generally accepted accounting principles for government and not-for-profit entities through team projects and examination(s). Credits: 3.00

MGMT 53200 - Forensic Accounting And Fraud Examination

Credit Hours: 3.00. This course is designed to help students apply their accounting, auditing, information systems and communication skills to detect financial fraud and unauthorized reporting acts to prepare and present a fraud case for criminal proceedings or civil litigation. These skills are highly valued in the rapidly growing field of forensic accounting. Upon completing this course, students will understand the role of forensic accountants in examining financial records for fraud and detecting insurance fraud; in providing litigation support; and in capturing digital evidence. This course will also review material related to the Certified Fraud Examiner (CFE) exam. Throughout the course, students will have opportunities to improve their written and oral communication skills, particularly as they relate to communication in the legal settings associated with investigating accounting.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas: Students will be able to demonstrate their understanding of business functional areas through homework assignments, examinations and team projects that require analysis or development of fraud detection plans and litigation support. 2. Develop current business technologies and use common business technology and software in essential tasks: Students will be able to demonstrate their understanding of how people in organizations use common technology and software to commit fraud through homework assignments, examinations and team projects. They will also be able to demonstrate their ability to use software to detect fraud and other irregular transactions. 3. Become familiar with the ethical issues that individuals face in organizations: Ethical behavior is a key factor in preventing fraud. Students will be able to demonstrate their ability to identify signs of unethical behavior and how it manifests itself in financial fraud through homework assignments, examinations and team projects. 4. Students will develop effective written and oral communication skills: Students will be able to demonstrate effective oral and written communication skills through class participation and the writing and presentation of team projects. 5. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environment: Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present team projects. 6. Achieve

depth of understanding and applications of financial reporting. Students will demonstrate their understanding of accounting systems through homework assignments, examinations and team projects that require a deep understanding of accounting rules and procedures and the technology that individuals use to keep financial records. Credits: 3.00

MGMT 53600 - Employment & Diversity Law For Managers

Credit Hours: 2.00. Managers, regardless of your industry, will routinely face HR and employment issues that collide with the law. In this course, we will examine many laws and the practical ways you can stay on the right side of the law. Don't worry, you aren't in a law school class and I don't expect you to become employment attorneys. However, I will help you gain a working knowledge of employment laws including: The Civil Rights Act, ADA, ADEA, FMLA, FLSA, and a host of alphabet soup. We will also apply these laws from posting a job description to recruiting to hiring to employee reviews to terminating an employee. While I can't guarantee you will never be sued by a disgruntled current or former employee, I can help you put yourself and your company in the best possible position to defend that suit. And don't worry: we will look at lots of quick case studies (less than a page) to give you context you can easily remember.

Learning Outcomes: 1. Know about the law of the employment process. 2. Know the global principles that apply to corporate managers in the legal context. 3. Know about specific human resource management techniques (or methodologies), and apply some to the techniques. 4. Know about the importance of legal principles as applied to the employment process. Credits: 2.00

MGMT 53700 - Persuasive Communications

Credit Hours: 2.00. The purpose of this course is to work with you to improve your professional communications specifically as those communications relate to client and external communications. We will focus on oral and written communications theory, techniques, and practice.

Learning Outcomes: 1. Acquire skills in writing professional business documents including business memos, business letters, group papers, and PowerPoint slides. 2. Develop and present elevator pitches for their career development. 3. Gain skills to research and craft an intensive analysis regarding a marketing plan for Fortune 500 companies. 4. Enhance personal presentation skills via elevator pitches, impromptus, and group presentations. Credits: 2.00

MGMT 53900 - Analytics For Social Media Marketing

Credit Hours: 2.00 or 3.00. The objective of this course is to equip students with tools and develop marketing skills required to address current marketing problems. The approach is to learn R software for conducting basic scraping on social media sites to understand user behavior and sentiment. In addition, Python will be used for web-scraping data from various websites and websites with dynamic content. The goal is to become familiar with such qualitative techniques as: word clouds, cluster dendrograms, sentiment analysis, and other methods. Occasional homework assignments or check points will be given to gain deeper understanding of the materials covered in class.

Learning Outcomes: 1. Learn how to collect and analyze consumer behavior and sentiment from social media platforms. 2. Gain experience in understanding online consumer search terms and related consumer trends. 3. Learn to become a marketing manager who would monitor competitors' products and pricing actions on the online space. 4. Be exposed to the challenges of recent online platforms where websites use dynamic content to increase user interactivities. Credits: 2.00 or 3.00

MGMT 54000 - Computing For Analytics

Credit Hours: 2.00 or 3.00. The main goal of this course is to introduce students to algorithmic thinking and computational tools for data analytics. The course will focus on challenges associated with large data sets and how algorithms and data structures can aid in resolving some of those challenges. The course will introduce relevant programming techniques in Python. Permission of department required.

Learning Outcomes: 1. Categorize problems according to their computational complexity. 2. Employ algorithmic techniques to obtain insights about data. 3. Develop algorithms to new problems. 4. Implement the algorithms and methodologies in python. Credits: 2.00 or 3.00

MGMT 54400 - Database Management Systems

Credit Hours: 3.00. Covers the theory and practice of database design and usage. Students will learn the importance of data modeling concepts and how to use these effectively and how to plan and design a database, including issues such as data

security and control.

Learning Outcomes: 1. Understand why database management is important and what it entails. 2. Analyze the database requirements of a business scenario and represent these requirements by means of entity-relationship (ER) diagrams. 3. Translate an ER diagram into normalized relations for a relational DBMS. 4. Design and implement an Oracle database. 5. Write simple and relatively complex data retrieval and maintenance commands in the SQL language. 6. Use Microsoft Access as a front end to a server database in Oracle. 7. Appreciate major data administration tasks, including security control, backup and recovery, and concurrency control. 8. Be familiar with data warehousing and its basic conceptual design. Credits: 3.00

MGMT 54500 - Systems Development

Credit Hours: 3.00. Focuses on information systems development theories, practices, and tools for rapid adaptation and management of leading-edge as well as emerging computing paradigms. MGMT 54400 Database Management is highly recommended. Permission of department required.

Learning Outcomes: 1. Define the essential processes involved in information systems development. 2. Analyze and represent business processes. 3. Develop and validate systems models and design specifications for an information system application. 4. Understand database concepts and design relational databases based on data models. 5. Effectively use and maintain databases through hands-on experience with Structured Query Language (SQL). 6. Work effectively on a team to successfully complete team projects. 7. Proficiently use various tools used in systems analysis and design. Credits: 3.00

MGMT 54700 - Computer Communications Systems

Credit Hours: 3.00. Explores the convergence of telecommunications and computer technology, framed in terms of their strategic impact in the business environment. Components of computer communication systems are surveyed. Major design and analysis issues in the development, implementation, and management of computer communication systems are examined. Relevant emerging trends are highlighted. The course is devoted to technical issues, applications, and case studies covering telecommunication systems used in business.

Learning Outcomes: 1. Learn the infrastructure of telecommunication systems. 2. Learn how telecommunications systems work. 3. Learn applications of telecommunication systems. 4. Learn how to create strategic advantage by using telecommunication systems. Credits: 3.00

MGMT 55200 - Mentoring And Socialization

Credit Hours: 2.00. Students learn about the employee socialization process through case studies, discussion, and presentations. In addition, students receive practical experience through participation in a mentoring program for new students. Class discussions and presentations evolve from students' mentoring experiences, and guest speakers provide real-world perspective on new employee programs. The course helps students develop skills in mediation, leadership, conflict management, and communication.

Learning Outcomes: 1. Learn strategies to develop individual mentoring and leadership skills. 2. Assist students in their transition to Krannert, the graduate school environment, and the community. 3. Learn top mentoring practices, theories, and ways to implement these for individual development. 4. Provide opportunity for students to practice professional mentoring skills. Credits: 2.00

MGMT 55360 - Industrial Relations I

Credit Hours: 2.00. An in-depth examination of human resource management in the context of union-management relations. Emphasis is on understanding how and why unions form, the legal context, and changing competitive environment for labor management relations. Covers the dynamics of the collective bargaining process, including the determinants of bargaining power, preparation of labor contract demands, and negotiation tactics. The course culminates with an extended mock negotiation exercise.

Learning Outcomes: 1. Provide you with a sense of US labor history and acquaint you with labor laws essential for managers in multinational corporations. 2. Understand power dynamics not only between unions and management, but between managers and

subordinates in everyday situations, in any organization. 3. Familiarize you with the union organizing process and help you understand its relevance for managers in non-unionized firms. 4. Engage you in a mock contract negotiation so that you may experience the dynamics of collective bargaining and negotiation. 5. Improve your conflict management skills. Credits: 2.00

MGMT 55400 - Leading Global Organizations And People Across Cultures

Credit Hours: 2.00 or 3.00. This course focuses on the opportunities and challenges of managing a global multicultural workforce and implementing global organizational people strategies. The overall goal of this class is to help you become a more effective professional and leader in a global world on and off the job by providing information, tools and multicultural opportunities to increase conceptual and practical understanding of how national cultures shape employment settings and its implications for your own behavior as a global business professional and leader who implements human capital and organizational strategies, policies, and practices in a cross-national context. This course will also increase knowledge of and ability to implement current global human capital, international HRM, and organizational strategies for MNES and domestically. To achieve these goals, student engagement in class sessions, and willingness to share perspectives and opinions, and application of course readings and materials, are critical to the success of this course. A range of participative learning methods are used to facilitate an active classroom environment, including learning log journaling, case analysis, experiential exercises, small group projects, break out discussions, company guest speakers, and self-assessments. The role of the instructor in this course is not always to provide "the" answer, but to create an environment where you can collectively explore, examine and experiment with students' own ideas and share ideas and perspectives on working and managing global firms.

Learning Outcomes: 1. Use cross-cultural leadership and organizational abilities to understand on how cultural differences shape workplace interactions so you can better implement organizational and people strategies to achieve business goals in a global environment. 2. Identify and avoid cultural mishaps and identify how your own national cultural values and assumptions about managing people and organizations shape your effectiveness in managing people, diversity, and systems in a global or cross-cultural firm. 3. Understand the challenges of adapting HRM policies and organizational people strategies when adapting HR and employment systems as organizations "go global" and develop a global workforce. 4. Understand the pros and cons of different multicultural strategies (cultural minimization, accommodation, cultural integration) for successfully implementing human capital strategies and HR practices in multicultural contexts. 5. Develop the core competencies needed by business leaders to work in multicultural teams contexts, including cultural intelligence, the ability to work in cross-cultural teams, develop clear and concise non country biased written communication, the ability to give effective presentations virtually and face to face, and the ability to engage in strategic cross-cultural thinking to implement global HR. 6. Understand and be able to apply core concepts in global HR/OB from 1)Global HR planning and organizational design; 2) Merger and Acquisition with a focus on linkages to successful people and organizational strategies; 3) Global talent management; 4) Development, reward, and performance management of global leaders; 5) Managing Global Teams, diversity, and cross-cultural communication; and 6) Implementing global change and improving organizational effectiveness. Credits: 2.00 or 3.00

MGMT 55410 - Training And Development

Credit Hours: 0.00 to 3.00. This course prepares students to design training and develop training programs and to identify principles, practices and methods of staff training and career development. Students will learn and practice how to deliver and evaluate said programs for return on investment (ROI). Emphasis is placed on the application of principles related to adult learning instructional design and program development, evaluation and learning technologies. Specific objectives include topics related to communication, diversity, generational differences and group dynamics.

Learning Outcomes: 1. Master training and

development principles and terminology. 2. Understand the linkage between strategies and training and development. 3. Understand how training and development can be a competitive advantage. 4. Conduct a needs assessment and SWOT analysis. 5. Apply the ADDIE model and learning styles. 6. Link Performance and Career Development needs to training. 7. Conduct, Evaluate, and Calculate the ROI of training. 8. Develop, Implement, and evaluate a training and development project. Credits: 0.00 to 3.00

MGMT 55500 - Leading Management Of Diversity And Inclusion In Organizations

Credit Hours: 2.00 or 3.00. This course is designed to help participants learn to effectively manage self, peers, teams, clients, and firms in diverse organizational settings and to lead organizational change to foster inclusion, equality, and productive workplaces. The class is designed to develop your skills in leading diversity and inclusion from a multi-level view in the workplace: employee, leader, team member, organizational, and institutional/societal levels. Its goal is to a) improve your ability to work in diverse teams, as well as b) develop your ability to design, and implement strategies to foster cultural and structural change to support the management of an increasingly diverse workforce toward enhanced organizational effectiveness to benefit business, employees, and society. People and leaders in organizations are constantly working with members of different backgrounds, social identities, and experiences, often across distributed and/or digitally connected environments, fostering increased attention to diversity equity and inclusion in transforming employment settings. When understood, supported and leveraged effectively, these differences in social identities, difference and values can help attract and retain talent, strengthen societal and community economic equality, support organizational and team effectiveness; but when overlooked, or mismanaged, these differences can increase turnover, conflict, stress, talent under-utilization, and harm career and work-life wellbeing, health, and productivity. We will focus on advancing understanding of how intersecting organizational and institutional structures and cultures and their relation to strategies for creating diversity; an inclusive culture and positive climate for inclusion and talent management; and developing and retaining diverse talent to foster innovation and organizational effectiveness across multiple levels of intervention. We discuss how to conduct an organizational diagnosis of the current diversity climate and barriers and facilitators for creating a multicultural workplace and a flexible environment supportive of many identities, and how assumptions of "ideal workers" may vary across industry and cultural contexts. You as a leader will be better able to articulate your own DEI vision and develop understanding of strategies that move from description to evidence-based diagnosis to action strategies and implementation in order to move aspirations into organizational change realities. From an individual leadership perspective, we tackle the question: "Why does diversity, equity and inclusion matter in employing organizations and business, what is the state-of-the-art evidence-based knowledge, and what does it mean to me personally in my career and my leadership beliefs?" Specifically, we focus on the business and social science processes - including attitudes toward in-groups and out-groups, stereotyping, identity, privilege, and power, intersectionality, discrimination, bias, influence opportunity, bystander awareness, allyship, difficult conversations, and perspective taking - these topics relate to how members of different social groups perceive and interact with one another. Since managing social identity increasingly involves managing work-life boundaries and work and non-work public and private selves, we will also learn about authenticity choices and social and public/professional identity boundary management. Further, the opportunity to experience higher well-being and work-life balance is increasingly linked to job and life opportunities reflecting growing work-life inequality in society. From an organizational and group perspective, we address the questions: "What are best practices for successful management of diversity and inclusion? And why does it matter to me as a future leader personally and in business and in the communities and world in which I live."

Learning Outcomes: 1. Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations. 2. Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations operating both in local, domestic and global contexts. 3. Propose ways to make relationships across cultural and cross-cultural and gender differences in organizations more effective. 4. Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in domestic and global organizations. 5. Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Credits: 2.00 or 3.00

MGMT 56000 - Manufacturing Planning And

Control

Credit Hours: 2.00 or 3.00. An advanced course in manufacturing planning and control systems, emphasizing the integration of demand forecasting, inventory control, production scheduling, and production control. Topics are linked through case studies and an elaborate manufacturing computer simulation game.

Learning Outcomes: 1. Master the major concepts, techniques and models of process design and analysis, and the ability to apply them to contexts beyond manufacturing. 2. Master the major tools for conformance quality control and performance quality improvement. 3. Understand the trend in manufacturing management and the advanced skills needed. 4. Acquire the analytical capabilities to uncover problems and improvement opportunities in manufacturing management. Credits: 2.00 or 3.00

MGMT 56100 - Logistics

Credit Hours: 2.00 or 3.00. Examines the distribution and delivery functions in a manufacturing or service industry. Topics include inventory control in distribution, transportation planning, distribution requirements planning, analysis of waiting lines, distribution system design and facility location and layout analysis.

Credits: 2.00 or 3.00

MGMT 56200 - Project Management

Credit Hours: 2.00. Emphasizes the use of PC-based project management software and its applications, particularly in manufacturing organizations and especially new product development projects. Extensive use is made of several case studies to illustrate the planning and monitoring of a project. Class is held in a computer lab.

Learning Outcomes: 1. Understand the importance and challenges of managing projects of various types and sizes. 2. Learn and apply tools for project selection, team formation, and requirements gathering. 3. Create detailed budgets and schedules. 4. Acquire analytical capabilities for monitoring projects and investigating variances in scope, budget, and schedules. 5. Improve their ability to concisely communicate project information to senior management. Credits: 2.00

MGMT 56300 - Machine Learning For Business Analytics

Credit Hours: 2.00. With the rise in big data, Machine Learning has experienced rapid growth over the last ten years with major advances in its subfields of Deep Learning, Reinforcement Learning, Natural Language Processing, Computer Vision, Robotics, and other subfields. The purpose of this course is to provide the students with a systematic introduction to the recent developments in machine learning through the coverage of modern machine learning concepts and practical business applications, as well as hands-on experience with modern machine learning frameworks. The course plans to cover neural nets, convolutional neural networks, recurrent networks, deep generative models, deep reinforcement learning, and the trustworthy AI framework with the properties of safety, robustness, privacy, and fairness.

Learning Outcomes: 1. Understand the foundations of machine learning concepts and methods. 2. Receive a deep understanding of modern ML -- deep learning, and different deep neural. 3. Network architectures and their state-of-the-art applications. 4. Understand the caveats of real-world data. 5. Receive hands-on practice to apply ML methods to solve business problems. Credits: 2.00

MGMT 56400 - Management Of Service Operations

Credit Hours: 2.00. Special characteristics of services require an interdisciplinary approach to analyzing operations. This course draws upon concepts from accounting, management science, and marketing. Differences and similarities between the service and manufacturing organizations are analyzed. Case studies of service organizations are used extensively. Prerequisite: MGMT 66000 (if Graduate student status) or else MGMT 36100 (if Undergraduate student status).

Credits: 2.00

MGMT 56500 - Strategic Sourcing And Procurement

Credit Hours: 2.00. This course will address the process of procurement including terminology, metric, and decision making. Additionally, we will investigate the best practices and processes for managing the relationships with suppliers and their performance. We will also explore the sourcing decision and the strategic ramifications of producing/ providing goods and services internally or purchasing them from external organizations. Prerequisites: Students are expected to have taken a basic course on operations (such as the masters core class MGMT 66000: Introduction to Operations Management) and a basic course on supply chain management (such as the masters elective MGMT 66400: Supply Chain Management).

Learning Outcomes: 1. Develop a good

understanding of sourcing and procurement strategies and enhance the student's analytical skills to make optimal sourcing and procurement decisions. It requires critical thinking through the participation of games, case discussions and presentation of case assignments. Credits: 2.00

MGMT 56600 - Global Supply Chain Management

Credit Hours: 2.00. This course will integrate issues from marketing (channels of distribution), logistics, and operations management to develop a broad understanding of a supply chain in a global context. Students will learn how different factors, including exchange rate risk, custom duty and trading policies, geographic distribution of resources and demand, availability and reliability of local supplier, and characteristics of consumer, affect the design and execution of global supply chain strategies. Prerequisites: Students are expected to have taken a basic course on operations (such as the masters core class MGMT 66000: Introduction to Operations Management) and a basic course on supply chain management (such as the masters elective MGMT 66400: Supply Chain Management). Exposure to a course on optimization is also preferred, but not required. The course requires logical and analytical thinking.

Learning Outcomes: 1. Train the students to understand the issues in managing a global supply chain and to manage them and optimize their performance. It requires critical thinking through the participation of games, case discussions, and presentation of case assignments. Credits: 2.00

MGMT 56700 - Deep Learning For Business Analytics

Credit Hours: 2.00. With the rise in big data, Machine Learning has experienced rapid growth over the last ten years with major advances in its subfields of Deep Learning, Reinforcement Learning, Natural Language Processing, Computer Vision, Robotics, and other subfields. The purpose of this course is to provide the students with a systematic introduction to the recent developments in deep learning through the coverage of modern machine learning concepts and practical business applications, as well as hands-on experience with modern machine learning frameworks. The course plans to cover neural nets, convolutional neural networks, recurrent networks, deep generative models and deep reinforcement learning.

Learning Outcomes: 1. Identify the deep learning algorithms and design deep neural networks which are more appropriate for various types of learning tasks in various domains. 2. Perform regularization and hyperparameter selections of different deep learning models and evaluate their performance. 3. Implement deep learning algorithms in Python using the Keras library. 4. Apply the algorithms to a real-world problem and report the performance achieved by the models. Credits: 2.00

MGMT 56800 - Supply Chain Analytics

Credit Hours: 2.00. There is an exponential growth in the adoption of big data technologies in every walk of life. Organizations are collecting, storing, and analyzing massive amounts of data. This data is commonly referred to as big data because of its large volume, the velocity with which it is collected and transmitted, the variety of forms it takes, and veracity of its origin and content. In order to capitalize on the opportunities presented by big data, businesses are putting in place technologies, people, and processes. Just collecting, transmitting and storing big data creates little value for an organization. For many organizations, the term big data currently represents only a data infrastructure such as the Apache Hadoop family of products. The key to delivering real value from big data is the use of analytics. Data must be analyzed and the results used by decision makers and organizational processes in order to generate value. The main objective of this course is to learn how to collect, process, store, and analyze big data. Assignments could easily be completed in Python or SQL. We assume no familiarity with Linux and will introduce you to all essential Linux commands. Students need access to a computer with a 64 bit operating system and at least 4 GB of RAM. Note: 8 GB or more of RAM is strongly recommended.

Learning Outcomes: 1. Learn a systematic set of current popular analytical methodologies, including (1) data management and exploration (database management, data visualization, etc.), (2) data analysis (statistical methods, time series analysis, etc.), (3) modeling (math models, advanced spreadsheet engineering, etc.), and (4) decision analysis (optimization, simulation, numerical analysis, etc.). 2. Use these methodologies in a large-scale supply chain simulation game and to analyze cases involving multiple supply chain functions, such as forecasting, procurement, inventory, transportation, pricing, contract, revenue management, and reverse supply chain.

Credits: 2.00

MGMT 56900 - Ethical And Sustainable Supply Chain Management

Credit Hours: 2.00 or 3.00. This course provides students with knowledge and skills for building and analyzing ethical and sustainable practices in supply chains, taking a holistic view of the interaction between businesses, the environment, and society.

Learning Outcomes: 1. Run life-cycle analysis (LCA) and interpret findings. 2. Analyze product and process performance through life-cycle thinking. 3. Understand the Tragedy of the Commons in the business context and identify the underlying reasons. 4. Assess pros and cons of various solutions to the Tragedy of the Commons problem in business context. 5. Identify and explain various product stewardship practices and their pros and cons. 6. Identify innovative business models, such as Servicizing, based on sustainable use of products and services. 7. Compare and contrast traditional supply chain with closed-loop supply chain. 8. Compare and contrast different types of contracts and practices for incentivizing compliance with ethical and sustainable conduct throughout the supply chain. 9. Identify and analyze opportunities and constraints in building ethical and sustainable supply chains. 10. Compare and contrast alternative ways of complying with environmental and social regulations such as carbon trading. Credits: 2.00 or 3.00

MGMT 57000 - Spreadsheet Modeling And Simulation

Credit Hours: 2.00. Covers up-to-date and practical spreadsheet modeling tools, which can be applied to a wide variety of business problems in finance, marketing, and operations. Consists of simulation modeling techniques to analyze risk and uncertainties in business environment, optimization techniques to determine the best managerial actions under internally- and/or externally-imposed constraints, and real-world examples and cases to demonstrate broad applications of spreadsheet modeling and simulations in manufacturing and service operations, supply chain systems, yield management, asset dynamics, option pricing, etc.

Learning Outcomes: 1. Identify the most likely description of the uncertainty in future business with data analysis techniques, such as Pivot Table, PivotChart, fitting probabilities to data, etc. 2. Use deterministic and stochastic optimization techniques to determine the best managerial actions under internally- and/or externally-imposed constraints. 3. Analyze the risk and uncertainty in business environment and process with simulation modeling techniques. 4. Review and criticize peer's participation in and contribution to group work. Credits: 2.00

MGMT 57100 - Data Mining

Credit Hours: 2.00. Introduces the concepts, techniques, tools, and applications of data mining. The material is approached from the perspective of a business analyst, with an emphasis on supporting tactical and strategic decisions. Includes a variety of techniques to identify nuggets of information or decision-making knowledge in bodies of data, and extracting these in such a way that they can be put to use in the area, such as decision support, prediction, forecasting, and estimation.

Credits: 2.00

MGMT 57200 - Six Sigma And Quality Management

Credit Hours: 2.00. Establishes the link between quality and productivity design and improvement and variance reduction. The course examines some of the more traditional views on quality, as well as those today, which are gaining greater credibility and influence under the umbrella of TQM. It also covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations.

Credits: 2.00

MGMT 57300 - Optimization Modeling With Spreadsheets

Credit Hours: 2.00. The course emphasizes applications of optimization through cases and computer exercises. The applications are chosen to provide insights into business and economics. Areas covered include linear, network, integer, and nonlinear optimization. At the end of the course, the students should have the ability to model optimization problems work with software to solve optimization problems relate to optimization theory in a variety of application settings develop optimization insights into applications in marketing, finance, and operations and get some basic exposure to EXCEL automation. Prerequisites: Students are expected to have taken a basic MBA (core) course in business analytics (such as the masters core MGMT 67000).

Learning Outcomes: 1. Train the students to

write mathematical formulations of business problems and use solvers in excel spreadsheets to solve the problems. It requires critical thinking via the presentation of case assignments. Credits: 2.00

MGMT 57400 - Frontiers In Manufacturing Technology

Credit Hours: 1.00. This course will explore various types of technologies used in manufacturing today and the implication for future uses and applications. These modules will provide background, applications, and current use cases of the various tools. Students will also conduct weekly research on various technology applications.

Learning Outcomes: 1. Gain an understanding of the various technologies (17 types will be discussed). 2. Gain an understanding and be able to apply these tools to within the manufacturing sector. 3. Work independently and improve their ability to stay on task. 4. Be exposed to the history and how these technologies have evolved. 5. Gain an understanding of the future technological trends. Credits: 1.00

MGMT 57500 - Supply Chain Technology

Credit Hours: 2.00. This course will emphasize the use of supply chain technology for planning and control of dynamic manufacturing systems. This requires the simulation of plans and required changes over time. Therefore, the course will revolve around active learning computer simulations in SAP.

Learning Outcomes: 1. Execute end-to-end business scenarios, including Procure-to-Pay, Forecast to Delivery, and Order to Cash, in an Enterprise Resource Planning (ERP) system. 2. Choose among several planning methods and develop initial parameters based on supply chain and production capabilities and market intelligence. 3. Modify system parameters as necessary to address events such as material shortages, lack of cash flow, changes in supply availability, and market changes. 4. Access and analyze operational data from the ERP system. 5. Design a manufacturing planning and control strategy to maximize company value. Credits: 2.00

MGMT 58100 - Big Data Technologies

Credit Hours: 2.00. There is an exponential growth in the adoption of big data technologies in every walk of life. Organizations are collecting, storing, and analyzing massive amounts of data. This data is commonly referred to as big data because of its large volume, the velocity with which it is collected and transmitted, the variety of forms it takes, and veracity of its origin and content. In order to capitalize on the opportunities presented by big data, businesses are putting in place technologies, people, and processes. Just collecting, transmitting and storing big data creates little value for an organization. For many organizations, the term big data currently represents only a data infrastructure such as the Apache Hadoop family of products. The key to delivering real value from big data is the use of analytics. Data must be analyzed and the results used by decision makers and organizational processes in order to generate value. The main objective of this course is to learn how to collect, process, store, and analyze big data. Assignments could easily be completed in Python or SQL. We assume no familiarity with Linux and will introduce you to all essential Linux commands. Students need access to a computer with a 64 bit operating system and at least 4 GB of RAM. Note: 8 GB or more of RAM is strongly recommended.

Learning Outcomes: 1. Learn visualization techniques using Tableau to query large datasets and gain insights from it. 2. Learn to deploy big data technologies such as Cloudera Hadoop on Virtual Box. 3. Learn to collect data using open APIs to access streaming data from sites like Twitter, Quandl, Buzzfeed, etc. 4. Learn to architect a big data platform for analysis. Credits: 2.00

MGMT 58200 - Management Of Organizational Data

Credit Hours: 2.00. Provides the basic concepts and skills needed to analyze and organize business data, as well as to utilize the organized data to answer a variety of business queries. After successful completion, students will have an understanding of why database management is important and what it entails, how to analyze the data requirements of a business scenario and represent these requirements by means of entity-relationship (ER) diagrams, translate an ER diagram into normalized relations for a relational database management system, write simple and relatively complex data retrieval commands in the SQL language for an Oracle database, use Microsoft Access as a front end to a server database in Oracle, be familiar with several selected topics of current interest in the data management arena.

Credits: 2.00

MGMT 58500 - Information Technology Project

Management

Credit Hours: 2.00. The purpose of this class is to provide students with a basic understanding of the tasks and challenges facing IT and analytics project managers. Students learn about projects, roles and responsibilities of project managers. We start by discussing the skills and approaches commonly used in creating and monitoring project plans and braking complex projects down into manageable segments. We also discuss important areas defined in PMI's PMBOK, like scope, time, cost and quality management. Next we look at how IT projects have traditionally been managed, and move on to the study of agile methods. We go through some of the most important aspects of agile project management, such as user stories, agile teams an agile planning, execution and tracking. In learning these tools and techniques, we take a hands-on approach wherever possible and use project management software, exercises and case studies.

Learning Outcomes: 1. Acquire a good understanding of the most important aspects of general project management such as cost and time management. 2. Define the essential processes involved in information systems development. 3. Work effectively on a team to successfully complete team projects. 4. Understand and explain various approaches to manage IT projects. 5. Use project management tools, MS Project and Atlassian Jira. 6. Explain what agile is and how it is different from waterfall. 7. Work on a team as a scrum master or product owner. 8. Think about and describe how agile could be applied in various contexts. Credits: 2.00

MGMT 58600 - Python Programming

Credit Hours: 2.00 or 3.00. Because data grows exponentially and becomes complex, we need computational methods to collect, store, and analyze them in order to be successful in science, engineering, business, and other professions. Python Programming, is an introductory programming class that meets this need. You will learn how to write computer programs in Python language to solve real-world problems. This class is designed for students that want to learn to computer programming for data science. This course guides students through the basic Python programming language, from initial concepts to final data analysis using python and external packages.

Learning Outcomes: 1. Understand the basic programming concepts. 2. Understand the basic syntax and semantics of the Python language. 3. Understand the primitive data types build into Python. 4. Understand principles of data storage and manipulation. 5. Understand and use computer programming for basic interactive web applications. 6. Able to design, write and debug simple program to handle real-world data. Credits: 2.00 or 3.00

MGMT 58700 - Using R For Analytics

Credit Hours: 2.00. R has been one of the leading open-source programming languages used by analytics professionals today. You will develop the ability to interpret and modify R code to perform data analysis using the popular RStudio integrated development environment (IDE). During the first four weeks programming syntax, data structures, logic, functions, data loading, data reshaping, and shiny tool creation will be discussed to establish the necessary foundation to turn your data into insights using R. In every class we will discuss and apply a new R library or set of functions. During the last three weeks of the course you will perform descriptive, predictive, and prescriptive analytics with R. Assignments are both conceptual and hands-on exercises. The culmination of this course entails a final team project where you design, develop, and present a working Shiny application prototype that integrates descriptive, predictive, and prescriptive analytics to support a business problem. Permission of department required.

Learning Outcomes: 1. Ability to interpret and modify R code to perform data analysis. 2. Perform descriptive, predictive, and prescriptive analytics with R. 3. Design, develop, and present a working R-Shiny app that integrates descriptive, predictive, and prescriptive analytics to provide end-user decision support. Credits: 2.00

MGMT 58800 - VBA Programming

Credit Hours: 0.00 to 3.00. This course takes a variety of business topics and implements with state-of-the-art spreadsheet models. Students will gain hands-on experience with a wide range of business problems and databases in finance, marketing, operations, and so on. The focus of this course is to learn Visual Basic for Applications (VBA) to design functions and macros that will enhance spreadsheet models. Students will also have exposure to basics and other advanced topics of spreadsheet modeling. In addition to in-classroom time, this course will also meet in computer-based labs for hands-on instructions and implementation.

Learning Outcomes: 1. Learn the basic concepts, components, and elements of the Visual Basic language. 2. Learn the macro

programming environment in Excel. 3. Apply the basics of macro programming in organizing, summarizing, and visualizing data. 4. Develop the ability to use the techniques to analyze real-world data and draw scientific or managerial implications. Credits: 0.00 to 3.00

MGMT 59000 - Directed Readings In Management

Credit Hours: 1.00 to 4.00 (West Lafayette, North Central) 2.00 to 4.00 (Calumet). Supervised reading and reports in various subjects. Open only to a limited number of seniors and graduate students. Permission of instructor required.

Credits: 1.00 to 4.00

MGMT 59100 - Launching Global Leaders

Credit Hours: 0.00 to 2.00. Capitalizing on the unique personal and professional backgrounds of each student in our program, the Launching Global Leaders course provides a comprehensive and customizable leadership development curriculum. In this year long course, students will engage in a 360 assessment of strategically identified professional competencies critical to success in the contemporary workforce. Using these target areas as a guide, students will then customize their leadership development experience by selectively engaging in a variety of program offerings, including: interactive industry simulations, personal and team performance enhancement tools, professional coaching, interactive learning sessions with industry leaders, and workshops in developing intercultural competency, personal branding and career management.

Learning Outcomes: 1. Comprehensively assess their individual leadership strengths and areas of development along the Launching Global Leaders competency model. 2. Gain exposure to a variety of leadership styles and strategies from successful industry leaders. 3. Gain an awareness of contemporary issues facing leaders of global organizations, and strategies for future. 4. Gain exposure to tools and concepts currently utilized in industry that inspire continuous self-improvement. Credits: 0.00 to 2.00

MGMT 59200 - Contracts For Managers

Credit Hours: 3.00. Purpose of the course is to provide the student with an understanding of the contract legal environment as it pertains to profit and non-profit organizations and of the ethical considerations and social and political influences that affect such organizations. Students will examine a wide range of substantive rules of public law, which will provide a framework for a discussion of the ways in which managerial decision making affects and is affected by the legal environment.

Learning Outcomes: 1. Demonstrate a high-level of understanding of the law governing the formation of contracts. 2. Demonstrate the ability to identify and apply concepts of the law governing contractual interpretation and construction. 3. Demonstrate the ability to identify and apply concepts of the law governing contractual performance and breach. 4. Demonstrate the ability to identify and apply concepts of the law governing remedies for contract breach. 5. Demonstrate the ability to identify and apply concepts of the law governing the assignment of contractual rights and the delegation of contractual duties. 6. Demonstrate the ability to identify and apply concepts of the law governing third party beneficiaries to contracts. 7. Demonstrate their ability to do legal research and a publishable level. Credits: 3.00

MGMT 59699 - MS Internship

Credit Hours: 0.00. This course is required as part of the U.S. student visa regulation for international masters who are interning in the U.S. and want to use Curricular Practical Training (CPT). Even if a student is not being paid, they must sign up for the class unless the organization where the internship is being done is a non-profit. Students will be required to receive the necessary CPT permissions prior to enrolling in the course as well as complete paperwork from the Business Career Services office in Rawls Hall 3029. Course can also be taken by students that wish to have an internship transcripted. This course does not apply towards graduation. Does not count towards graduation. Permission of instructor required.

Learning Outcomes: 1. Experience internship. Credits: 0.00

MGMT 59800 - Analyzing Unstructured Data

Credit Hours: 2.00. This course prepares master students with the advanced and frontier technique for analyzing unstructured data that is built on the prerequisite of basic data analysis on structured data (e.g., data mining using python). Upon completion, students are expected to be competent and skilled in collecting, processing, and analyzing online unstructured data using the state-of-art artificial intelligence modeling (e.g., neural networks and deep learning methods) and the mainstream open-sourced toolboxes (e.g., NLTK, scikit-learn, keras, and TensorFlow); students should at least be proficient to design and lead industry-level practical projects conceptually when

working with data scientist. We take text and image as examples for illustration and cover applications of: Text mining and feature extraction (e.g., sentiment, topic, readability, etc.); Image classification (e.g., recognition, etc.); Advanced applications (e.g., translations, chatbot, image expression, etc.) The course is formatted as a combination of seminars and hands-on coding practices in class. Students are expected to code (and debug) in the class. The main method topics covered include: Crawling unstructured data using scrapy. Representation and embedding of text and image. Unsupervised learning for unstructured data (e.g., LDA topic modeling, clustering, etc.) Supervised learning for unstructured data (e.g., classic ML models, A/D/C/RNN, LSTM, etc.). Permission of instructor required.

Learning Outcomes: 1. Be competent and skilled in collecting, processing, and analyzing online unstructured data using the state-of-art artificial intelligence modeling (e.g., neural networks and deep learning methods) and the mainstream open-sourced toolboxes (e.g., NLTK, scikit-learn, keras, and TensorFlow). 2. Design and lead industry-level practical projects in joint with data scientist. Credits: 2.00

MGMT 60000 - Accounting For Managers

Credit Hours: 2.00 to 3.00 (West Lafayette) 3.00 (Calumet, North Central). The two-course accounting sequence employs a user's perspective on the firm's database. First, the standard accounting model is developed into a working tool, as no prior study of accounting is assumed. Then illustrative business cases are discussed to show how external reports conform to financial contracts and public regulation. Public reports primarily directed to investors and creditors are analyzed to reconstruct the economic events and managerial decisions underlying generally accepted accounting standards. Prerequisite: Masters student standing and Management majors only.

Credits: 2.00 to 3.00

MGMT 60100 - Managerial Accounting

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (North Central). Oriented to managers, the course examines the firm's internal systems for costing products or services and their interpretation. A variety of manufacturing and service industries are studies to demonstrate design of flexible cost systems to match the firm's technological, competitive and/or multinational environments. Applications to budgeting, variance analysis, pricing models, performance evaluation and incentives are demonstrated. Case discussion and analytical "what if" modes of instruction are used to enhance managerial skills of students. Design and use of accounting data are linked to other subjects in the program core and to ethical aspects of accounting policy issues. Prerequisite: MGMT 60000 .

Learning Outcomes: 1. Master basic service and product costing methods. 2. Develop analytic skills to help businesses use the different types of costing information to make better business decisions and to formulate better business models. 3. To understand and analyze the variety and the use of accounting performance evaluation methods and the role of incentives in a business environment. Credits: 2.00 to 4.00

MGMT 60200 - Valuation And Financial Statement Analysis

Credit Hours: 2.00. Establishes how to use accounting information to make business and investment decisions. Internally, the information is used to assess performance of units, to evaluate performance of upper-level management, to monitor the firm's investment and financing decisions, and for comparison purposes with the firm's rivals. Externally, accounting information is used by financial analysts, investors and (potential) acquirers to assess the value of the firm, by creditors to assess its credit-worthiness, and by regulators. Prerequisite: MGMT 60000 , MGMT 60100 .

Learning Outcomes: 1. Demonstrate ability to understand financial statements and related information. 2. Practice communicating decisions and ideas through written and oral communication. Credits: 2.00

MGMT 60600 - Seminar In External Reporting I

Credit Hours: 2.00 to 4.00. Seminar examines research issues on the production, dissemination, and use of financial accounting information for economic decisions by external users. The materials covered are primarily empirically oriented. The aim is to expose students to these issues as they are covered in the accounting and related literature. Prerequisite: ECON 60000 .

Credits: 2.00 to 4.00

MGMT 60700 - Seminar In Internal Accounting

Credit Hours: 2.00 to 4.00. Development of a conceptual framework for evaluating information system alternatives. The seminar examines insights into information value provided by the literature. Both the decision-facilitating and contracting-facilitating roles of information are considered. Topics also include auditing issues. Prerequisite: ECON 60700 , ECON 61500 .

Credits: 2.00 to 4.00

MGMT 60900 - Seminar In External Reporting II

Credit Hours: 2.00 to 4.00. Selective investigation of analytical research of informational and incentive issues in accounting. Emphasis is on the role of externally reported accounting information in asset pricing in financial markets. Prerequisite:

ECON 60700 , ECON 61000 , ECON 61500 .

Credits: 2.00 to 4.00

MGMT 61000 - Financial Management

Credit Hours: 0.00 to 4.00. Analysis of short-term working capital needs. Cash budgeting procedures, pro forma statements, major types of short-term loan arrangements, and short-term asset management. Prerequisite: MGMT 60000, Master's student standing or higher and Management and Computational Finance majors only.

Learning Outcomes: 1. Explain how the Statement of Cash Flows can be used to diagnose operating performance and describe the calculation and use of financial ratios. 2. Define financial ratio analysis and explain how ratios reflect financial performance. 3. Examine how a company's financial plan is shaped by a company's operating strategy. 4. Recognize how seasonal patterns of activity affect a company's financial plan. 5. Discuss long-term financial planning. 6. Compare compounding interest rates, discounting cash flows, and bond valuation. 7. Recognize techniques used in project analyses and capital budgeting, as well as incremental cost and revenue in capital project analysis. 8. Apply capital structure theory in practice. Credits: 0.00 to 4.00

MGMT 61100 - Advanced Corporate Finance

Credit Hours: 2.00 to 4.00 (West Lafayette, Calumet) 3.00 (North Central). Long-term capital structure planning, capital budgeting, treatment of uncertainty in investment decisions, security underwriting, dividend policies, and mergers. Prerequisite: MGMT 61000.

Learning Outcomes: 1. Outline and describe Corporate Financial Policies and understand their potential impact of firm value. 2. Value real options in capital budgeting projects using the Black Scholes, the risk-neutral probability and the duplicating portfolio models. 3. Understand the use of and characteristics of various alternatives to corporate finance including leasing, convertible bonds, and structured finance. Credits: 2.00 to 4.00

MGMT 61400 - Investments

Credit Hours: 2.00 to 4.00. Examination of the process of asset valuation. Emphasis on portfolio analysis, security selection, risk-return relationships, and performance evaluation. Additional topics considered include security analysis, option pricing and analysis, futures contracts, and security market operations.

Learning Outcomes: 1. Develop a sound foundation for the main concepts in investment management and portfolio theory. 2. Understand how stock, bond, and option prices are determined. 3. Learn the analytical tools and financial theory necessary to understand how financial assets are used for investment decisions. 4. Take a critical look at the process of investing and relate the topics covered to current real-world problems relevant to practitioners. 5. Prepare students for more advanced courses in investments, portfolio management, and corporate finance. Credits: 2.00 to 4.00

MGMT 61500 - International Financial Management

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet). Integrative course dealing with the management of firms doing business internationally. Emphasis on decision making. Will draw upon, and adapt, managerial decision models developed for domestic operations, as well as cover appropriate international institutional material. Particular focus on finance and strategic management. Prerequisites: ECON 51500.

Learning Outcomes: 1. Evaluate how changes in the exchange rates affect a firm's cash flows and value. 2. Evaluate how international capital budgeting decisions are affected by the complications due to currency considerations. 3. Evaluate how international capital budgeting decisions are affected by the complications due to tax considerations. 4. Evaluate how international capital budgeting decisions are affected by the complications due to country risk considerations. Credits: 2.00 to 4.00

MGMT 61601 - Seminar In Capital Markets I

Credit Hours: 2.00. This is the first in a sequence of four PhD level finance courses that cover theoretical and empirical research in capital markets. Offered in alternate years.

Learning Outcomes: 1. Demonstrate ability to think creatively and critically while solving problems in capital markets. 2. Be able to show ability to conduct research in an ethical and

responsible manner. 3. Be able to effectively communicate knowledge of capital markets. Credits: 2.00

MGMT 61602 - Seminar In Capital Markets II

Credit Hours: 2.00. This is the second in a sequence of four PhD level finance courses that cover theoretical and empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61601 .

Learning Outcomes: 1. Critical Thinking: Students demonstrate ability to think creatively and critically while solving problems in capital markets. 2. Ethical and Responsible Research: Students will be able to show ability to conduct research in an ethical and responsible manner. 3. Communication: Students will be able to effectively communicate knowledge of capital markets. Credits: 2.00

MGMT 61701 - Seminar In Capital Markets III

Credit Hours: 2.00. This is the third in a sequence of four PhD level finance courses that cover theoretical empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61602 .

Learning Outcomes: 1. Demonstrate ability to think creatively and critically while solving problems in capital markets. 2. Able to show ability to conduct research in an ethical and responsible manner. 3. Able to effectively communicate knowledge of capital markets. Credits: 2.00

MGMT 61702 - Seminar In Capital Markets IV

Credit Hours: 2.00. This is the fourth in a sequence of four PhD level finance courses that cover theoretical empirical research in capital markets. Offered in alternate years. Prerequisite: MGMT 61701 .

Learning Outcomes: 1. Able to think creatively and critically while solving problems in capital markets. 2. Able to show ability to conduct research in an ethical and responsible manner. 3. Able to effectively communicate knowledge of capital markets. Credits: 2.00

MGMT 61801 - Seminar In Managerial Finance I

Credit Hours: 2.00. This is the first in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years.

Learning Outcomes: 1. Demonstrate ability to think creatively and critically while solving problems in managerial finance. 2. Able to show ability to conduct research in an ethical and responsible manner. 3. Able to effectively communicate knowledge of managerial markets. Credits: 2.00

MGMT 61802 - Seminar In Managerial Finance II

Credit Hours: 2.00. This is the second in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years. Prerequisite: MGMT 61801 .

Learning Outcomes: 1. Demonstrate ability to think creatively and critically while solving problems in managerial finance. 2. Able to show ability to conduct research in an ethical and responsible manner. 3. Able to effectively communicate knowledge of managerial markets. Credits: 2.00

MGMT 61901 - Seminar In Managerial Finance III

Credit Hours: 2.00. This is the third in a sequence of four PhD level finance courses that cover theoretical empirical research in managerial finance. Offered in alternate years. Prerequisite: MGMT 61802 .

Learning Outcomes: 1. Demonstrate ability to think creatively and critically while solving problems in managerial finance. 2. Able to show ability to conduct research in an ethical and responsible manner. 3. Able to effectively communicate knowledge of managerial markets. Credits: 2.00

MGMT 61902 - Seminar In Managerial Finance IV

Credit Hours: 2.00. This is the fourth in a sequence of four PhD level finance courses that cover theoretical and empirical research in managerial finance. Prerequisite: MGMT 61901 .

Learning Outcomes: 1. Critical Thinking: Students demonstrate ability to think creatively and critically while solving problems in managerial finance. 2. Ethical and Responsible Research: Students will be able to show ability to conduct research in an ethical and responsible manner. 3. Communication: Students will be able to effectively communicate knowledge of managerial finance. Credits: 2.00

MGMT 62000 - Marketing Management

Credit Hours: 2.00 to 4.00 (West Lafayette and Calumet) 3.00

(North Central). An integrated analysis of major marketing decisions, including product pricing, advertising, distribution, and sales force policies. Prerequisite: Master's student standing and Management majors only.

Credits: 2.00 to 4.00

MGMT 62300 - Business Marketing

Credit Hours: 2.00 to 4.00. This course deals with the challenges of marketing to commercial enterprises, government organizations, and non-profit institutions. It covers topics including organizational buying behavior, launching and management of new high tech products, beta testing, customer relationship management, and the importance of manufacturing-marketing coordination. Prerequisite: MGMT 62000.

Credits: 2.00 to 4.00

MGMT 62500 - Marketing Research

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet). Application of statistical and other quantitative concepts to marketing management problems. Prerequisite: MGMT 67000 .

Credits: 2.00 to 4.00

MGMT 62600 - Seminar In Marketing Models

Credit Hours: 2.00 to 4.00. Treatment of theoretical marketing models. Study of marketing models in research setting. Prerequisite: MGMT 62000, 67200.

Learning Outcomes: 1. Understand the main research areas associated with quantitative methods in marketing. 2. Acquaint with the basic research techniques, approaches and key findings in the realm of empirical quantitative models in marketing. 3. Learn to develop and estimate the econometric models on consumer choices and firm interactions. 4. Prepare research ideas and the skills to implement the ideas. Credits: 2.00 to 4.00

MGMT 63000 - Legal And Social Foundations Of Management

Credit Hours: 2.00 to 4.00. An examination of the nature of the legal environment from the viewpoint of the social and moral bases of law. Emphasis is given to the operation of our legal system and its significance in decision functions of management. Prerequisite: Master's student standing and Management majors only.

Learning Outcomes: 1. Recommend appropriate actions in the business environment based on an understanding sources of law, legal process and procedure, and available remedies determine appropriate actions in the business environment based on an understanding of agency law concepts and employment laws, focusing on Title VII and related laws. 2. Analyze contractual rights, obligations, liabilities, and remedies in the business environment. 3. Evaluate tort rights, obligations, liabilities, and remedies in the business environment. 4. Identify the legal constraints faced by the business professional as well as the legal options available to the business professional in responding to and resolving legal issues. 5. Recognize and analyze the laws that affect contemporary businesses, including the laws relating to agency and employment, securities regulation, the organization of a business, and the legal liability of accountants. 6. Describe the ways in which various effect governmental regulations affect contemporary business practices. 7. Evaluate ethical problems that are integrally connected to the legal issues. Credits: 2.00 to 4.00

MGMT 63150 - Accounting For Private Equity

Credit Hours: 2.00 or 3.00. The course offers students with knowledge of private equity services that accounting firms provide to clients. It covers investment banking, buy- and sell-side due diligence, M&A tax services, business valuations, etc.

Learning Outcomes: 1. Gain practical knowledge and skills regarding tools accounting firms use to service Private Equity clients. 2. Improve technical presentation skills, both verbal and written. 3. Simulate the business environment and team approach. Credits: 2.00 or 3.00

MGMT 63250 - Advanced International Accounting

Credit Hours: 2.00 or 3.00. This course is designed to help students a) Learn about the development of international accounting movements and implications in a globalized financial market; b) Develop the ability to read and interpret the financial statements of companies that are prepared in accordance with International Financial Reporting Standards (IFRS); c) Emphasize the importance of professional judgment in international accounting when assessing different accounting treatments for the same event; d) Learn to cope with differences in financial measurement, recognition, and reporting practices;

and e) Enhance the students' communication skills. The course should also contribute to the requisite background required for professional examinations such as CPA and to become prepared for a long-range successful accounting, auditing, and/or managerial career.

Learning Outcomes: 1. Learn about the development of international accounting movements and implications in a globalized financial market. 2. Develop the ability to read and interpret the financial statements of companies that are prepared in accordance with International Financial Reporting Standards (IFRS). 3. Emphasize the importance of professional judgment in international accounting when assessing different accounting treatments for the same event. 4. Learn to cope with differences in financial measurement, recognition, and reporting practices. 5. Enhance the students' communication skills. Credits: 2.00 or 3.00

MGMT 63350 - Accounting Data Analytics

Credit Hours: 2.00 or 3.00. The skill set that accountants have needed to perform math and to keep order has evolved from pencil and paper, to calculators, and then to spreadsheets and accounting software. A new skill set that is becoming more important for nearly every aspect of business is that of big data analytics: managing large amounts of data in the database, analyzing them and finding actionable insights and visualizing the results. This course is designed to help accounting students develop an analytical mindset and prepare them to use data analytic programming languages and software like Python, SQL, and Tableau.

Learning Outcomes: 1. Understand the basic syntax and semantics of the Python language. 2. Understand the primitive data types build into Python. 3. Understand the key data visualization principles and techniques. 4. Apply data visualization principles and techniques to real-world business problems. 5. Critically evaluate the design and presentation of complex data or concept. 6. Design innovative static and interactive visualizations to effectively present information and enable data exploration. 7. Analyze a business situation to determine information management needs. 8. Design a database to address those needs. 9. Write SQL queries to retrieve information from a relational database. Credits: 2.00 or 3.00

MGMT 63400 - Business Law For Accountants

Credit Hours: 2.00 or 3.00. This course is designed to help prepare students for their professional careers by familiarizing them with aspects of the law that are directly relevant to the practice of accounting. These topics are not only at work every day in business but are also tested on professional examinations such as the Uniform Certified Public Accounting (CPA) Exam. Specific topics include, but are not limited to, contract law, relevant provisions of the Uniform Commercial Code, bankruptcy, and the legal liability of accountants. The course will be taught through a mixture of lectures and class discussions. Students are expected to come to class having completed the assigned readings and ready to participate in class discussions.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas: Students will be able to demonstrate the ability to apply legal rules and principles to business transactions and the accounting for them. 2. Become familiar with the ethical issues that individuals face in organizations: Students will be able to demonstrate an understanding of business ethics and social responsibility as it relates to the legal aspects of business transactions and reporting. 3. Develop awareness and understanding of global issues relating to financial reporting, tax accounting and business decisions: Students will be able to demonstrate an understanding of international business law and cyber law, both of which affect financial reporting and tax accounting. 4. Develop effective written and oral communication skills: Students will be able to demonstrate effective oral communication skills through class participation and effective written communication skills through the development and writing of a research paper. Credits: 2.00 or 3.00

MGMT 63410 - Communications For Accountants

Credit Hours: 2.00. Accountants spend much of their time

designing and writing reports, memos, etc. and explaining those communications to others. They communicate regularly with external investors and creditors, regulators, clients and fellow professionals. This course is designed to help accounting students prepare for their professional careers by helping them develop their written and oral communication skills. The course begins with an overview of the writing process and then moves to document organization and design and how to write with conciseness and clarity. The last half of the course focuses on specific forms of written communication (e.g., letters, memos, reports, email, essays on professional exams) and oral presentations.

Learning Outcomes: 1. Become familiar with the ethical issues that individuals face in organizations: Students will be able to demonstrate an understanding of ethical communication as it relates to accounting-related issues. 2. Develop current business technologies and use common business technology and software in essential tasks: Students will study the appropriate and professional use of social media and electronic and written communication mediums in a business setting. 3. Students will develop effective written and oral communication skills: Students will be able to demonstrate effective oral and written communication skills through class assignments and the writing and presentation of a team paper. 4. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environment: Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present a report on a pre-specifies accounting topic. Credits: 2.00

MGMT 63450 - Financial Statement Analysis And Valuation

Credit Hours: 2.00 to 3.00. This course is designed to prepare students to become intelligent financial statement users. Understanding how market participants use financial statements will assist professionals in their primary tasks of creating and communicating financial information to these individuals.

Learning Outcomes: 1. Identify certain adjustments that are required by financial analysts when assessing firms. 2. Demonstrate an adequate understanding of complex financial statement analysis and valuations procedures. 3. Develop reports that discuss the adjustments necessary to provide an accurate assessment of firms' income-generating abilities, as well as reports that encompass various valuation techniques commonly used in practice. Credits: 2.00 to 3.00

MGMT 63550 - Accounting Consulting For Entrepreneurship

Credit Hours: 2.00 or 3.00. This course is an experiential learning experience that is part of the Experiential Learning Initiative in the Krannert School of Management. The main goal of the course is to provide various accounting services to STEM start-up companies which are based on Purdue's innovations (www.purduefoundry.com) and to established companies in the bigger corporate world. At the same time, we also would like to give our students the opportunity to apply their acquired classroom knowledge and have them exposed to some real-world accounting problems that start-up or established companies typically experience. Our students are expected to provide various accounting support services that are related to financial accounting & reporting, managerial accounting, business planning, and/or tax issues. The format of the course is very open. The first four weeks will be spent in a classroom setting, with presentations on how to professionally manage a client relationship and how to successfully tackle projects in a challenging STEM start-up and/or established corporate environment. Each project will be completed by teams of 3-5 students, which will be formed at the beginning of the semester. After the initial classroom sessions, the project teams will be on their own, with faculty guidance, running the engagement. The teams will meet with the clients to determine their needs and expectations. The students will do the work and deliver the output including a final presentation to the client.

Learning Outcomes: 1. Provide various accounting services to STEM start-up companies which are based on Purdue's innovations (www.purduefoundry.com) and to established companies in the bigger corporate world. Credits: 2.00 or 3.00

MGMT 63610 - Business Ethics

Credit Hours: 2.00. This course is designed to move past a surface-level understanding that we need to act ethically in the business environment to wrestling with what does that look like and what frameworks can help us do just that. I also firmly believe that we have to prethink our decisions before we are confronted with opportunities to compromise ethically. We will incorporate current headlines to our evaluation of major ethical lapses of the past.

Learning Outcomes: 1. Describe, list, differentiate, and utilize a set of frameworks/theoretical approaches to ethics and apply those approaches to concrete problems/cases. 2. Assemble the ethical concepts through effectively writing and speaking about business ethics by paraphrasing and describing the concepts in your own words. 3. Respond to questions in online discussions to develop and integrate business ethics in real-world cases. 4. Develop your ability to effectively write and speak about business ethics by paraphrasing and describing the concepts in your own words. 5. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 6. Use business ethics and apply to real-world cases by thinking critically about our own responsibilities as economic agents (as workers, managers and consumers) and as citizens. 7. Summarize and use a set of frameworks/theoretical approaches to ethics and apply those approaches to concrete problems/cases. 8. Summarize Crisis Communications and integrate ethics into related case studies. Credits: 2.00

MGMT 63650 - Accounting Ethics

Credit Hours: 3.00. This course is designed to introduce students to the foundational elements underlying ethics and ethical behavior, with an emphasis on ethical issues facing professional accountants. The course will provide students with a framework of ethical reasoning, professional values and attitudes for exercising professional skepticism, and other behavior that is in the best interest of the public and accounting profession. The course will also review the core values of integrity, objectivity, and independence as well as rules of professional conduct. This course uses real-world case studies and practical hands-on applications in order to enhance the student's ability to recognize ethical dilemmas and overcome them with sound ethical decision-making. Illinois Board of Examiners ethics course required to apply for taking the Uniform CPA Examination.

Learning Outcomes: 1. Summarize the importance of ethics and ethical reasoning to professional accountants through explaining various ethical models. 2. Paraphrase and implement the core values of integrity, objectivity and independence, the backbone of the accounting profession. 3. Implement the rules of professional conduct included in the AICPA Code of Professional Conduct and TSBPA ethics rules to various case studies from a CPA Exam perspective. 4. Identify situations that might be unethical or a violation of professional standards, perform research and consultations as appropriate, and determine the appropriate action. 5. Recognize potentially unethical behavior of clients and determine the impact on the services being performed. Credits: 3.00

MGMT 63750 - Advanced Taxation

Credit Hours: 2.00 or 3.00. This course is directed at students who wish to learn more about the taxation of business entities beyond the basic principles taught in MGMT 504 Introductory Tax Accounting or an equivalent course. The course will cover broad topics such as tax law sources and tax research; the tax advantages and disadvantages of various business entities as well as how entrepreneurs may choose the optimal entity for tax purposes; taxable and nontaxable methods of mergers, acquisitions, and divestitures; fundamental concepts of consolidated tax returns for C Corporations; and the accounting for income taxes under ASC 740.

Learning Outcomes: 1. Describe various tax planning procedures. 2. Identify the tax law sources and assess the authoritative weight of each. 3. Conduct basic tax research using RIA Checkpoint and communicate results. 4. Understand the basic tax treatment of major operational events for sole proprietorships, partnerships, S Corporations, and C Corporations. 5. Identify the optimal business entity for tax purposes. 6. Understand the basic types of taxable acquisitions of C Corporations and tax planning ideas. 7. Understand the basic types of nontaxable acquisitions of C Corporations and tax planning ideas. 8. Understand the basic types of corporate divestitures and tax planning ideas. 9.

Understand fundamental concepts of consolidated tax returns for C Corporations. 10. Calculate a corporation's income tax provision under ASC 740 and understand how to prepare the required financial statement disclosures. Credits: 2.00 or 3.00

MGMT 63800 - Pricing Strategies And Algorithms

Credit Hours: 2.00. The course enables participants to formulate a systematic framework for approaching the problem of pricing a product, and more generally, a product line. The concepts and analytical methods necessary to develop such a framework are explored and incorporate marketing, competitive, and legal aspects. The course will use a combination of lectures, case discussions and exercises. Prerequisite: MGMT 62000.

Learning Outcomes: 1. Adopt a systematic framework to approach the problem of pricing a product or service. 2. Understand various approaches to estimate value of a product or service to users. 3. Understand the tradeoff between price and sales volume and its relation to price elasticity. 4. Understand segmented pricing and psychological aspects of pricing. 5. Understand the implications of pricing in a competitive environment and the importance of price policy. 6. Appreciate pricing issues when selling through an intermediary. 7. Be introduced to legal aspects of pricing. Credits: 2.00

MGMT 63850 - Public Company Reporting And Regulation

Credit Hours: 2.00 or 3.00. This course introduces students to the Securities and Exchange Commission's (SEC) rules and regulations as they apply to U.S. companies and their auditors. Requirements for frequently encountered annual reporting responsibilities (e.g., Forms 10-K, 10-Q, 8-K, proxy statements, etc.) and registration statements are explored and analyzed. Actual SEC filings provide real-world applications and interpretation of the SEC's rules. Rules imposed by the primary U.S.-based stock exchanges are introduced as is the history of the SEC and current trends affecting this rule-making body. Additionally, this course encompasses the enforcement power of the SEC and its implications to companies, their officers, and accountants.

Learning Outcomes: 1. Identify the structure, mission, and limitations of the SEC and key securities laws and statutes impacting U.S. companies and their external auditors. 2. Demonstrate an understanding of the Securities Acts of 1933 and 1934 and The Public Company Accounting Reform and Investor Protection Act of 2002 by identifying required disclosures and associating them with the specific rule requirements. 3. Research specific topics including emerging issues by using online resources supported by the SEC and the stock exchanges. Credits: 2.00 or 3.00

MGMT 63900 - Advanced Auditing And Audit Analytics

Credit Hours: 3.00. This course is designed to help students prepare for their professional careers by strengthening their understanding of the CPA's attest function and familiarizing them with current assurance issues. After finishing the course, students should understand the current state of the Enterprise Risk Management and tools for risk evaluation, be able to identify best practices related to external audit, be prepared to manage an audit group, understand the key aspects of being an audit consultant and be able to work with all levels of internal and external audit professionals. Throughout the course, students will have opportunities to improve their written and oral communication skills, particularly as they relate to communication in the audit setting. The course will also emphasize the impact of recent and current regulatory actions, including the Sarbanes-Oxley Act of 2002, on the audit profession. Prerequisite: MGMT 50600 with a minimum grade of C.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas: Students will be able to demonstrate an understanding of how U.S. audit and securities market regulations affect an audit. They will also use their statistical training in audit planning and evaluation as well as risk assessment. 2. Become familiar with the ethical issues that individuals face in organizations: Students will be able to demonstrate an understanding of ethics as it relates to audit and external reporting. 3. Develop current business technologies and use common business technology and software in essential tasks: Students will use spreadsheets and auditing software in case analyses and assignments. 4.

Students will develop effective written and oral communication skills: Students will be able to demonstrate effective oral and written communication skills through class participation and the writing and presentation of a team paper. They will also demonstrate effective written communication skills through case write-ups. 5. Achieve depth of understanding and applications of financial reporting: By deepening their understanding of the audit process and techniques and by working through case studies focused on particular reporting and auditing issues, students will develop and demonstrate a deep understanding of reporting regulations and rules. 6. Develop the leadership and teamwork skills to function effectively in a diverse cross-functional environment: Students will demonstrate their leadership and teamwork skills by effectively working as a team to produce and present a research paper on business and audit risks in a specific sector. Credits: 3.00

MGMT 63901 - London Trip For IASB

Credit Hours: 2.00 or 3.00. This is an experiential study abroad class with workshops held at the International Accounting Standards Board (IASB) as well as at one of the leading universities in the UK. In addition, students will visit public multinational companies and/or accounting firms in the Greater London area, UK.

Learning Outcomes: 1. Understand the IASB institution, its role, and its relationship to national standard-setting bodies. 2. Understand the IFRS standard-setting process, and be able to develop a new standard based on the IFRS conceptual framework. 3. Understand how standards are applied by multinational companies and be able to interpret standards given more complex situations and events. 4. Understand the enforcement process related to international accounting standards. 5. Gain a deeper understanding of the political impact on accounting standard-setting. Credits: 2.00 or 3.00

MGMT 63902 - Accounting And Public Policy

Credit Hours: 1.00 or 2.00. This course offers students an intensive, distinctive, personal and professional development experience, addressing critical public policy institutions, issues, and trends affecting the profession of accounting. Over 3 days in Washington, D.C., participants meet with and gain a greater understanding of the role of regulatory agencies such as the Public Company Accounting Oversight Board and the Securities and Exchange Commission. Participants also have meetings and discussions with organizations governing the accounting profession, such as the American Institute of Certified Public Accountants and the Center for Audit Quality, as well as more informal but important organizations such as trade associations and think tanks. The course often includes visits with members and staff from Congress and officials from the Executive Branch to understand their institutional roles in governing the profession. These meetings include discussions of the relevant tax, securities, commodities, and oversight committees in Congress, for example. Within the Executive Branch, discussions typically include the operations of forensic accounting and compliance within agencies such as the U.S. Treasury and Internal Revenues Service and the Federal Bureau of Investigation. Participants also gain practical insights into the strategic role of government relations, as well as the role of public policy lobbying and advocacy by the overall profession and individual firms, regarding issues that affect them and their clients. Other topical sessions often include discussions of cybersecurity policy, tax policy, and other topics relevant to the profession and key clients.

Learning Outcomes: 1. Will provide students an intensive, distinctive, personal and professional development experience, addressing critical public policy institutions, issues, and trends affecting the profession of accounting. Credits: 1.00 or 2.00

MGMT 63910 - Accounting For Managers

Credit Hours: 0.00 or 1.00. Accounting is the language of business. Understanding financial accounting enables professionals inside the firm to communicate with external users. In this course you will be introduced to financial accounting, which focuses on the reports that are generated to provide external users information about a firm's financial position and operational effectiveness.

Learning Outcomes: 1. Describe the financial statements and the parties involved in the production and use of financial statements. 2. Analyze the key principles used in financial accounting. 3. Analyze the process of preparing financial statements. 4. Evaluate how managers' choices and estimates shape

financial statements. Credits: 0.00 or 1.00

MGMT 64000 - Financial Modeling

Credit Hours: 2.00 or 3.00. This course provides an introduction to financial modeling using computer applications. The first part of the course covers how to use Microsoft Excel to analyze historical and pro forma financial statements, stock return data, linear regression analysis, Monte Carlo simulations, Pivot Tables and also covers many advanced functions within Excel. The second part of the course provides an introduction to using SAS to analyze financial data and more advanced regression techniques. Prerequisites: MGMT 61000 (Note: Students who have not taken MGMT 61000 may enroll with instructor permission).

Learning Outcomes: 1. Gain experience using Excel to solve complex problems and build financial models. 2. Learn how to use Excel and other software to build, test and run regression analysis with financial data. 3. Provide an introduction to using SAS for analyzing financial data. 4. Learn how to implement Monte Carlo simulations using Excel for financial applications. Credits: 2.00 or 3.00

MGMT 64100 - Options And Futures

Credit Hours: 2.00 to 4.00. Rigorous and applied coverage of the pricing and hedging of options and futures contracts with applications. Prerequisite: MGMT 61000 .

Credits: 2.00 to 4.00

MGMT 64200 - Portfolio Management

Credit Hours: 2.00 to 4.00. Methods of analysis of common stocks and bonds for individual and institutional portfolios. Review of the empirical evidence of security market efficiency, and implications of that evidence for various methods of security analysis. Team projects to analyze the economy, the particular industry or sector, and selected firms within the industry or sector, and to make specific buy-hold-sell recommendations for the stocks and bonds of those firms. Prerequisite:MGMT 61000 .

Credits: 2.00 to 4.00

MGMT 64300 - Financial Risk Management

Credit Hours: 2.00 to 4.00. Provides a foundation for understanding ways in which financial institutions and industrial firms can optimally manage financial risks. Concentrates on various "functional" risk measurement problems related to interest rate risk, default risk, exchange rates, and commodity prices. Prerequisite: MGMT 61000 .

Credits: 2.00 to 4.00

MGMT 64400 - Venture Capital And Investment Banking

Credit Hours: 2.00 to 4.00. Examines the process of corporate value creation through financial policy choices. The sequence of topics roughly parallels the life cycle of a typical corporation. Begins by studying the financing of entrepreneurial companies. Then studies the investment banking and capital acquisition process employed for public securities issues. Also examines capital acquisition and reorganization decisions, such as the use of hybrid securities like convertible debt and PIPEs, project financing bankruptcy reorganizations, and equity structurings. Prerequisite: MGMT 61000 .

Credits: 2.00 to 4.00

MGMT 64500 - Mergers, Acquisitions, And Corporate Control

Credit Hours: 2.00 to 4.00. Focuses on firms' internal governance structures and on pressure from the external market for corporate control, including executive compensation, board of directors' composition, shareholder activism, mergers, and takeovers. Prerequisite: MGMT 61000 .

Credits: 2.00 to 4.00

MGMT 64700 - Financial Engineering

Credit Hours: 2.00 or 3.00. The objective of this course is to provide students with the necessary skills to value and hedge a wide variety of derivatives contracts used in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous-time. Some basic knowledge of stochastic processes would be helpful, but not essential: we will cover what we need in class. The course covers valuation of securities using modern martingale methods as well as the necessary parameter estimation and numerical methods such as Monte Carlo simulations. Applications will include derivatives such as options on stocks, bonds and currencies, as well as valuation of defaultable securities, and modeling the term structure of interest rates and risk management with Value-at-Risk. Prerequisites: MGMT 61400, or similar coursework with instructor permission.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Understand the underlying economic determination and behavior of financial derivatives. 3. Design and structure such financial derivatives. Credits: 2.00 or 3.00

MGMT 65000 - Strategic Management I

Credit Hours: 2.00 to 4.00. Concepts and methods that integrate previous training in functional areas of management. The perspective is that of the general manager charged with directing the total enterprise. Emphasis is given to formulation and implementation of strategy. Prerequisite: MGMT 61000 , MGMT 62000 , Master's student standing and Management majors only.

Credits: 2.00 to 4.00

MGMT 65200 - Entrepreneurship

Credit Hours: 0.00 to 3.00. Examines entrepreneurship with a focus on the start-up process for high growth new ventures.

Cases will be used, and students will conduct a feasibility analysis of a new venture concept. Prerequisites: MGMT 61000 and MGMT 62000. Concurrent Prerequisites: MGMT 65000.

Learning Outcomes: 1. Learn how to sketch out a possible business idea and "pitch it" to gain team members and participants. 2. Develop a business model and learn the advantages of bootstrap financing vs venture capital financing for new ventures. 3. Describe a value proposition of a business plan and show the current valuation. 4. Learn how to write a Business Plan. Credits: 0.00 to 3.00

MGMT 65210 - Organizational Development And Consulting Rewards

Credit Hours: 2.00. The course will describe techniques for diagnosing organizations and interventions for improving organizations. Specific interventions will be examined in detail including structural interventions (e.g., organizational design, job design), interpersonal process interventions (e.g., process consultation, team building), and human resource interventions (e.g., performance management, career development). The course will attempt to both build knowledge and provide practice in the various techniques.

Learning Outcomes: 1. Understand the basics principles of the theory and practice of OD. 2. Gain familiarity with the different types of OD interventions, including detailed real-world examples. 3. Introduce the specific OD techniques (or methodologies) and get practice applying some of the techniques. 4. Appreciate the importance of an OD practitioner perspective in understanding and implementing OD. Credits: 2.00

MGMT 65310 - Human Resource Systems

Credit Hours: 3.00. An overview of selected human resource activities/systems for the future human resource professional. Emphasis will be placed on building skills in areas that will provide a foundation for future coursework in human resources management. Topics covered include planning and forecasting human resource needs, job analysis, design and evaluation of training systems, design of performance appraisal systems, and safety and health in the workplace.

Learning Outcomes: 1. Develop a strong value for HRM knowledge generated from research (i.e., "evidence-based management") and its potential for contributing to improving the quality of contemporary human resource management activities. 2. Develop an appreciation for the organizational environment in which HRM activities occur, and an understanding of the effects of that environment on such activities. 3. Demonstrate an understanding of relevant professional and legal standards in developing, implementing, and evaluating HRM functions. 4. Understand and apply fundamental principles and techniques related to HRM activities. 5. Evaluate the strengths and weaknesses of the primary tools and principles employed in HRM. 6. Improve writing, critical thinking, and discussion skills through course activities. Credits: 3.00

MGMT 65330 - HR Strategy

Credit Hours: 2.00 to 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on HRM, Strategic HRM, Managing Human Resources Globally, and Strategically Managing Human Resource Functions.

Learning Outcomes: 1. Understand the history of human resource management and how it has evolved to the strategic level. 2. Understand what strategic Human Resource Management means and entails. 3. Understand and complete a Human Resource Management Strategic plan. 4. Make yourself an invaluable resource to upper level management and the CEO by demonstrating the extreme importance and value of Strategic Human Resource management. Credits: 2.00 to 3.00

MGMT 65340 - Staffing Tools

Credit Hours: 2.00. Provides an in-depth analysis of the methods used in staffing and selection processes. Methods used to evaluate individuals as well as methods used to evaluate selection and promotion tools will be studied. Emphasis on the processes of designing, administering, revising, and evaluating selection programs that comply with government regulation as well as add value to the organization. This course is designed for the future HR professional. Concurrent Prerequisite: MGMT 65310 or STAT 51200 .

Learning Outcomes: 1. Understand the staffing systems at both practical and theoretical levels, including the basic scientific concepts. 2. Gain familiarity with the common methods, tools, and

techniques in staffing. 3. Develop hands-on skills in using some of these staffing methods and tools. Credits: 2.00

MGMT 65350 - Staffing Systems

Credit Hours: 2.00. Examines all aspects of the staffing process beginning with applicant recruitment and ending with termination and outplacement. Emphasis on building skills that the general manager will need to evaluate, design, and implement these activities. Designed for the future manager, as well as the future HR professional. Topics will be addressed from an individual perspective, as well as an organizational perspective. Prerequisite: OBHR 63100 or OBHR 63300 or MGMT 65310.

Learning Outcomes: 1. Understand the staffing systems at both practical and theoretical levels. 2. Gain familiarity with the common methods, tools, techniques, and strategies in staffing. 3. Develop hands-on skills in using some of these staffing methods and tools. Credits: 2.00

MGMT 65370 - Industrial Relations II

Credit Hours: 2.00. An examination of union-management relations topics that build on material addressed in OBHR 640. Topics include causes of strikes, impasse resolution techniques, grievance and arbitration procedures, public sector labor relations, labor-management cooperation, and international labor-management relations. Emphasis is on how changes in the competitive environment have created the need for changes in the traditional union-management relationship. Films, cases, exercises, and guest speakers are utilized. Prerequisite: OBHR 64000 or MGMT 65360.

Learning Outcomes: 1. Identify the various forms of alternative dispute resolution techniques, such as mediation, arbitration, and peer review, as utilized in both the private and public sectors. 2. Demonstrate understanding of key concepts from the course such as why workers join unions, the usefulness of the strike, how industrial relations works in the unionized sector versus in the employment at will sector of the economy, etc. 3. Outline the labor management relationship in a major industry such as airlines, health care, entertainment, etc. showing understanding of the past, present and future of industrial relations in that sector. 4. Develop the ability to think critically about the major issues that face unions and management as we move into the middle part of the century. 5. Develop the ability to critically evaluate the positions of labor and management on key issue such as recent Supreme Court decisions like Janus, the factors that should be utilized in making promotion decisions, just cause for discharge, etc. Credits: 2.00

MGMT 65380 - Compensation And Reward Systems

Credit Hours: 3.00. The first course in a two-course master's-level sequence focusing on the use of rewards to achieve organizational objectives. Special emphasis is given to compensation as a particularly salient reward. Designed for HR professionals, the course examines the relationship between rewards and organizational characteristics to achieve effective reward practices. Lectures, discussions, case studies, and guest speakers are used to build competence in job evaluation, skill-based pay, and setting pay levels. Prerequisite: OBHR 63100 or OBHR 63300 or MGMT 65310, MGMT 67100 or STAT 51200.

Learning Outcomes: 1. Learn the current state of compensation decision-making. 2. Develop knowledge and skills in making evidence based compensation decisions. 3. Learn how compensation systems relate to business strategies, human resources systems, and other organizational processes. 4. Build competence in measuring and valuing work, the design of pay structures, and market-pricing systems. Credits: 3.00

MGMT 65390 - HR Analytics

Credit Hours: 2.00 to 3.00. This course provides an introduction to the field of HR analytics. HR Analytics is an advanced set of data analysis methodologies, tools and metrics for comprehensive workforce performance measurement and improvement. The objective of HR analytics is to drive evidence-based decisions and action in the workplace. In addition to your instructor, you may hear from expert practitioners and corporate leaders who have "been there and done that" leveraging a myriad of HR analytics along the way. We will also review (and hopefully expand) your understanding of handling data including conceptualizing models, identifying key metrics, collecting data, analyzing data, and presenting data in ways that tell a powerful story. Throughout our course, I will infuse consulting concepts, methodologies, and lessons learned that combined with your analytic skills will help you to effectively serve as an HR Business Partner (internal HR consultant).

Learning Outcomes: 1. Understand how organizations use HR analytics to address

business problems, support business decision making and drive business outcomes. 2. Become familiar with methods and processes to design, define and execute workforce research projects in a consulting capacity leveraging consulting models and methodologies and enhancing project management capabilities. 3. Learn how to approach and apply HR analytics methodology. 4. Understand current HR analytics practices, tools and emerging trends. Credits: 2.00 to 3.00

MGMT 65420 - Leadership

Credit Hours: 1.00 to 3.00. Examines organizational leadership responsibilities, forms of leadership, the acquisition, use, and consequences of power, critical leader skills, and how corporate environments shape leadership. Emphasis on self-discovery and development of managerial leadership knowledge and skills.

Learning Outcomes: 1. Increase conceptual understanding of key leadership principles and strategies utilized within formal organizations. 2. Have deepening knowledge regarding important interpersonal relationship skills and abilities. 3. Help students discover important insights into oneself as a leader (including strengths and weaknesses/opportunities for personal growth). Credits: 1.00 to 3.00

MGMT 65430 - Negotiations In Organizations

Credit Hours: 1.00 to 3.00. Decision making examines organizational context, stages, creativity, biases, and group processes. Negotiations examine strategies for preparing and conducting negotiations. The principal focus is on individual and interpersonal aspects of each. Permission of department required.

Learning Outcomes: 1. Understand the basic components of business negotiations through reading and completing assignments based on the textbook chapters. 2. Learn the basic components of a negotiated contract by completing a business transaction in written form. 3. Attain pragmatic negotiations skills using the I-Message method for daily activities encompassing negotiation tactics and the Verbal Skills method for more sophisticated negotiations for a major business transaction. 4. Explore cultural differences in negotiations by completing a study of practice in two countries other than the U.S. and sharing results with other students to expand their cultural knowledge base. 5. Explore and practice alternative dispute resolution techniques including mediation and arbitration. 6. Demonstrate the negotiations skills they are attaining by participating in class role-plays and by completing a final major negotiation in class. Credits: 1.00 to 3.00

MGMT 65440 - Change Management

Credit Hours: 2.00. The purpose of this course is to provide you with essential tools and concepts you need to help create and sustain needed change in your personal and/or professional life, in your work teams and in organizations. This course is taught in an executive style format, intended for working future managers with emphasis on knowledge application and experiential learning.

Learning Outcomes: 1. Understand how classic and contemporary change models can be used to create and sustain change in individuals, teams, and organizations. 2. Understand how micro-level barriers to change are often overlooked, and how to overcome them. 3. Learn to influence others when holding them accountable so that they choose to change. 4. Understand fundamental sources of power and how they can be appropriately used to influence others to change. 5. Understand how and when to utilize different leadership to lead change, and how to anticipate blind spots to be more influential. 6. Understand how individual differences within teams impact effectiveness and change. 7. Apply program materials to create a personal leadership development plan, and learn how to avoid regression to the status quo. Credits: 2.00

MGMT 65450 - Human Capital Consulting

Credit Hours: 2.00 or 4.00. Working in a team setting, this course provides real-life experience consulting with an organization to solve a real business problem. The focus is on human capital or human resource-related problems. Students

work with a client to define the scope of their engagement, identify needs, conduct outside research (benchmark, market analysis), develop solutions, and identify key deliverables. The project culminates with an executive summary presentation with tangible recommendations to the client's senior leadership. This experience prepares students to serve as an HR Business Partner (HRBP).

Learning Outcomes: 1. Identify problems and generate & offer solutions to problems. 2. Conduct benchmarking and other external market analysis. 3. Develop the professionalism and influence skills needed to credibility influence an executive audience. 4. Demonstrate credibility through written and oral presentations. Credits: 2.00 or 4.00

MGMT 65460 - Talent Acquisition

Credit Hours: 2.00 to 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions, and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Design a talent acquisition program in order for an organization's talent to be its competitive advantage. 2. Design a workforce implementation plan and a process to identify issues and continuous refinement of the plan. 3. Create a Recruiting plan that is focused on both external and internal candidates. 4. Design a process for final candidate evaluation. 5. Develop strategies to orient and onboard newly acquired talent. Credits: 2.00 to 3.00

MGMT 65470 - Talent Management

Credit Hours: 2.00 to 3.00. This course focuses on the employer-employee relationship and how managers work with employees to improve their performance. Attention is given to Talent, Talent Management, and Performance Management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing talent. Various definitions of Employee Engagement will be explored, along with how it is, measured, and why it is so important to your organization. Finally, various methods to engage employees in the organization will be studied.

Learning Outcomes: 1. Define talent and talent management. 2. Determine talent management strategies to support an organization's objectives and goals. 3. Evaluate talent management models to address organizational needs. 4. Develop and integrate a talent management system into organizations. 5. Define critical elements of a successful performance management system. 6. Identify methods to promote and maintain an engaged workforce. Credits: 2.00 to 3.00

MGMT 65480 - Total Rewards

Credit Hours: 2.00. This course examines how organizations can optimize financial and relational returns to gain and sustain a competitive advantage in a global environment. We will use theory and cases to develop a sound understanding of the compensation system.

Learning Outcomes: 1. Understand compensation systems and how they can be a catalyst for change and to help organizations execute their business strategies. 2. Know how to attract, engage, and retain top talent effectively. 3. Apply practical management tools for sustaining competitive advantage. 4. Develop technical compensation skills to design pay structures and market pricing systems. 5. Comprehend the importance of rational returns for employees and the role it plays in employee development. Credits: 2.00

MGMT 65500 - Competitive Strategy

Credit Hours: 2.00 or 3.00. Examines how firms obtain and sustain superior returns through the development and implementation of a competitive strategy at the business-unit level. Focus is on strategies that develop and exploit two sources of superior returns: unique value-creating resources (e.g., patents, brand equity, operational capabilities), and powerful positions in markets and supply chains. Participants are expected to be familiar with basic competitive strategy concepts and tools, such as "five-forces analysis", the value chain, and generic strategies. Presents a more analytical perspective of strategy, drawing from game theory. Prerequisites: MGMT 65000.

Learning Outcomes: 1. Learn how to analyze differential competitive positions. Establish the source of advantage in terms of competitive position and resources firms may have. Use

case analysis and discussion to do so. 2. Identify the means of disrupting incumbent positions with entry or deter entry through pre-emption of competitive position or key resources by incumbents. Also consider mechanisms for incumbents to reduce the success of entrants by adopting some aspects of entrants offering. Project scenarios in which entrants can be successful and also identify scenarios in which incumbents will respond aggressively. Project pricing and financial outcomes of these choices for entrant and incumbent. 3. Understand the competitive dynamics of business ecosystems. Identify the drivers of success in these ecosystems by articulating the network effects associated with different offerings within an ecosystem. Credits: 2.00 or 3.00

MGMT 65700 - Manufacturing Strategy And Process Innovation

Credit Hours: 2.00. In recent years many firms have rediscovered manufacturing and operations as a potential source of strategic advantage. In general, these firms have sought to develop capabilities in operations which provide a sustainable advantage in the marketplace. In addition, successful firms have developed processes for understanding the cross-functional implications of product and process choices. In this course, we will seek to understand the circumstances under which particular operating capabilities are most beneficial and how such capabilities can be developed so that operations can be exploited for competitive advantage. Concurrent Prerequisite: MGMT 61000, 65000, 66000.

Learning Outcomes: 1. Identify a fit between Competitive Priorities and Operational Choices by showing how such a fit is accomplished in case analysis and write-ups and understanding pressures to change competitive priorities or operational choices. 2. Establish how capabilities emerge over time and enable a trajectory of competitive advantage by showing how capabilities create options to change tradeoffs in competitive priorities in case analysis and write-ups and identifying financial implications of pursuing one competitive priority vs another. 3. Use financial analysis and discussion of capabilities to argue for investment choices in case analysis. 4. Understand benefits of different approaches to supplier alliances. Consider tradeoffs in governance cost, production cost, long term efficiency and responsiveness in arms length, vertically integrated, and third way supplier partnerships in case analysis. Credits: 2.00

MGMT 65730 - Technology Strategy

Credit Hours: 2.00 or 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage. We take an in-depth look at how technological innovation affects the competitive dynamics of markets, how firms can strategically manage these dynamics, and how firms can create and implement strategies to maximize their likelihood of success. The course introduces tools, concepts, and analytical frameworks that will enhance your ability to define and analyze strategic problems that stem from innovation and technological change, and to identify sources of competitive advantage from both an industry and firm-level perspective. Permission of department required.

Learning Outcomes: 1. Assess the degree to which a firm or industry is subject to technological factors. 2. Evaluate the temporal dynamics of an industry, lifecycles and s-curves from both a technological maturity and adoption (installed customer base) perspective. 3. Design firm strategies to capitalize on internal technological capabilities and external opportunities. 4. Formulate collaboration strategies and strategies for protecting innovation. Credits: 2.00 or 3.00

MGMT 65810 - Corporate Consulting Experiential Learning

Credit Hours: 1.00 to 4.00. This course is an engagement with an external firm to solve challenges within the business. Students work together on project teams that require a cross-functional and interdisciplinary perspective. Student mix is

determined by project needs and qualifications. Projects are typically sponsored at a senior level of the organization and address enterprise-level issues and challenges of strategic importance. Permission of instructor required.

Learning Outcomes: 1. Demonstrate proficiency in use of consulting skills. 2. Manage client meetings and expectations. 3. Set-up and manage project using project management skills and tracking. 4. Critique peer contributions and have the ability to discriminate between good and better performers. Credits: 1.00 to 4.00

MGMT 66000 - Introduction To Operations Management

Credit Hours: 2.00 to 4.00 (West Lafayette) 3.00 (Calumet, North Central). As goods and services are produced and distributed, they move through a set of inter-related operations or processes in order to match supply with demand. The design of these operations for strategic advantage, investment in improving their efficiency and effectiveness, and controlling these operations to meet performance objectives is the domain of Operations Management. The primary objective of the course is to provide an overview of this important functional area of business. Prerequisite: MGMT 67000 .

Credits: 2.00 to 4.00

MGMT 66100 - Management Of Operating Systems

Credit Hours: 1.00 to 4.00. A project course in which students are exposed to a variety of operations problems as they arise in a real world setting. The focus of the course is problem formulation, analysis, and proposal(s) of an implementable scheme for their resolution. Prerequisite: MGMT 66000.

Learning Outcomes: 1. Gain an increased ability to identify and analyze issues in operations management. 2. Develop implementable solutions. 3. Enhance understanding of how specific projects relate to larger business goals. 4. Improve professional skills, including teamwork, client communication, and project management. Credits: 1.00 to 4.00

MGMT 66400 - Supply Chain Management

Credit Hours: 2.00 to 4.00. Continues the examination of the linkage between a firm's product-market strategy and the role of the operations (i.e., production) function initiated in MGMT 660. Topics include material requirements planning, production activity control, and just-in-time systems. Prerequisite: MGMT 66000.

Learning Outcomes: 1. Learn tools and methodologies to model and analyze supply chain processes. 2. Learn how to manage uncertainty and risk, both within the firm and across the supply chain. 3. Learn how to effectively coordinate supply chains using contracts. 4. Understand how companies have used the principles from this course to significantly enhance their competitiveness and to innovate business models. Credits: 2.00 to 4.00

MGMT 67000 - Business Analytics

Credit Hours: 2.00 to 4.00. Introduction to quantitative decision procedures under uncertainty. Applications of descriptive statistics, probability models, simulation models, interval estimates, and hypothesis testing to management problems. Managerial-oriented cases are used in instruction. Prerequisite: Master's student standing and Management majors only.

Credits: 2.00 to 4.00

MGMT 67200 - Advanced Business Analytics

Credit Hours: 2.00. Quantitative decision procedures under uncertainty applied to business problems. Basic concepts in econometrics and multivariate analysis are studied. Several managerial-oriented case studies are used to illustrate estimation, testing, and regression procedures. Master's student standing and Management majors only.

Learning Outcomes: 1. Review of Multiple Linear Regression. 2. Analysis of Variance (ANOVA): A Regression Approach. 3. Qualitative Independent Variables. 4. Qualitative or Discrete Dependent Variables. 5. Univariate Time Series Models for the Mean. 6. Univariate Time Series Models for Volatility. Credits: 2.00

MGMT 67620 - Optimization For Data Analysis And Decisions

Credit Hours: 2.00 or 3.00. This course covers optimization theory and algorithms for data analysis and decision-making. The topics covered include polyhedral analysis, duality, first-order methods, relaxation techniques, and computational aspects of optimization. The course will use business applications to demonstrate usefulness of the methods.

Learning Outcomes: 1. Understand convex optimization theory. 2. Understand the use of optimization techniques with data analysis. 3. Code optimization algorithms. 4. Perform polyhedral analysis. 5. Utilize modern solvers

and modeling paradigms to solve optimization problems. 6. Develop relaxations for nonconvex optimization problems. Credits: 2.00 or 3.00

MGMT 67700 - Seminar In Quantitative Methods In Management Research

Credit Hours: 3.00. Applications of quantitative methods of analysis to research problems in financial, marketing, and production management. Data processing and statistical inference in management research. Prerequisite: MGMT 67000, 67100, 67200.

Credits: 3.00

MGMT 68000 - Economic Analysis Of Technology Markets

Credit Hours: 0.00 to 3.00. The core models of microeconomics are fundamental to day-to-day management decisions. This course will cover economic models that describe firm production, pricing, entry/exit decisions, market efficiency, and welfare. Such economic models will be applied to the analyses of a variety of market conditions, including monopoly, oligopoly, and monopolistic competition. It will provide students with an understanding of the implications of economic theory on technology products, firms, markets, and consumers.

Learning Outcomes: 1. Be able to use economic models to analyze technology markets and make optimal managerial decisions. Credits: 0.00 to 3.00

MGMT 68200 - Digital Product Design

Credit Hours: 2.00. This course is a comprehensive exploration of designing digital products that can improve the quality of people's daily lives. It covers value creation with technology and a human-centered design process including improv brainstorming, storyboarding, interviewing, sketches, and selling. Students will learn how to ideate and how to iteratively refine ideas with real users. Students will consider factors driving technology product design decisions such as the unique economic characteristics of today's technology-intensive markets and their impact on strategic interactions among firms and consumers. Students will also learn to discover unmet user needs, reframe problematic situations, envision multiple possible product concepts, and assess their feasibility, viability, and desirability. The course culminates in the creation of a business model, a product sketch, and a plan for taking the product to market.

Learning Outcomes: 1. Apply digital business methods and digital information strategies. Credits: 2.00

MGMT 68300 - Technology-Driven Business

Credit Hours: 2.00 to 3.00. Digital technologies such as the Internet, IoT, and AI are rapidly and fundamentally transforming today's companies and industries. They have enabled completely new ways for companies to organize work, generate innovations, make decisions, and interact with customers, suppliers, and competitors. This course is designed for students who want to deeply analyze digital transformations and, more importantly, manage technology-driven businesses. Applying information economics principles and theoretical rigor, this course studies how digital technologies affect consumer behavior, business model innovations, market design, and competitive outcomes. This course trains students to apply data analytics skills to real business problems and develop a rich understanding of the strategic value of digital transformations.

Learning Outcomes: 1. Develop analytical and quantitative skills to analyze and formulate business decisions. 2. Understand current business technologies and related knowledge to translate data into useful information for decision making. 3. Become familiar with the ethical issues that individuals face in organizations. 4. Develop effective written and oral communication skills. 5. Develop the leadership and teamwork skills to function effectively in a diverse, cross-functional environment. 6. Develop awareness of global and multicultural issues relating to business decisions. Credits: 2.00 to 3.00

MGMT 68700 - AI For Business Decisions

Credit Hours: 1.00 to 3.00. Leading-edge companies in every industry are relying on data and AI to replace intuition and guesswork in their decision-making. This course prepares students to understand how AI can be utilized to create value and a sustainable competitive advantage. It teaches the scientific process of using AI to transform data into predictions and insights for making better business decisions in a real-world setting. Upon completion, students should be able to identify and evaluate value propositions of AI advances, conduct successful AI implementations, and manage AI-driven digital

transformations.

Learning Outcomes: 1. Design and present as a part of the project engagements that take into consideration human instincts and biases. 2. Understand and identify human instincts and biases that are useful for design considerations. 3. Break apart engagements into three parts: mechanics, dynamics, and aesthetics. Credits: 1.00 to 3.00

MGMT 68800 - Developing A Global Business Strategy

Credit Hours: 2.00 to 4.00. Provides an introduction regarding the business and strategy challenges faced by managers in our global economy, regardless of whether the firm is a small domestic company or a large multi-national. Major topics for the course include motivations and challenges of internationalization, international business fundamentals, foreign market entry strategies, organizing across countries, analyzing global industries, building competitive advantage in global industries, and the influence of culture and institutions. Prerequisite: MGMT 65000.

Learning Outcomes: 1. Understand the three foundation characteristics related to foreign market entry - firm, industry, and institutional factors. 2. Analyze country choice for entry and the factors involved in choosing a country. 3. Develop the essential skills to identify and pursue global business opportunities, with a focus on the different modes of entry. 4. Acquire the skills to resolve management decision problems in global markets, and analyze multi-country organizational structures. Credits: 2.00 to 4.00

MGMT 69000 - Advanced Problems In Management

Credit Hours: 1.00 to 4.00. Advanced investigation in a specific management field at the graduate level.

Credits: 1.00 to 4.00

MGMT 69100 - Special Problems In Management

Credit Hours: 1.00 to 4.00. Advanced investigation in a specific management field at the graduate level. For students in the master's programs in management who are registered in the master's program summer session. Permission of instructor required.

Credits: 1.00 to 4.00

MGMT 69199 - Graduate Co-Op I

Credit Hours: 0.00. Graduate cooperative education experience. Program coordinated by Business Career Services with cooperation from academic disciplines and participating employers. Permission of department required.

Learning Outcomes: 1. Have an increased ability to identify and analyze issues in operations management to develop implementable solutions. 2. Understand how specific projects relate to larger business goals. 3. Have improved professional skills, including teamwork, client communication, and project management. Credits: 0.00

MGMT 69200 - Managerial Communication Skills

Credit Hours: 1.00. Enhances student professionalism in managerial contexts by improving oral communication skills by developing strong oral presentation techniques.

Credits: 1.00

MGMT 69299 - Graduate Co-Op II

Credit Hours: 0.00. Graduate cooperative education experience. Program coordinated by Business Career Services with cooperation from academic disciplines and participating employers. Permission of department required.

Learning Outcomes: 1. Have an increased ability to identify and analyze issues in operations management to develop implementable solutions. 2. Understand how specific projects relate to larger business goals. 3. Have improved professional skills, including teamwork, client communication, and project management. Credits: 0.00

MGMT 69399 - Graduate Co-Op III

Credit Hours: 0.00. Graduate cooperative education experience. Program coordinated by Business Career Services with cooperation from academic disciplines and participating employers. Permission of department required.

Learning Outcomes: 1. Have an increased ability to identify and analyze issues in operations management to develop implementable solutions. 2. Understand how specific projects relate to larger business goals. 3. Have improved professional skills, including teamwork, client communication, and project management. Credits: 0.00

MGMT 69410 - Communication And Persuasion

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course is to help students take

the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and practical skills to express your ideas in ways that connect. Permission from department required. Co-requisite: MGMT 69000 - Industry Practicum

Learning Outcomes: 1. Articulate personal brand via writing, speaking and interacting. 2. Explain data and analyses in ways that are concise and clearly understood by laymen without losing meaningful context or content (content delivery). 3. Demonstrate mastery at being data-driven by (a) translating data and analyses into a narrative that provides context for your message (storytelling) AND (b) creating informative, clutter-free data visualizations to support your message (content organization). 4. Make persuasive recommendations that convince decision-makers to adopt a particular belief or take a course of action. 5. Identify ethics and inclusion considerations in communication and persuasion. Credits: 2.00

MGMT 69600 - Theoretical Principles For Deep Learning

Credit Hours: 2.00 or 3.00. This course aims to expose you to one of the most active contemporary research directions within machine learning: theoretical principles for deep learning. Despite its undisputedly useful empirical breakthroughs, their understanding is still in many ways nascent. This course provides the latest theoretical aspects of deep learning and representation learning, accompanied by a mixture of reading group sessions and student projects. This is an advanced graduate course designed for master's and Ph.D.-level students and assumes a substantial degree of quantitative research background.

Learning Outcomes: 1. Demonstrate the deep learning algorithms and design deep neural networks which are more appropriate for various types of learning tasks in various domains. 2. Understand representation power and generalization of deep models, regularization, and hyperparameter selections. 3. Identify optimization for deep learning algorithms with observations on the landscape and explain the role of overparameterization. 4. Perform nonlinear feature selections in deep architectures. 5. Leverage your deeper theoretical understanding to produce rigorous solutions to real-world applications. Credits: 2.00 or 3.00

MGMT 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Manufacturing Engineering Technology

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

MFET 11301 - Product Data Management

Credit Hours: 3.00. This course provides an understanding of the types of data generated and used in the product lifecycle, the current tools and methodologies in the management of that data, and system analysis and implementation techniques for using PDM as the backbone supporting a company's product development and implementation activities. Interaction between various enterprise systems is discussed.

Learning Outcomes: 1. Develop a significant understanding of concepts, applications, and procedures involved in the controlling, protecting, and accessing product definition data. 2. Understand and apply Product Data

Management (PDM) technologies and methods in a Product Lifecycle Management (PLM) environment. 3. Use a PDM system from the end-user perspective, simulating various workflows. 4. Understand basic principles of project management. 5. Understand the creation and importance of object metadata. 6. Describe the relevance of PDM in model-based enterprises. Credits: 3.00

MFET 15900 - Introduction To The Smart Manufacturing Enterprise

Credit Hours: 1.00. This course serves as an introduction to modern smart manufacturing methods and processes. The course explores the manufacturing enterprise in different industry contexts to illustrate multiple, varied paths to inform students of multiple career opportunities.

Learning Outcomes: 1. Define the multiple areas that rely on the manufacturing process and connected enterprise. (Case studies, guest speakers) 2. Demonstrate understanding of the fundamentals of historical technology evolution and potential future trends of manufacturing through Industry 1.0, Industry 2.0, Industry 3.0, Industry 4.0, etc. 3. Identify potential manufacturing methods and processes in modern smart manufacturing. (Case studies, guest speakers) 4. Apply knowledge of different manufacturing methods to design a prototype of a manufacturing process. (prototyping and presentation) Credits: 1.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MFET 20301 - Model-Based Definition

Credit Hours: 3.00. This course provides experience in the development of model-based product definition through the use of contemporary modeling tools and the application of ASME dimensional standards. This course also covers product data exchange and interoperability standards from the perspective of neutral and proprietary data formats and models. Long-term archival concepts are also covered.

Learning Outcomes: 1. Explain the significance of 2D and 3D CAD model standards relative to industrial practice. 2. Describe the elements and process of 3D model-based definition. 3. Incorporate model-based definition techniques into the CAD model database and technical documentation when creating geometry. 4. Implement modeling techniques that support long-term archival of product data. 5. Develop standard parts libraries which incorporate industrial standard parts specifications. 6. Select appropriate file format(s) for the communication of CAD data through different toolsets and data exchange media. 7. Develop basic literacy in interpreting technical documentation. Credits: 3.00

MFET 20401 - Data Capture, Collection, Analysis, And Visualization In Smart Manufacturing

Credit Hours: 3.00. This course provides an introduction as well as hands-on experience in data analysis and visualization in the Smart Manufacturing environment. It introduces students to the role of data in a Smart Manufacturing Enterprise, concepts and techniques of data analytics, and design principles for creating effective data visualization to facilitate managerial decision-making. This course is part of Smart Manufacturing Enterprise Fundamentals and should be taken after completing Introduction to the Smart Manufacturing Enterprise course.

Learning Outcomes: 1. Describe the types of data existing in a Smart Manufacturing

Enterprise, and how data are used to support strategic, tactical, and operational decisions in smart manufacturers. 2. Perform descriptive, diagnostics, and predictive analytics on a manufacturing/supply chain dataset. 3. Solve a small manufacturing/supply chain optimization problem with Excel Solver. 4. Explain what visual qualities are important to convey data and apply design principles in creating visualizations. 5. Combine data analytics and visualization to provide insights into manufacturing/supply chain datasets. Credits: 3.00

MFET 21301 - Simulation And Visualization Applications

Credit Hours: 3.00. This course provides an investigation of predictive and documentary capabilities of engineering simulation and visualization tools. The course is based on concepts derived from theoretical computer graphics and related industrial standards, as well as the use of the geometric model-based product definition.

Learning Outcomes: 1. Describe the processes of simulation and visualization methods and tools. 2. Select and use appropriate simulation and visualization tools for specific PLM tasks. 3. Describe the role of product data models to enhance the processes of engineering design optimization and verification. 4. Develop skills of communication and project management through written assignments, individual, and group projects. 5. Define and apply the fundamentals of technical simulation and visualization with CAx tools in a PLM environment. Credits: 3.00

MFET 23000 - Industrial Internet Of Things, Networks, And Systems I

Credit Hours: 3.00. This course provides an introduction to Industrial Internet of Things (IIoT) devices, networks, and standards in the context of converged information technology (IT) and operations technology (OT) industrial automation systems. Course topics include an examination of IT and OT networks, hardware, architecture, protocols, standards, and security practices in the context of industrial applications.

Learning Outcomes: 1. Explain the concept of Industrial Internet of Things (IIoT) and the enabling technologies. 2. Describe IT and OT development and detail differences in priorities and capabilities. 3. Design, implement, and analyze an integrated industrial network. 4. Configure host-level and network-level technical security controls in IT and OT systems. 5. Apply industry standards and reference architectures to ensure best practices in the selection, deployment, and operation of IIoT devices. Credits: 3.00

MFET 23100 - Industrial Internet Of Things, Networks, And Systems II

Credit Hours: 3.00. This course offers a practical exploration of Industrial Internet of Things (IIoT) in converged information and operations technology (IT/OT) industrial automation systems. Course topics include IT and OT reference architectures, industrial network convergence, standards, and security practices in the context of Edge, hybrid, and Cloud-based industrial applications. Specific focus is given to integrating and securing networked industrial devices with local and cloud-based IT systems in greenfield and brownfield scenarios.

Learning Outcomes: 1. Apply industry standards to develop a basic industrial network for converged IT/OT smart manufacturing systems. 2. Demonstrate the implementation of key security components required for converged IT/OT industrial networks. 3 Describe the role, characteristics, and requirements of safety systems in smart manufacturing. 4. Implement batch and real-time computation and basic machine learning models in an automated system. Credits: 3.00

MFET 24100 - Automatic Control Systems

Credit Hours: 3.00. This course provides students with a comprehensive understanding of feedback control systems and their practical implementation. Students will learn modeling and simulations of linear/linearized dynamic systems, stability study, time domain analysis, frequency domain analysis, root-locus method, design of PID control, compensators, derivation of control law, and system performance analysis through hands-on exercises and simulations. The curriculum emphasizes applications of mechatronics, robotics, and mechanical/electrical engineering technology fields.

Learning Outcomes: 1. Utilize the fundamental concepts for feedback control system design. 2. Create mathematical models of dynamic

systems. 3. Analyze the performance of control systems through simulations. 4. Optimize controller parameters for desired system behavior. 5. Apply control theory to real-world engineering problems. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MFET 25000 - Smart Manufacturing Cloud Computing Applications

Credit Hours: 3.00. This course introduces concepts and principles of cloud computing and the virtualization of computing resources and services for smart manufacturing applications. The fundamental topics of cloud computing will be addressed, including virtually processing, storing, modeling and analyzing of data in the cloud environment. Fundamental concepts about cloud tools, applications, and services from a production and manufacturing perspective will be presented.

Learning Outcomes: 1. State the challenges and advantages of cloud computing in smart manufacturing. 2. Explain the concepts and principles of cloud computing such as a scalability, elasticity, agility, fault tolerance, disaster recovery and networking. 3. Recognize the models, tools, and service types offered by the different cloud platforms for smart manufacturing applications. 4. Select strategies for managing and optimizing cloud computing resources for different manufacturing applications. 5. Apply techniques in clouding computing to model and manage manufacturing data. 6. Build manufacturing apps using cloud based platform tools and services. Credits: 3.00

MFET 29000 - Special Topics In Manufacturing Engineering Technology

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Manufacturing Engineering Technology is provided by Technology faculty, subject to MFET curriculum subcommittee approval.

Learning Outcomes: 1. Vary by course offering. Credits: 1.00 to 3.00

MFET 29200 - Projects In Automation, Robotics And Mechatronics

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Course is for supervised project development, subject to MFET curriculum subcommittee approval. Intended for lower division students. Permission of instructor required.

Learning Outcomes: 1. Successfully complete a project of limited scope. 2. Document and manage a project using accepted project management principles. 3. Demonstrate effective oral and written communication skills. Credits: 1.00 to 3.00

MFET 29900 - Manufacturing Engineering Technology Independent Project

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by instructor and approved by the MFET curriculum committee. Primarily for third- and fourth-semester students with special interests. Permission of instructor required.

Learning Outcomes: 1. Vary by course offering. Credits: 1.00 to 3.00

MFET 30301 - Digital Manufacturing

Credit Hours: 3.00. This course investigates digital manufacturing methods, tools, and processes. Topics include additive and subtractive production techniques, CNC tools, geometric dimensioning and tolerance, model-based definition, measurement instruments and metrology, and scanning techniques for geometry validation.

Learning Outcomes: 1. Describe the differences between additive and subtractive manufacturing. 2. Create a simple CNC program to drive a desktop mill, lathe, and cutter. 3. Understand the basic steps to moving CAD data through a CAM system to drive a machine. 4. Use measurement techniques and model-based data to inspect a manufactured part. 5. Use 3D scanning technology to validate a manufactured part. Credits: 3.00

MFET 31301 - The Business Of Managing Digital Product Data

Credit Hours: 3.00. This course provides experience in the business-related aspects of PLM tools and methods. Topics include identifying specifications and roles for system users within an organization, creating database models for digital product information, workflows, virtual machine installation and configuration of PLM systems, budgeting, and benchmarking.

Learning Outcomes: 1. Identify specifications and requirements for users of PLM systems. 2. Identify user roles and create them with appropriate permissions in a PLM system. 3. Install and configure a PLM system to be used by student teams. 4. Develop the product data model consistent with user requirements. 5. Conduct basic benchmarking and budgeting activities for a PLM deployment. Credits: 3.00

MFET 32100 - Nature-Inspired Design And Materials

Credit Hours: 3.00. In this course, students will work at the intersection of nature, design, materials, and devices. We will begin by exploring structures in nature, from the microscale to the macroscale. Inspired by nature, teams will design structures, objects, tools, machines, or sensors that incorporate aesthetic elements inspired by their exploration and observation of nature. These designs will then be realized through 3-D printing and will be realized in a proof-of-concept device.

Learning Outcomes: 1. Differentiate among general multi-physics engineering principles. 2. Design 3D structures creatively, using nature inspiration, art, and engineering software. 3. Evaluate 3D structures from the aesthetic and engineering perspective. 4. Fabricate sensors and other electrical devices, implementing nature-inspired structures. 5. Develop teamwork ethics, especially from diversified backgrounds. Credits: 3.00

MFET 34100 - Process And Continuous Control Applications

Credit Hours: 3.00. An examination of devices, algorithms, strategies, and standards used in smart manufacturing continuous process and control serves as the basis of this course. Concepts include Proportional, Integral, & Derivative Control (P&ID), loop modeling, transfer functions, PID design, implementation and tuning. Course laboratories focus on implementing and tuning systems using industry-grade hardware and devices.

Learning Outcomes: 1. Explain the importance of control systems in the management of a continuous process. 2. Apply fundamental control theory concepts and models to a process or continuous control scenario. 3. Document process control applications, using recognized standards and symbology. 4. Apply controller algorithms and tuning methods to refine the performance of control loops. 5. Determine appropriate control architecture and hardware for single and multiple loop systems. Credits: 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 34800 - Introduction To Robot Kinematics

Credit Hours: 3.00. This course introduces the fundamentals of robotics with an emphasis on solutions to the kinematics problems of serial robotic manipulators. It covers robot modeling and simulation, forward kinematics, inverse kinematics, analysis of robot motion and static forces, and trajectory planning.

Learning Outcomes: 1. Create the kinematics model of a robotic manipulator. 2. Solve forward and inverse kinematics problems of a robotic manipulator. 3. Analyze the motion and static forces of a robotic manipulator. 4. Plan trajectories of a robotic manipulator. Credits: 3.00

MFET 35000 - Smart Manufacturing Systems Modeling & Simulation

Credit Hours: 3.00. This course addresses application of industrial internet of things (IIoT) for modeling and simulation of smart manufacturing assets, processes, and operations. Emphasis is on synchronizing modeling/simulation with real-time data to develop innovative services, create efficiencies, and enable productivity improvement in smart factories.

Learning Outcomes: 1. Describe the

convergence of the physical and digital worlds, technology, and standards of IIoT-aided modeling and simulation. 2. Implement process data modeling and application to various types of plant data (drives, pumps, production lines) using real-time, historical, and event-based data. 3. Develop digital/virtual-cloud representation models to be mirrored onto physical manufacturing systems. 4. Create digital twin (DT) models using data from IIoT devices for monitoring and automating control of smart connected assets. 5. Construct DT-oriented simulation model for IoT-aided manufacturing system for applications in productivity, reliability, efficiency, and predictive maintenance operations. 6. Develop application of augmented reality and manufacturing model proxies in diagnostic and troubleshooting operations. Credits: 3.00

MFET 35100 - Mixed Reality Smart Manufacturing Applications & Design

Credit Hours: 3.00. The course investigates development strategies, use cases, and mixed reality (MR) application in industrial IoT (IIoT)-based smart manufacturing systems. Emphasis is on superimposing digital content onto physical systems, integrating data from smart and connected manufacturing production operations, processes, and machines.

Learning Outcomes: 1. Outline the benefits and applications of mixed reality (MR) offers in smart manufacturing environments. 2. Link the MR concepts, industrial IoT (IIoT) technologies, and development approaches with smart manufacturing applications. 3. Develop proficiency in using hardware, software tools and technologies to design and prototype effective MR applications for manufacturing. 4. Design and develop MR user interfaces and interaction techniques for augmented human-machine systems. Credits: 3.00

MFET 35200 - Smart Manufacturing Production Information Systems

Credit Hours: 3.00. An examination of smart manufacturing information systems with particular focus on applications for horizontal- and vertically-integrated manufacturing organizations. Topics include cloud-based integrated information systems to provide connectivity, visibility, and analytics of production and shop-floor execution systems and integrating manufacturing execution, manufacturing operations management, and enterprise resource planning (ERP) systems.

Learning Outcomes: 1. Apply ISA-95 standards for horizontal and vertically integrated smart manufacturing operations using Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and Enterprise Resource Planning (ERP) systems. 2. Apply cloud infrastructure and data concepts for storing, distributing, and accessing manufacturing enterprise data for planning, scheduling, management, and production control. 3. Implement real-time, batch, and streaming data processing techniques for visualization and analytics of production data. 4. Apply cloud-based Manufacturing Execution System (MES), Manufacturing Operations Management (MOM) and ERP for creating efficiency, optimization, and control of production operations. Credits: 3.00

MFET 36100 - Machine Learning And Manufacturing Analytics

Credit Hours: 3.00. Machine learning (ML) algorithms are used to extract and analyze large amounts of manufacturing data. Fundamental ML analytic techniques and commonly used ML algorithms for manufacturing applications will be introduced. Students will create, train, and deploy ML models on a cloud platform to create enterprise-ready smart manufacturing artificial intelligence (AI) solutions.

Learning Outcomes: 1. Explain the benefits machine learning and artificial intelligence have in manufacturing. 2. Describe the fundamental principles, core concepts and operations involved with developing machine learning applications. 3. Apply commonly used machine learning algorithms for smart manufacturing applications. 4. Apply cloud-based automated machine learning tools to develop models and applications to perform intelligent manufacturing operations and analytics. Credits: 3.00

MFET 36300 - Intelligent Manufacturing Systems I

Credit Hours: 3.00. This course investigates how artificial intelligence, industrial IoT, and big data are used to enable predictive analytics with machine learning. Emphasis is on optimizing production processes, improving productivity, quality, efficiency, and integrating predictive maintenance applications in smart manufacturing operations.

Learning Outcomes: 1. Apply appropriate machine learning algorithms for improving and optimizing manufacturing operations. 2. Enable predictive analytics with machine learning for maintenance operations. 3. Evaluate manufacturing processes using machine learning. 4. Identify and solve manufacturing problems using machine learning and root cause analysis. 5. Describe how data- and knowledge-based systems are used in product and design lifecycles. Credits: 3.00

MFET 36400 - Intelligent Manufacturing Systems II

Credit Hours: 3.00. Artificial intelligence (AI), machine learning (ML), industrial IoT (IIoT), and big data are applied to enable predictive analytics with machine learning for optimizing processes and operations in a horizontally-integrated smart manufacturing value-chain network.

Learning Outcomes: 1. Integrate cloud platforms with industrial big data, advanced analytics, AI/ML, and IIoT in a horizontally integrated supply chain network. 2. Implement data, analytics, and machine learning to create insights and drive decision-making in a horizontally integrated value chain network. 3. Describe how intelligent systems are connected to physical assets via IIoT infrastructure to automate inventory, and asset management across a manufacturing value chain network. 4. Apply predictive modeling, analytics, and AI/ML techniques to optimize material management, production planning, scheduling, and supply operations across a manufacturing value chain network. Credits: 3.00

MFET 37100 - Introduction To Precision Machine Design

Credit Hours: 3.00. This is a multidisciplinary course focusing on engineering techniques that are employed to design and develop high-precision automation products equipped with precision mechanisms. Fine mechanisms and precision instruments will be used to illustrate the concepts and applications. Topics covered include design strategy, high-precision mechanical components, sensors and measurement, servo control, design for controllability, control software development, controller hardware as well as automated error detection and recovery.

Learning Outcomes: 1. Utilize principles of precision machine and mechanism design for smart and precision machinery. 2. Design electromechanical components and systems using multidisciplinary techniques. 3. Design smart machinery with sensing, transmission, actuation technologies, and machine control strategies. 4. Perform product value analysis and product life performance analysis of precision machines. Credits: 3.00

MFET 37400 - Manufacturing Integration I

Credit Hours: 3.00. The fundamentals of data communications and local area networks are taught in order to show students how to integrate modern manufacturing systems. Emphasis is on the various levels of communications between shop floor computers, PLCs, robots, and automatic identification equipment. Database technology is used as an integration tool. This course prepares students for the MFET capstone course.

Learning Outcomes: 1. Achieve communications between various types of controls and devices. 2. Interface various peripheral manufacturing devices using networking and serial communications. Credits: 3.00

MFET 39200 - Advanced Projects In Automation, Robotics, And Mechatronics

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Course is for supervised project development, subject to MFET curriculum subcommittee approval. Intended for upper division students. Instructor of permission required.

Learning Outcomes: 1. Successfully complete a project of limited scope. 2. Document and manage a project using accepted project management principles. 3. Demonstrate effective oral and written communication skills. Credits: 1.00 to 3.00

MFET 39500 - Smart Manufacturing Enterprise

Organization And Operations

Credit Hours: 3.00. This course provides an introduction and overview of dealing with organizational change management needed to address existing cultures within organizations dealing with the digital transformation required to implement a Smart Manufacturing Enterprise. It introduces students to the cultural and organizational barriers that exist and the theories, tools, and best practices used to overcome them.

Learning Outcomes: 1. Summarize the barriers to organizational change management. 2. Describe the tools, techniques and theories that are employed to overcome organizational and cultural barriers within and organization. 3. Describe the impact that AI will have on the workforce and SMART manufacturing. 4. Provide examples of the drivers, enablers and compelling forces for Industry 4.0's advancement. 5. Define the Industry 4.0 framework and be able to outline the various systems used and their role in SMART Manufacturing organizations. 6. Illustrate the role and importance of IT+OT, Cyber Physical Systems, analytics, and BIG Data driving decisions in SMART manufacturing organizations. 7. Identify the integration points of Machine-, Factory, and Enterprise-level activities using MES, FEMS, ERP, QMS, & PLM for connecting people, process, and machines across the manufacturing value chain. Credits: 3.00

MFET 41000 - Introduction To Additive Manufacturing

Credit Hours: 3.00. This course covers topics in additive manufacturing (AM) technologies. Topics include the AM benefits and drawbacks of additive as compared to subtractive manufacturing, additive manufacturing process and material selection, design for additive manufacturing, support structure generation, printing process planning, and quality control techniques, such as monitoring, inspection, and surface modification.

Learning Outcomes: 1. Describe the concepts, benefits, and application of additive manufacturing. 2. Select appropriate additive manufacturing processes and material for producing parts. 3. Design 3D objects for additive manufacturing considering the process requirements. 4. Develop strategies and practices incorporating appropriate quality control techniques. Credits: 3.00

MFET 44000 - Smart Manufacturing Autonomous Human Robot Systems

Credit Hours: 3.00. This course explores robot cognition with application of intelligent human-robot systems in unstructured manufacturing environments. Topics include intelligent robotics, machine learning, machine vision, and human-robot interaction with particular emphasis on applications for smart manufacturing.

Learning Outcomes: 1. Describe the fundamental concepts of autonomous mobile and field robotics and human-robot interaction in unstructured smart manufacturing environments. 2. Apply intelligent sensory perception algorithms and robot control through sensory feedback for visual and tactile sensing as modalities for human-robot interaction. 3. Identify machine perception approaches and deep-learning techniques to help robots acquire interactive skills. 4. Apply algorithms for spatial representation, mapping and localization with real-time robot control strategies integrated with machine perception approaches for applications in smart manufacturing environments. Credits: 3.00

MFET 44100 - Robotics and IoT Seminar

Credit Hours: 0.00 or 1.00. The Robotics Seminar is a series of lectures from eminent local, national and international researchers in the field of robotics and the internet of things (IoT) and related areas, such as computer vision, autonomy, cyber-physical systems, wearables, etc.

Learning Outcomes: 1. Conduct a search of published papers, articles and materials on the web of relevance to a seminar topic. 2. Analyze a presentation in the context of prior published papers and materials on the web. 3. Evaluate the claims of a presentation with respect to researched material. Credits: 0.00 or 1.00

MFET 44200 - Programming Robots With ROS

Credit Hours: 3.00. Robot Operating Systems (ROS) will be used as a programming platform to explore the topics of

computer vision, SLAM (Simultaneous Localization and Mapping), path planning, grasping, and social interaction in robotic systems, as well as programming large systems for physical interaction with the world. Self-contained implementation projects are core to the class. Student knowledge of a procedural programming language, familiarity with robotics, and a rudimentary understanding of matrices is assumed.

Learning Outcomes: 1. Apply software versioning techniques to the programming of large software projects with hardware in-the-loop. 2. Build ROS software consisting of pre-written packages and custom packages to implement complex robotic applications on arms and vehicles. 3. Apply basic software engineering techniques to designing and documenting software. 4. Apply and evaluate computer vision techniques based on templates to track objects in 2-D. 5. Synthesize 3-D computer vision techniques for 3-D sensors from 2-D algorithms. 6. Analyze and evaluate hardware sensors with respect to specific software task needs. 7. Apply SLAM methods to real-world scenes to interpret the world on real hardware in real-time. 8. Analyze execution times and evaluate trade-offs in computational hardware performance with respect to sensor data throughput. 9. Implement feedback controllers and tune for specific hardware characteristics. 10. Apply manual path planning techniques to 2-D and 3-D maps extracted from SLAM algorithms. 11. Apply automatic path planning tools and software to 2-D and 3-D maps extracted from SLAM algorithms. Credits: 3.00

MFET 47100 - Electric Machines

Credit Hours: 3.00. This course provides a comprehensive introduction to electrical machines fundamentals, three-phase circuits, electromagnetic principles, AC and DC motors, transformers, magnetism in motors, energy conversion in electric machines as well as their industrial and commercial applications.

Learning Outcomes: 1. Utilize working principles of electric machinery for design and performance analysis. 2. Master application of three-phase circuits, transformers, electromagnetic field analysis, electrical/mechanical energy conversion and efficiency, and interaction between motors and power systems. 3. Develop teamwork and problem-solving skills through electric machine projects. 4. Select and integrate electric machines in multidisciplinary systems. Credits: 3.00

MFET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MFET 48002 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MFET 48003 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and

develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MFET 48004 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MFET 48005 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MFET 49000 - Special Topics In Manufacturing Engineering Technology

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Manufacturing Engineering Technology is provided by Technology faculty, subject to MFET curriculum subcommittee approval.

Learning Outcomes: 1. Vary by course offering. Credits: 1.00 to 3.00

MFET 49900 - Manufacturing Engineering Technology Independent Project

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by instructor and approved by MFET curriculum committee. Primarily for seventh- and eighth-semester students with special interests. Permission of instructor required.

Learning Outcomes: 1. Vary by course offering. Credits: 1.00 to 3.00

MFET 51400 - Product Lifecycle Management

Credit Hours: 3.00. A survey of the graphical knowledge base with business and industry applications that support the product lifecycle management process is presented. Graphical applications used in the development of a product from an initial concept through its disposal are covered. Current and past application topics are reviewed in both theoretical and technological aspects and are validated through applied research. Emphasis is placed on the interdisciplinary nature of product lifecycle management through industrial case studies.

Learning Outcomes: 1. Develop fluency and awareness of the elements of product lifecycle management in the contemporary sense. 2. Describe the basic elements of a PLM environment. 3. Identify organizational barriers to implementing PLM. 4. Describe the various roles in the organization and their relationship to PLM. 5. Describe the concept of the Digital Thread and how it relates to product lifecycle management. 6. Identify potential organizational impacts of PLM. 7. Work within a team to design and deploy a product data management solution that supports PLM and the Digital Thread. 8. Complete a research/white paper targeted at an industry or academic conference and/or publication covering the efforts of the project undertaken during the semester. Credits: 3.00

MFET 51700 - Product Development Using Virtual Environments

Credit Hours: 3.00. This course presents the concepts of

product development using virtual reality and haptic devices in the development and manufacture of products. Students learn how this technology is currently being used in industry and anticipated technological advancements. Some of the major topic areas covered are: virtual reality technologies, product design and development processes, virtual environments and virtual prototyping, 3D modeling, design analysis and visualization, simulation visualization, multimodal user interface in virtual environments, and real-world applications of product development. Knowledge of 3D computer graphics fundamentals.

Learning Outcomes: 1. Understand the theory of engineering and product design for virtual environments. 2. Apply the principles of engineering and design in developing 3D models for virtual space. 3. Apply current VR and engineering CAD tools to product development and display scenarios. 4. Describe challenges and issues regarding 3D engineering design in virtual space. Credits: 3.00

MFET 52400 - Model-Based Definition In The Digital Enterprise

Credit Hours: 3.00. This course will explore Model-based definition (MBD), an emerging industry technique that uses 3D CAD models with annotations to communicate information between people and equipment instead of using drawings. This technique results in reduced variability during data translation, more accurate product definition information and wider dissemination of product data through an increasingly digital corporate enterprise.

Learning Outcomes: 1. Understand how MBD is beneficial to the modern manufacturing environment of organizations, along with the use of PLM tools and methods. 2. Author Product Manufacturing Information (PMI) in the selected CAD system. 3. Understand the challenges and opportunities where MBD data can be re-used throughout the lifecycle of the product. Credits: 3.00

MFET 53400 - Technical Documentation In The Digital Enterprise

Credit Hours: 3.00. This course will explore the different ways technical documentation manifests itself within the enterprise to support the digital thread. We will use various industry applications to create and modify technical documentation and explore the processes and applications that facilitate the creation, storage, and configuration of technical documentation.

Learning Outcomes: 1. Provide a history of the evolution of Technical Documentation. 2. Provide an overview and background of the emerging use of Technical Documentation in the context of the Digital Enterprise. 3. Explain and demonstrate how to generate various forms of Technical Documentation for manufacturing. 4. Expose students to the opportunities and uses of Technical Documentation throughout the supply chain. Credits: 3.00

MFET 55700 - Smart Manufacturing Enterprise: Exploring The Applied Technologies

Credit Hours: 3.00. The core foundations of digital transformation in manufacturing for making all things digital, making all things smart, and making all things connected to drive business value.

Learning Outcomes: 1. Analyze how the nine enabling technologies of Industry 4.0 is transforming the manufacturing industry. 2. Demonstrate understanding of the socio-economic impact of Industrial IoT and cyber-physical manufacturing systems will have on human workforce and the manufacturing industry alike. 3. Demonstrate how digital and data assisted systems in manufacturing is used for decision making and augmenting human capabilities in manufacturing. 4. Analyze how information is acquired, exchanged, managed, and leveraged across manufacturing value chain. Credits: 3.00

MFET 55800 - Smart Manufacturing & Global Supply Chain

Credit Hours: 3.00. Progressive manufacturing uses innovative technology to improve products or processes through the Internet of Things. Smart manufacturing is not limited to emerging technologies; rather, it is composed of efficient, productive, highly integrated, tightly controlled processes across a spectrum of globally competitive U.S. manufacturers and suppliers, including the facilities themselves. The course will examine the selection, characteristics, and optimization of materials, processes, big data, cloud analysis of design data, control and adaptive theories, and personnel in a production environment. Examining global manufacturing issues through a variety of business examples, you will study the framework that explains the characteristics and challenges surrounding global supply chain management and investigate the impact on

suppliers, manufacturers, and customers.

Learning Outcomes: 1. Evaluate and design automation and control strategies in manufacturing operations. 2. Assess data collection, analysis, and sharing attributes of manufacturing systems and subsystems. 3. Plan and apply strategies for managing data from multiple sources. 4. Analyze and appraise variables significant for global supply chain management. Credits: 3.00

MFET 63400 - Automation Of Digital Product Development Processes

Credit Hours: 3.00. This course introduces students to advanced computer programming techniques in the context of Computer-Aided Design and Manufacturing by focusing on automation and customization procedures of 3D solid modeling, design, and management tasks. The course emphasizes problem-solving skills and creative thinking by developing solutions to manipulate CAD applications, files and PDM systems programmatically. By the end of the semester, students should be able to identify characteristics and common patterns in tasks that lend themselves to automation and select and evaluate the most appropriate mechanisms to implement different levels of automation. Pre-Requisite: CGT 52000 or equivalent.

Learning Outcomes: 1. Demonstrate expertise in manipulating CAD applications and files programmatically. 2. Analyze how CAD systems can be customized to suit unique purposes. 3. Devise algorithms to automate design work and speed CAD/CAM processes. 4. Develop functionality that expands and builds on the capabilities of CAD software. 5. Create complete applications for engineering and design both inside and outside the CAD environment. 6. Improve productivity by reducing the time required to perform repetitive tasks. Credits: 3.00

MFET 64200 - Programming Robotics And Cyber-Physical Systems With The Robotics Commons

Credit Hours: 3.00. Robot Operating System (ROS) is an open-source programming platform that allows the sharing of software packages for more in-depth exploration of complex software projects involving robotics and cyber-physical systems. The basic tools of simulation, visualization, computer vision, simultaneous localization and mapping (SLAM), path planning, manipulation, grasping, and social interaction in robotic systems will be presented in the context of advanced projects with a publishable result. Students will develop complex, independent projects as part of the class that will result in a final report in the form of a publication-worthy paper suitable for submission to an international conference. Student knowledge of a procedural programming language, familiarity with robotics, and a rudimentary understanding of linear algebra is assumed. Prerequisites: ECE 56900.

Learning Outcomes: 1. Design and analyze ROS software consisting of pre-written packages and custom packages to implement complex robotic applications on arms and vehicles. 2. Apply advanced software engineering techniques to designing and documenting software. 3. Synthesize 2-D and 3-D computer vision techniques for 2-D and 3-D sensors for control of robots and systems in 3-D. 4. Analyze papers from the contemporary robotics and CPS literature and synthesize critiques of the contributions. 5. Develop advanced projects and defend their contributions. Credits: 3.00

Materials Engineering

MSE 19000 - Introduction To Materials Engineering

Credit Hours: 1.00. An introduction to materials science and engineering. Emphasis on the "processing, structure, properties, performance" relationships that lead to the development of materials for society's needs. Examples drawn from the major materials classes.

Learning Outcomes: 1. Recognize and give examples of the "processing, structure, properties, performance" relationships for the major materials classes. Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning

outcomes. Credits: 3.00

MSE 23500 - Second Year Materials Engineering Laboratory

Credit Hours: 3.00. Laboratory experiments using standard equipment to measure material properties, characterize material structure and composition, and explore processing methods to form functional shapes, and modify properties of the formed shapes. Experiments are carried out with metal, ceramic, and polymeric materials to illustrate property-structure-processing relationships.

Learning Outcomes: 1. Identify and properly utilize primary sources and online databases to find information about material structures, properties, and processing techniques. 2. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 3. Apply characterization techniques appropriate for the class of material analyzed. 4. Assess validity of experimental data and recognize experimental factors affecting data. 5. Accurately and clearly report engineering data using figures, graphs, and tables and proper statistical methods. 6. Display effective written communication in technical reports. Credits: 3.00

MSE 25000 - Physical Properties In Engineering Systems

Credit Hours: 3.00. Class connects math, science and engineering practice and applications. Presents foundational aspects of engineering problem solving, use of computer math tools for engineering problem solving, basic engineering statics, dynamics and mechanics, group problem solving approaches, and introductory aspects of design and materials selection.

Credits: 3.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics;

Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties.

Credits: 3.00

MSE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 33000 - Processing And Properties Of Materials

Credit Hours: 3.00. An introduction to the relationships between the processing of materials and their properties. Heat treating, forming, casting, consolidation, and other more material-specific manufacturing processes. Elucidation of the role of phenomena such as heat flow, mass diffusion, nucleation, interfacial tension, elastic and plastic deformation, precipitation, grain growth.

Credits: 3.00

MSE 33500 - Materials Characterization Laboratory

Credit Hours: 3.00. The principles of analytical methods for characterization of materials for structure and composition; optical microscopy, scanning electron microscopy, X-ray spectroscopy and diffraction, atomic absorption, emission spectroscopy, and mass spectrometry. Laboratory experiments in X-ray spectroscopy, X-ray diffraction, optical microscopy, and scanning electron microscopy.

Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and

momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

MSE 36700 - Materials Processing Laboratory

Credit Hours: 3.00. This laboratory is intended as an intensive experience in processing techniques used for ceramics, metals, and polymers. Sintering of a ceramic, casting and post-processing (work hardening, heat treatment, etc.) of a metal, and preparation and extrusion of a polymer are the suggested processes. The measurements (e.g., powder size, compaction force, temperature, grain size, molecular weight) applicable to the successful processing of the material and the final properties (e.g., hardness, ductility, strength, stiffness) will be emphasized.

Learning Outcomes: 1. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 2. Demonstrate effective written communication in lab reports. 3. Demonstrate effective oral communication in final project presentation. 4. Characterize the physical mechanisms that underlie the basic interactions between macroscopic shaping processes and microstructure development for the core bulk processing routes of each of the main classes of materials and how they relate to properties. 5. Assess validity of experimental data and recognize experimental factors affecting data. 6. Identify specific processing capabilities and limitations for the main classes of materials.

Credits: 3.00

MSE 37000 - Electrical, Optical, And Magnetic Properties Of Materials

Credit Hours: 3.00. An introductory course to provide basic background on the behavior of materials; electronic band structure, electronic and ionic conduction, electronic processes in semiconductors, dielectric, optical, and magnetic properties, and superconductivity; emphasis is on the relation between the properties and the structural aspects of materials.

Credits: 3.00

MSE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 38200 - Mechanical Response Of Materials

Credit Hours: 3.00. This course encompasses deformation-based microscopic mechanisms, including dislocation motion, diffusion, and viscoplasticity. Macroscopic mechanical response of metals, ceramics, polymers, and composites will be related to elasticity and plasticity concepts for single crystal, polycrystalline, and amorphous materials. Practical design considerations for deformation will be included as well as an introduction to fracture mechanisms.

Learning Outcomes: 1. Conversant with conventional nomenclature, units and notation of mechanical behavior. Examples: Stress, strain, yield strength, fracture strength; yield criteria, flow rules, creep, fracture. 2. Estimate relative ranges and values for important properties of common engineering materials. Examples: Young's modulus at room temperature for steels versus most polymers; yield strength ranges for ductile metals. 3. Recognize mechanisms for important mechanical behaviors. Examples: Plastic deformation by dislocation glide; plastic deformation by molecular rearrangement; dilatant deformation processes; strengthening mechanisms in crystalline solids. 4. Predict mechanical responses based on given information. Examples: Will yielding occur given a stress state and properties? Will fracture occur given a stress state and properties? How will the material change shape for the applied deformation? Which slip system(s) will be operative? 5. Explain the fundamental basis for important deformation mechanisms or processes. Examples: Dislocation glide, cross-slip, dislocation climb, precipitation strengthening; molecular orientation; Nabarro-Herring creep; plane strain fracture. 6. Apply the mechanisms of deformation to component design or alloy design. Credits: 3.00

MSE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 38399 - Professional Practice Co-Op III
Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 39000 - Materials Engineering Seminar
Credit Hours: 0.00. Presentation and discussion of current topics in materials engineering.

Credits: 0.00

MSE 39399 - Cooperative Experience III
Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39499 - Extensive Cooperative Experience IV
Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39599 - Extensive Cooperative Experience V
Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39699 - Professional Practice Internship
Credit Hours: 0.00. Professional experience in Materials Engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Learning Outcomes: 1. Develop the ability to function on multi-disciplinary teams and receive the broad education necessary to understand the impact of engineering solutions in global, economics, environmental and societal context. Credits: 0.00

MSE 42000 - Structure And Properties Of Organic Materials
Credit Hours: 3.00. This course presents information on the chemical and physical structure and basic material properties of organic materials, including synthetic plastics and specialty polymers and surfactants as well as select natural materials (e.g., proteins, carbohydrates, lipids). Fundamental concepts from organic chemistry will be presented along with descriptions of how the chemical and physical structures of organic molecules directly impact the properties of bulk materials over multiple length scales, from the molecular-level to the macroscale. This course will prepare students to be successful in higher-level polymer and soft material elective courses in materials engineering.

Learning Outcomes: 1. Describe atomic-scale bonding and identify common hydrocarbon units in organic molecules and describe common organic reactions involving those units. 2. Select the appropriate characterization techniques for chemical structures, physical structures, and bulk material properties and interpret basic data from selected techniques. 3. Explain how macromolecules are synthesized and outline the most common synthesis reactions. 4. Distinguish between chemical and physical structures or organic materials and classify

different structures into appropriate material length scales. 5. Explain important structure-property relationships over multiple length scales. Credits: 3.00

MSE 43000 - Materials Processing And Design I

Credit Hours: 3.00. Experience in the initiation and execution of a specific materials project or study involving research, processing, and design; a written proposal on the project prepared by the student under the supervision of an individual faculty member; oral progress report at the end of the semester.

Learning Outcomes: 1. Ability to apply knowledge of mathematics, science, & engineering to problems in materials engineering. 2. Ability to exhibit effective oral and written communication skills. 3. Recognition of the need for, and an ability to engage in life-long learning. 4. A knowledge of contemporary issues, particularly as they relate to materials engineering. Credits: 3.00

MSE 44000 - Materials Processing And Design II

Credit Hours: 3.00. Continuation and completion of the materials project or study initiated in MSE 43000 and presentation of a written dissertation on the results and conclusions. Competence in technical writing is emphasized in the preparation of the dissertation.

Learning Outcomes: 1. Exhibit effective oral and written communication. 2. Become aware of the complexity of working in teams to achieve goals, including issues related to the importance of individual ownership of project assignments, communication, leadership roles, establishing goals, and recognizing a diversity of talents among group members. 3. Have a basic understanding of different ethical systems, including legal positivism, ethical egoism, utilitarianism, deontological, etc. 4. Understand consequences of unethical behavior in the profession. 5. Understand and apply the basic tools of engineering design. 6. Draw simple logic diagrams that relate the important precedent relationships for tasks required to complete an engineering program. 7. Develop and learn necessary modelling, processing and characterization tools needed to successfully execute the project. 8. Use statistical analysis to infer conclusions from experiments. Credits: 3.00

MSE 44500 - Materials Engineering Systems Analysis And Design

Credit Hours: 3.00. Integration of materials engineering core coursework with statistical, economic and environmental considerations for analysis and design of systems. Analysis of primary materials processing operations using mathematical and statistical models for predicting interactive effects and process optimization. Specification of materials and processes for mechanical designs, incorporating properties assessment and tradeoffs, cost analysis, and performance optimization with multiple constraints.

Learning Outcomes: 1. Translate performance attributes in a given design to the corresponding nominal material properties. 2. Derive and apply material indices to materials selection for single- and multi-objective designs using the CES materials database and software tools. 3. Specify manufacturing processes for a given component design (material, shape, production rate) using basic cost modeling. 4. Apply a computational model for simulating a materials production and/or processing operation. 5. Quantify material properties, processing and performance variability using statistical methods. Examples: error analysis, probability distributions, sampling theory, statistic intervals and statistical process control charts. 6. Perform basic calculations for engineering cost analysis and use those results to make choices among trade-offs in product design or process operation. 7. Locate and evaluate design information for specific materials and processes. Examples: testing standards, processing specifications, commercial data and patents. 8. Apply quantitative trade-off strategies in selection of materials for designs with conflicting objectives. 9. Apply computational models for materials production and/or processing operations to predict interactive effects of inputs on material quality,

production rates, cost minimization, and environmental impact. 10. Optimize material and process selection simultaneously, based on refined functional relationships between processing, properties and costs. Credits: 3.00

MSE 48900 - Ethics In Engineering Practice

Credit Hours: 3.00. Presentation and discussion of common ethical theories, including ethical egoism, legal positivism, utilitarianism, duties and rights, and virtue ethics. Application of these theories to the practice of engineering, including professionalism, codes of ethics, trust and loyalty, confidentiality, whistle blowing, respect for legitimate authority, risk and reliability, and fraud. Examples of application of ethical theory and case studies drawn from across the engineering profession and include discussion of the interrelated technical and ethical issues.

Learning Outcomes: 1. Identify and discuss common ethical theories. 2. Describe how these theories apply these theories to the practice of engineering. 3. Analyze case studies of failures of engineering products and organizations.

Credits: 3.00

MSE 49000 - Directed Studies In Materials Engineering

Credit Hours: 1.00 to 3.00. Supplementary individual instruction for students from other engineering schools enrolled in 30000-50000 level MSE courses. Permission of instructor required.

Credits: 1.00 to 3.00

MSE 49700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Topics vary. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 49900 - Research In Materials Engineering

Credit Hours: 0.00 to 18.00. Available upon prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 50200 - Defects In Solids

Credit Hours: 3.00. Structures and interactions of point, line, and planar defects in solids, with emphasis on properties of defects. Generic basis of defect energies and interactions, with reference to specific materials and material classes as examples. Types of point defects found in crystals, their origins, interactions, and motion. Overview of dislocation theory and point-defect/dislocation interactions. Structural aspects of surfaces and interfaces, including point and line defect interactions.

Credits: 3.00

MSE 50800 - Phase Transformations In Solids

Credit Hours: 3.00. Description of stress effects on transforming systems. Development of classical models for nucleation and growth and spinodal decomposition. Application of models to discontinuous precipitation, bainite formation, and martensitic transformations.

Credits: 3.00

MSE 51000 - Microstructural Characterization Techniques

Credit Hours: 3.00. A broad variety of analytical tools will be presented. The intent is to allow the student to make an educated selection of characterization techniques, or critical analysis of published data, for materials and defect analysis. The techniques will be assessed in terms of the probe type and material response, of what device and specimen requirements are typical, and of what data can or cannot be derived from each type of analysis.

Credits: 3.00

MSE 51200 - Powder Processing

Credit Hours: 3.00. Processing of engineering materials from powders. Synthesis of metals, ceramics, and polymers in powder form. Characteristics of particulates. Behavior of collections of particles; surface forces, particle agglomeration and dispersion, gelation, particle packing. Consolidation of powders; mechanics of dry flow and compaction, slurry rheology, shaping processes. Densification and microstructural development; geometry, thermodynamics, and kinetics of sintering, liquid-phase sintering, reaction densification, infiltration. Powder processing of composites.

Learning Outcomes: 1. Describe a powder fabrication process from starting reagent to finished powder. interpret a particle size distribution and estimate mean particle size and specific surface area from the data. 2. Review an ASTM standard for particulate materials characterization. 3. Describe the role of van der Waals interactions in determining structure on the colloidal and macroscopic length scales. 4. Differentiate between processing routes more favorable for processing bulk materials versus routes geared towards processing thin films. 5. Describe when it is appropriate to process dry powders versus processing powders suspended in a liquid medium. 6. Calculate the packing density of bimodal particle size distributions and describe the difference between calculated values and what one might expect to observe in

experimental measurements. 7. Describe the effects of particle agglomeration on interparticle forces and the packing density of powder compacts. 8. Calculate the particle size at which gravitational segregation becomes significant during aqueous colloidal processing. 9. Describe how segregation effects may be minimized during aqueous colloidal processing and any advantages and disadvantages associated with the modified process. 10. Describe the effects of interparticle forces on powder compact homogeneity and subsequent effects on compact densification. 11. Describe the effects of furnace atmosphere on the density, the specific surface area, and the microstructure of a powder compact. Credits: 3.00

MSE 51700 - Materials For Hypersonics

Credit Hours: 3.00. This course will include a brief history of hypersonic flight and design, along with a description of the aerothermal environment, to provide motivation for the use of ceramic materials as thermal protection systems and window materials. The classroom approach is to develop a fundamental understanding of materials structure, forming and sintering, and properties (mechanical and thermal) of ceramics, and then apply that knowledge for hypersonic applications such as ultra-high temperature ceramics (UHTCs including ZrB2), ceramic matrix composites (including Cf/SiC, SiCf/SiC, and Carbon/Carbon), and materials requirements for RF and IR radomes and windows. Permission of instructor required.

Learning Outcomes: 1. Become familiar with the aerothermal environment expected during hypersonic flight. 2. Learn how to process high-temperature ceramic materials, from colloidal design to forming methods such as additive manufacturing. 3. Understand flexure testing and Weibull statistics interpretation of ceramic materials. 4. Know how bonding and microstructure affect thermal properties. 5. Understand the basic material requirements for radar frequency and infrared frequency windows for hypersonic flight. 6. Articulate the assumptions of various thermodynamic models used to estimate heat flux and surface temperatures during hypersonic flight. 7. Differentiate the advantages and disadvantages of different additive manufacturing techniques used for ceramics. 8. Calculate sample strengths for different-sized flexure specimens. 9. Make assessments of the thermal shock resistance of materials based on mechanical and thermal properties. 10. Calculate the thicknesses of random materials based on the frequency of interest for different RF window concepts. Credits: 3.00

MSE 51800 - Failure Analysis

Credit Hours: 3.00. Introduction to failure analysis and prevention. Concepts of materials failure, root cause analysis, manufacturing aspects of failure, techniques for identifying failure, fracture, corrosion, wear, and case studies. Also includes business and entrepreneurship aspects.

Learning Outcomes: 1. Become familiar with and be able to identify the categories of failure. 2. Recognize types of failure based on microstructural and post-mortem characterization 3. Relate failure to stressors driving failure (mechanical, thermal, electrical, etc.) 4. Communicate results of a failure analysis clearly to professional audiences 5. Estimate stressors driving failure in relationship to materials properties, service conditions, and design constraints. 6. Use or select appropriate characterization tools for failure analysis. 7. Select appropriate inspection criteria to prevent failure. 8. Recommend improvements in design, service or inspection to prevent failure. Credits: 3.00

MSE 52000 - Steel And Aluminum Alloys: Processing, Structure And Properties

Credit Hours: 3.00. Steel and aluminum alloy processing will be studied to provide fundamental understanding of how the final properties are influenced by processing from the extraction of metal from ore, through shaping by casting, hot-working and cold-working, and heat treatment for control of microstructure. This understanding will enable the student to go beyond comparisons of standard handbook values and recognize the fundamental metallurgical phenomena leading to differences in performance among the main alloy classifications. By examining the relationships among processing, microstructure, and properties, the course will provide the "know-how" for specifying,

designing, and manufacturing with steels and aluminum alloys.

Learning Outcomes: 1. Describe current practice of steel and aluminum production in terms of the thermochemical unit processes. 2. Understand the differences between the main classes of commercial metal shaping processes and their intrinsic effects on microstructure. 3. Relate alloy microstructure to properties as measured in standard mechanical testing. 4. Interpret standards and specifications for processing and properties of different steel and aluminum alloy classifications. 5. Identify processing defects and predict their effect on material performance. 6. Specify alloy and processing route to achieve desired properties sets for particular applications. 7. Explain properties variability in terms commercial practice constraints. 8. Analyze critically the state of research on a particular current topic in steel or aluminum metallurgy. Credits: 3.00

MSE 52300 - Physical Ceramics

Credit Hours: 3.00. Physical and chemical processes responsible for microstructure development in modern ceramic materials, and the relationship between microstructures and physical properties. The material covered is divided into three parts: solid state processes, including structural defects, diffusion, sintering and grain growth, reaction rates, nucleation and growth, and microstructure development; mechanical and thermal behavior, including deformation, strength, thermal properties, and thermal and compositional stresses; and electrical and magnetic behavior, including electrical conductivity, dielectric properties, and magnetic properties. Offered in alternate years.

Credits: 3.00

MSE 52400 - Mechanical Behavior Of Polymers

Credit Hours: 3.00. This course will focus on the mechanical properties and behaviors of polymeric materials. The course will utilize fundamental solid and fluid mechanics to understand the response of bulk polymers (solid and liquid, above and below T_g). The impact of deformation rate and temperature on the mechanical response of polymers will be covered in detail. The course will start with an overview of linear elastic mechanics, move to rubber elasticity, and then viscoelasticity (concentrating on time-temperature superposition). We will also cover fluid dynamics and the rheology of non-Newtonian fluids. We will conclude with a section on deformation, yield, and fracture mechanisms (focusing on those phenomena that are unique to polymers such as rubber cavitation, drawing, and crazing).

Learning Outcomes: 1. Demonstrate fundamental understanding of solid mechanics: draw a free body diagram and employ the correct equations of state to solve two- and three-dimensional statics and solids problems. 2. Articulate in rubber elasticity. 3. Utilize time-temperature superposition to generate a master curve to fully describe the mechanical response of a viscoelastic material. Apply "spring and dashpot" models to describe nonlinear materials responses. 4. Describe a rheology experiment of a non-Newtonian fluid: interpret and analyze raw rheology data, identify key phase transitions. 5. Solve simple fracture mechanics problems. 6. Demonstrate an understanding of polymer deformation mechanisms. 7. Apply polymer yield criteria to predict failure resulting from a given loading scenario. Credits: 3.00

MSE 52500 - Struct-Property Relationships Of Engineering Polymers

Credit Hours: 3.00. Structure-property relationships developed for commodity and engineering resins. Focus on connecting bonding and polymer structure (i.e., molecular weight, tacticity, crystallinity as it regards spherulites) to mechanical (yield phenomena and fracture) and thermomechanical behavior (viscoelasticity). Thermal characterization techniques, including DSC, TGA, TMA, and DMTA. Flow of polymer melts related to common melt processing techniques (i.e., extrusion and injection molding). Offered in alternate years.

Learning Outcomes: 1. Identify microstructural differences between thermoplastic, thermosetting, and elastomeric polymers and how these affect thermal and mechanical properties. 2. Discuss the crystalline structures of thermoplastic polymers, including nucleation and growth of spherulitic structures and how molecular weight, tacticity, and cooling rate affect the morphology of the crystals. 3. Discuss entropy elasticity as it relates to elastomeric behavior. 4. Compare and contrast the yield and fracture behavior of polymers with metallic and ceramics materials. 5. Explain viscoelasticity from a microstructural viewpoint, and its manifestations in polymeric mechanical

behavior, including mathematical modeling of creep and stress relaxation behaviors of simple and complex systems. 6. Interpret the results from common thermal characterization (TGA, DSC, DMA) techniques and relate them to polymer structure. 7. Discuss polymer melt-processing techniques of extrusion and injection molding, and how polymer chain morphology affects processing. Credits: 3.00

MSE 52700 - Introduction To Biomaterials

Credit Hours: 3.00. This course aims to introduce students to Biomaterials concepts: structure, properties, and applications. The class will cover the main classes of materials: metals, ceramics and polymers in the context of their use in medicine as implant materials, drug delivery vehicles, and as tissue engineering scaffolds. Permission of instructor required.

Learning Outcomes: 1. Be familiar with the main concepts of Biomaterials principles: biocompatibility, structure-property-applications relationships, mechanical response of natural tissues, cellular pathways for tissue-material ingrowth. 2. Understand the requirements for metals and alloys, as well as ceramic materials to be used in load bearing implants (corrosion concepts, stress shielding, mechanical properties, composition). 3. Understand what properties of polymers impact their use in medicine (leaching and swelling, creep and stress relaxation). 4. Understand the tissue response to biomaterials: cytotoxicity, carcinogenicity, immune reactions. 5. Be able to expand the understanding of materials concepts to drug delivery applications (polymer degradation, encapsulation) and tissue engineering (scaffold porosity, diffusion of nutrients, mechanical properties). Credits: 3.00

MSE 53000 - Materials Processing In Manufacturing

Credit Hours: 3.00. Examination of the production/synthesis of engineering materials and the subsequent processing steps required to obtain a desired shape and microstructure. The course covers four major categories of materials processing: primary processing or materials synthesis, solidification processing, deformation processing, and powder processing, and provides specific examples from the processing of polymers, metals, and ceramics. The goal is to connect fundamental principles of materials processing to manufacturing processes. Credit will not be given for both MSE 5300 and MSE 36700 .

Credits: 3.00

MSE 53100 - Quantitative Analysis Of Microstructure

Credit Hours: 3.00. A review will be presented of basic probability theory and statistical analysis, with particular emphasis on terms and definitions of a microstructure. The properties accessible to quantification, the basic stereological relationships and the mathematical foundations, and the microstructural tools needed to quantify the structure will be emphasized. The last one-third of the course will cover applications of quantitative metallography to problems in failure analysis, solidification, heat treatment, phase equilibria, and deformation behavior. Offered in alternate years.

Credits: 3.00

MSE 53500 - Lean Manufacturing Of Materials

Credit Hours: 3.00. This course provides perspectives on materials processing and product innovation with an economic lens on efficiency and elimination of waste. It includes an historical perspective of manufacturing via the transition from mass to lean production in the automotive industry; and extends manufacturing and product development in context of emerging trends in automation (e.g., control and PAT, I4.0), modular design, supply chain, and sustainability. The class covers lean tools, focusing on value stream analyses and optimization using simulations. As an elective, the course accommodates a range of student interest profiles. It includes both individual and interest-based group assignments. The mix of students adds to the effectiveness of group exercises. A term paper enables individuals to do a deeper dive into specific interests. Overall, the course has shown to be adaptable over a broad range of students representing a variety of departments and professional backgrounds.

Learning Outcomes: 1. Understand the distinction between Mass Production and Lean Manufacturing and to analyze a facility's progress in the transition from Mass to Lean. 2. Articulate a case for Lean. Students will be able to present an argument on why Lean is a superior environment to Mass. 3. Compare and contrast the culture, organizational structure and leadership in Mass and Lean environments. 4. List and describe the Types of Waste and why waste elimination is a core component of Lean Manufacturing. 5. List and describe lean functionality (i.e., quality, continuous flow, pull

systems, 5S, Visual Control, Task Planning, etc.). 6. Articulate why the "Rules in Use" were a breakthrough in understanding the Toyota Production System. 7. Develop a Value Stream Map of a manufacturing process, and explore optimization thereof using simulations and economic models, including options to mitigate changing conditions or uncertainty. 8. Understand A3 methodology and create an A3 proposal having economic justifications. 9. Understand the similarities and differences between Lean Manufacturing and Product Development. 10. Complete a Matrix exercise. An individual deep-dive survey of a specific interest selected by each student, and a group exercise to synthesize and present elements of individual surveys clustered by topical area. Credits: 3.00

MSE 53600 - Solidification Of Castings

Credit Hours: 3.00. A study of solidification of metal in molds involving the characteristics of liquid-solid phase transformations, sand and metal thermal behavior, macroscopic structures, mechanical properties, and casting defects.

Learning Outcomes: 1. Analyze and understand the heat flow in different casting processes and alloy effects. 2. Analyze and understand the thermodynamics of solid-liquid phase change and effects of pressure, capillarity, and chemistry. 3. Analyze and understand the kinetics of solidification including crystal nucleation, growth, and glass transition temperature. 4. Analyze and understand microstructural development during processing and the causes for morphological instability and dendritic growth. 5. Recognize effective gating and risering practice in metal casting and predict the microstructure and casting defects given an alloy and process. 6. Become familiar with the current solidification science and practices within the archival literature. Credits: 3.00

MSE 54700 - Introduction To Surface Science

Credit Hours: 3.00. Classical thermodynamics of surfaces: surface tension, surface excess properties, and surface segregation. Atomic structure of surfaces and surface reconstruction. Electronic structure of surfaces, surface states, and the electronic structure/properties of interfaces. Adsorption, surface diffusion, and clustering of adsorbates. Chemical reactions at surfaces. Offered in alternate years.

Credits: 3.00

MSE 54800 - Deposition Processing Of Thin Films And Coatings

Credit Hours: 3.00. Processing and microstructural development of thin films and layered structures. Includes vapor, liquid, and reactive processing, as well as layer modification by annealing and beam techniques. Offered in alternate years.

Learning Outcomes: 1. List the detailed sequence of steps required for CVD (or sputter or MBE) film deposition and quantify the parametric dependence of these steps. 2. Explain the process and film requirements for an epitaxial (or columnar or amorphous) film. 3. Discuss the differences between different evaporation processes. 4. Compare the advantages and disadvantages of techniques used to suppress reactivity (a) of the materials during deposition and (b) of the material with the substrate. 5. Explain the importance of materials and process parameters during laser annealing. 6. List material and process critical factors for specific films in at least three different functional classes of film applications. 7. Communicate in detail the importance, use, and production method of a particular functional film in a manner understandable by other students. 8. Explain the importance and critical issues involved in the following film deposition processes: CVD, PVD, Electrochemical, thermal spray, lithography. 9. Explain the broad issues involved in processing each different type of material class: metals, ceramics, polymers, semiconductors, composites, and functionally graded materials. Credits: 3.00

MSE 55000 - Properties Of Solids

Credit Hours: 3.00. Critical examination of fundamental concepts of physical properties of solids and the relation of these properties to thermal and mechanical treatments.

Approach is atomistic rather than electronic, and an emphasis is made to connect the fundamental knowledge of solid state physics to actual processing of materials and to a qualitative understanding of current research in the area of materials science. Offered in alternate years.

Credits: 3.00

MSE 55500 - Deformation Mechanisms In Crystalline Solids

Credit Hours: 3.00. Focuses on the mechanisms for deformation and fracture of metal, intermetallic, and ceramic materials, with particular emphasis on high temperature properties. The industrial success of superalloys, dispersion-strengthened alloys, stainless steels, composites, and thermal barrier coatings will serve as the basis for exploring the relationship between composition, microstructure, and component application in high temperature performance. Topics included are alloying effects on dislocation climb and glide, grain boundary and lattice diffusion, and dynamic recrystallization. The interactions between environment and thermal and mechanical cycling also will be considered. Design tools for prediction and evaluation of component life will be investigated in detail, including an exploration of deformation mechanism maps. Offered in alternate years.

Learning Outcomes: 1. Understand dislocation plasticity: nucleation, motion, multiplication and interactions of dislocations. 2. Understand diffusion-based creep and stress relaxation: time-dependent dislocation motion, dislocation climb, Nabarro-Herring Creep, Coble Creep, Harper-Dorn Creep. 3. Recognize mapping strategies for design using deformation mechanism maps. 4. Describe effects of processing and microstructure on deformation mechanisms. Credits: 3.00

MSE 55600 - Fracture Of Materials

Credit Hours: 3.00. The failure and fracture of materials under applied stress are the focal points of this course, with particular emphasis on the material characteristics that influence fracture. The initial subjects covered in this course will include introductions to linear elastic fracture mechanics (LEFM) and elastic plastic fracture mechanics (EPFM). Subsequently, the strength and toughness of metals, ceramics, and polymers will be explored with regard to processing property relationships and microstructure. Special topics will include fracture mechanism maps, Weibull statistics, toughening mechanisms, and failure analysis. This course is distinct from a course on fracture mechanics in that the fundamental materials aspects of fracture are of paramount importance. Offered in alternate years.

Learning Outcomes: 1. Recognize and understand the significance of stress concentration; fracture mode (I, II, III); process or plastic zone; plane strain fracture toughness, KIC; plane stress fracture; crack tip opening displacement, CTOD; J-Integral. 2. Recognize how the shear and dilatant character of a deformation process plays in role in fracture resistance. 3. Recognize how specimen geometry and size influences fracture toughness and strength compared to applications. 4. Be conversant in at least one research area related to fracture and failure. 5. Be able to critique experimental fracture data relative to models or mechanisms reported for those materials. 6. Understand how post-mortem analysis can be used to assess failed components. Credits: 3.00

MSE 55900 - Phase Equilibria In Multicomponent Systems

Credit Hours: 3.00. A detailed examination of the thermodynamics of phase equilibria in multicomponent systems, experimental methods of determining these equilibria by measurements of thermodynamic activity and graphical method of representing the equilibria. This is followed by an examination of theoretical models of the behavior of solutions and an examination of the extent to which observed phenomena can be understood and predicted in terms of the models. Offered in alternate years.

Credits: 3.00

MSE 56000 - The Production Of Inorganic Materials

Credit Hours: 3.00. Examination of the production of inorganic materials of engineering importance (metals, ceramics, and glasses) from ore concentrates, raw materials, and recycled materials. Individual stages in the extraction, refining, and syntheses processes are examined from the viewpoints of thermodynamics and kinetics, and alternative production routes are compared and contrasted. Topics covered include carbothermic and metallothermic reduction of oxide concentrates, smelting and conversion of sulfide mattes, electrolysis and electrowinning from aqueous solutions and molten salts, distillation and vacuum refining, glass-forming, and the synthesis of carbide and nitride ceramics. Offered in alternate years.

Credits: 3.00

MSE 56200 - Soft Materials

Credit Hours: 3.00. Soft materials are an important and diverse class of materials that share the common trait of being easily deformable by external stresses, electric or magnetic fields or

even thermal fluctuations. These materials are the foundation of important technologies that are used in everyday life including ceramic and pharmaceutical processing (tablet formation), cosmetics (hand creams), cleaning products, foods (milk, mayonnaise) and bio-technologies (drug delivery). The aim of this class is to gain a fundamental understanding of the physical and chemical underpinnings of common soft materials systems and how they are used to engineer technologically relevant materials and structures.

Learning Outcomes: 1. Analyze the applicability of research techniques based on concepts learned in class. 2. Perform calculations to quantify molecular and colloidal properties. 3. Determine the feasibility of a scientific/engineering idea using fundamental concepts and performing calculations. 4. Find the optimal conditions for the fabrication of soft materials. 5. Process images and/or data to characterize soft materials. Credits: 3.00

MSE 56700 - Polymer Synthesis

Credit Hours: 3.00. Analyze properties of polymers and correlate them to chemical structure. Apply methods and mechanisms of polymer chemistry to industrial and laboratory synthesis. Examine the kinetic and design factors that control polymer structures. Offered in alternate years.

Learning Outcomes: 1. Student will understand, predict and design polymer properties based on polymer structure and how and why certain reactions take place through mechanistic means. 2. Be able to produce a polymer structure based on known reactants and retrosynthetically design a chemical route to a variety of polymer structures. 3. Intuitively grasp the kinetic factors involved to predict such things as molecular weight, polydispersity, and others. 3. Understand polymer chemistry in relation to everyday materials and why industrial practice is as is. Credits: 3.00

MSE 56800 - Additive Manufacturing Of Materials

Credit Hours: 3.00. The course takes an MSE approach to additive manufacturing, integrating deposition processing, powder processing, and solidification processing principles in the full range of AM process configurations and kinematics. The overarching goal is to learn how microstructure development, and thus the resulting material properties, are controlled by the interaction of physical, chemical, thermal and mechanical phenomena in the shaping of materials by additive processing. All the main classes of materials and AM processes are covered. Additional objectives are to quantitatively analyze the capabilities and limitations of AM relative to established commercial shaping processes; and to critically analyze the AM research literature.

Learning Outcomes: dentify the generic elements of any additive manufacturing process. 2. Identify and understand the main unit materials process involved and be able to predict how processing parameter will change resulting material structure and properties. 3. Relate additive processing to characteristic microstructure features and defects. 4. Interpret standards and specifications for processing and properties produced by the different additive manufacturing processes. 5. Distinguish quantitatively between the different additive manufacturing processes in terms of their shaping capability compared to traditional bulk shaping processes. 6. Identify AM processing defects and their origins in particular processing parameters 7. Specify an optimum AM process for a particular material, component and service conditions. 8. Explain properties variability and anisotropy in AM products in terms of processing constraints. 9. Analyze critically the state of research on a particular current topic in additive manufacturing. Credits: 3.00

MSE 57000 - Introduction To Materials Modeling And Informatics

Credit Hours: 3.00. This course provides an introduction at the graduate level to theory and methods for simulating the structure and properties of materials. The course will provide a broad initial overview of many atomistic modeling techniques, followed by a detailed study of density functional theory (DFT) over several weeks, then a few lectures on classical molecular dynamics (MD) and Monte Carlo (MC) simulations, and finishing with an introduction to materials informatics techniques which rely on learning from materials data. Students will obtain an essential understanding of quantum and classical theory and become acquainted with practical methods for running DFT, MD and MC simulations, as well as combining such simulations with simple machine learning and data science methods for materials design. Existing and new tools on nanoHUB, access to open-source simulation software, and writing simple Python code will be utilized for all necessary coursework and exercises. Permission of department required.

Learning Outcomes: 1. Design, execute and analyze simple simulations using techniques appropriate for the problem at hand. 2. Recognize the approximations and level of accuracy associated with each modeling technique. 3. Establish a foundation for exploring materials modeling techniques in greater depth and applying them to their own research projects. 4. Recognize the importance of machine learning and data science, and identify when to apply such techniques for materials datasets. Credits: 3.00

MSE 57400 - Sports Engineering And Entrepreneurship

Credit Hours: 3.00. This course provides an introduction at the graduate level to sports engineering and entrepreneurship. Students will be immersed in the state-of-the-art of industry and interact with renown experts in the field. This course is a comprehensive exploration of the key areas of sports engineering (digitalization, equipment and apparel, fan experience, data, etc.) with an emphasis on the future of the industry. The course includes the development of a business plan for a start-up in sports engineering, encouraging students to critically think about where they see opportunities for innovation based on knowledge gained in the course. This is not only for students looking to start their own business, but for any student interested in working in sports engineering field. Permission of instructor required.

Learning Outcomes: 1. Analyze the emerging technologies related to performance, sports equipment, apparel, facilities and events. 2. Evaluate the underlying technologies and market for a specific sport and its societal impact. 3. Create a business plan that captures the needs and trends of the next generation of sports. 4. Evaluate understanding of the different influencing factors in the decision process during the development of sports equipment, apparel, facilities and events. Credits: 3.00

MSE 57500 - Transport Phenomena In Solids

Credit Hours: 3.00. Energetics and kinetics of phase changes in metals and alloys. Nucleation and growth models, with special emphasis on the role of crystal defects. Selected topics in multicomponent diffusion. Offered in alternate years.

Credits: 3.00

MSE 57600 - Corrosion

Credit Hours: 3.00. Rate-controlling steps in electrode processes; activation, ohmic, and concentration polarization; passivation; potentiostatic studies and alloy design; applications to engineering systems. Offered in alternate years.

Credits: 3.00

MSE 57700 - Materials Science Of Rechargeable Batteries

Credit Hours: 3.00. This course is aimed at junior/senior undergraduate and graduate students interested on developing an understanding on the Materials Science of Rechargeable Batteries. The focus is on electrochemical materials, its non-idealities (e.g., transport limitations, failure mechanisms), and its application to energy storage devices, such as batteries and fuel cells, particularly for portable electronics and hybrid/electric vehicles. This course will deliver an introduction to basic electrochemistry, principles of electrochemical devices, and electroactive materials as used in such systems. Current trends and directions in the field of battery technology will be outlined. Permission of department required.

Learning Outcomes: 1. Become familiar with lingo, language, units and quantities associated to modern battery technology. 2. Read the scientific literature on rechargeable batteries. 3. Relate properties to performance (power, energy, charge, health, life, etc.). 4. Communicate results of battery technology to professional audiences. 5. Make simple battery designs that maximize performance. 6. Develop a basic understanding of the most widely used battery simulation software. 7. Make simple battery designs that maximize reliability. Credits: 3.00

MSE 58500 - Magnetic Materials: Physical Properties And Applications

Credit Hours: 3.00. This course provides an introduction of the basic physical and structural properties that determine the functionality of magnetic materials and devices. Starting from basic concepts on the physics of magnetism, materials synthesis and device fabrication, the functional requirements of magnetic materials for diverse applications will be discussed. Magnetic material properties depend on the electronic structure of the constituent elements and their electronic interactions. These interactions are controlled by their atomic arrangement, microstructure, defects, and strain fields that distort the local atomic order. Furthermore, the role of reduced dimensionality on the physical and functional properties of nanoscale materials will be discussed.

Learning Outcomes: 1. Understand the physical

origins of magnetism and magnetic material properties. 2. Establish the correlation between materials magnetic properties and their crystalline order, microstructure, the role of defects and secondary phases. 3. Explain how synthesis and post-processing techniques are used to design and optimize magnetic materials. 4. Apply the course learnings to optimize magnetic material properties and functionality for diverse applications. Credits: 3.00

MSE 58600 - Experimental Characterization Of Advanced Composite Materials

Credit Hours: 3.00. The characterization of advanced composite materials is a combined lecture/laboratory course in which polymeric composite laminates will be fabricated of carbon fiber epoxy and subjected to classical test methods appropriate to the determination of the anisotropic, thermoelastic properties. Properties measured will include thermal expansion coefficients, anisotropic elastic constants, biaxial strength properties and interlaminar fracture strengths. The autoclave processing of composite laminates will be discussed and the consolidation, degree of cure and glass transition temperature of the polymeric matrix will be modeled. Microscopic analysis of the composite will be carried out to observe microstructure and measure composition fractions. Lectures will precede each experiment.

Learning Outcomes: 1. Be familiar with test methods for advanced composite materials. 2. Carry out these tests to produce property data for a specific material system including fabrication of test specimens, fiber volume fraction, lamina longitudinal tensile tests, lamina shear test, lamina off-axis tensile test, lamina flexural test, lamina thermoelastic test, laminate tensile test, laminate thermoelastic test, laminate notch strength test, mode I interlaminar fracture test, mode II interlaminar fracture test. Credits: 3.00

MSE 58900 - Archaeology And Materials

Credit Hours: 3.00. This course provides instruction in the methods and theories used by archaeologists and materials scientists to study ancient and historic technology. The course will focus on the analysis and interpretation of archaeological artifacts and provide opportunities for hands-on learning. Permission of department required.

Learning Outcomes: 1. Make a reasoned argument about historical development of anthropological and archaeological approaches to the study of technology, and the role of materials science in archaeological research. 2. Demonstrate a nuanced understanding of, and appreciation for, ancient and contemporary technologies and the materials properties which led to their fabrication and use in specific ways. 3. Demonstrate the ability to write a research proposal, design educational material, or design and conduct a research experiment that incorporates materials science in the investigation of past (ancient, historic, or potentially more recent) technology. 4. Understand the relationship between Culture and Technology and communicate concepts about the impact of this relationship on the environment and issues of sustainability. 5. Understand critical questions about a set of journal articles focused on specific topics and lead the class in a systematic discussion of the articles and the questions they raise. 6. Select and discuss written information from journal articles, books, the class textbooks, and class lectures to produce a comprehensive picture of specific anthropology, archaeology, and materials science concepts and approaches to the study of materials and culture. 7. Compare and contrast the information that different materials characterization techniques can provide about the way historical artifacts were made and used, including the materials from which they are constructed. Credits: 3.00

MSE 59700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 60000 - Materials Engineering Fundamentals

Credit Hours: 3.00. Fundamental relationships between the internal structure, properties and processing in all classes of engineering materials. Comprehensive coverage spanning

physical, chemical, thermal, mechanical, electrical, magnetic, and optical responses. The course is intended for materials researchers from all backgrounds, as well as engineers working in product design, development and manufacturing who seek a deeper understanding of the full spectrum of engineering materials.

Learning Outcomes: 1. Perform calculations to quantify material properties and microstructural characteristics. Example: Calculate the interplanar spacing of a family of atomic planes given a x-ray diffraction pattern. 2. Recognize the effect of composition and microstructure on material properties. Example: The effect of dislocation density on yield strength and electrical conductivity. 3. Take information from a known situation and apply it to a new situation. Example: Effect of temperature and applied stress on the peak positions in a XRD pattern. 4. Predict property response or microstructural changes based on imposed conditions. Example: Effects of temperature and alloying on the resistivity of metals. 5. Assess the interplay of two or more material properties. Example: Assess the effect of atomic bond strength on Young's modulus, coefficient of thermal expansion and melting temperature. Credits: 3.00

MSE 64000 - Transmission Electron Microscopy And Crystal Imperfections

Credit Hours: 3.00. Theory and application of TEM to problems in materials science and engineering. Principles of electron diffraction and microscopy are reviewed with the emphasis on the relationship between real and reciprocal space. Diffraction theory of imperfect crystals will be introduced. A primary part of the course will be a discussion of image contrasts in terms of atomistic structures of key crystal imperfections, including dislocations and grain boundaries. Experimental applications and image simulations will be included to amplify theoretical concepts. Offered in alternate years. Permission of instructor required.

Credits: 3.00

MSE 67000 - Atomistic View of Materials: Theory, Modeling And Simulations

Credit Hours: 3.00. In this course students will be introduced to the fundamental physics required to describe materials in terms of electrons and atoms, learn how these processes relate to macroscopic behavior and become familiar with advanced modeling and simulation techniques that enable quantitative predictions. Students will gain hands-on experience with several simulation tools, including ab initio calculations using density functional theory, molecular dynamics simulations and other advanced modeling techniques. Pre-Requisites: BS degree in materials, mechanical, chemical, electrical or aerospace engineering or in physics or chemistry. Permission of department and instructor required.

Learning Outcomes: 1. Become familiar with the principles of quantum, classical and statistical mechanics required for predictive materials science. 2. Extract materials properties from the simulations. 3. Recognize the approximations and estimate the level of accuracy to be expected from each modeling technique. 4. Design, perform and analyze computer experiments using electronic and atomistic simulation techniques appropriate for the problem at hand. 5. Read critically the current scientific literature on computational modeling and simulation of materials. Credits: 3.00

MSE 69000 - Seminar In Materials Engineering

Credit Hours: 0.00. Required of all MSE graduate students.

Learning Outcomes: 1. Students would demonstrate application of academic comprehension in industrial context. Credits: 0.00

MSE 69600 - Graduate Professional Practice

Credit Hours: 0.00. Professional practice in Industry. Restrictions: MSE graduate students only. Permission of instructor required.

Credits: 0.00

MSE 69700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Hours and credits to be arranged. Prerequisite: two upper-division mathematics courses: one on linear algebra and one on abstract algebra. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

MSE 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Mathematics

MA 10800 - Mathematics As A Profession And A Discipline

Credit Hours: 1.00. A seminar course for undergraduate students interested in majoring in an area of mathematics at Purdue. The purpose is to build prospective mathematics majors' awareness of opportunities to enhance their experiences at Purdue and of career paths available for graduates with a good mathematical background. The format of most classes is a presentation and discussion with an invited speaker/guest, including experts on a different aspect of mathematics in our world today. This course is recommended for undergraduates in their first or second year at Purdue.

Credits: 1.00

MA 11100 - Algebra

Credit Hours: 3.00. This is an algebra review course for students not prepared for MA 15200, 15300, or 15900. Topics covered: real numbers, linear functions, solving linear equations and systems of linear equations, absolute value equations and inequalities, rational expressions, complex numbers, proportions, solving quadratic equations.

Learning Outcomes: 1. Use qualitative graphs to describe situations. 2. Graph linear equations. 3. Find the slope of a line. 4. Interpret the meaning of slope for equations, graphs, and tables. 5. Find and use linear equations. 6. Identify linear functions. 7. Use function notation to make predictions. 8. Interpret and apply slope as a rate of change. 9. Use graphs, tables, substitution, and elimination to solve systems. 10. Use linear inequalities in one variable to make predictions. 11. Apply properties of exponents. 12. Simplify expressions that have rational exponents. 13. Add, subtract and multiply polynomial expressions and functions. 14. Factor trinomials of the form x2 + bx + c; factor out the GCF. 15. Factor polynomials and special binomials. 16. Use factoring to solve polynomial equations. 17. Solve quadratic equations by using the square root property and by completing the square. 18. Find the domains of rational functions and simplify rational expressions. 19. Add, subtract, multiply, and divide rational expressions. 20. Solve rational equations. 21. Simplify radical expressions. 22. Add, subtract, and multiply radical expressions. 23. Solve radical equations.

Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability,

including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Differentiate between various polygons based on number of sides and measures of angles. 2. Find the sum of the measures of the interior angles of a polygon. 3. Draw nets for polyhedra. 4. Differentiate between various types of polyhedra including all regular polyhedra. 5. Determine number of lines of symmetry for a plane figure and orders of rotational symmetry. 6. Determine number of planes of symmetry for a solid figure as well as axes of rotational symmetry. 7. Recognize and draw shapes that tessellate the plane and solid figures that tessellate space. 8. Determine dimensions of similar planar figures. 9. Determine surface area and volume of similar solid figures. 10. Construct perpendicular bisectors and parallel lines using a compass and straightedge. 11. Recognize and draw rigid motions of shapes including translations, reflections and rotations. 12. Determine area of plane figures and surface area and volume of solid figures. 13. Use the Pythagorean Theorem to determine diagonals of solid figures. Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

MA 15400 - Trigonometry (UCC: QR)

Credit Hours: 3.00. While MA 15400 is a continuation of MA 15300, the course MA 15300 is not a prerequisite. It is suggested that students have a C- or better in MA 15300 or a B- or better in MA 15200. Topics covered include the trigonometric functions, analytic geometry, laws of sines and cosines, vectors, dot product, conic sections, and rational functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the College of Science.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand and be able to use trigonometric functions, inverse trigonometric functions, analytic geometry, laws of sines and cosines, vectors and the dot product to solve application problems. 2. Learn about conic sections (ellipses, hyperbolas and parabolas) and rational functions. Credits: 3.00

MA 15555 - Quantitative Reasoning (UCC: QR)

Credit Hours: 3.00. This course will cover important mathematical ideas, including proportion, weighted averages, linear models, exponential models, basic probability and statistics, and some algebra, by using concrete real-world problems. It will not be a prerequisite for any other mathematics course.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn proportion and how to apply it to unit conversions, percentage, sales tax and discounts, and inflation. 2. Learn weighted averages and how they apply to the consumer price index and other examples. 3. Learn paradoxes involving weighted averages. 4. Learn linear models and how they apply to electricity bills, income taxes, and climate change. 5. Learn exponential growth and how it applies to compound interest and other financial issues. 6. Learn basic probability theory and how it applies to insurance and games of chance. 7. Learn how algebra is related to the other things learned. Credits: 3.00

MA 15800 - Precalculus - Functions And

Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 15900 - Precalculus

Credit Hours: 5.00. Algebra and trigonometry topics designed to prepare students for calculus. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Understand the basic properties of linear functions, including their graphs and applications. 2. Model physical and economic situations using exponential functions and solve problems related to the model. 3. Have a computational facility and conceptual understanding of functions, including compositions of functions, inverse functions, and graphs of functions. 4 Use logarithms to solve exponential equations and to solve problems using exponential models. 5. Understand the basic properties of polynomial functions, including their graphs and applications, with a special emphasis on quadratic functions. 6. Understand the unit circle definition of sine and cosine and be able to generate formulas for general sinusoidal functions. 7. Solve trigonometric equations and applied problems using inverse trigonometric functions. 8. Understand the ways in which a trigonometric expression can be represented and have the facility converting between these representations. 9. Determine geometric and algebraic properties of conic sections. Credits: 5.00

MA 15910 - Introduction To Calculus

Credit Hours: 3.00. A survey of differential and integral calculus. Applications to the agricultural, life, managerial, and social sciences. Not available for credit toward graduation in the School of Science.

Learning Outcomes: 1. To create functional models. 2. To create and simplify difference quotients. 3. To compute basic limits of functions and to apply limit laws. 4. To compute derivatives and to apply basic rules of differentiation. 5. To use derivatives in graphing and solving basic optimization problems. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem

of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16019 - Applied Calculus I For Technology

Credit Hours: 4.00. This course develops topics from analytical geometry and introduces differentiation and integration.

Learning Outcomes: 1. Demonstrate ability to calculate derivatives of polynomial, power, and rational functions and their compositions. 2. Demonstrate ability to apply derivatives to solve technology-related problems. 3. Demonstrate ability to compute integrals of polynomials, power, and rational functions and their compositions. 4. Demonstrate ability to apply integrals to solve technology-related problems. Credits: 4.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16290 - Data Science Labs: Calculus

Credit hours: 1.00. This course consists of weekly computer

laboratories which apply concepts learned in Calculus I and II to data science problems. Main topics covered include function sampling and approximation, numerical differentiation, numerical integration, Jupyter notebooks, introductory Python programming, object oriented programming, and data acquisition with microcontrollers and sensors.

Learning Outcomes: 1. Use mathematical tools to process and extract information from data. 2. Interact with Jupyter notebooks. 3. Write applications in Python 2. 4. Acquire basic object oriented programming skills. 5. Acquire and interpret sensor data. Credits: 1.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

MA 17000 - Introduction To Actuarial Science

Credit Hours: 2.00. (STAT 17000) An introduction to actuarial science from the point of view of practicing actuaries from life insurance, casualty insurance and consulting; introduction to insurance and the mathematical theory of interest; application of spreadsheets to problems related to actuarial science.

Learning Outcomes: 1. Describe different expressions of interest rates. Calculate an equivalent rate given another rate. 2. Calculate the present value of a set of cash flows. 3. Apply basic probability principles. 4. Describe and apply different types of probabilities used by actuaries. 5. Calculate the expected present value of a set of cash flows. 6. Describe basic types of insurance and their characteristics. 7. Define and apply basic components of insurance. Examples: premium, claim, deductible, coverage, limit, coinsurance, insured, owner. 8. Describe the ratemaking process. Calculate the rate of a simple insurance product. 9. Describe the pricing process. Calculate the price of a simple insurance product. 10. Describe different accounting regimes and their purposes. 11. Define a policy reserve. Calculate a simple policy reserve. 12. Define a loss reserve. Calculate a simple loss reserve. 13. Demonstrate a basic level of knowledge by applying Excel to solve problems. Credits: 2.00

MA 18300 - Professional Practicum I

Credit Hours: 0.00. Professional Practicum. For Cooperative Education students only; must be accepted for the program by the cooperative program coordinator. Permission of department required.

Credits: 0.00

MA 19000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required.

Learning Outcomes: 1. Learn about mathematical thinking and practice. Credits: 1.00 to 5.00

MA 25000 - Problem Solving In Probability

Credit Hours: 2.00. (STAT 25000) This course is designed to teach techniques for solving problems in probability theory which are relevant to the actuarial sciences. It is intended to help actuarial students prepare for the Society of Actuaries and Casualty Actuarial Society Exam P/1. Credit of Examination is not available for this course.

Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26190 - Data Science Labs: Multivariate Calculus

Credit Hours: 1.00. This course consists of weekly computer laboratories which apply concepts learned in Multivariate Calculus (Calculus III) to data science problems. The students will also practice programming in Python and use sensors and microprocessors to acquire data. Topics covered include representation and perception of color, motion detection in videos, and construction of a planimeter based on Green's theorem.

Learning Outcomes: 1. Use mathematical tools to process and extract information from data. 2. Interact with Jupyter notebooks. 3. Write applications in Python. 4. Acquire and interpret sensor data. Credits: 1.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

MA 27101 - Honors Multivariate Calculus (UCC: QR)

Credit Hours: 5.00. This course is the Honors version of MA 26100, Multivariate Calculus; it will also include a review of infinite series. The course is intended for first-year students who have credit for Calculus I and II. There will be a significant emphasis on conceptual explanation, but not on formal proof. Permission of department is required.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know techniques of vector algebra and be able to apply these to the geometry of space; in particular they will be able to find equations for lines and planes in space. 2. Find equations for standard surfaces in space. 3. Use vector methods to analyze motion in space, and calculate arc length and curvature. 4. Acquire a conceptual and computational knowledge of infinite series; in particular they will be able to test for convergence, and to do calculations with power series. 5. Understand the meaning of partial derivatives in various situations, and will be able to calculate with them. 6. Know the multivariable chain rule and its meaning, and will be able to apply it to calculate derivatives in various situations. 7. Know the meaning of directional derivatives and how to calculate them. 8. Find tangent planes. 9. Find and classify extreme values and saddle points and use the method of Lagrange multipliers. 10. Know the meaning of multiple integrals and how to calculate them. 11. Know the meaning of line integrals and surface integrals and how to calculate them. 12. Know Green's theorem, Stokes' theorem, and the divergence theorem and their applications. Credits: 5.00

MA 27300 - Introduction To Financial Mathematics

Credit Hours: 3.00. A mathematical treatment of some of the fundamental concepts of financial mathematics and their application to business situations and basic risk management. Includes discussions of interest rates, discount rates, annuity valuation, bond valuation, cash flow valuation, spot rates, forward rates, Macaulay duration, modified duration, convexity, immunization, and asset-liability management. Provides preparation for the SOA/CAS Actuarial Exam FM/2.

Credits: 3.00

MA 27900 - Modern Mathematics In Science And Society

Credit Hours: 3.00. The course covers topics in combinatorics and probability applied to real life situations such as the paradoxa of democracy, weighted voting, fair division, apportionment, traveling salesmen, the mathematics of networks, Fibonacci numbers, golden ratio, growth patterns in nature, mathematics of money, symmetry, fractals, censuses and surveys, random sampling, sample spaces, permutations and uniform probability spaces.

Learning Outcomes: 1. The students will gain knowledge, overview, and understanding in

several fundamental mathematical subdisciplines which fall into four basic categories: voting and apportionment; growth; management of networks; data analysis. 2. Students will assimilate these mathematical ideas while applying them to practical everyday questions, and in turn gain an understanding how real-life programs give rise to development of mathematical theories. Credits: 3.00

MA 29000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required.

Credits: 1.00 to 5.00

MA 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MA 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MA 30100 - An Introduction To Proof Through Real Analysis

Credit Hours: 3.00. An introduction to abstract reasoning in the context of real analysis. Topics may include axioms for the real numbers, mathematical induction, formal definition of limits, density, decimal representations, convergence of sequences and series, continuity, differentiability, the extreme value, mean value and intermediate value theorems, and cardinality. The emphasis, however, is more on the concept of proof than on any one given topic.

Credits: 3.00

MA 30300 - Differential Equations And Partial Differential Equations For Engineering And The Sciences

Credit Hours: 3.00. This is a methods course for juniors in any branch of engineering and science, designed to follow MA 26200 or MA 26600. Materials to be covered are: linear systems of ordinary differential equations, nonlinear systems, Fourier series, separation of variables for partial differential equations, and Sturm-Liouville theory.

Learning Outcomes: 1. Learn the theory of systems of first order linear differential equations and methods for solving them. 2. Learn qualitative theory of systems of nonlinear differential equations. 3. Learn the Laplace transform method for solving differential equations. 4. Learn about Fourier series and Sturm-Liouville theory and how to use them to solve separable partial differential equations. Credits: 3.00

MA 32500 - History Of Mathematics

Credit Hours: 3.00. The purpose of this course is to help students understand and appreciate the growth and development of mathematical ideas across various cultures. Students will study the achievements of people who have made significant contributions to the development of both ancient and modern mathematical concepts.

Learning Outcomes: 1. Gain an appreciation for mathematics as a central human pursuit, driven by both curiosity and practical applications. 2. Analyze the biographical details of key mathematical figures, understanding their contributions to the field. 3. Establish connections between mathematics and diverse academic disciplines, contemporary events, and the interrelationships among different branches of mathematics. 4. Explore the historical and

contemporary development of mathematics across societal, cultural, and geographic boundaries. 5. Understand the evolving significance of mathematics within various global cultures and societies. Credits: 3.00

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 34900 - Signals And Systems For Mathematicians

Credit Hours: 3.00. This course introduces the mathematical framework for the description, analysis and processing of signals such as music, speech and images. Main topics covered include signal representations in different bases; continuous-time signal sampling; and signal processing by linear and time-invariant systems.

Learning Outcomes: 1. Describe and analyze continuous-time and discrete-time signals in different bases. 2. Understand the relation between a continuous-time signal and a sampling of that signal, including methods to reconstruct a continuous-time signal from its samples and applicability conditions. 3. Describe and analyze the properties of continuous-time and discrete time systems in different bases. 4. Construct linear and time-invariant systems to process continuous-time and discrete-time signals. Credits: 3.00

MA 34990 - Data Science Labs: Signals And Systems

Credit Hours: 1.00. This course consists in weekly computer laboratories. The laboratories introduce students to the application of concepts learned in Signals and Systems or Fourier Analysis course to Data Science problems. The courses also provide opportunities to practice programming in Python and use sensors and microprocessors to acquire and manipulate data.

Learning Outcomes: 1. Use mathematical tools to process and extract information from data. 2. Interact with Jupyter notebooks. 3. Write applications in Python. 4. Acquire and interpret sensor data. Credits: 1.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 35301 - Linear Algebra II

Credit Hours: 3.00. Theoretical background for methods and results that appear in MA 35100. Inner products, orthogonality, and applications including least squares.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of vector space, subspace, linear combination of vectors, linear dependence and linear independence, bases and dimension. 2. Perform rigorous proofs using the definitions of linear transformation and the null space and range of a linear transformation. 3. Exhibit a clear understanding of the relationship between composition of linear transformation and matrix multiplication. 4. Understand elementary matrices and their use in describing the solution set of a system of linear equations. 5. Understand that the determinant function on n x n matrices with entries in a field F is a function that may be defined recursively, and may be uniquely defined as an alternating multilinear form which

takes the identity matrix to 1. 6. Perform rigorous proofs involving eigenvalues and eigenvectors. 7. Understand and be able to apply conditions for a linear operator on a finite-dimensional vector space to be diagonalizable. 8. Preform calculations with Gram-Schmidt, least squares and related topics. 9. Students should be able to do rigorous proofs involving inner product spaces and related topics. Credits: 3.00

MA 36200 - Topics In Vector Calculus

Credit Hours: 3.00. Multivariate calculus; partial differentiation; implicit function theorems and transformations; line and surface integrals; vector fields; theorems of Gauss, Green, and Stokes. Credit granted for only one of MA 36200 and MA 51000 .

Credits: 3.00

MA 36600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the statement of the theorem of existence and uniqueness of solutions of first order differential equations and standard methods of solving linear, and some special non-linear, differential equations of first order. 2. Interpret solutions qualitatively. 3. Learn how to construct mathematical models. 4. Learn the standard methods of solving linear homogenous differential equations of constant coefficients of arbitrary order. 5. Learn methods to solve nonhomogeneous differential equations of constant coefficients of arbitrary order. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how they apply to systems of linear differential equations. 9. Learn how to analyze systems of nonlinear differential equations (optional). 10. Learn Laplace transforms and their applications to differential equations (optional). Credits: 4.00

MA 37300 - Financial Mathematics

Credit Hours: 3.00. A mathematical treatment of some fundamental concepts of financial mathematics and their application to real world business situations and basic risk management. Includes discussions of valuing investments, capital budgeting, valuing contingent cash flows, yield curves, spot rates, forward rates, short sales, Macaulay duration, modified duration, convexity, and immunization. Provides preparation for the SOA/CAS Actuarial Exam FM/2.

Learning Outcomes: 1. Define and recognize concepts related to the time value of money, and will be able to do calculations involving these concepts. 2. Define and recognize concepts related to annuities and cash flows, and will be able to do calculations involving these concepts. 3. Define and recognize concepts related to loans, and will be able to do calculations involving these concepts. 4. Define and recognize concepts related to bonds, and will be able to do calculations involving these concepts. 5. Define and recognize concepts related to general cash flows and portfolios, and will be able to do calculations involving these concepts. 6. Dfine and recognize concepts related to immunization, and will be able to do calculations involving these concepts. 7. Define and recognize concepts related to interest rate swaps, and will be able to do calculations involving these concepts. Credits: 3.00

MA 37400 - Mathematical Foundations For Machine Learning

Credit Hours: 3.00. This course combines data, computation, and inferential thinking to solve challenging problems. In this class, we explore key areas of machine learning including question formulation, statistical inference, predictive modeling, and decision making. Through a strong emphasis on data-centric computing, and quantitative critical thinking, this class covers key principles and techniques of machine learning. These include algorithms for machine learning methods including regression, classification, and clustering; and statistical concepts of measurement error and prediction.

Learning Outcomes: 1. Identify a machine learning related data-science problem,

formulate questions, visualize the data, and identify features, and conduct statistical inference, and derive prediction algorithms. 2. Know how to use a computer programming tool (e.g. Python or Matlab) to draw samples from important distributions. 3. Understand linear machine learning models for regression problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for regression problems. 4. Understand linear machine learning models for classification problems; know how to use a computer programming tool (e.g. Python or Matlab) to implement the linear machine learning models for classification problems. 5. Know how to build kernel methods; in particular, Gaussian process methods, and how to use a computer programming tool (e.g. Python or Matlab) to implement kermel methods. 6. Understand the concept of mixture models and the Expectational-Maximization algorithm and how to use a computer programming tool (e.g. Python or Matlab) to implement mixture models and the Expectational-Maximization algorithm. 7. Understand the sampling methods and perform computations for Markov Chain Monte Carlo. Credits: 3.00

MA 37500 - Introduction To Discrete Mathematics

Credit Hours: 3.00. Induction, permutations, combinations, finite probability, relations, graphs, trees, graph algorithms, recurrence relations, generating functions. Problem solving in all these areas. Credit granted for only one of MA 27600 and 37500.

Credits: 3.00

MA 38500 - Introduction To Logic

Credit Hours: 3.00. Propositional calculus and predicate calculus with applications to mathematical proofs, valid arguments, switching theory, and formal languages.

Credits: 3.00

MA 38600 - Professional Practicum IV

Credit Hours: 0.00. Professional Practicum. Permission of department required.

Credits: 0.00

MA 39000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

MA 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MA 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MA 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in mathematics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the

professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MA 41600 - Probability

Credit Hours: 3.00. (STAT 41600) An introduction to mathematical probability suitable as a preparation for actuarial science, statistical theory, and mathematical modeling. General probability rules, conditional probability and Bayes theorem, discrete and continuous random variables, moments and moment generating functions, joint and conditional distributions, standard discrete and continuous distributions and their properties, law of large numbers and central limit theorem.

Credits: 3.00

MA 41690 - Data Science Labs: Probability

Credit Hours: 1.00. This course consists in weekly computer laboratories. The laboratories introduce students to the application of concepts learned in an introductory Probability course to Data Science problems. This course also provides opportunities to practice programming in Python and use sensors and microprocessors to acquire and manipulate data.

Learning Outcomes: 1. Use mathematical tools to process and extract information from data. 2. Interact with Jupyter notebooks. 3. Write applications in Python. 4. Acquire and interpret sensor data. Credits: 1.00

MA 42100 - Linear Programming And Optimization Techniques

Credit Hours: 3.00. Solution of linear programming problems by the simplex method, duality theory, transportation problems, assignment problems, network analysis, dynamic programming.

Credits: 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

Learning Outcomes: 1. Apply complex number theory and understand algebraic and geometric representations. 2. Solve complex equations and analyze limits, continuity, and differentiability. 3. Use Cauchy-Riemann equations to identify analytic functions. 4. Evaluate integrals using Cauchy's integral theorem and formula. 5. Apply the residue theorem for evaluating integrals in engineering and science problems. 6. Use Taylor and Laurent series to expand complex functions. 7. Solve boundary value problems in fluid dynamics, electrostatics, and potential theory. 8. Apply complex analysis techniques to engineering and science applications. Credits: 3.00

MA 42800 - Introduction To Fourier Analysis

Credit Hours: 3.00. Topics include: Fourier series, convolutions, kernels, summation methods, Fourier transforms, and applications to the wave, heat, and Laplace equations.

Learning Outcomes: 1. Know applications of Fourier series to problems in physics and other areas. 2. Know convergence theorems and proofs for Fourier series. 3. Know the relationship between convolutions and Fourier series. 4. Know applications of Fourier transforms to problems in physics and other areas. Credits: 3.00

MA 43200 - Elementary Stochastic Processes

Credit Hours: 3.00. An introduction to some classes of stochastic processes that arise in probabilistic models of time-dependent random processes. The main stochastic processes studied will be discrete time Markov chains and Poisson processes. Other possible topics covered may include continuous time Markov chains, renewal processes, queueing networks, and martingales.

Learning Outcomes: 1. Identify a verbal description of a stochastic process, identify the process as a Markov process and compute the transition matrix for the Markov process. 2. Compute the stationary distribution of a Markov process and use this to draw conclusions on the long-term asymptotic behavior of the stochastic process using appropriate limit theorems for Markov processes. 3. Understand what conditions are necessary to be able to apply the main limit theorems for Markov chains; also, students should be able to give examples of Markov chains where these limit theorems do not hold because the assumptions of the

theorems are violated. 4. Calculate hitting probabilities or expected hitting times of a Markov chain by solving a system of linear equations. 5. Know how to use mathematics software (e.g. Matlab) to perform computations for Markov chains on large state spaces. 6. Understand the thinning and superposition properties of Poisson processes and how to use these properties in computations. Credits: 3.00

MA 44000 - Honors Real Analysis I

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces. Topics include the completeness property of real numbers, topology of Euclidean spaces, Heine-Borel theorem, convergence of sequences and series in Euclidean spaces, limit superior and limit inferior, Bolzano-Weierstrass theorem, continuity, uniform continuity, limits and uniform convergence of functions, Riemann or Riemann-Stieltjes integrals.

Learning Outcomes: 1. Perform rigorous proofs using the definitions of open sets, closed sets, connected sets, compact sets, interior points, boundary points, cluster points, finite sets, infinite sets, and denumerable sets in Euclidean spaces. 2. Perform rigorous proofs of convergence or divergence for sequences or series in Euclidean spaces. 3. Determine points of continuity and existence of limits using rigorous proofs for functions whose domain and range are in Euclidean spaces. 4. Perform rigorous proofs that a sequence of functions converges uniformly or does not converge uniformly on a subset of a Euclidean space. 5. Know and be able to apply the definition and related theorems on the existence of Riemann or Riemann-Stieltjes integrals. Credits: 3.00

MA 44200 - Honors Real Analysis II

Credit Hours: 3.00. Real analysis in one and n-dimensional Euclidean spaces--continued from MA 44000. Topics include mappings of Euclidean spaces and their derivatives, multivariable chain rule, inverse function theorem and implicit function theorem, sets with content and integration in n dimensions, the integrability theorem, Jacobian and change of variables theorem, related topics.

Learning Outcomes: 1. Determine points at which derivatives exist and compute linear approximations for mappings of Euclidean spaces. 2. Perform rigorous applications of the multivariable chain rule, inverse function theorem and implicit function theorem in Euclidean spaces. 3. Apply the integrability theorem on the existence of Riemann integrals of functions in bounded sets in Euclidean spaces. 4. Perform rigorous applications of the change of variables theorem for integrals of functions on smooth transformations of domains in a Euclidean spaces. Credits: 3.00

MA 45000 - Algebra Honors

Credit Hours: 3.00. This course, which is essentially the first half of MA 55300, is recommended for students wanting a more substantial background in algebra than is afforded by MA 45300, in particular students intending to do graduate work in science or engineering. Topics include the elements of number theory and group theory; unique factorization in polynomial rings and in principal ideal domains.

Credits: 3.00

MA 45300 - Elements Of Algebra I

Credit Hours: 3.00. Fundamental properties of integers, polynomials, groups, rings, and fields, with emphasis on problem solving and applications. Not open to students with credit in MA 45000.

Learning Outcomes: 1. Demonstrate knowledge of: divisibility properties of integers and polynomials, structure theory of groups and examples of groups, structure theory of rings and examples of rings, basic theory of fields. 2. Demonstrate knowledge of the proofs of facts covered in the course. Credits: 3.00

MA 45401 - Galois Theory Honors

Credit Hours: 3.00. This course will give a thorough introduction to Galois theory. Galois theory is a fundamental tool in many areas of mathematics, including number theory and algebraic geometry. This course will increase students' mathematical maturity and prepare them for graduate school. Topics include finite extension fields and their symmetries, ruler and compass constructions, complex roots of unity, solvable groups, and the solvability of polynomial equations by arithmetic and radical operations. This course is intended for third- or fourth-year students who have taken MA 45000 (Algebra Honors) or MA 45300 (Elements of Algebra I).

Learning Outcomes: 1. Know the historical background of Galois theory. 2. Know the classical version which addresses questions

about roots of polynomials and the modern formulation in terms of abstract algebra. 3. Know about finite extension fields and their symmetries. 4. Know how Galois theory answers ancient questions about ruler and compass constructions. 5. Know about cyclotomic fields generated by complex roots of unity. 6. Know how Galois theory answers questions about the solvability of polynomial equations by arithmetic and radical operations. Credits: 3.00

MA 46000 - Geometry

Credit Hours: 3.00. This course begins at the high-school level and then moves quickly to intermediate and advanced topics including an introduction to non-Euclidean geometry. Emphasis on proofs.

Learning Outcomes: 1. Learn geometry topics included in the Indiana state standards. 2. Learn to solve a wide range of geometry problems. 3. Learn the meaning of definition, axiom, theorem, and proof, and use these words correctly. 4. Learn the proofs in book I of Euclid's elements. 5. Learn some basic ideas of non-Euclidean geometry. Credits: 3.00

MA 46200 - Elementary Differential Geometry

Credit Hours: 3.00. The geometry of curves and surfaces based on familiar parts of calculus and linear algebra. An introduction to the study of differentiable manifolds and Riemannian geometry.

Credits: 3.00

MA 47201 - Fundamental Long Term Actuarial Mathematics

Credit Hours: 4.00. Mathematical foundation of actuarial science, emphasizing probability models for life contingencies as the basis for analyzing life insurance and life annuities and determining premiums and reserves. This course provides the background for Course MLC of the Society of Actuaries and Course 3L of the Casualty Actuarial Society.

Learning Outcomes: 1. Understand and use decrement models in conjunction with interest rate models to evaluate insurance, annuities, and investments. 2. Apply models to calculate actuarial values, gross and net premiums, and benefit and expense reserves. Among the decrement models learned will be standard mortality, models, static mortality table models, and continuous time Markov chains in both a single decrement and multiple decrement environment. Credits: 4.00

MA 48100 - Advanced Problem-Solving Seminar

Credit Hours: 3.00. Seminar intended to prepare students for the national Putnam examination in mathematics. There is no formal prerequisite, but students should be familiar with basic elements of Linear Algebra, Analysis, Geometry and Trigonometry.

Learning Outcomes: 1. Learn about various, more advanced techniques of how to approach Olympiad undergraduate type problems within areas such as number theory, combinatorics, algebra, analysis and geometry. 2. Learn various angles of approaching a proof and how to properly conceptualize it. 3. Learn how to properly write (justify) the arguments within a mathematical proof at a high rigor level imposed by the Putnam contest. Credits: 3.00

MA 48200 - Advanced Short Term Actuarial Mathematics

Credit Hours: 3.00. This course provides comprehensive coverage of a wide range of advanced short-term actuarial analysis techniques including severity and aggregate models, parametric models' estimation and selection, parametric and empirical credibility, and reserving, pricing for short-term insurance coverages. This course prepares actuarial students for the SOA Exam ASTAM: Advanced Short-Term Actuarial Mathematics.

Learning Outcomes: 1. Understand and apply methods for modeling severity and aggregate loss distributions, including creating new distributions and comparing tail behaviors. 2. Analyze the impact of coverage modifications and inflation on loss modeling in insurance. 3. Estimate parameters using the maximum likelihood method and assess the asymptotic normality of the maximum likelihood estimator for a function of parameters. 4. Select models based on graphical and score-based approaches and perform goodness-of-fit tests. 5. Evaluate credibility concepts, including limited fluctuation credibility, Bayesian credibility with conjugate priors, and Bühlmann and

Bühlmann-Straub models. 6. Apply techniques for estimating unpaid losses, incurred but not reported (IBNR) losses, and project losses using trend analysis, as well as calculate overall average rates, rate changes, and risk classification differential changes. Credits: 3.00

MA 48400 - Seminar On Teaching College Algebra And Trigonometry

Credit Hours: 3.00. This course is a seminar on the teaching of mathematics for our best undergraduate mathematics education students. It provides supervised teaching experience along with a chance for the students to perfect their knowledge of algebra before going on to be high school teachers. Students who take this class will also teach a section of MA 15300. Permission of instructor required.

Credits: 3.00

MA 48700 - Professional Practicum V

Credit Hours: 0.00 or 1.00. Professional Practicum. Permission of department required.

Credits: 0.00 or 1.00

MA 49000 - Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 6.00. Supervised reading courses as well as special topics courses for undergraduates are given under this number. Permission of instructor required.

Credits: 1.00 to 6.00

MA 49500 - Advanced Topics In Mathematics For Undergraduates

Credit Hours: 1.00 to 5.00. Advanced topics courses in mathematics for undergraduates are given under this number. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

MA 50300 - Abstract Algebra

Credit Hours: 3.00. Group theory: definitions, examples, subgroups, quotient groups, homomorphisms, and isomorphism theorems. Ring theory: definitions, examples, homomorphisms, ideals, quotient rings, fraction fields, polynomial rings, Euclidean domains, and unique factorization domains. Field theory: algebraic field extensions, straightedge and compass constructions.

Credits: 3.00

MA 50400 - Real Analysis

Credit Hours: 3.00. Completeness of the real number system, basic topological properties, compactness, sequences and series, absolute convergence of series, rearrangement of series, properties of continuous functions, the Riemann-Stieltjes integral, sequences and series of functions, uniform convergence, the Stone-Weierstrass theorem, equicontinuity, and the Arzela-Ascoli theorem.

Credits: 3.00

MA 51000 - Vector Calculus

Credit Hours: 3.00. Calculus of functions of several variables and of vector fields in orthogonal coordinate systems. Optimization problems, implicit function theorem, Green's theorem, Stokes' theorem, divergence theorems. Applications to engineering and the physical sciences. Not open to students with credit in MA 36200 or MA 41000.

Credits: 3.00

MA 51100 - Linear Algebra With Applications

Credit Hours: 3.00. Real and complex vector spaces; linear transformations; Gram-Schmidt process and projections; least squares; QR and LU factorization; diagonalization, real and complex spectral theorem; Schur triangular form; Jordan canonical form; quadratic forms.

Credits: 3.00

MA 51400 - Numerical Analysis

Credit Hours: 3.00. (CS 51400) Iterative methods for solving nonlinear; linear difference equations, applications to solution of polynomial equations; differentiation and integration formulas; numerical solution of ordinary differential equations; roundoff error bounds.

Credits: 3.00

MA 51800 - Advanced Discrete Mathematics

Credit Hours: 3.00. The course covers mathematics useful in analyzing computer algorithms. Topics include recurrence relations, evaluation of sums, integer functions, elementary number theory, binomial coefficients, generating functions, discrete probability, and asymptotic methods.

Credits: 3.00

MA 51900 - Introduction To Probability

Credit Hours: 3.00. (STAT 51900) Algebra of sets, sample spaces, combinatorial problems, independence, random variables, distribution functions, moment generating functions, special continuous and discrete distributions, distribution of a function of a random variable, limit theorems.

Credits: 3.00

MA 52000 - Boundary Value Problems Of Differential Equations

Credit Hours: 3.00. Separation of variables; Fourier series; boundary value problems; Fourier transforms; Bessel functions; Legendre polynomials.

Credits: 3.00

MA 52100 - Introduction To Optimization Problems

Credit Hours: 3.00. Necessary and sufficient conditions for local extrema in programming problems and in the calculus of variations. Control problems; statement of maximum principles and applications. Discrete control problems.

Credits: 3.00

MA 52300 - Introduction To Partial Differential Equations

Credit Hours: 3.00. First order quasi-linear equations and their applications to physical and social sciences; the Cauchy-Kovalevsky theorem; characteristics, classification and canonical forms of linear equations; equations of mathematical physics; study of Laplace, wave and heat equations; methods of solution.

Credits: 3.00

MA 52500 - Introduction To Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions of one complex variable; differentiation and contour integration; Cauchy's theorem; Taylor and Laurent series; residues; conformal mapping; applications. Not open to students with credit in MA 42500.

Credits: 3.00

MA 52700 - Advanced Mathematics For Engineers And Physicists I

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52700 include linear algebra, systems of ordinary differential equations, Laplace transforms, Fourier series and transforms, and partial differential equations. MA 51100 is recommended.

Learning Outcomes: 1. Know the theory of systems of linear equations. 2. Know the theory of eigenvalues and eigenvectors and apply it to solve systems of ordinary differential equations and to analyze qualitative features. 3. Know theoretical properties of Laplace transforms and how to use them. 4. Know the basic theory of Fourier series and transforms, and how to apply these to solve partial differential equations.

Credits: 3.00

MA 52800 - Advanced Mathematics For Engineers And Physicists II

Credit Hours: 3.00. MA 52700 is not a prerequisite for MA 52800; these courses can be taken independently. Topics in MA 52800 include divergence theorem, Stokes theorem, complex variables, contour integration, calculus of residues and applications, conformal mapping, and potential theory. MA 51000 is recommended.

Learning Outcomes: 1. Improve knowledge of vector calculus and multivariable integral calculus. 2. Know basic theory of functions of a complex variable, including complex integration. 3. Improve knowledge of Taylor series, and extend this to Laurent series. 4. Know applications of complex analysis, including conformal mapping and potential theory.

Credits: 3.00

MA 53000 - Functions Of A Complex Variable I

Credit Hours: 3.00. Complex numbers and complex-valued functions of one complex variable; differentiation and contour integration; Cauchy's theorem; Taylor and Laurent series; residues; conformal mapping; special topics. More mathematically rigorous than MA 52500.

Credits: 3.00

MA 53100 - Functions Of A Complex Variable II

Credit Hours: 3.00. Advanced topics.

Credits: 3.00

MA 53200 - Elements Of Stochastic Processes

Credit Hours: 3.00. (STAT 53200) A basic course in stochastic models, including discrete and continuous time Markov chains and Brownian motion, as well as an introduction to topics such as Gaussian processes, queues, epidemic models, branching processes, renewal processes, replacement, and reliability problems.

Credits: 3.00

MA 53800 - Probability Theory I

Credit Hours: 3.00. (STAT 53800) Mathematically rigorous, measure-theoretic introduction to probability spaces, random variables, independence, weak and strong laws of large numbers, conditional expectations, and martingales.

Credits: 3.00

MA 53900 - Probability Theory II

Credit Hours: 3.00. (STAT 53900) Convergence of probability laws; characteristic functions; convergence to the normal law; infinitely divisible and stable laws; Brownian motion and the invariance principle.

Credits: 3.00

MA 54200 - Theory Of Distributions And Applications

Credit Hours: 3.00. Definition and basic properties of distributions; convolution and Fourier transforms; applications to partial differential equations; Sobolev spaces.

Credits: 3.00

MA 54300 - Ordinary Differential Equations And Dynamical Systems

Credit Hours: 3.00. This course focuses on the theory of ordinary differential equations and methods of proof for developing this theory. Topics include basic results for linear systems, the local theory for nonlinear systems (existence and uniqueness, dependence on parameters, flows and linearization, stable manifold theorem) and the global theory for nonlinear systems (global existence, limit sets and periodic orbits, Poincare maps). Permission of instructor required.

Learning Outcomes: 1. Know and understand

the central results and methods of proof in the theory of ordinary Differential Equations. 2. Gain deeper understanding of mathematical analysis more generally. 3. Gain facility in constructing, writing and presenting proofs. Credits: 3.00

MA 54400 - Real Analysis And Measure Theory

Credit Hours: 3.00. Metric space topology; continuity, convergence; equicontinuity; compactness; bounded variation, Helly selection theorem; Riemann-Stieltjes integral; Lebesgue measure; abstract measure spaces; LP-spaces; Holder and Minkowski inequalities; Riesz-Fischer theorem.

Credits: 3.00

MA 54500 - Functions Of Several Variables And Related Topics

Credit Hours: 3.00. Differentiation of functions; Besicovitch covering theorem; differentiation of one measure with respect to another; Hardy-Littlewood maximal function; functions of several variables; Sobolev spaces.

Credits: 3.00

MA 54600 - Introduction To Functional Analysis

Credit Hours: 3.00. Fundamentals of functional analysis. Banach spaces, Hahn-Banach theorem. Principle of uniform boundedness. Closed graph and open mapping theorems. Applications. Hilbert spaces. Orthonormal sets. Spectral theorem for Hermitian operators and compact operators.

Credits: 3.00

MA 55300 - Introduction To Abstract Algebra

Credit Hours: 3.00. Group theory: Sylow theorems, Jordan Holder theorem, solvable groups. Ring theory: unique factorization in polynomial rings and principal ideal domains. Field theory: ruler and compass constructions, roots of unity, finite fields, Galois theory, solvability of equations by radicals.

Credits: 3.00

MA 55400 - Linear Algebra

Credit Hours: 3.00. Review of basics: vector spaces, dimension, linear maps, matrices determinants, linear equations. Bilinear forms; inner product spaces; spectral theory; eigenvalues. Modules over a principal ideal domain; finitely generated abelian groups; Jordan and rational canonical forms for a linear transformation.

Credits: 3.00

MA 55600 - Introduction To The Theory Of Numbers

Credit Hours: 3.00. Divisibility, congruences, quadratic residues, Diophantine equations, the sequence of primes.

Credits: 3.00

MA 55700 - Abstract Algebra I

Credit Hours: 3.00. Review of fundamental structures of algebra (groups, rings, fields, modules, algebras); Jordan-Holder and Sylow theorems; Galois theory; bilinear forms; modules over principal ideal domains; Artinian rings and semisimple modules. Polynomial and power series rings; Noetherian rings and modules; localization; integral dependence; rudiments of algebraic geometry and algebraic number theory; ramification theory.

Credits: 3.00

MA 55800 - Abstract Algebra II

Credit Hours: 3.00. A continuation of MA 55700.

Credits: 3.00

MA 56000 - Fundamental Concepts Of Geometry

Credit Hours: 3.00. Foundations of Euclidean geometry, including a critique of Euclid's "Elements" and a detailed study of an axiom system such as that of Hilbert. Independence of the parallel axiom and introduction to non-Euclidean geometry.

Credits: 3.00

MA 56200 - Introduction To Differential Geometry And Topology

Credit Hours: 3.00. Smooth manifolds; tangent vectors; inverse and implicit function theorems; submanifolds; vector fields; integral curves; differential forms; the exterior derivative; DeRham cohomology groups; surfaces in E3., Gaussian curvature; two dimensional Riemannian geometry; Gauss-Bonnet and Poincare theorems on vector fields.

Credits: 3.00

MA 57100 - Elementary Topology

Credit Hours: 3.00. Fundamentals of point set topology with a brief introduction to the fundamental group and related topics, topological and metric spaces, compactness, connectedness, separation properties, local compactness, introduction to function spaces, basic notions involving deformations of continuous paths.

Credits: 3.00

MA 57200 - Introduction In Algebraic Topology

Credit Hours: 3.00. Singular homology theory; Eilenberg-Steenrod axioms; simplicial and cell complexes; elementary homotopy theory; Lefschetz fixed point theorem.

Credits: 3.00

MA 57300 - Numerical Solution Of Ordinary Differential Equations

Credit Hours: 3.00. Numerical solution of initial-value problems by Runge-Kutta methods, general one-step methods, and multistep methods; analysis of truncation error, discretization error, and rounding error; stability of multistep methods; numerical solution of boundary- and eigen-value problems by initial-value techniques and finite difference methods.

Learning Outcomes: 1. Learn general one-step methods for numerical solution of initial-value problems. 2. Learn explicit and implicit Runge-Kutta and multistep methods, convergence and stability. 3. Learn iterative methods for solving

large systems of equations. 4. Learn numerical methods for stochastic differential equations and Monte Carlo methods. 5. Learn the Fast Fourier Transform and spectral methods. 6. Learn to use software tools such as visualization and specialized computing packages. Credits: 3.00

MA 57400 - Numerical Optimization

Credit Hours: 3.00. Convex optimization algorithms using modern large-scale algorithms for convex optimization, with a heavy emphasis on analysis including monotone operator, fixed point iteration and duality in splitting methods. The course will cover and focus on the following three parts: smooth optimization algorithms, nonsmooth convex optimization algorithms, and stochastic and randomized algorithms. Permission of department required. Prerequisites: MA 51100 and MA 50400.

Learning Outcomes: 1. Learn standard convergence results for gradient descent method and Newton's method and their generalizations for smooth problems. 2. Learn convergence results for subgradient method and proximal point method for nonsmooth convex problems. 3. Learn about popular splitting methods and the proof of their convergence by using monotone operators and fixed-point iteration. 4. Learn about convergence of stochastic algorithms such as randomized coordinate descent, stochastic gradient descent and Langevin dynamics. Credits: 3.00

MA 57500 - Graph Theory

Credit Hours: 3.00. Introduction to graph theory with applications.

Credits: 3.00

MA 58400 - Algebraic Number Theory

Credit Hours: 3.00. Dedekind domains, norm, discriminant, different, finiteness of class number, Dirichlet unit theorem, quadratic and cyclotomic extensions, quadratic reciprocity, decomposition and inertia groups, completions and local fields.

Credits: 3.00

MA 58500 - Mathematical Logic I

Credit Hours: 3.00. Propositional and predicate calculus; the Gdel completeness and compactness theorem, primitive recursive and recursive functions; the Gdel incompleteness theorem; Tarski's theorem; Church's theorem; recursive undecidability; special topics such as nonstandard analysis. Credits: 3.00

MA 59000 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as dual-level special topics courses are given under this number. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

MA 59500 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Special topics courses including dual-level special topics. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 5.00

MA 59800 - Topics In Mathematics

Credit Hours: 1.00 to 5.00. Supervised reading courses as well as dual-level special topics courses are given under this number. Permission of instructor required.

Credits: 1.00 to 5.00

MA 61100 - Methods Of Applied Mathematics I

Credit Hours: 3.00. Banach and Hilbert spaces; linear operators; spectral theory of compact linear operators; applications to linear integral equations and to regular Sturm-Liouville problems for ordinary differential equations. Prerequisite: MA 51100, MA 54400.

Credits: 3.00

MA 61500 - Numerical Methods For Partial Differential Equations I

Credit Hours: 3.00. (CS 61500) Finite element method for elliptic partial differential equations; weak formulation; finite-dimensional approximations; error bounds; algorithmic issues; solving sparse linear systems; finite element method for parabolic partial differential equations; backward difference and Crank-Nicholson time-stepping; introduction to finite difference methods for elliptic, parabolic, and hyperbolic equations; stability, consistency, and convergence; discrete maximum principles. Prerequisite: MA 51400, MA 52300.

Credits: 3.00

MA 62000 - Mathematical Theory Of Optimal Control

Credit Hours: 3.00. Existence theorems; the maximum principle; relationship to the calculus of variations; linear systems with quadratic criteria; applications. Offered in alternate years. Prerequisite: MA 54400.

Credits: 3.00

MA 63100 - Several Complex Variables

Credit Hours: 3.00. Power series, holomorphic functions, representation by integrals, extension of functions, holomorphically convex domains. Local theory of analytic sets (Weierstrass preparation theorem and consequences). Functions and sets in the projective space Pn (theorems of Weierstrass and Chow and their extensions). Prerequisite: MA

53000.

Credits: 3.00

MA 63800 - Stochastic Processes I

Credit Hours: 3.00. (STAT 63800) Advanced topics in probability theory which may include stationary processes, independent increment processes, Gaussian processes; martingales, Markov processes, ergodic theory. Prerequisite: MA 53900.

Credits: 3.00

MA 63900 - Stochastic Process II

Credit Hours: 3.00. (STAT 63900) Continuation of MA 63800.

Credits: 3.00

MA 64200 - Methods Of Linear And Nonlinear Partial Differential Equations I

Credit Hours: 3.00. Second order elliptic equations including maximum principles, Harnack inequality, Schauder estimates, and Sobolev estimates. Applications of linear theory to nonlinear equations. Prerequisite: MA 52300.

Credits: 3.00

MA 64300 - Methods Of Partial Differential Equations II

Credit Hours: 3.00. Continuation of MA 64200. Topics to be covered are Lp theory for solutions of elliptic equations, including Moser's estimates, Aleksandrov maximum principle, and the Calderon-Zygmund theory. Introduction to evolution problems for parabolic and hyperbolic equations, including Galerkin approximation and semigroup methods. Applications to nonlinear problems. Prerequisite: MA 64200.

Credits: 3.00

MA 64400 - Calculus Of Variations

Credit Hours: 3.00. Direct methods; necessary and sufficient conditions for lower semicontinuity of multiple integrals; existence theorems and connections with optimal control theory. Prerequisite: MA 54400.

Credits: 3.00

MA 65000 - Commutative Algebra

Credit Hours: 3.00. The study of those rings of importance in algebraic and analytic geometry and algebraic number theory. Prerequisite: MA 55800.

Credits: 3.00

MA 66100 - Modern Differential Geometry

Credit Hours: 3.00. Topics chosen by the instructor. Prerequisite: MA 55400.

Credits: 3.00

MA 66300 - Algebraic Curves And Functions I

Credit Hours: 3.00. Algebraic functions of one variable from the geometric, algebraic, or function-theoretic points of view. Riemann-Roch theorem, differentials. Prerequisite: MA 55800.

Credits: 3.00

MA 66400 - Algebraic Curves And Functions II

Credit Hours: 3.00. Continuation of MA 66300. Topics chosen by the instructor. Prerequisite: MA 66300.

Credits: 3.00

MA 66500 - Algebraic Geometry

Credit Hours: 3.00. Topics of current interest will be chosen by the instructor. Prerequisite: MA 65000 or MA 66300.

Credits: 3.00

MA 68400 - Class Field Theory

Credit Hours: 3.00. Ideles, adeles, L-functions, Artin symbol, reciprocity, local and global class fields, Kronecker-Weber Theorem. Prerequisite: MA 58400.

Credits: 3.00

MA 69000 - Topics In Algebra

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69200 - Topics Applied Math

Credit Hours: 1.00 to 3.00. Topics in applied math. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69300 - Topics In Analysis

Credit Hours: 1.00 to 3.00. Topics in analysis. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69400 - Topics In Differential Equations

Credit Hours: 1.00 to 3.00. Topics In Differential Equations. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69600 - Topics In Geometry

Credit Hours: 1.00 to 3.00. Topics in geometry. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69700 - Topics In Topology

Credit Hours: 1.00 to 3.00. Topics in topology. Permission of instructor required.

Credits: 1.00 to 3.00

MA 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Mechanical Engineering

ME 16400 - Geometric And Annotation Modeling

Credit Hours: 3.00. This course focuses on CAD-based modeling and engineering graphics standards (national - ANSI/ASME and international - ISO), including coordinate and geometric dimensioning and tolerancing practices. It covers principles and techniques of three-dimensional surface and solid modeling. This course teaches students how to model real-world engineering objects and assemblies using the capabilities

of commercial CAD systems. Conceptual, preliminary and detailed part and assembly models are assigned as exercises to reinforce the classroom lectures. This course teaches the graphics language and standards necessary for engineering students to read, understand, and sign off engineering drawings and documents. Students are required to detail (create engineering drawings) their CAD models, demonstrating their ability to both read and apply graphic standards.

Learning Outcomes: 1. Improve sketching. 2. Understand wireframe, surface and solid modeling techniques found in a modern commercial CAD package. [3] 3. Create CAD models of basic machine components and assemblies. [2] 4. Design and create CAD models of average to complex mechanical components. [2] 5. Understand the approaches and processes used in component and assembly modeling, i.e., top-down and bottom-up design. [2] 6. Read and understand engineering drawings composed of multiple views with standard dimensioning and tolerancing nomenclature. [3] 7. Read and understand engineering drawings that contain geometric dimensioning and tolerancing symbols. [3] 8. Use of standards for geometric modeling, dimensioning, and tolerancing. [2] 9. Work in collaboration with fellow teammates to accomplish both the learning of the CAD tool and the executing of the modeling projects. [5] Credits: 3.00

ME 19800 - PMEA Leadership Program

Credit Hours: 1.00. A weekly seminar that includes topics such as leadership, professional skills, teamwork, and the Mechanical Engineering culture. Students will utilize these skills while representing Mechanical Engineering to current and prospective students, alumni, donors, and other visitors to the school.

Learning Outcomes: 1. Able to function effectively with a student run team whose members create a collaborative and inclusive environment, plan events, and meet the objectives of the ME Undergraduate Program. 2. Communicate effectively with a range of audiences. 3. Develop a personal philosophy of leadership that includes an understanding of self, others, and community. Credits: 1.00

ME 19900 - How Stuff Works

Credit Hours: 1.00. An introduction to Mechanical Engineering for First-Year Engineering students interested in exploring a career in ME. The course is student led and involves a mix of presentations from successful mechanical engineers about their chosen careers coupled with fun hands-on experiences related to better understand how everyday products work from a mechanical engineering perspective. A variety of common products are disassembled, evaluated, and reassembled to understand the underlying engineering design and fabrication fundamentals. Little or no mechanical experience is required.

Learning Outcomes: 1. Learn from successful alumni about their career paths and common products that they have helped to design and market. 2. Become familiar with common products and how they work. 3. Gain hands-on experience and develop your mechanical aptitude by dissecting products, studying the basic engineering and operation of the products and reassembling the products. 4. Become familiar with common engineering terminology used in describing the various parts and assemblies of products. Credits: 1.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ME 22001 - Fundamentals Of Energy Materials

Credit Hours: 3.00. This course examines the chemistry and structure of materials and their correlation with various electrochemical properties including their suitability for use in conversion and storage of electrochemical energy, energy related materials, and chemical and renewable energy sources.

Credits: 3.00

ME 22501 - Mechanical Engineering Laboratory I

Credit Hours: 1.00. Experiments in thermodynamics, parametric design and component fabrication.

Credits: 1.00

ME 22510 - Energy Engineering Laboratory I

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.

Credits: 1.00

ME 23900 - Introduction To Data Science For Mechanical Engineers

Credit Hours: 1.00. Introduction to data science for sophomore mechanical engineers with no prior knowledge of the topic; Overview of Python basics using Jupyter notebooks; review of probability theory as the language of uncertainty, Monte Carlo sampling for uncertainty propagation; basics of supervised (Bayesian generalized linear regression, logistic regression, deep neural networks, convolutional neural networks), and unsupervised learning (k-means clustering, principal component analysis, Gaussian mixtures).

Learning Outcomes: 1. Represent uncertainty in parameters in engineering or scientific models using probability theory. 2. Propagate uncertainty through physical models to quantify the induced uncertainty in quantities of interest. 3. Solve basic supervised learning tasks, such as regression and classification. 4. Solve basic unsupervised learning tasks, such as clustering, dimensionality reduction, and density estimation. 5. Develop and apply various Python coding skills. 6. Load and visualize data sets in Jupyter notebooks. 7. Visualize uncertainty in Jupyter notebooks. 8. Recognize basic Python software (e.g., Pandas, numpy, scipy, scikit-learn) and advanced Python software (e.g., pytorch, pyrho, Tensorflow) commonly used in data analytics. Credits: 1.00

ME 24000 - Basic Engineering Mechanics

Credit Hours: 4.00. This course is an introductory mechanics course in energy engineering, covers force systems and couples, equilibrium, centroids, friction, kinematics, kinetics of particles & rigid body, Newton's second law, energy, and momentum methods; equations of motions, and application to machine elements. Permission of department required.

Credits: 4.00

ME 25001 - Mechanical Engineering Laboratory II

Credit Hours: 1.00. Experiments on data analysis, hands-on programming with devices and fabrication.

Credits: 1.00

ME 25010 - Energy Engineering Laboratory II

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.

Credits: 1.00

ME 26000 - Sustainable Energy

Credit Hours: 3.00. The objective of this course is to familiarize the students with various forms of available energy. The concept of these energies in terms of efficiency, raw material, safety, economy and environmental impact will be introduced. Permission of department required.

Credits: 3.00

ME 26201 - Design, Ethics, And Entrepreneurship

Credit Hours: 2.00. Basic concepts of the design process. Innovative engineering design of real life applications. Engineering ethics topics. Fundamentals of Entrepreneurship. Design projects focus on open-ended problems. Design modeling, simulation, documentation and communication. Implementation and use of modern computer tools in solving design problems and completing team design projects in the area of Energy Engineering.

Credits: 2.00

ME 26300 - Introduction To Mechanical Engineering Design, Innovation And Entrepreneurship

Credit Hours: 3.00. The product design process. Development of product design specifications using customer inputs, benchmarking, product/market research and patent review. Concept generation and evaluation using brainstorming, functional decomposition, modeling and decision matrices. Detailed product design including assembly, economic analysis, CAD, and bill of materials. Oral and written design reviews. Key skills developed include teamwork, communication, project planning, innovation, design, and entrepreneurship.

Learning Outcomes: 1. Instill the philosophy that real engineering design problems are open-ended and multifaceted. 2. Teach a systemic design methodology. 3. Provide guidance in applying engineering principles to open-ended problems. 4. Develop the ability to mathematically model and analyze engineering systems. 5. Sharpen skills in leadership, teamwork, communication, project planning, innovation, design and entrepreneurship. 6. Instill a philosophy of professional and ethical behavior. 7. Provide a foundation for the rest of the mechanical engineering curriculum and future careers. Credits: 3.00

ME 26400 - Introduction To Manufacturing For Mechanical Design

Credit Hours: 3.00. Introduction to manufacturing processes for typical engineering materials. Basics of material properties and

behavior for manufacturing processes. Material selection and manufacturing process selection for mechanical design. Hands-on projects in the lab reinforce the knowledge of manufacturing processes.

Learning Outcomes: 1. Understand material properties and behavior for design and manufacturing. 2. Gain a fundamental knowledge of manufacturing processes. 3. Gain knowledge of the practice of measurements and manufacturing processes through laboratory experiments. 4. Enhance knowledge on the selection of materials and manufacturing processes for product design. 5. Enhance technical communication skills through short technical lab reports. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

ME 27200 - Mechanics Of Materials

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design for strength of various machine components. Reliability principles. Design documentation and communication. Laboratory experiments on mechanical design and strength.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

ME 28500 - Industrial Practice I

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only.

Credits: 0.00

ME 28600 - Industrial Practice II

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only.

Credits: 0.00

ME 29000 - Global Engineering Professional Seminar (UCC: STS)

Credit Hours: 1.00. Forum on contemporary issues in the global profession of mechanical engineering. Professionalism and ethics. Interactions with engineering faculty and with professionals outside the University. Quizzes on assigned readings in the areas of globalization, cultural difference and collaborating across cultural boundaries. Individually developed professional profiles describe technical interests and convey awareness of ethical responsibilities in global context.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Provide a solid foundation in global engineering skills. 2. Introduce the in global engineering community and encourage active involvement with professional associations such as ASME and SAE to develop teamwork and leadership skills. 3. Explore the ME Curriculum and identify resources available for planning a academic program including global literacies (language and area studies) and for obtaining diverse industrial experience appropriate for developing global competencies. 4. Support the development of a strong ethical framework for global professional workplace, including an appreciation for cultural differences, as a responsible member of the global engineering community. Credits: 1.00

ME 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the

professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 29500 - Engineering Topics

Credit Hours: 1.00 to 5.00. Topics of contemporary importance of special interest that are outside the scope of the standard undergraduate curriculum can be offered temporarily under the selected topics category until the course receives a permanent number. Typically offered Summer Fall Spring.

Credits: 1.00 to 5.00

ME 29601 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the freshman or sophomore level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 0.00 to 6.00

ME 29700 - Mechanical Engineering Sophomore Projects

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest. Students submit a summary report. Permission of instructor required.

Credits: 0.00 to 6.00

ME 30000 - Thermodynamics II

Credit Hours: 3.00. Properties of gas mixtures, air-vapor mixtures, applications. Thermodynamics of combustion processes, equilibrium. Energy conversion, power, and refrigeration systems.

Credits: 3.00

ME 30800 - Fluid Mechanics

Credit Hours: 3.00. Continuum description, velocity field, fluid statics, manometers, basic conservation laws for systems and control volumes, dimensional analysis. Bernoulli's equation along a streamline and with head losses. Flow over submerged bodies, boundary layers. Viscous flows in pipes, turbomachinery, system performance. One-dimensional gas dynamics.

Learning Outcomes: 1. Develop the ability to identify and classify the various types of flows one may encounter. 2. Develop (from rigorous first principles) the control volume formulation of the basic laws with emphasis on conservation of mass and Newton's 2nd law. 3. Apply the control volume formulation of the basic laws to model physical systems. Credits: 3.00

ME 30801 - Fluid Mechanics Laboratory

Credit Hours: 1.00. This course is the lab component of an already established ME 30900 Fluid Mechanics (4 cr) course, which is now being split into an ME 30800 (3 cr) Fluid Mechanics lecture course, and the material covered in this new ME 30801 (1 cr) Fluid Mechanical Laboratory. The content of both of these courses remains unchanged. The splitting of the lab from the lecture will enable better enrollment load balancing in the existing ME undergraduate laboratory facilities. Details of this new laboratory are outlined in the appended material below.

Learning Outcomes: 1. Know physical experiments in fluid mechanics. 2. Know application of fluid mechanics theory and fundamental concepts to measuring and analyzing fluid systems and flows. 3. Learn a laboratory design project on a flow system reinforces the design process. Credits: 1.00

ME 31002 - Fundamentals Of Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernoulli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.

Credits: 3.00

ME 31401 - Fundamentals Of Heat And Mass Transfer

Credit Hours: 3.00. Fundamental principles of heat transfer by conduction, convection, and radiation; mass transfer by diffusion and convection. Application to engineering situations.

Credits: 3.00

ME 31500 - Heat And Mass Transfer

Credit Hours: 4.00. Fundamentals of heat transfer by conduction, convection, and radiation; mass transfer by convection. Relevance to engineering applications.

Learning Outcomes: 1. Develop the ability to identify the relevant transport processes (heat, momentum and energy) when confronted with a particular problem. [1, 7] 2. Develop the ability to model and analyze heat and mass transfer processes. [1, 2, 3, 5, 7] 3. Augment the ability to design and conduct experiments to solve open-ended engineering problems. [2, 3, 5, 6, 7] 4. Reinforce technical written and oral communication skills through a formal project report. [3, 4, 5] Credits: 4.00

ME 31600 - Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernouilli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

ME 32301 - Mechanics Of Materials Laboratory

Credit Hours: 1.00. Experimental methods and techniques employed for the measurement of mechanical properties and evaluation of mechanical structures. Application of mechanics of materials and fundamental concepts to measuring and analyzing mechanical structures. A laboratory design project on mechanical structures.

Learning Outcomes: 1. Conduct simple experiments and analyze data. 2. Enhance systematic problem-solving skills and sharpen written-communication skills through short technical laboratory memos. 3. Complete a design project on a mechanical structure. Credits: 1.00

ME 32500 - Dynamics Of Physical Systems

Credit Hours: 3.00. Development and solution of linear models; translational and rotational mechanical systems, electrical systems, electromechanical systems, thermal systems, hydraulic systems. The Laplace transform, transfer functions, and Bode plots, state variable representation and solutions. Computer analysis and simulation.

Learning Outcomes: 1. Develop a mathematical model generally consisting of ordinary differential equations for a given system. 2. Determine the equilibrium conditions, and where appropriate, obtain a linearized model for a nonlinear system. 3. Rearrange the equations that make up the system model in a new form suitable for an analytical solution and use them to build and simplify block diagrams. 4. Solution for a first order system by the method of time domain response. 5. Use Laplace transform method to find the time response, to determine the role of the transfer function on the system response, and where appropriate, to find the time constraints, damping ratios, and undamped natural frequencies. 6. Use a suitable software (i.e. Simulink - Matlab) to simulate and analyze the behavior of the dynamic systems. 7. Use block diagrams and computer simulations as aids in modeling and analysis of dynamic systems. Credits: 3.00

ME 32501 - Mechanical Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Mechanics of Materials and Fluid Mechanics.

Credits: 1.00

ME 32510 - Energy Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Fluids Mechanics and energy engineering.

Credits: 1.00

ME 32600 - Engineering Project Management

Credit Hours: 3.00. (ECE 32600) Project management is an important skill that is needed in the private and public sectors as well as specialty businesses. This course will explore the challenges facing today's project managers and will provide a broad understanding of the project management environment focused on multiple aspects of the project.

Learning Outcomes: Upon successful completion of the course, students should be able to 1. Use library resources and internet

resources to find information necessary for the project. 2. Use critical thinking in its design process. 3. Use creative approaches when necessary to obtain project objectives. 4. Analyze and interpret data. 5. Function effectively on a multi-disciplinary team through mutual support, consensus seeking, cooperation, and sharing responsibility. 6. Write a project report, adhering to the specified format using an appropriate writing style, grammar, and spelling. 7. Make an oral presentation using effective visual aids. 8. An understanding of professional and ethical responsibility. 9. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 10. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

ME 32700 - Engineering Economics

Credit Hours: 3.00. (ECE 32700) Engineering Economics is designed as an overview of economics with a focus on how it relates to the practice of engineering. Topics include interest formulas, rate of return, life cost analysis, depreciation, taxes, and cash flow.

Credits: 3.00

ME 33000 - Modeling And Analysis Of Dynamic Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems; electrical, mechanical, fluid, and thermal components; linear system response; Fourier series and Laplace transform.

Credits: 3.00

ME 33010 - Modeling And Measurements Of Dynamic Systems

Credit Hours: 3.00. This course will cover the fundamentals of instrumentation, measurement, and dynamic systems modeling. Design, selection, and usage of the instrumentation systems and the interpretation of experimental results are also introduced. Basic concepts of measurements methods, measurement system response, assessment, uncertainty analysis of measured data, sensors, signal conditioning, recording / display devices, digital techniques, instrument interface, and measurement theories on stress and strain, temperature, pressure, fluid flow and velocity will also be covered. Additionally, fundamentals of dynamic systems including mechanical, electrical, and electromechanical systems will be introduced. Laplace transform, block diagram, transient and frequency response of linear first and second order system will be covered as well.

Credits: 3.00

ME 34001 - Instrumentation And Measurement Systems

Credit Hours: 2.00. Modeling and formulation of differential equations for dynamic systems, including mechanical vibratory systems, thermal systems, fluid systems, electrical systems, and instrumentation systems. Analysis of dynamic systems and measuring devices including transient response and frequency response techniques, mechanical systems, transducers, and operational amplifiers. Consideration of readout devices and their responses to constant, transient, and steady-state sinusoidal phenomena. Calibration and data analysis techniques are introduced. Both analog and digital computation are included.

Credits: 2.00

ME 34400 - Introduction To Engineering Materials

Credit Hours: 3.00. Introduction to the structure and properties of engineering materials, including metals, alloys, ceramics, plastics, and composites. Characteristics and processing affecting behavior of materials in service.

Credits: 3.00

ME 34600 - Renewable Energy Systems And Design

Credit Hours: 3.00. This course is designed to introduce the system and design of energy conversion and storage devices for renewable energy sources. Students will first learn about energy sources available on earth including kinetic, solar, and chemical. Next, the course will provide students with a review of the thermodynamic concepts behind energy constant and energy transfer via an energy conversion device. Finally, this course will tie together concepts of renewable energy sources and thermodynamics teaching students about design elements for energy conversion and storage devices, in which renewable energy sources are converted and stored. Permission of Instructor required.

Credits: 3.00

ME 35001 - Mechanical Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of Dynamic Systems, Heat & Mass transfer, and Materials.

Credits: 1.00

ME 35010 - Energy Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of heat and mass transfer, and energy engineering.

Credits: 1.00

ME 35200 - Machine Design I

Credit Hours: 4.00. Introduction to the principles of design and analysis of machines and machine components. Design for

functionality, motion, force, strength, and reliability. Review of fatigue failure theories and analysis of fatigue stresses. Laboratory experience provides open-ended projects to reinforce the design process.

Credits: 4.00

ME 35400 - Machine Design

Credit Hours: 3.00. Design, analysis, and selection of machine components for fluctuating loading. Application of design fundamentals to mechanical components and integration of components to form systems. Open-ended design projects reinforce the design process.

Learning Outcomes: 1. Apply Statics, Dynamics, and Strength of Materials to the realization of machine components. 2. Understand fatigue failure mechanisms 3. Apply fatigue failure theories to create reliable mechanical components. 4. Select standard machine components and materials. 5. Enhance problem-solving and communication skills through design projects. Credits: 3.00

ME 35401 - Machine Design Laboratory

Credit Hours: 1.00. Physical experiments on static and fatigue failure of mechanical parts. Application of failure theories to design of mechanical components and systems. Open-ended design projects to reinforce the design process.

Learning Outcomes: 1. Experiment on static and fatigue failure. 2. Compare theory with physical experiments and simulation. 3. Apply failure theories to design of machines. 4. Learn open ended design projects. Credits: 1.00

ME 36300 - Principles And Practices Of Manufacturing Processes

Credit Hours: 3.00. Manufacturing processes for engineering materials, both metallic and non-metallic. Fundamentals of manufacturing processes with a "hands-on" laboratory sequence. Analysis and design of processes for various engineering materials and their link to engineering design. Hands-on experiences through laboratory experiments and demonstrations. Not open to students with credit in IE 37000.

Credits: 3.00

ME 36400 - Systematic Engineering Design

Credit Hours: 3.00. The engineering design process including planning and clarification, conceptual design, embodiment design, and detail design. Identification of customer requirements and development of engineering specifications. Concept generation and selection. Rules and guidelines for embodiment design. Design considerations including quality, modularity, manufacturing, assembly, and economics. Detail design to support manufacturing.

Learning Outcomes: 1. Understand and apply a systematic design method. 2. Understand customer needs and translate needs to engineering specifications. 3. Generate concepts and use ideation techniques. 4. Develop layouts using embodiment design techniques. 5. Generate designs that are manufacturable. 6. Communicate design effectively to various stakeholders. 7. Work effectively in a team environment. 8. Acquire and apply new knowledge and tools to support the design process. Credits: 3.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.

Learning Outcomes: 1. Provide a fundamental knowledge of the theory of measurement sciences. (A2, A3, A4) 2. Gain knowledge of the practice and art of measurements through laboratory experiments. (A2, A3, A4) 3. Sharpen skills in problem formulation and integration of a broad range of technical capabilities through certain deliberately ill-defined experimental procedures. (A2, A3, A4) Credits: 3.00

ME 37200 - Design Of Mechanisms

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design documentation report writing and communication.

Credits: 3.00

ME 37500 - Measurement And Control Systems II

Credit Hours: 3.00. This course provides an introduction to modeling electrical, mechanical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Modeling techniques based on physical laws and principles are used to generate subsystem and system transfer functions. Closed-loop system analysis will include the use of proportional, integral, and derivative elements to control system response.

Learning Outcomes: 1. Introduce a systematic and unified system level modeling of lumped dynamic systems in different domains using first principles. (A2, A3) 2. Provide necessary mathematical tools for analyzing and predicting the performance of an engineered system based on its dynamic response. (A2, A3) 3. Provide an introductory treatment of designing feedback controllers to achieve closed-loop stability and specified system performance. (A2, A3) Credits: 3.00

ME 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39600 - Professional Internship II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit a summary report.

Credits: 0.00

ME 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

ME 39700 - Selected Topics In Mechanical Engineering

Credit Hours: 0.00 to 6.00. Topics of contemporary importance or of special interest in Mechanical Engineering. Permission of instructor required.

Credits: 0.00 to 6.00

ME 40600 - Robust Design, Standards And Contemporary Issues

Credit Hours: 1.00. The role of standards, robust design and lifelong learning in engineering design. Application to contemporary issues.

Credits: 1.00

ME 40700 - HVAC Design

Credit Hours: 3.00. The fundamentals required to design and analyze HVAC systems used in buildings. This includes the fundamentals of the thermodynamics of HVAC systems and buildings, the thermodynamics of moist air (psychometrics), calculating building heating / cooling loads, application of HVAC equipment to buildings, HVAC component analysis, energy reduction strategies. Application to real building designs.

Credits: 3.00

ME 41200 - Additive Manufacturing: Fundamentals, Equipment, And Applications

Credit Hours: 3.00. Introduction to additive manufacturing through lecture and project-based learning. The focus is additive process fundamentals, materials, characterization, and testing. Students will develop and understanding of processes and equipment for additive manufacturing; design for additive manufacturing; Implementation of Additive Manufacturing for Product Applications.

Learning Outcomes: 1. Understand the fundamentals of materials, properties, and testing for additive manufacturing. 2. Develop understanding of processes and equipment for additive manufacturing. 3. Understand design(s) for additive manufacturing with material(s) and process(es) for application specific functionality. 4. Complete a project based on product innovation or novel research. Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.

Credits: 3.00

ME 41400 - Thermal-Fluid Systems Design

Credit Hours: 3.00. Application of basic heat transfer and fluid flow concepts to design of thermal-fluid systems. Emphasis on design theory and methodology. Design experience in thermal-fluid area such as piping systems, heat exchangers, HVAC, and energy systems. Design projects are selected from industrial applications and conducted by teams.

Credits: 3.00

ME 41500 - Energy Systems Engineering

Credit Hours: 3.00. Application of Thermodynamics, fluid mechanics, and heat transfer fundamentals to the design of energy systems. Applications include thermal regulation in buildings, electronic equipment, energy generation, conversion, and storage, manufacturing processes, and combustion processes. Beyond the fundamentals, this course will focus on design and analysis techniques, including analysis of energy costs, economics, and environmental issues.

Credits: 3.00

ME 41800 - Engineering Of Environmental Systems And Equipment

Credit Hours: 3.00. Design and analysis of systems and equipment used in conditioning buildings. Review of fundamentals in thermodynamics, heat transfer, fluid mechanics, economics, non-linear equation solving, optimization. Analysis of building heating and cooling requirements for design and annual energy use. Design and selection of equipment.

Credits: 3.00

ME 42301 - Introduction To Nanotechnology

Credit Hours: 3.00. The course introduces students to the scale of nanotechnology, materials used in nanotechnology, forces acting in nanomaterials, electronic and mechanical behaviors on the nanometer scale, and applications in industries and life sciences. Nano-versus micro-technology in the evaluation of potential risks and benefits will be covered with emphasis on their impact on society.

Learning Outcomes: 1. Describe the status of nanotechnology infrastructure and products in the USA in instrumentation, devices, materials, and applications. 2. Compare nanotechnology to micro-technology issues. 3. Demonstrate knowledge of nanotechnology standards, tools, and Nano-manufacturing. 4. Explain the features of nanoscale electronics. 5. Communicate team project or team research term paper work through oral presentation and technical report. Credits: 3.00

ME 42501 - Mechanical Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of Mechanical Measurements and Control Systems.

Credits: 1.00

ME 42510 - Energy Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of mechanical measurements, control systems and alternative energy systems.

Credits: 1.00

ME 43000 - Power Engineering

Credit Hours: 3.00. Rankine cycle analysis, fossil-fuel steam generators, energy balances, fans, pumps, cooling towers,

steam turbines, availability (second law) analysis of power systems, energy management systems, and rate analysis.

Credits: 3.00

ME 43300 - Principles Of Turbomachinery

Credit Hours: 3.00. Unified treatment of principles underlying fluid mechanic design of hydraulic pumps, turbines and gas compressors. Similarity and scaling laws. Cavitation. Analysis of radial and axial flow machines. Blade element performance. Radial equilibrium theory. Centrifugal pump design. Axial compressor design.

Learning Outcomes: 1. Understand principles of operation of pumps, fans, compressors and turbines. 2. Develop the ability to size and select turbomachinery for a specific application. 3. Develop the ability to analyze the performance of turbomachinery. 4. Master the concepts of classic mean-line and quazi-3D design methods. Credits: 3.00

ME 43400 - Gas Turbines For Power And Propulsion

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component matching and off-design performance. Coursework in thermodynamics and fluid mechanics.

Learning Outcomes: 1. Apply basic performance characteristics of shaft power gas turbine engines. 2. Apply basic performance characteristics of gas turbines for aircraft propulsion. 3. Apply cycle analysis. 4. Apply component performance analysis. 5. Apply design and off-design operation. Credits: 3.00

ME 43500 - Dynamical Systems

Credit Hours: 1.00. This course introduces the modeling and analysis of dynamical systems providing the tools for problem-solving of complex mechanical, electromechanical, and aerospace systems. The course focuses on providing a unified approach to derive equations of motion of diverse linear systems the solution of which can be obtained in generic fashion. The course is designed to draw from differential equations, dynamics, and control systems courses, thereby unifying seemingly diverse concepts and tools under the dynamical systems umbrella.

Learning Outcomes: 1. Gain familiarization with energy-based methods for equations of motion derivation. 2. Understand derivation and analysis of linear dynamical systems via canonical forms of equations of motion. 3. Gain familiarization with general solution approaches to linear dynamical systems. Credits: 1.00

ME 44000 - Automotive Prime Movers: Green Engines And Clean Fuel

Credit Hours: 3.00. Internal combustion engines (ICE), hybrid engines (HE), fuel-cell engines (FCE), and alternative/renewable fuels. ICEs topics- engines with advanced combustion systems such as clean diesels, direct-injection spark-ignition engines (DISI), and low-temperature combustion (LTC) compression-ignition. HE topics- different components of hybrid engines and the powertrain design. FCE topics- fundamentals of fuel cells and automotive applications. Clean fuel topics- biofuels, hydrogen, and natural gas, as well as, other cleaner fossil fuels for automotive applications. Well-to-wheel energy and cost analysis of prime mover designs/fuels.

Learning Outcomes: 1. Relate processes in automotive prime movers to engineering fundamentals. 2. Study low-carbon emitting, and LEV, ULEV, SULEV, PZEV, and ZEV prime mover designs. 3. Study prime mover designs that are alternative to conventional combustion engines. 4. Study cleaner alternatives to conventional fossil fuels. 5. Carry out analysis of prime mover designs and fuel alternatives to identify cost and energy tradeoffs. Credits: 3.00

ME 44400 - Computer-Aided Design And Prototyping

Credit Hours: 3.00. Introduction to advanced computer-aided design (CAD) for product design, modeling, and prototyping. Individual use and team-based environment to design and prototype a functional and marketable product. Projects include use of the advanced design tools to produce a working prototype that is manufacturable. Application to design, manufacturing, and analysis.

Credits: 3.00

ME 44700 - Compressible Flow And Renewable Kinetic Energy

Credit Hours: 3.00. This course is designed to introduce compressible flow, turbomachines and design of kinetic energy conversion and storage devices for wind, wave and tidal renewable energy sources. Students will first learn about compressible flow, turbomachines concepts and kinetic energy sources available on earth. Next, the course will provide students with analysis, design parameters and control renewable kinetic energies.

Credits: 3.00

ME 45500 - Vehicle Design And Fabrication

Credit Hours: 3.00. Open-ended project course to design and build competitive prototype vehicles. Integration of design concept formulation, engineering analysis and testing, and prototype fabrication. Product development activities in a hands-on setting. Design constraints imposed by manufacturing limitations, funding constraints and market competition. Permission of instructor required.

Learning Outcomes: 1. Apply the design process to the design of a vehicle. 2. Apply engineering fundamentals to evaluate the design of a vehicle. 3. Apply team-work skills to management of the Mini-Baja or Formula SAE teams. 4. Learn the effect of design choices by building and testing students' designs. Credits: 3.00

ME 45900 - Mechanism And Machine Theory

Credit Hours: 3.00. Introduction to the principles of the analysis and design of mechanisms and machinery. Design for functionality, motion constraints, inertia force effects, and static and dynamic balancing.

Learning Outcomes: 1. An understanding of the kinematics of mechanisms. 2. An understanding of the kinetics and dynamics of machines. 3. Enhance problem-solving techniques in mechanism and machine theory. 4. Appreciation of the design of different types of machinery. Credits: 3.00

ME 46200 - Capstone Design

Credit Hours: 3.00. Concurrent engineering design concept is introduced. Application of the design is emphasized. Design problems from all areas of mechanical engineering are considered.

Credits: 3.00

ME 46300 - Engineering Design

Credit Hours: 3.00. Application of the design process to the design of various engineering components and systems. Mathematical modeling in design is emphasized. Design problems from all areas of mechanical engineering are considered.

Learning Outcomes: 1. Reinforce the philosophy that engineering design problems are open-ended and multifaceted. [1, 2, 3, 5] 2. Exercise a collaborative design methodology. [2, 3, 4, 5, 6, 7] 3. Broaden skills in leadership, teamwork, communication, project planning, innovation, design, and entrepreneurship. [3, 5] 4. Experience the application of core course materials, engineering design methods, and testing to practical open-ended design problems. [1, 2, 6] 5. Reinforce a philosophy of professional and ethical behavior. [4] 6. Provide a practical foundation for knowledge acquisition and continued learning as needed in students' future careers. [7] Credits: 3.00

ME 47500 - Automatic Control Systems

Credit Hours: 3.00. Controller design in frequency domain with introduction to digital systems and control.

Credits: 3.00

ME 48200 - Control System Analysis And Design

Credit Hours: 3.00. (MSTE 36000) Classical feedback concepts, root locus, Bode and Nyquist techniques, state-space formulation, stability, design applications. Students may not receive credit for both ECE 38200 and ME 48200.

Credits: 3.00

ME 48900 - Introduction To Finite Element Analysis

Credit Hours: 3.00. Introduction to finite element analysis with focus on linear elasticity and heat transfer. Matrix analysis and assembly of solutions. Strong form and weak form as a general solution process for differential equations.

Learning Outcomes: 1. Introduce concepts of finite element analysis. 2. Learn the use of matrix methods for solution of truss structures. 3. Learn strong and weak form for the solution of differential equations. 4. Learn how to define finite elements and finite element approximations. 5. Learn how to solve weak form formultions as a finite element approximation. 6. Apply these concepts to linear elastic and heat transfer problems. 7. Apply a commercial finite element code to linear elastic and heat transfer problems. 8. Understand the use of the Finite Element Analysis in engineering practice. Credits: 3.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary

approaches stressed. Offered in alternate years.

Credits: 3.00

ME 49601 - Experimental Courses

Credit Hours: 1.00 to 6.00. Experimental classes offered at the junior or senior level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 1.00 to 6.00

ME 49700 - Mechanical Engineering Projects

Credit Hours: 1.00 to 6.00. Projects or special topics of contemporary importance or of special interest outside the scope of the standard undergraduate curriculum. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. Permission of instructor required.

Credits: 1.00 to 6.00

ME 49800 - Research In Mechanical Engineering I

Credit Hours: 0.00 to 6.00. Individual research projects for students with honors classification. Requires prior approval of, and arrangement with, a faculty research advisor. Honors classification. Permission of instructor required.

Credits: 0.00 to 6.00

ME 49900 - Research In Mechanical Engineering II

Credit Hours: 0.00 to 6.00. Continuation of ME 49800. Requires submission of a written thesis, public presentation, and oral defense of the research project. Honors Classification. Permission of instructor required.

Credits: 0.00 to 6.00

ME 50000 - Advanced Thermodynamics

Credit Hours: 3.00. The empirical, physical basis of the laws of thermodynamics. Availability/exergy concepts and applications. Properties and relations between properties in homogeneous and heterogeneous systems. The criteria of equilibrium. Application to a variety of systems and problems, including phase and reaction equilibrium. Offered in alternate years.

Credits: 3.00

ME 50100 - Statistical Thermodynamics

Credit Hours: 3.00. The molecular interpretation of thermodynamic equilibrium. Development of the partition function. Introduction to quantum mechanics and molecular spectroscopy. The Maxwell-Boltzmann formulation of statistical mechanics and applications to ideal gases, solids, radiation, and laser diagnostics. The Gibbs formulation of statistical mechanics and application to real gases. Kinetic theory and applications to transport properties and chemical kinetics. Offered in alternate years.

Learning Outcomes: 1. Provide a fundamental microscopic understanding of thermodynamics, temperature, radiation and transport phenomena. 2. Apply concepts and calculate thermodynamic and transport properties of ideal gases. 3. Evaluate properties in reacting and non-reacting flow fields from laser spectroscopic measurements. Credits: 3.00

ME 50101 - Energy Assessment Of Industrial Processes

Credit Hours: 3.00. The course provides and analyzes methodologies for improving energy efficiency in the manufacturing sector. The manufacturing equipment and processes will be analyzed in terms of energy consumption and optimization. It provides the technical and analytical foundation for students on assessing industrial processes to evaluate measures for optimizing energy efficiency in industrial, electrical, motor drive, compressed air, process heating, process cooling, lighting, space conditioning, combined heat and power systems. This course is designed for students who are interested in energy efficiency. Permission of instructor required.

Credits: 3.00

ME 50102 - Energy Management Principles

Credit Hours: 3.00. This course provides energy management principles for industrial applications. Various energy management methods, commitments, and strategies for continuous improvement as well as international standards will be analyzed and integrated. This course emphasizes real world applications including: critiquing utility rates structure and assessing costs; characterizing and quantifying energy saving opportunities at industrial facilities; determining investment payback scenarios and considerations. Permission of instructor required.

Credits: 3.00

ME 50103 - Industrial Energy Assessment: Tools And Applications

Credit Hours: 3.00. This course synthesizes advanced energy efficiency, energy auditing, and energy assessment methods and practices. Several types of industrial audits will be analyzed with respect to the methods, tools (hand and software), and industrial application. Topics include: the audit process for energy, industrial productivity, and waste stream audits; audit components: energy bill analysis and economic analysis: audit system mechanics related to building envelop, electrical system, HVAC system, waste heat recovery, lighting, cogeneration, and other prevalent industrial systems; and measurement instrumentation issues for each industrial system. Students will enhance learning from a class project, which requires completion of an industrial scale energy audit. Permission of instructor required.

Credits: 3.00

ME 50104 - Powertrain Integration

Credit Hours: 3.00. The holistic view of powertrain development

that includes engine, transmission, and driveline is now well accepted. Current trends indicate an increasing range of engines and transmissions in the future with, consequently, a greater diversity of combinations. This course discusses engines, transmissions, and drivelines in relation to their interfaces with chassis systems. This course also explores various aspects of powertrain integration. Novel concepts relating, for example, to continuously variable transmissions (CVTs) and hybridization as well as approaches to modeling, analysis, and simulation will be discussed. Permission of instructor required

Credits: 3.00

ME 50105 - Hybrid And Electric Transportation

Credit Hours: 3.00. This course will cover fundamentals of hybrid electric and battery electric transportation systems with particular emphasis on automotive vehicles. It will cover powertrain configurations of Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV), and Battery Electric Vehicle (BEV). The principal element of the powertrain of these vehicles will be discussed: Battery, Electric Motor, Engine, Transmission. This course will cover design concepts for HEV / PHEV and BEV powertrain. Optimal methods of component sizing via appropriate modeling and analysis methodologies will also be introduced. An introduction to power electronic components and microprocessor based controllers for these powertrains will also be given. An in-depth coverage, including optimal energy management, will be given on the energy and power management of HEV / PHEV and BEV powertrain once the design is complete. Introduction of various concepts and terminologies, the state of the art development, energy conversion and storage options, modeling, analysis, system integration and basic principles of vehicle controls will be covered as well. Upon completion of this course, students should be able to follow the literature on these subjects and perform modeling, design, analysis and development work in this field. A field demonstration of a PHEV will be used to further enhance the learning experience in this course. Permission of department reqjuired. Prerequisite: ME 48200/ECE 38200.

Credits: 3.00

ME 50106 - Industrial Energy Audit

Credit Hours: 1.00 or 2.00. Students enrolled in this course will investigate, evaluate, conjecture, formulate and author during their participation in professional energy audits at multiple manufacturing sites. Students earn one credit during the fall semester and two credit hours during the spring semester of this two-part course. Permission of instructor required.

Credits: 1.00 or 2.00

ME 50300 - Micro-And-Nano-Scale Energy Transfer Processes

Credit Hours: 3.00. Transport of energy in natural and fabricated micro- and nano-scale structures. Physical nature of energy transport by three carriers-electrons, phonons, and photons. Bulk material properties (e.g., thermal/electrical conductivity) are derived from statistical particle transport theories. Effects of spatial confinement on bulk properties are quantified. Contemporary interdisciplinary engineering applications.

Learning Outcomes: 1. Gain an understanding of the fundamental elements of solid-state physics. 2. Develop skills to derive continuum physical properties from sub-continuum principles. 3. Apply statistical and physical principles to describe energy transport in modern small-scale materials and devices.

Credits: 3.00

ME 50400 - Automotive Control

Credit Hours: 3.00. Basic engine operation; lambda control, speed control, knock control, fuel injection timing control, ignition control of SI engines; driveline modeling, automatic transmission control, clutch phasing control; wheel model, complete vehicle model; observers, friction coefficient estimators, tire contact patch force estimators; anti-lock brake control, traction control, yaw stability control; drive-by-wire systems. The distance offering of this course originates from the IUPUI campus, is offered through streaming video via ProEd, and may be made available at the West Lafayette campus.

Credits: 3.00

ME 50500 - Intermediate Heat Transfer

Credit Hours: 3.00. Heat and mass transfer by diffusion in one-dimensional, two-dimensional, transient, periodic, and phase change systems. Convective heat transfer for external and internal flows. Similarity and integral solution methods. Heat, mass, and momentum analogies. Turbulence. Buoyancy-driven flows. Convection with phase change. Radiation exchange between surfaces and radiation transfer in absorbing-emitting media. Multimode heat transfer problems.

Learning Outcomes: 1. Analyze and solve variable cross-section fin problems. 2. Apply separation of variables to steady-state and transient heat conduction problems in Cartesian and cylindrical coordinate systems. 3. Apply separation of variables to steady-state conduction with heat generation. 4. Analyze and solve boundary layer problems. 5. Solve internal and external flow, forced convection problems. 6. Solve external flow natural convection problems. 7. Identify different regimes of boiling and condensation. 8. Recognize, model, and solve radiation heat transfer problems. Credits: 3.00

ME 50600 - Two-Phase Flow And Heat Transfer

Credit Hours: 3.00. Basic two-phase flow equations, homogeneous model, drift-flux model, flow regimes, pressure drop in two-phase flow. Nucleation and bubble dynamics, pool boiling, subcooled boiling, forced convection boiling, critical heat flux in pool boiling, critical heat flux in forced convection boiling, minimum heat flux, film boiling, post dryout heat transfer. Flow instabilities, choking in two-phase flow, film and dropwise condensation. Applications to heat exchangers. Special boiling and two-phase flow problems. Offered in alternate years.

Credits: 3.00

ME 50601 - Design Optimization Methods

Credit Hours: 3.00. In this course, the general theory of optimization, concepts and problem statement are presented. Methods for minimization of a function of one or n-variables with and without constraints are discussed. Response surface methods and design of experiments are shown to significantly reduce analysis time. Applications using a commercial software package to solve typical engineering design optimization problems are demonstrated. Uncertainty in the design process is introduced. In addition to engineering, the methods studied can be applied to a variety of diverse disciplines such as finance, investment portfolio management, and life sciences. Permission of instructor required.

Credits: 3.00

ME 50700 - Laser Processing

Credit Hours: 3.00. Introduces background knowledge in laser science and laser technology and fundamentals involved in laser processing and manufacturing. The following topics are discussed: laser fundamentals, industrial laser systems and processes, and the laser-induced thermal, thermo-mechanical, and thermo-acoustic effects. The course also discusses emerging areas of laser applications, such as microscale laser processing, ultrafast laser processing, and the related energy transport analyses. Laboratory and video demonstration sessions are used to enhance the overall understanding of the course materials. Offered in alternate years.

Credits: 3.00

ME 50800 - Heat Trans In Biological Systems

Credit Hours: 3.00. Introduction to applications of heat transfer in living systems to students who have general interests in biomedical engineering. Fundamental concepts of biology and engineering involved in these applications are introduced. Regulation of blood flow under external thermal stimuli and its effect on heat transfer are discussed. Clinical applications of heat transfer, including cancer therapy and gene therapy. Prerequisite: first course in fluid or aerodynamics. Offered in alternate years.

Credits: 3.00

ME 50801 - Orthopaedic Tissue Mechanics

Credit Hours: 3.00. Orthopaedic tissues, such as bone, cartilage, tendon and ligament, serve functions that are largely mechanical in nature and that are critical for our health. This course is structure around classical topics in mechanics of materials and their applications in biomechanics and musculoskeletal tissues. Primary emphasis will be on the mechanical behavior of tissues, including elastic and failure properties as well as more advanced topics such as anisotropy, nonlinearity, viscoelasticity, poroelasticity, damage and fatigue. Importantly, the theories used to describe these mechanical properties were originally developed for advanced engineering materials such as fiber composites, polymers, elastomers, hydrogels, etc. Thus, while the theories will be presented in the context of biological materials, potential applications are much broader. Tissue microstructure and its importance to the material properties will be covered. Mechanics of whole bones and implants (composite and asymmetric beam theories) and the mechanical function of native and artificial joints (contact mechanics, lubrication and wear) may also be discussed, time permitting. Some homework assignments will emphasize the use of experimental data to develop and test theoretical models via nonlinear curve fitting and optimization using Matlab. Students will receive an introduction to tissue mechanics literature to better understand how the concepts presented in class are used in the research setting.

Credits: 3.00

ME 50900 - Intermediate Fluid Mechanics

Credit Hours: 3.00. Fluid properties. Basic laws for a control volume. Kinematics of fluid flow. Dynamics of frictionless incompressible flow and basic hydrodynamics. Equations of motion for viscous flow, viscous flow applications, boundary layer theory. Wall turbulence, lift and drag of immersed bodies.

Learning Outcomes: 1. State basic laws for a control volume in different coordinate systems. 2. Derive the kinematics of fluid flow in problem solving. 3. Derive the equations for frictionless and incompressible flows. 4. Derive the basic equations of motion of viscous flows. 5. Find standard exact solutions of viscous-flow equations and apply them. 6. Derive and solve basic equations of boundary-layer theory. 7. Find lift and drag forces on immersed bodies with simple shapes. 8. Understand concepts of incompressible turbulent flows and wall turbulence. Credits: 3.00

ME 51000 - Gas Dynamics

Credit Hours: 3.00. Flow of compressible fluids. One-dimensional flows including basic concepts, isentropic flow, normal and oblique shock waves, Rayleigh line, Fanno line, and simple waves. Multidimensional flows including general concepts, small perturbation theory for linearized flows and method of characteristics for nonlinear flows. Prerequisite: first course in fluid or aerodynamics.

Credits: 3.00

ME 51100 - Heat Transfer In Electronic Systems

Credit Hours: 3.00. This course covers both traditional and more innovative methods for heat extraction in electronic systems and the effectiveness and applicability of these methods over a wide range of scales. Special emphasis is given to industry-related applications with experts often attending and presenting material as part of class instruction.

Learning Outcomes: 1. Introduce concepts in thermal management of electronics to senior undergraduate and graduate students and practicing engineers. 2. Provide an appreciation for the applications of first principles to electronics cooling and packaging problems in industry. 3. Provide students with sound tools to approach existing packaging and cooling applications, while also raising awareness of novel techniques at the cutting edge. Credits: 3.00

ME 51201 - Energy Storage Devices And Systems

Credit Hours: 3.00. The basic concepts and components of primary and rechargeable batteries; Faraday's Law: electrode process and kinetics; electric double layer; electroanalytical techniques; battery standard, operation, and other considerations; materials for Li-ion batteries; next generation high energy rechargeable lithium batteries; batteries for electric vehicles and hybrid electric vehicles; and battery for the electrodes, electrolytes, temperature range and operation of different types of batteries. Permission of instructor required.

Credits: 3.00

ME 51300 - Engineering Acoustics

Credit Hours: 3.00. The simple oscillator. Lumped acoustical elements. Electro-mechanical-acoustical analogies. Wave motion in strings and membranes. Introduction to linear acoustics through derivation of the wave equation and simple solutions. Plane and spherical waves. Acoustic intensity. Plane wave transmission through fluid layers and simple barriers. Sound absorption. Modeling of acoustical sources: monopoles, dipoles, quadrupoles. Mechanisms of sound generation and directionality. Sound propagation in one-dimensional systems (e.g., ducts and mufflers). Introduction to room acoustics.

Credits: 3.00

ME 51400 - Fundamentals Of Wind Energy

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component machine and off-design performance. Inspection trip to industrial plan required.

Learning Outcomes: 1. Introduce students to the technology and economics of converting wind energy to electricity. 2. Inform students to the environmental concerns of wind energy. 3. Understand principles of wind turbine aerodynamics. 4. Develop the ability to design optimum blading. 5. Develop the ability to evaluate a potential site in terms of wind energy. 6. Understand wind turbine structural dynamics issues. Credits: 3.00

ME 51800 - Analysis Of Thermal Systems

Credit Hours: 3.00. Modeling and optimization of thermal systems with a focus on heat-pumping equipment, such as vapor compression, absorption, and some advanced heat-pumping cycles. Students combine the use of thermodynamics, heat transfer, fluid mechanics, and numerical methods to develop and apply mathematical models for the analysis and optimization of specific equipment. Offered in alternate years.

Learning Outcomes: 1. Develop a comprehensive understanding of the fundamentals of thermal systems' modeling and analysis. 2. Develop a detailed understanding of vapor compression systems, absorption systems, and other advanced heat pumping equipment. Credits: 3.00

ME 52000 - Imaging-Based Computational Hemodynamics For Cardiovascular Assessment

Credit Hours: 3.00. Image-based computational hemodynamics is a newly-emerged computational technique for non-invasive and patient-specific assessment of cardiovascular diseases based on medical imaging data. In this course, students will learn (1) concepts and principles of cardiovascular circulation in the human body and imaging modalities for cardiovascular diseases; (2) image-based computational modeling methods for quantification of hemodynamics (velocity, pressure, and wall-shear stress) in human vessels based on CT/MRI and Doppler ultrasound imaging data; and (3) computational analysis to assess the severity of cardiovascular diseases. Team projects to non-invasively assess the severity of arterial stenosis in renal, iliac, and coronary arteries via quantification of trans-stenotic pressure gradient and/or fractional flow reserve will provide first-hand experience of how computational modeling and analysis can contribute to medical innovation and advanced precision medicine.

Credits: 3.00

ME 52200 - Indoor Environmental Analysis And

Design

Credit Hours: 3.00. Review of current trend of building and indoor environment design. Theory of thermal comfort, indoor air quality, visual comfort, and acoustic comfort. Introduction of experimental techniques and advanced computer tools for indoor environment analysis and design.

Learning Outcomes: 1. Provide an introduction into and practical examples of indoor environment. 2. Present the basic theory of thermal comfort, indoor air quality, visual comfort, acoustics comfort and HVAC systems. 3. Introduce advanced tool to analyze and design indoor environment and energy use in buildings. 4. Conduct indoor environment analysis and design for a challenging problem. Credits: 3.00

ME 52301 - Nanosystems Principles

Credit Hours: 3.00. (ECE 52301) This is the introductory course in the nanosystems area. It introduces students to the principles and applications of nanosystems. The course begins with an introduction to the nanometer scale phenomena. It then introduces students to the basic elements resulting in nanosystems: nanoscale materials, processes, and devices. It also provides students with a basic understanding of the tools and approaches that are used for the measurement and characterization of nanosystems, and their modeling and simulation. Moreover, the course covers the applications of nanosystems in a wide range of industries, including information technology, energy, medicine, and consumer goods. The course concludes with a discussion of the societal and economical significance of these applications, including benefits and potential risks.

Credits: 3.00

ME 52500 - Combustion

Credit Hours: 3.00. Physical and chemical aspects of basic combustion phenomena. Chemical energetics and equilibrium. Basic chemical kinetics, chain reactions, and explosions. Chain and thermal ignition. Homogeneous combustion models. Detonations and deflagrations. Laminar flame speed and flame extinction. The Shvab-Zeldovich formulation of the multicomponent conservation equations. Diffusion flames and droplet combustion. Introduction to turbulent combustion.

Credits: 3.00

ME 52600 - Spray Applications And Theory

Credit Hours: 3.00. Theory of spray formation and evolution as well as treating a host of spray applications. Topics include drop size distributions, breakup of liquid sheets and ligaments, drop formation and breakup, drop motion and the interaction between a spray and its surroundings, drop evaporation, nozzle internal fluid mechanics, external spray characteristics, nozzle performance, and experimental techniques relevant to these subjects. Applications include: (1) agricultural sprays, (2) consumer products, (3) gas turbine combustion, (4) heat transfer, (5) internal combustion engines, (6) paints and coatings, (7) pharmaceutical and medicinal sprays, and (8) spray drying. Offered in alternate years.

Credits: 3.00

ME 52601 - Integrated Nanosystems Processes And Devices

Credit Hours: 3.00. (ECE 52601) This course covers processes and devices associated with integrated nanosystems. Integrated nanosystems refer to systems which consist of integrated micro-, meso-, and/or macro-scale parts, and their core components are realized by nano-scale materials, processes, and devices. The course, while covering processes which result in integrated nanosystems, will focus on the theory and operation of select electronic, electromechanical, and biomedical devices which are used for information technology, sensing, medical, and other applications. The lectures will be complemented by hands-on laboratory experience. Permission of instructor required.

Credits: 3.00

ME 52900 - Sustainable Energy Options And Analysis

Credit Hours: 3.00. This course develops an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. A range of different technologies and approaches are presented for meeting future energy needs. Students learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics and gain experience in assessing different energy technologies for specific case studies.

Learning Outcomes: 1. Gain an understanding of the current energy situation and impacts of energy choices on economics and sustainability metrics. 2. Gain an understanding of alternative technologies for meeting future energy needs. 3. Learn how to assess the potential for alternative energy technologies in terms of economic and sustainability metrics. 4. Gain experience in assessing different energy technologies. Credits: 3.00

ME 53100 - Characteristics Of Particles, Powders, And Compacts

Credit Hours: 3.00. Familiarize students with the properties and methods used to characterize the mechanical behavior of particles, powders, and compacts, with the intention of using these properties for process and performance design. Students work with a subset of the measurement methods in a laboratory setting. Students successfully completing the course will be able to define and describe the significant properties of particles,

powders, and compacts; describe and demonstrate techniques used to measure these properties; and demonstrate how these properties are useful in product and manufacturing performance. Offered alternate years.

Learning Outcomes: 1. Define and describe the significant properties of particles, powders, and compacts. 2. Describe and demonstrate techniques used to measure these properties. 3. Demonstrate how these properties are useful in product and manufacturing performance. 4. Pursue further studies on particle and powder characterization. Credits: 3.00

ME 53101 - Particle, Powder, And Compact Characterization

Credit Hours: 2.00. The goal of this course is to familiarize students with the properties and methods used to characterize the physical and mechanical behavior of particles, granules, and compacts with the intention of using these properties for process and performance design.

Learning Outcomes: 1. Define and describe the significant properties of particles, granules, powders, and compacts. 2. Explain how these properties are measured. 3. Illustrate how these properties influence the performance of particle-based products and manufacturing processes. 4. Create a computational or web-based tool that demonstrates or implements concepts from the course. Credits: 2.00

ME 53102 - Particle, Powder, And Compact Characterization Laboratory

Credit Hours: 1.00. The goal of this laboratory course is to train students on state-of-the-art laboratory equipment used to measure the mechanical properties of particles, granules, powders, and compacts.

Learning Outcomes: 1. Follow laboratory safety guidelines. 2. Operate common laboratory equipment and follow standard operating procedures used to measure the mechanical properties of particles, granules, powders, and compacts. 3. Plan and perform measurements as part of a team, analyze results, and summarize the results in a written report. Credits: 1.00

ME 53300 - Turbomachinery II

Credit Hours: 3.00. Aerodynamic analysis and design of axial flow and radial flow gas compressors and gas turbines. Blade element performance (deflection, profile and shock losses, etc.). Meridional flow analysis for general radial equilibrium. Secondary flow and end-wall boundary layer models. Centrifugal compressor modeling. Unsteady flow, rotating stall, and surge.

Credits: 3.00

ME 53500 - Design And Modeling Of Fluid Power Systems

Credit Hours: 3.00. Introduction to fluid power technology. Design of hydraulic systems for mobile and industrial application for functionality, cost and energy efficiency. Modeling strategies for fluid power systems. Labs and class projects are given to reinforce the design and modeling learning projects.

Learning Outcomes: 1. Interpret and design hydraulic systems according to ISO standard of representation. 2. Describe the principle of operation of basic components such as pumps, motors, hydraulic control valves, pipes, linear actuators (cylinders) and recognize the technologies available for each component. 3. Model the operation of hydraulic components through lumped or distributed numerical approaches. 4. Discuss the features of the hydraulic control technologies commonly available for mobile machinery and industrial applications, particularly in terms of cost, functionality and energy consumption. 5. Formulate, design, simulate and present the most energy efficient solution for the hydraulic control system of a fluid power application, given the functional requirements. Credits: 3.00

ME 53501 - Introduction To Systems Engineering

Credit Hours: 3.00. This course offers an examination of the principles of systems engineering and their application across the system life cycle. Special emphasis is given to concept exploration, requirements analysis and development, analysis of alternatives, preliminary design, integration, verification, and system validation. The students will use the international space station (on-orbit modules) for practical application of the principles introduced in this course. This is the first of two courses in systems engineering and is a prerequisite to the Systems & Specialty Engineering course. Both courses use the same text book and have a 15% overlap of the text material. Permission of instructor required.

Credits: 3.00

ME 53502 - Systems And Specialty Engineering

Credit Hours: 3.00. This course offers an examination of the

interaction between the principles of systems engineering and the design for specialty engineering areas. The focus of their interactions is viewed across the system life cycle. Special emphasis is given to contributions of the specialties to the essential knowledge development needed for concept exploration, requirements analysis and development, trade-offs and decisions with uncertainty, preliminary design, system integration, verification, and system validation. Students will use the international space station and its support systems for practical application of the principles introduced in this course. Permission of instructor required.

Credits: 3.00

ME 53503 - Model-Based Systems Engineering

Credit Hours: 3.00. This course focuses MBSE or Model-Based Systems Engineering (i.e. the model-based version of Systems Engineering) with an emphasis on its intelligent implementation using SysML graphical language for systems representation. The other two pillars for implementing MBSE are also covered: a methodology (OOSEM) and a tool (Cameo Systems Modeler). The coursework incorporates theoretical concepts learned in earlier systems engineering classes and is structured around the Object Modeling Group's SysML which is used in modeling systems. SysML's application to real-life projects and businesses to define, track and visualize various aspects of a system is investigated. Case studies from a variety of disciplines - including engineering and healthcare - are used as teaching tools.

Credits: 3.00

ME 53504 - Systems Driven Product Development

Credit Hours: 3.00. Integrated Model-Based Systems Driven Product (and Process) Development, or SDPD (Systems Driven Product Development) is a methodology and framework for integrating system behavioral modeling with downstream design and manufacturing practices to plan multi-domain, complex, systems. SDPD is an implementation of MBE (Model-based Engineering) which integrates MBSE (Model-based Systems Engineering) and PLM (Product Lifecycle Management) to create the "Digital Twin" of a product/process and support the digital transformation resulting in the digital enterprise of Industry 4.0 (4th Industrial Revolution). The course covers key concepts and definitions pertaining to SDPD including MBSE, PLM, Digital Manufacturing, Digital Twin, Digital Thread, Industry 4.0, Interoperability, Traceability, Validation/Verification, Optimization, and Predictive Analytics. State-of-the-art engineering software tools are taught and used by students to design, optimize and verify multi-domain complex products (or systems) following the SDPD methodology. The graduate level project consists of a comprehensive implementation of SDPD methodology in real-life/industry relevant design and optimization of complex (multi-domain) systems.

Credits: 3.00

ME 53700 - Complex Fluids

Credit Hours: 3.00. The aim of the course is to provide a basic foundation in the fluid mechanics of viscous flows and complex fluids. Students completing this course are expected to understand the physics underlying the constitutive equations for these materials and be able to model them.

Learning Outcomes: 1. Develop a thorough understanding of complex fluids and relevant flow physics. 2. Define and describe significant properties of complex fluids. 3. Explain how properties of complex fluids are measured. 4. Understand the physics underlying the constitutive equations for complex fluids. 5. Enable continued study in advanced topics in fluid mechanics. 6. Develop the ability to critically evaluate the scientific literature on complex fluids. 7. Develop skills for scientific presentations. Credits: 3.00

ME 53800 - Air Breathing Propulsion

Credit Hours: 3.00. (AAE 53800) Analysis of operating characteristics of turbojet, turbofan, turboshaft, afterburning, and ramjet propulsion systems. Analysis and design of inlet, diffuser, combustor, compressor, turbine, and nozzle. Component matching and off-design performance. Inlet distortion, nozzle-afterbody, and installation losses. Mission analysis.

Credits: 3.00

ME 53900 - Introduction To Scientific Machine Learning

Credit Hours: 3.00. Introduction to the fundamentals of predictive modeling for advanced undergraduates and graduate science and engineering students that work in the intersection of data and theory.

Learning Outcomes: 1. Represent mathematically the uncertainty in the parameters of physical models. 2. Propagate parametric uncertainty through physical models to quantify the induced uncertainty in quantities of interest. 3. Calibrate the uncertain parameters of physical models using experimental data. 4. Combine multiple sources of information to enhance the predictive capabilities of models. 5. Pose and solve design optimization problems under uncertainty involving expensive simulations or experiments. 6. Improve scientific writing and data visualization skills. Credits: 3.00

ME 54000 - Internal Combustion Engines

Credit Hours: 3.00. Spark-ignition and compression-ignition engine processes. Study of the fundamentals of turbulence, boundary, layers, liquid atomization, sprays, combustion, and pollutant formation as applied to engines. Engine after treatment. Modeling of engine flows, sprays, combustion, and pollutants. Offered in alternate years.

Learning Outcomes: 1. Study the fundamentals of turbulence, boundary layers, liquid atomization, sprays, combustion, and pollutant formation as applied to internal combustion engines. 2. Study the modeling of engine flows, sprays, combustion, and pollutant formation in internal combustion engines. Credits: 3.00

ME 54100 - Engineering Design: A Decision-Based Perspective

Credit Hours: 3.00. Multi-objective decision making under risk and uncertainty; Group decision making; Sequential decision making; Model-based and data-driven decision making; Heuristics and biases in design decision making. Applications to engineering design including estimation of customer preferences, simulation-based design, and sustainable design.

Learning Outcomes: 1. Formulate design decisions under risk and uncertainty. 2. Apply multi-attribute utility theory to make decisions in engineering design. 3. Evaluate the assumptions and limitations of commonly used decision-making methods. 4. Identify heuristics and biases in design decision making. 5. Adopt an interdisciplinary approach to design across engineering economics and social sciences. Credits: 3.00

ME 54200 - Introduction To Renewable Energy

Credit Hours: 3.00. An introductory course on renewable energy. Students will learn the fundamental principles of the various renewable energy options and their applications and costs. After taking this course, students will be familiar with the economic and societal impact of renewable energy systems, and be able to participate in the design or selection of renewable energy systems.

Credits: 3.00

ME 54255 - Motorsports Vehicle Dynamics Fundamentals

Credit Hours: 3.00. Vehicle dynamics is the study of behavior of vehicles in motion. The study is one of the most important activities in the Vehicle design and development cycle to design vehicles which drive well and are comfortable to ride in. The course focuses on the development of advanced mathematical engineering models that represent the behavior of automotive vehicles and vehicle subsystems. Topical emphasis is focused on rectilinear performance, steady state handling behavior, tire models and suspension models.

Learning Outcomes: 1. Evaluate the solution to the race car and vehicle design as applied to motorsports vehicles. 2. Investigate the concept of the suspension design process and optimization techniques including concepts of kinematics and vibration isolation used in industry by race engineers. 3. Implement concepts of tire and mechanism of load generation and industry standards. 4. Critique suspension geometry design, wheel and steering angles, suspension travel, anti-features, roll centre, camber change rate and elastokinematics. 5. Develop modeling and dynamic simulation. 6. Formulate mechanism of traction force generation in Braking and accelerating and explanation of working of Anti-lock brake systems as an industry tool in motorsports design. Credits: 3.00

ME 54355 - Motorsports Vehicle Vibration Dynamics

Credit Hours: 3.00. An investigation into advanced topics in the field of vehicle dynamics. This course covers the principles and applications of vehicle handling dynamics from an advanced perspective in depth. The methods required to analyze and optimize vehicle handling dynamics are presented, including tire compound dynamics, vehicle planar dynamics, vehicle roll dynamics, full vehicle dynamics, and in-wheel motor vehicle dynamics. The provided vehicle dynamic model is capable of investigating drift, sliding, and other over-limit vehicle maneuvers. This is an ideal course for postgraduate and research students and engineers in motorsports, mechanical, automotive, transportation, and ground vehicle engineering.

Learning Outcomes: 1. Evaluate the rectilinear performance simulation program based on the modelling equations adapted to the race car and vehicle design as applied to motorsports vehicles. 2. Investigate the concept of the transient vehicle handling model used in industry by race engineers. 3. Implement concepts of the vehicle ride model and apply known vehicle parameters to understand

vehicle performance and industry standards. 4. Develop advanced modeling and dynamic simulation. Credits: 3.00

ME 54455 - Motorsports Aerodynamics Fundamentals

Credit Hours: 3.00. A study and adaptation of fluid flow and aerodynamics as applied to motorsports design and performance optimization. This course is designed to reinforce student's understanding of aerodynamics as it pertains to a race car. This course breaks down the differences between actual air flow while driving / racing versus air flow within a wind tunnel, and how these flows are different. It discusses how to evaluate those flows, and determine if they need to be improved. It discusses ways to improve the aero on race cars.

Learning Outcomes: 1. Evaluate the solution to the aerodynamic analysis and design as applied to motorsports vehicles. 2. Investigate the concept of the aerodynamic optimization techniques used in industry by race engineers. 3. Implement concepts of wind tunnel technology and industry standards. 4. Critique aerodynamic flow regimes (continuum, slip, and transition) and their verifications in different regimes. 5. Develop modeling and fluid simulation. 6. Formulate and conduct direct Computational Fluid Dynamics simulations as an industry tool in motorsports design. Credits: 3.00

ME 54555 - Advanced Applications Of Motorsports Aerodynamics

Credit Hours: 3.00. This advanced course is designed to adapt the secrets of the rapidly developing field of high-speed vehicle design. From F1 to Indy Car, Advanced drag simulation and Sedan racing, this course provides clear advanced explanations for students and engineers who want to improve their design skills and to interpret how their favorite race cars aerodynamics is designed. It differentiates how aerodynamics win races, why downforce is more important than streamlining and drag reduction, designing wings and venturis, plus wind tunnel designs and more. Appraises the development process of advanced motorsports aerodynamics engineering. Extensive use of CFD in the development of race car aerodynamics.

Learning Outcomes: 1. Incorporate the design of aerodynamic bodywork and components using numerical techniques. 2. Evaluate aerodynamic optimization techniques used in industry by race engineers. 3. Implement race car engine/frame integration including wake mechanics. 4. Implement the process by which race vehicles are designed with regards the addition and optimization of aerodynamic multidisciplinary platform. 5. Determination of facilities to develop high-resolution nonintrusive instrumentation such and wind tunnels with acoustic lining. Credits: 3.00

ME 54600 - CAD/CAM Theory And Advanced Applications

Credit Hours: 3.00. Theory of CAD/CAM. Geometric modeling for seamless CAD/CAM integration. Solid modeling data structure design/manipulation. CAD and CAM tools with a focus on product development integration and automation. Machining theory, automated CNC machining, and process control. CAD/CAM applications using programming languages and open architecture kernel for modeling. Projects involve CAD/CAM aspects for advanced engineering.

Credits: 3.00

ME 54655 - Composite Materials For Automotive Applications

Credit Hours: 3.00. This course focuses on development of low-cost carbon fiber for automotive applications, mechanical properties of advanced composites, automotive composite structures for crashworthiness, crashworthiness analysis of composite, hybrid structures consisting of sheet metal and fiber reinforced plastics for structural automotive and design solutions to improve crash-box impact efficiency for racing applications.

Learning Outcomes: 1. Incorporate the design of low-cost carbon fiber for automotive and motorsports applications using analytical and numerical techniques. 2. Investigate structural optimization techniques used in industry. 3. Evaluate race car chassis integration including monocoque. 4. Formulate the process by which the crash-box impact efficiency for racing applications is optimized using multidisciplinary platforms. 5. Execution of green composites for automotive applications. Credits: 3.00

ME 54755 - Design And Analysis Of Materials And Structures In Lightweight Vehicles

Credit Hours: 3.00. The materials for the construction of automobiles are changing from mostly low carbon steels to a combination of steels, light alloys, such as aluminum and magnesium alloys, and polymer matrix composites. Many of these materials are already used in today's vehicles, albeit in smaller volumes. Future vehicles, which will have to be much

lighter in weight for improved fuel economy and reduced environmental pollution, will contain much larger volumes of these materials. The selection of materials will not only be influenced by their weight reduction potential, but also by factors such as safety, durability, processing, joining, recycling and cost. This course focuses on materials, their properties, processing technology and design and materials selection issues pertinent to designing lightweight vehicles. It will provide first-hand knowledge and experience of working with these advanced materials. It starts with a broad review of the materials scenario and design considerations for lightweight automotive structures. It is then divided into two major parts: materials, and design and manufacturing. The materials part contains topics on advanced steels, aluminum alloys, magnesium alloys and polymer matrix composites. It will provide information on material properties, processing characteristics and application examples. The design and manufacturing part contains information on manufacturing processes for light alloys, joining, crash worthiness considerations, recycling and life-cycle issues.

Learning Outcomes: 1. Evaluate the material selection from advanced steels, aluminum alloys, Magnesium alloys and thermoplastics and thermoplastic-matrix composites for lightweight automotive structures. 2. Investigate the techniques for joining of thermoplastic matrix composites. 3. Investigate design allowables and use of MIL-HDBK-5. 4. Critique execution plans for fatigue analysis of materials and structures. 5. Develop models for design and analysis of symmetric and asymmetric beams. 6. Formulate shear stresses in single and multi-cell beams subjected to bending and/or torsional loadings in monocoque. 7. Execute simulations for structural configurations of modern automobile. Credits: 3.00

ME 54800 - Fuel Cell Science And Engineering

Credit Hours: 3.00. Fundamental principles of fuel cell science and engineering (fuel cell reactions, charge and mass transport in fuel cells, water transport management, and materials development in the fuel cells, fuel cell system designs and integrations), current state-of-the-art fuel cell technology and the current technical challenges on the development of fuel cells, codes and standards for safe handling of fuel cells. Permission of instructor required.

Credits: 3.00

ME 54855 - Motorsports Vehicle Simulations

Credit Hours: 3.00. A course on mathematical modeling and computer simulation of mechanical systems offering a complete tool for modeling and simulation of integrated and complex systems for use within automotive and motorsports applications. Complex multi-disciplinary systems modeling and analysis problems will be solved, using a modeling and simulation environment for complex systems analysis such as Dymola's Modelica simulation technology. Dymola is a complete environment for model creation, testing, simulation and post-processing. Equal emphasis is placed on model development and simulation via Dymola GUI interface. Models range from simple spring-mass-damper system to whole vehicle models will be covered.

Learning Outcomes: 1. Evaluate the solution to the race car and vehicle design as applied to motorsports vehicles. 2. Investigate the techniques to build robust models for adaptation and reuse. 3. Implement and identify the placement of simulations in motorsports within the larger context of simulations as a field of study. 4. Critique execution plans and methods for verification and validation of motorsports simulations. 5. Develop Modelica language and Dymola interface to design components for models. 6. Formulate existing Dymola and Modelica library components to complete models of mechanical, electrical, fluid, and thermal systems for study in simulation. 7. Execute simulations and process results to answer questions about the behavior of a system. Credits: 3.00

ME 55000 - Advanced Stress Analysis

Credit Hours: 3.00. Studies of stresses and strains in three-dimensional problems. Failure theories and yield criteria. Stress function approach to two-dimensional problems. Bending of nonhomogeneous asymmetric curved beams. Torsion of bars with noncircular cross sections. Energy methods. Elastic stability. Introduction to plates. Students may not receive credit for both ME 55000 and CE 57000.

Credits: 3.00

ME 55100 - Finite Element Analysis

Credit Hours: 3.00. An introduction to the basic principles of finite element method. Weak variational form of boundary-value problems. Finite element formulation of one- and two-dimensional boundary-value problems. Time-dependent problems. Computer implementation. Examples are chosen from heat transfer, solid mechanics, and fluid mechanics areas.

Credits: 3.00

ME 55200 - Advanced Applications of Finite Element Method

Credit Hours: 3.00. Various algorithms for nonlinear and time-dependent problems in two and three dimensions. Emphasis on advanced applications with problems chosen from fluid dynamics, heat transfer, and solid mechanics areas. Independent project required.

Credits: 3.00

ME 55300 - Product And Process Design

Credit Hours: 3.00. Fundamental principles of product and process design to produce a marketable product, develop a preliminary business strategy, and construct an operational prototype. Overview of relevant principles related to product and process design. Market analysis, design parameters, manufacturing prototype plan, production process plan, and a business strategy developed in teams. Broad overview of the entire product development process, including patents, commercialization of new technologies, and the highly interdisciplinary nature of product design through industry guest lectures. Impact of information technologies and the Internet on product design, prototyping, marketing, and customization. Product prototype is required. Design and product software information technology service-type concepts. Permission of instructor required.

Credits: 3.00

ME 55400 - Intellectual Property For Engineers

Credit Hours: 1.00. Survey of the law of patents, trade secrets, trademarks, and copyrights, with special emphasis on the process of defining inventions broadly and diversely. Obtaining, registering, licensing, and litigation of intellectual property.

Credits: 1.00

ME 55401 - Design For IP Protection And Commercialization

Credit Hours: 3.00. Present topics of intellectual property (IP) such as copyright, trademark, and trade secret, topics directed to patents including a through introduction to subject matter eligibility, novelty, and non-obviousness as well as topics related to enablement and written description requirements of a patent and how each of these concepts can affect design choices. Learn how to navigate patent databases. Develop patentable designs, as well as designs that do not infringe on existing IP. Learn about technology commercialization from an IP perspective.

Credits: 3.00

ME 55600 - Lubrication, Friction & Wear

Credit Hours: 3.00. Science, technology, and application of lubricated interacting surfaces in relative motion. Advanced analysis techniques and hands-on exposure to modern experimental methods provide an enhanced understanding of fundamental principles of lubrication, friction, and wear. Basics of design and analysis of machine components operating in the presence of air and liquid lubricants. Rolling fatigue, friction and wear models, and measurement techniques. Offered in alternate years.

Credits: 3.00

ME 55700 - Design For Manufacturability

Credit Hours: 3.00. Introduction to manufacturing concerns, such as efficient design, producibility, and quality, which must be considered early in the engineering design process. Topics include the product development cycle, manufacturing process selection, tolerancing, quality function deployment (QFD), design for assembly (DFA), quality control techniques, Taguchi's robust design methodology, life cycle engineering, and reliability. Laboratory projects in the area of tolerancing, assembly, and manufacturability are included along with a project from industry in which the students can disassemble, analyze, and redesign a product while obtaining feedback from industry concerning manufacturability.

Credits: 3.00

ME 55800 - Composite Materials

Credit Hours: 3.00. Portential applications of composite materials. Basic concepts of fiber reinforced composites. Manufacturing, micro- and macro-mechanics, and static analysis of composite laminates. Performance (fatigue and fracture) and their application to engineering design.

Credits: 3.00

ME 55801 - Composite Materials For Automotive Applications

Credit Hours: 3.00. This course focuses on development of low-cost carbon fiber for automotive applications, mechanical properties of advanced pore morphology foam composites, automotive composite structures for crashworthiness, crashworthiness analysis of composite, hybrid structures consisting of sheet metal and fiber reinforced plastics for structural automotive and design solutions to improve crash-box impact efficiency for racing applications.

Credits: 3.00

ME 55802 - Design And Analysis Of Materials And Structures In Lightweight Vehicles

Credit Hours: 3.00. This course focuses on materials, their properties, processing technology and design and materials selection issues pertinent to designing lightweight vehicles. It will provide first-hand knowledge and experience of working with these advanced materials. It starts with a broad review of the materials scenario and design considerations for lightweight automotive structures. It is then divided into to major parts: materials, and design and manufacturing.

Credits: 3.00

ME 55900 - Micromechanics Of Materials

Credit Hours: 3.00. Prediction of the macroscopie behavior of materials from their microstructure and the design of new materials. Microstructure-property relationships between the macroscopie material behavior and microscopic structure. Application to traditional structure as well as to new engineering materials. Adapting emerging constitutive relations into structure analyses. Introduction of this new approach to materials, its

applications in predictive analysis tools, and its importance in simulation-based engineering.

Credits: 3.00

ME 56000 - Kinematics

Credit Hours: 3.00. Geometry of constrained plane motion with applications to linkage design. Type and number synthesis, size synthesis. Path curvature, inflection circle, cubic of stationary curvature. Finite displacements, three and four separated positions. Graphical, analytical, and computer techniques.

Credits: 3.00

ME 56200 - Advanced Dynamics

Credit Hours: 3.00. Dynamics of multi-degrees-of-freedom mechanical systems. Holonomic and nonholonomic constraints. Lagrange's equations of motion. Hamilton's principle for holonomic systems. Kinematics and kinetics of rigid body motion, including momentum and energy methods. Linearized equations of motion. Classification of vibratory systems - gyroscopic, circulatory forces. Stability of linear systems - divergence and flutter. Applications to gyroscopes, satellite dynamics, etc.

Learning Outcomes: 1. Develop an understanding of the principles governing the motion of mechanical systems modeled as rigid bodies. 2. Develop an ability to analyze rigid-body kinematics in stationary as well as moving frames of reference. 3. Develop an ability to use Newton-Euler laws of rigid body motion. 4. Develop an understanding of the fundamental concepts in analytical dynamics, and the ability to use them to formulate the equations of motion for rigid bodies and systems. Credits: 3.00

ME 56300 - Mechanical Vibrations

Credit Hours: 3.00. Review of systems with one degree for freedom. LaGrange's equations of motion for multiple degree of freedom systems. Introduction to matrix methods. Transfer functions for harmonic response, impulse response, and step response. Convolution integrals for response to arbitrary inputs. Principle frequencies and modes. Applications to critical speeds, measuring instruments, isolation, torsional systems. Introduction to nonlinear problems.

Credits: 3.00

ME 56500 - Vehicle Dynamics

Credit Hours: 3.00. Modeling of wheeled vehicles to predict performance, handling, and ride. Effects of vehicle center of mass, tire characteristics, traction and slip, engine characteristics, and gear ratios on performance. Suspension design. Steady state and transient handling models of four-wheeled vehicles and car-trailer systems to determine oversteer and understeer characteristics, critical speeds, and stability. Multi-degree-of-freedom ride models, including tire and suspension compliance. Computer simulations. Current research topics in vehicle vibration isolation.

Learning Outcomes: 1. Mature in application of modeling techniques to predict the dynamic behavior of highway vehicles. 2. Develop an understanding of the relationships between vehicle design variables and vehicle dynamic behavior (acceleration, braking, handling, and ride). Credits: 3.00

ME 56802 - Ceramic Materials

Credit Hours: 3.00. Fundamental concepts of ceramic materials. Atomic structure, bonding the transport of charged defects and their relationships to conductivity in ceramics, phase diagrams and glasses. Solid state processes, including sintering and grain growth. Physical properties including mechanical, thermal, magnetic, dielectric, and optical properties. Application to energy and biomedical applications.

Credits: 3.00

ME 56900 - Mechanical Behavior Of Materials

Credit Hours: 3.00. A study of load and environmental conditions that influence the behavior of materials in service. Elastic and plastic behavior, fracture, fatigue, low and high temperature behavior. Fracture mechanics. Failure analysis case studies emphasis on design.

Credits: 3.00

ME 57000 - Machine Design

Credit Hours: 3.00. Analysis of stresses and deflections due to complicated loading. Investigation of specific design problems through application of theory of elasticity, failure criteria, energy approach, and numerical methods. Individual design project.

Learning Outcomes: 1. Understand complicated 3-D state of stress for both determinate and indeterminate problems. 2. Learn advance theory of elasticity. 3. Gain fundamental knowledge of bodies in contact. 4. Solution methods for torsion of prismatic section and bending of asymmetric cross section. 5. Apply energy method to solve problems for linear and nonlinear materials. Credits: 3.00

ME 57100 - Reliability Based Design

Credit Hours: 3.00. Basic concepts of probability and random variables. Time-dependent reliability models. Strength-based reliability and interference theory. Weakest-link and fail-safe systems. Extremal distributions. Monte Carlo methods. Maintainability and availability. Fault tree analysis. Quality control and reliability. Offered in alternate years.

Learning Outcomes: 1. Enable students to understand the importance of reliability during the design of engineered products. 2. Learn common probability distributions and fit probability distributions to experimentally obtained failure data. 3. Learn to describe and manipulate expectation and variance of continuous functions. 4. Understand principles of probabilistic design of engineered products. 5. Carryout reliability simulations of complex systems using Monte Carlo and first order reliability methods. 6. Understand important failure concerns in mechanical and electronic systems. Credits: 3.00

ME 57101 - Probabilistic Engineering Design

Credit Hours: 3.00. This course presents probabilistic methodologies for engineering design under uncertainty. It is intended for students who are interested in statistical/probabilistic methods for engineering analysis and design. The outcomes of the course are 1) an ability to model uncertainties in engineering applications, 2) an ability to performance basic statistics, risk, and reliability analyses, and 3) an ability to integrate probabilistic design with simulations, optimization, Design for Six Sigma, and Design of Experiments. The course is lecture and project based.

Credits: 3.00

ME 57200 - Analysis And Design Of Robotic Manipulators

Credit Hours: 3.00. Introduction to the analysis and design of robotic manipulators. Topics include: kinematic configurations, forward and inverse position solution, velocity and acceleration, path planning, workspace analysis, force and torque solutions, rigid body dynamics, motors and actuators, robot design, sensors and controls, computer simulation, and graphical animation.

Learning Outcomes: 1. Analysis of manipulator motion and forces. 2. Manipulator design including actuator, drive, and sensor issues. 3. Computer simulation to predict motion and forces. Credits: 3.00

ME 57201 - Analysis And Design Of Robotic Manipulators

Credit Hours: 3.00. The basic components of robotic systems; selection of coordinate frames; homogeneous transformations; solutions to kinematics of manipulator arms; velocity and force-torque relations; dynamic equations using Euler-Lagrange formulation; motion planning; obstacle avoidance; controller design using torque method; and classical controllers for manipulators. Permission of instructor required.

Credits: 3.00

ME 57301 - Air Pollution And Emission Control

Credit Hours: 3.00. This course is designed to integrate the real-world problem solving experience into the course curriculum through project / lab environment. Students will study the air pollution sources and fundamental mechanisms of their impact on the environment and human health, and how automotive emission can be measured and controlled. In particular, measurement of particulate emission deposited in a diesel particulate filter will be studied. Here the students will have a chance to optimally design the sensor components. The course topics are chosen in this context so that they align with the local industry / lab well. Topics in emission control technologies, including sensors, control mechanisms, remedial systems will be taught and combined into the course projects that students will complete over the course of a semester.

Credits: 3.00

ME 57401 - Additive Manufacturing

Credit Hours: 3.00. During this course, students evaluate the engineering aspects and physical principles of available AM technologies (binder and material jetting, sheet lamination, vat photopolymerization, directed energy deposition, powder bed fusion, and material extrusion technologies) as well as these technologies' most relevant applications and criteria in order to successfully select the AM technology that is best suited for the embodiment of a particular design (material compatibility, interface issues, strength requirements). The topics of this course are grouped into three modules: (1) AM Technologies (2) Design for AM (3) AM Process Planning. During the first module (50% of the course), the historical development of AM is examined and then the underlying physical principles of current AM technologies are evaluated. The second module (25% of the course) focuses on investigating the mathematical principles and technical aspects of design optimization methods for AM (including topology optimization). The third module (25% of the course) incorporates product evaluation (mechanical properties and dimensional accuracy), process optimization, and applications. Students taking this course will create original products using CAD/CAE systems and topology optimization tools. Students will hone skills on image post-processing, segmentation, vectorization, and generation of STL files. Students also will execute tasks using several 3D printers and manipulate different AM technologies including material extrusion, vat photopolymerization, and powder-bed fusion. They will also have the opportunity to visit local industries in the areas of manufacturing, design, and materials.

Credits: 3.00

ME 57500 - Theory And Design Of Control Systems

Credit Hours: 3.00. Covers the analysis and design of control systems from both a classical and modern viewpoint, with

emphasis on design of controllers. Classical control design is reviewed, including both root locus and Bode domain design methodologies. The state space representation is introduced, along with notions of stability, controllability, and observability. State feedback controllers for pole placement and state observers are discussed with emphasis in their frequency domain implications.

Credits: 3.00

ME 57600 - Computer Control Of Manufacturing Processes

Credit Hours: 3.00. Fundamental elements for manufacturing process control are presented with advanced control theories, modeling and analysis of actuators, controller architecture, interfacing and programming. Emphasis is on computer integrated manufacturing with computer numerical control of machine tools, automation via programmable logic controllers, motion control, process control examples, and manufacturing process monitoring. Hands-on experience is attained through laboratory experiments with state-of-the-art equipment.

Credits: 3.00

ME 57700 - Human Motion Kinetics

Credit Hours: 3.00. Study of kinetics related to human motion. Review of human anatomy and anthropometric data. Planar and three-dimensional kinematic analysis of gross human motion. Detailed kinematic studies of human joints. Newton-Euler and Lagrangian methods for joint torques. Muscle force and power analysis. Studies on walking, jumping, cycling, and throwing exercises.

Credits: 3.00

ME 57800 - Digital Control

Credit Hours: 3.00. Introduction to, and overview of, the field of digital control. Prior knowledge of continuous control techniques is assumed. Topics include mathematical background from residue theory through integral transforms; sampled data systems, including A/D, D/A, and hold properties, aliasing, and Z transforms. Digital control design via continuous, discrete, and state space design techniques. Implementation considerations, including nonlinear effects. Mechanical engineering examples.

Credits: 3.00

ME 57900 - Fourier Methods In Digital Signal Processing

Credit Hours: 3.00. Fundamentals of signal processing associated with Fourier analyzer systems are presented. Emphasis is on amplitude accuracy and frequency resolution properties necessary for reliable experimental methodologies in system identification, spectrum estimation, and correlation analysis. Deterministic, as well as random, data analyses are presented. Students are required to develop algorithms that significantly expand the utility of Fourier analyzer systems.

Credits: 3.00

ME 58000 - Nonlinear Engineering Systems

Credit Hours: 3.00. Methods of analysis for nonlinear ordinary differential equations arising in engineering systems. Review of linear systems. Stability concepts. Phase plane methods. Perturbation and averaging methods of analysis. Self-excited and parametrically-excited systems. Relaxation oscillations. Systems with more than one degree of freedom.

Credits: 3.00

ME 58100 - Numerical Methods In Mechanical Engineering

Credit Hours: 3.00. The solution of problems arising in mechanical engineering using numerical methods. Topics include nonlinear algebraic equations, sets of linear algebraic equations, eigenvalue problems, interpolation, curve fitting, ordinary differential equations, and partial differential equations. Applications include fluid mechanics, gas dynamics, heat and mass transfer, thermodynamics, vibrations, automatic control systems, kinematics, and design.

Learning Outcomes: 1. Identify the classical numerical methods available for engineering problem-solving. 2. Utilize numerical methods as an engineering tool and improve programming skills. 3. Develop a fundamental understanding of the methods. 4. Explain the importance of errors associated with scientific computing. Credits: 3.00

ME 58400 - System Identification

Credit Hours: 3.00. Theory and application of System Identification methods. Connecting the world of mathematical models to experimental data - least squares methods and difference equation models. Background in probability and analysis: algebra of random variables, law of large numbers, central limit theorem. The ARMA family of models; mapping physics models to generalized ARMAX forms (linear and nonlinear); mapping the parameter estimation problem to the least squares problem (batch and recursive), and numerical solution techniques. Model (in)validation, optimal identification criteria, experiment design and data preprocessing considerations. Issues of signal-to-noise ratio, persistency of excitation, sampling frequency, data accuracy and data sizes.

Learning Outcomes: 1. Interpret data probabilistically and ability to calculate uncertainty propagation. 2. Fit backbox models to data; convert physics models to identifiable forms for least squares formulations. 3. Construction of numerical codes for solving least squares problems and use of MATLAB System ID toolbox. 4. Construct informative experiments for dynamic systems with suitable precision of and accuracy of sensing, data

length, persistency of excitation, and sampling frequency. Credits: 3.00

ME 58600 - Microprocessors In Electromechanical Systems

Credit Hours: 3.00. Architecture of microcomputers; operating systems, logic functions, logic circuit design; I/O structure and interfacing; assembly language, manual assembly; software and hardware interrupts; data acquisition, serial and parallel communications; the role of high-level languages. Laboratory experiments on applications to electrical, mechanical, and thermofluid systems.

Credits: 3.00

ME 58700 - Engineering Optics

Credit Hours: 3.00. Fundamentals of geometrical and physical optics as related to problems in engineering design and research. Characteristics of imaging systems; properties of light sources; optical properties of materials. Diffraction, interference, polarization, and scattering phenomena as related to optical measurement techniques. Introduction to lasers and holography. (Laboratory work can be undertaken for additional credit by special arrangement.).

Credits: 3.00

ME 58800 - Mechatronics - Integrated Design Of Electro-Mechanical Systems

Credit Hours: 3.00. Electronic and interfacing techniques for design and control of electro-mechanical systems. Basic digital and analog design with applications to electro-mechanical interfacing via hands-on laboratory experience. Commonly used actuators and sensors and corresponding interfacing techniques. Realistic and integrated product development experience provided through a comprehensive final project where working prototypes are built to defined specifications.

Credits: 3.00

ME 58901 - Optimal Design Of Mechatronic Systems: Robots And Interactive Structures

Credit Hours: 3.00. This course will introduce the fundamentals of transformation of knowledge from art/design to engineering/technology applications. Different variant forms of free form design, in relation to various structural topologies common in engineering and technology applications and related optimization techniques will be discussed. This course will utilize the epistemology of studio practice implicit in the artistic process in order to acquire embodied knowledge. Reasoning innovative process can be taught through the crafting of mechanical structures while experiencing bodily interactions with the nature of materials and tools. Thus, this course introduces a range of design principles and critical studio practice methodologies while working with a range of variable materials and aims to help students grow in their creative thinking. It will integrate mechatronic modeling / simulation, optimal design, and hands-on fabrication of robotic systems (sensors, actuators, electric circuits, and embedded controllers) and interactive structures in a makerspace environment. Permission of instructor required.

Credits: 3.00

ME 59100 - Mechanical Engineering Project

Credit Hours: 1.00 to 3.00. Individual advanced study in various fields of mechanical engineering. May be repeated for up to 6 credit hours. Students registered for this course must have weekly meeting with the instructor for at least an hour. Permission of department required.

Credits: 1.00 to 3.00

ME 59300 - Solid Mechanics I

Credit Hours: 3.00. The design of modern engineering structures is intrinsically linked to the understanding and analysis of materials and structures. This course is a foundational course on graduate-level knowledge in this area of engineering. Course will cover Elements of linear elasticity, Kinematics of deformation, equilibrium conditions, and constitutive relationship of materials. Classical problems in elastostatics and general solutions for field equations in elasticity. Anisotropic elasticity, thermal elasticity.

Learning Outcomes: 1. Comprehend mechanics concepts of key classes engineering materials (elasticity, thermoelasticity), and be able to relate mechanics principles to real-world engineering applications in design. 2. Comprehend the methods for the analysis and prediction of deformation, strain and stress in engineering structures. 3. Identify elasticity and thermoelasticity in the context of static and dynamic loading. 4. Develop the ability to deal with elastic and thermal boundary conditions. 5. Develop the skill to analyze problems of stability. 6. Use solid mechanics principles to interpret and analyze the mechanical behavior of advanced engineering structures. Credits: 3.00

ME 59500 - Special-Topic Minicourses

Credit Hours: 1.00. A series of one-credit-hour courses on special topics offered as ME 59500, 59500, etc. These special-topic minicourses will provide an opportunity for introducing students to topics of contemporary importance or special interest that fall outside the scope of the curriculum. Information about current offerings may be obtained from the schedule of classes or the mechanical engineering registration deputy.

Credits: 1.00

ME 59600 - Solid Mechanics II

Credit Hours: 3.00. The design of modern engineering structures is intrinsically linked to the understanding and analysis of materials and structures. This course is a

foundational course on graduate-level knowledge in this area of engineering.

Learning Outcomes: 1. Select the most appropriate theory for modeling a particular material and structure in a given application and outline the variables and general parameters needed, as well as limitations of the chosen theory. 2. Formulate and evaluate the stress-strain response of a (i) hyperelastic material, (ii) a viscoelastic material, (iii) a plastic material; Formulate and evaluate the internal resultant versus kinematic variable response of (i) beams, (ii) plates, and (iii) shells; Formulate and evaluate the contact force (pressure) between (i) smooth non-conforming deformable surfaces (e.g., spherical objects), (ii) a rigid object on a deformable substrate (e.g., indentation), (iii) fluid-solid interfaces, for elastic solids (and/or rate-dependent solids and/or plastic solids). 3. Use solid mechanics principles to interpret and analyze the mechanical behavior of advanced engineering structures. Credits: 3.00

ME 59700 - Advanced Mechanical Engineering Projects I

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken in cooperation with their advisor. Permission of instructor required.

Credits: 0.00 to 6.00

ME 59800 - Mechanical Engineering Graduate Seminar

Credit Hours: 0.00. Acquaint graduate students with a broad spectrum of research in various areas of mechanical engineering. Weekly seminars by invitees/researchers from academia, national labs, or industry. Seminar topics provide a mix of subjects, areas and disciplines, and can involve considerable technical depth, a broad overview and/or historical perspectives. Permission of department required.

Credits: 0.00

ME 59999 - PMP Professional Development

Credit Hours: 0.00 to 3.00. Projects or special topics in professional development as it relates to ME. Permission of department required.

Learning Outcomes: 1. Varies due to the nature of the course. Credits: 0.00 to 3.00

ME 60101 - Computational Modeling Of Turbulence

Credit Hours: 3.00. This course consists of three parts. The first part is on the fundamentals of turbulence inlcuding turbulence concepts, statistical description, and Kolmogorov hypothesis. The second part covers major practical modeling concepts and formulations such as direct numerical simulation (DNS), large eddy numercial simulation (LES), and Reynolds averaged Navier-stokes simulation (RANS). The third part is team project related to turbulence computation with applications in environment, industry, biomechanics for visualizing and experiencing turbulence. Prerequisite: Intermediate Fluid Mechanics (ME 50900) or consent of instructor.

Credits: 3.00

ME 60500 - Convection Of Heat And Mass

Credit Hours: 3.00. Heat and mass transfer in moving fluid media; free, forced, and mixed convection for internal and external flows; differential and integral treatments of boundary layer problems; convection analogies for heat, mass, and momentum transfer; combined heat and mass transfer with chemical reactions; special topics and applications to electronic cooling, materials processing, transpiration and film cooling. Prerequisite: ME 31500 .

Credits: 3.00

ME 60600 - Radiation Heat Transfer

Credit Hours: 3.00. Thermodynamics and physics of radiation and its interaction with interfaces and matter; radiation characteristics of surfaces and radiation properties of solids, liquids, and gases; analysis of radiation exchange between real and idealized surfaces; fundamentals of radiation transfer in absorbing, emitting, and scattering media; interaction of radiation with conduction and convection; remote temperature sensing and applications to selected problems involving combined energy transfer mechanisms. Offered in alternate years. Prerequisite: ME 31500 .

Credits: 3.00

ME 60601 - Optimal Design Of Complex Mechanical Systems

Credit Hours: 3.00. The objective of this research course is to prepare students to address mechanical systems design and innovation challenges through appropriate advanced optimal design methodologies. This course will focus on current design approaches, which are rapidly expanding in research and industrial applications, but are not commonly included in engineering curricula. The course also focuses on the theoretical aspects of multi-objective optimization, global approximation methods (metamodel-based optimization), and applications in mechanical engineering systems. Students of this research course will acquire an understanding of state-of-

the-art analysis and optimization tools through hands-on experience and the involvement in research projects. The research experiential learning will prepare students to design innovative mechanical systems and to increase their problem solving capabilities through the use of effective design methodologies. Pre-requisite or co-requisite: ME 50601. Permission of instructor required.

Credits: 3.00

ME 60800 - Numerical Methods In Heat, Mass, And Momentum Transfer

Credit Hours: 3.00. Governing conservation equations and their classification according to numerical properties. Discretization by Taylor series, weighted residual, and control volume methods. Solution of systems of algebraic equations. Discretization and solution of the convection-diffusion equation. Methods of solving the equations governing fluid flow. Mathematical modeling of turbulence, combustion, and radiation. Prerequisite: ME 50500 , ME 58100 .

Credits: 3.00

ME 61000 - Boundary Layer Theory

Credit Hours: 3.00. Fundamentals of continuum fluid mechanics; Navier-Stokes equations. Laminar flow; boundary-layer concept; similarity solutions; transformation methods; integral and finite difference solution techniques for general pressure gradients. Should be preceded by intermediate fluid mechanics.

Credits: 3.00

ME 61100 - Principles Of Turbulence

Credit Hours: 3.00. Methods of description and basic equations for turbulent flows. Isotropic and homogeneous turbulence, energy spectra, and correlations. Introduction to measurements. Transition theory and experimental evidence. Wall turbulence, engineering calculations of turbulent boundary layers. Free turbulent jets and wakes. Prerequisite: ME 61000 .

Learning Outcomes: 1. Develop the ability (from first principles) to describe the physics of turbulent flows. 2. Comprehend the methods of analysis used in turbulence study. 3. Understand the principles of turbulence simulation and the associated modeling problems. Credits: 3.00

ME 61200 - Continuum Mechanics

Credit Hours: 3.00. A unified and exact mathematical treatment of the mechanics of solids and fluids. Cartesian tensor algebra and calculus; stress tensor, principle stresses and invariants; material and spatial coordinates, deformation gradient, strain and stretch tensors; balance of mass, momentum, and energy; constitutive equations of elasticity, hyperelasticity, viscous fluids and viscoelasticity.

Credits: 3.00

ME 61201 - Continuum Mechanics

Credit Hours: 3.00. This course will cover the formal, consistent and unified mathematical treatment of the mechanics of continuous solids and fluids. Topics covered include the kinematics of deformation, the concept of stress, and the conservation laws for mass, momentum and energy. This is followed by an introduction to constitutive theory with applications to well-established models for viscous fluids and elastic solids. The concepts are illustrated through the solution of tractable initial boundary-value problems.

Credits: 3.00

ME 61300 - Advanced Engineering Acoustics

Credit Hours: 3.00. An extension of ME 51300 . Sound transmission between two media. Acoustic resonators and application to muffler theory. Structural radiation and sound. Acoustical measurements and signal processing: sound intensity, surface intensity, coherence and cepstral techniques. Numerical acoustics: finite element analysis, boundary integral equation analysis and statistical energy analysis. Advanced topics. Prerequisite: ME 51300 .

Credits: 3.00

ME 61400 - Computational Fluid Dynamics

Credit Hours: 3.00. Application of finite difference methods, finite element methods, and the method of characteristics for the numerical solution of fluid dynamics problems. Incompressible viscous flows: vorticity transport equation, stream function equation, and boundary conditions. Compressible flows: treatment of shocks, implicit and explicit artificial viscosity techniques, and boundary conditions. Computational grids. Prerequisite: ME 50900 or ME 58100 .

Credits: 3.00

ME 61500 - Aeroacoustics

Credit Hours: 3.00. (AAE 61500) Quantitative measures of sound (decibel scales, spectra, energetics of acoustic motions, and measurement techniques). The wave theory of sound (basic equations and properties, sound propagation in homogeneous and inhomogeneous media, one-, two- and three-dimensional sound fields and distributed sources). Effects of source movement. Aerodynamic noise generation - acoustic analogy (Lighthill's equation and Ffowcs Williams-Hawkings equation). Introduction to Computational Aeroacoustics (CAA). Noise from turbulent shear flows (jet noise, cavity noise, and noise from flow over objects). Noise from turbomachinery, propellers, and rotors. Prerequisite: ME 30900 or ME 51300 or AAE 51100.

Credits: 3.00

ME 61700 - Applied Thermal Physics And Molecular Spectroscopy

Credit Hours: 3.00. The fundamentals of statistical mechanics, kinetic theory, and molecular spectroscopy will be taught in order to predict and characterize the behavior of non-equilibrium gases using optical and laser diagnostics. This material will be taught within the context of applications involving combustion,

plasmas, propulsion, energetic materials, shock waves and laser radiation. Pre-requisite: Thermodynamics I, ME 20000 or Heat Transfer 1, ME 31500 or Chemistry 1, CHM 12500.

Learning Outcomes: 1. Model and experimentally characterize the dynamic behavior of non-equilibrium gases as they transition from one equilibrium state to another (e.g., due to chemical ignition, shock heating/compression, and laser radiation). 2. Calculate how energy is distributed (i.e., partitioned) on the molecular level and how many molecules or atoms exist in a given quantum state. 3. Determine the viable mechanisms for transferring energy and inducing chemical reactions via collisions and to calculate how quickly these processes occur and how they evolve in time. 4. Calculate absorption and emission spectra of atoms and molecules and to convert laboratory measurements of said spectra to thermodynamic properties of the test gas (e.g., temperature, pressure, species concentration, velocity). Credits: 3.00

ME 62000 - Combustion Of Energetic Materials

Credit Hours: 3.00. Students will learn the concepts of how to approach research in the area of Energetic Materials (EM) based on an understanding of the fundamental principles. Students will learn how energetic materials are fabricated, safety used, as well as understand life cycle issues, homogeneous & heterogenous combustion, and advanced energetic material concepts. Multiphase combustion phenomena will be introduced and emphasized. They will apply these concepts to a literature review and group research project, as well as that includes applying thermochemistry and chemical kinetic software. In addition, six hands-on labs are performed. This material will be covered in the context of real-world applications, with an emphasis on energetic materials, combustion, propulsion, explosives, pyrotechnics, and detonation phenomenon. Pre-requisite: ME 52500 or AAE 53900 or consent of instructor.

Learning Outcomes: 1. Become familiar with the basic terminology, material science, physics & chemistry of energetic materials. 2. Learn how to safely work with energetic materials. 3. Learn how to experimentally or computationally approach research. 4. Learn how to approach literature reviews and form hypotheses for future research. 5. Learn the knowledge and experience needed to understand, model, develop, and experimentally characterize energetic materials, and well as numerous related fields. Credits: 3.00

ME 62500 - Advanced Combustion

Credit Hours: 3.00. Coupling of the energy, species, and mass conservation equations with the momentum equation. Statistical treatment of turbulence and the problems of interactions of turbulence with chemistry, radiation, and two-phase flows. Critical study of at least 10 seminal and recent contributions in the combustion literature. Offered in alternate years. Prerequisite: ME 52500 .

Credits: 3.00

ME 64000 - Structural Acoustics

Credit Hours: 3.00. Waves in fluids and structures, dispersion relations, sound radiation from structures, radiation efficiency, radiation from concentrated forces, effect of fluid loading on wave propagation, transmission of sound through barriers, effect of panel lining, enclosures, acoustically induced vibration of structures and numerical calculation of fluid-structure interaction. Offered in alternate years. Prerequisite: ME 51300 , ME 56300 .

Credits: 3.00

ME 65000 - Computational Fracture Mechanics

Credit Hours: 3.00. Advanced concepts of methods for the analysis of cracks, of crack propagation and damage evolution. Prediction of the macroscopic behavior of structures as it emerges from the presence of defects such as cracks, voids, or delamination. Linear elastic and nonlinear fracture problems. Rate independent and rate dependent problems. Methods in computational fracture mechanics where material separation emerges as an outcome of the boundary value problem. Demonstrations of how mechanical design can take advantage of the methods of computational fracture mechanics by introducing such concepts into structural analyses. Applications of computations in predictive analysis and its importance in simulation-based engineering. Prerequisites: AAE 55800 or ME 48900, or similar courses in finite element analysis or ME 57000 or ME 61200 or AAE 55300, or similar courses on advanced solid mechanics. Recommended but not required: CEE 597-109 or AAE 65400.

Learning Outcomes: 1. Introduce concepts of computational methods for material damage, fracture and fatigue. 2. Learn continuum mechanics concepts for description of material failure. 3. Learn about advanced constitutive equations for bulk and interface failure. 4. Learn how model material failure processes. 5. Learn

how to develop and apply computational mechanics methods. 6. Apply these concepts to analysis of failure at the macro, micro and Nano scale. Credits: 3.00

ME 65100 - Advanced Finite Element Method For Solids

Credit Hours: 3.00. This course is designed to teach students advanced finite element techniques for solid mechanics stress and heat transfer analysis. Those include: techniques for modeling beams, plates and 2D/3D continua with material non-linearity, material plasticity and geometric non-linearity; heat transfer; modeling thermos-mechanical systems; frequency domain, time domain and quasi-static solutions; modeling of frictional contact; modeling rigid-bodies. Applications of the modeling techniques taught in this course will be introduced, including: modal analysis; stress-analysis with material and geometric non-linearity; structural dynamics with material and geometric non-linearity; frictional contact problems; metal forming and crash analysis. Prerequisites: ME 55100 and ME 58100. Graduate Standing. Permission of instruction required.

Credits: 3.00

ME 65500 - Computational Mechanics Of Materials

Credit Hours: 3.00. Prediction of the mechanical behaviors of engineering materials employing computational methods, at atomistic, discrete, and continuum levels. Continuum and discrete models for material deformation in brittle and ductile materials. Atomistic models for fracture in nanomaterials. Applications to engineering structures on the macro-micro and nanoscale.

Credits: 3.00

ME 66400 - Vibrations Of Continuous Systems

Credit Hours: 3.00. Theory of small oscillations of continuous systems. Love's equations for thin shells, reduction to special cases of shallow shells, plates, beams, etc. Initial stresses; influence of shear; thermal excitation. Initial value problems; forced vibrations; structural damping. The dynamic Green's function, impedance concepts; variational approaches. Experimental procedures, scaling, composite, and stiffened shells. Prerequisite: knowledge of one degree of freedom system vibrations.

Credits: 3.00

ME 67500 - Multivariable Control System Designs

Credit Hours: 3.00. Fundamentals of the frequency response loop shaping methodology for the analysis and design of robust multivariable control systems will be presented. Emphasis is on suitable extensions of the classical Bode-Nyquist design techniques to systems with not only uncertain parameters but also multiple inputs and outputs. Instrument and environmental signal level constraints on the performance of control systems will be critically evaluated. Students are required to develop ability to handle open-ended design issues involving significant multiobjective performance trade-offs. Prerequisite: ME 57500 .

Credits: 3.00

ME 67700 - Nonlinear Feedback Controller Design

Credit Hours: 3.00. Controller design and analysis of nonlinear feedback systems. Topics include the design of linear/nonlinear feedback controllers. Describing Function (DF) techniques for design, Popov and Generalized Circle Criterion for closed-loop stability, functional analysis and Volterra series approaches, and introduction to existing nonlinear controller design tools. Offered in alternate years. Prerequisite: ME 67500 .

Credits: 3.00

ME 68000 - Bifurcations And Chaos

Credit Hours: 3.00. Basic concepts in stability of systems, nonlinear dynamical systems, and bifurcation theory. Algebraic and geometric techniques for local bifurcation analysis. Models governed by difference, ordinary, and particle differential equations. Examples from mechanical, structural, chemical, and electrical systems. Models of chaotic behavior. Techniques for prediction of chaos. Routes to chaos. Offered in alternate years. Prerequisite: ME 58000 .

Credits: 3.00

ME 68100 - Finite And Boundary Element Methods

Credit Hours: 3.00. The solution of problems in mechanical engineering using the generalized numerical techniques; the finite element method and the boundary element method. Topics include reformulation of partial differential equations into appropriate form for each method. The development and implementation of code and solution of problems. Applications include: acoustics, fluid dynamics, heat transfer, design, mechanics and biomechanics. Prerequisite: ME 58100 .

Credits: 3.00

ME 68700 - Laser Diagnostics For Reacting Flows

Credit Hours: 3.00. The principles of spectroscopic laser diagnostics including absorption, fluorescence, and Raman scattering techniques. Theory of the interaction of laser radiation with atomic and molecular resonances. Lasers and detectors for optical diagnostics. Offered in alternate years. Prerequisite: ME 50100 .

Credits: 3.00

ME 68900 - Adaptive Control

Credit Hours: 3.00. Theory and application of adaptive control of linear systems in both continuous and discrete time domain. Real-time parameter estimation algorithms, direct and indirect adaptive methods, deterministic self-tuning regulators, Lyapunov stability theory, input-output stability, model-reference adaptive control, stability and convergence of adaptive

algorithms, robustness, and implementation issues, with laboratory experiments and demonstrations. Offered in alternate years. Prerequisite: ME 57500 .

Credits: 3.00

ME 69000 - Individual Study In Mechanical Engineering

Credit Hours: 0.00 to 18.00. Individual study in advanced areas not currently available through formal course offerings within the University. Course plan must be approved by professor in charge prior to registering for the course. Written report and presentation of a departmental seminar based on material studied are required at the end of the semester. Permission of instructor required.

Credits: 0.00 to 18.00

ME 69100 - Mechanical Engineering Graduate Seminar

Credit Hours: 0.00. Acquaint graduate students with a broad spectrum of research in various areas of mechanical engineering. Weekly seminars by invitees/researchers from academia, national labs, or industry. Seminar topics provide a mix of subjects, areas and disciplines, and can involve considerable technical depth, a broad overview and/or historical perspectives.

Learning Outcomes: 1. Develop an understanding of the field of Mechanical Engineering in its widest possible applications. 2. Develop an appreciation of the various interdisciplinary research efforts being pursued where Mechanical Engineering has the potential to provide leadership. Credits: 0.00

ME 69600 - Advanced Professional Internship

Credit Hours: 0.00. Advanced professional experience in mechanical engineering. The program is coordinated by the school with cooperation of participating employers. Students submit a summary report. Prerequisite: Master's student standing.

Credits: 0.00

ME 69700 - Advanced Mechanical Engineering Projects II

Credit Hours: 1.00 to 6.00. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken in cooperation with their advisor. Prerequisite: Doctoral student standing. Permission of instructor required.

Credits: 1.00 to 6.00

ME 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

ME 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Mechanical Engineering Technology

MET 10200 - Production Design And Specifications

Credit Hours: 3.00. The design, evaluation, and documentation of engineering specifications required of manufacturability and assembly are introduced. Emphasis is on CAD-based details, assemblies, design layouts, equipment installations, and related industrial practices.

Learning Outcomes: 1. Follow current American National Standards practices in generating a complete assembly/detail dimensioned set of drawings. 2. Use references to verify design intent by calculating and documenting via standard practices, allowable limits and multi-part fits. 3. Seek answers to questions on technical specification, company procedures, products or services. Credits: 3.00

MET 11100 - Applied Statics

Credit Hours: 3.00. Force systems, resultants and equilibrium, trusses, frames, beams, and shear and moments in beams are studied.

Learning Outcomes: 1. Determine the resultant of several vectors. 2. Draw complete free-body diagrams. 3. Apply the equations of equilibrium to free-body diagrams. 4. Calculate the axial loads in truss members and the pin reactions for various mechanisms and frames. 5. Locate the centroid of a composite geometric quantity. Credits: 3.00

MET 11300 - Mechanics Applications

Credit Hours: 1.00. Concepts of mechanics are applied to structures, machine components, and frames. Stresses and deformations resulting from axial, shear, torsional, and flexural loads are considered. Kinematics and kinetics of motion are introduced.

Learning Outcomes: 1. Solve linear and rotational kinematics problems that are based on constant or linearly-varying acceleration. 2. Apply the principles of dynamic equilibrium to

solve linear particle and rotational kinetics problems. 3. Calculate axial stress, shear stress, bearing stress, torsional stress, and flexural stress. 4. Use material properties and design factors to confirm simple loading of machines, frames, beams, and columns. Credits: 1.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

MET 16000 - Analytical And Computational Tools In MET

Credit Hours: 3.00. The skills needed to solve technical problems in mechanical engineering technology are developed. Instruction is given in analytical and computational problem-solving techniques. The electronic calculator, the factor-label method of unit conversions, engineering graphs, and the computer are used to solve problems. Computer emphasis is on spreadsheet analysis, graphics, and generation of technical reports through the integrated use of software packages. Credit will not be granted for MET 16000 and MET 16200 or MET 16300.

Credits: 3.00

MET 16200 - Computational Analysis Tools In MET

Credit Hours: 1.00. Instruction is given in analytical and computational problem-solving techniques. The electronic calculator, the factor-label method of unit conversions, and engineering graphs are used to solve technical problems in mechanical engineering technology. Credit will not be granted for both MET 16000 and 16200.

Learning Outcomes: 1. Demonstrate algebraic techniques for solving systems of equations. 2. Demonstrate geometric understanding related to areas and volumes of shapes. 3. Demonstrate trigonometry techniques of basic trigonometric functions, theorems, and laws. 4. Apply U.S. Customary and S.I. units in calculations. 5. Apply linear interpolations of tabular data. 6. Draw graphs using software. Credits: 1.00

MET 16400 - Computing In Engineering Technology

Credit Hours: 3.00. Fundamental programming concepts are introduced using an interpreted high level programming language. Programming topics such as variable types, arrays, input/output tasks, and conditional and repetition executions will be applied to address technical problems seen in the first two years of engineering technology curricula.

Learning Outcomes: 1. Write programs to perform calculations. 2. Apply conditional and repetition logic to produce intended results. 3. Obtain input data for program manipulation. 4. Produce output data for subsequent use. Credits: 3.00

MET 20400 - Production Drawing

Credit Hours: 3.00. Application of principles of engineering drawing to design layout, detail, and assembly. A 2D PC CAD-centered laboratory.

Credits: 3.00

MET 21100 - Applied Strength Of Materials

Credit Hours: 4.00. The principles of strength, stiffness, and stability are introduced and applied primarily to mechanical components.

Learning Outcomes: 1. Find internal shear and internal bending moment within a structure due to the external loading. 2. Undertsand basic mechanical properties of materials and cross-sectional/area properties of structures and apply them. 3. Identify and calculate the stress present due to internal loads. 4. Identify potential maximum stress locations and calculate the principle stresses and the maximum shear stress. 5. Calculate deflection in statically determinate structures. Credits: 4.00

MET 21102 - Applied Strength Materials Lab

Credit Hours: 1.00. This laboratory course focuses on testing of materials to determine their physical and mechanical properties. Students will verify physical testing through computer analysis using appropriate computer application and prepare reports from data secured from such tests and analysis.

Learning Outcomes: 1. Demonstrate an understanding of the basic principles of Strength of Materials. 2. Apply previous analytical skills from mathematics and MET prerequisite courses to new areas of application. Therefore, demonstrate proficiency in performing strength of materials experimentation. 3. Show understanding of "Stress and Strain Transformation." 4. Demonstrate proficiency in determination of Combined Stresses and beam deflection. 5. Conduct experiments involving equipment compliant with industry standards and perform calculations on experimental results to assist in analyzing data. 6. Draw conclusions concerning material behavior under various testing and/or loading conditions and prepare lab reports using a structured approach. Credits: 1.00

MET 21300 - Dynamics

Credit Hours: 3.00. Kinematics and kinetics principles of rigid-body dynamics are introduced. Emphasis is on the analysis of bodies in plane motion.

Learning Outcomes: 1. Identify the type of solution method required for dynamics problems. 2. Use kinematics, work/energy principles, conservation of energy, impulse/momentum, or conservation of momentum to solve dynamics problems. 3. Identify the correct coordinate system type for various dynamics problems. 4. Calculate the mass moment of inertia for basic and composite shapes. 5. Use mass moment of inertia when solving a dynamics problem. Credits: 3.00

MET 21400 - Machine Elements

Credit Hours: 3.00. The methods developed in statics, dynamics, and strength of materials are applied to the selection of basic machine components. The fundamental principles required for the selection of individual elements that compose a machine are developed. Selected course topics are included as computer exercises.

Learning Outcomes: 1. Apply principles and methods from statics, dynamics, and strength of materials to the selection of machine components. 2. Develop skill in using, reading, and interpreting necessary materials such as tables, charts, graphs, and industrial catalogs as part of appropriate problem solution. 3. Use the underlying concepts and theories of machine elements to select appropriate solution methods for specific problem solutions. Credits: 3.00

MET 22000 - Heat And Power

Credit Hours: 3.00. Heat/Power is an introduction to the principles of thermodynamics and heat transfer. Basic thermodynamic processes are used to evaluate the performance of energy-based systems such as internal combustion engines, power plants, and refrigeration equipment.

Learning Outcomes: 1. Determine properties of gases, steam, and refrigerants. 2. Analyze fixed mass and steady flow control volume systems and devices. 3. Apply fundamental concepts of the 2nd Law of Thermodynamics to heat-work energy conversion and thermal efficiency. Credits: 3.00

MET 22010 - Heat-Power Laboratory

Credit Hours: 1.00. Laboratory course that introduces the principles of thermodynamics and heat transfer through energy

systems. Permission of department required.

Learning Outcomes: 1. Apply the First Law of Thermodynamics and conversation of mass to analyze when testing fixed mass (closed) and steady flow control volume (open) systems and devices. 2. Understand the fundamental concepts of the Second Law of Thermodynamics and their application. Apply them to conversations between heat and work and to thermal efficiency. 3. Test thermodynamic systems involving cycles such as Otto, Diesel, Rankine, and refrigeration cycles. 4. Identify and operate laboratory equipment typically used in measurement and analysis of thermal systems. 5. Use application software for analyzing, documenting, and presenting the results of technical work. Credits: 1.00

MET 23000 - Fluid Power

Credit Hours: 3.00. This course consists of the study of compressible and incompressible fluid statics and dynamics as applied to hydraulic and pneumatic pumps, motors, transmissions, and controls.

Learning Outcomes: 1. Design hydraulic and pneumatic systems. 2. Compute various properties related to fluids and fluid power systems using appropriate mathematical equations and tools. 3. Analyze both hydraulic and pneumatic fluid power systems and their relevant components. 4. Demonstrate the efficient use of various components as part of a fluid power system. 5. Analyze the results from standard computing and simulation tools to create presentations and reports. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

MET 29000 - Special Topics In MET

Credit Hours: 1.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Group instruction in new or specialty areas of Mechanical Engineering Technology is provided by MET faculty, subject to MET curriculum subcommittee approval.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

MET 29900 - Mechanical Engineering Technology

Credit Hours: 1.00 to 3.00. Independent project or laboratory work is conducted under the supervision of appropriate MET faculty. Hours and subject matter must be arranged by instructor and approved by MET curriculum subcommittee. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

MET 30200 - CAD In The Enterprise

Credit Hours: 3.00. Theory and practice of management, use and integration of computer-aided design systems, and related

engineering tools and practices are studied as they are applied in the industrial enterprise. Emphasis is on course projects.

Learning Outcomes: 1. Operate a variety of CAD software packages to create models, assemblies, and fully annotated mechanical and electrical drawings that adhere to accepted drafting standards. 2. Appropriately apply GD&T, fits and tolerances to complex mechanical assemblies. 3. Develop practical system designs and part designs that are capable of being manufactured, including visual, calculated, and simulated analysis to assure design validity. 4. Transfer CAD files of various file formats to CAM software and set up simple tool path operations for machining. Credits: 3.00

MET 31000 - Computer-Aided Machine Design

Credit Hours: 3.00. Introduction to the use of specialized programs to analyze machine components such as shafts, linkages, springs, and cams. Use of finite element analysis to analyze mechanical systems.

Credits: 3.00

MET 31100 - Experimental Strength Of Materials

Credit Hours: 3.00. Selected advanced topics from the areas of mechanics of materials, structures, stress analysis, and strain measurements are considered. Basic electronic strain gage circuits and instrumentation are presented, with emphasis on transducer applications.

Learning Outcomes: 1. Calculate principal stresses, maximum shear stress, and principal direction in a plane when given the loading condition. 2. Select, locate and mount strain gages for the measurement of strain in an experimental structure. 3. Analyze the stress in a structure based on the strain data when given appropriate material information. 4. Perform an open-ended experimental investigation in solid mechanics using strain gages or other experimental stress methods. Credits: 3.00

MET 31300 - Applied Fluid Mechanics

Credit Hours: 3.00. The fundamental principles of fluid mechanics are developed, including properties of fluid, pressure, hydrostatics, dynamics of fluid flow, friction losses, and sizing of pipes. Emphasis is on problem solving.

Learning Outcomes: 1. Apply hydrostatic equations to static and dynamic fluid problems. 2. Solve problems involving flow over immersed bodies. 3. Analyze piping systems for closed conduit flow. 4. Select pumps to optimize open and closed loop flow systems. Credits: 3.00

MET 31400 - Applications Of Machine Elements

Credit Hours: 3.00. The methods developed in statics, dynamics, and strength of materials are applied to the selection of basic machine components (gears, shafts, bearings, chain and belt drives, clutches and brakes, and motors).

Learning Outcomes: 1. Analyze and design chain and belt drive systems. 2. Analyze, design, and select appropriate gears for a machine. 3. Identify motors that are appropriate to use in a machine with specific components and loading criteria. 4. Analyze a machine to select rolling element bearings based on loading and life requirements. 5. Design clutches and brakes that store and/or transfer rotational energy. Credits: 3.00

MET 31500 - Applied Mechanism Kinematics And Dynamics

Credit Hours: 3.00. Displacements, velocities, and accelerations are determined using graphical, semi-graphical, and numerical analyses of rotational and translational motions of common mechanisms such as linkages, cams, gears, screws, and chains as well as their loading.

Learning Outcomes: 1. Categorize and model common mechanisms, including their degrees of freedom. 2. Determine the displacements, velocities, and accelerations in common linkages. 3. Analyze and synthesize common mechanisms (e.g., linkages, cams, gears, screws, belts, chains, shafts). 4. Use software in kinematic analysis and synthesis. Credits: 3.00

MET 31601 - Mechanics Of Machine Design

Credit Hours: 3.00. Concepts of stress and strain analysis under combined loadings are introduced. Analyses emphasize use of von Mises stress, Mohr's circle, static failure theories, and fatigue failure criteria. Structural joints and buckling are also analyzed.

Learning Outcomes: 1. Analyze stresses in mechanical bodies and structures subjected to combined loadings. 2. Apply static failure criteria in the analysis and design of mechanical bodies. 3. Apply fatigue assessment methods in

the analysis and design of mechanical bodies subjected cyclic loadings. 4. Perform buckling analysis in columns. 5. Analyze structural joints. Credits: 3.00

MET 31700 - Machine Diagnostics

Credit Hours: 3.00. A broad spectrum of equipment behavior is introduced through the study of four major operating parameters: vibration, noise, temperature, and lubrication. Emphasis is placed on measurement and analysis of data using diagnostic instrumentation and techniques found in modern process and manufacturing plants.

Learning Outcomes: 1. Determine the equation of motion for a single degree of freedom vibrating system. 2. Experimentally determine system vibration characteristics. 3. Understand and apply the principles for condition-based maintenance to diagnose machinery problems. 4. Develop and complete an open-ended diagnostics project. Credits: 3.00

MET 31800 - Applied Room Acoustics

Credit Hours: 3.00. Concepts of acoustics are applied to rooms, automotive applications, speakers, musical instruments, audio electronics, and other areas of interest. Modeling and design skills are developed through applied labs and a semester project. Lectures and mathematical exercises are combined with hands-on labs and a semester project to link abstract and physical concepts. As part of the semester project, a special fee will be assessed to be used towards materials for the semester project.

Learning Outcomes: 1. Analyze sound in terms of amplitude and frequency content. 2. Analyze the signal chain in a sound system (course will use a typical commercial sound system as a basis for discussion). 3. Describe the basic types of room treatments for different acoustical environments. 4. Describe the basic function of filters. 5. Analyze acoustic spaces using modeling software. 6. Design the acoustic performance of an enclosed space given representative physical and economic requirements. Credits: 3.00

MET 32000 - Applied Thermodynamics

Credit Hours: 3.00. Following a review of fundamental concepts, advanced power and refrigeration cycles are analyzed. Applications such as gas mixtures, air-vapor mixtures, and chemical reactions of combustion processes are presented.

Learning Outcomes: 1. Use thermodynamic properties of gases and vapors in system analysis. 2. Apply the first and second laws of thermodynamics to real and ideal systems. 3. Analyze thermodynamic cycles (e.g., Otto, Diesel, Brayton, Rankine, vapor compression). 4. Compute properties of gas mixtures. Credits: 3.00

MET 32800 - CAD/CAM For Mechanical Design Drafting

Credit Hours: 3.00. Basic operation of mechanical design-drafting. A PC CAD (2D and 3D) laboratory-centered course introducing the basic steps involved in the geometric design of mechanical parts. This class provides an overview and continues into a detailed investigation of parametric modeling. Parametric modeling concepts will be applied to problems using standard industrial practices. Students must possess a solid background in engineering or technical graphics.

Credits: 3.00

MET 33400 - Advanced Fluid Power

Credit Hours: 3.00. Hydraulic and pneumatic circuits and their steady state and time-variant behavior as it affects the selection and design of components and systems used in fluid power transmission and motion control are studied. Emphasis is placed on industrial and mobile applications, but the principles also apply to aerospace, marine, and other fluid power systems.

Learning Outcomes: 1. Utilize the applicable laws of fluid mechanics to compute the requirements of fluid power systems. 2. Utilize computer software to evaluate starting and stopping transient behaviors in hydraulic systems. 3. Design motion control strategies with various actuators and valves to accomplish a specified task with hydraulic and pneumatic systems. 4. Analyze the performance of various pumps and compressors and specify the appropriate pump or compressor for a hydraulic or pneumatic system. Credits: 3.00

MET 33800 - Manufacturing Processes

Credit Hours: 4.00. Course covers basic fabrication and material removal manufacturing processes. Areas studied include casting, forging, material joining, forming, basic metal removal mechanisms, automated manufacturing processes, dimensional metrology for quality control and manufacturing process planning. The course emphasizes the selection and application of the various manufacturing processes. Permission of department required.

Credits: 4.00

MET 34500 - Welding Processes

Credit Hours: 3.00. Welding processes, equipment, and weldments are studied. An in-depth look is taken into welding processes, welding problems, quality control, inspection methods, welding filler metals, welding equipment, and weldment design.

Learning Outcomes: 1. Understand welding variables and processes. 2. Specify appropriate welding processes, equipment, and consumables for various welding operations. 3. Perform cost estimations for different weldments. 4. Write basic weld procedure specifications. Credits: 3.00

MET 34600 - Advanced Materials In Manufacturing

Credit Hours: 3.00. Metals, polymers, ceramic, and composite materials are studied. Crystal structure, molecular behavior, and the effects of various processes on material properties are considered. Course emphasizes the development and control of material properties to meet engineering requirements and specifications.

Learning Outcomes: 1. Describe common materials and major manufacturing processes. 2. Understand the process-property interaction for materials and manufacturing processes, including the major processes in strengthening materials. 3. Describe methods for measuring material properties. 4. Describe microstructure evolution of materials during casting, hot working, cold working, and heat treating processes. 5. Use appropriate tools for materials design and selection. Credits: 3.00

MET 34800 - Engineering Materials

Credit Hours: 4.00. An overview of structures, properties and applications of metals, polymers, ceramics, and composite materials is presented. Problem-solving skills are developed in material selection, evaluation, measurement, and testing. Laboratory activities include testing various properties of different materials, and the selection of materials for engineering application. Permission of department required.

Credits: 4.00

MET 34900 - Stringed Instrument Design And Manufacture

Credit Hours: 3.00. Concepts, knowledge, and skills in experimental mechanics, production processes, and design are integrated to manufacture a working musical instrument. Production concerns such as fixture design, process variability, and validation testing comprise key course elements.

Learning Outcomes: 1. Demonstrate understanding of the product development process. 2. Manage project and time to complete individual and team goals. 3. Synthesize design, manufacturing, and testing constraints, resulting in a working product. Credits: 3.00

MET 35000 - Applied Fluid Mechanics

Credit Hours: 3.00. The fundamentals of fluid mechanics including properties of fluid, pressure, hydrostatic force on submerged areas; kinematics and dynamics of fluid flow; friction losses and sizing of pipe.

Credits: 3.00

MET 36000 - Heating, Ventilating, And Air-Conditioning

Credit Hours: 3.00. A study of heat losses, heat-producing equipment, and cooling equipment in addition to the design of the direct systems. Includes controls and cost estimating for commercial, industrial, and residential systems. Codes and standards are emphasized throughout the course.

Credits: 3.00

MET 37900 - Introduction To Aerospace Technology

Credit Hours: 3.00. An overview of flight vehicle design is introduced through designing and making radio controlled model flight vehicles. Aerodynamic forces, dynamics and longitudinal stability are studied. Students will make airframes, integrate the controls, and test fly the resulting vehicles.

Learning Outcomes: 1. Evaluate minimum and maximum speed, climb rate, and power requirements for a flight vehicle. 2. Summarize stability parameters for a flight vehicle. 3. Explain basic performance characteristics of turbine and rocket engines. 4. Estimate performance of a flight vehicle using analysis or a simulation software package. 5. Prototype a model flight vehicle. Credits: 3.00

MET 38200 - Controls And Instrumentation For Automation

Credit Hours: 3.00. Study of the procedures and techniques essential to industrial measurement and transmission of data is provided in the areas of microprocessor control, process control, and automated testing. Concepts of hysteresis, repeatability, weighted signals, span, suppression, range, and closed loop control are emphasized.

Learning Outcomes: 1. Evaluate and select sensors for a given application based on relevant specifications. 2. Select a data acquisition system based on the requirements of a given application. 3. Explain how process gain, dead band, and lag affect the performance of a closed loop control system. 4. Tune a closed loop PID controller. Credits: 3.00

MET 39200 - Laboratory Assistant In Engineering Technology

Credit Hours: 0.00 to 3.00. Hours, subject matter, and credit to be arranged by faculty. Intended for upper division students. Course content meets the MET Professional Experience requirement. Permission of department and instructor required.

Learning Outcomes: 1. Varies due to the nature of the course. Credits: 0.00 to 3.00

MET 40100 - Capstone Projects I

Credit Hours: 3.00. This course deals with the planning for capstone projects. Methods to develop engineering requirements to meet project needs and formal design techniques are studied. Planning and design alternatives to meet cost, performance, and user-interface goals are emphasized. System tests and measurements are considered. Project planning, scheduling, and management techniques are studied. Different design approaches are compared.

Learning Outcomes: 1. Apply the engineering design lifecycle process. 2. Evaluate customer needs when defining a solution. 3. Evaluate design alternatives to determine the most appropriate design to pursue. 4. Define a plan for project development. 5. Propose a solution to a technical problem. Credits: 3.00

MET 40200 - Capstone Projects II

Credit Hours: 3.00. This is the second of two courses in a capstone project sequence. Project management and system engineering methods are applied to solving an engineering problem. Permission of instructor required.

Learning Outcomes: 1. Create a functional prototype. 2. Weigh design alternatives for requirements, efficiency, reliability, and cost. 3. Apply formal test procedures, including data analysis. 4. Present project results orally and in writing. Credits: 3.00

MET 41100 - Introduction To The Finite Element Method

Credit Hours: 3.00. The finite element method is introduced, with emphasis on modeling and interpretation of results. Linear static problems are solved using commercial FEA software, and FEA results are verified through laboratory tests and/or theoretical calculations. Topics include trusses, frames, plane stress/strain, torsion, 3D structures, buckling, and natural frequency/mode shape analyses.

Learning Outcomes: 1. Select and use the appropriate element type in the construction of FEA models for linear static, buckling, and frequency and mode shape analyses. 2. Demonstrate knowledge of meshing, symmetry, and the application of loads and constraints in the construction of FEA models. 3. Understand and demonstrate the use of mechanical testing, analytical calculation, and verification problems as a check on FEA solution accuracy. 4. Perform and open-ended design problem involving the application of FEA in a linear static or thermal problem. Credits: 3.00

MET 41400 - Design Of Mechanical Projects

Credit Hours: 3.00. Application of the fundamental principles of mechanical, hydraulic, and electrical technology to the design of mechanical systems. Discussion of the design process and continuation of topics in the design of machine elements. A semester design project is required.

Credits: 3.00

MET 42100 - Air Conditioning And Refrigeration

Credit Hours: 3.00. Heat gains and losses, heat-producing equipment, cooling, and refrigeration equipment are studied. System design is presented, including controls and instrumentation for commercial, industrial, and residential systems.

Learning Outcomes: 1. Recognize and explain the operation of common refrigeration and air conditioning equipment. 2. Evaluate the performance of refrigeration and air conditioning equipment. 3. Use appropriate instrumentation for accurate measurements of HVAC&R equipment performance. 4. Identify equipment, operating strategies, or management practices that encourage energy conservation and sustainable buildings. 5. Apply standard industry practices to the design of HVAC&R systems. Credits: 3.00

MET 42200 - Power Plants And Energy Conversion

Credit Hours: 3.00. The theories and skills learned from prerequisite coursework are applied to the analysis and design of power plants and their systems and to selected technologies of energy conversion. Industrial procedures and methods are emphasized.

Learning Outcomes: 1. Identify the efficiency of power cycles. 2. Detect and locate major components in power generation circuits and renewable power generating systems. 3. Evaluate turbines and cooling water systems. 4. Identify various types of fuel available in the utility industry and renewable energy sources. 5. Describe typical power plant pollutants. 6. Identify current technologies and policies that impact the development of new power plants. Credits: 3.00

MET 42600 - Internal Combustion Engines

Credit Hours: 3.00. Introduces the operating principles of internal combustion engines with emphasis on performance, efficiency, and emissions. Students will evaluate engine performance through geometric, kinematic, and thermodynamic analysis. Introduces advanced thermodynamic cycles and trends in internal combustion engine technology.

Learning Outcomes: 1. Describe the principles of internal combustion engine operation. 2. Calculate engine geometric and operating parameters. 3. Analyze engine performance through kinematic, kinetic, and thermodynamic calculations. 4. Evaluate advanced engine technologies and explain their impact on emissions and performance. 5. Describe the social and environmental impact of internal combustion engines from historical and contemporary perspectives. 6. Design an internal combustion engine for use in an on-road or off-road vehicle system. Credits: 3.00

MET 43200 - Hydraulic Motion Control Systems

Credit Hours: 3.00. Hydraulic feedback motion control systems, types, and applications are studied. Simulation and performance of closed loop control systems with single and multiple signal paths are emphasized. Dynamic system performance is predicted and evaluated. System parameters including accuracy, response speed, fluid compressibility effects, load disturbances, and nonlinear behavior of the components are studied.

Learning Outcomes: 1. Identify the origins, development and applications of servo mechanisms. 2. Explain hydraulic system and component nonlinearities such as friction, deadband, backlash, and hysteresis. 3. Recognize control terms, definitions, and fluid power components of a hydraulic system. 4. Evaluate transfer functions and their use in predicting the performance of a system. 5. Utilize computer software simulation tools to investigate the dynamic performance of simple control loops. 6. Develop methods for improving hydraulic system stability through the use of simulation tools. Credits: 3.00

MET 43600 - Pneumatic Motion Control Systems

Credit Hours: 3.00. The application of pneumatic motion control systems to industrial motion control and robotics is studied. Circuit design with control logic of both fluid and electronic types is stressed, as applied to pneumatic point-to-point and proportional controls. Control designs are implemented, tested, and evaluated in the laboratory.

Learning Outcomes: 1. Identify the internal parts and the operation of pneumatic components. 2. Design pneumatic systems integrating electronic input/output controls. 3. Construct single and multiple pneumatic cylinder/motor systems utilizing directional control valve technology. 4. Evaluate pneumatic control systems using simulation software. 5. Estimate the power loss due to air leakage in a pneumatic system. 6. Design closed loop control systems used in diverse pneumatic applications. Credits: 3.00

MET 44200 - Plastics Manufacturing Systems

Credit Hours: 3.00. Basic control theory, heat transfer, machine design principles, and basic polymer science are applied to analysis and design of polymer manufacturing systems. Emphasis is placed on thermoplastics processes such as extrusion and injection molding. Projects include design of new machinery, major renovations of existing processes, and automation of processes.

Learning Outcomes: 1. Understand the terms and principles of mold and pattern design for plastics manufacturing. 2. Develop a solid understanding of factors that drive plastics manufacturing processes. 3. Use simulation

software for pre manufacturing analysis and compare to the actual part once manufactured. 4. Explain how to conduct a design of experiments process to make basic recommendations related to product and/or process design which would allow more efficient manufacturing. 5. Develop an understanding of the common polymers and appropriate application for different manufacturing processes. Credits: 3.00

MET 44301 - Joining Processes

Credit Hours: 3.00. Topics cover joining technologies such as fastening, welding, brazing/soldering, adhesive, and diffusion bonding processes of metals, ceramics, plastics, and composites. The materials, processes, destructive and non-destructive evaluation, and design aspects of these technologies as well as current production practices will be presented. Emphasis will be placed on identification and optimization of key processing parameters. Students will be exposed to commonly used technologies, equipment, and methods for joint design, formation, testing, and optimization to better understand key parameters and process variables, and their influence on optimum joint designs.

Learning Outcomes: 1. Understand the operating principles, advantages and limitations of commonly used joining processes, including application to optimize joint design. 2. Develop a solid understanding of the response of materials to joining processes and joint functionality. 3. Identify the key parameters of major joining processes and their optimization in various production and product design scenarios. 4. Apply common techniques for quality measurement and control to joining processes. 5. Recommend changes to product and/or process design for more efficient manufacturing. Credits: 3.00

MET 44400 - Applied Metallurgy

Credit Hours: 3.00. Metals used in common engineering applications are studied to determine how their properties are achieved. Photomicrographic and other methods are employed to investigate the alloying, hotworking, coldworking, and heat treating processes of these metals. Detection, identification, and diagnosis of metal failure are included.

Learning Outcomes: 1. Understand common metallurgical processes and their effects on the microstructures and mechanical properties of alloys. 2. Identify phases in alloys using microscopes. 3. Correlate phases to the deformation and failure of alloys. 4. Apply knowledge that has been learned in the class to solve real world problems. Credits: 3.00

MET 44500 - Applied Metalcasting

Credit Hours: 3.00. This course applies metalcasting principles from concept through final product. Students design and optimize essential elements of casting systems using both simulation and fabrication methods and testing.

Learning Outcomes: 1. Apply sound design and manufacturing principles in the production of metal-cast products. 2. Design effective and efficient molds for multiple metal-cast products. 3. Apply methods to effectively identify, prevent and correct common product defects. 4. Demonstrate effective use of applicable software optimization tools. 5. Safely demonstrate metalcasting production techniques and practices. Credits: 3.00

MET 45100 - Manufacturing Quality Control

Credit Hours: 3.00. (MFET 45100) Quality control practices used in manufacturing industries; management, statistical control charts, reliability, sampling plans, economics, computer methods, and test equipment are presented and applied. Credit will not be granted for both MET 45100 and MFET 45100.

Learning Outcomes: 1. Apply the theory, principles, and applications of various quality management philosophes. 2. Measure and collect data in a variety of manners using technical standards related to sampling plans and quality process documentation. 3. Work in teams to conduct measurement system analysis and statistical process control (SPC). 4. Develop a solid understanding of how to utilize common quality management tools. 5. Conduct quality control experiments commonly used in industry for different manufacturing processes. Credits: 3.00

MET 45200 - Advanced GD&T Concepts Applied To Product Quality

Credit Hours: 3.00. This course explores the theory and application of Geometric Dimensioning and Tolerance (GD&T) to measurement systems and the programming necessary to

insure product quality.

Learning Outcomes: 1. Develop a comprehensive understanding of GD&T standards and callouts and how they apply to product quality. 2. Develop and demonstrate a comprehensive understanding of the critical components, capabilities, and software of CMMs and similar product measurement systems. 3. Apply uncertainty principles to measurement data to determine critical parameters associated with CD&T controls of product quality. Credits: 3.00

MET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

MET 48200 - Mechatronics

Credit Hours: 3.00. Fundamental concepts and applications of practical mechatronics are presented, with emphasis on product design, systems integration, and functional relationships between mechanical structure, sensor data, precision actuators, power resources, embedded microcontrollers, control logic, and drives. Students gain hands-on experience with mechatronics components and measurement equipment which is applied in a team-based design-build mechatronics system project.

Learning Outcomes: 1. Describe the design and operation of mechatronics. 2. Demonstrate input/output characteristics of microcontroller and its interfacing. 3. Create a mechatronic system solution to a given problem. 4. Explain programming and interfacing issues involved in the design of mechatronic system. Credits: 3.00

MET 49000 - Special Topics In MET

Credit Hours: 1.00 to 3.00. Group instruction in new or specialty areas of mechanical engineering technology is provided by MET faculty, subject to MET curriculum subcommittee approval. Hours, subject matter, and credit to be arranged by faculty.

Learning Outcomes: 1. Varies due to the nature of the course. Credits: 1.00 to 3.00

MET 49900 - Mechanical Engineering Technology

Credit Hours: 1.00 to 6.00. Independent project or study of a special topic is conducted under the supervision of appropriate MET faculty. Hours and subject matter must be arranged with the instructor and approved by the MET curriculum subcommittee before enrolling in the course. Permission of instructor required.

Learning Outcomes: 1. Varies due to the nature of the course. Credits: 1.00 to 6.00

MET 50300 - Applied Optimization

Credit Hours: 3.00. This course will introduce technology graduate students and senior undergraduates to the basic concepts of optimization methods with particular emphasis on applications in product and process design. Unconstrained nonlinear problems will be presented and solved using steepest descent and conjugate directions. Constrained problems will be solved using exterior penalty functions. Permission of department required.

Learning Outcomes: 1. Recognize optimization problems and cast them in standard form. 2. Identify objective functions and constraints. 3. Use commercial software to solve formal optimization problems. 4. Correctly identify global and local optimum solutions. 5. Use basic calculus concepts to calculate design sensitivities. 6. Understand the geometric concept of design space and be able to plot design space for a constrained problem with two design variables. Credits: 3.00

MET 51500 - Mechanics For Engineering And Technology

Credit Hours: 2.00. Evaluation of static and dynamic systems through the application of mechanics principles. Course will focus on aircraft applications and associated human factors. Topics to be covered include analysis of force equilibrium, kinematics with constant and varying acceleration, kinetics, work, energy, impulse and momentum.

Learning Outcomes: 1. Analyze systems in static equilibrium to determine applied and/or reaction forces necessary for system design and evaluation. 2. Analyze particles or systems of particles to determine acceleration, velocity

and/or position using the principles of dynamics for linear and rotational motion (such as kinematics, force, acceleration, work, energy, impulse and/or momentum). 3. Analyze extended rigid bodies or systems of bodies to determine acceleration, velocity and/or position using the principles of dynamics for translational, rotational and general plane motion (such as kinematics, force, acceleration, work, energy, impulse and/or momentum). 4. Devise relationships between the user and the aircraft to determine applied forces (both pilot to aircraft, and aircraft to pilot or passenger). Credits: 2.00

MET 51800 - Propulsion Mechanics And Electronic Systems

Credit Hours: 3.00. The course provides an in-depth exploration of propulsion systems driven by electro-mechanical technologies, with applications in aerospace, automotive, and industrial sectors. The course will cover the principles of electromechanical energy conversion and its integration with propulsion systems, focusing on electric motors, actuators, and power electronics used in propulsion mechanisms. Emphasis will be placed on the application of modern control systems, thermal management, and the efficiency optimization of electro-mechanical propulsion systems. Students can engage in hands-on projects, using simulation tools to design, analyze, and optimize propulsion systems for performance, durability, and sustainability.

Learning Outcomes: 1. Analyze and design electro-mechanical propulsion systems for various applications. 2. Evaluate power electronics and control systems to optimize propulsion performance. 3. Create outputs from simulation tools for propulsion system analysis. 4. Evaluate the environmental and efficiency impacts of electro-mechanical propulsion technologies. 5. Analyze potential future propulsion technologies strategic applications and scenarios. Credits: 3.00

MET 52700 - Technology From A Global Perspective

Credit Hours: 3.00. Introduction to the challenges faced by the practicing technologist when working and interacting with international technical personnel, both here and abroad, including history, standards, education, and practice of technology outside the United States. Permission of department required.

Learning Outcomes: 1. Awareness and comprehension of cross-cultural factors necessary for international professional practice in technology. 2. Effective research strategies that access what is known about technology development, usage and impact from a global perspective. 3. Knowledge and skill in researching and reporting cultural factors affecting business practices in a variety of independent nation states. 4. Knowledge of procedures, regulations and practices regarding international business. 5. Research skills to identify the natural and technology resources of countries. 6. An ability to contrast the impact of technology infrastructure and use of technology in developed countries to what occurs in underdeveloped countries. 7. Knowledge of the concept and application of ""Appropriate Technology"". 8. Knowledge of the historical development of technology in various modern nations. 9. Informed judgments regarding the influences of cultural and political environments of countries and their technological development. 10. Awareness of the major changes related to current and/or emerging technology in the leading industrial nations of the world. 11. Understanding of the methodologies employed for the effective introduction of technologies into new country or cultural settings. 12. Knowledge of selected International Technology Standards and organizations. Credits: 3.00

MET 53000 - Facilities Engineering Technology

Credit Hours: 3.00. A study of the application of the engineering sciences and technology to the solution of problems associated with mechanical and electrical systems in buildings. Emphasizes commercial and industrial facilities. Identifying energy conservation measures for both mechanical and electrical systems and evaluating their economic impact are an important focus of the course.

Learning Outcomes: 1. Explain building energy trends and related policy. 2. Explain the

organizations and personnel supporting the built environment. 3. Use building automation systems to monitor and control building operation. 4. Quantify energy use in building systems. 5. Use accepted professional practice for technical computations and writing. 6. Calculate the economic impact of energy and resource conservation measures for buildings. 7. Compute the impact of solar energy use for a building. 8. Apply strategies for maintaining Indoor Air Quality in buildings. 9. Evaluate the performance of mechanical or electrical systems in buildings. Credits: 3.00

MET 53500 - Optimization Of Metalcasting Design

Credit Hours: 3.00. The course focuses on optimal design of metalcastings to fit structural requirements (applied loads) and to assure sound manufacturability (castability). Students are expected to learn the general principles of design optimization through hands-on laboratory exercises based on the application of finite element and computational fluid dynamics software.

Learning Outcomes: 1. Analyze and apply advanced principles of metalcasting design to create efficient, high-quality castings with minimal defects and optimal performance characteristics. 2. Utilize modern simulation tools and techniques to predict and mitigate potential casting issues, optimize gating and riser systems, and ensure cost-effective production methods. 3. Develop and implement strategies for material selection, waste reduction, and energy efficiency, ensuring sustainable practices in metalcasting design and production. Credits: 3.00

MET 54600 - Industrial Applications Of Computer Integrated Manufacturing

Credit Hours: 3.00. A study of the development of CIM (computer integrated manufacturing) from the application of basic automation to a fully integrated system for the operation of the business enterprise. Emphasis is placed on the technology, systems, and human resources, which are integrated to accomplish the objectives of the company. Permission of instructor required.

Credits: 3.00

MET 58100 - Workshop In Mechanical Engineering Technology

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 0.00 to 8.00

MET 59000 - Special Problems In Mechanical Engineering Technology

Credit Hours: 1.00 to 6.00. Independent study of a special problem under the guidance of a member of the staff. Does not substitute for either M.S. thesis or M.S. project credit. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 6.00

MET 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of instructor required.

Learning Outcomes: 1. Varies by course offering due to individual research topics. Credits: 1.00 to 3.00

MET 64500 - Design And Control Of Rehabilitation And Assistive Robots

Credit Hours: 3.00. This course focuses on studying the fundamentals of the design and control of rehabilitation and assistive robots and evaluating their performances. Topics in multiple areas, including robotics, biomechanics, controls, and mechatronics, are included in this course. Specifically, the students study various applicable control methods, including impedance control for the physical interaction of humans and robots. Additionally, the students conduct gait experiments and analyze the data to determine the gait parameters relevant to the design of lower leg assistive and rehabilitation robots, including human joint impedance. Supportive topics such as user intent recognition and relevant instrumentation are also discussed. Prerequisites: MFET 44200 or ECE 56900 or ME 57200.

Learning Outcomes: 1. Evaluate the needs of target populations, technologists, and ethical and regulatory restrictions related to human well-being, especially improved mobility. 2. Analyze the biomechanics considerations in the evaluation of the design and control of rehabilitation robots. 3. Analyze the data of the performed gait experiments. 4. Design an impedance controller for an assistive robot. 5.

Create a system of wearable sensors to analyze gait parameters in an unstructured environment. Credits: 3.00

MET 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Learning Outcomes: 1. Varies by courses due to individual research topics. Credits: 1.00 to 18.00

Medicinal Chemistry and Molecular Pharmacology

MCMP 49000 - Special Topics

Credit Hours: 1.00 to 3.00. A course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest, utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required.

Credits: 1.00 to 3.00

MCMP 51400 - Biomolecular Interactions: Theory And Practice

Credit Hours: 1.00 to 4.00. Theory and applications of biophysical and bioanalytical methods for the identification and qualification of biological and pharmaceutical samples. Methods to be discussed include chromatography, electrophoresis, optical spectroscopy, mass spectrometry, electrochemical methods, radiochemical analysis, ultracentrifugation, calorimetry and surface plasmon resonance. Physical measurements, such as binding equilibrium, kinetics and macromolecular structure will be discussed. While fundamentals of each technique will be discussed, a major focus will be on the application and integration of presented methods for the analysis of biological problems. The course will be organized into four general topic areas around the theme of medicinal analysis, and variable credit will be available based on a student's interest in the four topic areas (i.e., 1 credit per topic area). Students should register for 1 credit hour, and the variable credit option will be discussed and determined at the first class period. Permission of instructor required.

Credits: 1.00 to 4.00

MCMP 54400 - Drug Classes And Mechanisms

Credit Hours: 3.00. The course will integrate basic principles of medicinal chemistry and pharmacology to achieve an understanding of drug mechanisms as applied to autonomic/endocrine, cardiovascular/renal, CNS, and chemotherapy/infectious diseases. The course will apply concepts from organic chemistry, biochemistry, anatomy, physiology, and principles of drug action to describe how drugs are used to treat the symptoms and causes of disease.

Learning Outcomes: 1. Knowledge and understanding of the major drug classes. 2. Knowledge of the relationships between mechanism of action with drug interactions and adverse reactions. 3. Development of an introductory-level ability to critically evaluate primary literature. 4. An appreciation for the relevant research and discovery processes involving medicinal chemistry and pharmacology related to the major drug classes. 5. A broad knowledge of pharmaceutical and related sciences. 6. An understanding of drug discovery, development, and commercialization. 7. Effective written and oral communication skills. 8. An ability to integrate and apply knowledge to solve problems. Credits: 3.00

MCMP 57000 - Basic Principles Of Chemical Action On Biological Systems

Credit Hours: 3.00. Detailed description of modern pharmacology with emphasis on the mechanism of drug action and approaches used to understand their therapeutic and toxic effects. Topics include receptor theory and signal transduction, pharmacokinetics and pharmacogenetics with emphasis on current concepts in molecular pharmacology. Permission of instructor required.

Credits: 3.00

MCMP 57100 - Discovery And Development Of Therapeutic Agents

Credit Hours: 3.00. Detailed description of drug discovery and development that integrates multiple scientific disciplines. Topics include Drug Disposition and Toxicology, Identification, Qualification, and Validation of Molecular Targets, Lead Discovery and Optimization, and New Drug Modalities and Advanced Medicinal Products. These topics assume prior student mastery of basic chemical principles of biological action that are taught in MCMP 57000.

Learning Outcomes: 1. Demonstrate an advanced understanding of the process for identifying and developing new candidate agents. 2. Evaluate pharmaceutical candidates for therapeutic efficacy, safety, and potential improvement of candidates for clinical development. 3. Design traditional and cutting-edge drug discovery workflows for identifying therapeutic targets and pharmaceutical candidates. 4. Understand the breadth of the drug discovery process and be conversant with

the interdisciplinary nature and disciplines involved in the drug discovery industry. Credits: 3.00

MCMP 59800 - Introduction To Research

Credit Hours: 1.00 to 3.00. Introduction to research in synthetic and analytical medicinal chemistry, pharmacognosy, and natural products under the direction of a member of the graduate faculty. Permission of instructor required.

Credits: 1.00 to 3.00

MCMP 61700 - Molecular Targets: Neuro Function And Dysfunction

Credit Hours: 2.00. The application of basic scientific principles from medicinal chemistry and molecular pharmacology, and new discoveries in biology, to the development of new drugs to treat psychiatric disorders and diseases of the central nervous system. Important examples of drug targets, and small molecules (either currently approved drugs or those under investigation) that target them, are discussed. Classes of drug target examples discussed include: G protein-coupled receptors, neurotransmitter transporter proteins, and ion channels. Processes of neurosecretion and neurodegenerative processes will also be discussed, as well as target validation and examples of the use of genetic models to identify CNS targets. Prerequisites: MCMP 57000 . This course is offered even numbered years.

Learning Outcomes: 1. Understand completely modern approaches to assessing the nature and relevance of the various targets for CNS drugs and CNS drug discovery. 2. Demonstrate full comprehension and satisfactory presentation of CNS drug discovery findings from the current literature. 3. Demonstrate satisfactory critical evaluation of the primary literature. 4. Demonstrate a synthesis of knowledge acquired/demonstrated through the first three outcomes, to achieve a full understanding of a specific area of CNS drug discovery, and generate a satisfactory original research proposal in that area. Credits: 2.00

MCMP 61800 - Molecular Targets: Cancer

Credit Hours: 2.00. The application of basic scientific principles from medicinal chemistry and molecular pharmacology, and new discoveries in biology, to the development of new anti-cancer drugs. Important examples of drug targets and small molecules (either currently approved drugs or those under investigation) that target them, are discussed. Classes of drug targets discussed include: kinases, small monomeric G proteins, prenyltransferases, transcription factors, nuclear receptors, cell cycle proteins, cytoskeletal proteins, and topoisomerases. Prerequisites: MCMP 57000 .

Learning Outcomes: 1. Understand completely modern approaches to anti-cancer drug discovery. 2. Demonstrate full comprehension and satisfactory presentation of anti-cancer drug discovery findings from the current literature. 3. Demonstrate satisfactory critical evaluation of the primary literature. 4. Demonstrate a synthesis of knowledge acquired/demonstrated through the first three outcomes, to achieve a full understanding of an area of anti-cancer drug discovery, and generate a satisfactory original research proposal in that area. Credits: 2.00

MCMP 62500 - Grant Writing

Credit Hours: 1.00. Strategies for preparation of grant proposals; generating ideas for proposals and peer review. Lecture and laboratory periods will alternate each week (i.e., lecture week one, laboratory week two). Permission of department required.

Credits: 1.00

MCMP 69000 - Special Topics In Medicinal Chemistry And Molecular Pharmacology

Credit Hours: 0.00 to 6.00. Special topics, projects, or laboratory exercises in selected areas of medicinal chemistry and molecular pharmacology. Permission of instructor required.

Credits: 0.00 to 6.00

MCMP 69600 - Seminar In Medicinal Chemistry And Molecular Pharmacology

Credit Hours: 0.00 or 1.00. Faculty and student participation in discussion of current research and developments in synthetic medicinal products, quality control, instrumentation, biosynthesis, and structure elucidation of natural products.

Credits: 0.00 or 1.00

MCMP 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

MCMP 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Medieval and Renaissance Studies

MARS 22000 - Introduction To Medieval And Renaissance Studies

Credit Hours: 3.00. An introduction to the interdisciplinary study of the Middle Ages and Renaissance.

Credits: 3.00

Military Science and Leadership

MSL 10100 - Introduction To The Army

Credit Hours: 1.00 to 2.00. An introduction to the army, the profession of arms, and basic soldier skills. Students learn what it means to be a professional in the U.S. Army. The overall focus is introducing them to the Army Leadership Requirements Model and the Reserve Officers' Training Corps (ROTC) program, its purpose in the Army, and its advantages for the student. Other topics include map reading, land navigation, fieldcraft, first aid, and individual/team movement techniques.

Learning Outcomes: 1. Demonstrate proficiency in mission command philosophy. 2. Demonstrate proficiency in mission command leader and commander tasks. 3. Demonstrate proficiency in mission command staff tasks. 4. Demonstrate proficiency in mission command systems. 5. Demonstrate capacity in creative critical thinking. 6. Demonstrate proficiency in communications skills. 7. Demonstrate proficiency in cultural awareness, cross cultural competencies in the strategic environment of 2025 and beyond. 8. Pursue Comprehensive Fitness / Resiliency Skills and Performance Enhancement Skills. 9. Pursue lifelong learning, self-assessment, and goal setting. 10. Demonstrate proficiency in Army and Joint doctrine. 11. Support Army policies, programs, and processes. 12. Demonstrate technical and tactical competency. Credits: 1.00 to 2.00

MSL 10200 - Foundations Of Leadership

Credit Hours: 1.00 to 2.00. An introduction to the personal challenges and competencies that are critical for effective leadership. Topics include critical thinking, time management, goal setting, and communication. The course emphasizes the communications process and the importance for leaders to develop essential skills to effectively communicate in the Army. Basic squad-level tactics will be reinforced.

Learning Outcomes: 1. Apply critical thinking and problem-solving, using troop-leading procedures (TLP). 2. Demonstrate map reading and land navigation skills. 3. Explain the value of diversity and the officer's role in leading change. 4. Describe the fundamentals of the Army as a profession. Credits: 1.00 to 2.00

MSL 20100 - Leadership And Ethics

Credit Hours: 2.00 to 3.00. An examination of leadership and ethics through the study and analysis of famous leaders. Army values and ethics and their relationship to the Law of Land Warfare is stressed. Emphasizes the philosophy of military service and how military leaders can apply values and ethics to a variety of situations they might encounter in the Army.

Learning Outcomes: 1. Apply Army core values and ethics to different situations that officers may encounter as a leader. 2. Explain the relationship between Army Values, the Law of Land Warfare, and the philosophy of military service. 3. Develop a personal leadership philosophy and style. Credits: 2.00 to 3.00

MSL 20200 - Army Doctrine And Decision Making

Credit Hours: 2.00 to 3.00. The course explores using analytical techniques, creative-thinking skills, and the Army problem-solving process to help with situational decision making. Troop-leading procedures (TLP) and operational orders (OPORD) are used to explain Army Doctrine and symbology. Topics include using unified land operations, offensive operations, and defensive operations in squad-level tactics.

Learning Outcomes: 1. Apply analytical techniques, creative-thinking skills, and the Army problem-solving process. 2. Explain Army doctrine and symbology, using TLPs and OPORDs. 3. Explain how squad tactics are used in unified land operations, offensive operations, and defensive operations. Credits: 2.00 to 3.00

MSL 30100 - Training Management And The Warfighting Function

Credit Hours: 3.00 to 4.00. Examines how the Army operates through warfighting functions. Emphasizes planning, preparing, and executing training for small-unit tactics.

Learning Outcomes: 1. Describe the fundamentals of training management. 2. Explain how the Army operates through the warfighting functions. 3. Plan, prepare, and execute training for a squad conducting small-unit tactics. Credits: 3.00 to 4.00

MSL 30200 - Applied Leadership In Small Unit Operations

Credit Hours: 3.00 to 4.00. An examination of the fundamentals

of direct-level leadership and small-unit tactics at the platoon level in preparation for Cadet Summer Training Advance Camp. Emphasizes the planning, coordinating, navigating, motivating, and leading a platoon to execute a mission.

Learning Outcomes: 1. Describe the fundamentals of direct-level leadership and small unit tactics at the platoon level. 2. Explain how the Army operates through the warfighting functions. 3. Plan, coordinate, and lead a platoon to execute a mission. Credits: 3.00 to 4.00

MSL 40100 - The Army Officer

Credit Hours: 3.00 to 4.00. An examination of Army officer development to include planning, resourcing, and assessing training at the small-unit level. Topics include counseling subordinates, evaluating performance, values and ethics, career planning, legal responsibilities, and programs that support Army officers in these endeavors.

Learning Outcomes: 1. Describe Army programs that support counseling subordinates and evaluating performance, values and ethics, career planning, and legal responsibilities. 2. Explain how to plan, prepare, execute, and continuously assess training at the company level. Credits: 3.00 to 4.00

MSL 40200 - Company Grade Leadership

Credit Hours: 3.00 to 4.00. This course explores the roles and responsibilities of company-grade Army officers with respect to unified land operations. Emphasizes the knowledge, skills and abilities required of junior officers in preparation for commissioning.

Learning Outcomes: 1. Describe company grade officer roles and responsibilities pertaining to unified land operations. 2. Demonstrate officership as it pertains to a U.S. Army Second Lieutenant. Credits: 3.00 to 4.00

MSL 49000 - Directed Studies In Military Science

Credit Hours: 1.00 to 3.00. Individual readings, topics, or projects in military science appropriate for advanced undergraduate students. Permission of instructor required.

Credits: 1.00 to 3.00

Motorsports Engineering

MSPE 29000 - Motorsports Engineering Seminar

Credit Hours: 1.00. An overview of the motorsports industry including types of vehicles, types of competition, careers available, historical perspective, development of pertinent technologies, and brief discussions of engineering related topics that will be covered in more detail in future classes. Interactions with motorsport and mechanical engineering faculty along with motorsports engineers currently working in the industry. Professionalism and ethics are discussed along with topical discussions as related to the motorsports industry in the areas of globalization, cultural differences, and collaboration across cultural boundaries.

Learning Outcomes: 1. Demonstrate knowledge of the motorsports industry and recognize techniques, skills and modern tools of the motorsports industry. 2. Apply current knowledge and solve introductory problems relevant to the motorsports industry. 3. Possess a general knowledge of the history and evolution of motor racing nationally and internationally. 4. Develop technical writing skills beyond those learned in first-year engineering. 5. Recognize professional, ethical, and societal responsibilities in the context of the motorsports industry. Credits: 1.00

MSPE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and

teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 29701 - Computer Modeling For Motorsports

Credit Hours: 2.00. An introductory course detailing methods for designing and modeling motorsports components using Computer Aided Design (CAD) software.

Learning Outcomes: 1. Understand Bottom-up Design of systems and components. 2. Utilize modern engineering tools to model components as solid models in 3 dimensions. 3. Utilize modern engineering tools to generate detail two-dimensional detail drawings of components. 4. Utilize modern engineering tools to model and constrain component assemblies in 3 dimensions. 5. Communicate thoughts and ideas. Credits: 2.00

MSPE 29800 - Programming And Computer Modeling For Motorsports

Credit Hours: 2.00. Introductory course detailing methods for creating virtual models of vehicle systems for design, analysis and optimization. Virtualization methods include object-oriented programming techniques for creating mathematical models in Excel, Matlab and Python. Students will learn the basics of data regression consistent with the analysis methods conducted in the motorsports industry. The methods introduced through this course lay the foundation for advanced courses in vehicle design, simulation, and analysis.

Learning Outcomes: 1. Introductory understanding of Object-Oriented Programming using Excel VBA and C#. Credits: 2.00

MSPE 31201 - Business of Motorsports

Credit Hours: 0.00 or 3.00. This course covers the unique aspects of the motorsports industry, especially race teams, including organizations, budgeting, marketing, and sponsorships through an examination of literature and guest speakers.

Credits: 0.00 or 3.00

MSPE 31700 - Motorsports Practicum I

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a professional motorsports organization.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team. 10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 32000 - Motorsports Design I

Credit Hours: 3.00. Introduction to the principles of design and analysis of vehicle subsystems and components within those subsystems. Vehicle subsystems are reviewed and evaluated for functionality, and reliability with emphasis on the utilization of analytical tools in design. Analytical methods developed in vehicle dynamics are utilized to support the understanding of forward and reverse engineering principles.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to solution of design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively. Credits: 3.00

MSPE 33000 - Systems Engineering For Motorsports

Credit Hours: 3.00. Systems engineering encompasses the engineering knowledge to specify, design, program and analyze the electrical systems of a motorsports vehicle. The course will explore those systems to provide the engineering foundation in instrumentation, data analysis, data reduction, and system programming. Project work will supplement the learning outcomes through direct engagement of designing and specifying a data system for a motorsports vehicle, manufacturing a motorsports vehicle sensor loom, and programming the communication pathways between different vehicle electrical systems.

Learning Outcomes: 1. Understand the fundamentals of the data acquisition systems

installation, operation, software, and maintenance, while appreciating the importance of data integrity 2. Understand the implications of design decisions when designing the data acquisition system or designing around the data acquisition system. 3. Understand the limitations and possibilities of the data acquisition system. 4. Utilize data acquisition analysis tools to properly import and display data signals. 5. Understanding on how to write math channels to interpret and analyze data. 6. Initial understanding of how recorded data represents vehicle and driver performance. 7. Utilize motorsports wiring tools to manufacture a motorsports sensor harness. 8. Understand the basics of digital car communication including the math associated with communicating digital signals throughout the vehicle. Credits: 3.00

MSPE 33001 - Data Acquisition For Motorsports I

Credit Hours: 2.00. This course introduces students to motorsports data acquisition systems and the associated hardware and software that are comprised therein. A hands-on lab component is included int he class where in students learn how to specify a motorsports data system, understand vehicle network communication and build a motorsport industry standard data acquisition wiring harness.

Credits: 2.00

MSPE 33100 - Data Acquisition For Motorsports II

Credit Hours: 3.00. This course explores the appliaction of vehicle dynamics principles to motorsport vehicles. Students will utilize engineering software tools to develop motorsport engineering worksbooks for vehicle performance analysis. Driver performance analysis and race strategy topics are introduced to provide the student with the full fundamentals of race engineering.

Credits: 3.00

MSPE 34000 - Dynamic Signals And Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems and continuous-time and discrete-time signals, mechanical electromechanical components, linear system response, Fourier and Laplace Transforms. The course is designed to teach the student the basic concept for modeling the behavior of dynamic systems.

Credits: 3.00

MSPE 35000 - Computer Aided Design And Manufacturing

Credit Hours: 3.00. This course provides the basis for the computer-aided engineering and analysis skills needed in the Motorsports Industry. The ability to visualize and conceptualize a real part in the physical world and produce graphical representations of it in 2D and 3D in Solidworks or an equivalent is a primary objective. Further skills to be developed include the ability to produce large assemblies of such parts with appropriate tolerancing, free form surfacing, casting shapes and casting machining, 2D drawings for use in 3D sheet metal fabrication including shrink and stretch, use of 3D models to facilitate Finite Element Analysis, Conversation of CAD model to programming of CAM machining.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to problems involving the design and manufacturing of components and systems. 2. Design a system, component, or process to meet desired needs. 3. Identify, formulate, and solve engineering problems involving the design and manufacturing of components and systems. 4. Use the techniques, skill, and modern engineering tools necessary for engineering practice. Credits: 3.00

MSPE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the

professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

MSPE 41400 - Motorsports Design II

Credit Hours: 3.00. This is the culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project with the Motorsports Industry.

Learning Outcomes: 1. Apply knowledge of mathematics, science and engineering to the solution of complex and comprehensive design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs pertinent to the motorsports industry. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively in written reports and oral presentations. 7. Use the technique, skill, and modern engineering tools necessary for engineering practice in the motorsports industry. Credits: 3.00

MSPE 41700 - Motorsports Practicum II

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a race team in the motorsports industry. Students will be expected to show mastery of at least 12 of the 12 skills outlined in the Course Objectives.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team. 10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 42600 - Internal Combustion Engines

Credit Hours: 3.00. This course will cover fundamentals of hybrid electric and battery electric transportation systems with particular emphasis on high performance vehicles. It will cover powertrain configurations of Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV), and Battery Electric Vehicle (BEV). Component sizing and energy management topics will also be covered.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools needed for design and analysis of engines. 2. Apply current knowledge and adapt to emerging applications in engine development. 3. Conduct, analyze and interpret experiments and apply results to improve processes. 4. Function effectively on teams. 5. Identify, analyze and solve technical problems. 6. Communicate effectively. Credits:

3.00

MSPE 43100 - Race Engineering

Credit Hours: 3.00. Motorsports engineering knowledge obtained throughout the curriculum are brought together to create foundational knowledge in the discipline. Analytical tools in Excel or Matlab along with data analysis tools from Cosworth or Motec are utilized to guide the application of motorsports engineering principles to vehicle performance optimization. Race strategy topics are investigated to provide foundational knowledge beyond vehicle system.

Learning Outcomes: 1. Utilize Excel or Matlab to analyze vehicle systems and performance. 2. Utilize Cosworth Toolbox or Motec i2 software to analyze vehicle systems and performance. 3. Calculate fuel error and its impact on race strategy. 4. Understand tire degradation principles and its impact on race strategy. 5. Write technical reports to disseminate the technical information in a clear and concise manner. Credits: 3.00

MSPE 47200 - Vehicle Dynamics

Credit Hours: 3.00. Analytical and mathematical model development of the automotive and motorsports vehicles to understand how key vehicle parameters influence vehicle performance. Areas of focus include rectilinear motion, lateral motion, suspension kinematics, tire dynamics and drivetrain modeling.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools necessary for analysis of vehicle dynamics and design of vehicle systems. 2. Apply current knowledge and adapt to emerging applications appropriate to the topic of vehicle dynamics. 3. Conduct, analyze and interpret experiments and apply experimental results to improve processes. 4. Apply creativity in the design of systems, components or processes appropriate to program objectives. 5. Function effectively on teams. 6. Identify, analyze and solve technical problems. 7. Communicate effectively. Credits: 3.00

MSPE 48200 - Motorsports Aerodynamics

Credit Hours: 3.00. A focused introductory course into the study of aerodynamics principles as applied to automotive and motorsports vehicles. Broad range of topics introduce students to the complexity of fluid flow in and around the vehicle. Analytical methods including Computational Fluid Dynamics are utilized to emphasize key aerodynamics principles taught in the course.

Learning Outcomes: 1. Students will understand the basics of aerodynamic analysis and design as applied to motorsports vehicles. 2. Students will be able to apply Computational Fluid Dynamics modeling and analysis techniques to motorsports design. 3. Students will be able to integrate the various aspects of motorsports modeling and design. Credits: 3.00

MSPE 49000 - Motorsports Engineering Independent Study

Credit Hours: 1.00 to 3.00. This is an independent study course for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.

Credits: 1.00 to 3.00

MSPE 49700 - Motorsports Design Project

Credit Hours: 3.00. This is an independent study version of the MSPE 41400 culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project within the Motorsports Industry. Permission of instructor required.

Credits: 3.00

MSPE 49900 - Motorsports Engineering Special Topics

Credit Hours: 1.00 to 3.00. This is a special topics course for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.

Credits: 1.00 to 3.00

Music History and Theory

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 11200 - Fundamentals Of Music (UCC: HUM)

Credit Hours: 3.00. Fundamentals of music notation, ear training, and music reading.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand music notation, rhythmic structure, meter, scales, blues form, chords, basic musicianship and ear training, and fundamentals of songwriting. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 17100 - Jazz Improvisation I

Credit Hours: 2.00. This course is an introduction to the development of beginning jazz improvisational and theoretical skills for all instrumentalists and vocalists. Fundamentals theoretical and musicianship skills are addressed through practical application, guided listening, dictation, transcription, harmonic and rhythmic analysis, and performance of standard jazz repertoire.

Learning Outcomes: 1. Explain the fundamentals of jazz theory and musicianship. 2. Write or transcribe a jazz solo from a recording. 3. Explain and notate jazz harmonies and voicings using established forms of analysis. 4. Describe various jazz styles in performance. 5. Perform selected jazz repertoire. 6. Perform an improvised jazz solo. Credits: 2.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural

elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of music theory from the late Romantic era through current practice. Students may be asked to compose works in a variety of styles that include late Romanticism, Impressionism, Neoclassicism, Atonality, Pointillism, Minimalism, Sound-Mass Composition, Indeterminacy, Ambient music, Graphic Notation and Neoromanticism.

Learning Outcomes: 1. Demonstrate a theoretical understanding of harmonic practice from the Late Romantic Era through the contemporary period. 2. Analyze the structural elements of music from the Late Romantic Era through the contemporary period. 3. Produce original compositions in the styles associated with the Late Romantic Era through the contemporary period. Credits: 3.00

MUS 25000 - Music Appreciation (UCC: HUM)

Credit Hours: 3.00. The traditions, forms, and styles of classical music. Other types of music may be examined as well. (Students may register through the Continuing Education Student Learning Center at the Tech Statewide locations via distance education.) CTL:IFA 1330 Music Appreciation

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 27100 - Jazz Improvisation II

Credit Hours: 2.00. This course is a continuation of MUS 17100, Jazz Improvisation I. Students will continue to develop their jazz improvisation skills that include scale development, pattern playing, guided listening, dictation, transcription skills, harmonic, melodic and rhythmic studies as well as performing standard jazz repertoire. Students should have at least two years of previous experience in band, orchestra, choir, or piano study prior to enrolling in this course. Students will be required to perform in class. Prerequisites for this class are MUS 13200, Music Theory I and MUS 17100, Jazz Improvisation I or consent of the department.

Learning Outcomes: 1. Define common terminology and techniques used in jazz. 2. Explain common chord progressions found in jazz. 3. Demonstrate common linear approaches to jazz improvisation. 4. Explain similarities and differences between various jazz styles and how they impact improvisation. 5. Perform effective jazz solos. Credits: 2.00

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

MUS 32100 - Songwriting

Credit Hours: 3.00. This course is an introduction to contemporary songwriting. Topics covered will include the study of contemporary chord progressions, melodic development, essential songwriting forms and lyric writing. Students will analyze and compose original songs that will cover a wide range of musical styles and genres including folk, country, pop, rock, jazz and hip-hop. Students interested in Art Song composition should take MUS 34100 or 34200, Composition I-II. Prerequisites include MUS 13200, Music Theory I and MUS 27000, Computer Skills in Music or consent of department.

Learning Outcomes: 1. Demonstrate a theoretical and practical understanding of contemporary songwriting. 2. Explain traditional

and contemporary harmonic and melodic practice in songwriting. 3. Define common terms such as verse, chorus, bridge, refrain and hook. 4. Analyze and compose works in simple forms such as binary, ternary, AABA and blues forms. 5. Explain and demonstrate common features of various beats and styles associated with songwriting: samba, bossa nova, swing, bop, funk, hip-hop. 6. Analyze and write effective lyrics. 7. Create original songs. Credits: 3.00

MUS 32400 - Teaching Music In The Elementary School

Credit Hours: 3.00. Develops basic musicianship through singing, playing instruments, reading and writing music, listening and moving to music. Surveys music teaching methods and materials. Includes lesson planning, experiences in teaching, and observation of children in music classes.

Learning Outcomes: 1. Advocate for the importance of music's inclusion (or exclusion, if desired) in the elementary classroom. 2. Develop curricula that appropriately advances the musical abilities, appreciation, and understanding of children. 3. Perform by singing and playing instruments both alone and in a group. 4. Synthesize appropriate terms to describe musical performance and recording. 5. Connect music to a variety of societal, cultural, and historical contexts. Credits: 3.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.

Learning Outcomes: 1. Explain common chords, scales and modes used in contemporary jazz music. 2. Define common terms used in jazz arranging and composition. 3. Explain and demonstrate common features of various jazz styles. 4. Create original jazz compositions and arrangements. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 34500 - History Of Rock Music

Credit Hours: 3.00. This course is a survey of the major trends, styles, and genres of rock music from the earliest recordings to the present day. It focuses on the work of the artists and groups who have proven to have the most enduring significance.

Learning Outcomes: 1. Analyze song form as well as instrumentation. 2. Describe and distinguish between various rock genres and their chronological development in history. 3. Describe rock music's influence on society and culture. 4. Demonstrate fluency in the fundamentals of music. Credits: 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire.

4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

MUS 36000 - Singing For The Theatrical Stage

Credit Hours: 2.00. A workshop/lab in which students explore how to sing musical theater repertoire for the stage. Students will learn about musical theater auditioning, character analysis and development through song, and performance on stage as a singing actor. The course will have both in-class and out-of-class performance opportunities as well as research experiences that use performance-based methods to explore oneself in social contexts (autoethnography). It is recommended that students have at least two years of singing experience prior to taking this course. Exceptions may be made with instructor's approval. The course may be repeated.

Learning Outcomes: 1. Incorporate and explain musical and theatrical decisions through the singing of musical theater repertoire. 2. Develop and perform a repertoire of appropriate materials for musical theater auditions. 3. Create new art through performance-based research and musical media that can be disseminated on stage and online. 4. Evaluate and describe one's own performance as well as others through reflection and criticism. 5. Analyze musical theater performances, characters, and scripts to better perform as a singing actor. Credits: 2.00

MUS 37000 - Introduction To Instrumental And Choral Conducting

Credit Hours: 3.00. This course is an introduction to instrumental and choral conducting. Topics covered will include the study of essential skills necessary to lead vocal and instrumental ensembles that will involve warmup techniques, choral and instrumental tone production, baton and directing patterns, ensemble organizational leadership and score analysis. Prerequisites include MUS 13300, Music Theory II or consent of the department.

Learning Outcomes: 1. Define common terms used in musical scores. 2. Demonstrate a wide variety of conducting hand and baton patterns. 3. Explain how musical analysis can influence conducting. 4. Explain standard organizational and leadership approaches in conducting musical groups. 5. Explain frequent errors made by conductors. Credits: 3.00

MUS 37500 - Selected Topics In Music

Credit Hours: 3.00. A study of a specific genre in music (symphony, opera, chamber music, etc.) or the works of a single composer.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 3.00

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38300 - Digital Audio Recording And Production I

Credit Hours: 3.00. This course is an introduction to digital audio recording and production practices. Topics covered will include design and structure of sound studios, musical sequencing and recording, microphones, fundamentals of sound reinforcement, and sound editing. Students will be required to develop music recording projects.

Learning Outcomes: 1. Explain the fundamentals of musical acoustics. 2. Define digital audio and MIDI (Musical Instrument Digital Interface) terminology. 3. Explain and demonstrate the principles of music recording (studio and live mixes). 4. Explain and demonstrate the fundamentals of sound reinforcement (live sound performances). 5. Explain and demonstrate microphone selection and placement. 6. Design a recording studio. 7. Explain and demonstrate musical sequencing and digital audio editing. 8. Explain and demonstrate how to combine digital sequenced data with natural acoustic sounds. 9. Create professional mixes: adding reverb, compression, special effects, etc. Credits: 3.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS 38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.

Learning Outcomes: 1. Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in combining sound and music to video and film productions. Credits: 3.00

MUS 49000 - Guided Reading In Music

Credit Hours: 1.00 to 6.00. For students with specialized needs and interests in the field. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 1.00 to 6.00

MUS 59000 - Special Problems In Music

Credit Hours: 1.00 to 4.00. An individualized and intensive study of any aspect of music required by the student's plan of study. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 1.00 to 4.00

Natural Resources and Environmental Science

NRES 12100 - Stepping Stones To Environmental Science

Credit Hours: 1.00. Intended to expose first-year students to emerging environmental problems and innovative solutions, to support their transition to Purdue through a sense of community and increased engagement, and to provide students access to faculty in the environmental sciences in a small group setting. Activities include field trips, hands-on learning, study halls, and meals together. Enrollment is restricted to members of the environmental science learning community. Department permission required.

Learning Outcomes: 1. Recognize environmental service and awareness groups on campus and in the local community. 2. Identify local environmental challenges. 3. Increase knowledge of potential solutions for increasing food-water-energy sustainability. Credits: 1.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 23000 - Survey Of Meteorology (UCC: SCI)

Credit Hours: 3.00. (EAPS 22100) An introductory course for both science and non-science students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate, ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00 Credits: 1.00

NRES 33700 - Environmental Hydrology

Credit Hours: 3.00. (AGRY 33700) This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Learning Outcomes: 1. Become familiar with hydrological processes, interactions and their representations over scales from point to ""continental"" and times from seconds to years. The major emphasis is on surface and near surface phenomenon. 2. Gain qualitative and quantitative understanding of land surface water budgets and how they respond to environmental change. 3. Develop problem solving abilities on topics related to surface water hydrology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological

hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology.

Learning Outcomes: 1. Analyze a response scene to stop the release or potential releases of hazardous substances. 2. Connect knowledge and awareness to meet OSHA requirements. (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. 3. Receive their 40-hour HAZWOPER Certification after successfully completing all requirements. Credits: 3.00

NRES 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (AGRY 38500) Designed as an upper level introductory course covering environmental soil chemistry concepts in the framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or mathematics background.

Credits: 4.00

NRES 39300 - Interdisciplinary Approaches To Environmental And Sustainability Studies

Credit Hours: 3.00. This course is the lynchpin of the undergraduate Certificate in Environmental and Sustainability Studies. It will present a series of case studies, core concepts, and problem questions that integrate the following three academic approaches: 1) Human Dimensions and Environment/Sustainability, 2) Engineering and Environment/Sustainability, and 3) Environmental/Sustainability Sciences.

Credits: 3.00

NRES 40000 - Natural Resources And Environmental Science Study Abroad

Credit Hours: 0.00 to 8.00. Utilized to record credits earned through participation in Purdue study abroad programs with cooperating foreign universities.

Credits: 0.00 to 8.00

NRES 41000 - Research In Natural Resources And Environmental Science

Credit Hours: 1.00 to 3.00. Supervised individual research. NRES 41000 provides the opportunity to participate in independent undergraduate research with the goal of learning how to design, execute, and report research. Students will properly and permanently record their information in a timely fashion and learn how to examine, analyze, and interpret their results. One credit hour corresponds to one how of laboratory preparation and three hours of laboratory research. Total credits in NRES 41000 and NRES 41100 may not exceed six credits. Permission of instructor required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00 to 3.00

NRES 42000 - Environmental Internship

Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (AGRY 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Credits: 3.00

NRES 48000 - Hazardous Waste Certification Renewal

Credit Hours: 0.00. Upon completion of this course, students will be able to 1) analyze a response scene to stop the release or potential releases of hazardous substances, and 2) connect knowledge and awareness to meet OSHA requirements (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. Students successfully completing all requirements will receive their 40-hour HAZWOPER Certification.

Learning Outcomes: 1. Receive 40-hour HAZWOPER Certification Renewal upon completion of this course. Credits: 0.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems.

Credits: 2.00

NRES 49800 - Individual Studies In Environmental Science

Credit Hours: 1.00 to 3.00. An opportunity for upper-level undergraduates to focus their interests and knowledge on an environmentally related problem. Arrangements must be made with a Natural Resources and Environmental Science Program faculty member before registration. Permission of instructor required.

Credits: 1.00 to 3.00

NRES 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Discuss the complexity of involving stakeholders in decisions about landscape management. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

Naval Science

NS 11000 - Introduction To Naval Science

Credit Hours: 3.00. This course is a general introduction to the USN and USMC that emphasizes organizational structure, warfare components and assigned roles/missions of USN/USMC. It covers all aspects of naval service from its relative position within the DoD to the specific warfare community/career paths and includes basic elements of leadership and USN and USMC core values. The course provides students with initial exposure to many elements of naval culture and provides the conceptual framework/working vocabulary for students to use on summer cruise.

Learning Outcomes: 1. Demonstrate proficiency in USN and USMC customs, such as the hand salute, uniform preparation, and flag etiquette. 2. Describe the departmental organizations of the USN and USMC. 3. Define the various watch-standing roles of shipboard personnel. 4. Describe the general career path of the various unrestricted line communities in the Navy and Marine Corps. 5. Describe all rank insignia of the armed forces. 6. Explain institutional values and ethics of the Department of the Navy. Credits: 3.00

NS 20200 - Naval Science Laboratory

Credit Hours: 2.00. This lab is designed to develop students morally, mentally, and physically and to imbue in them the highest ideals of duty, honor, and loyalty. Topics shall cover general Navy/Marine Corps mission and policies, force protection, operational security, watch standing, physical fitness, nutrition, stress management, and other professional development subjects not normally included in the curriculum of the Naval Science Courses. Laboratory periods may also be used on an occasional basis to supplement the Naval Science Courses and provide additional time for projects, such as navigation chart work. Open to Naval ROTC students only.

Learning Outcomes: 1. Complete the Navy or Marine Corps physical fitness tests with passing scores. 2. Demonstrate proficiency in close-order drill. 3. Complete a dress uniform inspection with a passing score. 4. Demonstrate proper military courtesies. 5. Describe the basics of military customs, ceremonies, and traditions. 6. Demonstrate exemplary personal and professional behavior in accordance with standards of conduct expected of a professional military officer. 7. Demonstrate the basic principles of the Navy and Marine Corps' Warrior Toughness program. Credits: 2.00

NS 21200 - Naval Ships Systems II (Weapons)

Credit Hours: 3.00. This course outlines the theory and employment of weapons systems. Students explore the processes of detection, evaluation, threat analysis, weapon selection, delivery, guidance, and explosives. Fire control systems and major weapons types are discussed, including capabilities and limitations. The physical aspects of radar and underwater sound are described. Facets of command, control, communications, computers, and intelligence are explored as a means of weapons system integration. The tactical and strategic significance of command and control warfare and information warfare is discussed.

Learning Outcomes: 1. Explain the choice of weapon, given the defined threat's capabilities. 2. Define the capabilities and limitations of Naval Ship weaponry. 3. Identify, visually, a ship's array of antennae and communication components. 4. Describe the importance of command and control warfare. 5. Analyze the

moral and ethical responsibilities of leaders and their use of firepower. Credits: 3.00

NS 21300 - Sea Power And Maritime Affairs

Credit Hours: 3.00. This course is a study of the U.S. Navy and sea power's influence on history and the political process. Students will explore the major events, attitudes, personalities, and circumstances that have imbued the U.S. Navy with its proud history and rich tradition. It deals with issues of national imperatives in peacetime, as well as war, varying maritime philosophies that were interpreted into naval strategies/doctrines, budgetary concerns that shaped force realities, and the pursuit of American diplomatic objectives. It concludes with a discussion of the Navy's strategic and structural changes at the end of the Cold War and its new focus, mission, and strategy in the post-September 11, 2001 world.

Learning Outcomes: 1. Describe the impact and significance of geography and Sea Lines of Communication on maritime strategy and naval operations. 2. State the mission and basic organization of the Navy and Marine Corps. 3. Describe the current organization of the Department of the Navy. 4. Describe significant events in U.S. naval history. 5. Describe the evolution of the Navy and Marine Corps including the origins. 6. Describe the importance of power projection by seaborne forces and cite historical examples. 7. Describe the significant historical developments of naval weapons systems, platforms, tactics, techniques, and procedures. Credits: 3.00

NS 21400 - Naval Leadership And Management

Credit Hours: 3.00. Introduces the student to many of the fundamental concepts of leading Sailors and Marines, which shall be expanded upon during the continuum of leadership development throughout NROTC. It develops the elements of leadership vital to the effectiveness of Navy/Marine Corps officers by reviewing the theories and parameters of leadership and management within and outside of the Naval Service and progressing through values development, interpersonal skills, management skills, and application theory. Practical applications are explored through the use of experiential exercises, readings, case studies, and laboratory discussions.

Learning Outcomes: 1. Explain the differences between management and leadership. 2. Describe sources of leader power and related influence tactics. 3. Describe the interaction between the leader, the followers, and the situation. 4. Describe the building blocks of leadership skills and how they impact a leader's effectiveness. 5. Perform a leadership personality analysis and interpret its results. 6. Describe rational and emotional approaches to organizational changes. 7. Apply leadership concepts to a written analysis of a real-world leader. Credits: 3.00

NS 31000 - Naval Navigation

Credit Hours: 3.00. This course is an in-depth study of the theory, principles, procedures, and application of plotting, piloting, and electronic navigation, as well as an introduction to maneuvering boards. Students learn piloting techniques, the use of charts, the use of visual and electronic aids, and the theory of operation of both magnetic and gyrocompasses. Students develop practical skills in plotting and electronic navigation. Other topics include tides, currents, effects of wind/weather, voyage planning, and an application and introduction to the international/inland rules of navigation.

Learning Outcomes: 1. Explain the theory and practice of navigation at sea. 2. Describe the environmental weather factors affecting naval operations. 3. Describe the sources of environmental products/predictions, forecasts available to naval units underway. 4. Demonstrate relative motion and the capability to solve problems associated with relative motion using maneuvering boards. 5. Demonstrate proper use of the Rules of the Road preventing collisions at sea. Credits: 3.00

NS 31100 - Naval Operations And Seamanship

Credit Hours: 3.00. This course is a continued study of relative motion, formation tactics, and ship employment. It includes introductions to naval operations and operations analysis, ship behavior and characteristics in maneuvering, applied aspects of ship handling, afloat communications, naval command and control, naval warfare areas, and joint warfare.

Learning Outcomes: 1. Explain the theory of relative motion as it applies to vessels at sea. 2. Describe the fundamentals of the U.S. Navy's systems of communications used on sea-going vessels. 3. Demonstrate proper use of the Rules of the Road preventing collisions at sea. 4. Discuss the many issues relating to ship handling and Naval Officers' responsibility. 5.

Demonstrate relative motion and the capability to solve problems associated with relative motion using maneuvering boards. 6. Perform the proper use of Standard Commands during Conning Officer Virtual Environment (COVE) lab. 7. Explain the doctrines of Naval Warfare, Command and Control, and Joint Operations. Credits: 3.00

NS 33000 - Evolution Of Warfare

Credit Hours: 3.00. The purpose of Evolution of Warfare is to imbue students with an understanding of the origins of modern warfighting theory through an analysis of historical philosophies, domains, tactics and technology. Through a study of military history, students explore the timeless fundamentals of armed conflict as well as the central role of innovation. They will apply these fundamental warfighting concepts to historic amphibious and expeditionary operations through guided analysis and decision games.

Learning Outcomes: 1. State the major cultural, technological, organizational, and doctrinal transformations in warfare. 2. State the operational history of amphibious and expeditionary warfare. 3. Recite the warrior ethos. 4. Describe the relationship between the tactical, operational, and strategic level of warfare. 5. Describe the origins of current USMC and Joint doctrine, especially MCDP 1 and MCDP 1-0. 6. Apply symmetric and asymmetric principles across all warfighting domains. 7. Apply knowledge from historical conflicts to modern and future challenges. 8. Demonstrate fundamental writing and speaking skills required of a marine officer. 9. Demonstrate a tactical mindset and effective decision-making. Credits: 3.00

NS 35000 - Naval Ship Systems-Engineering

Credit Hours: 3.00. In this course, students learn detailed ship design, hydrodynamic forces, stability, propulsion, electrical theory and distribution, hydraulic theory and ship control, and damage control. The course includes basic concepts of theory/design of steam, gas turbine, diesel, and nuclear propulsion.

Learning Outcomes: 1. Explain the first and second laws of thermodynamics and how they apply to naval ship systems. 2. Understand the difference between thermal and mechanical energy and how to transfer between the two to produce propulsion. 3. Explain how energy is stored onboard US naval vessels and the ways that stored energy is converted into propulsion. 4. Describe each step of a thermodynamic cycle and be able to apply them to various heat engines. 5. Draw the steam cycle on a temperature/entropy graph and describe each process. 6. Describe the role of various auxiliary equipment in a propulsion plant. 7. Describe the basic damage control process and the initial ship-wide response to fire and flooding. Credits: 3.00

NS 41300 - Naval Leadership And Ethics

Credit Hours: 3.00. This course completes the final preparations of ensigns and second lieutenants for service in the Navy and Marine Corps. The course integrates an intellectual exploration of Western moral traditions and ethical philosophy with a variety of topics, such as military leadership, core values, professional ethics, the UCMJ and Navy regulations, and discussions relating to the roles of enlisted members, junior and senior officers, command relationships, and the conduct of warfare. The course provides midshipmen with a foundation of moral traditions, combined with a discussion of actual current and historical events in the Navy and Marine Corps, to prepare them for the roles and responsibilities of leadership in the Naval Service of the 21st century. Permission of instructor required.

Learning Outcomes: 1. Explain the role of commissioned officers as members of the U.S. Armed Forces and the obligations and responsibilities assumed by taking the oath of office, including the constitutional requirement for civilian control. 2. Explain the naval officer's roles and responsibilities as a member of the profession of arms. 3. Explain the significance of special trust and confidence vested in commissioned officers. 4. Explain the Uniform Code of Military Justice (UCMJ), the practice of military law, and the applications of regulations as they may involve a junior officer in the performance of duties. 5. Explain the purpose, scope, and constitutional basis of Navy regulations and the UCMJ, relating them to

personal conduct in the military service. 6. Explain the professional, moral, and ethical responsibilities of the naval officer. 7. Explain the relationship of integrity, moral courage, and ethical behavior to authority, responsibility, and accountability. 8. Demonstrate, by personal example, the professional attributes and behaviors of a naval officer. 9. Describe how leadership by example influences an officer's ability to effectively lead in an organization. Credits: 3.00

NS 44000 - Fundamentals Of Maneuver Warfare

Credit Hours: 3.00. The purpose of this course is to introduce the student to the foundational concepts and history of the USMC as the premier maneuver warfighting organization. It is a theoretical class that utilizes both historical examples from previous military operations as well as current doctrine, developing an individual who is both a critical thinker and scholar in the profession of arms. The goal is to educate the student to read military history analytically.

Learning Outcomes: 1. Describe the role of the United States Marine Corps as a premier amphibious warfare fighting institution. 2. Describe specific successful amphibious-based maneuver warfare operations throughout Marine Corps history. 3. Describe how amphibious warfare ties into general warfare, serving as a subset of total warfare. 4. Perform an analysis of historical influences upon current tactical, operational and strategic implications of maneuver warfare practices used in current and future operations. 5. Recite a basic understanding of Marine Corps doctrine that facilitates successful sea-based operations, requiring ship-to-shore movements. Credits: 3.00

Nuclear Engineering

NUCL 11000 - Introduction To Energy Engineering

Credit Hours: 1.00. This course, designed for first-semester freshmen, reviews and discusses the history of energy use by the world, the relation between energy usage and quality of life, the social impact of energy use, and the environmental constraints on energy usage. In particular, the role that engineering disciplines play in solving energy problems will be discussed. The full impact that the various energy alternatives have on economic and environmental issues will be reviewed in order to provide a rational basis for energy choices for the future.

Credits: 1.00

NUCL 12000 - Freshman Research Project

Credit Hours: 1.00. In this course, the student performs a small independent project in nuclear engineering under direct faculty supervision.

Credits: 1.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications.

Credits: 3.00

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized.

Credits: 2.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

NUCL 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only.

Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility.

Credits: 0.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

NUCL 30500 - Nuclear Engineering Undergraduate Laboratory II

Credit Hours: 2.00. Continuation of NUCL 20500 . Experiments with scintillation detectors, multichannel analyzers, neutron detectors, the subcritical pile, and the reactor will be performed. Measurements will be made to demonstrate neutron activation analysis techniques, neutron slowing down, neutron flux distributions, and the effects of control rods on neutron fluxes.

Credits: 2.00

NUCL 31000 - Introduction To Neutron Physics

Credit Hours: 3.00. Development of diffusion theory for neutrons. Neutron interactions and development of one-group neutron diffusion theory with point, plane, and fission sources. Application to one- and two-region reactors. Introduction to buckling, multiplication constants, critical size, neutron slowing down, and resonance capture. Applications using two-group theory.

Credits: 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design.

Credits: 3.00

NUCL 32500 - Nuclear Materials Laboratory

Credit Hours: 3.00. Nuclear materials laboratory that evaluates various characterization techniques and technologies, tensile properties, hardness, fracture toughness, microstructures, X-ray diffraction, electron microscopy, mechanical properties of thin-films, NDE techniques and data acquisition in materials characterization techniques.

Learning Outcomes: 1. Understanding of what materials are, and how they perform and fail. 2. Understand the conceptual tools dealing with materials phenomena. 3. Be able to communicate with professionals about materials problems. 4. Be able to address the limitations of materials in design, and improve them.

Credits: 3.00

NUCL 35000 - Nuclear Thermal-Hydraulics I

Credit Hours: 3.00. The first of an integrated two-course sequence introducing the concepts of nuclear reactor thermal transport and associated hydraulics with applications to design and safety. Macroscopic balances, dimensional analysis, and flow measurement. Fluid behavior, momentum transfer, and applications to reactor systems and design.

Credits: 3.00

NUCL 35100 - Nuclear Thermal-Hydraulics II

Credit Hours: 3.00. Emphasis is given to the fluid transport of heat from reactor fuel elements. Heat transfer in fluids, analogies, and applications to reactor coolant channel analysis. Two-phase flow and convective boiling. Radiative heat transfer. Applications to safety analysis and reactor design.

Credits: 3.00

NUCL 35500 - Nuclear Thermohydraulics Laboratory

Credit Hours: 3.00. Laboratory course corresponding to NUCL 35000 and NUCL 35100 . Various fluid flow and heat transfer phenomena applied to nuclear reactor systems and design.

Credits: 3.00

NUCL 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800 .

Credits: 0.00

NUCL 40200 - Engineering Of Nuclear Power Systems

Credit Hours: 3.00. Principles and practice of power plant systems with design applications; thermal cycles, heat transport, mechanical designs, control, safety analysis, shielding analysis, fuel cycles; resources, optimization, options, waste management. Fusion and alternate energy sources.

Credits: 3.00

NUCL 41000 - Introduction To Reactor Theory And Applications

Credit Hours: 3.00. Intermediate treatment of reactor theory and its relevance to routine design engineering calculations, including introduction to transport theory, criticality evaluation, multi-group theory, isotopic depletion, and concludes with short overview of multi-level reactor design calculations, critical experiments, and treatment of neutronic uncertainties. List of Topics: Derivation of Boltzmann transport equation, and its reduction to steady state and time dependent diffusion equation. Introduction to multi-group theory, and evaluation of group

parameters in both wide and narrow resonance approximations. Introduction to homogenization theory, and evaluation of lattice parameters. Evaluation of criticality condition for bare and reflected reactor geometries. Development of discretization techniques for the time-dependent multi-group diffusion theory equation. Reactor kinetics, reactivity coefficients and reactivity balance equation. Flowchart of multi-level reactor design calculations. Introduction to critical experiments and startup reactor physics test. Sources and treatment of uncertainties in reactor calculations.

Learning Outcomes: 1. Develop an understanding of reactor physics value for engineering design calculations, and to learn how it is applied to make engineering design decision regarding material choice, composition, type, and operating conditions to sustain and control chain reactor over reactor operating horizon. 2. Learn how to develop a computer code to solve a reactor physics problem.

Credits: 3.00

NUCL 42001 - Radiation Interaction With Materials And Applications

Credit Hours: 3.00. Fundamental of radiation interaction with materials and applications, types of radiation and radiation sources, physical mechanisms of radiation interaction with solids, radiation damage, ion mixing, applications in nuclear fission and fusion reactors, applications in materials synthesis.

Learning Outcomes: 1. Learn the types and sources of radiation. 2. Understand the physical mechanisms of radiation interaction with materials and model these interactions quantitatively. 3. Understand and model the phenomenon of radiation damage to bulk, surfaces and interfaces. 4. Relate the concepts of radiation damage to neutron interaction with solids in both fission and fusion reactors. 5. Understand the technological applications of radiation interaction with materials. Credits: 3.00

NUCL 44900 - Senior Design Proposal

Credit Hours: 1.00. The course outcome is the writing and presentation of a proposal for the senior design project, NUCL 45000 . The tasks include the selection of project design topics (various nuclear engineering components and systems designs), the selection of teams, introduction to design process, team management, communication, and engineering ethics, literature and patents survey, initiation of design activities and familiarization with design tools (for example software).

Credits: 1.00

NUCL 45000 - Design In Nuclear Engineering

Credit Hours: 3.00. Application of the design process to the project design topics identified in NUCL 44900 . The design process usually includes, but not limited to, mathematical modeling in design, neutronic, thermal-hydraulics and safety studies, risk assessment, economics, policy and regulation, environmental impact.

Credits: 3.00

NUCL 46000 - Introduction To Controlled Thermonuclear Fusion

Credit Hours: 3.00. Energy resources and the potential role of nuclear fusion. Ignition and breakeven conditions for fusion power plants. Particle and energy confinement in linear and toroidal magnetic fields. Review of magnetic and inertial confinement experiments and conceptual reactor configurations.

Credits: 3.00

NUCL 47000 - Fuel Cell Engineering

Credit Hours: 3.00. The principles of electromechanical energy conversion for a single fuel cell, fuel cell stack, process engineering in the fuel and oxidizer supply systems. Principles, components, operation and performance for alkaline, phosphoric acid, solid polymer, molten carbonate and solid oxide fuel cells. Provides broad insight into science, technology, system design, and safety concerns in design and operation of fuel cells.

Credits: 3.00

NUCL 48000 - Nuclear Engineering Technical Communications

Credit Hours: 3.00. This course makes students aware of the importance of communication skills-written, oral, graphical and interpersonal-in a successful nuclear engineering career and gives them the opportunity to develop and practice those skills. Students will learn how to access, evaluate, use and synthesize relevant technical literature. In addition, through the writing and speaking assignments, students develop team work skills, gain an understanding of professional and ethical responsibilities of engineering, learn to write a simple propose and learn about selected contemporary global economic, social and political issues, particularly with respect to nuclear topics.

Learning Outcomes: 1. Ability to communicate effectively. 2. The ability to understand the impact of engineering solutions in a global and societal context. 3. A knowledge of contemporary issues, particularly with respect to nuclear topics. 4. An understanding of professional and ethical responsibility. Credits: 3.00

NUCL 49000 - Independent Study In Nuclear

Engineering

Credit Hours: 1.00 to 6.00. Projects or research of contemporary importance or special interest. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only 6 credits may be counted for the technical elective requirement. Permission of instructor required.

Learning Outcomes: 1. Learning objectives vary based on varying coursework. Credits: 1.00 to 6.00

NUCL 49700 - Selected Topics In Nuclear Engineering

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Learning Outcomes: 1. Learning objectives will vary with coursework. Credits: 1.00 to 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies.

Credits: 0.00

NUCL 50100 - Nuclear Engineering Principles

Credit Hours: 3.00. A first course for graduate students desiring a nuclear engineering sequence and an elective for students in science or engineering. The course is structured in four parts: (1) Nuclear structure and radiation, biological effects and medical applications of radiation. (2) Basics of neutron and reactor physics, neutron diffusion and reactor criticality. (3) Nuclear materials and waste. (4) Reactor systems and safety.

Credits: 3.00

NUCL 50200 - Nuclear Engineering Systems

Credit Hours: 3.00. Engineering aspects of nuclear power. Materials of construction; fuel and fuel cycles; heat removal; radiation shielding; economics; and nuclear power systems. Permission of instructor required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Demonstrate an ability to solve typical nuclear reactor calculations. 3. Develop a quantitative foundation of nuclear reactor safety, radiation protection and shielding. 4. Apply knowledge of mathematics and physics to the design of nuclear power reactor systems. 5. Able to design a reactor system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 6. Model engineering issues in nuclear reactor safety, radiation protection and shielding quantitatively and draw appropriate inferences. 7. Able to use the techniques, skills, and modern engineering tools necessary for nuclear reactor systems through a project. Credits: 3.00

NUCL 50300 - Radioactive Waste Management

Credit Hours: 3.00. Will familiarize students with the nature of the risks associated with radioactive waste and the history, regulations, and worldwide status for the safe storage of various types of radioactive waste. The sources, characteristics, and magnitudes of radioactive wastes are described, and the current and proposed engineered waste management systems are examined along with the analysis of their associated risks.

Credits: 3.00

NUCL 50400 - Nuclear Engineering Experiments

Credit Hours: 3.00. A laboratory course that, when coupled with NUCL 50100 , produces a sequence that contains both the theoretical and engineering aspects of nuclear engineering. Topics include radiation detection and analysis, neutronics, and nuclear reactor experiments.

Credits: 3.00

NUCL 51000 - Nuclear Reactor Theory I

Credit Hours: 3.00. Methodologies of neutron flux calculations, diffusion and slowing down theory, flux separation, material buckling, resonance absorption, Doppler effect, 2-group and multi-group theories, and reactivity balances for design and operation. Introduction to reactor kinetics, delayed neutrons, point reactor kinetics, transient behavior, load changes, reactivity feedback, and safety implications.

Credits: 3.00

NUCL 51100 - Reactor Theory And Kinetics

Credit Hours: 3.00. Advanced methodologies for neutron flux calculation, nodal methods, introduction to transport theory, transport correction, multigroup theory, and introduction to the generation of group constants. Reactor kinetics, perturbation theory, adjoint fluxes, reactivity calculation from perturbation theory, reactivity coefficients due to Doppler effect, temperature and density changes, void coefficient, and energy and power coefficients. Microkinetics, theory of reactivity measurements, approximate methods: prompt jump approximation, and prompt kinetics. Transients with feedback, safety implications, and spatial kinetics.

Credits: 3.00

NUCL 51200 - Computers In Reactor Analysis

Credit Hours: 3.00. The application of computational methods in reactor systems analysis. Theory behind modern numerical methods (e.g. SOR, Conugate Gradient, etc.) for solving large,

sparse systems on linear equations that result from the discretization of elliptical and parabolic partial differential equations. Applications include the multigroup, multi-dimensional neutron transport equation and two-phase flow fluid dynamics. Extensive use of MATLAB, FORTRAN, and UNIX(tm). No written exams, and the majority of problem sets are performed as group projects. Knowledge of FORTRAN required.

Credits: 3.00

NUCL 52000 - Radiation Effects And Reactor Materials

Credit Hours: 3.00. Introduction to radiation effects in solids and a survey of nuclear reactor materials. Radiation interaction mechanisms and effects on properties. Reactor material characteristics, selection criteria, testing, and economic considerations.

Credits: 3.00

NUCL 55100 - Mass, Momentum, And Energy Transfer In Energy Systems

Credit Hours: 3.00. Formulations for analyzing complicated thermal-hydraulic phenomena in energy systems. Derivation of two-phase flow field equations and constitutive relations. Thermal-hydraulic modeling of nuclear reactor systems. Analyses of nuclear reactor safety related phenomena based on conservation principles.

Credits: 3.00

NUCL 55200 - Thermal-Hydraulics And Reactor Safety

Credit Hours: 3.00. Applications of thermal-sciences to nuclear reactor safety design and risk assessment. Emphasis on illustrating the use of basic principles in quantitative safety assessments of practical and current interest. The basic topics revolve around multiphase transients and applications which include study of accident analysis and its applications to licensing for light water reactor systems and for liquid metal fast breeder reactor.

Credits: 3.00

NUCL 55300 - Nano-Macro Scale Applications Of Nuclear Technology

Credit Hours: 3.00. Introduction of the principles of nuclear science and engineering for addressing industrial and scientific issues ranging from sub-nano-to-macro scales. Areas to be covered include: propulsion, high-energy density materials, supercooling, medical applications, sonoluminescence, novel detection systems for special nuclear and contraband materials, and advanced nuclear fusion power systems.

Credits: 3.00

NUCL 55500 - Thermal Hydraulics Measurement And Instrumentation

Credit Hours: 3.00. Measurement techniques in fluid flow, heat transfer, and multi-phase flow. The principle and practice of measurement of temperature, flow, level, pressure, and void fraction (in two-phase flow systems) as applied to nuclear reactor systems. Instrument error and measurement errors, and data acquisition system using PC. Hands-on experience in the laboratory with instruments.

Learning Outcomes: 1. Demonstrate an understanding of the principles of instruments. 2. Demonstrate an ability to design an application of the instrument in fluid system. 3. Understand design concepts, design evaluation and application of a measurement system to practical systems. Credits: 3.00

NUCL 56000 - Introduction To Fusion Technology

Credit Hours: 3.00. Introduction to electricity and magnetism, magneto-fluid-mechanics and plasma physics. Thermonuclear reactions, power balances, macroscopic and microscopic instabilities. Principles of operation and conceptual design of Tokamaks, Mirror, Theta-Pinch, and Laser-Driven fusion reactors.

Credits: 3.00

NUCL 56300 - Direct Energy Conversion

Credit Hours: 3.00. Review of energy sources and study of the basic processes of direct energy conversion and their applications to energy utilization, based on both conventional and nuclear energy conversion schemes. Conventional schemes include thermoelectric, photovoltaic, thermionic, magnetohydrodynamic generators, fuel cell systems, etc.; and nuclear energy conversion schemes correspond to nuclear radiation and fusion energy conversion. Permission of instructor required.

Credits: 3.00

NUCL 57000 - Fuzzy Approaches In Engineering

Credit Hours: 3.00. Presentation of the mathematical fundamentals of fuzzy logic theory and a survey of engineering applications. Fuzzy sets; the extension principle; fuzzy numbers; fuzzy relations and composition; linguistic descriptions; implication operators and fuzzy algorithms are formally developed. Applications emphasize the engineering utilization of approximate reasoning to diagnostics, control, safety, and decision-making problems.

Credits: 3.00

NUCL 57500 - Neural Computing In Engineering

Credit Hours: 3.00. Mathematical fundamentals of computing with neural networks. Survey of engineering applications. Computational metaphors from biological neurons. Artificial neural networks modeling of complex, nonlinear and ill-posed problems. Emphasizes engineering utilization of neural computing to diagnostics, control, safety, and decision-making problems.

Credits: 3.00

NUCL 58001 - Essential Communication Skills For Nuclear Engineering

Credit Hours: 3.00. Essential communications skills for engineers with emphasis on communicating subject matter specific to the nuclear engineering field. Includes instruction, practice, and detailed feedback on written, oral, and graphical communications. Students learn to access, evaluate, and synthesize technical literature and practice skills necessary to prepare a literature review. Ethics and professional responsibilities, along with contemporary global economic, social and political issues are among the topics discussed. The only prerequisite is admission to the graduate program in Nuclear Engineering.

Learning Outcomes: 1. Understand importance of developing strong communications skills. 2. Know and routinely practice effective written, oral and graphical communication skills. 3. Access, use and synthesize relevant technical literature. 4. Work effectively in a team. 5. Understand professional and ethical responsibilities. 6. Be aware of contemporary global economic, social, and political issues. Credits: 3.00

NUCL 59000 - Independent Study In Nuclear Engineering I

Credit Hours: 1.00 to 6.00. Independent study projects. Interested students seek a faculty instructor in their area of special interest and prepare a brief description of the independent project to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only a maximum of 6 credits may be counted for the degree program requirement. Permission of instructor required.

Learning Outcomes: 1. Vary due to coursework. Credits: 1.00 to 6.00

NUCL 59700 - Selected Topics In Nuclear Engineering I

Credit Hours: 1.00 to 3.00. Development of individual research and study projects. Permission of instructor required.

Learning Outcomes: 1. Vary with coursework. Credits: 1.00 to 3.00

NUCL 61000 - Nuclear Reactor Theory II

Credit Hours: 3.00. This course covers advanced reactor physics topics including the neutron transport theory, slowing down and resonance escape, and generalized perturbation theory. The neutron transport theory is the fundamental theory describing the neutron flux behaviors in nuclear systems. The slowing down and resonance escape calculations are essential for generating the multi-group cross sections required in the whole-core neutron transport calculations. The generalized perturbation theory is a powerful method for determining the changes in response parameters due to the variations in nuclide densities and microscopic cross sections. Prerequisites: NUCL 51000 and advanced engineering mathematics covering complex analysis, partial differential equations, and integral equations.

Learning Outcomes: 1. Demonstrate knowledge on advanced reactor physics topics (neutron transport theory, slowing down and resonance escape, and generalized perturbation). 2. Use computational methods to determine information regarding the aforementioned reactor physics topics. Credits: 3.00

NUCL 61200 - Applied Reactor Analysis

Credit Hours: 3.00. Reactor physics analysis of existing reactors and critical experiments through the use of digital computers and reactor programs. One-, two-, and three-dimensional solutions of the diffusion and transport equations. Calculation methods for lifetime effects on excess reactivity, power distribution, breeding ratio, and temperature, void, and Doppler coefficients of reactivity. Fuel shuffling and safety calculations for fuel handling and storage. Concurrent Prerequisite: NUCL 61000 .

Credits: 3.00

NUCL 62000 - Advanced Topics In Radiation Damage

Credit Hours: 3.00. Materials phenomena unique to nuclear reactor environments are examined quantitatively. The relation between these phenomena and the structure and properties of engineering materials is discussed. Coupled phenomena are considered in relation to materials modeling codes. Prerequisite: NUCL 42000 and NUCL 52000 (or other related/similar courses).

Learning Outcomes: 1. Learn performance of nuclear materials in reactor environments. 2. Learn the effects of various radiations on materials damage and lifetime. 3. Learn methods and techniques to extend the lifetime, safety, and reliability of reactor components. Credits: 3.00

NUCL 64000 - Fast Reactor Theory

Credit Hours: 3.00. Course is designed to teach reactor physics specific to fast spectrum reactors and the associated computational methods. Topics include breeding and actinide burning capabilities, core design implications, and reactivity feedback mechanisms. Computational methods will be specific to fast reactor physics analysis and include the fast neutron

spectrum calculation, group constant generation and reactivity feedback calculations for Doppler, thermal expansions, and sodium void. Prerequisites: NUCL 51100 and advanced engineering mathematics covering complex analysis, partial differential equations, and integral equations.

Learning Outcomes: 1. Demonstrate essential knowledge of fast reactor theory. 2. Demonstrate working knowledge of the associated computational methods and codes. Credits: 3.00

NUCL 65000 - Thermal Hydraulics For Nuclear Reactor Safety

Credit Hours: 3.00. Safety philosophy, levels and goals of safety. Approaches used for nuclear reactor safety for the protection of public health. Design basis accidents. Engineered safeguards and inherent safety features. Fundamentals of safety related thermal-hydraulic phenomena and their integration into a methodology for containment assessment. Prerequisite: ME 50500 .

Credits: 3.00

NUCL 65100 - Dynamics Of Nuclear Thermal-Hydraulics System

Credit Hours: 3.00. This course discusses and analyzes various two-phase flow instabilities important for nuclear reactor systems. For the interfacial stabilities, Kelvin-Helmholtz and Rayleigh-Taylor instabilities as well as flooding and flow reversal instabilities are addressed. For the static instabilities, flow excursion instability that can reach the critical heat flux condition is analyzed relative to fast reactor and high flux research reactors. For the dynamic instabilities the density wave instabilities are discussed in detail. The characteristic equation is obtained and how to determine the stability of the system is discussed. Both the encirclement theory and the D-Partition stability boundary theory are explained. In addition, each student's research is studied through presentations, questions and discussions. Permission of instructor required. Prerequisites: NUCL 55100 and NUCL 55200.

Learning Outcomes: 1. Understand the Physics and Analytical Method to Solve Interfacial Instabilities in Two-phase Flow, Static Instabilities, Flow Excursion and Flow Reversal Dynamic Instability caused by Kinematic Waves. 2. Understand the implications in Interfacial Structures in Coolant in Nuclear Reactors, Sodium Cooled Fast Reactor, Safety High Flux Research Reactor and Isotope Production Reactors, Boiling Water Reactor Designs, and Natural Circulation Passively Safe Reactors. 3. Learn about Small Perturbation Method, Characteristic Equation, Response Function, Encirclement Theory, D-Partition Method and Stability Map. 4. Learn how to present research progress and analyze and discuss it. Credits: 3.00

NUCL 65500 - Two-Phase Flow Computational Fluid Dynamics Applications

Credit Hours: 3.00. The course guides the student to two-fluid model solutions using computational fluid dynamics (CFD). Topics include: review of the two-fluid model, review of elliptic and parabolic partial differential equations, description of numerical algorithms, and two-phase flow channel and jet flows. Prerequisite: NUCL 56000 .

Learning Outcomes: 1. Understand basic principles of hyperbolic and parabolic partial differential equations applied to the equations of fluid dynamics. 2. Use finite differences to solve partial differential equations of fluid dynamics. 3. Apply principles in 1 and 2 to simulations with Navier Stokes and Two Fluid Model Equations. 4. Employ stability theory to analyze the Two Fluid Model. Credits: 3.00

NUCL 66000 - Magnetic Confinement Fusion

Credit Hours: 3.00. Applications of plasma physics for analysis and design of plasma configurations in fusion reactors. Topics include beam-driven fusion systems, plasma heating and ignition via neutral beams and RF wave heating, plasma waves, kinetic and fluid descriptions of plasmas, and energy transport; blanket neutronics for tritium breeding, energy conversion, and reactor design considerations. Prerequisite: NUCL 56000 .

Credits: 3.00

NUCL 66100 - Inertial Confinement Fusion Technology

Credit Hours: 3.00. Inertially confined thermonuclear fusion reactions and energy gains; laser-plasma interactions; hydrodynamic compression; energy transports including electron thermal conduction and radiation transport; beam transport and instabilities; driver energy deposition and the driver development for lasers, particle beams and accelerators; and target designs. Approval of Instructor required. Prerequisite: NUCL 56000 or equivalent.

Learning Outcomes: 1. Understand the physics of inertial confinement fusion. 2. Explore the engineering issues associated with the concepts and applications of beam drivers, targets, and chambers leading to target ignition

and energy conversions. Credits: 3.00

NUCL 69000 - Independent Study In Nuclear Engineering II

Credit Hours: 1.00 to 6.00. Independent research projects. Interested students seek a faculty instructor in their area of special interest and prepare a brief description of the independent project to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only maximum of 6 credits may be counted for the degree program requirement. Permission of instructor required.

Learning Outcomes: 1. Learning outcomes will vary based on coursework. Credits: 1.00 to 6.00

NUCL 69600 - Nuclear Engineering Seminar

Credit Hours: 0.00. Discussion by graduate students and invited speakers of their research projects and topics of interest in nuclear engineering. Prerequisite: Master's student standing and Nuclear Engineering majors only.

Credits: 0.00

NUCL 69700 - Selected Topics In Nuclear Engineering II

Credit Hours: 1.00 to 3.00. Courses on topics of contemporary importance or special interest in nuclear engineering. Hours and credits to be arranged. Permission of instructor required.

Learning Outcomes: 1. Vary based on coursework. Credits: 1.00 to 3.00

NUCL 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

NUCL 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Nuclear Pharmacy

NUPH 49000 - Special Topics

Credit Hours: 1.00 to 3.00. An honors course for superior students to be used in relation to, and to supplement, an existing course; an in-depth approach to topics of current interest utilizing the original literature as prime source material. A laboratory project may be included. Permission of instructor required.

Credits: 1.00 to 3.00

NUPH 49100 - Introduction To Nuclear Pharmacy

Credit Hours: 1.00. This course will serve as an introduction to nuclear pharmacy practice and serve as the first course in the nuclear pharmacy elective series. Successful completion of the nuclear pharmacy series can be used to meet the 200 hour didactic training requirement set forth by the Nuclear Regulatory Commission (NRC) towards achieving Authorized User status. This course will provide basic information about the profession of nuclear pharmacy, as well as an introduction to radioactive material and radiation safety concepts. The course will conclude with guest lectures from practitioners in several different areas of nuclear pharmacy practice to provide information about the different areas of practice available to nuclear pharmacists.

Learning Outcomes: 1. Describe nuclear pharmacy and nuclear medicine and the role of these areas of practice. 2. Review the history of nuclear pharmacy practice. 3. Understand concepts relating to the medical use of ionizing radiation. 4. Identify methods used to monitor and minimize radiation exposure. 5. Recognize basic principles of radiation biology and how radiation interacts with humans. 6. Understand the role of radiation monitoring in nuclear pharmacy practice. 7. Review basic regulatory oversight for nuclear pharmacy and PET pharmacy practice. 8. Describe the role of nuclear pharmacists in various practice settings. Credits: 1.00

NUPH 49200 - Basics Of Nuclear Pharmacy Practice

Credit Hours: 1.00. This course emphasizes some of the daily tasks performed by nuclear pharmacists when working in the nuclear pharmacy.

Learning Outcomes: 1. Understand the fundamentals of radiation and radiation safety. 2. Know the principles of instrumentation used in nuclear pharmacy and understand the use of these instruments as related to daily practice. 3. Understand the theoretical foundations of the profession of nuclear pharmacy. 4. Meld theory and abilities in the practice setting. 5. Develop a basic knowledge base to enable a student to practice the profession (ex. summer internships). Credits: 1.00

NUPH 49300 - Regulatory Considerations For Nuclear Pharmacy Practice

Credit Hours: 2.00. This is the second course in the nuclear pharmacy series, with an emphasis on the regulatory oversight of nuclear pharmacy practice. While the previous course dealt with radiation safety issues, this course outlines how these safety skills relate to the regulatory requirements set forth by the various regulatory agencies.

Learning Outcomes: 1. Provide a basic overview of the various regulatory agencies that oversee nuclear pharmacy practice. 2. Relate practical radiation safety skills and tasks to their regulatory requirements. 3. Utilize clinical reasoning skills to address practical related problems. Credits: 2.00

NUPH 49400 - Clinical Aspects Of Nuclear Pharmacy Practice

Credit Hours: 2.00. This course will be offered as a lecture course with some interactive discussion and problem solving applications. In addition, students will be required to complete several distance learning activities that relate to/enhance the materials that will be covered in the lecture period. This course is the final course in the NUPH series that can be used to count toward the 200 hours of didactic training required for Authorized Nuclear pharmacist (ANP) status.

Learning Outcomes: 1. Understand the principles of drug design, radiopharmaceutical chemistry, product compounding and clinical applications as they apply to the currently available radiopharmaceutical products. 2. Understand the differences between SPECT and PET radiopharmaceuticals. 3. Understand the role of nuclear medicine procedures in the diagnostic and therapeutic workup of patients with certain clinical conditions. Credits: 2.00

NUPH 49500 - Applied Nuclear Pharmacy

Credit Hours: 2.00. This is an elective course that consists of lecture, laboratory, and distance education components which will count as part of the 200 hours of didactic training required for Authorized Nuclear Pharmacist (ANP) status. This course focuses on the preparation, dispensing and clinical applications of radiopharmaceutical products.

Learning Outcomes: 1. Understand the preparation of a variety of radiopharmaceutical products. 2. Enhance skills in kit selection, product specific compounding requirements, radiochemical purity testing and dispensing of final doses for patient use. 3. Utilize practical pharmaceutical compounding skills including sterile product preparation guidelines as they apply to radiopharmaceutical preparation. 4. Identify clinical applications of products being prepared in the nuclear pharmacy laboratory. 5. Identify and problem solve clinical issues related to various radiopharmaceuticals. Credits: 2.00

NUPH 49600 - Case Studies In Clinical Nuclear Medicine

Credit Hours: 1.00 or 2.00. Introduction to the clinical applications of radiopharmaceutical drug products and the associated practice of nuclear medicine, through analysis of a series of current clinical case studies. Factors examined include: patient medical history, with emphasis on recent diagnostic procedures and pharmacotherapy; radiopharmaceutical selection, dosage, and preparation; possible contraindications for the nuclear medicine procedure and associated interventional agents; diagnostic findings; and the impact of study outcome on subsequent patient treatment. Permission of instructor required.

Credits: 1.00 or 2.00

NUPH 69000 - Special Problems

Credit Hours: 0.00 to 18.00. Individual investigations in the applications of radionuclides to research and nuclear pharmacy. Hours and credits to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

NUPH 69600 - Seminar In Nuclear Pharmacy

Credit Hours: 0.00 or 1.00. Selected topics in nuclear pharmacy, radiopharmaceutical chemistry, health physics, and radiation biology, presented by staff, students, and invited speakers.

Credits: 0.00 or 1.00

Nursing

NUR 10800 - Introduction To Nursing

Credit Hours: 1.00. Introduce students entering the nursing profession to foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements and responsibilities within the profession. Students are introduced to the rigor of the curriculum and begin to build a sense of community within the Purdue School of Nursing.

Learning Outcomes: 1. Explain the relationship between the Essentials of Baccalaureate Education for Professional Nursing Practice document and Purdue's baccalaureate nursing curriculum. 2. Describe the roles of the professional nurse in the healthcare delivery system. 3. Describe individuals, families, communities, and populations as consumers of nursing care. 4. Reflect upon personal and professional responsibilities in relation to the

nursing profession. 5. Communicate in oral and written form at a professional level. 6. Identify personal behaviors necessary for success in an academic and professional career. 7. Engage in student and/or nursing organizations as an aspect of professional growth and development. Credits: 1.00

NUR 10900 - Introduction To Nursing II

Credit Hours: 1.00. Using knowledge acquired in NUR 10800 students will examine the profession of nursing and their role and responsibilities within the profession. Topics to be discussed include informatics and technology, the importance of professional communication in oral and written form, the global image of nursing, wellness and self-care, and preparation for progression into the sophomore year. Permission of department required.

Learning Outcomes: 1. Demonstrate the ability to communicate in oral and written form at a professional level. 2. Explore the roles of the professional nurse in both domestic and global healthcare delivery systems. 3. Examine the role of social media and its impact on healthcare. 4. Identify components of effective and ineffective communication in the healthcare environment. 5. Discuss the use of informatics in documenting the management of patient care. 6. Identify skills and personal behaviors necessary for success in an academic and professional career. Credits: 1.00

NUR 21801 - Health Assessment And Essentials Of Nursing Practice I

Credit Hours: 5.00. Focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client centered safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients from the healthy to chronically ill populations. 2. Develop critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 3. Discuss the impact of evidence based nursing research in guiding practice. 4. Identify the effect of personal values and beliefs on professional practice. 5. Develop basic physical and psychosocial clinical assessment skills for the client across the lifespan, including interviewing techniques, and comprehensive history and physical exam. 6. Employ basic principles of documentation to describe clinical findings. 7. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 8. Use informatics appropriately in simulation and in the clinical setting. 9. Identify methods and resources for personal and professional growth. Credits: 5.00

NUR 21901 - Pathopharmacology I

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort and the pharmacotherapies utilized as treatment for alterations and disease states. This introductory knowledge provides the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe primary regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations in body structure and function affecting homeostasis; metabolic processes; immune response; circulation; renal elimination; fluid/electrolyte and acid/base balance; sensory perception and comfort. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and comfort. 4. Idenify major drug classifications and pharmacokinetic processes utilized in the

prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contraindications, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22001 - Essentials Of Nursing Practice II

Credit Hours: 5.00. Continues to expand on the professional nursing role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients in the clinical setting. 2. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 3. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 4. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 5. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 6. Identify client adaption and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 5.00

NUR 22101 - Pathopharmocology II

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function and the pharmacotherapies utilized as treatment for alterations and disease states. This course builds on the learning objectives from Pathopharmacology I to provide the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe the primary regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 4. Identify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contradictions, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into the overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22201 - Population Health

Credit Hours: 2.00. A comprehensive introduction to population health concepts and practices through examination of philosophy, purpose, functions, activities and tools. Multiple determinants (genetics, cultural, social, and behavioral factors) that influence population health and illness are explored including the contribution of these factors to health disparities. Population-focused initiatives for health promotion and disease prevention are examined within the context of local to global public health systems.

Learning Outcomes: 1. Describe the context and scope of public health from a historical and modern perspective. 2. Describe the methodology used by public health to define and address population health issues. 3.

Identify public health's interprofessional nature and the contributions of different disciplines to improving population health. 4. Describe the ethical, legal, organizational, financial, and structural aspects of the current US and selected global health care delivery systems. 5. Discuss the contribution that biostatistics, epidemiology, information technology, and evidence-based practice make in improving health and preventing, detecting and minimizing the impact of disease and injuries. 6. Explain how multiple determinants (genetics/genomics, social, behavioral, environmental factors) contribute to specific population health outcomes from a local to global perspective. 7. Describe the principles needed to understand population health issues including planning, implementing and evaluating interventions across the lifespan. 8. Identify public health's roles in addressing the needs of vulnerable populations and eliminating health disparities across the lifespan. Credits: 2.00

NUR 22301 - Foundations Of Research And Evidence-Based Practice (UCC: IL)

Credit Hours: 3.00. Students gain foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. Students learn the principles of research process and identify strengths and limitations of research articles in relation to EBP in nursing and healthcare.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently to Information Literacy Competency Standards for Higher Education. 3. Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical practice. 5. Examine economic, legal and ethical issues related to conducting research. Credits: 3.00

NUR 22401 - Nursing Practice Foundations I: Health Assessment

Credit Hours: 4.00. Designed for second degree students, this course focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical experience, learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client-centered, safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Develop beginning critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 2. Discuss the impact of evidence based nursing research in guiding practice. 3. Identify the effect of personal values and beliefs on professional practice. 4. Develop basic physical and psychosocial clinical assessment skills for the client across the lifespan including interviewing techniques, and comprehensive history and physical exam. 5. Employ basic principles of documentation to describe clinical findings. 6. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 7. Use informatics appropriately in simulation and in the clinical setting. 8. Identify methods and resources for personal and professional growth. Credits: 4.00

NUR 22501 - Nursing Practice Foundations II: Fundamentals

Credit Hours: 4.00. Designed for second degree students, this course continues to expand on the professional nurse role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients representing healthy to chronically ill populations. 2. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients

in the clinical setting. 3. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 4. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 5. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 6. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 7. Identify client adaptation and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 4.00

NUR 22601 - Topics In Nursing Research And Evidence-Based Practice

Credit Hours: 3.00. Introduces foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. The principles of research process and strengths and limitations of research articles in relation to EBP in nursing and healthcare are identified.

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently according to Information Literacy Competency Standards for Higher Education. 3. Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical research. 5. Examine economic, legal, and ethical issues related to conduction research. 6. Discuss the process of translating research evidence into practice. 7. Demonstrate the characteristics of an innovator that are necessary for EBP, which include leadership, a sense of inquiry, flexibility to change, awareness of self and of the environment, effective communication, critical thinking, lifelong learning, and professionalism. Credits: 3.00

NUR 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 31401 - Health Alterations In Adults I

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of well-being as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in tissue integrity related to surgical interventions, cellular division, reproductive function, elimination, nutrition and sensory function that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision-making when caring for diverse populations of adults experiencing selected illnesses. 2. Utilize

the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related (including gerontologic) pathophysiology when providing care to diverse populations of adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence- based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to client, client's family, and other members of the healthcare team. 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes. 10. Utilize patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31501 - Nursing Of Childbearing Families

Credit Hours: 5.00. Promotes the development of nursing skills when caring for families and their newborns during uncomplicated and/or complicated childbearing experiences within a variety of clinical settings. Emphasizes the study and application of the nursing process, integrating evidence based practice while meeting the health and safety needs of diverse childbearing families.

Learning Outcomes: 1. Integrate theory and evidence to guide nursing practice and clinical decision-making throughout the care of childbearing families. 2. Incorporate childbearing family participation throughout health promotion, disease prevention, and risk reduction processes. 3. Address the childbearing family's developmental, physiologic, and psychological needs. 4. Assess ethical, legal, and sociocultural influences on resource utilization and compassionate maternal-child health care delivery. 5. Design targeted plans of care via a partnership with childbearing families, intra- and interprofessional teams, professional organizations, and institutions. 6. Utilize information technology to enhance learning, practice, and communication. Credits: 5.00

NUR 31601 - Integration Seminar I

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and obstetrical diagnoses. Through the course activities the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medical-surgical and obstetrical populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

NUR 31701 - Health Alterations In Adults II

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of wellbeing as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in health related to oxygenation, circulatory dynamics, endocrine regulation, neurological regulation, immune regulation and musculoskeletal dynamics that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to

inform practice and influence clinical decision making when caring for diverse populations of adults experiencing selected illnesses. 2. Demonstrate appropriate use of the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related pathophysiology when providing care to adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence-based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to the client, client's family, and other members of the health care team 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes that emphasize client safety and evidence-based practice. 10. Use patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31801 - Psychiatric And Mental Health Nursing

Credit Hours: 5.00. Focuses on providing nursing care that supports mental health and the care of persons with mental illness while providing a conceptual integration of the nursing process, theories, and research from the biopsychosocial sciences and humanities. Demonstrates the relevance of psychiatric-mental health nursing concepts to all areas of professional practice.

Learning Outcomes: 1. Examine the effects of myths, stereotypes, stigma, values, beliefs and culture on the practice of psychiatric nursing. 2. Compare past, current, and projected systems in delivery of evidence based mental health care and its social implications. 3. Identify legal and ethical implications involved in the practice of psychiatric mental health nursing. 4. Utilize the nursing process in the phases ofthe therapeutic nurse-client relationship to delineate the complex needs of clients with psychiatric disorders.. 5. Identify the principles of communication and therapeutic relationships in the care of clients with psychiatric disorders. 6. Determine specific nursing care interventions for acute and serious behavioral health issues that demonstrate developmentally and culturally appropriate strategies. 7. Utilize the ANA Standards of Psychiatric and Mental Health Nursing Practice as a basis for safe and competent care. 8. Incorporate theory, research and evidence from the psychobiological sciences, biological sciences, and humanities into an evidenced based practice approach to psychiatric nursing care. 9. Utilize client care technologies, information systems, and communication resources to access, organize and communicate information in a professional manner. 10. Establish therapeutic, collaborative relationships with members of the interdisciplinary treatment team. 11. Demonstrate personal and professional growth and skill development when providing evidence-based nursing care to clients with psychiatric disorders. Credits: 5.00

NUR 31901 - Integration Seminar II

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and psychiatric diagnoses. Through the course activities, the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes

in one's nursing practice with medically and psychologically unstable populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

NUR 33001 - Nursing Peer Mentors

Credit Hours: 2.00. Peer mentorship role to assist students entering the nursing profession to develop an understanding of the foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements, and responsibilities within the profession. To help students acclimate to college and begin to build a sense of campus community and community within the Purdue School of Nursing. Important attributes of a peer mentor are the desire to develop and help others, an openness to spending time with diverse individuals who may not share a common background, values, or goals, and a willingness to share failures and personal experiences to provide valuable opportunities for learning. A peer mentor should have a growth mindset and learning attitude, skill in developing others through active listening, asking open-ended questions, self-reflection, and providing feedback, and the ability to commit time and energy to the mentoring relationship. Permission of department required.

Learning Outcomes: 1. Actively create supportive, intentional relationships with mentees based on mutual trust, respect, and accountability that create a safe space for mentees to work towards personal learning goals. 2. Provide objective guidance and feedback to mentees based on personal experiences navigating the University and School of Nursing environment. 3. Facilitate reflective thinking by asking thought-provoking questions that seek deeper meaning and help the mentee become more self-aware of strength and growth opportunities. 4. Serve as a role model for personal growth and learning by employing practices of goal setting, seeking feedback, and reflection for one's own development during the mentoring relationship. Credits: 2.00

NUR 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry

principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39699 - Professional Practice Internship

Credit Hours: 0.00. Program coordinated by Nursing with cooperation of participating employers and the Office of Professional Practice. Students will submit summary reports and company evaluations related to the experience. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional nursing context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Incorporate knowledge of the nursing profession and practice, basic nursing principles, and principles and practice of ethical responsibilities in professional work. Credits: 0.00

NUR 39801 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University. Permission of department required.

Learning Outcomes: 1. Course outcomes will vary depending upon specific study abroad experience in which the student participates. Credits: 1.00 to 6.00

NUR 39900 - Special Topics

Credit Hours: 0.00 to 3.00. Hours, credit, and subject matter to be arranged by faculty.

Credits: 0.00 to 3.00

NUR 41001 - Issues In Professional Nursing

Credit Hours: 2.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues and key trends surrounding social determinants of health policy and economics, regulatory agencies, political action, cultural diversity, practice competency, nursing informatics and ethics are used as a framework. Permission of department required.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Evaluate historical components and current nursing practice that impact healthcare systems. 3. Demonstrate understanding of the impact of local, state, national and global regulations on healthcare trends and healthcare policy. 4. Evaluate the impact that economic, political, cultural, and social concerns have on the role of professional nursing and the healthcare delivery system. 5. Articulate the value of pursuing practice excellence, life-long learning, engagement, self care, and resilience in professional nursing practice. 6. Utilize inquiry, analysis, information literacy, nursing informatics to address practice issues, ambiguity, and unpredictability in the healthcare systems. Credits: 2.00

NUR 41401 - Pediatric Nursing

Credit Hours: 5.00. Explores factors influencing the health and wellness of children and families. Students will apply principles, concepts and research from the health and human sciences to the care of children and families across the health-illness continuum. A structured clinical component focuses on clinical reasoning and evidence based practice. Students will provide family centered care to healthy, at risk and ill children across a variety of clinical settings.

Learning Outcomes: 1. Integrate family theories; growth and development; genomics; environmental and psychosocial factors in the care of children across the health-illness continuum. 2. Integrate nursing concepts into evidence based nursing practice for children and families across a variety of health care settings. 3. Apply knowledge of information technologies to improve health outcomes of children and families. 4. Evaluate environmental and psychosocial risk factors for children and families. 5. Adapt nursing care to families, recognizing their diverse needs, ethnicity, culture, and values. 6. Evaluate the collaborative role of the nurse with other health care disciplines in the provision of comprehensive nursing care for healthy, at risk, and ill children. 7. Demonstrate a spirit of inquiry, responsibility and accountability within legal, ethical, professional and organizational parameters. Credits: 5.00

NUR 41501 - Public Health Nursing

Credit Hours: 5.00. Utilize health promotion, maintenance,

education and disease prevention in coordinating and providing population-focused care to individuals, families and aggregates in the community. A variety of clinical settings are used to offer students a broad, comprehensive perspective of public health nursing, a field that synthesizes content from nursing, social and public health sciences. Collaboration with the community and implementation of population-focused interventions foster critical thinking and independent decision making in the delivery of nursing care.

Learning Outcomes: 1. Synthesize concepts, theories, knowledge and practice from nursing, social and public health sciences. 2. Examine the structure, function, and influence of historical, political, social, environmental, cultural, and ethical factors to the health of individuals, families, and communities. 3. Collaborate with interdisciplinary healthcare and human service providers to address the health needs of individuals, families, and communities. 4. Utilize principles, concepts, models, theories and research to guide culturally sensitive nursing care and public health practice of individuals, families, and communities. 5. Explore the delivery of public health nursing services to diverse and vulnerable populations. 6. Formulate client teaching strategies that address the principles of disease prevention and health promotion to clients across the lifespan. 7. Evaluate interventions implemented using community and family resources to address mutually identified health needs of clients. 8. Use principles of caseload management, in the delivery of safe, quality public health nursing services that reflect legal, ethical, and professional standards. 9. Apply national health objectives in planning interventions to meet the individual, system, and community level needs of diverse populations. 10.Utilize health care technology to improve health outcomes of individuals, families, and communities. 11.Integrate the role of advocacy into the delivery of care to individuals, families, and communities. Credits: 5.00

NUR 41701 - Leadership In Nursing

Credit Hours: 3.00. Studies the components of nursing leadership and management functions with an emphasis on critical thinking, problem solving, communication, and team building within the context of experiential problem-based group projects. This course will provide specific practice and evaluation of strategic and financial planning, conflict management, delegation, and complex change. Competencies to be gained, at a novice level, include professional communication, sound ethical and legal judgments within personal and organizational frameworks, leadership skills in the management and evaluation of others, and an understanding of the drivers of healthcare change and finances.

Learning Outcomes: 1. Synthesize concepts of nursing leadership and management in relation to the role of the professional nurse, nurse leader, and manager in promoting safe and quality care. 2. Organize a quality improvement project by utilizing project management strategies, quality improvement principles, and evidence-based practices to promote system changes in healthcare delivery. 3. Utilize concepts of professional communication, delegation, and evaluation of healthcare team members with an awareness of ethical, professional, social, and legal issues implicit to nursing leadership and management. 4. Describes economic, policy, social, and organizational factors that influence the professional nurse and healthcare systems. 5. Evaluate the impact of professional and unprofessional behaviors on healthcare delivery and professional interactions and presentations through knowledge of nursing standards of excellence. Credits: 3.00

NUR 41901 - Professional Nursing: Evolution As A Clinician And Leader

Credit Hours: 3.00. Incorporate the use of critical thinking, clinical reasoning, and active learning in analyzing contemporary issues related to professional nursing practice and obtaining professional nursing licensure. Issues surrounding political action, socio-legal concerns, cultural diversity and ethics in nursing practice are used as a framework.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Articulate the

value of pursuing practice excellence, life-long learning, and engagement in professional nursing practice including membership in professional organization, completion of continuing education, and specialty certifications. 3. Integrate principles of evidence-based practice, ethical decision-making, inter-professional communication, and advocacy to answer complex questions related to the practice setting. 4. Evaluate the impact of local, state, national and global health policy on the healthcare system. 5. Differentiate the professional nurse's role in health policy development and implementation. 6. Apply effective study habits and test taking strategies to enhance performance on the NCLEX-RN exam. Credits: 3.00

NUR 42001 - Transition To Professional Nursing Practice

Credit Hours: 4.00. This course challenges students to use critical thinking and clinical reasoning to identify, prioritize and evaluate nursing interventions for clients with complex healthcare issues. Students interact with members of the healthcare team and clinical faculty to practice effective leadership, delegation and supervision of nursing students in clinical environments.

Learning Outcomes: 1. Apply sound clinical judgment, professional behavior, communication, collaboration and integration of best practice in clinical settings. Demonstrate/apply professional behavior, communication, collaboration and sound clinical judgment by integrating best practice in clinical settings. 2. Utilize the nursing process when caring for clients with complex healthcare needs. 3. Articulate the value of pursuing practice excellence, life-long learning, patient advocacy and engagement in professional nursing practice. 4. Demonstrate effective leadership, delegation and supervision when collaborating with members of the healthcare team. 5. Assume personal responsibility for professional growth. 6. Analyze system barriers that effect quality healthcare delivery in patients affected by complex conditions. Credits: 4.00

NUR 43001 - NCLEX Review

Credit Hours: 2.00. The NCLEX-Prep is a pre-graduation comprehensive review of nursing content implemented in the senior year. The course is utilized as supplemental to assist with overall content review. Students will use their ATI account to access the content and will be assigned an ATI educator. The course is used to assist students to prepare for the ATI Comprehensive Predictor (Program Exit Exam), and NCLEX (National Council Licensure Examination).

Learning Outcomes: 1. Demonstrate an increased understanding of nursing content related to NCLEX. 2. Develop a study base for post-graduate RN content review. 3. Improve test-taking strategies specifically for NCLEX. 4. Increase individual awareness of content deficits. 5. Recognize the need for continued preparation after graduation. Credits: 2.00

NUR 50000 - Theoretical Constructs In Nursing

Credit Hours: 3.00. This course examines the integration of theory/conceptual relationships in the development of nursing knowledge. Students explore ways in which nurses in advanced practice incorporate theoretical knowledge in the implementation of the advanced practice in nursing role. Students analyze the clinical relevance of mid-range and practice theories. Students examine the relationship of theoretical constructs to research and praxis through concept analysis, theory evaluation, and discussion of the application of theory to practice. This course examines ways in which theoretical thought is embedded in evidence-based nursing practice.

Credits: 3.00

NUR 50100 - Foundations Of Advanced Practice In Nursing

Credit Hours: 2.00. This course builds on the knowledge and experiences that students possess when beginning their advanced practice in nursing education. Students explore their assumptions about advanced practice in nursing, its historical context and definitions of the various advanced practice roles, conceptual underpinnings and role competencies. Students develop an appreciation for how evidence based practice influences advanced practice in nursing. They develop skills that include using information communication technologies, identifying problems, posing questions that lead to evidence sources, searching and differentiating among various sources and types of evidence.

Credits: 2.00

NUR 50200 - Pharmacotherapeutics For Advanced Practice Nursing

Credit Hours: 3.00. Course includes pharmacodynamics, pharmacokinetics, and pharmacotherapeutics of broad categories of pharmacologic agents. Students apply these principles and also consider the role of best available evidence and patient preferences as a basis for managing pharmacologic regimens. Students review regulations relevant to prescriptive authority for advanced practice nurses.

Credits: 3.00

NUR 50300 - Advanced Health Assessment

Credit Hours: 3.00 (West Lafayette, Fort Wayne); 4.00 (Calumet). Students develop advanced, evidence-based health assessment skills that build on their current knowledge and abilities. Major concepts of the course include comprehensive and focused history taking and advanced physical assessment. Students relate underlying physiologic mechanisms with normal and abnormal findings from the history and physical assessment. The course provides a basis for designing a culturally sensitive and evidence-based plan of care within the situational context of the individual.

Credits: 3.00 to 4.00

NUR 50500 - Sociocultural Influences On Health

Credit Hours: 2.00 to 3.00. This course examines the influences of cultural and sub-cultural variables on health and health care delivery. Students analyze and apply appropriate theoretical perspectives and current research to design evidence-based strategies that ground clinical decision making in advanced practice nursing. Students use the National Standards on Culturally and Linguistically Appropriate Services (CLAS) as the basis for providing culturally competent care. As students apply principles of culturally competent communication they are encouraged to develop insight and an attitude of resistance to stereotyping. Students gain an understanding of the context of vulnerable and marginalized populations through the analysis of social, cultural, and economic influences that impact health and illness.

Credits: 2.00 to 3.00

NUR 50700 - Physiologic Concepts For Advanced Practice Nursing

Credit Hours: 4.00. Students examine the principles of physiologic function at all levels of organization from cells to organ systems as they affect human function. The course uses homeostasis as a model to account for regulatory and compensatory functions in health. Students develop the necessary theoretical and empirical foundation for subsequent understanding of the diagnosis and management of human responses to disease and non-disease based etiologies.

Credits: 4.00

NUR 51000 - Research And Evidence Based Nursing Practice

Credit Hours: 3.00. This course focuses on both the generation of primary evidence through an in-depth examination of the research process and its critical use in evidence based practice. Students systematically search, appraise and interpret the best available evidence that informs advanced practice nursing and health related disciplines.

Credits: 3.00

NUR 51100 - Health Promotion For Advanced Practice In Nursing

Credit Hours: 2.00 to 3.00. Students analyze health promotion/disease prevention, and health education frameworks combined with best available evidence as a foundation for advanced practice in nursing. Students promote the health of diverse client populations by incorporating the Healthy People goals, clinical practice guidelines, risk assessment, epidemiological data and evidence based screening tools into nursing practice. In collaboration with selected clients and/or families, students implement health coaching/teaching through the integration of family, health promotion and health literacy theories.

Credits: 2.00 to 3.00

NUR 51200 - Clinical Applications In Pharmacotherapeutics

Credit Hours: 1.00. This course applies information from NUR 50200 to the care of clients through the use of case studies. Emphasis is placed on incorporating information from pharmacology, physiology, and physical assessment.

Credits: 1.00

NUR 51300 - Health Promotion In Special Populations

Credit Hours: 3.00. Examination of wellness and health promotion issues unique to three special populations: clients in rural areas, women, and adolescents. Legal and ethical issues related to practice with special populations is addressed. Evidence-based standards will be utilized.

Credits: 3.00

NUR 51400 - Clinical Application In Pharmacotherapeutics For Pediatric Nurse Practitioners

Credit Hours: 1.00. Applies information from NUR 50200 , Pharmacotherapeutics in Primary Care, to the care of infants, children, and adolescents through the use of case studies. Emphasis is placed on incorporating information from pharmacology, physiology, and physical assessment.

Credits: 1.00

NUR 51500 - Health Promotion In Pediatric Populations

Credit Hours: 3.00. Examines wellness and health promotion issues unique to children from birth through adolescence. Concepts of growth and development are integrated into health promotion activities. Legal and ethical issues related to practice with children and adolescents are addressed. Evidence-based practice standards will be utilized.

Credits: 3.00

NUR 51601 - Clinical Applications In

Pharmacology Family Nurse Practitioner

Credit Hours: 1.00. This course applies information from Pharmacotherapeutics in primary care (NUR 50200) to the care of infants, children, adolescents and adults through the use of case studies. Emphasis is on incorporating from pharmacology, physiology and physical assessment.

Credits: 1.00

NUR 51700 - Doctor Of Nursing Project Seminar, Doctor Of Nursing Practice

Credit Hours: 0.00. This seminar will allow the student to begin contemplating and organizing their thoughts in developing the DNP project. In this seminar, the student will be introduced to the requirements for the DNP project and begin to cultivate feasible project questions that have an impact in clinical care, obtain feedback and network with peers.

Credits: 0.00

NUR 52200 - Psychopharmacology Across The Lifespan

Credit Hours: 2.00. Signs and symptoms of all major psychiatric disorders and the medications used to treat them across the life-span are discussed. Classes of psychiatric medications are considered; including indications, therapeutic uses, neurophysiological mechanism of action and side effects.

Credits: 2.00

NUR 52500 - Informatics In Nursing

Credit Hours: 3.00. Integrates nursing science with computer technology and information science to identify, gather, and manage information. Emphasis on technology based health applications with support clinical, administrative, research, and educational decision making enhancing the efficacy of nursing endeavors.

Credits: 3.00

NUR 52800 - Acute Illness: Pediatric Health Practice

Credit Hours: 3.00. A developmentally organized course to provide knowledge and experience to care for acute episodic illnesses of children and adolescents in primary healthcare settings. Examines pathophysiological alterations and clinical management. Students will synthesize knowledge of developmental, physiological, psychological, and sociocultural factors in the assessment and management of acute illness. The focus is on differential diagnosis, clinical management, and child and family education within the context of primary care. Health promotion models, and biopsychosocial, developmental, and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed.

Credits: 3.00

NUR 52900 - Acute Illness: Pediatric Health Preceptorship

Credit Hours: 3.00. Assists students to develop and broaden clinical judgment and skills. Content includes the study of primary health care of children and adolescents with acute conditions and the impact of those conditions on family members. The focus is on growth and development, assessment, differential diagnosis, clinical decision making, management, and patient and family education within the context of primary care. Professional issues, collaboration and scope of practice, and advocacy are emphasized. Clinical seminars focus on variations of child health in the context of health promotion and advanced assessment.

Credits: 3.00

NUR 53200 - Acute Illness: Adult Health Practice

Credit Hours: 3.00. Examination of pathophysiological alterations and clinical management of acute conditions in adolescents and adults. Students will synthesize knowledge of physiological, psychological, and sociocultural factors in the assessment and management of acute illness. Focus is on the differential diagnosis, clinical management, patient and family education within the context of primary care. Health promotion models, as well as biopsychosocial and cultural theories are integrated throughout the course. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions.

Credits: 3.00

NUR 53300 - Acute Illness: Adult Health Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of adolescents and adults with acute conditions and the impact of those conditions on family members. Focus is on assessment, deferential diagnosis, clinical decision making and management, as well as patient and family education within the context of primary care. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions. Professional issues, collaboration and scope of practice, and advocacy are emphasized.

Credits: 3.00

NUR 53800 - Psychiatric Mental Health Nurse Practitioner Roles And Psychotherapeutic Framework And Modalities

Credit Hours: 2.00. Scope and standards of practice for psychiatric mental health advanced practice nursing is set forth in this course. Content includes Psychiatric Mental Health Nurse Practitioner (PMHNP) functioning based on the state practice act as well as additional functions of the PMHNP including providing integrative therapy interventions, community interventions, case management, consultation and liaison services, clinical supervision, and policy development. Students will explore principles of evidence-based psychotherapy interventions including individual and group therapy, family and play therapy, and demonstrate competency in two forms of psychotherapeutic interventions.

Credits: 2.00

NUR 53900 - Psychiatric Mental Health Nurse Practitioner Roles And Therapeutic Modalities Preceptorship

Credit Hours: 2.00. Psychotherapeutic frameworks and modalities are analyzed within the role of the PMHNP. Students participate in the application of individual and group psychotherapeutic interventions in a clinical setting by a PMHNP or therapist/clinical social worker.

Credits: 2.00

NUR 54200 - Chronic And Commonly Recurring Conditions: Adult Health Practice

Credit Hours: 3.00. Examination of pathophysiological alterations and clinical management of chronic conditions and illnesses in adolescents and adults. Students will synthesize knowledge of physiological, psychological, and sociocultural factors in the assessment and management of chronic conditions. Focus is on the differential diagnosis, clinical management, and patient and family education within the context of primary care. Chronic illness and health promotion models, as well as biopsychosocial and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed. The adult nurse practitioner role is analyzed in the context of caring for persons with acute conditions.

Credits: 3.00

NUR 54300 - Chronic Illness: Adult Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of chronic illness and recurring conditions in adolescents and adults and the impact of those conditions on family members. Focus is on the differential diagnosis, clinical decision making and management, as well as patient and family education within the context of primary care. The adult nurse practitioner role is analyzed in the context of caring for persons with chronic conditions. Professional issues, collaboration, scope of practice and advocacy are emphasized.

Credits: 3.00

NUR 54400 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan

Credit Hours: 3.00. Evidence-based treatment methods including principals of psychopharmacology and psychotherapeutic modalities across the life span are examined, evaluated and implemented in clinical practice. Factors, such as culture, neurobiology, developmental level and gender that impact disease expression, therapeutic approaches and treatment response are explored. Mental health assessment including standardized psychiatric assessment tools, including Mental Status Exam, Mood Disorder Questionnaire, Patient Health Questionnaire (PHQ-9), Columbia-Suicide Severity Rating Scale (C-SSRS), DSM V and ICD is presented. In addition, developmental and functional level, and cultural influences are included. Substance use assessment skills and substance use interventions will be examined including how substance use impacts psychiatric symptom expression and response to treatment. Legal and ethical implications of care will be discussed.

Credits: 3.00

NUR 54500 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan I Preceptorship

Credit Hours: 3.00. Students engage in the PMHNP role in a clinical setting under the supervision of a Psychiatric Mental Health Nurse Practitioner (PMHNP) or MD. Students implement and evaluate mental health assessment skills, evidenced based treatment interventions and evaluate effectiveness integrating principals of neurobiology, culture, developmental and functional abilities.

Credits: 3.00

NUR 55200 - Chronic Illness And Commonly Recurring Conditions: Pediatric Health Practice

Credit Hours: 3.00. Examines pathophysiological alterations and clinical management of chronic conditions and illnesses in children and adolescents. Students will synthesize knowledge of developmental, physiological, psychological, and sociocultural factors in the assessment and management of chronic conditions. The focus is on the differential diagnosis, clinical management, and child and family education within the context of primary health care. Chronic illness and health promotion models, as well as biopsychosocial, developmental, and cultural theories are integrated throughout the course. Individual, family, and group intervention strategies are addressed.

Credits: 3.00

NUR 55300 - Chronic Illness And Commonly Recurring Conditions: Pediatric Health Preceptorship

Credit Hours: 3.00. Assists students to develop and broaden clinical judgment and skills. Content includes the study of chronic illness and recurring conditions in children and adolescents and the impact of those conditions on family members. The focus is on growth and development, differential diagnosis, clinical decision making and management, and child and family education within the context of primary care. The pediatric nurse practitioner role is analyzed in the context of caring for children with chronic conditions. Professional issues, collaboration, scope of practice, and advocacy are emphasized.

Credits: 3.00

NUR 57600 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan II

Credit Hours: 3.00. The practice of Psychiatric Mental Health Nurse Practitioner (PMHNP) is further expanded to include identification and management of the complex patient across the life span. Explore how co-morbid health conditions impact psychiatric disorders and treatment response. Differentiate

psychiatric diagnoses, personality disorders, social, family and cultural influences, developmental disorders and how these factors impact treatment. Apply a variety of approaches including inter-and intra-professional resources, and psychopharmacological interventions to the management of complex patients. Legal and ethical implications of care are discussed.

Credits: 3.00

NUR 57700 - Advanced Practice Psychiatric Mental Health Nursing Across The Lifespan II Preceptorship

Credit Hours: 3.00. Students engage in the Psychiatric Mental Health Nurse Practitioner (PMHNP) role in a clinical setting under the supervision of a PMHNP or Medical Doctor. Students continue to develop and broaden clinical judgment, psychiatric assessment skills, and evidenced-based treatment interventions while considering cultural influences, and developmental and functional abilities. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of mental health.

Credits: 3.00

NUR 59800 - Master's Capstone

Credit Hours: 1.00 or 3.00. Students apply research principles through problem identification, proposal development, implementation, and evaluation of a clinical problem. Students synthesize principles of health assessment and advanced practice nursing through a clinical research project. The project may be an evaluation study or part of an ongoing faculty research project.

Credits: 1.00 or 3.00

NUR 59900 - Special Topics/Independent Study In Nursing

Credit Hours: 0.00 to 6.00 (West Lafayette, Calumet) 1.00 to 6.00 (Fort Wayne). Special topics in nursing are critically examined. Hours, credit, and subject matter are determined by the staff. Permission of instructor required.

Credits: 0.00 to 6.00

NUR 60400 - PhD Seminar

Credit Hours: 0.00. This seminar is taken by Ph.D. nursing students each semester to integrate themselves to the academic and professional roles of the Ph.D. prepared nurse. This seminar will facilitate students to share their research ideas and progress through networking and collegial discourse. It also provides a low-stake forum where students can give and receive feedback on each other's research. Seminar goals include improving students' presentation and writing skills, teaching how to give constructive criticism, and advising on the academic and professional job market.

Credits: 0.00

NUR 61100 - Primary Care Of The Young Family

Credit Hours: 3.00. Prepares family nurse practitioner students to assume responsibility for the coordination and delivery of culturally appropriate health services to childbearing and childrearing families. Students apply theory and research to the management of pregnancy, well-child care, stable chronic conditions, and acute episodic illnesses commonly encountered in primary care settings. The course emphasizes a sound conceptual basis for practice and an appreciation for evidence-based care. Students continue to integrate health promotion and health maintenance into the primary care of young families.

Credits: 3.00

NUR 61300 - Primary Care Of The Young Family Practicum

Credit Hours: 3.00. Students progress in their ability to master the competencies of the family nurse practitioner, using critical thinking and diagnostic reasoning skills. Students apply knowledge of clinical research, pharmacology, physiology, and conceptual frameworks to the primary care of childbearing and childrearing clients and families. Prerequisite: NUR 50000 , NUR 51100 .

Credits: 3.00

NUR 61500 - Primary Care Of The Young Family Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of the young family with acute and chronic conditions, and the impact of those conditions on family members. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. The Family Nurse Practitioner role is analyzed in the context of caring for the young family with acute and chronic conditions. Professional issues, collaboration and scope of practice, advocacy are emphasized. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 61100.

Credits: 3.00

NUR 62200 - Primary Care Of The Aging Family

Credit Hours: 3.00. Prepares family nurse practitioner students to assume responsibility for the coordination and delivery of culturally appropriate health services to middle-aged and older families. Students learn to manage stable chronic conditions and acute episodic illnesses commonly encountered in primary care settings. The course emphasizes the conceptual basis for practice and an appreciation for evidence-based care. Students continue to integrate health promotion and health maintenance into the primary care of older clients and their families.

Credits: 3.00

NUR 62300 - Primary Care Of The Aging Family Practicum

Credit Hours: 3.00. Students progress in their ability to master the competencies of the family nurse practitioner, using critical thinking and diagnostic reasoning skills. Students apply knowledge of clinical research, pharmacology, physiology, and

conceptual frameworks to the primary care of middle-aged and older clients and families. Prerequisite: NUR 61300 .

Credits: 3.00

NUR 62400 - Evidence-Based Practice

Credit Hours: 3.00. This course focuses on discovery and utilization of evidence-based care to produce the best outcomes for patients. The student develops a problem statement, performs a comprehensive literature search, and critically evaluates the evidence to determine best practice and formulate recommendations. The implementation of evidence-based practice (EBP) practical strategies, and analysis of components of EBP are examined throughout the course. Prerequisite: and either an undergraduate or graduate statistics course within the last five years. is recommended.

Credits: 3.00

NUR 62500 - History, Ethics, And Innovations In Health-Care Delivery Systems

Credit Hours: 3.00. Broadens and refines the student's view of the current health-care delivery system by providing an analysis from an historical perspective, of the forces that have shaped the system, including scientific discoveries, technological advances, social justice issues and the development of health professions and institutions. Nursing knowledge is influenced by these multiple factors; thus, the course provides students with tools to lead others in meeting the many challenges the health-care system brings. A chronological and topical format is used, which investigates policy and societal trends affecting health care, the nursing and medical professions, and professional practice. Changes in the roles of health-care providers and consumers are assessed from economic, social, organizational, political, ethical, legal, and technological perspectives.

Credits: 3.00

NUR 62600 - Applied Biostatistics For Outcome Evaluation

Credit Hours: 3.00. This course applied biostatistical methods commonly used in epidemiologic research to large data sets. Students learn to use statistical software to compute descriptive, bivariate, and multivariate statistics. Students translate statistical findings into conclusions relevant to the delivery of health care. Prerequisites: NUR 51000 and an undergraduate statistics course within the last five years.

Credits: 3.00

NUR 62700 - Primary Care Of The Aging Family Preceptorship

Credit Hours: 3.00. This course assists students to develop and broaden clinical judgment and skills. Content includes the study of primary care of the aging family with acute and chronic conditions and the impact of those conditions on family members. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. The Family Nurse Practitioner role is analyzed in the context of caring for the aging family with acute and chronic conditions. Professional issues, collaboration and scope of practice, advocacy are emphasized. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 62200.

Credits: 3.00

NUR 63100 - Family Nurse Practitioner Preceptorship Clinical Synthesis

Credit Hours: 2.00 to 3.00. This course assists students to integrate clinical knowledge and skills from prior course work when providing care to patients across the lifespan. The Family Nurse Practitioner role is analyzed in the context of caring for patients of all ages with acute and chronic conditions. Focus is on assessment, differential diagnosis, clinical decision-making and management, as well as patient and family education within the context of primary care. Prerequisites: NUR 50700 and NUR 50200 and NUR 50300 and NUR 51600 and NUR 51100 and NUR 51300. Co-requisite: NUR 61100 and NUR 61500 and NUR 62200 and NUR 62700.

Credits: 2.00 to 3.00

NUR 63200 - Health Policy: Local To Global

Credit Hours: 3.00. This course provides an overview of health policy not only in the context of health care policy, but also the broader concepts of policies which affect health outside of the realm of health care delivery. Social, ethical, cultural, economic, and political issues that affect the delivery of health and nursing services are critically analyzed. Roles of health care providers and consumers of health care services, as well as government and entrepreneurial interest are examined. Emphasis is placed on the impact of policy decisions and advocacy on professional nursing practice, health services, health equity.

Credits: 3.00

NUR 64000 - Human Factors In Healthcare Engineering

Credit Hours: 3.00. This course provides an introduction to human factors and ergonomics with a focus on healthcare applications. Fundamental principles will be introduced including the cognitive, physical, and social considerations that comprise human factors engineering. By course completion, students should be able to formulate studies of and/or evaluate the healthcare domain using these fundamentals principles of human factors engineering. Permission of instructor required. Prerequisites: NUR 51000 or equivalent and Undergraduate Statistics course within the past five years.

Learning Outcomes: 1. Identify human factors relevant to healthcare engineering. 2. Describe ergonomic concepts applicable to healthcare engineering. 3. Interpret research applicable to human factors and engineering. 4. Apply the fundamental physical, cognitive, and organizational principles to the healthcare

setting. Credits: 3.00

NUR 64100 - Principles Of Epidemiology

Credit Hours: 3.00. This course will provide the student with an introduction to epidemiology - the study of the distribution and determinants of health status. This course focuses on application of epidemiologic descriptive and analytic study as it relates to the distribution and determinants of health status. Topics will include the scope and history of epidemiology, basic quantitative methods and measures used in the field, and an introduction to the design and implementation of epidemiological studies. The course will also include the examination of cases from infectious disease, various forms of applied epidemiology (e.g., clinical and field epidemiology), surveillance/screening tests, types of epidemiological studies, concepts of disease transmission, and causality. Prerequisites: At least one undergraduate or graduate level statistics course. Permission of department required.

Credits: 3.00

NUR 64200 - Systems Approaches In Healthcare

Credit Hours: 3.00. Students are introduced to the fundamentals of systems engineering tools and approaches through hands-on problem-solving exercises. Systems Engineering tools/methods are applied to a clinical problem. Upon completion of this course, the participants will have had exposure to system engineering tools and approaches such as process mapping, bottle-neck analysis, queuing, lean engineering, simulation, optimization, dealing with uncertainty, what-if analysis, quality control and performance monitoring techniques. Permission of instructor required.

Learning Outcomes: 1. Discuss the applicability of systems engineering in a healthcare setting. 2. Develop familiarity with systems engineering tools and approaches. 3. Recognize opportunities for improvement where systems engineering can be employed. 4. Identify a specific clinical problem in a real-world setting that can be analyzed using systems engineering. 5. Conduct an in-depth analysis of a clinical problem using one of the tools/approaches presented. Credits: 3.00

NUR 65500 - Advanced Practice In Nursing Seminar

Credit Hours: 1.00. Students analyze movements and trends that influence advanced practice in nursing. Students dialogue with peers on issues related to advanced practice, nursing as a profession and discipline, healthcare and other related topics of interest. Prerequisite: NUR 60100, NUR 60300, NUR 61300 .

Credits: 1.00

NUR 65600 - Healthcare Organization, Policy And Economics

Credit Hours: 3.00. Students use theories to understand the various models that influence health care policy and organize health care delivery. Students investigate the processes of analyzing and forming health policy. The reciprocal relationship between evidence-based practice and health care policy is explored. Students examine health care economics from a micro and macro perspective and their impact on health care delivery systems. Students also explore issues such access to health care, health care quality, and cost. Prerequisite: NUR 50100 .

Credits: 3.00

NUR 65700 - FNP Practicum: Clinical Synthesis

Credit Hours: 2.00. This is the final clinical capstone course in a sequence of clinical courses designed to prepare graduate nursing students for FNP practice. Students synthesize and apply theoretical and empirical knowledge in primary-care settings with culturally diverse clients and families. Emphasis is given to the clinical management of a wider spectrum of clients and to the more complex, co-morbid conditions seen in family practice. Prerequisite: NUR 62300 .Corequisite: NUR 65500 , NUR 65600 .

Credits: 2.00

NUR 67300 - DNP Health Policy Residency

Credit Hours: 2.00. This residency course provides an opportunity for students to gain greater understanding of how public policy affects state, national, and international health-care delivery systems and resources. Students will interact with top policy makers at the local, state, national, and/or international level to explore the many forces, including political, economic, social, and technological, that influence current policy and the policy-making process. Prerequisite: NUR 65600.

Credits: 2.00

NUR 67400 - Quality Initiatives, Leadership And Advanced Practice Nursing

Credit Hours: 2.00. This course develops concepts of the guiding principles of quality, system and leadership initiatives in the Nurse Practitioner Role. The students explore principles and techniques of health coaching, interprofessional team work, delegation and prioritization that can be used in various healthcare settings. Potential quality initiatives will be identified and an improvement plan will be developed using various quality initiatives modalities in the healthcare system to improve quality care, safety and patient outcomes. Permission of department required.

Credits: 2.00

NUR 67500 - Role Transition And Synthesis

Credit Hours: 2.00. This course provides an integration of core, cognate, and specialty knowledge, with an emphasis on role transition and synthesis. Focuses on internal and external healthcare organizational factors at the local, state, national, and international levels. Seminars explore role issues, licensure, credentialing, finances, legislation, healthcare policy, legal

issues, ethics, cultural diversity, evidence-based practice, emerging trends in the management of acute and chronic conditions of adults, and independent and collaborative practice. Prerequisite: NUR 53200 , NUR 53300 . Corequisite: NUR 54200 , NUR 54300 , NUR 59800 .

Credits: 2.00

NUR 67800 - Healthcare Economics And Finance

Credit Hours: 3.00. This class will provide an introduction to the application of health economics principles as it relates to various health care systems, health care stakeholders and health policy issues in the United States. The course will explore the allocation and distribution of resources in the health care industry and the nature of the constantly changing relationship between health care and its major constituencies. Topics include the demand for health care, access to care, health care parity, health care reimbursement, economic evaluation, health care delivery models, and health care professionals' services.

Credits: 3.00

NUR 68000 - DNP Cognate Residency: Direct Practice/Systems Management I

Credit Hours: 3.00. This is the first in a series of two courses that applies knowledge and skill to improve healthcare outcomes in systems. The emphasis is the application of engineering principles to health care including human factors, systems analysis and design, and optimal use of information technology and simulation. Residency activities provide students with opportunities to participate in professional service activities, attend institutes and conferences to expand their area of research or clinical interest and/or develop significant scholarly pursuits. The focus is on creating change in the healthcare system through analysis, synthesis, critique, and application of evidence-based practice to support accessible high quality, safe, efficient, and effective health care. Prerequisites: NUR 68700 .

Credits: 3.00

NUR 68001 - PhD Cognate Residency

Credit Hours: 3.00. The PhD Cognate includes experiential learning that provides preliminary preparation for conducting the PhD Dissertation Proposal. The course will incorporate guidelines for ethical conduct of human studies, research-based studies, and evaluation of evidence-based literature for study design. The course will assist students to develop the project reflective of previous courses, evidence, project feasibility, theoretical frameworks, appropriate methodology and data analysis.

Learning Outcomes: 1. Use communication information technology to advance the scholarship of discovery as a nurse scientist. 2. Analyze emerging clinical patterns and problems within a practice setting, healthcare organization, community, or system. 3. Integrate nurse-led care strategies that meet current and future healthcare needs based on scientific findings in nursing, organizational, political, economic, and other related sciences. 4. Employ consultative and leadership skills with transdisciplinary teams to generate new knowledge to improve healthcare. 5. Evaluate existing knowledge to develop a research plan to guide the generation of new knowledge and ideas to improve health. 6. Interact with diverse organizational cultures and populations, such as stakeholders of a specific topic, health system leaders, research participants, and interdisciplinary team members. Credits: 3.00

NUR 68100 - DNP Cognate Residency: Direct Practice/Systems Management II

Credit Hours: 3.00. This is a second in a series of two courses that applies knowledge and skill to improve healthcare outcomes in systems. The emphasis is the advanced application of engineering principles to health care including human factors, systems analysis and design, and optimal use of information technology and simulation. Students assume a leadership role in the application process utilizing skills acquired in DNP Residency: Direct Practice Management I. Residency activities provide students with opportunities to participate in professional service activities, attend institutes and conferences to expand their area of research or clinical interest and/or develop significant scholarly pursuits. The focus is on providing leadership in creating change in the healthcare system through analysis, synthesis, critique, and application of evidence-based practice to support accessible high quality, safe, efficient, and effective health care and systematic evaluation of outcomes. Clinical sites for the DNP Residency may include collaboration with experts in local, state, national, and international healthcare agencies. Residency activities are selected by the student under the guidance of the faculty advisor and preceptor, DNP program director, and approved by the director of graduate programs in nursing. Prerequisite: NUR 68700 .

Credits: 3.00

NUR 68300 - DNP Cognate Residency: Public Health/Homeland Security Practice I

Credit Hours: 3.00. This is the first in a series of two courses that provides an opportunity to explore a public health topic of interest under the direction of a faculty member. The focus is on implementation of an evidence-based practice model and evaluation of their effectiveness in improving community health outcomes. Residency activities provide opportunities to utilize research and evidence-based practice to expand the knowledge base needed for the development, implementation, and

evaluation of programs to meet the public health needs of specific communities with risk assessment analysis. Students will assess, plan, and evaluate the preparedness and response to mass casualty disasters or other public health concerns. Prerequisites: NUR 51000 and NUR 63200 . Concurrent Prerequisites: NUR 62400 and NUR 62600 .

Credits: 3.00

NUR 68500 - DNP Cognate Residence: Public Health/Homeland Security Practice II

Credit Hours: 3.00. This is the second in a series of two courses that provides an opportunity to further explore a public health topic of interest under the direction of a faculty member. The focus is on implementation of an evidence-based practice model and advanced application of evaluation techniques in establishing their effectiveness in improving community health outcomes. Residency activities provide ongoing opportunities to refine research and evidence-based practice to expand the knowledge base needed for the development, implementation, and evaluation of programs to meet the public health needs of the community and systems of care. Emphasis is on providing leadership in incorporating assessment of health needs of specific communities with risk assessment analysis to implement models to improve community outcomes. Students assume a leadership role as they assess, plan, and evaluate the preparedness and response to mass casualty disasters or other public health concerns. Residency sites may be local, state, national, and/or international settings. Residency activities are selected by the students under the guidance of the faculty advisor and preceptor, DNP program director, and approved by the director of graduate programs in Nursing. Prerequisite: NUR 68300 .

Credits: 3.00

NUR 68700 - Doctor Of Nursing Practice (DNP) Practice Inquiry: Evidence-Based Practice I

Credit Hours: 3.00. This course is first of a two part series that provides the opportunity to develop, implement and evaluate an evidence-based inquiry project. Students gain competence in activities aimed at improving the healthcare practice and systems, outcome evaluations, translation of research into practice, participation in interdisciplinary and collaborative research, and dissemination of research results. Total clinic hours 192. Prerequisites: NUR 51000 , NUR 62600 , NUR 62400 and Cognate Residencies.

Credits: 3.00

NUR 68900 - Doctor Of Nursing Practice (DNP) Practice Inquiry: Evidence-Based Practice II

Credit Hours: 3.00. This course is second in the series that provides the opportunity to develop, implement and evaluate an evidence-based inquiry project. Students gain competence in activities aimed at improving the healthcare practice and systems, outcome evaluations, translation of research into practice, participation in interdisciplinary and collaborative research, and dissemination of research results. Total clinic hours 192. Prerequisites: NUR 68700 and Cognate Residencies.

Credits: 3.00

NUR 69010 - Research Seminar

Credit Hours: 1.00. The Seminar in Nursing Research is a discussion-based course intended to socialize the nursing student to the role of an independent scholar. Discussion concentrates upon current topics and issues in nursing research, with an emphasis on targeting the most supportive trajectories for individual student research foci. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 1.00

NUR 69020 - Leadership Seminar

Credit Hours: 1.00. The nurse as leader is deconstructed and reconstructed within the realms of scientific knowledge, theory, education, and healthcare delivery. Nurse leaders as members of collaborative teams and the influence of nursing intelligence on research teams are examined. Historical and societal influences affecting nurse leaders are examined, including media portrayals of nursing, transformational leadership, critical theory and feminist theory. Models of leadership are explored within the context of scientific work; the student is challenged to evaluate themselves as present and future leaders and members of nursing's academe. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 1.00

NUR 69030 - Communication Seminar

Credit Hours: 1.00. Original research findings, using a global framework, are analyzed. The effectiveness of communication to implement and evaluate programs designed to promote innovative change in healthcare is critiqued. Communication as a mechanism to develop pathways to ensure accuracy of scientific information transfer, and as a necessary component of policy and major public health events is appraised. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 1.00

NUR 69040 - Collaboration Seminar

Credit Hours: 1.00. Principles of collaboration to generate scientific knowledge, which is used to improve nursing and healthcare practice, education, policy, and outcomes, are discussed. Evidence generated from transdisciplinary teams is analyzed with attention given to specific professions contributions and roles. The specific role of the nurse scientist and the value of nursing intelligence within the context of

collaborative projects are discussed. Best practices in collaboration as exemplified by select research teams are presented. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 1.00

NUR 69050 - Implementing Theory In Healthcare Research

Credit Hours: 3.00. Historical and contemporary social, ethical, educational, scientific, and professional influences on the development of theoretical knowledge in nursing and health research are analyzed. Various methods of theory development are reviewed. Selected biological/physiological, behavioral, and health service theories that form the basis of nursing science are critically evaluated. Skills needed for theory analysis and theory development are emphasized. The role of theoretical knowledge to innovation in nursing science and healthcare is presented. Scientific bridges between theoretical frameworks and research methods are appraised. Selected nursing and healthcare scientists communicate the theoretical aspects of their programs of research with an emphasis on collaboration between disciplines. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 3.00

NUR 69060 - Innovative Care/Innovations In Healthcare Delivery

Credit Hours: 3.00. Historical, ethical, financial, and social influences on contemporary innovations in healthcare practices and delivery systems are analyzed. The genesis and diffusion of both micro- and macro-level innovations are reconstructed with the use of theories, organizational and transdisciplinary factors, and effective processes. Quality of care issues are synthesized utilizing innovations in care and health delivery systems as a framework. With innovative care and innovations in healthcare delivery systems as frameworks, quality of care issues are appraised. Selected exemplars of successful innovations, with an emphasis on strategies to evaluate dissemination and impact, are analyzed. Admission to the Nursing PhD program or instructor permission. This is one of the first courses taken by PhD students and may be open to graduate students outside the School of Nursing with permission from the instructor.

Credits: 3.00

NUR 69100 - Health Care Research Methods

Credit Hours: 3.00. This course advances knowledge and skill in quantitative research methods for health program evaluation, population health, healthcare quality improvement, and other healthcare research applications. Topics include design of experimental, quasi-experimental, and observational studies; primary data collection through surveys and other techniques; use of clinical, administrative, and other secondary data sources; and data analysis strategies appropriate to each design and type of data. The course addresses basic issues of sampling, measurement, and validity and reliability, as well as practical issues that arise in healthcare research.

Credits: 3.00

NUR 69200 - Applied Statistics In Healthcare Research

Credit Hours: 3.00. This course advances knowledge and skills in statistical approaches for analyzing complex healthcare data. It focuses on statistical analysis in contexts such as evidence-based practice, quality improvement, evaluation, and behavioral and population health. Topics include probability and descriptive statistics, nonparametric statistics, risk and odds ratios, sensitivity and specificity, logistic and multinomial regression, multiple linear regression, general linear models, survival and time-to-event analysis, and mixed effect modeling. The course will provide hands-on experience in statistical analysis of healthcare data. Prerequisites: Introductory course in statistics or biostatistics at the advanced undergraduate or graduate level.

Credits: 3.00

NUR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Nutrition Science

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10600 - Introduction To The Profession Of Dietetics

Credit Hours: 1.00. Overview of the dietetics profession, including standards, ethics, educational and employment opportunities, and professional credentialing. Spring semester offered only through distance learning.

Learning Outcomes: 1. Describe the profession of dietetics and future trends. 2. Recognize the education preparation needed to pursue careers in dietetics including different education models of becoming an entry-level dietitian. 3. Demonstrate knowledge of the supervised practice experience application process. 4.

Identify the credentialing of dietetic practitioners. 5. Recognize the major professional organizations in dietetics such as the Academy of Nutrition and Dietetics, state affiliates and district dietetic associations, and dietetic practice groups and the roles of each. 6. Demonstrate the ability to develop a professional development portfolio, resume, and cover letter. 7. Develop an understanding of professionalism related to dietetics including interviewing skills, professional etiquette, professional ethics, and professional practice standards. 8. Develop skills for planning a career in dietetics such as self-assessment, goal setting, networking, job search strategies, and timeline establishment. Credits: 1.00

NUTR 10700 - Introduction To Nutrition Science

Credit Hours: 1.00. An overview of professional opportunities for nutrition scientists. Introduces tools and resources available for becoming a nutrition scientist.

Learning Outcomes: 1. To identify and describe the current professional opportunities for nutrition scientists. 2. To comprehend the educational preparation necessary to pursue a career as a nutrition scientist. 3. To name and become knowledgeable about the functions of, and advantages of belonging to, major professional organizations in nutrition science such as the American Society of Nutrition. 4. To apply modern information technology to the problem of discovering scientifically valid nutrition science information. Credits: 1.00

NUTR 12500 - Food Safety Certification And Career Development

Credit Hours: 1.00. Training in ServSafe food safety certification program.

Learning Outcomes: 1. Select appropriate food safety and sanitation practices according to ServSafe guidelines. 2. Assess professional development using resume and student portfolio. Credits: 1.00

NUTR 20200 - Principles Of Food Preparation And Nutrition

Credit Hours: 4.00. Chemical, physical, microbiological, and nutritional principles of food preparation. Functions and sources of nutrients, their relationship to a healthy lifestyle and incorporating the benefits into marketing of foodservice.

Credits: 4.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 24500 - Rookie Experience In Sports Nutrition

Credit Hours: 1.00. For students without prior experience within the specialty dietetics practice of sports nutrition, this course provides traditional and experience-based learning in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Basics of sports nutrition are taught and students must pass an exam to progress to NUTR 34500 , Continuing Experience In Sports Nutrition. Written application and interview process required prior to instructor approval. Permission of Instructor required.

Learning Outcomes: 1. Describe healthful and performance-enhancing nutrition habits of student-athletes through active participation in project groups. 2. Recognize well-established scientific concepts, controversies, experts and resources in the field of sports nutrition. 3. Demonstrate work-enhancing skills/qualities like initiative, leadership, creativity, communication, cooperation, commitment and enthusiasm. 4. Apply information-literacy skills to accomplish goals of project groups. Credits: 1.00

NUTR 29700 - Introduction To Honors Research

Credit Hours: **2.00.** Introduces students to the design and implementation of an honors research project.

Learning Outcomes: 1. Identify the requirements for graduation with honors from Nutrition Science. 2. Define specific goals for

completion of their Honors Project. 3. Recognize the benefits of graduating with honors. 4. Discuss research currently being done in Nutrition Science. 5. Identify faculty interested in serving as mentors for students pursuing Honors Research Projects in Nutrition Science. 6. Locate and obtain research articles relevant to their research project. 7. Write appropriate citations for research articles. 8. Explain the scientific method and research ethics. Credits: 2.00

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate

understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 34000 - Field Experience In Nutrition, Fitness And Health

Credit Hours: 1.00 to 3.00. Field experience in NFH-related setting that provides an opportunity for the application of the classroom experience. For NFH majors only. The student secures his/her own field experience, which must be approved by the NFH program coordinator in order to receive academic credit.

Credits: 1.00 to 3.00

NUTR 34500 - Continuing Experience In Sports Nutrition

Credit Hours: 1.00. Traditional and experience-based learning within the specialty dietetics practice of sports nutrition in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Students must pass an exam given in NUTR 24500 , Rookie Experience In Sports Medicine, to enroll. Permission of Instructor required.

Learning Outcomes: 1. Describe healthful and performance-enhancing nutrition habits of student-athletes through active participation in project groups. 2. Recognize well-established scientific concepts, controversies, experts and resources in the field of sports nutrition. 3. Demonstrate work-enhancing skills/qualities like initiative, leadership, creativity, communication, cooperation, commitment and enthusiasm. 4. Apply information-literacy skills to accomplish goals of project groups. Credits: 1.00

NUTR 35000 - Dietetics Practicum In Quantity Food Production

Credit Hours: 1.00 to 3.00. Supervised on-the-job experience related to the food service management in health care facilities, schools, community programs, etc. Student is responsible for arrangement and approval of the experience through the supervising food service manager or dietitian and the course instructor. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge gained from coursework to actual work situations. 2. Develop skills related to management of food service. 3. Design and complete a project appropriate for a food service operation. Credits: 1.00 to 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 37500 - Foods And Nutrition Internship

Credit Hours: 1.00 to 4.00. Food science or nutrition professionally related work experience in industry, institutions, or business. Permission of instructor required.

Credits: 1.00 to 4.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven

research projects. Credits: 1.00 to 3.00

NUTR 39100 - Independent Study

Credit Hours: 1.00 to 3.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Increase knowledge base and/or application in nutrition science. Credits: 1.00 to 3.00

NUTR 39200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required.

Learning Outcomes: 1. Develop extensive knowledge base and/or application in nutrition science. Credits: 1.00 to 5.00

NUTR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for Honors College and Department of Nutrition Science Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 39800 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 3.00

NUTR 40000 - Executive In The Classroom

Credit Hours: 1.00. Lecture and discussion, featuring industrial and business executives in food-related areas. Emphasis is placed on careers in the food industry.

Credits: 1.00

NUTR 41100 - Dietetics Career Planning

Credit Hours: 1.00. This course will prepare students to successfully apply and interview for dietetics supervised practice experience, jobs and graduate programs.

Learning Outcomes: 1. Students will prepare resumes, personal statements, and sample applications. 2. Students will use available resources to develop skills in interviewing. 3. Students will identify the steps and deadlines for applying to graduate school and supervised practice programs. Credits: 1.00

NUTR 41500 - Practicum In Nutrition, Fitness, And Health

Credit Hours: 2.00. Application of nutrition and exercise knowledge and skills by performing assessments, interpreting data, designing and implementing programs, documenting progress, and counseling of an adult client.

Learning Outcomes: 1. Collect, analyze, and interpret nutrition and fitness assessment data. 2. Organize aspects of interaction with the client (educational materials, short- and long-term planning, etc.). 3. Use critical thinking and counseling skills to elicit pertinent client information, evaluate client feedback, and guide the client toward positive changes. 4. Accurately and concisely document interactions with client. 5. Creatively apply nutrition and fitness knowledge. 6. Communication effectively with the client. 7. Evaluate effectiveness of intervention; make necessary changes. 8. Develop critical thinking skills and professional judgment to recognize and manage the"" gray"" areas of one-on-one wellness counseling/coaching. 9. Utilize information technology and other methods of inquiry to accomplish all of the above. Credits: 2.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the

public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 42600 - Laboratory In Community Nutrition

Credit Hours: 3.00. Application of previous knowledge and communication skills in nutrition of community settings, such as school nutrition, health facilities, and federal or state nutrition programs.

Learning Outcomes: 1. Perform as a community nutritionist and complete the competencies as outlined in the Learning Outcomes for Supervised Practice Form. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 44200 - Foodservice Systems Management

Credit Hours: 3.00. Systems approach to foodservice management. Foodservice operations based on nutritional goals of the target market. Food sanitation and safety, management of human resources, and supervision. Emphasis on applications to health-care facilities.

Learning Outcomes: 1. Identify and describe the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 2. Apply management and business theories and principles to the development, marketing and delivery of programs or services. 3. Determine costs of services or operations, prepare a budget and interpret financial data. 4. Apply the principles of human resource management to different situations. 5. Apply safety principles related to food, personnel and consumers. Credits: 3.00

NUTR 44300 - Laboratory In Foodservice Systems Management

Credit Hours: 9.00. Application of knowledge relating to foodservice. Responsibilities may include communication skills and tasks equivalent to supervising foodservice operations.

Learning Outcomes: 1. Prepare you for an entry-level job in food service management, and to introduce you to the fundamentals of management required for the competent practice in other areas of dietetics. Credits: 9.00

NUTR 45300 - Food Chemistry

Credit Hours: 4.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Recognize and predict how chemical structures and reactions influence sensory and analytical properties of food. 3. Explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives, and evaluate the validity of health controversies related to these ingredients. 5. Design, execute, and explain (via oral and written reports) a food experiment using the scientific method. Credits: 4.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

NUTR 46100 - Laboratory In Medical Nutrition Therapy

Credit Hours: 10.00. Application of previous knowledge and communication skills of medical nutrition therapy in the hospital/patient care setting to ultimately include responsibilities equivalent to staff relief.

Learning Outcomes: 1. Perform as a clinical nutritionist and complete the competencies as outlined in the Learning Outcomes for Supervised Practice Form. Credits: 10.00

NUTR 46500 - Laboratory In Engagement

Credit Hours: 3.00. Culminating experiences in community nutrition, foodservice, medical nutrition therapy, public health, research and/or nutrition related business. Placements will be arranged based on individual student's preferred track in long-term care facilities, hospitals, public health or community agencies, and/or business and industry.

Learning Outcomes: 1. Perform at entry level as dietician and in placements arranged based on individual student's preferred track in long-term care facilities, hospitals, public health or community agencies, and/or business and industry. Credits: 3.00

NUTR 48000 - Medical Nutrition Therapy I

Credit Hours: 4.00. Nutrition assessment in humans and introduction to the nutrition care process. Application of the nutrition care process to various disease states.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical evidence-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition therapy. Credits: 4.00

NUTR 48100 - Medical Nutrition Therapy II

Credit Hours: 3.00. Application of the Nutrition Care Process in various disease states and conditions to prepare students for supervised practice programs.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition

therapy. Credits: 3.00

NUTR 48800 - Topics In Nutrition, Fitness, And Health

Credit Hours: 3.00. This course critically evaluates the interrelationships between nutrition and exercise and their impact on physical performance and health. Concepts combining nutritional sciences and exercise physiology will be presented. Emerging science and controversies in the current literature will be discussed.

Learning Outcomes: 1. Value the integration of nutrition and exercise for human health promotion, especially related to dietary macronutrients and energy. 2. Discuss current controversial topics in nutrition and fitness and special topics. 3. Practice scientific literature searching, critical evaluation and interpretation of research, technical and scientific writing, and oral communication skills. Credits: 3.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 49100 - Independent Study

Credit Hours: 1.00 to 4.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Increase knowledge and/or application in nutrition science. Credits: 1.00 to 4.00

NUTR 49200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required.

Learning Outcomes: 1. Develop extensive knowledge base and/or application in nutrition science. Credits: 1.00 to 5.00

NUTR 49500 - Undergraduate Seminar In Foods And Nutrition

Credit Hours: 1.00. Instruction and application of concepts for effective oral presentations in the field of nutrition sciences.

Learning Outcomes: 1. To enhance your critical thinking skills. 2. To develop and enhance your oral communication skills. 3. To enhance your ability to make effective visuals for presentations. Credits: 1.00

NUTR 49600 - Evaluation Of Nutrition Science Research

Credit Hours: 3.00. Evaluation of nutrition science research as it relates to health and disease.

Learning Outcomes: 1. Distinguish between data and interpretation through the practice of reading, analyzing, critiquing, and discussing nutrition science research articles. 2. Access and integrate the contribution of multiple research studies to an area of nutrition science rresearch and its impact on health and disease. 3. Explain, orally and in writing, the evaluation of nutrition science research. 4. Identify and assess the validity of sensational nutrition science research presented in media. Credits: 3.00

NUTR 49700 - Honors Research Project

Credit Hours: 1.00 to 3.00. The completion of the independent honors research project for Honors College and Department of Nutrition Science Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Learning Outcomes: 1. Demonstrate critical thinking skills in nutrition science. 2. Present and defend hypothesis-driven research project. Credits: 1.00 to 3.00

NUTR 51100 - Applied Nutrition Counseling

Credit Hours: 3.00. Field experience in one-on-one nutrition counseling that requires application of prior learning of theory, knowledge and skills.

Credits: 3.00

NUTR 51200 - Dietary Supplements

Credit Hours: 2.00. Provides advanced training to evaluate concepts and issues of dietary supplement use in various populations. Students develop critical thinking skills through activities such as case studies to make appropriate recommendations for nutrition supplementation.

Credits: 2.00

NUTR 51300 - Food Chemistry

Credit Hours: 2.00. Application of fundamental laws and concepts of chemistry, physics, and biology to foods and the sensory and analytical properties of food. Evaluation of the validity of health controversies related to food ingredients.

Completion of a food additive assessment.

Credits: 2.00

NUTR 51400 - Food Chemistry Laboratory

Credit Hours: 2.00. Application of fundamental laws and concepts of chemistry, physics, and biology to foods and eating. Experiments with food will be designed, reported and critiqued using the scientific method.

Credits: 2.00

NUTR 51500 - Nutrition Pathophysiology

Credit Hours: 2.00. A review of the underlying nutritional components and pathophysiology of common human diseases/disorders and current approaches for the prevention, management, and treatment of nutrition-related diseases. Building upon previous coursework in micronutrient and macronutrient metabolism, the focus is on the metabolic disturbances occurring with diseases such as diabetes, GI diseases, obesity kidney diseases, cardiovascular disease, and anemia.

Learning Outcomes: 1. Explain the underlying nutritional aspects of several common diseases. 2. Use current information technologies to locate and apply evidence-based guidelines and protocols. 3. Use principles of pathophysiology to explain the nutritional aspects of diseases, identify nutrition-related problems and determine and evaluate nutrition interventions; this will include the integration of multiple disciplines (e.g., biochemistry, genetics, microbiology, pharmacology, physiology). 4. Have knowledge of prevention theories and guidelines for nutrition-related diseases.

Credits: 2.00

NUTR 51600 - Eating Disorders And Healthy Weight Management

Credit Hours: 3.00. An evidence-based, application-focused exploration of the continuum of healthy eating to eating disorders and the factors that influence body weight. This includes review of each eating disorder diagnosis from an interdisciplinary perspective with emphasis on the role of the registered dietitian nutritionist in prevention, identification, treatment, and recovery.

Learning Outcomes: 1. Describe the prevalence of and relevant biological, environmental, social, and psychological factors associated with the development of overweight, obesity, and eating disorders. 2. Identify the diagnostic characteristics of and understand tailored treatment interventions for anorexia nervosa, bulimia nervosa, binge eating disorder and avoidant/restrictive feeding intake disorder, as well as discuss other specified feeding and eating disorders presentation and treatment. 3. Appreciate the role of the interdisciplinary support/treatment team and various levels of care in eating disorder support and treatment while developing knowledge and aptitude in a range of nutrition therapy interventions. 4. Identify the benefits, potential risks, appropriate target population(s), and medical nutrition therapy components of diet-based, medication-based, and surgical weight management interventions. 5. Understand and be able to apply mindful and intuitive eating and health at every size approach in patient/client care as a method of preventing disordered eating, weight stigma, and body negativity and to support wellbeing and recovery. Credits: 3.00

NUTR 52100 - Advanced Medical Nutrition Therapy

Credit Hours: 3.00. Application of the Nutrition Care Process in various disease states and conditions to prepare students for supervised practice.

Credits: 3.00

NUTR 52200 - Advanced Nutrition Communications

Credit Hours: 3.00. Provides advanced training and skill development to effectively implement and evaluate food and nutrition communication to lay and professional audiences through oral, written, and mass media channels. Permission of department required.

Credits: 3.00

NUTR 52300 - Trends In Nutrition & Dietetics

Credit Hours: 2.00. Analysis and discussion of current trends in dietetics practice and nutrition including such topics as nutrigenomics, informatics, sustainability, agricultural practices, food policies, and global health. Permission of department required.

Credits: 2.00

NUTR 52900 - Basic Bone Biology

Credit Hours: 3.00. This course is designed to present the fundamentals of bone biology. The course objectives are designed to provide learners with a solid framework for understanding mechanisms, diseases, and treatments

associated with the musculoskeletal system as they advance in their education and training.

- Approximately 45 hours of lecture will help the learner achieve the objectives outlined. Lectures will be given to present information and tie into information learners have acquired or will acquire in other courses (e.g. biomechanics, physiology, molecular biology, etc.) to assist them in combining all of their courses and research experiences together into one interdisciplinary learning experience.
- Directors will attend and supervise the scheduled lecture sessions if they are not providing the lecture content, and they will be available during these times to answer questions. However, it is expected that students take additional time outside of scheduled class time to further learning.
- Materials for the learners will be posted on the course's website. These materials will include:
- Lecture notes and PowerPoints: Each lecturer will post his/her lecture notes and associated PowerPoint slides prior to the lecture.
- Additional information: As the course progresses, instructors may come across additional information that they may find useful for student learning of the material. These materials will be posted for students to utilize as they see fit.

** Materials found on other sites (e.g. social networking sites) will not be official course materials, so use at your own risk.*
** Course offered every other spring*

Credits: 3.00

NUTR 53100 - Ethical Practice And Professionalism In Dietetics

Credit Hours: 1.00. Evaluation of concepts and issues of ethical practice in the dietetics profession and the application of the Scope/ Standards of Practice for Nutrition and Dietetics Practitioners and the Code of Ethics for the Nutrition and Dietetics Profession. Permission of department required.

Credits: 1.00

NUTR 53200 - World Food Problems

Credit Hours: 3.00. (AGEC 53200) This course focuses on the multi-disciplinary challenges that exist in meeting the food and nutrition needs of a growing world population. The course aims to instill an appreciation of the importance of economics, food production and technology, trade, culture, communication, political processes and institutions, demography and related factors in determining adequate food availability and health globally. Permission of instructor required.

Credits: 3.00

NUTR 53300 - Community Nutrition Experience

Credit Hours: 3.00. Application of previous knowledge and communication skills in nutrition of community settings, such as school nutrition, health facilities, and federal or state nutrition programs.

Credits: 3.00

NUTR 53400 - Human Sensory Systems And Food Evaluation

Credit Hours: 3.00. Overview of human chemosensory (taste, smell, chemesthetic) mechanisms and function, as well as procedural and statistical methods for evaluating the sensory responsiveness of people and the sensory properties of foods.

Credits: 3.00

NUTR 53500 - Leadership In Dietetics

Credit Hours: 1.00. Evaluation of concepts and development of skills relevant to leadership in dietetics including staff development, budgeting, strategic planning, quality improvement, regulatory compliance and embracing human diversity.

Learning Outcomes: 1. Apply change management strategies to achieve desired outcomes. 2. Apply management theories to the development of programs or services. 3. Evaluate a budget/financial management plan and interpret financial data. 4. Demonstrate an understanding of the regulation system related to billing and coding, what services are reimbursable by third party payers and how reimbursement may be obtained. 5. Apply the principles of human resource management to different situations. 6. Evaluate data to be used in decision-making for continuous quality improvement. 7. Analyze quality, financial and productivity data for use in planning. 8. Practice resolving differences or dealing with conflicts. 9. Promote team involvement and recognize the skills of each member. Credits: 1.00

NUTR 53900 - Foodservice Systems

Management Experience

Credit Hours: 4.00. Application of previous knowledge and communication skills in foodservice facilities. Student's performance will ultimately include responsibilities equivalent to staff relief. Must have ServSafe Certification (manager level) prior to enrollment.

Credits: 4.00

NUTR 54100 - Food Policy And Nutrition

Credit Hours: 3.00. We will explore the nature of contemporary United States food policy and key events throughout history that have shaped what it is today. We will investigate and discuss the roles individuals, corporations, and federal, state, and other government agencies play in creating food policy, and how these stakeholders as well as complex sociological and economic factors influence the way Americans eat. These questions will lead us to consider the future of food and food policy in the United States. Can Americans develop food policy that supports the agricultural economy AND promotes the consumption of healthy foods? Could our agricultural system support this? We will learn about and explore these questions with class discussions, debate, research, guest lectures, relevant documentary films, and thought-provoking readings that present a variety of viewpoints. You will explore current, real-life problems and have an opportunity to develop potential solutions.

Credits: 3.00

NUTR 54200 - Engagement Experience

Credit Hours: 3.00. Application of previously acquired knowledge and communication skills in a culminating supervised practice experience in one of seven engagement tracks. Placements at professional sites incorporate individual student's preferred track in foodservice, industry, nutrition-fitness-wellness-energy balance, community/public health, long-term care, medical nutrition therapy or research. Students complete a major project demonstrating readiness to practice as an entry-level dietitian.

Credits: 3.00

NUTR 54300 - Medical Nutrition Therapy Experience

Credit Hours: 4.00. Application of previous knowledge and communication skills of medical nutrition therapy in the hospital/patient care setting to ultimately include responsibilities equivalent to staff relief.

Credits: 4.00

NUTR 54400 - Advanced Medical Nutrition Therapy For Special Populations

Credit Hours: 1.00. Application of Medical Nutrition Therapy for special populations including enhanced skills for the practice of dietetics. Lectures and laboratory activities supplement training in various diagnoses and conditions not routinely encountered during supervised practice experiences in NUTR 54300 Medical Nutrition Therapy Experience. Permission of department required.

Learning Outcomes: 1. Apply evidence-based guidelines, systematic reviews and scientific literature. 2. Evaluate emerging research for application in nutrition and dietetics practice. 3. Incorporate critical-thinking skills in overall practice. 4. Practice in compliance with current federal regulations and state statutes and rules, as applicable, and in accordance with accreditation standards and the Scope of Nutrition and Dietetics Practice and Code of Ethics for the Profession of Nutrition and Dietetics. 5. Function as a member of interprofessional teams. 6. Perform the Nutrition Care Process and use standardized nutrition language for individuals, groups and populations of differing ages and health status, in a variety of settings. 7. Practice routine health screening assessments, including measuring blood pressure and conducting waived point-of-care laboratory testing (such as blood glucose or cholesterol). 8. Perform routing health screening assessments including measuring blood pressure, conducting waived point of care laboratory testing (such as blood glucose or cholesterol), initiating pharmacotherapy plans (such as insulin management), and administering vaccine injections (such as flu shots). 9. Provide instruction for self-monitoring blood glucose, insulin administration and adjusting diabetes medication. 10. Insert nasogastric or nasoenteric feeding tubes. 11. Initiate and conduct bedside swallow

screenings. Credits: 1.00

NUTR 59000 - Special Problems In Nutrition

Credit Hours: 1.00 to 4.00. Individual problems dealing with various aspects of nutrition. Permission of instructor required.

Credits: 1.00 to 4.00

NUTR 59100 - Nutrition Science Graduate Experiential Learning/Internship

Credit Hours: 0.00 to 2.00. The objective of the course is to enhance graduate learning via facilitating graduate students to enhance research and data analysis skills through real-life experience. Permission of instructor required.

Learning Outcomes: 1. Gain real-life knowledge that strengthens a student's graduate learning. 2. Obtain research and data analysis skills that are important for a student's thesis but are not readily available on campus. 3. Conduct research with a collaborator to enhance a student's thesis. Credits: 0.00 to 2.00

NUTR 59600 - A Journey Through The GI Tract

Credit Hours: 2.00. This seminar-format course follows the production and then the fate of a meal of pizza and soda from the farm through the digestive system. Topics for in-depth consideration include cephalic phase responses, salivary, sensory and masticatory processes in the oral cavity, esophageal, gastric and intestinal (small and large) phases of digestion, as well as the brain-gut axis and microbial contributions to health and disease. The emphasis will be on organ and whole-body level physiology related to ingestive behavior and body weight. Prior coursework in biochemistry and physiology preferred or request permission from the instructor.

Learning Outcomes: 1. Understand the relationships between food properties and both food digestion and nutrient absorption/metabolism. 2. Understand feed-forward and backward signaling systems in the GI tract. 3. Understand the requirements and limits of digestive processes. 4. Improve their written and verbal communication skills. 5. Evaluate critically how perturbations in GI processes impact health. Credits: 2.00

NUTR 60500 - Nutritional Biochemistry And Physiology I

Credit Hours: 4.00. (ANSC 62500) Integration of biochemical and physiological functions of nutrients in humans and animals emphasizing interactions in bone and gut metabolism and physiology. Permission of instructor required.

Credits: 4.00

NUTR 60600 - Nutritional Biochemistry And Physiology II

Credit Hours: 2.00. (ANSC 62600) Integration of biochemical and physiological functions of nutrients in humans and animals emphasizing post-absorptive use of nutrients as sources of energy and for the synthesis of macromolecules, emphasizing integrative metabolism in liver, muscle and adipose tissues. Offered weeks 1 - 8. Prerequisite: NUTR 60500.

Credits: 2.00

NUTR 60700 - Nutritional Biochemistry And Physiology III

Credit Hours: 2.00. (ANSC 62700) Integration of biochemical and physiological functions of nutrients in humans and animals, emphasizing lipid metabolism and transport in the context of cardiovascular function. Offered weeks 9 - 16. Prerequisite: NUTR 60600.

Credits: 2.00

NUTR 60900 - Food Lipids

Credit Hours: 1.00 to 3.00. (FS 60900) Importance of lipids in the diet and food systems with emphasis on changes occurring during processing, preparation, and storage. Nomenclature, physical attributes, and oxidation of lipids as well as properties and characteristics of antioxidants will be major components of the course. Offered in alternate years. Prerequisite: BCHM 56100; Prerequisite: NUTR 45300 or FS 45300.

Credits: 1.00 to 3.00

NUTR 61200 - Obesity: Behavior, Physiology And Policy

Credit Hours: 2.00. The topics in this course provide a firm conceptual foundation for graduate students interested in issues related to obesity. Topics include issues ranging from molecular to policy: there is a strong emphasis on interdisciplinary approaches and critical thinking as it is a goal to integrate the sophisticated analyses of the physiological, nutritional, developmental, genetic, sensory, socio-economic, and experiential determinants of food and fluid intake. In addition, topics in this course such as health implications of obesity, epidemiology of obesity, endocrine, energy metabolism/integration, and neurochemistry will provide the opportunity for greater interdisciplinary collaborations.

Credits: 2.00

NUTR 61600 - Special Topics In Ingestive Behavior

Credit Hours: 3.00. Explore, in-depth, important and current issues in ingestive behavior, enhance critical thinking skills, acquire professional skills (e.g. organizational, interpersonal), and develop rapport with scholars in the field.

Credits: 3.00

NUTR 61700 - Ingestive Behavior Seminar

Credit Hours: 1.00. (PSY 61801) Fosters an exchange of ideas and promotes greater familiarity among individuals from

different laboratories and departments with interests related to ingestive behavior, and gives students opportunities to build their communication skills and lead/mediate discussions at a high scholarly level. Typically offered in alternate years.

Credits: 1.00

NUTR 62600 - Advanced Presentation Skills

Credit Hours: 1.00. This course will teach graduate students how to synthesize information from multiple scientific studies and then communicate that information effectively to others in the form of a 40 minute long scientific seminar. The course is designed to provide students with clear guidelines for effective long-form oral communication of scientific information and then give students an opportunity to put those guidelines into practice. Prerequisites: Graduate standing past the first year. NUTR 69400 or equivalent course (determined by instructor review). For PhD students; INP Scientific Writing Course NUTR 62700. For MS students; a statement from the research mentor that the student has a clear thesis topic, that the student has completed the majority of work on the thesis, and that the student has conducted background reading on the thesis topic.

Credits: 1.00

NUTR 62700 - Scientific Writing In Nutrition Science

Credit Hours: 1.00. The goal of this course is to develop and practice skills for clear scientific writing. The course is designed to introduce and practice the building blocks of scientific writing, including word choice, sentence structure and paragraph structure. In addition, students will be introduced to components of a hypothesis testing biomedical research paper in order to communicate a storyline. In addition, the publication cycle will be discussed. Prerequisites: Graduate standing past the first year. NUTR 60500 and NUTR 60600 and NUTR 60700. Other students can be approved for entry by permission of the instructor.

Credits: 1.00

NUTR 63000 - Carbohydrates

Credit Hours: 3.00. (FS 63000) Carbohydrates with an emphasis on those of low molecular weight in foods. Structures, reactions, and properties of mono- and oligosaccharides. Introduction to polysaccharides and food gums. Offered in alternate years. Prerequisite: 6 credit hours in Organic Chemistry.

Credits: 3.00

NUTR 63200 - Lipids And Cell Function

Credit Hours: 2.00. This graduate-level course teaches advanced knowledge and critical thinking skills relevant to lipids in cell, tissue, and organismal physiology and pathophysiology. Students should have completed some graduate level biochemistry, physiology and nutrition coursework. Permission of instructor required.

Learning Outcomes: 1. Know several resources for research related to lipids including websites, professional organizations, journals, books and companies. 2. Name and classify lipids appropriately according to recommendations from LIPIDMAPs. 3. Describe different methods for detecting and analyzing a wide variety of lipids. 4. Describe how lipids (diet and endogenously derived) impact physiology and pathophysiology at the cellular, tissue, and organism levels. 5. Critique research published on lipids. Credits: 2.00

NUTR 63400 - Nutrition And Cancer Prevention

Credit Hours: 2.00. An in-depth examination of the role of nutrition in cancer prevention. Typically offered in alternate years.

Credits: 2.00

NUTR 64000 - Human Feeding

Credit Hours: 2.00. Critical review of the genetic, neural, metabolic, endocrine, sensory, cognitive, and cultural determinants of appetite, food selection, and energy balance. Offered in alternate years. Prerequisite: physiology, biochemistry. Masters student standing.

Credits: 2.00

NUTR 69000 - Interdepartmental Nutrition Program Grant Writing

Credit Hours: 1.00. Fulfillment of grant writing requirements for graduate students enrolled in the Interdepartmental Nutrition Program. Prerequisite: Interdepartmental Nutrition Program graduate students status. Permission of instructor required.

Credits: 1.00

NUTR 69400 - Introductory Presentation Skills In Nutrition Science

Credit Hours: 1.00. Introductory training and application of concepts for effective communication through oral and poster presentations in the field of nutrition science.

Credits: 1.00

NUTR 69500 - Interdepartmental Nutrition Program Seminar

Credit Hours: 0.00 or 1.00. Develop and strengthen skills in organization, preparation, and presentation of scientific information relevant to nutrition science to an audience of scientists.

Credits: 0.00 or 1.00

NUTR 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

NUTR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission

of instructor required.

Credits: 1.00 to 18.00

Organizational Behavior and Human Resources

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

OBHR 49000 - Problems In Organizational Behavior

Credit Hours: 1.00 to 4.00. Supervised readings and reports in various subjects. Arrange with instructor before enrolling. Permission of instructor required.

Credits: 1.00 to 4.00

OBHR 59000 - Problems In Organizational Behavior And Human Resource Management

Credit Hours: 1.00 to 4.00. Advanced study and investigation in a field of organizational behavior and human resource management under the guidance of staff. Permission of instructor required.

Learning Outcomes: 1. Learning objectives vary due to nature of variable course content.

Credits: 1.00 to 4.00

OBHR 60500 - Research Methods I

Credit Hours: 3.00. An introduction to research methods. This seminar examines the use of research methods to develop empirical tests for theoretical and practical issues. It includes readings and discussions on the philosophy of science, reliability, validity, research design, threats to research, ethics, and other issues in research methodology. Students formulate hypotheses and an original research design to test their hypotheses.

Learning Outcomes: 1. Identify key decisions organizational researchers must make when crafting research proposals and conducting studies. 2. Demonstrate ability to generate a sound research proposal, based on course concepts and key research decisions discussed throughout the course. 3. Criticize the research methods employed in prior published works in the organizational literature, comparing and contrasting exemplary versus less-than-exemplary approaches. Credits: 3.00

OBHR 60600 - Research Practicum

Credit Hours: 2.00 or 3.00. Independent empirical research in organizational behavior and human resource management, including the submission of a written report. Prerequisite: OBHR 60500 . Permission of instructor required.

Credits: 2.00 or 3.00

OBHR 64600 - Human Resource Information Systems I

Credit Hours: 2.00. Designed to gain an understanding of and appreciation for the use of information systems as a tool for managing human resources. The course will introduce and master, and then apply to HR problems, a set of topical hardware and software solutions. The class project, an HRIS consulting assignment with a major corporation, will commence. Prerequisite: MGMT 65310 .

Credits: 2.00

OBHR 65200 - Organizational Development And Consulting

Credit Hours: 2.00. Organizational development (OD) refers to the application of behavioral sciences knowledge and techniques to improve organizational effectiveness (e.g., productivity, quality, service, employee satisfaction, etc.). The course will describe techniques for diagnosing organizations and interventions for improving organizations. Specific interventions will be examined in detail including structural interventions (e.g., organizational design, job design), interpersonal process interventions (e.g., process consultation, team building), and human resource interventions (e.g., performance management, career development). The course will attempt to both build knowledge and provide practice in the various techniques. The course will not duplicate material in other current course offerings by this professor, and it will not require prior courses in human resources.

Learning Outcomes: 1. Learn about the theory and practice of OD. 2. Learn about different types of OD interventions, including detailed real-world examples. 3. Learn about specific OD techniques (or methodologies), and get practice

applying some of the techniques. 4. Learn about the importance of an OD practitioner perspective in understanding and implementing OD. Credits: 2.00

OBHR 68100 - Managing Behavior In Organizations

Credit Hours: 2.00 to 4.00. Individual and group behavior are the central components of the study of behavior in organizations. Focus is on the managerial application of knowledge to issues such as motivation, group processes, leadership, organizational design structure, and others. The course employs cases, exercises, discussions, and lectures. Prerequisite: Master's student standing and Management majors only.

Credits: 2.00 to 4.00

OBHR 68300 - Individual Behavior In Organizations

Credit Hours: 1.00 to 3.00. This seminar provides an analysis of theory and research on individual and group behavior in organizations. Readings and discussion focus on motivation, attitudes and job satisfaction, employee participation and turnover, stress, leadership, group processes, and other issues.

Learning Outcomes: 1. Identify and define organizational behavior concepts. 2. Apply those concepts to improve your understanding of your own work attitudes and behaviors. 3. Apply those concepts to improve the functioning of your organizational unit. Credits: 1.00 to 3.00

OBHR 68400 - Research In Human Resource Management

Credit Hours: 1.00 to 3.00. Focuses on research methods, theories, and issues in HR management. A doctoral-level course designed for students interested in a research and teaching career in HR or organizational behavior. Objectives are to learn the primary theories and theoretical issues in each major area in HR, to learn the primary research methods and methodological issues, to attain a comprehensive reading list of the literature, to learn about publishing and the article review process, and to develop ideas for potential research projects.

Credits: 1.00 to 3.00

OBHR 69000 - Advanced Problems In Organizational Behavior And Human Resource Management

Credit Hours: 2.00 to 4.00. Advanced investigation in a specific organizational behavior or human resource field at the graduate level.

Credits: 2.00 to 4.00

OBHR 69900 - Research PhD Thesis

Credit Hours: 1.00 to 18.00. Research PhD Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Organizational Leadership and Supervision

OLS 25200 - Human Relations In Organizations

Credit Hours: 3.00. A survey of the concepts that provide a foundation for the understanding of individual and group behavior in organizations. Special emphasis on typical interpersonal and leadership relationships.

Credits: 3.00

OLS 26300 - Ethical Decisions In Leadership

Credit Hours: 3.00. This class is for students interested in discussing and contemplating the difficult legal and ethical situations facing managers in all sizes and types of organizations. Students in this class will read and discuss a variety of writings on ethics in the workplace and also analyze both written and videotaped legal/ethical scenarios.

Credits: 3.00

OLS 27400 - Applied Leadership

Credit Hours: 3.00. Introduction to applied leadership in the context of organizational functions, structures, and operation.

Credits: 3.00

OLS 29801 - Leadership Seminar I For ET Student Leaders

Credit Hours: 0.00 or 1.00. New student peer leaders in Engineering and Technology will receive training to facilitate a mentoring relationship, lab, and/or recitation within the School of Engineering and Technology's formal and PLTL programs. Selected topics focus on leadership styles, group dynamics, facilitation techniques, collaborative learning techniques, redirecting strategies, and student motivation. Permission of department required.

Credits: 0.00 or 1.00

OLS 30200 - Leadership And Economic Aspects Of Sustainability

Credit Hours: 3.00. The main focus of this course is to learn how organizations make sustainability work in their organizations. You will learn about the triple bottom line (environment, social and economic aspects of business decisions) and how to make "sustainability" thrive in an organization. This course will look at how organizations: describe the benefits of sustainability for corporations and society; build a framework for implementing corporate sustainability; lead and design strategies for corporate sustainability; organize, perform evaluations and create reward systems for sustainability; implement social, environmental, and economic measuring systems; improve corporate processes, products, projects for sustainability; and manage reports for sustainability. This course will view various examples of sustainable practices in organizations, such as, Interface, Novartis, CEMEX, DuPont, Timberland, and Chiquita Brands,

which are making sustainable practices thrive in their organization.

Credits: 3.00

OLS 32700 - Leadership For A Global Work Force

Credit Hours: 3.00. This course is for present and future leaders interested in the increasingly diverse global workforce. The course will present a variety of leadership issues including expatriate assignments, international business strategies and their cultural and managerial impact, and a review of business practices around the world.

Credits: 3.00

OLS 33100 - Occupational Safety And Health

Credit Hours: 3.00. A presentation of the aspects of occupational safety and health that are essential to the organizational leaders. Special emphasis is placed on developing an understanding of the economic, legal, and social factors related to providing a safe and healthy work environment.

Credits: 3.00

OLS 34400 - Employee Benefits

Credit Hours: 1.00 to 3.00. This course will promote an understanding of employee benefit programs. Students will learn about the strategic importance of employee benefits and approaches to planning a benefits program while applying the legal, regulatory, and industry influences on employee benefits practices.

Credits: 1.00 to 3.00

OLS 34600 - Critical Thinking And Ethics

Credit Hours: 3.00. A course in complex problem solving and creative thinking with an emphasis on the ethical impacts of these solutions.

Learning Outcomes: 1. Define various approaches to the study of ethics in leadership. 2. Recognize and apply laws and regulations that affect ethical behavior in business and industry. 3. Work through processes to better identify what are real problems and perceived problems. 4. Use various techniques to ensure the real problem is identified and generate solutions. 5. Relate methods and concepts learned to new situations in order to solve problems. 6. Identify necessary steps to evaluate and implement solutions. 7. Develop individual problem solving and analytical skills. 8. Identify ethical, legal, and global challenges facing organizational leaders. Credits: 3.00

OLS 34800 - Human Resources Analytics

Credit Hours: 1.00 to 3.00. This course provides insight into uses of analytics in Human Resources (HR), why it is important, and how HR analytics add value to organization. Students will explore resources that will align an organization's mission and goals with key metrics and benchmarks.

Credits: 1.00 to 3.00

OLS 35100 - Innovation And Entrepreneurship

Credit Hours: 3.00. An in-depth study of innovation in existing organizations, as well as entrepreneurship in start-up businesses, franchises, family-owned firms, and other business formats.

Learning Outcomes: 1. Define the nature, skills, and spirit of entrepreneurs. 2. Conduct market research to develop innovative business model. 3. Conduct an industry analysis to identify competitors and industry trends. 4. Explain the benefits of selecting a diverse leadership team and employee pool. 5. Create and evaluate a business plan. Credits: 3.00

OLS 36800 - Employment Law

Credit Hours: 3.00. This course covers the regulatory environment of the employment relationship. Topics will include discrimination and Title VII of the Civil Rights Acts of 1964, recruitment and selection, affirmative action, rights of union and nonunion employees, Fair Labor Standards Act, Equal Pay Act, employee benefit plans, unemployment compensation, and right to discharge.

Credits: 3.00

OLS 37100 - Project Management

Credit Hours: 3.00. This course provides the basics of the project management discipline and allows the student to apply these skills in team-based situations.

Credits: 3.00

OLS 37500 - Training Methods

Credit Hours: 3.00. Principles, practices, and methods of employee training. Introduction to systematic training program design, development, and evaluation. Emphasis is on the supervisor as a trainer.

Learning Outcomes: 1. Define the role training and development plays in sustaining a competitive advantage across the full array of modern organizations. 2. Explain how training is a systemic process and how it relates to the overall leadership, supervision, and human resource management system of an organization. 3. Describe the purpose and scope of a training needs assessment and plan,

including its key components in designing training systems in leadership, supervision, and human resource management system of an organization. 4. Compare and contrast various training delivery methods, citing advantages and disadvantages of each. 5. Describe the essential principles of adult learning and intervention evaluation in developing and designing a training program in leadership, supervision, and human resource management system of an organization.

Credits: 3.00

OLS 37600 - Human Resource Issues

Credit Hours: 3.00. Analysis and discussion of case problems concerning typical leadership and personnel situations that impact upon the supervisor/manager. Emphasis directed toward development of attitude, philosophy, analytical ability, and problem-solving skills within the working environment.

Credits: 3.00

OLS 37800 - Labor And Management Relations

Credit Hours: 3.00. An introduction to, and overview of, the fundamental concepts of labor relations, collective bargaining, and dispute resolution procedures. An international comparative analysis is used to assess some of the legal, economic, and political structures of labor relations.

Credits: 3.00

OLS 38300 - Human Resource Management

Credit Hours: 3.00. This course teaches an overview of the human resource function in organizations today. Case studies are used to explore applications of human resource principles.

Credits: 3.00

OLS 38500 - Leadership Strategies For Quality And Productivity

Credit Hours: 3.00. Knowledge and applied leadership skills essential for establishing and continuously improving organizational effectiveness by forestalling and solving workplace problems.

Credits: 3.00

OLS 38600 - Leadership For Organizational Change

Credit Hours: 3.00. Introduction to and overview of fundamental concepts of leading organizational change. Topics include setting the stage for organizational change, implementing organizational change, sustaining organizational change, and the role of the change manager. Concepts and frameworks taught in this course are applicable to change at multiple scales from small enterprises and large corporations to communities and ecosystems.

Learning Outcomes: 1. Identify organizational culture and transformation readiness. 2. Apply various change management frameworks to leading organizational change. 3. Understand the role organizational culture plays in change and transformation. 4. Identify the effect of technological change on organizations, communities, and society. 5. Develop and apply a change management framework. Credits: 3.00

OLS 38800 - Leadership Through Teams

Credit Hours: 3.00. The group process, team development and exploration of dynamics that impact group and team performance.

Learning Outcomes: 1. Identify various principles and theories of group dynamics. 2. Plan and lead effective meetings. 3. Provide opportunities to become skilled participant-observers of team processes. 4. Demonstrate the behavior of the team leader and team members in molding work groups into high performance teams. 5. Demonstrate the process of human communications in small group context. 6. Use communication skills to more competently solve problems in task-oriented groups. 7. Use personal knowledge and interpersonal skills in dealing with people in all group types. 8. Analyze and comprehend why teams are functional or dysfunctional.

Credits: 3.00

OLS 39000 - Leadership Theories And Processes

Credit Hours: 3.00. This course integrates knowledge and skills from all associate level OLS courses and allows students to define, reflect upon, and improve their leadership abilities.

Credits: 3.00

OLS 39801 - Leadership Seminar II For ET Student Leaders

Credit Hours: 0.00 or 1.00. This course introduces ET student peer leaders to the knowledge, attitudes, and inner resources needed to be an effective leader. Students will utilize their first hand experiences to obtain the techniques to improve their leadership skills. Permission of department required.

Credits: 0.00 or 1.00

OLS 39900 - Special Topics

Credit Hours: 1.00 to 6.00. Hours and subject matter to be

arranged by staff.

Credits: 1.00 to 6.00

OLS 39901 - Special Topics In Project Management

Credit Hours: 3.00. Hours and subject matter to be arranged by faculty/staff. Primarily for upper-division majors with specific interests in project management. Permission of instructor required.

Learning Outcomes: 1. Vary with topic of each offering. Credits: 3.00

OLS 42300 - Green Organizations: Global Responsibility For Environmental And Economic Necessity

Credit Hours: 3.00. This course is interdisciplinary-emphasizing sustainability, engineering, manufacturing, technology, and leadership processes for the purpose of being environmentally responsible, cost effective, and socially responsible including guest lecturers, group discussions, and tours of businesses, locally or in other countries. Typically offered Summer Fall Spring.

Credits: 3.00

OLS 45000 - Advanced Project Management

Credit Hours: 3.00. An introduction to project management concepts and practices in the context of human resource development projects.

Learning Outcomes: 1. Apply the Project Management Institute's methodology to plan a project in the training and development field. 2. Apply instructional development methodology. Credits: 3.00

OLS 45400 - Gender And Diversity In Management

Credit Hours: 3.00. Today's workforce is composed of employees with a variety of individual differences, including race, gender, LGBTQ+, culture, national origin, mental and physical disabilities and age. This course will use the knowledge of diversity, equity, inclusion and ethical responsibilities to develop effective leadership.

Learning Outcomes: 1. Define managing diversity, valuing diversity and affirmative action. 2. Compare American cultural values with non-American cultural values. 3. Describe the major diversity issues, including inclusion, equity and ethical responsibilities, encountered in the workplace. 4. Explain how federal anti-discrimination laws affect the management of diversity and ethical responsibilities. 5. Describe how leaders can effectively manage diversity, inclusion, equity and ethical responsibilities. 6. List the major components of a diversity/inclusion program. Credits: 3.00

OLS 47700 - Conflict Management

Credit Hours: 3.00. A study of the methods for dealing with innerpersonal, interpersonal, and political disputes by means generally outside the traditional court system. Students will investigate the theoretical and practical aspects of conflict assessment, negotiation, problem solving, mediation, and arbitration.

Learning Outcomes: 1. Interpret and summarize major conflict management concepts. 2. Apply course conflict management concepts to new situations and real-world applications. 3. Assess conflict situations and apply appropriate methods to mitigate conflict. 4. Demonstrate ability to handle difficult people and situations. Credits: 3.00

OLS 47900 - Staffing Organizations

Credit Hours: 3.00. An applications-oriented study of key concepts in staffing organizations, including principles and issues in conducting job analysis; preparing job descriptions/specifications; and screening/selecting employees. Special emphasis on the design, validation, and operation of high-volume staffing systems.

Credits: 3.00

OLS 48400 - Leadership Strategies For Quality And Productivity

Credit Hours: 3.00. A study of how organizational leaders create an environment conducive to high levels of employee self-motivation, quality, and productivity (TQM). Actual case situations are used to illustrate the application of course content.

Learning Outcomes: 1. Describe characteristics of adaptable organizations. 2. Assess existing organizational strategic alignments. 3. Design organizational systems for sustainable competitive advantage. 4. Implement organizational systems for sustainable competitive advantage. Credits: 3.00

OLS 48700 - Leadership Philosophy

Credit Hours: 3.00. A review of current managerial, education, and development theories and practices; discussions of fundamental social, economic, and political changes affecting business and the art of managing; implications of these changes for individual development and continued growth.

Learning Outcomes: 1. Discuss disparate texts/writings on leadership from different eras and cultures. 2. Exhibit familiarity with a philosophical approach to studying leadership. 3. Explain a personal leadership philosophy. Credits: 3.00

OLS 48900 - Digital Transformation

Credit Hours: 3.00. This course covers the role of digital transformation and what it means for companies. This course includes practicums in digital transformation, including business transformation strategies, and AI driven insight.

Learning Outcomes: 1. Describe the foundations of Industry 4.0. 2. Explain the history of digital transformation. 3. Evaluate business collaboration in the modern workplace. 4. Synthesize performance management goals and objectives. Credits: 3.00

OLS 49000 - Senior Research Project

Credit Hours: 1.00 to 6.00. Opportunity to study specific problems in the field of personnel, safety, supervision, and training under the guidance of an OLS faculty member.

Credits: 1.00 to 6.00

OLS 49100 - Internship Program

Credit Hours: 3.00 (West Lafayette and Tech Statewide); 1.00 to 3.00 (Calumet and North Central). A practicum designed to combine University study with work experience directly related to the student's plan of study. Permission of department required.

Learning Outcomes: 1. Apply organizational leadership theory in a corporate environment. Credits: 3.00 or 1.00 to 3.00

OLS 49101 - Internship Experiences

Credit Hours: 2.00. A practicum designed to combine University study with work experience directly related to the student's plan of study. Includes a design of an optimal interning experience as well as a written final paper and oral presentation covering the student's internship experience. Permission of department required.

Learning Outcomes: 1. Compare and contrast internship experiences of different types of organizations. 2. Describe the internship experience. 3. Evaluate the effectiveness of the internship experience. Credits: 2.00

OLS 49900 - Special Topics In Organizational Leadership And Supervision

Credit Hours: 1.00 to 3.00. Hours and subject matter to be arranged by staff. Permission of instructor required.

Credits: 1.00 to 3.00

OLS 50100 - Leadership And Ethics

Credit Hours: 3.00. This course is an examination of ethical, legal and policy issues facing business and technology leaders. Topics include perspectives on business ethics and values, ethical issues and theory, personal values in the workplace, values and heuristics, responses to ethical situations, corporate social responsibility, sustainability and the responsible corporation, ethical compliance, global and local values, globalization and international business. In particular, this course will ask students to examine, analyze and understand the concept of servant leadership as an ethical construct for leaders. This course uses various learning tools including the case study method and involves active discussion and debate in an online setting. Typically offered Fall Spring Summer.

Learning Outcomes: 1. Analyze a range of perspectives and approaches to the study of ethics in leadership. 2. Sharpen and synthesize critical thinking, communication and reasoning skills. 3. Enhance knowledge and application of laws and regulations that affect businesses and industry, scientific research, technology innovations and public policies. 4. Develop sound problem solving and analytical skills. 5. Strengthen research, writing, debate, and technology skills. 6. Analyze, create solutions for global, technological and security challenges for business leaders. 7. Read about, critically analyze and debate the concept of Servant Leadership as an ethical construct for leadership. Credits: 3.00

OLS 50701 - Quantitative Analysis And Analytics For Leaders

Credit Hours: 3.00. This course emphasizes the use of statistical analysis in critical decision making. Specifically, the course focuses on selecting data and running appropriate statistical analyses, synthesizing findings based upon the analyses, making decisions based upon the findings, and using multiple modes to present the data, the findings, and recommendation(s) for action.

Credits: 3.00

OLS 51500 - Foundations Of Human Resources

Credit Hours: 3.00. A survey course emphasizing the human resource function (and its development) in the context of the work organization. Human resource development topics include exploration of various training and development techniques, the relation of training to organizational strategies, training needs analysis, evaluation of training, and career development. The

strategic approach to human resource management also is covered, including what human resource professionals can and should do to help the organization succeed. Permission of Department required.

Credits: 3.00

OLS 51600 - Diversity, Equity, And Inclusion For Organizational Leaders

Credit Hours: 3.00. This course will assist students in identifying and understanding diversity, equity, and inclusion issues in the workplace. Students will engage with various theories and concepts related to workplace and societal diversity, equity and inclusion and apply them to organizational settings.

Credits: 3.00

OLS 53100 - Advanced Visual Technical Communication

Credit Hours: 3.00 or 4.00. This course is intended for graduate students who wish to learn the theory and practice of visually communication. Prerequisites: A background in technical communication is desirable, but not required.

Learning Outcomes: 1. Apply effectively visual technical communication principles when designing publications, especially technical ones, which communicate both visually and with words. 2. Apply project management skills. 3. Apply group collaborative writing skills. 4. Design and refine publications for clients within specific situations. 5. Evaluate, use, and understand relevant software for creating visual technical communication. Credits: 3.00 or 4.00

OLS 53200 - Advanced Managing Document Quality

Credit Hours: 3.00 or 4.00. In this course, students will examine and apply principles of creating a technical or professional publication from start to finish Students will explore and practice publication quality management issues such as planning, researching audience and content, designing the publication, drafting, obtaining reviews, conducting usability testing, and negotiating within organizational cultures.

Learning Outcomes: 1. Explain the features that affect document quality. 2. Apply and explain the processes that lead to effective technical/professional publications. 3. Evaluate, use, and explain software tools that can aid technical communicators in managing the publication creation process. 4. Apply concepts relevant to effective processes that technical communicators need to understand. 5. Apply user-centered design principles and usability testing in the process of creating effective publications. 6. Synthesize ideas from secondary research concerning an emerging concept in the field that will be useful in professional practice. Credits: 3.00 or 4.00

OLS 53300 - Advanced Research Approaches For Technical And Professional Communication

Credit Hours: 3.00 or 4.00. This course is intended for graduate students who wish to learn the theory and practice of conducting applied research in technical and/or professional communication. Prerequisites: A background in technical communication is desirable, but not required.

Learning Outcomes: 1. Generate effective research questions, suitable for workplace technical/professional communication research into audience, content, and communication approaches. 2. Conduct and report on results of secondary research relevant to technical/professional communication. 3. Design, conduct, and report on the results of primary research relevant to technical/professional communication. 4. Analyze reports of technical/professional communication research. 5. Explain the rationale for technical/professional research approaches, based on sound concepts and noting the capabilities and limitations of various approaches. Credits: 3.00 or 4.00

OLS 56300 - Sustainable Practices In Business And Industry In The European Union

Credit Hours: 3.00. This course examines and critically assesses sustainable practices in businesses, industries, and/or municipalities in Germany OR France. Students will spend one week in Marseille, France OR Mannheim, Germany visiting, touring, and analyzing businesses, industries or municipalities on their sustainable practices, culture and technical language skills.

Learning Outcomes: 1. Acquire knowledge of issues in sustainability (interdisciplinary area) as it relates to business and industry internationally and nationally. 2. Analyze, compare and contrast sustainable practices in German or France businesses or industries with

comparable U.S. businesses or industries. 3. Identify and describe trends and business practices in various sustainable organizations. 4. Utilize and synthesize sustainable knowledge from course to apply in life upon return to U.S. 5. Acquire knowledge and appreciation of German or French culture and some language skills. 6. Understand and analyze the interconnectivity of global concerns. Credits: 3.00

OLS 57100 - Advanced Project Management In Technology

Credit Hours: 3.00. This course helps students learn project management through applying technology project approaches in teams. Using project tools and templates, students learn the technology project life-cycle through actual and simulated situations. The course presents terms and approaches used in industry and allows students to apply methods individually and in teams.

Credits: 3.00

OLS 57200 - Integration Of Project Management For Leaders

Credit Hours: 3.00. This course emphasizes critical analysis, synthesis, and evaluation of theories and applications of project management knowledge and skills, leadership, communication, and stakeholder engagement. Students integrate theoretical and applied skills in planning, distributing, and managing communication; analyzing and interpreting project organization in context; and applying best practices in team management.

Learning Outcomes: 1. Compose and apply an appropriate communication strategy for a given situation. 2. Prepare professional documentation and presentations consistent with university and diverse workplace standards. 3. Demonstrate interpersonal skills consistent with expectations for project managers. 4. Apply critical and innovative thinking skills to improve their own, and other's decision making processes within projects. 5. Evaluate alternative strategies and implement major aspects of project management for a realistic project. 6. Model ethical sensitivity for a given situation. 7. Apply critical thinking and problem-solving skills to project knowledge areas and processes. 9. Consider and relate basic leadership principles and processes to address leadership issues and to remove obstacles in the project environment. 10. Locate, assess, and synthesize current literature on topics associated with project management competencies. 11. Facilitate the organizational change management process and encourage behavior to maximize project success. 12. Analyze power dynamics and organizational politics and suggest conflict management and negotiation techniques relevant to the project. 13. Identify, recognize, and engage both internal and external project stakeholders. 14. Demonstrate how project purpose, organizational structure, culture, roles, and knowledge management affect the ability to lead a project team. 15. Evaluate roles of team members, how they contribute to projects, and apply an understanding of self in how they relate to teams. 16. Apply knowledge of team building, operation, and behavior, considering factors that influence effectiveness for all types of teams, including those that are virtual and global. Credits: 3.00

OLS 57400 - Managerial Training and Development

Credit Hours: 3.00. Review of current managerial education and development theories and practices; discussion of fundamental social, economic, and political changes affecting business and the work of managing; implications of these changes for individual manager development and continued growth.

Credits: 3.00

OLS 57900 - Emerging World-Class Leadership Strategies

Credit Hours: 3.00. Exposes graduate students to the theoretical foundation and empirical research associated with emerging strategies and theories in the study of world-class leadership. The structure of the course is four fold: the discovery of critical leadership skills and behaviors, discovery of critical world-class leadership strategies, encouragement of self analysis, discovery of leadership strengths, and conducting research on leadership issues. Permission of instructor required.

Credits: 3.00

OLS 58000 - Interpersonal Skills For Leaders

Credit Hours: 3.00. Development and improvement of interpersonal and group dynamic skills for effective leadership in organizations. Emphasis on action learning and real-world application of skills. Course may be offered in traditional, distance, or blended format. Open to all graduate students with special consideration given to senior OLS students with 3.0 GPA and School of Technology graduate students.

Credits: 3.00

OLS 58100 - Workshop In Organizational Leadership And Supervision

Credit Hours: 0.00 to 8.00. Advanced study of technical and professional topics. Emphasis is on new developments relating to technical, operational, and training aspects of industry and technology education. Course may be offered in traditional, distance, or blended format. Course format may vary, depending upon topic of course.

Credits: 0.00 to 8.00

OLS 58200 - Leadership and Organizational Change

Credit Hours: 3.00. Explores issues in leadership and organizational change. Included are change theories, utilizing resistance to change, contemporary approaches to change, the future workplace, and researching best practices in organizational change.

Learning Outcomes: 1. Attain an understanding of the major models of change theory. 2. Gain skills in managing change through pragmatic applications of change theories. 3. Complete a major change research project in which they investigate a change initiative, gather data, and make recommendations for successfully implementing the change. Credits: 3.00

OLS 58300 - Coaching And Mentoring In Organizations

Credit Hours: 3.00. This course explores issues and practices in technologically-driven organizations pertaining to the roles and functions that coaching and mentoring play in employee development. A "best practices" approach, utilizing the case method, is emphasized. Presented from the point of view of a human resource manager/leader, the focus of the course is on identifying coaching opportunities, enhancing communication skills, developing and implementing coaching and mentoring strategies, and evaluating the outcomes of these strategies. Attention is directed to facilitating personal coaching mentoring skills. Course may be offered in traditional, distance, or blended format. Permission of department required.

Credits: 3.00

OLS 59000 - Individual Research Problems In Supervision And Personnel

Credit Hours: 1.00 to 6.00. Opportunity to study specific problems in the field of supervision and personnel under the guidance of a qualified faculty member within the department. Does not include thesis work. Permission of instructor required.

Credits: 1.00 to 6.00

OLS 59800 - Directed MS Project

Credit Hours: 1.00 to 3.00. A formal investigation of a particular problem under the guidance of the advisory committee. Not applicable to a thesis option plan of study. Enrollment during at least two consecutive terms for a total of three credits is required. Permission of instructor required.

Credits: 1.00 to 3.00

OLS 69800 - Research MS Thesis

Credit Hours: 1.00 to 18.00. Research MS Thesis. Permission of instructor required.

Credits: 1.00 to 18.00

Pharmaceutical Science

PHSC 10000 - Introduction To Pharmacy And Pharmaceutical Sciences

Credit Hours: 1.00. This first semester pre-pharmacy course is designed to provide the pre-pharmacy student with an introduction to the profession of pharmacy and to Purdue University College of Pharmacy. The topics presented in this course will allow the pre-pharmacy students to develop informed perspectives on: pharmacy summer employment opportunities for students; pharmacy career opportunities; current pharmacy practice trends; the importance of professionalism, values, and ethics as it pertains to the profession; resume and cover letter development; the College's curriculum, admissions process, and course registration process.

Learning Outcomes: 1. Describe various pharmacy career paths and opportunities. 2. Discuss professionalism as it relates to the profession. 3. Discuss current pharmacy practices trends in various settings. 4. Develop a resume. 5. Develop a cover letter. 6. Describe the College's admissions process. Credits: 1.00

PHSC 20000 - Introduction To Pharmacy And Admissions Process

Credit Hours: 2.00. A second orientation course to provide students interested in pre-pharmacy an introduction to the profession of pharmacy and to the Purdue University College of Pharmacy. Topics include personal development, academic program and career planning, pharmacy career opportunities, professionalism and ethics, and the Pharm.D. curriculum and the pharmacy admissions process. The course builds on PHPR 10000, but students are not required to have taken that course in order to enroll in this course.

Learning Outcomes: 1. Identify personal

strengths and weaknesses and a plan to build on this knowledge. 2. Recognize the variety of traditional and non-traditional career options available in pharmacy. 3. Develop a personal plan for career development. 4. Reflect on how ethics and professionalism apply to the pharmacist's practice role. 5. Obtain information to be able to outline the content and structure of the Pharm.D. curriculum as well as to be able to explain the professional program application process. Credits: 2.00

PHSC 20100 - Bachelor Of Science In The Pharmaceutical Sciences Orientation II

Credit Hours: 1.00. This seminar course is designed to enhance the BSPS student's professional skills career exploration and prepare for post-graduation employment. It provides the academic content to link experiences in professional fields to study in Pharmaceutical Sciences as well as social, economic and intellectual forces that shape views and work experiences. The intent is to prepare the student to successfully transfer skills to workplace. Typically taken in the junior year. The course builds on IMPH 10000, but students are not required to have taken that course. The course consists of a mix of on-line modules and assignments and in-person class sessions.

Learning Outcomes: 1. Build on-the-job skills; and develop and cultivate professional skills and relationships. 2. Analyze self-assessment of performance, professional expectations and ethical issues involved with being professional. 3. Articulate how classroom-acquired knowledge applies to real-world situations. 4. Explore critical topics that will assist the transition into a professional environment. 5. Reflect on professional development goals and needs. Credits: 1.00

PHSC 20400 - Organic Chemistry I

Credit Hours: 3.00. A study of the compounds of carbon on a functional group basis, with particular emphasis on those organic compounds of pharmaceutically important classes of compounds. This course presents organic chemistry concepts that are essential for understanding various topics in biochemistry and principles of drug action.

Learning Outcomes: 1. Utilize the basic and advanced principles of organic chemistry to explain the chemical reactivity of various organic compounds. 2. Identify the functional groups present in various pharmaceutically and biochemically relevant compounds; be able to predict their physical and chemical behavior at physiological conditions. 3. Enhance critical thinking skills and be able to solve complex multi-step problems in a systematic manner. 4. Embrace the tenets of collaborative learning and interact with peers effectively in various professional as well as informal settings. Credits: 3.00

PHSC 20401 - Organic Chemistry I Laboratory

Credit Hours: 1.00. Laboratory experiments to accompany PHSC 20400 performing laboratory experiments involving the methods of purification, reactions, and synthesis of organic compounds.

Learning Outcomes: 1. Perform lab exercises that demonstrate some of the principles studied in PHSC 20400 Organic Lecture. 2. Complete "dry lab" and "wet chemistry" experiments that directly relate to the contents that are covered in PHSC 20400 lecture. 3. Work together in groups to gather and analyze data in several lab exercises. Credits: 1.00

PHSC 20500 - Organic Chemistry II

Credit Hours: 3.00. PHSC 20500 is a continuation of PHSC 20400. You will learn the principles of organic chemistry with an emphasis on reactions of pharmaceutically important classes of compounds. This course presents organic chemistry concepts that are essential for understanding various topics in biochemistry and principles of drug action. You will continue to apply the fundamentals learned in general chemistry to the functional classes of compounds that are most important in pharmaceutical and biological chemistry.

Learning Outcomes: 1. Utilize the basic and advanced principles of organic chemistry to explain the chemical reactivity of various organic compounds. 2. Identify the functional groups present in various pharmaceutically and biochemically relevant compounds; be able to predict their physical and chemical behavior at physiological conditions. 3. Enhance critical thinking skills and be able to solve complex multi-step problems in a systematic manner. 4. Embrace the tenets of collaborative learning

and interact with peers effectively in various professional as well as informal settings. Credits: 3.00

PHSC 20501 - Organic Chemistry II Lab

Credit Hours: 1.00. This course has been designed to help you apply the concepts of organic chemistry and to enhance your understanding of the subject. This lab is an extension of the PHSC 20401 laboratory, and you will continue to use the concepts and techniques that you learned in organic chemistry I.

Learning Outcomes: 1. Perform lab exercises demonstrating some of the principles studied in lecture. 2. Complete "wet chemistry" experiments directly related to the reactions that are covered in lecture. 3. Learn about and engage in several analytical and purification techniques like thin-layer chromatography and column chromatography. Credits: 1.00

PHSC 20800 - Biochemistry For Pharmaceutical Sciences

Credit Hours: 3.00. The overall objectives of this course are to increase students' biomedical understanding and knowledge and their ability to apply that understanding and knowledge. This requires the students in this course to learn and understand the facts, concepts, and formulaic processes, and to become skilled at applying what they have learned.

Learning Outcomes: 1. The student must demonstrate comprehension of major scientific discoveries and use of the scientific method to make these discoveries: a. Basic principles of thermodynamics and kinetics and their role in defining chemical processes. b. The relevance of molecular biology, biochemistry, immunology, and pharmacogenomics and apply key principles to disease states and therapeutics. Credits: 3.00

PHSC 40000 - Research Methodology And Pharmacokinetic Concepts

Credit Hours: 1.00. This course is designed to provide students with a working knowledge of fundamental concepts in pharmacokinetics and research methodology. In particular, students will learn the importance of determining and deploying the pharmacokinetics of experimental therapeutic agents to appropriately design and analyze preclinical studies in drug discovery.

Learning Outcomes: 1. Define the concepts of clearance, volume of distribution, half-life, and systemic availability. 2. Define the key concepts for quantifying drug response, including ED50, EC50, Emax, IC50, and TD50. 3. Describe the key elements of hypothesis formulation and testing. 4. Define the terms specificity, selectivity, and sensitivity as they regard to experimental data. 5. Use basic concepts of experimental methodology, design a basic study to determine the pharmacokinetics of a drug in a species after intravenous administration of an experimental drug. 6. Provide EC50 data from cell studies on the effects of an experimental drug, design a study to determine the dose needed to achieve the EC50 in a given species. 7. Formulate a hypothesis and design a study to determine the effects of an experimental agent on a model disease, including measures of reproducibility and appropriate data analysis. 8. Design a basic study to assess the reproducibility of an assay. Credits: 1.00

PHSC 42200 - Immunology

Credit Hours: 3.00. This course exposes students to the basic principles of immunology, teaches students to use those principles to understand the cause of immunological disease and the basis of immunoprophylaxis and immunotherapy, and provides students with sufficient information to understand the principles and challenges of gene therapy and the application of genomics to future drug development.

Learning Outcomes: 1. The basic components of the immune system and their roles in innate and adaptive immunity. 2. The development and function of lymphocytes in adaptive immunity. 3. The molecular basis of antibody diversity. 4. How antigens are recognized by T cells. 5. How B cells develop and function in the body. 6. How T cells develop in the body and differentiate into specialized subsets. 7. How lymphocytes undergo positive and negative selection. 8. How B cells and T cells are activated and participate in adaptive immunity. 9. The basis of MHC polymorphism and the role on the immune response. 10. How the complement system is

activated and plays its role in immune responses. 11. How the cellular components of the innate and adaptive immune systems combine to generate an effective response against pathogens. 12. How the body remembers a previous infection. 13. The types and causes of immunodeficiency diseases. 14. How infection with HIV affects the immune system. 15. How the immune system sometimes recognizes harmless antigens (allergic reactions). 16. How the immune system can damage healthy tissue. 17. The basis and practice of immunization. 18. How the immune system complicates organ transplantation. 19. How the immune system recognizes cancer cells and can be used to combat cancer. Credits: 3.00

PHSC 42400 - Principles Of Pathophysiology And Drug Action

Credit Hours: 3.00. This course introduces the basic principles of pathophysiology, pharmacodynamics, toxicology and medicinal chemistry necessary to understand the therapeutic use and adverse actions of drugs. The course will integrate and apply concepts of science courses, including organic chemistry, biochemistry, anatomy and physiology into an understanding of the basic fundamentals of disease processes, toxicology and drug actions. Thus, this course will provide students with the basic background necessary to understand and apply pharmacotherapeutics to the practice of pharmacy.

Learning Outcomes: 1. Understand the basic principles of pathophysiology and pharmacology. 2. Understand the basic principles of thermodynamics and kinetics and their role in defining chemical processes; Basic principles of drug design and their chemical and biochemical mechanisms of drug action. 3. Synthesize information in order to draw logical conclusions; Provide evidence-based support for arguments, recommendations and solutions; Demonstrate the ability to make sound decisions given complex scenarios in a time-constrained environment. 4. Demonstrate the ability to present ideas, plans, and data in appropriate written formats to succinctly and effectively communicate with various audiences. 5. Exhibit professional behavior at all times in congruence with the pharmacist code of ethics. 6. Demonstrate the ability to self-access and take needed steps to achieve competence; exhibit positive, professional, empathic attitudes and behaviors in all intra- and interprofessional communications. Credits: 3.00

PHSC 42800 - Dosage Forms I

Credit Hours: 3.00. The purpose of this course is to provide a foundation in the basic concepts of pharmaceutics that are the foundation of drug delivery. The course begins by presenting the molecular basis for aqueous and lipid solubility of drugs, pharmacokinetic principles that are related to dosage forms, mechanisms by which excipients or manufacturing processes affect bioavailability, and chemical kinetics applied to the shelf-life of dosage forms. The pharmaceutics principles are then applied to successively more complex liquid dosage forms: solution, emulsion, and suspension. The excipients that are required to prepare the dosage forms: buffers, preservatives, emulsifiers, suspending agents, wetting agents, etc., and the method of preparing each dosage form in both a compounding and manufacturing setting are covered.

Learning Outcomes: 1. Provide an understanding of the relationship between dosage forms, the design of dosage forms, including how to turn molecules into medicines, and drug delivery and the physicochemical properties and structures of drug molecules. 2. Enable students to comprehend the underlying principles of drug product quality and be able to apply them to engage in critical thinking of drug stability, formulation, and delivery. 3. Recognize the importance of physiological conditions on the design, selection, and performance of dosage forms. 4. Build up the knowledge in drug development and delivery and develop problem-solving skills. 5. Build a solid foundation for understanding the role of formulations in drug therapy. Credits: 3.00

PHSC 42900 - Dosage Forms II

Credit Hours: 2.00. The purpose of this course is to educate beginning pharmacy students to thoroughly understand the basic physical-chemical principles involved in preparing liquid and semisolid dosage forms and controlled drug delivery systems used in the practice of pharmacy.

Learning Outcomes: 1. Explain the basic scientific principles involved in the performance of liquid dosage forms, including solution, emulsion, and suspension, and their chemical and physical stability. 2. Explain the basic scientific principles involved in controlled drug delivery and nanomedicine and list examples. 3. Explain the factors involved in absorption of drugs from solid dosage forms administered by various routes, including transdermal and mucosal routes. 4. Explain the basic scientific principles involved in administering sterile solutions, including factors needed to maintain sterility, solution isotonicity and iso-osmolality, IV bags and drip sets. 5. Explain how biopharmaceuticals including peptides, proteins, and nucleic acids are formulated and advise on their handling in clinical pharmacy setting. 6. Advise patients on the proper use and storage of dosage forms and understand the relationship of dosage form selection to clinical outcomes. 7. Explain unique properties of veterinary products. Credits: 2.00

PHSC 43600 - Biochemistry For Pharmaceutical Sciences II

Credit Hours: 2.00. The overall objective of this course is to expand students' knowledge of biochemistry obtained in the prerequisite one-semester Biochemistry course to understanding advanced aspects of human biochemistry related to pharmaceutical sciences.

Learning Outcomes: 1. Apply an advanced understanding and knowledge of biochemistry to pharmaceutical sciences and the practice of pharmacy. 2. Demonstrate advanced understanding of biochemistry including integration of multiple areas of metabolism in the causation of disease and in physiologic homeostasis; biochemical signal transduction paradigms and concepts; the basis of complex biotechnology methods for disease diagnosis and disease research (recombinant DNA, proteomics, genomics, metabolomics), and the development of experimental therapeutics (gene transfer, reverse genetics, siRNA); and the advanced aspects of molecular transport, membrane function, enzyme kinetics, and the enzymology of drug metabolism. 3. Understand the molecular basis of many idiopathic and acquired metabolic disease, of inborn disorders of metabolism, of diseases of aberrant molecular signaling, and of diseased of aberrant molecular transport; including the mechanisms of DNA damage and repair and the mechanisms of action of antimetabolites and of synthetic therapies for metabolic disorders. 4. Demonstrate proficient knowledge of each of the content areas presented as well as demonstrate understanding of the each content area is sufficient for accurate application of those concepts to novel situations. Credits: 2.00

PHSC 44400 - Drug Classes And Mechanisms

Credit Hours: 3.00. This course provides an overview of the major therapeutic classes of pharmaceuticals. It integrates basic principles of medicinal chemistry and pharmacology in order to achieve an understanding of drug mechanisms. The major classes of drugs that are covered are those targeting the autonomic nervous, endocrine system, cardiovascular system, renal system, respiratory system and central nervous system, in addition to chemotherapy drugs and drugs targeting infectious diseases. The course will apply concepts from organic chemistry, biochemistry, anatomy, physiology, and principles of drug action to describe how drugs are used to treat the symptoms and causes of disease. Lectures will focus on representative drugs to illustrate key concepts related to mechanisms of action.

Learning Outcomes: 1. Attain knowledge and understanding of the major drug classes. 2. Attain knowledge of the relationships among mechanisms of action, drug interactions, and adverse reactions. 3. Gain the ability to critically analyze primary literature. 4. Gain an appreciation for research and discovery processes involving medicinal chemistry and pharmacology related to the major drug classes. Credits: 3.00

PHSC 46000 - Drug Discovery And Development I

Credit Hours: 3.00. Focuses on the strategies, current methods and technologies used in early stage pre-clinical research to

discover, validate and select lead drug candidates.

Learning Outcomes: 1. A variety of college outcomes related to: conceptual competence, scientific comprehension, integrative competence, critical thinking and decision-making abilities, communication skills and abilities, responsible use of professional values and ethical principles, and group interaction and citizenship. Credits: 3.00

PHSC 46100 - Drug Discovery And Development II

Credit Hours: 3.00. The course focuses on the process of drug development from pre-formulation to unit operations. The emphasis is on the scientific principles behind every step in moving from a drug molecule to its products.

Learning Outcomes: 1. Demonstrate evidence-based knowledge of the following theoretical foundations and apply these to basic anatomy/physiology, delivery of drugs from various dosage forms, relationship between chemical structure and dosage form selection, influences of pharmacokentics on formulation and dosage form design, unit operations of drug manufacturing. 2. Demonstrate comprehension of major scientific discoveries and methods. 3. Be able to use mathematical variables to analyze physical and pharmacokentic properties of a drug compound. 4. Meld theory and abilities in a practical setting to identify and provide solutions of related problems. 5. Examine issues rationally logically, and coherently. 6. Be able to read, write, speak, listen, use data, media, and appropriate technologies to send and respond effectively to communications for varied audiences and purposes. 7. Demonstrate effective interpersonal and intergroup behaviors in a variety of situations and circumstances, in particular, working together in their term-projects. Credits: 3.00

PHSC 48500 - Intercultural And Global Health Issues

Credit Hours: 2.00. This course is designed to meet the University Embedded Outcomes of Intercultural Knowledge, and Global Citizenship and Social Awareness. Students will discuss and develop presentations (verbal and written) about various intercultural and global health issues.

Learning Outcomes: 1. Examine health issues that have global and/or cross-cultural impact. 2. Identify and articulate personal insights about intercultural and global health issues. 3. Develop and present an oral and poster presentation in a seminar fashion. Credits: 2.00

Pharmacy

PHRM 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PHRM 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PHRM 31600 - Drug Abuse/Addiction Education

Credit Hours: 1.00. An overview of alcoholism and other chemical addictions. Students are given the information and experience necessary to present a five-hour drug abuse education program to the public and specifically middle school students. Course is taught by undergraduate pharmacy students with oversight by staff.

Learning Outcomes: 1. Describe the pharmacology involved with classes and specific substances of abuse. 2. Discuss aspects (i.e., social, genetic predisposition, intervention, treatment) associated with the disease of chemical addiction. 3. Describe the role of the Pharmacist Recovery Network (PRN). 4. Present a drug abuse/addition program (5 hours) to a class of sixth grade students. Credits: 1.00

PHRM 38199 - Industrial Practice I

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required.

Learning Outcomes: 1. Applying fundamental principles of the pharmaceutical sciences studied in the classroom environment. 2. Learning to work effectively with others and in teams. 3. Clarifying opportunities best suited to individual aptitudes and interests. 4. Gaining confidence in the application of skills and abilities. 5. Developing foundation for transition into the job environment following graduation. Credits: 1.00

PHRM 38299 - Industrial Practice II

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required.

Learning Outcomes: 1. Applying fundamental principles of the pharmaceutical sciences studied in the classroom environment. 2. Learning to work effectively with others and in teams. 3. Clarifying opportunities best suited to individual aptitudes and interests. 4. Gaining confidence in the application of skills and abilities. 5. Developing foundation for transition into the job environment following graduation. Credits: 1.00

PHRM 38399 - Industrial Practice III

Credit Hours: 1.00. Professional practice of pharmaceutical sciences in industry. Comprehensive written report of this experience required. For cooperative program students only enrolled in the College of Pharmacy. Permission of Department required.

Learning Outcomes: 1. Applying fundamental principles of the pharmaceutical sciences studied in the classroom environment. 2. Learning to work effectively with others and in teams. 3. Clarifying opportunities best suited to individual aptitudes and interests. 4. Gaining confidence in the application of skills and abilities. 5. Developing foundation for transition into the job environment following graduation. Credits: 1.00

PHRM 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PHRM 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PHRM 39599 - Extensive Cooperative Experience

V

Credit Hours: 0.00. Professional experience in pharmacy. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PHRM 39699 - Pharmaceutical Science Internship Experience

Credit Hours: 1.00 to 3.00. Professional practice with qualified employers within the pharmaceutical industry. Pre-approval of enrollment by the BSPS Committee is required as well as completion of a course paper. Department and instructor permission required.

Learning Outcomes: 1. Ensure pharmaceutical science students receive early exposure to the most common career paths taken by today's graduates and gain a first-hand perspective of industry responsibilities and activities in their roles. This contributes to a foundation for gaining appreciation of the strategies for continually evolving requirements and skills in industry. 2. Provide pharmaceutical science students with opportunities to have early in their program observation of scientists providing services, particularly those that address Pharmaceutical Science Outcome Ability Goals. These include Conceptual Competence, Scientific Comprehension, Mathematical Competence, Integrative Competence, Critical Thinking and Decision-Making Abilities, Communication Skills and Abilities, Responsible Use of Professional Values and Ethical Principles, Social Awareness and Social Responsibility, Professional Abilities and Habits, and Group Interaction and Citizenship. See the ""Student Handbook"" for specific descriptions of the components of these outcome abilities. 3. Provide pharmaceutical science students with early industry exposure that illustrates the reasons they need in-depth learning of the basic and applied sciences and a commitment to lifelong learning for professional effectiveness. 4. Provide pharmaceutical science students with experiences and learning in applications that are essential to evolving professional responsibilities in an industrial setting. 5. Contribute to pharmaceutical science student development as well as providing the vision and motivation to become a positive scientific influence or change agent. 6. Broaden students' perspectives on career pathways and foster initiatives to enhance career planning. Credits: 1.00 to 3.00

PHRM 40500 - Mindfulness

Credit Hours: 1.00. The goal of the course is to introduce students to intercultural development, identify stressors in life, and learn simple methods to reduce stress of pharmacy students. This introductory course comprises of class activities/discussions and assignments. *It is very important that respect is demonstrated by being considerate, courteous, and professional, and by maintaining confidentiality of others' information*. *There are no exams in this course.*

Learning Outcomes: 1. Facilitate learning through group discussion and presentation styles. 2. Enhance written, verbal, and nonverbal communication skills. 3. Increase awareness of professional and personal image in healthcare settings. 4. Develop professional and personal confidence and curiosity. Credits: 1.00

PHRM 41000 - Professional Communications

Credit Hours: 1.00. Professional communications will focus on developing verbal, written, and nonverbal communication skills. The goals of the course are to augment the students' knowledge about soft and hard communications, reinforce necessary skills for interactions and engagement in various healthcare settings, and develop professional and personal confidence. Class participation is expected and the format will be active learning with very few lectures. All pharmacy students are welcome - this course is not intended to focus on any particular group or class. This course comprises of home study and class discussions. *All*

discussions in class shall remain confidential. There are no exams in this course.

Learning Outcomes: 1. Facilitate learning through group discussion and presentation styles. 2. Enhance written, verbal, and nonverbal communication skills. 3. Increase awareness of professional and personal image in healthcare settings. 4. Develop professional and personal confidence and curiosity. Credits: 1.00

PHRM 41900 - Experiential Reflections In The Pharmaceutical Sciences

Credit Hours: 0.00. This course meets the requirement for the experiential component of the BSPS program in the College of Pharmacy. Students will be required to submit a written reflection on a practical experience of a minimum of 8 weeks duration that was accomplished in the past year. This reflection will include a description of the location, duration, and type of practical experiences. Students will provide a summary of key learning through the experience and how it has impacted their career plans. Students will also be required to submit a letter from their practical experience supervisor confirming the dates, place, and nature of the experience. Permission of department and instructor required.

Learning Outcomes: 1. Demonstrate proficiency in technical writing using clear, concise, logical progression of thought. 2. Demonstrate a general understanding of how different areas of expertise must come together in order to discover and develop pharmaceutical products. 3. Demonstrate the ability to reflect on career goals and opportunities. Credits: 0.00

PHRM 42500 - Pharmacy Leadership And Innovation Forum

Credit Hours: 1.00. This course introduces students to emerging trends and career opportunities in pharmacy and the pharmaceutical sciences through exposure to leaders in professional and corporate environments.

Learning Outcomes: 1. Principles of management and administration. 2. Synthesize information to draw logical conclusions. 3. Interact with other pharmacists, physicians, nurses, and other healthcare professionals to achieve positive patient outcomes. 4. Demonstrate values consistent with the provision of quality healthcare to all patient groups and populations. 5. Demonstrate awareness of key issues and debates in healthcare. 6. Demonstrate awareness of and ability to analyze internal and external factors that influence the practice of pharmacy and healthcare in an attempt to resolve practice-related problems. Credits: 1.00

PHRM 42700 - Conversations About Death And Dying

Credit Hours: 1.00. This course is open to all years of the professional pharmacy program or others with instructor permission. This course provides opportunity for open discussion of the topics of death and dying in the provision of healthcare.

Learning Outcomes: 1. Explore personal and professional feelings, beliefs, and attitudes regarding death and dying. 2. Reflect on your feeling and beliefs related to death and dying. 3. Discuss with another person their feelings, beliefs, and attitudes about death and dying. 4. Practice communication skills around death and dying. 5. Investigate a topic related to death and dying. 6. Explore the roles of health care professionals in E-o-L care. 7. Develop a personal end-of-life portfolio. 8. Compare and contrast different burial options. 9. Distinguish between different end-of-life documents. 10. Describe the components needed for a will. 11. Describe hospice and palliative care. 12. Identify issues around Physician-Assisted Dying. Credits: 1.00

PHRM 43600 - Biochemistry For Pharmaceutical Sciences II

Credit Hours: 2.00. The overall objective of this course is to expand students' knowledge of biochemistry obtained in the prerequisite one-semester Biochemistry course to understanding advanced aspects of human biochemistry related to pharmaceutical sciences.

Learning Outcomes: 1. Apply an advanced understanding and knowledge of biochemistry to pharmaceutical sciences and the practice of pharmacy. 2. Demonstrate advanced understanding of biochemistry including integration of multiple areas of metabolism in

the causation of disease and in physiologic homeostasis; biochemical signal transduction paradigms and concepts; the basis of complex biotechnology methods for disease diagnosis and disease research (recombinant DNA, proteomics, genomics, metabolomics), and the development of experimental therapeutics (gene transfer, reverse genetics, siRNA); and the advanced aspects of molecular transport, membrane function, enzyme kinetics, and the enzymology of drug metabolism. 3. Understand the molecular basis of many idiopathic and acquired metabolic disease, of inborn disorders of metabolism, of diseases of aberrant molecular signaling, and of diseased of aberrant molecular transport; including the mechanisms of DNA damage and repair and the mechanisms of action of antimetabolites and of synthetic therapies for metabolic disorders. 4. Demonstrate proficient knowledge of each of the content areas presented as well as demonstrate understanding of the each content area is sufficient for accurate application of those concepts to novel situations. Credits: 2.00

PHRM 43900 - Vulnerable And Underserved Patient Care

Credit Hours: 2.00. The goal of this course is to increase knowledge of the challenges faced by underserved patient populations and ways healthcare providers can assist patients in overcoming these challenges. The course also provides exposure and experience in patient care provided in two rural federally qualified health centers (FQHCs). Students will be able to challenge preconceived notions that they may have about underserved populations and learn the impact that pharmacists can have in caring for these populations.

Learning Outcomes: 1. Discuss and reflect on one's individual views and cultural attitudes and beliefs regarding vulnerable and underserved populations. 2. Recognize characteristics of patients who are at increased risk for health and health care disparities. 3. Identify obstacles to medication adherence in vulnerable and underserved patients. 4. Summarize the roles of different individuals in the delivery of health care for vulnerable and underserved patients. 5. Analyze ethical and legal issues affecting vulnerable and underserved populations. 6. Examine financial barriers a patient may face in accessing social and health care services. 7. Identify barriers and challenges faced by vulnerable and underserved patients and consider these when developing and modifying patient care plans. 8. Demonstrate the role of pharmacists in caring for underserved and vulnerable populations. Credits: 2.00

PHRM 44200 - Introduction To The Pharmaceutical Industry

Credit Hours: 2.00. While providing an overview of the pharmaceutical industry, this course focuses on the drug development process, including clinical research, regulatory affairs, pharmacovigilance and marketing. Pharmaceutical company executives serve as guest lecturers and discuss their individual areas of expertise.

Learning Outcomes: 1. Acquire a working knowledge of the organizational structure in the pharmaceutical industry and the role the Food and Drug Administration (FDA) plays in the provision of drug development. 2. Know multiple divisions within a pharmaceutical company including, but not limited to: Regulatory Affairs, Clinical Trial Development, Pharmacovigilance, Medical Information, and Health Outcomes. 3. Know the types of attitudes, skills, abilities, and training that are necessary for pharmacists to possess to effectively work with a variety of other professionals in the pharmaceutical industry. 4. Build a network of professionals within the pharmaceutical industry for resources and guidance as he/she determines his/her career path. Credits: 2.00

PHRM 45600 - Pharmaceutical Care Of Diabetes

Credit Hours: 1.00. The purpose of this course is for students to obtain a comprehensive knowledge of the pharmaceutical care of diabetes. Students will participate in class discussions related to patient cases and learn about effective communication with patients with diabetes. In class discussions will expose the students to patient case scenarios in which they will gain an appreciation for the complexities involved with diabetes, construct evidence-based treatment plans, and enhance overall

understanding of effective diabetes management. This course provides a platform for shaping future pharmacists into excellent caregivers for patients with diabetes. Permission of instructor required.

Learning Outcomes: 1. Approximate the number of carbohydrates in a variety of foods. 2. Recommend: a) Diabetes oral medication initiation doses and dose adjustments; b) Insulin initiation doses and dose adjustments; c) Non-insulin injectable initiation doses and dose adjustments; d) Individualized medication recommendation changes. 3. Know the basic settings and methods for operating continuous glucose monitoring (CGM) devices. 4. Identify patients with diabetes who would benefit from CGM. 5. Initiate and titrate dosing for insulin injections and insulin pumps. 6. Educate a patient with diabetes on effective insulin pump use. 7. Know basic concepts surrounding the use of motivational interviewing for patients with diabetes. 8. Describe different opportunities for pharmacists to become involved in diabetic care and processes for becoming a Certified Diabetes Educator (CDE) or Board-Certified in Advanced Diabetes Management (BC-ADM). 9. Identify effective strategies to communicate with patients with diabetes. 10. Identify the role of APPE students in a variety of settings relevant to patients with diabetes. Credits: 1.00

PHRM 46400 - Preparing For Postgraduate Residency Program

Credit Hours: 2.00. This elective course will focus on preparing for the pharmacy residency program selection process. The purpose of this course is to discuss various aspects of the selection process, provide students with guidance regarding each step of the process, and provide feedback regarding materials such as curriculum vitaes (CVs), letters of intent, and thank you notes. This course is intended to guide the students through the process using events, which normally occur during the residency search including pre-Midyear preparation, navigating American Society of Health-System Pharmacists (ASHP) Midyear, the post-Midyear application and interview process, and the Match. Permission of instructor required.

Learning Outcomes: 1. Develop short-term and long-term professional and personal goals. 2. Discuss reasons why you want to complete a residency/post graduate training program. 3. Research residency programs and prepare a residency rank list based on professional and personal career goals. 4. List various ways in which residency program information can be obtained and evaluate programs based on your particular areas of interest. 5. Explain the general process involved in the residency search including navigation of ASHP Midyear Meeting, application and interview timeline, the Match process, and the post-Match process. 6. Identify key components of being a successful resident. 7. Revise a CV based on peer and faculty feedback and give appropriate feedback on others' CVs. 8. Create a professional, polished CV that can be continually updated. 9. Create a letter of intent appropriate for a residency program application. 10. Develop a complete residency application for multiple programs. 11. Demonstrate appropriate verbal and non-verbal interview skills. 12. Demonstrate professionalism throughout all course activities and interactions. 13. Demonstrate an inquisitive mindset by asking questions and actively seeking out answers to your inquires. Credits: 2.00

PHRM 46600 - Pharmaceutical Care In Oncology

Credit Hours: 1.00. This course aims to expand students' understanding of hematology and oncology topics. After completion, the student should be able to apply course concepts to actual patient cases. CLPH 49000 will be collaboratively taught by oncology pharmacists and residents from the greater Indianapolis area hospitals. Students will be exposed to relevant topics including current events, supportive care, bone marrow transplant, renal cell carcinoma, specialty pharmacy administration and leadership, oral chemotherapy, palliative care and career paths in oncology pharmacy.

Learning Outcomes: 1. Demonstrate critical thinking and decision making assessed through current event discussions and patient case presentations. 2. Demonstrate communication skills and abilities assessed through current event discussions and mock patient counseling

experience. 3. Demonstrate information literacy assessed through current event discussions. 4. Demonstrate professionalism and ethics assessed through current event discussions and palliative care case/discussions. 5. Demonstrate competence and social awareness assessed throughout all discussions and projects as it pertains to individuals with the diagnosis of cancer. Credits: 1.00

PHRM 46800 - Clinical Integration And Application

Credit Hours: 2.00. This is an elective class which gives participants more experience working up patient cases with multiple complications and an opportunity to make recommendations to a team. The material for each case will be derived from actual cases and topics will include continuity of care problems, typical problems/diseases seen in hospitalized patients, and a host of other chronic illnesses. During the 3-week class, students will have 1-1.5 hours to work on a patient case in class and address challenges faced in the clinical setting. The second half of class will be used for students to present their recommendations to a "medicine team" (made up of your classmates and teachers). Students will be responsible for creating a pharmacist problem list and making verbal drug therapy recommendations. The majority of the grade will come from in-class participation with other points coming from online quizzes, communication exercises, and follow-up answers from clinical questions.

Learning Outcomes: 1. Utilize the Pharmacists' Patient Care Process (PCPP) when evaluating and synthesizing patient care plans 2. Identify and prioritize medical problems for a complex patient each class period. 3. Interpret patient cases through the identification of pertinent objective and subjective data each class period. 4. Formulate and adjust a patient specific, evidence-based treatment plan for each identified medical problem daily. 5. Present audience appropriate, patient specific recommendations using evidence-based medicine as necessary. 6. Identify and apply relevant literature, including, but not limited to practice guidelines, landmark trials, and case reports to each patient case. 7. Prepare and communicate a drug information response including appropriate citations when requested. 8. Demonstrate the ability to self-assess one's performance and identify areas for continual professional development. Credits: 2.00

PHRM 49000 - Special Topics

Credit Hours: 0.00 to 3.00. Subject matter and method of approach individually directed by instructor. Permission of instructor required.

Learning Outcomes: 1. The development of professional skills and increased knowledge base of pharmaceutical subject matter. Credits: 0.00 to 3.00

PHRM 49500 - Pharmaceutical Research Special Topics

Credit Hours: 1.00 to 3.00. Ongoing involvement in pharmaceutical research. Pharmaceutical research subject matter and method of approach individually directed by instructor. Permission of instructor required.

Learning Outcomes: 1. Develop professional skills. 2. Increase knowledge base of pharmaceutical subject matter. 3. Direct research exposure and experience. Credits: 1.00 to 3.00

PHRM 50000 - Artificial Intelligence And Its Use In Clinical Care

Credit Hours: 2.00. The course comprehensively covers key topics such as the mechanisms behind how AI functions, the capabilities and limitations of current technologies, and important considerations around data privacy, bias, and health equity. Ethical issues are also explored through analyses of real-world case studies. The course equips participants with a solid foundation to thoughtfully engage with, evaluate, and contribute to the ongoing integration of AI into clinical practice and beyond.

Learning Outcomes: 1. Identify various applications and settings where AI is being utilized in healthcare today and where it will migrate to in the future. 2. Describe the technical underpinnings of how AI tools are built and function. 3. Analyze the clinical and social impacts of AI for patient care including how patients are using these tools as well as various ethical and regulatory issues. 4. Synthesize a solution to clinical cases using AI tools to improve your skills in the healthcare industry. Credits: 2.00

PHRM 69500 - Introduction To Pharmaceutical

Sciences Research

Credit Hours: 0.50. Introduction of new graduate students to graduate programs, various disciplines, and the research environment in the College of Pharmacy, and prepare them for their graduate studies at Purdue College of Pharmacy. Each meeting is expected to have ~90 minutes presentation(s) and 30 minutes student discussion. Permission of department required.

Learning Outcomes: 1. Know the graduate programs and their classmates and peers. 2. Understand pharmacy as a profession and recognize various scientific and research areas in pharmaceutical sciences. 3. Have a fundamental understanding of professionalism and research conduct. 4. Start utilization of career development tools including individual development plan (IDP). 5. Understand the general framework for conducting research that constitutes of literature search, hypothesis development, data keeping, and scientific writing. Credits: 0.50

PHRM 80000 - Integrated Pharmacotherapy I

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80100 - Integrated Pharmacotherapy II

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and

utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80200 - Integrated Pharmacotherapy III

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80300 - Integrated Pharmacotherapy IV

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various

therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80400 - Integrated Pharmacotherapy V

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80500 - Integrated Pharmacotherapy VI

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist,

regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non- pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80600 - Integrated Pharmacotherapy VII

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non- pharmacologic) for the given disease states within this course and design a patient specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80700 - Integrated Pharmacotherapy VIII

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology,

pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non- pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80800 - Integrated Pharmacotherapy VIIII

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non-pharmacologic) for the given disease states within this course and design a patient-specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health

improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 80900 - Integrated Pharmacotherapy X

Credit Hours: 2.50. This integrated pharmacotherapy course will develop knowledge and skills regarding the physiology, pathophysiology, pharmacology, medicinal chemistry, pharmacokinetics, pharmaceutics, and pharmacotherapeutics relevant to diseases and drugs associated with the autonomic, endocrine, pulmonary systems. It is essential that pharmacists understand the underlying pathophysiology of endocrine, reproductive, and gastrointestinal diseases and conditions, and the current and developing therapeutic strategies utilized to provide optimal patient care as a future clinical pharmacist, regardless of pharmacy setting.

Learning Outcomes: 1. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 2. Evaluate various therapeutic alternatives (both pharmacologic and non- pharmacologic) for the given disease states within this course and design a patient specific therapeutic regimen. Assess the effectiveness of therapy on the basis of clinical and laboratory parameters. 3. Interpret and utilize patient case summaries, patient databases, medical abbreviations, and terminology in the overall management of patients. 4. Demonstrate critical thinking and decision-making skills to develop a process for recognizing, analyzing, and resolving a drug therapy-related problem. 5. Describe the pathophysiologic processes responsible for the given disease states within this course and integrate this knowledge into the therapeutic decision-making process. 6. Develop habits of an independent and life-long learner by completing assigned readings, reviewing necessary background information when needed, addressing objectives not covered in class, asking questions to solidify learning, and continually performing a self-evaluation of one's own knowledge and skills. 7. Integrate and apply information from previous basic science and clinical courses in the curriculum and from other experiences to promote health improvement and disease prevention and to solve patient therapeutic problems. Credits: 2.50

PHRM 81000 - Basics Of Immunology

Credit Hours: 1.00. The goal of PHRM 81000 (Basics of Immunology) is to expose the student to the basic principles of immunology and enable the student to use these principles to understand how the immune system combats infections. This goal will be achieved through online recorded lecture and out of class reading assignments and quizzes. The student will be expected to understand basic immunological concepts and apply this knowledge to solving problems involving the integration of the various components of the immune system.

Learning Outcomes: 1. Discuss the basic components of the immune system and their roles in innate and adaptive immunity. 2. Discuss the development and function of lymphocytes in adaptive immunity. 3. Discuss the molecular basis of antibody diversity. 4. Discuss how antigens are recognized by T cells. 5. Discuss how B cells develop and function in the body. 6. Discuss how T cells develop in the body and differentiate into specialized subsets. 7. Discuss how lymphocytes undergo positive and negative selection. 8. Discuss how B cells and T cells are activated and participate in adaptive immunity. 9. Discuss the basis of MHC polymorphism and the role in the immune response. 10. Discuss how the complement system is activated and plays a its role in immune responses. 11. Discuss how the cellular components of the innate and adaptive immune systems combine to generate an effective response against pathogens. 12. Discuss how the body remembers a previous

infection. Credits: 1.00

PHRM 81100 - Integrated Case Studies I

Credit Hours: 1.00. This is the first course in a series of five courses focused on aiding in the individual professional development of student pharmacists through a focus on systematic, holistic patient work up grounded in the Pharmacists' Patient Care Process (PPCP). These courses place a heavy emphasis on refining a student's own systematic patient work-up and monitoring approach, practicing holistic, patient- specific care plan development, and refining other skills to prepare students for experiential education. The cases used in each class simulate actual patient cases which include continuity of care challenges, typical problems/diseases seen across pharmacy settings (e.g., ambulatory care, community, hospital, etc.), and multiple chronic diseases. The cases will include topics within the corresponding Integrated Pharmacotherapy (IPT) courses as well as integrating previous IPT content and topics not within IPT. Class time will be spent working up patients individually and as a team, discussing the monitoring/PPCP process, identifying and applying drug information resources, and verbally communicating pharmacotherapy plans to peers and faculty. The complexity of patient cases and volume of patients cared for will increase throughout the case series sequence. All course activities are designed to help enhance the transition into introductory and advanced pharmacy practice experiences.

Learning Outcomes: 1. Develop your own standardized approach for systematic and effective patient workup and monitoring for use in any clinical setting within the Pharmacist's Patient Care Process framework. a. Clearly detail your process to explain what information is relevant to collect/assess. b. Identify a method for organizing collected information that contributes to an effective monitoring approach. c. Complete patient workup in an efficient (or timely) manner. 2. Create a holistic patient-specific, evidence-based pharmacotherapy plan for one or more patients that includes both pharmacologic and non-pharmacologic management strategies. Prioritize patient problems based on clinical setting/encounter. b. Utilize evidence-based resources (primary literature, guidelines, etc.) in the selection and adjustment of pharmacotherapy for the delivery of care to every patient. c. Develop solutions to address barriers related to the social drivers of health. d. Adjust recommendations with new or unanticipated information. e. Create a detailed monitoring plan to achieve prioritized goals of therapy. 3. Communicate patient workup processes and/or pharmacotherapy plans clearly to a variety of audiences (e.g., patients, providers, pharmacists, other healthcare team members, etc.). 4. Refine your professional identity (the ability to think, act, and feel like a pharmacist) through development of your own standardized workup and monitoring process, development of patient-specific, evidence-based pharmacotherapy plans, and reflective communication activities. Credits: 1.00

PHRM 81200 - Integrated Case Studies II

Credit Hours: 1.00. This is the second course in a series of five courses focused on aiding in the individual professional development of student pharmacists through a focus on systematic, holistic patient work up grounded in the Pharmacists' Patient Care Process (PPCP). These courses place a heavy emphasis on refining a student's own systematic patient work-up and monitoring approach, practicing holistic, patient- specific care plan development, and refining other skills to prepare students for experiential education. The cases used in each class simulate actual patient cases which include continuity of care challenges, typical problems/diseases seen across pharmacy settings (e.g., ambulatory care, community, hospital, etc.), and multiple chronic diseases. The cases will include topics within the corresponding Integrated Pharmacotherapy (IPT) courses as well as integrating previous IPT content and topics not within IPT. Class time will be spent working up patients individually and as a team, discussing the monitoring/PPCP process, identifying and applying drug information resources, and verbally communicating pharmacotherapy plans to peers and faculty. The complexity of patient cases and volume of patients cared for will increase throughout the case series sequence. All course activities are designed to help enhance the transition into introductory and advanced pharmacy practice experiences.

Learning Outcomes: 1. Develop your own standardized approach for systematic and effective patient workup and monitoring for use in any clinical setting, within the Pharmacist's Patient Care Process framework. Clearly detail your process to explain what information is relevant to collect/assess. Identify a method for organizing collected information that contributes

to an effective monitoring approach. And complete patient workup in an efficient (or timely) manner. 2. Create a holistic patient-specific, evidence-based pharmacotherapy plan for one or more patients that includes both pharmacologic and non-pharmacologic management strategies. Prioritize patient problems based on clinical setting/encounter. Utilize evidence-based resources (primary literature, guidelines, etc.) in the selection and adjustment of pharmacotherapy for the delivery of care to every patient. Develop solutions to address barriers related to the social drivers of health. Adjust recommendations with new or unanticipated information. And create a detailed monitoring plan to achieve prioritized goals of therapy. 3. Communicate patient workup processes and/or pharmacotherapy plans to a variety of audiences (e.g., patients, providers, pharmacists, other healthcare team members, etc.). 4. Refine your professional identity (the ability to think, act, and feel like a pharmacist) through development of your own standardized workup and monitoring process, development of patient-specific, evidence-based pharmacotherapy plans, and reflective communication activities. Credits: 1.00

PHRM 81300 - Integrated Case Studies III

Credit Hours: 1.00. This is the third course in a series of five courses focused on aiding in the individual professional development of student pharmacists through a focus on systematic, holistic patient work up grounded in the Pharmacists' Patient Care Process (PPCP). These courses place a heavy emphasis on refining a student's own systematic patient work-up and monitoring approach, practicing holistic, patient- specific care plan development, and refining other skills to prepare students for experiential education. The cases used in each class simulate actual patient cases which include continuity of care challenges, typical problems/diseases seen across pharmacy settings (e.g., ambulatory care, community, hospital, etc.), and multiple chronic diseases. The cases will include topics within the corresponding Integrated Pharmacotherapy (IPT) courses as well as integrating previous IPT content and topics not within IPT. Class time will be spent working up patients individually and as a team, discussing the monitoring/PPCP process, identifying and applying drug information resources, and verbally communicating pharmacotherapy plans to peers and faculty. The complexity of patient cases and volume of patients cared for will increase throughout the case series sequence. All course activities are designed to help enhance the transition into introductory and advanced pharmacy practice experiences.

Learning Outcomes: 1. Develop your own standardized approach for systematic and effective patient workup and monitoring for use in any clinical setting within the Pharmacist's Patient Care Process framework. a. Clearly detail your process to explain what information is relevant to collect/assess. b. Identify a method for organizing collected information that contributes to an effective monitoring approach. c. Complete patient workup in an efficient (or timely) manner. 2. Create a holistic patient-specific, evidence-based pharmacotherapy plan for one or more patients that includes both pharmacologic and non-pharmacologic management strategies. a. Prioritize patient problems based on clinical setting/encounter. b. Utilize evidence-based resources (primary literature, guidelines, etc.) in the selection and adjustment of pharmacotherapy for the delivery of care to every patient. c. Develop solutions to address barriers related to the social drivers of health. d. Adjust recommendations with new or unanticipated information. e. Create a detailed monitoring plan to achieve prioritized goals of therapy. 3. Communicate patient workup processes and/or pharmacotherapy plans clearly to a variety of audiences (e.g., patients, providers, pharmacists, other healthcare team members, etc.). 4. Refine your professional identity (the ability to think, act, and feel like a pharmacist) through development of your own standardized workup and monitoring process, development of patient-specific, evidence-based pharmacotherapy plans, and reflective communication activities. Credits: 1.00

PHRM 81400 - Integrated Case Studies IV

Credit Hours: 1.00. This is the fourth course in a series of five

courses focused on aiding in the individual professional development of student pharmacists through a focus on systematic, holistic patient work up grounded in the Pharmacists' Patient Care Process (PPCP). These courses place a heavy emphasis on refining a student's own systematic patient work-up and monitoring approach, practicing holistic, patient- specific care plan development, and refining other skills to prepare students for experiential education. The cases used in each class simulate actual patient cases which include continuity of care challenges, typical problems/diseases seen across pharmacy settings (e.g., ambulatory care, community, hospital, etc.), and multiple chronic diseases. The cases will include topics within the corresponding Integrated Pharmacotherapy (IPT) courses as well as integrating previous IPT content and topics not within IPT. Class time will be spent working up patients individually and as a team, discussing the monitoring/PPCP process, identifying and applying drug information resources, and verbally communicating pharmacotherapy plans to peers and faculty. The complexity of patient cases and volume of patients cared for will increase throughout the case series sequence. All course activities are designed to help enhance the transition into introductory and advanced pharmacy practice experiences.

Learning Outcomes: 1. Develop your own standardized approach for systematic and effective patient workup and monitoring for use in any clinical setting, within the Pharmacist's Patient Care Process framework. Clearly detail your process to explain what information is relevant to collect/assess. Identify a method for organizing collected information that contributes to an effective monitoring approach. And complete patient workup in an efficient (or timely) manner. 2. Create a holistic patient-specific, evidence-based pharmacotherapy plan for one or more patients that includes both pharmacologic and non-pharmacologic management strategies. Prioritize patient problems based on clinical setting/encounter. Utilize evidence-based resources (primary literature, guidelines, etc.) in the selection and adjustment of pharmacotherapy for the delivery of care to every patient. Develop solutions to address barriers related to the social drivers of health. Adjust recommendations with new or unanticipated information. And create a detailed monitoring plan to achieve prioritized goals of therapy. 3. Communicate patient workup processes and/or pharmacotherapy plans to a variety of audiences (e.g., patients, providers, pharmacists, other healthcare team members, etc.). 4. Refine your professional identity (the ability to think, act, and feel like a pharmacist) through development of your own standardized workup and monitoring process, development of patient-specific, evidence-based pharmacotherapy plans, and reflective communication activities. Credits: 1.00

PHRM 81500 - Integrated Case Studies V

Credit Hours: 1.00. This is the fifth course in a series of five courses focused on aiding in the individual professional development of student pharmacists through a focus on systematic, holistic patient work up grounded in the Pharmacists' Patient Care Process (PPCP). These courses place a heavy emphasis on refining a student's own systematic patient work-up and monitoring approach, practicing holistic, patient- specific care plan development, and refining other skills to prepare students for experiential education. The cases used in each class simulate actual patient cases which include continuity of care challenges, typical problems/diseases seen across pharmacy settings (e.g., ambulatory care, community, hospital, etc.), and multiple chronic diseases. The cases will include topics within the corresponding Integrated Pharmacotherapy (IPT) courses as well as integrating previous IPT content and topics not within IPT. Class time will be spent working up patients individually and as a team, discussing the monitoring/PPCP process, identifying and applying drug information resources, and verbally communicating pharmacotherapy plans to peers and faculty. The complexity of patient cases and volume of patients cared for will increase throughout the case series sequence. All course activities are designed to help enhance the transition into introductory and advanced pharmacy practice experiences.

Learning Outcomes: 1. Develop your own standardized approach for systematic and effective patient workup and monitoring for use in any clinical setting within the Pharmacist's Patient Care Process framework. a. Clearly detail your process to explain what information is relevant to collect/assess. b. Identify a method for organizing collected information that contributes to an effective monitoring approach. c. Complete patient workup in an efficient (or timely) manner. 2. Create a holistic patient-

specific, evidence-based pharmacotherapy plan for one or more patients that includes both pharmacologic and non-pharmacologic management strategies. a. Prioritize patient problems based on clinical setting/encounter. b. Utilize evidence-based resources (primary literature, guidelines, etc.) in the selection and adjustment of pharmacotherapy for the delivery of care to every patient. c. Develop solutions to address barriers related to the social drivers of health. d. Adjust recommendations with new or unanticipated information. e. Create a detailed monitoring plan to achieve prioritized goals of therapy. 3. Communicate patient workup processes and/or pharmacotherapy plans clearly to a variety of audiences (e.g., patients, providers, pharmacists, other healthcare team members, etc.). 4. Refine your professional identity (the ability to think, act, and feel like a pharmacist) through development of your own standardized workup and monitoring process, development of patient-specific, evidence-based pharmacotherapy plans, and reflective communication activities. Credits: 1.00

PHRM 81600 - Introduction To Patient-Centered Care

Credit Hours: 2.00. This course teaches students the key communication principles and skills necessary to deliver direct patient care and interact with other health care professionals. This includes developing cultural self-awareness, evaluating patient comprehension, and improving personal communication skills.

Learning Outcomes: 1. Apply the steps of the PPCP to collect and analyze patient-specific information, assess the information, develop and implement a patient-centered plan, and follow-up once the plan has been implemented. 2. Identify patient-specific factors and incorporate these aspects into patient care. 3. Demonstrate effective communication skills for patients, caregivers, peers, and other healthcare providers. 4. Develop strategies to appropriately adjust behavior or communication style based on cultural and communication considerations to optimize patient care. 5. Begin to develop a structured clinical thought process when presented with a patient case. 6. Work effectively within a group of peers to evaluate a patient's case and complete clinical documentation. Credits: 2.00

PHRM 81700 - Introduction To Self-Care

Credit Hours: 2.00. This course introduces students to the principles and practices of self-care and over-the-counter (OTC) medications. Students will learn to assess and recommend appropriate self-care treatments for common conditions, considering patient-specific factors. The course covers nonprescription medications, including their pharmacology, indications, contraindications, and proper use. It also teaches techniques for evaluating patient symptoms and determining when self-care is appropriate versus when to refer to a healthcare provider. Additionally, students will explore strategies for educating patients on lifestyle modifications and preventive measures to maintain health and well-being. By the end of the course, students will be equipped with the knowledge and skills to confidently guide patients in self-care practices and make informed recommendations for OTC therapies.

Learning Outcomes: 1. Identify common self-care conditions and describe both non-therapeutic and therapeutic treatment options for non-prescription management of self-care conditions. 2. Apply therapeutic knowledge to patient care. By the end of this course, students will be able to effectively apply the Pharmacist Patient Care Process (PPCP) to gather and assess patient information, identify patient-specific factors, and make informed decisions regarding self-care and non-prescription therapies. 3. Demonstrate advanced communication and drug information skills. Credits: 2.00

PHRM 81800 - Professional Identity Formation And Leadership

Credit Hours: 1.00. This course is designed to enhance the PharmD P-1 student's professional skills, career exploration and prepare for internships, post-graduation employment or continuing education plans. It provides academic content to link experiences in professional fields to study in pharmacy as well as social, economic and intellectual attitudes that shape views and work experiences. It also introduces Professional Identity Formation (PIF), which is defined as "a complex and transformational process of internalizing a profession 's core

knowledge, skills, values and beliefs, resulting in an individual "thinking, acting and feeling" like a member of that professional community." (AACP) The course will build the student's professional skills and attitudes, with activities and experiences, intended to advance professional, personal, and career development. The topics and activities are purposely designed and implemented to ensure an array of opportunities for students to document competency of advocacy, self- awareness, leadership, and professionalism.

Learning Outcomes: 1. Prepare for a transition to a professional career setting after graduation through self-reflection, self-assessment of performance, and goal setting, while learning tools and strategies to navigate personal and professional values and interests. 2. Understand the importance of on-the-job training and experiential opportunities; and learn how to develop and cultivate professional skills and relationships. 3. Articulate professional expectations and learn how to navigate ethical issues involved with being a professional. 4. Identify personal leadership traits and skills while understanding multiple leadership and communication styles. 5. Identify career interests or goals and understand the pathways to different careers in pharmacy. Credits: 1.00

PHRM 82000 - Professional Skills Laboratory I

Credit Hours: 2.00. Experiments, computer simulations, case studies, and problem sets that actively involve the student in problem-solving, applying and interrelating important concepts from the core courses taught that semester.

Learning Outcomes: 1. Theoretical foundations of the profession are presented and reinforced as well as scientific comprehension. 2. Theory and practice are brought together in most laboratories. 3. Critical thinking and decision-making abilities are employed in solving problems through case studies and recitation. 4. Group interaction and communication skills are addressed through small group activities. 5. Other professional outcome ability goals incorporated in several modules are the evaluation of patient data, scientific literature, and pharmaceutical products followed by making specific recommendations and documentation of services. Credits: 2.00

PHRM 82100 - Professional Skills Laboratory II

Credit Hours: 2.00. Continuation of PHRM 82000 with emphasis upon modules that provide laboratory practice experience designed to integrate basic science concepts and practice applications. Small group problem-solving methodology will be utilized as appropriate.

Learning Outcomes: 1. Theoretical foundations of the profession are presented and reinforced as well as scientific comprehension. 2. Theory and practice are brought together in most laboratories. 3. Critical thinking and decision-making abilities are employed in solving problems through case studies and recitation. 4. Group interaction and communication skills are addressed through small group activities. 5. Other professional outcome ability goals incorporated in several modules are the evaluation of patient data, scientific literature, and pharmaceutical products followed by making specific recommendations and documentation of services. Credits: 2.00

PHRM 82200 - Pharmacy Skills And Patient Counseling

Credit Hours: 2.00. Pharmacy Skills and Patient Counseling is a two credit hour, required first professional year experiential course combining practical experience in the Purdue University Pharmacy with lecture. Students are monitored by faculty instructors, staff pharmacists and Advanced Pharmacy Practice Experience (APPE) students. Students must have a valid Social Security number the first week of class.

Learning Outcomes: 1. Recall and apply brand and generic names, common uses, strengths, doses, side effects and counseling points of commonly used medications. 2. Recall and apply federal and state laws. 3. Obtain pertinent patient information during the prescription intake process. 4. Recall and apply commonly used pharmacy abbreviations, conversions, and computer software functions. 5. Process and dispense new and refilled prescriptions according to federal and state law requirements. Credits: 2.00

PHRM 82400 - Principles Of Pathophysiology And Drug Action

Credit Hours: 3.00. This course introduces the basic principles of pathophysiology, pharmacodynamics, toxicology and medicinal chemistry necessary to understand the therapeutic use and adverse actions of drugs. The course will integrate and apply concepts of science courses, including organic chemistry, biochemistry, anatomy and physiology into an understanding of the basic fundamentals of disease processes, toxicology and drug actions. Thus, this course will provide students with the basic background necessary to understand and apply pharmacotherapeutics to the practice of pharmacy. Prerequisite: MCMP 20400, 20500, 20800, and BIOL 20300, 20400 or 30100, 30200. Departmental permission required.

Learning Outcomes: 1. Conceptual Competence: Pathophysiology, Principles of pharmacology. 2. Scientific Comprehension: Basic principles of thermodynamics and kinetics and their role in defining chemical processes; Basic principles of drug design and their chemical and biochemical mechanisms of drug action. 3. Critical Thinking and Decision Making Abilities: Synthesize information in order to draw logical conclusions; Provide evidence-based support for arguments, recommendations and solutions; Demonstrate the ability to make sound decisions given complex scenarios in a time-constrained environment. 4. Communication Skills and Abilities: Demonstrate the ability to present ideas, plans, and data in appropriate written formats to succinctly and effectively communicate with various audiences. 5. Responsible use of Professional Values and Ethical Principles: Exhibit professional behavior at all times in congruence with the pharmacist code of ethics. 6. Professional Abilities and Habits: Demonstrate the ability to self-access and take needed steps to achieve competence; exhibit positive, professional, empathic attitudes and behaviors in all intra- and interprofessional communications. Credits: 3.00

PHRM 82500 - Integrated Pharmacotherapy I

Credit Hours: 6.00. This course will serve as an integrated approach to the physiology/pathophysiology, medicinal chemistry, pharmacology, pharmacokinetics/ pharmaceutics, and pharmacotherapeutics of the following topics: fluids/electrolyte pharmacotherapy, renal diseases, acid/base disorders, clinical nutrition, autonomic nervous system (ANS), pulmonary diseases, hematology, immunology, and rheumatology. The emphasis of this course is knowledge and skill development. Also in the process of completing the objectives, attitudes toward the role of the pharmacist and patient-related issues will be imparted.

Learning Outcomes: 1. Conceptual Competence: The student must demonstrate evidence-based knowledge of the following theoretical foundations of the profession and apply these to individual practice settings. Basic anatomy/physiology; Pathophysiology; Diagnostic methods and decision making; Principles of pharmacology; Relationship between chemical structure and biological activity; Delivery of drugs from various dosage forms; Pharmacotherapy; Drug interactions; Treatment guidelines. 2. Scientific Comprehension: The students must demonstrate comprehension of major scientific discoveries and use of the scientific method to make these discoveries. Basic principles of drug design and the chemical and biochemical mechanisms of drug action; The relevance of molecular biology, biochemistry, and pharmacogenomics and apply key principles of disease states and therapeutics. 3. Mathematical Competence: The students must be able to use mathematical variables to analyze physical, biological, and socioeconomic phenomena. Perform error-free mathematical calculations with regard to drug dosing and pharmacokinetics. 4. Integrative (Practice-related) Competence: The student must be able to meld theory and abilities in the practice setting to enhance positive patient outcomes. Provide patient-centered pharmaceutical care; Promote health improvement and disease prevention; critically evaluate patient data, literature sources, and drug products; provide specific, sound, cost effective, evidence-based drug and healthcare recommendations; design, implement, and evaluate patient specific

pharmacotherapeutic regimens; select the proper drug, dose, and dosage form for a specific patient; design strategies to monitor patients' drug regimens for therapeutic and toxic effects of medications; design strategies to avoid or manage drug interactions and adverse drug events; identify and implement strategies to encourage patient adherence to therapeutic interventions. 5. Critical Thinking and Decision Making Abilities: The student must examine issues rationally, logically, and coherently; and shall acquire, evaluate, and synthesize information and knowledge relevant to an identified problem; and make sound decisions in both familiar and unfamiliar context. Synthesize information in order to draw logical conclusions; provide evidence-based support for arguments, recommendations, and solutions; demonstrate the ability to make sound decisions given complex scenarios in a time-constrained environment. Credits: 6.00

PHRM 82600 - Introduction To Patient Centered Care

Credit Hours: 4.00. The introductory course teaches students the key communication principles and skills necessary to deliver patient care and interact with other health care professionals. This includes performing basic physical assessments, evaluating patient comprehension, and improving personal communication skills.

Learning Outcomes: 1. Identify and perform physical assessment techniques based on disease states. 2. Demonstrate the ability to interpret and use assessment values appropriately. 3. Demonstrate communication skills to effectively advise and counsel patients. 4. Demonstrate effective communication skills when conveying patient information or therapeutic recommendations to healthcare providers. 5. Develop strategies to appropriately adjust behavior or communication style based on cultural and communication considerations in order to optimize patient care. 6. Develop strategies to modify therapeutic regimens based on an assessment of patient readiness and motivation. 7. Develop strategies to address issues related to patient adherence to therapeutic recommendations. 8. Demonstrate skills to interview patients, evaluate medication regimens, respond to health-related needs, and develop an action plan for addressing therapeutic issues. Credits: 4.00

PHRM 82800 - Dosage Forms I
