Credit Hours: 1.00 to 6.00. For students doing individualized research on landscape architecture; report required. Arrange with academic advisor and honors research advisor before registering. Admission to the honors program required. Permission of instructor required.

Credits: 1.00 to 6.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader

appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 30100 - Agroecology

Credit Hours: 3.00. This course introduces students to the application of ecological concepts to food production systems and farm management. We will consider species interactions, nutrient and water cycles, regenerative practices, alternative approaches to agriculture, and ecosystem services provided to and by agro-ecosystems.

Learning Outcomes: 1. Understand key connections between ecology and agriculture. 2. Apply the agro-ecosystem concept to farming systems. 3. Discuss the relative strengths and weaknesses of conventional and alternative forms of agriculture. 4. Understand the effect of farm management practices on primary productivity, nutrient cycling, and species interaction. 5. Evaluate ecosystem services provided to and by agro-ecosystems. 6. Consider the role of social factors on farming systems. 7. Discuss the potential for ecologically based agriculture to address farming issues at local, regional, and global levels. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by

accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

SFS 31100 - Aquaponics

Credit Hours: 1.00. (FNR 31300) (HORT 31100) There has been significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia, and our impending food crisis has kindled an interest in developing aquaponic systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. High input costs can, however, be a limitation. The waste disposal problem of the fish can become the nutrient supply to the plants.

Learning Outcomes: 1. Understand the nature of interactions among organisms, in particular those involving plants: mutualism, commensalism, parasitism, herbivory. 2. Understand the relationships among host, environment and pathogen for development of plant disease. 3. Know principal pathogens of Midwestern crops. 4. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 5. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 6. Understand the importance of energy in society and in agricultural production systems. 7. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 8. Have a broad awareness of the role of agriculture in global society. 9. Understand the advantages and disadvantages of different approaches to food production. 10. Understand the principles of food marketing and sales. 11. Understand the principles of post harvest food storage and pest management. Credits: 1.00

SFS 31200 - Urban Agriculture

Credit Hours: 1.00. Urban agriculture has the potential to address a range of social, economic and environmental issues including food insecurity, energy conservation, and human health and well-being. During this 5-week course, students will learn about the forces driving urban agriculture as well as the political and biophysical factors constraining it by reading articles, reviewing case studies, and visiting urban farms, vertical farm factories, food pantries, and local food advocacy groups. At the end of this course, students will apply the knowledge they've gained by developing a plan to increase urban agriculture in the greater Lafayette metropolitan area.

Learning Outcomes: 1. Understand the complexity of our global food system and learn how urban agriculture can address social, economic and ecological issues in cities around the world. 2. Develop critical thinking and communication skills through in-class discussions and writing assignments that integrate agroecology, urban planning, and civic engagement as they relate to urban agriculture. 3. Apply relevant theories and examples by developing a plan to facilitate the growth of urban agriculture. Credits: 1.00

SFS 31300 - Farm To Fork

Credit Hours: 1.00. This course will investigate the culinary opportunities of local and seasonal foods and the horticultural demands of producing and marketing them. Dr. Hallett will represent the "farm", giving students a brief overview of the production of local and seasonal foods in Indiana. The "farm" will harvest produce at the student farm and deliver it to the "fork" -- Chef Ambarish Lulay - who will work his culinary magic in the teaching kitchens in the HTM department. The focus, from both "sides" of the course will be the importance of niche marketing for farmers and chefs. This course is going to be tasty and fun!

Learning Outcomes: 1. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 2. Have a broad awareness of the role of agriculture in global society. 3. Understand the advantages and disadvantages of different approaches to food production. 4. Understand the principles of

food marketing and sales. 5. Understand the principles of postharvest food storage and pest management. 6. Be able to handle multiple tasks and deadline pressures. 7. Be able to work effectively with individuals from diverse cultures. 8. Have strong professional ethics and integrity. 9. Understand the importance of developing leadership skills. 10. Be able to work effectively in teams. Credits: 1.00

SFS 31400 - Comparative Livestock Production Systems

Credit Hours: 1.00. This course will compare and contrast the various livestock and poultry systems in the United States. The course will begin with in depth analysis of the history and structure of prevalent or conventional livestock and poultry production systems followed by a similar analysis of the various alternative production systems currently in use in the US, including organic, grass-fed, and pasture-raised among others. A heavy focus will be placed on critically evaluating the pros and cons of each system, regulations of both conventional and process-verified systems and potential differences in products resulting from different management and processing systems.

Learning Outcomes: 1. Understand the structure of conventional livestock and poultry production systems in the US. 2. Understand the alternative livestock and poultry production systems prevalent in the US. 3. Know how each system is regulated including the various process verified systems. 4. Know how different management and processing systems do or do not impact final product qualities. 5. Be able to critically evaluate and compare the benefits and challenges inherent in different production systems. Credits: 1.00

SFS 31500 - Principles Of Permaculture

Credit Hours: 1.00. The goal of this class is to encourage students to think of farming systems, including their energy and resource flows, economics and social characteristics, in the ways that ecologists think of ecological systems. How does energy flow through farming systems, and how do resources recycle (or not)? What are the weaknesses of farming systems that could be mitigated by mimicking natural systems? Issues of efficiency, sustainability and resilience will be investigated in the context of permaculture, a theory of food production and landscape design that has an emphasis on perennial crops, low input production, and ecological diversity. The centerpiece of the course will be to further develop the Purdue Student Farm using permaculture principles.

Learning Outcomes: 1. Analyze energy and natural resource issues of modern society in the context of ecological systems thinking. Credits: 1.00

SFS 35100 - SFS Capstone Project

Credit Hours: 1.00. The SFS Capstone Project is a directed-learning course that will require students to prepare and present a sustainability analysis of a farm enterprise, most likely the enterprise at which they conduct their required summer internship, and this may be an internship approved at an operation other than a farm. Students will be required to analyze and enterprise taking into account its economic, environmental and social sustainability, and its broader role in sustaining the local and regional economy, environment and community. The analysis will be prepared as a paper and a presentation that will be given to the undergraduates of the SFS program at an SFS program meeting. The paper and the presentation will be prepared in consultation with a faculty mentor from the SFS program committee and will be graded by the faculty mentor. Completion of an approved work or internship experience.

Learning Outcomes: 1. Analyze complex concepts. 2. Think critically about systems and business operations from a range of different economic and social contexts. 3. Develop written and oral communication skills. Credits: 1.00

SFS 39100 - Special Problems In Sustainable Food And Farming Systems

Credit Hours: 1.00 to 3.00. Contemporary topics in sustainable food and farming systems are explored. Topic selection is based on student interest. Permission of instructor required.

Learning Outcomes: 1. Communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 2. Conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 3. Develop an understanding of and be able to

practice the scientific method of investigation. 4. Handle multiple tasks and deadlines. 5. Have a strong professional ethics and integrity. 6. Have a working knowledge of SI (metric) units. Credits: 1.00 to 3.00

SFS 41100 - Structural Racism In US Agriculture

Credit Hours: 1.00. A discussion-based exploration of the history and legacies of structural racism in American agriculture. We will analyze the barriers to success faced by non-white farmers in the US, the structures that have oppressed minority groups in agriculture, and ways in which these forces might be reversed or resisted.

Learning Outcomes: 1. Deepen an understanding of racism, bias, and white privilege. 2. Develop an understanding of the governmental, institutional, and social structures that have led to racial and ethnic inequities in American agriculture. 3. Understand the relationship of all peoples with American agriculture, whether indigenous or arriving as enslaved person or immigrant, and the legacies of those relationships. 4. Analyze the ways in which immigration and foreign policy impact the US food system. 5. Learn to communicate issues of structural racism in American agriculture effectively. 6. Construct ideas that might promote a more equitable food system. Credits: 1.00

SFS 41200 - Colonialism, Globalization, And Food Justice

Credit Hours: 1.00. This course will uncover the foundations of inequities in access to healthy, nutritious food from the first era of colonization to the modern era of globalization. The course will make students aware of the racial and ethnic inequities in farming and food systems and consider mechanisms of decolonization: resistance against the status quo and the development of new food systems.

Learning Outcomes: 1. Understand the emergence of modern food systems through the eras of colonization and globalization. 2. Analyze the factors that contribute to inequities in access to healthy, nutritious food. 3. Investigate global and local food justice movements. 4. Evaluate the legacies of colonialism in today's food deserts. 5. Investigate local food movements, such as urban agriculture, represent attempts at decolonization. 6. Investigate the activism of indigenous groups around the world seeking decolonization and food justice. 7. Consider policies to reduce inequities in food systems. Credits: 1.00

SFS 41300 - The Cultures And Agricultures Of The United States

Credit Hours: 1.00. The United States is a vast country encompassing many climates, geographies, and human histories. This course will investigate the diversity of the United States by examining a dozen locations with respect to people-and-place. How have people shaped these places, and how have these places shaped the people who have lived in them?

Learning Outcomes: 1. Understand the different types of land use, especially agriculture, in different regions of the United States, and consider their sustainability. 2. Investigate the cultures and agricultures of American Indian tribes prior to first contact with Europeans. 3. Analyze the displacement and relocation of American Indian tribes in specific regions. 4. Analyze the nature and legacies of slavery, and the means by which African Americans have been excluded from land ownership since reconstruction. 5. Consider the contributions of Asian Americans to the cultures and agricultures of the United States. 6. Investigate changes to the natural, built, and cultural landscapes of the United States through time. 7. Consider how the sustainability of cultures, economies, environmental health, and agriculture can (or cannot) be sustained in different regions of the United States. Credits: 1.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in

science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

Mitch Daniels School of Business

Take Your Next Giant Leap

Take your next giant leap at Purdue University's Mitch Daniels School of Business. We are developing future leaders ready to manage, or found, great companies and transform society. By integrating business with technology, engineering, and science and offering transformative, hands-on learning, our top faculty and programs will prepare you to harness the power of data and analytical thinking. Master technological excellence and communication skills to turn discoveries into world-changing solutions.

Launch Your Career with Confidence

From your first day on campus, you'll find support to help you prepare for your future career. At the Daniels School of Business, career development is built into your student experience-through classes, clubs, internships, alumni connections, and real-world projects.
Our Business Career Services team will work with you early and often, offering one-on-one advising, career treks, events, and training to help you build the confidence and skills to take your next giant leap. Whether you're searching for your first internship or planning long-term goals, we'll help you create a path that aligns with your strengths and ambitions.

Jump on the Fast Track

Most business school students start their journey at a point of entry where they complete a common core of foundational courses for management and economics, along with

general core curriculum courses. After earning the GPA required for admission into upper division, students will follow a plan of study associated with a specific major. Many students bring in ample AP and dual credits such that they move fast through this entry-level stage to pursue multiple majors, minors, concentrations certificates, and internships. And most of our majors may be completed in three years. The school's mission is to facilitate students' success in designing and completing the plan of study that optimizes every student's educational and professional objectives.

Build the Future of Business

Business school students may aspire to the C-suite to become Chief Executive Officers, Chief Financial Officers, Chief Information Officers or Chief People Officers for multi-national organizations. Many pursue careers in accounting, management consulting, investment banking or data analysis. Others thrive as entrepreneurs and launch successful startups. You will find Daniels School graduates working all around the world, using their skills and talents to make the world a better place.

Advising Information

Department of Business Administration

Overview

All organizations, large and small, need leaders with business acumen. They effectively design, coordinate, and communicate innovative solutions in all aspects of an organization from operations to human resources. Daniels business graduates are adaptable leaders with strong roots in analytics, complemented by communication skills and technological expertise that help their organizations compete in the business world.
A multi-functional approach to coursework allows you to discover different business areas at the same time, including finance, strategy, law and organizational behavior. You'll refine your critical thinking, communication and analytical skills as you explore the ways profitable businesses contribute value to society. Once you complete these foundational courses, dive deeper into the major of your choice. Additional minors and concentrations allow you to focus on specific interests.
Daniels graduates pursue many different careers. Some begin in corporate management rotational programs as account executives or project managers. Others apply their business education as entrepreneurs who start their own businesses. You will find Daniels graduates in companies all over the word, including Boeing, Tesla, Accenture, IBM, PwC, KPMG, Amazon, Google, Procter & Gamble, United Technologies, and JPMorgan Chase.

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related

careers. Credits: 1.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ECON 21900 - Economics For Future Elementary Teachers

Credit Hours: 3.00. A principles of economics course designed for future elementary and social studies teachers. The purpose of this course is to: 1) introduce the future teacher to basic economic concepts required by the Indiana Academic Standards for Social Studies, K-6, 2) learn methods for teaching these concepts in the K-6 curriculum, and 3) develop a catalog of curriculum materials appropriate for teaching economics in grades K-6. No credit for management students.

Learning Outcomes: 1. Identify and understand the basic concepts and principles of economics in order to teach at the elementary school level. 2. Develop an `Economic Way of Thinking? that can be utilized to make more efficient choices as consumers, and as voters. 3. Identify supplementary materials (DVDs, online and app-based resources, simulations, curriculum materials, etc.) that can be used in K-6 teaching or as a supplement in K-6 classrooms. 4. Apply this 'Economic Way of Thinking' in the analysis existing curriculum in K-6 economics, and of everyday current events. 5. Utilize the basic concepts and principles of economics to design and develop new K-6 curriculum. Credits: 3.00

ECON 21910 - Economics For Future Secondary Teachers

Credit Hours: 3.00. Upon completion of this course students will be able to analyze economic events in order to make more intelligent choices as consumers, workers, and voting citizens; identify and understand the basic concepts and principles of economics in order to meet standards at the secondary school level; identify supplemental materials and programs from variety of sources used in your teaching major, minor or as supplements in your classrooms; and review and organize lessons that teach economic concepts. No credit for management students. The course content is principles-level economics and is designed for social studies education students who are beginning their sequence of required economics courses. The course is designed to be taken before upper-division economic content courses.

Learning Outcomes: 1. Analyze economic events so that you will be able to make more intelligent choices as a consumer, worker, and voting citizen 2. Identify and understand the basic concepts and principles of economics in order to teach at the secondary school level. 3. Identify supplementary materials and programs (CD's, video tapes, simulations, curriculum materials, etc.) from a variety of sources that can be used in your teaching major, minor or as supplements in your classroom. 4. Review and organize lessons that teach economic concepts in your chosen Social Studies area. 5. Assist course instructor in improving the course to better fit your needs. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic

costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

ECON 28600 - Economics Scholars

Credit Hours: 1.00. This course explores the concept of human capital investment in higher education. For each course meeting you will be assigned readings. You must complete the assigned readings before the scheduled discussion and come prepared to discuss them. Class will consist of a discussion of the ideas in the readings, not a lecture, with grades based on your participation in addition to one writing assignment at the end of the semester. The instructor will suggest questions to get the discussion started and will maintain the queue that determines speaking order. Permission of instructor required.

Learning Outcomes: 1. Read essays on higher education investment and be able to explain and evaluate their arguments. 2. Discuss and write about how the concept human capital investment theory applies to higher education policy today. Credits: 1.00

ECON 29000 - Sophomore Level Problems In Economics

Credit Hours: 1.00 to 4.00. Arrange with instructor before enrolling. Investigation in a specific economics field. Permission of instructor required.

Learning Outcomes: 1. Vary by course topic. Credits: 1.00 to 4.00

ECON 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in economics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECON 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in economics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

ECON 32200 - Economics Of Public Policy

Credit Hours: 3.00. The examination and analysis of public finance practices and problems in the federal fiscal system. Government activities that involve spending and taxation are analyzed applying basic principles of economics. Topics include public education, social security, healthcare, environment and tax systems. State and local government issues are also addressed.

Learning Outcomes: 1. Explain how the provision of government goods and services through political institutions differs from market provision of goods and services. 2. Examine and analyze taxes and subsidies with and without market failure. 3. Examine and analyze various types of government expenditures on public education, health care, social security, income assistance, unemployment compensation, etc. 4. Explain how cost-benefit analysis can be used to help government choose among alternative investment projects. 5. Examine and analyze the impact of various types of taxes on the economy. Credits: 3.00

ECON 32500 - Economics Of Sports

Credit Hours: 3.00. This class applies economic principles to the professional sports entertainment industry and its derivative input markets. The class begins by examining the microeconomics of demand for (by fans) and supply of (by teams) sports entertainment. The labor markets for the primary input, athletic talent, receive significant attention. Coordination among economic agents, taking the forms of leagues, players' unions, and government, is considered at the end of the class, with an emphasis on how they affect the efficiency of the markets related to sports entertainment. Quantitative empirical analysis is emphasized throughout the class. This is not a sports trivia or fantasy sports strategy class.

Learning Outcomes: 1. Solve models of how fans, teams, and players behave. 2. Describe and evaluate the structures of the markets for sports outputs and inputs, e.g., players. 3. Explain information presented in quantitative forms, e.g., equations, graphs, tables. 4. Analyze the effects of leagues' or governmental

polices on market efficiency. 5. Communicate conclusions about sports output and input markets in numerical, graphical, tabular, and written forms. Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 36100 - Antitrust And Regulation

Credit Hours: 3.00. This course studies the influence of laws and regulations on market performance and on the functioning of a free-enterprise system. The focus is on two types of government policies: antitrust law and economic regulation. Antitrust laws define the rules by which firms are supposed to compete. Regulations may require that firms obtain approval to set prices, change prices, or enter new markets. They may require firms to adhere to environmental or safety standards. The focus is on current topics in both areas, including comparison of U.S. practice with that of European Union and elsewhere.

Learning Outcomes: 1. Demonstrate a basic understanding of economics as applied to antitrust and government regulation of firms, including comparisons of U.S. practice with that of the European Union and elsewhere. 2. Understand the perspective provided by

economic analysis regarding the interplay between government regulation and firms' decisions regarding such factors as pricing, market entry, and the extent/form of competition. 3. Identify insights economic analysis provides concerning the creation and implementation of optimal regulation of business. Credits: 3.00

ECON 36200 - Health Economics

Credit Hours: 3.00. This course is designed to introduce upper level undergraduate students in economics to the field of health economics. We will analyze health and health care theories, institutions, and key policy issues using tools from intermediate microeconomic theory. The course begins with an analysis of health care as a commodity and why health is different from other consumer goods. The course then examines the demand for and the production of health and health care, and the behavior and organization of health care providers. The discussion then switches to information asymmetries and the functioning of health insurance markets. Afterwards, the course turns to the analysis of government involvement in the health care system. The class concludes with an examination of medical care systems around the world, paying particular attention to the U.S. health care system.

Learning Outcomes: 1. Describe the main economic theories relating to health and health care markets. 2. Apply economic theory to the analysis of health care policy and institutions. 3. Construct a detailed demand and supply model of the health insurance market. 4. Critically evaluate key policy issues in health and health care from an economic perspective. Credits: 3.00

ECON 36500 - History Of Economic Thought

Credit Hours: 3.00. The course traces the development of theories of value and economic growth from the seventeenth century to Karl Marx. Among the authors studied are the mercantilists, Hume, Smith, Ricardo, and Marx. Excerpts from the original works are read and evaluated in light of modern theory.

Credits: 3.00

ECON 36700 - Law And Economics

Credit Hours: 3.00. It has become increasingly clear to economists, legal scholars and political scientists that it is impossible to understand economic institutions without first having an understanding of the legal framework within which they operate. Similarly, it is impossible to understand the impact of law on society without first having an understanding of economic principles. This problem is further complicated by the fact that there are often ambiguities in the written law that lead to significant differences between what the law appears to say and how the law is interpreted in the courts. This course is designed to give the student an understanding of both legal and economic principles and the relationship between them. Finally, through the use of economic analysis, the student will acquire the tools to predict the likely outcomes of particular laws and how they will affect their family and business decisions.

Learning Outcomes: 1. Understand better the relationship of Law and Economics, two different disciplines that both directly impact the business climate. 2. Learn how the concepts taught in this class apply in a real world setting. Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

ECON 37200 - Experimental Economics

Credit Hours: 3.00. This course will explore how experiments are used in economics to test economic theory, understand behavior, and evaluate new policies. Focusing on recent research, we read research papers on a variety of policy topics

including labor market discrimination, payday lending, organ transplantation, media censorship, and voting. Applying the concepts from class, students will identify their own original research questions and design new experiments.

Learning Outcomes: 1. Understand why experiments are the gold standard for causal inference. 2. Identify the key elements of any economic experiment and evaluate design choices. 3. Generate original research questions that can be answered with an experiment. 4. Design novel experiments to test hypotheses. Credits: 3.00

ECON 37300 - Computational Economics

Credit Hours: 3.00. The main goal of this course is to introduce economics students to the computation, programming, and data analysis in Python. In the first part of the course, we will cover basic programming techniques and the use of popular Python packages for data analysis. In the second part of the course, we will consider more advanced programming techniques including numerical methods, dynamic programming, and simulation-based methods. Throughout the course we will consider a number applications related to microeconomics, macroeconomics, and econometrics covered in the Economics program curriculum.

Learning Outcomes: 1. Have a working knowledge of programming techniques in Python. 2. Use scientific computing packages to analyze economic data. 3. Possess an understanding of numerical methods used to solve economic models. 4. Use visualization tools to communicate computational results. Credits: 3.00

ECON 37600 - Economics Of The European Union

Credit Hours: 3.00. Current economic structure of the European Union, and the economic challenges it is now facing.

Learning Outcomes: 1. Understand the background and current economic structure of the European Union, as well as the economic challenges it is now facing. Credits: 3.00

ECON 38000 - Money And Banking

Credit Hours: 3.00. The course analyzes the economics of money, monetary systems, investments, and financial intermediaries in modern industrial economies. Topics considered include the origin of money and the banking industry, financial asset markets, the role of central banks, and the effects of various monetary policies. The theory will be presented side by side with current economic and financial news, and the students will learn how to track financial and economic data via The Wall Street Journal.

Learning Outcomes: 1. Understand economic analysis, through developing the economic intuition necessary to organize concepts and facts, and draw conclusions through use of inductive and deductive logic. 2. Evaluate current developments and financial news, using economic analysis to think critically about how to interpret current events. 3. Use economic analysis to predict likely changes in the economy and financial system. Credits: 3.00

ECON 38500 - Labor Economics

Credit Hours: 3.00. The purpose of this course is to introduce important topics, theories, institutions, and policy issues relating to the functioning of labor markets. Topics to be considered include labor supply decisions, investments in human capital, compensating wage differentials, labor contract theory, unions, compensation programs, signaling in labor markets, the economics of unemployment, and government employment, retirement, and workplace safety.

Learning Outcomes: 1. Distinguish the major determinants of labor market participation and hours worked. 2. Analyze how welfare programs and business cycles affect labor supply. 3. Derive the short and long term demand for labor. 4. Construct a detailed demand and supply model of the labor market. 5. Find the equilibrium labor market outcomes in the context of the neoclassical model 6. Analyze the role played by jobs' and workers' characteristics in generating wage differentials. 7. Develop a schooling model that explains human capital investment. 8. Distinguish factors that affect earnings inequality and labor market discrimination. Credits: 3.00

ECON 39000 - Junior Level Problems In Economics

Credit Hours: 1.00 to 4.00. Investigation into a specific topic area of economics. Permission of instructor required.

Credits: 1.00 to 4.00

ECON 39040 - Economics Internship

Credit Hours: 1.00. An Economics-related work experience. This internship experience is intended to complement the student's academic plan-of-study and help prepare him/her for his/her future role in Economics. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job description may be requested before registration will be permitted. Permission of instructor required.

Learning Outcomes: 1. Internship experience. Credits: 1.00

ECON 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in economics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECON 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in economics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECON 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in economics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECON 43200 - Economics Of Growth & Innovation

Credit Hours: 3.00. Part one: we focus on this fact: the richest countries in the world have incomes nearly 200 times greater than the poorest, with profound consequences for the lives (and deaths) of their citizens. Why nations are poor and how they can become rich is one of the most important questions in Economics. We will look at the role of investment, schooling, population growth and technology. Part two: we explore how globalization affects productivity and innovation. This includes how international trade and domestic policies affect allocative efficiency, accelerate structural change, and discipline competitive behaviors by domestic firms. We explore how firms grow on global markets, how technology is embodied in traded inputs, and how international markets for ideas and the possibility of imitation can lead to explosive growth. Part three: we explore a rapidly growing literature on the economics of innovation. We'll wrestle with the questions of: where new ideas come from, and whether it is becoming more difficult to innovate; how cities become hotbeds of innovation and how this will be affected by remote work; and how innovation can be shaped by choices of firms and by government policies.

Learning Outcomes: 1. Analyze income levels and growth rates across countries using economic models to understand and assess the

underlying factors driving disparities in economic development, including investment, population growth, schooling, and technology; quantitatively assess these factors and make cross-country comparisons to build capabilities for engaging in economic reasoning through data; use economic models and research evidence to evaluate the causal drivers of, and impact of policy decisions on, innovation at the level of individuals, institutions, and places. Credits: 3.00

ECON 45100 - Game Theory

Credit Hours: 3.00. In the course, economic, political, and social interactions are represented as games, in which strategies and resulting outcomes can be analyzed. The analysis of these interactions is then used to demonstrate how one can make optimal decisions under uncertainty. This course uses Calculus.

Learning Outcomes: 1. Model strategic interactions as a game. 2. Describe behavior in games using strategies. 3. Calculate the Nash equilibrium of a game. 4. Predict behavior in different games. 5. Explain the role of uncertainty in strategic interactions. Credits: 3.00

ECON 45600 - Urban Economics

Credit Hours: 3.00. Examines the market forces that lead to the development, growth, and size of cities. In addition, this course covers the theory of location and land use, principles of local public finance, policy problems in the areas of urban housing, transportation, crime, and pollution.

Credits: 3.00

ECON 46100 - Industrial Organization

Credit Hours: 3.00. This course examines the determinants of firm and market structure and the resulting market performance in imperfectly-competitive markets. Advanced topics include advertising, research and development, imperfectly competitive international markets, and market integration. Emphasis is placed on using theoretical models of firm and industry behavior to explain and analyze real-world examples of firm behavior.

Learning Outcomes: 1. Use basic versions of the models economists use to analyze imperfectly competitive markets. 2. Recognize the results of empirical tests of those models, in the laboratory and using real-world data. 3. Recognize the implications of these models for public policy toward business competition. Credits: 3.00

ECON 46300 - Advanced Data Analysis And Machine Learning

Credit Hours: 3.00. This is an advanced applied econometrics course that introduces students to a variety of techniques and methods for the empirical study of economic data. This course focuses on the practical aspects of economic data analysis, including data organization (such as merging and appending datasets) and the implementation of econometric models. This course will cover multivaraite linear regression, non-linear least squares, models for binary and categorical outcomes, model selection using machine learning, and panel data models. As part of the course, students will learn to conduct empirical analysis of economic data using Stata, a statistical software package.

Learning Outcomes: 1. Explore and organize economic data. 2. Apply a variety of econometric techniques including: multivariate linear regression, non-linear least squares, models for binary outcomes (including logit and probit models), and models for panel data (including linear random effects and fixed effects models). 3. Understand the fundamentals of machine learning and use machine learning for model selection. 4. Interpret and critique the results from econometric estimations. Credits: 3.00

ECON 46600 - International Economics

Credit Hours: 3.00. Analyzes topics in international economics, using more advantage techniques and more detailed treatment than in ECON 37000 or 37100. While coverage varies somewhat with instructor, some topics could include: economic growth, innovation and technology transfer, and the role of multinational corporations.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade and finances. 2. Understand the perspective provided by economic analysis regarding the interaction between economic

growth and international trade. 3. Identify insights economics analysis provides concerning the benefits and costs of technology transfer and the role of multinational corporations. Credits: 3.00

ECON 47100 - Behavioral Economics

Credit Hours: 3.00. Students learn about human behavior in economic environments, with a strong emphasis on classroom laboratory exercises. Topics considered include behavior in a variety of markets - for example, markets with price controls, markets for financial assets and auction markets -- and behavior in social dilemmas that arise when people try to provide public goods voluntarily or when sellers try to conspire to fix prices. Students will also learn how people bargain with, trust each other, and show social preferences towards others. Decision-making and anomalies for risky and uncertain choices will also be covered.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to human behavior in various economic environments based on classroom laboratory exercises. 2. Understand the perspective provided by economic analysis in social exchanges that involve bargaining, trust, and uncertainty. 3. Identify insights experimental economics provides concerning individuals' behavior in markets. Credits: 3.00

ECON 48500 - Economics Of Racial And Gender Discrimination

Credit Hours: 3.00. This course focuses on quantifying the extent of, and determining the underlying causes of racial and gender disparities in the labor market. Topics include the impact of prejudice on labor market outcomes, statistical discrimination, early childhood factors and differences in environment, and fertility and reproductive technology.

Learning Outcomes: 1. Quantify racial and gender disparities in economic outcomes. 2. Recognize the differences and importance of disparities that control and do not control for observable factors. 3. Understand the difference between prejudice and discrimination, and the extent to which prejudice can cause discrimination. 4. Assess how discrimination can occur even in the absence of prejudice. 5. Evaluate the impact of policies designed to reduce disparities, such as affirmative action. Credits: 3.00

ECON 49000 - Problems In Economics

Credit Hours: 1.00 to 4.00. Arrange with instructor before enrolling. Supervised reading and reports in various subjects. Open only to a limited number of seniors with superior records in previous courses. Permission of instructor required.

Learning Outcomes: 1. Vary by course topic. Credits: 1.00 to 4.00

ECON 49900 - Economics Capstone Research

Credit Hours: 3.00. The course combines experiential learning with a hands-on research project that unfolds over the course of a semester, serving as a culminating experience at the end of their degree program. The overarching objective of the capstone project is for students to understand how business problems can be addressed with empirical methods. This course is designed to help students develop a more comprehensive and integrative understanding of the major, apply their knowledge to develop and execute a methodologically rigorous research a project, and demonstrate their mastery of critical thinking and research skills they have acquired throughout their time in the major. In addition to a paper, completion of the research project may involve the presentation of the findings in a seminar or workshop setting.

Learning Outcomes: 1. Complete a high quality research paper that applies Economic analysis to a topic of particular interest to the student. 2. Develop a deep understanding of the roles that Economic theory and/or empirical analysis (Econometrics) play in creating high-quality economic analysis. 3. Identify the economics literature (journals, books, monographs, etc.) that relates to the research topic considered. Credits: 3.00

MGMT 10000 - Introduction To Management

Credit Hours: 1.00. An introduction to and survey of the field of management. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Required for freshman management students.

Learning Outcomes: 1. Understand the fundamental vocabulary of Business. 2. Analyze and rank different main areas of business in accordance with individual interests. 3. Apply appropriate strategies to maximize the possibility of getting the desired grade. 4. Develop a working knowledge of the many offerings that Krannert provides. 5. Become acquainted with numerous people associated with Krannert's past, current, and future endeavors. Credits: 1.00

MGMT 11000 - Introduction To Management And Information Strategies

Credit Hours: 2.00. An introduction to and survey of the field of business. Exposure to the different functional areas of management will be stressed. Focus will be on the individual development of the student in regard not only to future professional employment but also to his or her educational planning. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Students apply their knowledge of business in a Case Competition. Required for freshman Krannert Leaders Academy students.

Learning Outcomes: 1. Learn how to manage themselves. 2. Identify various professional development options available to them. 3. Reflect upon what type of Krannert student they would like to be. 4. Learn strategies and tactics to help them transition to college life 5. Analyze and rank different main areas of business in accordance with individual interests. 6. Learn how to manage teams. 7. Reflect upon their behavior within a group. 8. Learn how to manage a small team to be efficient 9. Compete in a freshmen case competition to explore further how to practice teamwork in a case environment. 10. Use information and fundamentals of business to make decisions 11. Understand the fundamental vocabulary of business. 12. Become aware of various resources that are available to them through the library. 13. Break down problems into segments. 14. Use information to make decisions in groups. 15. Become acquainted with numerous people associated with Krannert's past, current, and future endeavors. Credits: 2.00

MGMT 17300 - Data Mining Lab

Credit Hours: 1.00. The Data Mining Lab provides a guided Experiential Learning environment for School of Business', especially BS BAIM's, freshman and sophomore students to learn the basics of business data variety, how they are organized, and what insights may be mined for. Students will have hands-on experience to get familiar with a specific data mining tool, R, for carrying out some data mining experiments. Completion of this course will not only enable students to see how the prerequisite or accompanying foundational courses are relate to their major studies but also help them better preparing for successes in their multiple upper division course studies.

Learning Outcomes: 1. Recall examples of business data and data driven decisions. 2. Exemplify the concepts of structured business data and enterprise data management infrastructure. 3. Differentiate business applications of supervised and unsupervised data mining methods. 4. Explain data mining framework that consists of data understanding, insights derivation, and analytical result communication. 5. Use a data mining tool, R, for simple data mining related tasks. Credits: 1.00

MGMT 17500 - Information Strategies For Management (UCC: IL)

Credit Hours: 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments. Permission of instructor required.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Ability to access information and determine what different sources are needed for problem solving. 2. Develop a foundation in problem-solving to use discovered information effectively and

efficiently. 3. Develop a knowledge base into the full array of information available (scholarly articles, market reports, quality websites, and other types of information). 4. Prioritize sources based on credibility and relevance. 5. Accurately cite the information you find. 6. Use retrieved information to accomplish a specific purpose and present information clearly and persuasively using a range of technology tools and media. Credits: 1.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

MGMT 19000 - Freshman Level Problems In Management

Credit Hours: 1.00 to 4.00. Investigation into a specific topic area of Management. Arrange with instructor before enrolling.

Credits: 1.00 to 4.00

MGMT 19700 - Careers In Accounting & Finance

Credit Hours: 1.00. This course explores the various career opportunities available to accounting majors, as well as opportunities available to non-accounting majors who have a strong background in accounting. While most students believe public/private accounting are the only career options for accounting majors, we examine other avenues such as hedge funds, private equity and consulting, among others.

Learning Outcomes: 1. Identify potential career paths for both accounting and non-accounting majors with a strong accounting background. 2. Demonstrate an understanding of the various tasks employees perform in several distinct careers. 3. Develop the attributes necessary to succeed in various careers designed for individuals with an accounting major or a strong understanding of accounting (for non-accounting majors). Credits: 1.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used

to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 22000 - Making The Business Case

Credit Hours: 3.00. This course develops one's ability to address situations faced by managers. This involves collecting information, analyzing that information to determine what decision or action is required and then selling the recommended decision or action to the management team. Selling this is done using one's persuasive skills in both telling a story and illustrating that story.

Learning Outcomes: 1. Differentiate whether a situation calls for making a decision or solve a problem. 2. Identify important facts in case studies. 3. Organize facts found in case studies into issues that factor in the analysis of alternatives. 4. Evaluate alternative solutions to a decision in terms of how they address issues. 5. Recommend an alternative solution. 6. Create a plan of action that will put the recommendation in place. 7. Create presentations that have a story line flowing through them. 8. Create a slide deck that supports the story line of the presentation. 9. Demonstrate effective speaking and body language when making presentations. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating

application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

MGMT 24200 - Contemporary Problems In Personal Finance For Minorities

Credit Hours: 3.00. This course is designed to allow students to make informed decisions regarding their current and future financial position. Utilizing basic tools such as financial statements and budgets, the students can learn how to plan effectively for continuous financial stability. Students also are able to acquire a basic understanding of different saving instruments, investments, and retirement planning methods, as well as the benefits of purchasing real assets and accumulating wealth to allow stability. Students also have the opportunity to explore other interesting topics of personal finance through presentations and voluntary participation in class discussion. Permission of instructor required.

Learning Outcomes: 1. Create a personal spending, saving, and investment plan for immediately after college. 2. Invest in desired stocks based on popular statistical measures. 3. Obtain a general understanding of careers in financial services. 4. Understand the financial impact of taxes, debt, and health. Credits: 3.00

MGMT 24300 - Contemporary Thought Of Minorities In Management

Credit Hours: 3.00. The basic goal of this course is to introduce the minority student to the vast opportunities that are available in the field of management. The logic of a business education for the minority student is a reflection of the phenomenon that many corporations today are actively seeking minorities for managerial positions. Each semester, approximately 15 Fortune 500 companies are invited to the class to give presentations about entry-level opportunities with their firms. Other topics include the interview, resume writing, dual-career couples, the work force, affirmative action, minorities in the corporate world, etc. Each student is required to give a class presentation covering a business area of interest followed by class discussion over the topic.

Learning Outcomes: 1. Develop job search strategies tailored to your career of choice. 2. Understand the largest challenges facing minority employees within corporate America. 3. Demonstrate an ability to work on a team to analyze data and provide a recommendation to a business case. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 25300 - Finance Industry Exploration

Credit Hours: 2.00. Finance Industry Exploration will introduce students to various sectors of the financial services industry through lectures, guest lectures by financial market participants and regular reading of financial publications (Wall Street Journal, Financial Times, etc.). Students will understand potential career paths, how specific financial markets operate, career success factors, employment differentiation, industry vernacular and suggested future coursework. Topics covered may include (subject to speaker availability) - Investment Banking, Mergers and Acquisitions, Corporate Finance, Corporate Development, Public Finance, Commercial Banking, Sales and Trading, Wealth Management, Asset Management, Private Equity and Private Credit, Venture Capital, Investor

Relations and FinTech.

Learning Outcomes: 1. Analyze and explain the commercial landscape of the finance industry, including key firms, influential personalities, and the challenges and opportunities each face. 2. Develop and evaluate a tailored career strategy by identifying one or two industry sectors, multiple companies, and specific roles of interest, and designing a curricular and extracurricular pathway to enhance competitiveness in the job market. 3. Identify and interpret the success factors of various industry sectors and evaluate how specific roles generate value for their company and clients. 4. Demonstrate the ability to discuss industry topics with professionals by using appropriate terminology and providing relevant historical and company-specific examples. Credits: 2.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

MGMT 25600 - Technology Landscape

Credit Hours: 1.00. Success in business requires an understanding of today's rapidly evolving technological landscape. This course provides students with an overview of emerging technologies that are shaping the future of business. Weekly meetings feature forums with technology experts and business practitioners, giving students insights into the latest technological advancements and their practical applications in diverse business contexts.

Learning Outcomes: 1. Identify and evaluate new and emerging technologies, including those associated with Computing, Digital Transformation, Automation, Biotechnology, Nanotechnology & Advanced Materials, Technology Management. 2. Integrate new and emerging technologies to promote business growth, competitiveness, and sustainability. 3. Conceive and describe applications of new and emerging technologies to tackle the challenges facing businesses over the next decade. 4. Conceive and describe applications of new and emerging technologies for a sustainable local, national, and global society. 5. Describe the political, legal, and ethical challenges resulting from the development and application of new and emerging technologies. 6. Create and deliver clear, effective, and engaging written assignments appropriate for both technical and non-technical audiences. Credits: 1.00

MGMT 26100 - Introduction To Supply Chain Management

Credit Hours: 3.00. This course seeks to introduce general concepts in supply chain management, including procurement,

supply planning, demand planning, and logistics. This course is designed around a corporate partnership to provide students with the opportunity to collaborate on solving a large-scale supply chain challenge. In the first five weeks of the semester, students will be introduced to basics of SCM through lectures, cases, and assignments. Beginning in the sixth week, students will form teams to work on a real-world case presented by the corporate partner, a complex problem broken down into six learning areas, each with a corresponding deliverable.

Learning Outcomes: 1. Define, measure, and recommend improvements to an organization's supply chain. 2. Gain experience in applying these skills to a real-world business problem. 3. Learn about the different aspects of supply chain management. Credits: 3.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development practices, including documentation.

Learning Outcomes: 1. Understand and apply basic technical knowledge to managerial problems. 2. Successfully write, test, and run computer programs designed to address managerial problems. Credits: 3.00

MGMT 28900 - Doster Leadership Conference Board Experiential Course

Credit Hours: 1.00. This experiential course focuses on developing leadership and managerial skills through the planning and execution of the Doster Leadership Conference. The course is designed for students currently in a leadership role related to the Doster Leadership Conference. The material is developed to offer evidence-based approaches to tasks and issues you will face in your role as a board member for the Doster Leadership Conference. In this course, you'll learn to tackle real-world challenges, improve communication, and foster effective teamwork. You'll also gain insights into event logistics, budgeting, and stakeholder engagement while honing your problem-solving abilities. By actively participating in the conference's development, you'll grow as a leader, event organizer, and team member and be better prepared for leadership and project management roles in the future. Ultimately, you will become a stronger, more thoughtful, more organized, and more creative board member and board committee as a whole. Permission of instructor required.

Learning Outcomes: 1. Make evidence-based decisions to address managerial issues. 2. Develop a systematic approach to fulfilling board member responsibilities and obligations. 3. Embrace a growth mindset as individuals and as a collective board. 4. Identify and address opportunities for improvement to deliver a high-quality conference. Credits: 1.00

MGMT 29000 - Problems In Management

Credit Hours: 0.00 to 4.00. Arrange with instructor before enrolling. Investigation in a specific management field. Permission of instructor required.

Credits: 0.00 to 4.00

MGMT 29050 - Professional Internship

Credit Hours: 0.00. Students should be pursuing an internship complementing their academic plans-of-study (majors, minors, and concentrations within the Krannert School of Management). The intended purpose of the internship experience is to help students clarify career interests and prepare for future roles in Accounting; Analytical Consulting; Economics; Finance; Human Resources (OBHR); Industrial Management; International Business; Management; Management Information Systems; Marketing; Supply Chain, Manufacturing, and Operations Management; Quantitative Methods; or Strategic Management. Students must be seeking a Bachelor of Science degree in the School of Management. Employment must be related to the students major, minor, or area of academic concentration. May not be taken for more than five (5) semesters. Permission of instructor required.

Learning Outcomes: 1. Identify skills, values and interests that ultimately help determine career fit and gain career preparedness. Credits: 0.00

MGMT 29110 - Integrated Business & Engineering Seminar I

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on

professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation.
Credits: 1.00

MGMT 29120 - Integrated Business & Engineering Seminar II

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation.
Credits: 1.00

MGMT 29130 - Integrated Business & Engineering Seminar III

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation.
Credits: 1.00

MGMT 29140 - Integrated Business & Engineering Seminar IV

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation.
Credits: 1.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development.
Credits: 0.00

MGMT 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 29300 - Diversity In The Workplace

Credit Hours: 3.00. Diversity can be defined as real or perceived differences among people with regards to race, ethnicity, sexual orientation, religion, age, physical and mental ability, and family status that affect an individual's treatment, opportunities and outcomes. As demonstrated in the workplace, diversity is the numerous ways that employees are viewed as being similar or different. Through this course, students will examine the historical context and the emergence of diversity in the workplace including bias, meritocracy, privilege, social identity frameworks, organizational culture, allyship and advocacy.

Learning Outcomes: 1. Demonstrate knowledge of historical policy and employment regulations that drive current workplace decisions. 2. Demonstrate awareness of social identities, values, and biases of self and of others. 3. Demonstrate perspective and skills to effectively navigate workplace groups and relationships. Credits: 3.00

MGMT 29400 - Navigating Gender In The Workplace

Credit Hours: 3.00. This course has four objectives: (1) To Increase self-awareness and understand its value in managing careers; (2) To learn how gender culture and implicit bias may affect workplace experiences; (3) To develop strategies to deal with gender related challenges; and (4) To develop competencies in leading effective, gender-aware teams. By exploring these areas, students will develop new insights for managing their careers, and they will learn new leadership strategies to help their teams achieve higher levels of performance.

Learning Outcomes: 1. Through self-assessment, increase understanding of your strengths, core values and work styles. 2. Practice behaviors that demonstrate your confidence and leadership skills. 3. Learn how men and women might behave differently in certain work situations, based on research. 4. Understand implicit bias and its potential impact on talent assessment and advancement. 5. Learn effective strategies and skills to handle common gender-related work challenges - as an individual, as a team member and as a leader. Credits: 3.00

MGMT 29450 - Women In Leadership

Credit Hours: 1.00. Ready to grow your confidence in leadership? In this one-credit course, we will explore how to develop and grow your talents, strengths and leadership while also making an impact at the school of business. We'll also explore what leadership looks like in different contexts, tools you need, and how to be a more inclusive leader.

Learning Outcomes: 1. Explore leadership theories and apply them to your experiences. 2. Develop a leadership plan for your personal leadership development and growth. 4. Assess how your MyStrengths talents make you uniquely qualified to lead. 5. Reflect on past

success as you build a plan for personal leadership growth. Credits: 1.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 31200 - Challenge X: Discovering Meaningful Problems Worth Solving

Credit Hours: 3.00. Venture creation drives progress by solving complex challenges, addressing pressing problems, and unlocking new opportunities. It begins with a deep understanding of stakeholder needs, customer pain points, and systemic challenges through rigorous observation and direct

engagement. This course helps students lay that foundation by identifying a problem space they care about and embarking on a discovery journey. By the end, they will define their Challenge X?a clear, high-impact problem or opportunity that could inspire a new venture. Permission from Instructor is required.

Learning Outcomes: 1. Generate innovative venture ideas and critically evaluate their attractiveness and alignment with emerging market opportunities. [Idea Generation and Evaluation] 2. Conduct effective customer discovery processes - including secondary research, interviews and surveys - to validate problem hypotheses and refine business concepts. [Customer Discovery Skills] 3. Develop a strong understanding of problem-framing dynamics by synthesizing customer feedback into actionable insights that guide iteration and improvement of venture ideas. [Problem Framing] 4. Analyze target customers and markets using tools and frameworks to estimate market size, identify key segments, and assess competitive landscapes. [Market Analysis Competence] 5. Create and deliver persuasive presentations that effectively communicate validated business opportunities and demonstrate readiness for further entrepreneurial development. [Entrepreneurial Communication] Credits: 3.00

MGMT 31300 - Solution X - Designing And Building The Product To Address Challenge X

Credit Hours: 3.00. Once a validated problem is identified, how do we transform deep insights into impactful solutions? Building on Venture X1, this course focuses on designing, testing, and refining the right solution through rapid prototyping, business model innovation, and stakeholder engagement. Students will explore multiple solutions, iterate based on real-world feedback, and prioritize those that leverage existing technologies for maximum impact. By the end, they will have their Solution X-a validated prototype and model ready for further development and eventual venture creation. Permission of instructor required.

Learning Outcomes: 1. Design and build a Minimum Viable Product (MVP) that addresses a validated problem, and test it iteratively with customers to gather actionable feedback. [MVP Development and Testing] 2. Identify, prioritize, and validate critical assumptions about the desirability, feasibility, and viability of a business idea through structured experimentation. [Critical Assumption Testing] 3. Develop a comprehensive business model that integrates key components such as value proposition, customer segments, revenue streams, and cost structures. [Business Model Design] 4. Formulate and evaluate a go-to-market strategy that aligns with the product offering, target customers, and competitive landscape. [Go-to-Market Strategy] 5. Deliver a compelling presentation that effectively communicates the MVP, business model, and validated assumptions to potential investors or stakeholders. [Pitching and Stakeholder Communication] Credits: 3.00

MGMT 31400 - MODEL X - Assembling And Attracting Resources For Launch

Credit Hours: 3.00. This course helps students transition from a validated solution to a scalable venture by focusing on assembling the critical resources needed for launch and long-term success. Building on X1 and X2, it shifts from solution development to securing the right team, customer traction, strategic partnerships, and sustainable funding. Through hands-on engagement with potential customers, investors, and partners, students refine their model and identify the best pathway-whether as a startup, business unit, or product extension. Over the summer, they will receive financial support, collaborate in a shared environment, and ultimately pitch their venture to attract the necessary resources for launch. Permission of instructor required.

Learning Outcomes: 1. Develop and refine a customer-validated business model with a clear value proposition that resonates with a specific cohort of paying customers. [Customer-Validated Business Model] 2. Form and manage a purpose-built co-founding team, leveraging partnerships with mentors, advisors, and subject matter experts to strengthen the venture. [Team Building and Leadership] 3. Identify and establish key partnerships with organizations and stakeholders to enhance

business growth and scalability. [Strategic Partnerships] 4. Create and deliver an investor pitch that clearly communicates the value proposition, business model, and traction, while targeting the right investors for the venture. [Pitching and Fundraising] 5. Work effectively in a co-located team environment, learning from peers and leveraging the local network in downtown Indianapolis to solve real-world entrepreneurial challenges. [Collaborative Problem Solving] Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 33100 - Development And Impact of Equal Employment Law

Credit Hours: 3.00. This class will delve into the legal issues that affect women and men with regard to gender discrimination, equality under the law, sexual harassment, the wage gap, the glass ceiling, affirmative action, family law, and more. The class will be lead through a variety of teaching formats including lectures, activities, presentations, and more. Through this course students will learn about these important areas and, in the process, develop strategies that will assist them as they pursue careers in business and management. Students will have the opportunity to delve deeply into areas that interest them and will impact their future careers. They will do this through a research topic and presentation. Sophomores and juniors are encouraged to enroll. The content may be of particular interest to women, but the course is open to all students.

Learning Outcomes: 1. Learn about the law as it relates to women in business and other areas. 2. Learn the theory related to law and women in business. 3. Practice through experiential exercises approaches to legal situations women confront in the business context. 4. Conduct research and make presentations related to class topics. Credits: 3.00

MGMT 33200 - Business World Problem Solving

Credit Hours: 3.00. The class engages students to work in cross-functional teams to analyze business problems,develop recommendations, and persuade decision makers through the presentation of compelling solutions. In the classroom students will work together in teams to solve problems that are difficult for firms to outsource and are usually solved in-house without the opportunity to engage a consultant.

Learning Outcomes: 1. Identify the critical elements of a business decision. 2. Develop a solution as a team. 3. Prepare and present a professional presentation of a business solution. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 33900 - Krannert Mentoring & Leadership Program

Credit Hours: 2.00. This course will help students learn mentoring best practices and qualities of an effective mentor while practicing and developing these qualities in themselves as they mentor incoming Krannert first-year students. Additional topics include: 1) how to implement and assess mentoring programs in companies, 2) how mentoring builds ethics and leadership skills, and 3) how to be a better cross-cultural mentor.

Learning Outcomes: 1. Learn best business mentoring practices and how to implement them. 2. Grow your awareness of your mentoring and leadership skills and challenges. 3. Develop formal mentoring relationships with assigned mentees and informal mentoring relationships with other mentors and mentees. 4. Acclimate mentees to Krannert, college life, and business opportunities. 5. Facilitate your professional and personal growth (to mentor you) as you develop your mentees. Credits: 2.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 35000 - Intermediate Accounting I

Credit Hours: 3.00. Financial reporting for interested external parties. Emphasis on asset valuation, income measurement, and preparation of financial statements, and on appreciation of discretion available to preparers.

Learning Outcomes: 1. Understand the

objectives of financial reporting. 2. Explain and apply the basic principles of accounting. 3. Describe how to prepare and analyze an income statement, balance sheet, statement of cash flows and statement of retained earnings under generally acceptable accounting principles (GAAP). 4. Understand the tradeoffs involved in standard setting, the limitations of current accounting standards, and the effects that these tradeoffs and limitations have on the quality and content of financial statements. 5. Gain an appreciation of firms' ability and incentives to choose from a wide variety of alternative measurement bases and accounting procedures and the effects that those choices have on readers of firms' financial statements. Credits: 3.00

MGMT 35100 - Intermediate Accounting II

Credit Hours: 3.00. Continuation of Intermediate Accounting I. An examination of additional problems in financial reporting, including long-term assets, liabilities, owners' equity, income taxes, earnings per share, leases, and pensions.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants (i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

MGMT 35500 - Consulting Tools And Skills

Credit Hours: 3.00. This novel course will provide an opportunity for motivated students to gain exposure to the skills and tools necessary to succeed in the consulting industry. There will be a chance to work in small teams to define client problems, collect and analyze data, develop solution proposals, and implement recommendations. Students will also be given an insider's look into the history of consulting, common types of consulting, and professional standards in this specialized area of management. Honing skills in project management, presentation delivery, storytelling, and stakeholder engagement will form the foundation of the tools used to solve client challenges.

Learning Outcomes: 1. Effectively and confidently use specific consulting business language. 2. Critically analyze resumes and case interviews. 3. Effectively research businesses and unfamiliar industries. 4. Use a

consulting approach to problem solving. 5. Present a professional, engaging, and authentic persona. Credits: 3.00

MGMT 37000 - Real Estate Fundamentals

Credit Hours: 3.00. This course introduces the basic concepts, principles, and analytic methods applied in the field of real estate. The course covers topics including legal, financial, economic and marketing concepts related to real estate. The goal of the course is to expose students to the field of real estate and prepare them for more advanced real estate courses.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Describe titles to the conveyance of real estate. 3. Review land economic principles as they relate to real estate values. 4. Identify all quantitative issues required to complete effective real estate transactions. 5. Discuss the aspects of city planning and zoning on real estate values. 6. Understand basic methods for real estate valuation. 7. Understand basic issues in real estate development. Credits: 3.00

MGMT 37300 - Accounting Information Systems & Data Analytics

Credit Hours: 3.00. Learn how to manage the design, control and operation of accounting information systems. The emphasis is on identifying the information needs of decision makers and developing appropriate business process control in the design of accounting information systems. Gain an understanding and appreciation of the accounting information system and how it is used to successfully manage, audit and develop processes to support today's evolving business environment.

Learning Outcomes: 1. Understand and apply basic tools necessary for diagrammatically analyzing and documenting organizational data flows and business processes including data modeling and flowcharting. 2. Gain an understanding of the various business processes necessary for an enterprise to successfully operate, the key controls for maintaining successful business processes, and application of the methodology for evaluating risks and controls within the given business process. 3. Explain, justify and evaluate the components of organizational governance and associated effective internal control systems. 4. Develop a basic understanding of data analytics and emerging technologies in accounting information systems. 5. Explain and justify AIS auditing, computer fraud, and security techniques. Credits: 3.00

MGMT 37500 - Real Estate Law

Credit Hours: 3.00. The course provides an overview of real estate law and its influence on various aspects of the real estate industry. The course examines the legal issues surrounding the nature of real property, types of ownership and possession, real estate contracts, escrow and title and insurance, zoning, financing, landlord and tenant, land use regulations, environments law and regulations, and agency ethics.

Learning Outcomes: 1. Recognize and understand what real property is. 2. Understand how the right to use land is conveyed. 3. Understand the limitations and requirements of land ownership. 4. Understand how the state controls and influences the use of property. 5. Describe the various ways of acquiring the title of real property. 6. Interpret the regulations on real estate contracts. 7. Evaluate various types of real estate ownership and financing techniques. 8. Understand the limitations which can be imposed on real property based on environmental concerns. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their

business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

MGMT 38900 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications.

Learning Outcomes: 1. Process data using R and RStudio. 2. Apply statistical and machine learning principles using R and RStudio. 3. Produce meaningful data visualization outputs using R and RStudio. 4. Examine the interaction between business principles and data analytics. Credits: 3.00

MGMT 39000 - Junior Level Problems In Management

Credit Hours: 0.00 to 4.00. The Accounting Internship provides work experience in businesses or other institutions. Permission of instructor required.

Credits: 0.00 to 4.00

MGMT 39100 - Strategic Thinking And Decision-Making

Credit Hours: 3.00. This course focuses on how to think strategically and make good business decisions. By the end of the class, you will be able to do the following: (1) Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions; (2) Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas; (3) Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas; (4) Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders.

Learning Outcomes: 1. Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions. 2. Engage in decision-making strategies to design/develop prototypes in a variety of media (digital and/or physical) for the appropriate level of fidelity necessary to communicate, understand, and test innovative ideas. 3. Select and use appropriate methods/tools/equipment to make decisions and design/prototype innovative ideas. 4. Pitch a viable solution for a validated problem to a variety of potential investors and/or stakeholders. Credits: 3.00

MGMT 39200 - Optimizing Personal Brand And Image

Credit Hours: 3.00. This course will focus on four areas: personal branding, social and digital media strategies, financial literacy and philanthropy. You'll gain an understanding of how to convey your image to an external audience, evaluate the proper channels to maximize and monetize that image responsibly, select advisors to help negotiate contracts and invest your

money, and establish charities and events that support your personal causes. You'll learn which media and financial landmines to avoid while staying true to your personal principles and philosophies, and you'll gain leading-edge information about the technologies to keep you ahead in the game of life.

Learning Outcomes: 1. Outline the basics of developing your brand and convey your image to an external audience. 2. Evaluate the proper channels to maximize and monetize that image responsibly. 3. Explain basic financial concepts and compare advisors to negotiate contracts and invest your money responsibly. 4. Demonstrate how to establish philanthropies and events that align with your personal causes and brand. Credits: 3.00

MGMT 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MGMT 39699 - Professional Practice Internship

Credit Hours: 0.00 to 1.00. Professional experience in Management. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit reflective summaries and receive company evaluation. Permission of Instructor required.

Learning Outcomes: 1. Identify the practices, protocols, and key skills used for various positions of a particular organization and/or industry in which they are working. 2. Reflect on their professional growth, personal development, and the practical application of theoretical knowledge within their chosen field. 3. Refine and reassess their own career goals as a result of the experience. Credits: 0.00 to 1.00

MGMT 39799 - Professional Internship

Credit Hours: 1.00 to 3.00. Professional experience in Management. The internship must be for a minimum of 11 weeks and credit hours are determined based on worked hours per week and total hours worked. Program coordinated by the Office of Professional Practice in collaboration with Business Careers Services in the Mitch Daniels School of Business.

Surveys are required to gather information on each student's experience, including details about compensation, location, and position. Along with completing work experience surveys, students are also evaluated by their supervisors. At the completion of the internship course, students are required to submit their updated resume which reflects their internship experiences. Other assignments may be required depending on the number of credits assigned to the course. Permission of instructor required.

Learning Outcomes: 1. Identify the practices, protocols, and key skills used for various positions of a particular organization and/or industry in which they are working. 2. Reflect on their professional growth, personal development, and the practical application of theoretical knowledge within their chosen field. 3. Refine and reassess their own career goals as a result of the experience. Credits: 1.00 to 3.00

MGMT 39800 - Using R For Business Analytics

Credit Hours: 3.00. The main purpose of this course is to introduce and familiarize undergraduate students to RStudio and the R programming language as tools for business data analytics. Students will develop a small portfolio of projects that demonstrate fundamental knowledge of programming, exploratory data analysis, data visualization, and basic predictive modeling techniques using R. The emphasis of the course will be on hands-on applied projects in R in which students will be able to appreciate and visualize statistical and machine learning concepts tailored to real world business applications.

Learning Outcomes: 1. Process data using R and RStudio. 2. Apply statistical and machine learning principles using R and RStudio. 3. Produce meaningful data visualization outputs using R and RStudio. 4. Examine the interaction between business principles and data analytics. Credits: 3.00

MGMT 40100 - Executive Forum

Credit Hours: 1.00. A lecture-discussion course featuring executives from business firms and other organizations. Emphasis is placed on the actual practice of management in corporate America, on career selection and mobility, on styles of management, and on other topics not normally covered in undergraduate courses.

Learning Outcomes: 1. Learn from a diverse set of speakers from a variety of institutions. 2. Understand problems and solutions and opportunities. 3. Gain the need for educational preparation of future business leaders. 4. Understand themselves, their responsibilities and their relationships with each other. 5. Understand the executive suite. Credits: 1.00

MGMT 40500 - Six Sigma And Quality Analytics

Credit Hours: 3.00. The course is an undergraduate elective offered as part of the Center for Manufacturing Management Enterprises (CMME) quality initiatives. Provides an overview of various tools and methods for total quality management.

Learning Outcomes: 1. Make data driven conclusions and decisions for quality management operations through working on various business cases. 2. Apply previously gained statistical knowledge to understand and to analyze data. 3. Gain some advanced analytical technics such as Analysis of Variances (ANOVA) and Design of Experiment (DOE) to optimize obtaining data and learnings. 4. Master a simple yet powerful MINITAB software to carry out complex tasks. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed

income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.

Learning Outcomes: 1. Understand the basic features and pricing of commonly used derivative products. 2. Develop necessary analytical tools needed to make good managerial decisions using derivatives. Credits: 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans.

Learning Outcomes: 1. Students will be introduced to financial markets and management of financial institutions through learning about determinants of interest rates, and measurement and management of financial risk, with particular attention on management of depository firms such as banks and savings and loans. Credits: 3.00

MGMT 41220 - FinTech

Credit Hours: 3.00. Dramatic development in technology is fundamentally transforming all aspects of financial intermediation including lending, payment services, investments and trading. The goal of the course is to introduce these new developments to students with the emphasis on underlying economic mechanisms. We will start with talking about fiat money but quickly delve into cryptocurrencies and their applications. We will talk about tokens, smart contracts, automated market making and how applications of these concepts are transforming financial services and financial inclusion. We will cover these topics by analyzing real companies and contrast them with traditional players in the financial system.

Learning Outcomes: 1. Understand fundamentals of blockchain and cryptocurrencies. 2. Understand tokenization, smart contracts, and automated market makers. 3. Evaluate implications of decentralized finance on banking, fund raising, financial markets and financial inclusion. 4. Develop skills to analyze various business models in the Fintech space. 5. Create a case study on a real Fintech company. Credits: 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities.

Learning Outcomes: 1. Examine management of fixed income securities. 2. Examine portfolios and risk management strategies. 3. Demonstrate use of simulation models for risk assessment. Credits: 3.00

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer

real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

MGMT 41350 - Venture Capital And Entrepreneurial Finance

Credit Hours: 3.00. This course includes descriptions of markets for start-up businesses, venture capital financial structures, valuation of start-ups, role of venture capital in economic development and business growth strategies.

Learning Outcomes: 1. Evaluate start-up ventures and understand the markets for early-stage businesses. 2. Value these companies using Discounted Cash Flow models, markets multipliers and other industry-specific valuation methods. Credits: 3.00

MGMT 41500 - International Financial Management

Credit Hours: 3.00. The course explores financial decision making in an international framework from the perspective of the management of a multinational corporation. Topics covered include the international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations.

Learning Outcomes: 1. Students will learn about financial decision making in an international framework from the perspective of the management of a multinational corporation through topics such as international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations. Credits: 3.00

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and corporate governance. The course uses a combination of lectures, readings, and case analysis.

Learning Outcomes: 1. Understand the processes of valuation, negotiation, and financial outcomes of transactions involving mergers and acquisitions. Credits: 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Outline and design new financial derivatives. 3. Develop the VIX index using options data. Credits: 3.00

MGMT 42000 - Consumer Analytics

Credit Hours: 3.00. Many firms possess extensive information about customers, their transactions, and their relationships with the firms, necessitating expertise for intelligent utilization. The objective of this course is to equip you with a scientific approach to customer marketing, featuring hands-on use of databases, analytics, and computing to collect, analyze, and act on customer information for various industries. This course specifically focuses on customer relationship analytics, including identifying promising prospects and customer acquisition, customer development through up-selling, cross-selling, and personalization, as well as managing customer attrition, retention, and evaluating customer lifetime value. It also explores advanced analytics models such as conjoint analysis, purchase forecasting, and perception analysis.

Learning Outcomes: 1. Use data analytics to improve customer engagement and elevate the

overall customer experience. 2. Clarify the role of analytical customer relationship management in achieving strategic marketing goals across various industries. 3. Carry out analytical skills through practical experience with customer datasets. 4. Recognize advanced modeling techniques commonly employed in the field. 5. Summarize the financial advantages of adopting marketing strategies based on the concept of 'Customer Lifetime Value'. Credits: 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning, promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client.

Learning Outcomes: 1. Enhance the student's knowledge on Advanced Modeling Techniques, such as how and when to apply Logistic Regression, Logit, Multinomial Logit, Ordinal Logit, and Tobit. 2. Showcase situations across a variety of marketing topics (pricing, sales, advertising, new product development, etc.) where analytical methods can bring greater insight to the marketing practitioner. 3. Apply the above information to a real-world consulting project and deliver not only managerial insights, but also a data-driven presentation. Credits: 3.00

MGMT 42120 - Data & AI-Driven Marketing

Credit Hours: 3.00. Marketing is increasingly evolving from traditional approaches to leveraging big data and artificial intelligence (AI) to make strategic decisions and drive impactful campaigns. This course offers an immersive exploration into the intersection of data science, artificial intelligence, and marketing strategies, providing students with the knowledge and skills to thrive in the digital era. It will discuss uses of data science tools and AI algorithms in marketing applications, such as personalized marketing, sentiment analysis, and ad campaign optimization. Students will also gain hands-on experience on applying the methods to real-world data.

Learning Outcomes: 1. Identify modern statistical & machine learning methods required for marketing using big data. 2. Carry out applying statistical and machine learning methods to improve major marketing decisions. 3. Implement statistical and machine learning methods in Python using real-world data. Credits: 3.00

MGMT 42130 - Consumer Behavior

Credit Hours: 3.00. Consumer behavior is the study of the processes involved when individuals or groups select, purchase, use, or dispose of products, services, ideas, or experiences to satisfy needs and desires. We will draw on research from psychology, marketing, economics and sociology to learn why consumers behave in the ways that they do. The course focuses on three general topics. 1) Consumers as individuals. We will explore basic psychological concepts like intrinsic motivation, perception, memory, and emotions to help us understand behavior. 2) Attitude change and decision-making. We will examine how consumers search and evaluate alternatives, develop attitudes, and make choices. 3) Consumers in their social and cultural settings. We will examine the interaction between the consumer and multiple external influences. We investigate how social elements (friends, family, etc.) and culture influence behavior.

Learning Outcomes: 1. Organize, explain and predict consumers judgements and choices using social science multiple concepts, frameworks and theories. 2. Identify & analyze consumer behavior issues and apply relevant theories to aid in managerial decision-making. 3. Generate basic applied experiments in consumer behavior to test relevant theories with real consumers. Credits: 3.00

MGMT 42210 - International Marketing

Credit Hours: 3.00. Most U.S. businesses, large and small, are becoming deeply involved in international business. The trend is going to grow even stronger because of the influence of World

Trade Organization and regional trade blocks. Under these circumstances, it is imperative that business managers possess the skill sets to adapt their marketing strategies to the needs of international markets. This course will cover the concepts and theories pertaining to international marketing. It is aimed to provide students with skills in formulating a marketing plan for foreign market entry and conducting business in a foreign country.

Learning Outcomes: 1. Understand the issues involved in formulating and evaluating international marketing strategies. 2. Learn about global market entry, expansion, and sustainment. 3. Be exposed to the appropriate theories, models, and other tools to make better marketing decisions in cross-cultural business settings. 4. Obtain insights into how profitable global marketing strategies can be created. Credits: 3.00

MGMT 42300 - New Product Development

Credit Hours: 3.00. Provides an overview of the new product development process. Detailed insights are provided in the "fuzzy front end" of this process. Targeting positioning, and product decisions are also covered. The second half of the course completes the marketing mix and covers various market testing and product launch issues.

Learning Outcomes: 1. Understand new product development process. 2. Analyze new product development cases. 3. Develop and test a new product idea. Credits: 3.00

MGMT 42410 - Retail Management

Credit Hours: 3.00. Understanding and executing effective sales and retail strategies are essential for achieving overall business success, impacting growth, customer relationships, and competitiveness in the market. This course combines theoretical foundations with practical applications, guiding students in integrating sales and retail management principles into comprehensive business decision-making processes.

Learning Outcomes: 1. Apply market analysis techniques to identifying customer segments, analyze sales techniques and create a strategic sales plan. 2. Demonstrate an understanding of the principles of inventory management, merchandising strategies and their impact on customer experience and profitability. 3. Analyze the alignment of sales and retail strategies with broader business objectives. 4. Apply sales and retail management concepts to diverse business scenarios. Credits: 3.00

MGMT 42420 - Sales Management

Credit Hours: 3.00. An introduction to sales force management, this course offers a comprehensive examination of the salesforce management process. Key topics include the principles and best practices of recruiting, selecting, training, compensating, and motivating sales personnel. Additionally, the course will cover strategies for effective supervision and evaluation of a sales team to ensure optimal performance.

Learning Outcomes: 1. Explain the different components/skills of relationship sales management and apply them through course assignments. 2. Compare and contrast different sales management strategies through cases and simulations. 3. Identify the appropriate balance between the theoretical, analytical, and pragmatic dimensions of professional sales management through discussions and examples of the diverse sales concepts, issues, and activities. Credits: 3.00

MGMT 42500 - Marketing Research

Credit Hours: 3.00. The purpose of this course is to develop skills in the planning and execution of market research studies designed to acquire useful information for marketing decisions. It aims to familiarize students with techniques of research design, data collection, and analysis. Emphasis is placed on evaluating the results obtained from such investigations.

Learning Outcomes: 1. Identify and prioritize marketing research needs by analyzing a firm's marketing plan. 2. Demonstrate competency using a variety of research methods, such as regression, conjoint analysis, multi-dimensional scaling, and cross-tabulation. 3. Develop a marketing research proposal that includes a problem description, associated research theory and models, a research instrument, a description of data collection procedures and protocols, and data analysis. 4. Critique different marketing research projects, identifying

strengths, weaknesses and potential improvements in theory, measurement and analysis. 5. Demonstrate the ability to work in teams to design, conduct and report marketing research. Credits: 3.00

MGMT 42610 - Brand Management

Credit Hours: 3.00. This course is designed to provide an understanding of how to manage a brand, product, or product category. The course concerns issues related to customer behavior and customer decision making, with an emphasis on how to utilize such customer-oriented knowledge for building and maintaining brand equity. This course builds on concepts and topics covered in the core marketing course.

Learning Outcomes: 1. Increase understanding of the important issues in planning and evaluating brand strategies. 2. Provide appropriate theories, models, and other tools to make better brand management decisions. 3. Provide students with insights into how profitable brand strategies can be created. Credits: 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital age. 2. Develop capabilities in designing, implementing, and evaluating digital marketing strategies. 3. Understand major tools of digital marketing by gaining hands-on learning experience of search engine advertising tools by participating in a Google sponsored online marketing challenge competition. Credits: 3.00

MGMT 42910 - Experiential Marketing

Credit Hours: 3.00. In this course, students learn to apply marketing concepts to real world marketing problems. Projects are varied and may involve marketing plan development for a start-up, market research, analysis of marketing data, digital marketing, search engine marketing, web design, and social entrepreneurship. Clients include Purdue Marketing Advisory Board members, entrepreneurs working with Purdue's Foundry and Discovery Park, Purdue Research Park start-ups, small and medium-size Indiana businesses, and non-profit organizations. Students are given flexibility in selecting projects of interest. Teams work under the direction of a faculty member. Teams meet regularly with the faculty supervisor and also the project sponsor to review project progress and discuss the next steps towards meeting project requirements. Projects are done in teams, although evaluation is individual. Permission of instructor required.

Learning Outcomes: 1. Acquire experience in applying concepts learned in marketing and other classes to real world problems. 2. Acquire practical knowledge in the stages of project management including problem formulation, selection of research approach to addressing a marketing problem, and collection of secondary and primary data. 3. Learn to integrate the project analysis and information gathered into a consistent whole and make specific recommendations for decision-making in real world situations. 4. Experience challenges of working in teams to achieve projects goals. Credits: 3.00

MGMT 42930 - Labor Relations

Credit Hours: 3.00. The course focuses on employee-employer relations. Attention is given to topics in legal aspects of union organizing and collective bargaining, labor unions history and structure in the United States, labor management negotiations, dispute resolution procedures, international labor relations, and labor-management cooperation.

Learning Outcomes: 1. Summarize what unions do and why workers join labor unions. 2. Explain how management can react when its workers decide to form a union. 3. Execute the process of collective bargaining and summarize

information typically contained in a collective bargaining agreement. 4. Differentiate how disputes are resolved through mediation, arbitration, and other methods. 5. Compare how labor-management relations in the USA are versus similar relationships in other countries around the world. Credits: 3.00

MGMT 43000 - Professional Selling

Credit Hours: 3.00. The course covers all aspects of professional selling to help students develop an understanding of sales managers' goals, decisions, and challenges and learn about the tools, frameworks, and insights to diagnose and resolve strategic and tactical issues of selling. These concepts can help all employees promote their own ideas internally and more effectively work with the sales organization to achieve organizational success.

Learning Outcomes: 1. Introduce students to the concepts, analyses, and activities that comprise professional selling. 2. Provide practice in assessing and solving problems sales professionals encounter. 3. Demonstrate how the sales function supports other marketing and strategic priorities within companies. Credits: 3.00

MGMT 43700 - Social Media Marketing

Credit Hours: 3.00. This course is deigned to equip students with tools and develop marketing skills required to address current marketing problems. The approach is to learn R software for conducting basic scraping on social media sites to understand user behavior and sentiment. In addition, Python will be used for web-scraping data from various websites and websites with dynamic content. The goal is to become familiar with such qualitative techniques as: word clouds, cluster dendrograms, sentiment analysis, and other methods. Occasional homework assignments or check points will be given to gain deeper understanding of the materials covered in class. The deliverables for this project will be a slide presentation (no more than 10 pages, excluding appendices) to showcase what you have learned. This may be included as a part of your resume to show your potential employers. These are some of the basic knowledge of useful skills in web crawling, data mining, and statistical analyses, so you may leverage your portfolio when seeking entry/junior level marketing analyst positions.

Learning Outcomes: 1. Learn how to collect and analyze consumer behavior and sentiment from social media platforms. 2. Gain experience in understanding online consumer search terms and related consumer trends. 3. Learn to become a marketing manager who would monitor competitors' products and pricing actions on the online space. 4. Exposed to the challenges of recent online platforms where websites use dynamic content to increase user interactivities. Credits: 3.00

MGMT 43800 - Pricing Strategies

Credit Hours: 3.00. In the era of Big Data, where extensive information is available at the customer level, managers benefit from an increased ability to learn from their customers' behavior. In this scenario pricing becomes a crucial lever for increasing the relationship with the customer and maximizing profits and shareholder value. In this course, students will learn how to systematically approach pricing decisions, taking the perspective of the marketing manager. The course will use a combination of lectures, case discussions and in-class exercises to leverage micro-level transaction data for pricing decisions.

Learning Outcomes: 1. Become familiar with the concepts, theory, and latest thinking bearing on the key issues in pricing, taking the perspective of the marketing manager. 2. Apply concepts and theory to the solution of real pricing problems in marketing settings. 3. Develop your business communication skills and receive feedback from your peers and the instructor. Credits: 3.00

MGMT 43901 - Real Estate Investment & Development

Credit Hours: 3.00. The course will cover two main topics: real estate development and real state investment. For real estate development, we will discuss the process of the real estate development process, including the basics of the idea conception, feasibility, planning, financing, market analysis, contract negotiation, risk management, marketing, and asset management. For real estate investment, we will discuss the process and techniques of analyzing real property investment, and the effects of market conditions, government policies, and other factors on real estate investment.

Learning Outcomes: 1. Understand the nature

of real estate markets and how value is determined. 2. Understand the process of developing real estate properties. 3. Understand the basic methods for evaluating financial and other risks associated with a real estate development project. 4. Understand and utilize the underlying theory in the analysis of income-producing real estate as an investment medium. 5. Use the net present value and internal rate of return and traditional measures of investment analysis of a real estate investment. 6. Understand the basic principles in structuring real estate investments. Credits: 3.00

MGMT 43902 - Real Estate Capital Markets

Credit Hours: 3.00. In this course, students explore the world of real estate finance and capital markets from the perspectives of investors, lenders, fund managers, and other capital allocators. Diving into essential topics like deal structuring, waterfall analysis, debt management, real estate private equity, taxation and regulation, public incentives, mortgage-backed securities (MBS), and Real Estate Investment Trusts (REITs). Through hands-on experience, they will learn to model before-tax and after-tax cash flows, price various securities and deal structures, and develop strategies for managing risk and distress at both project and fund levels. With a strong focus on case study analysis, this course will equip students with practical insights and skills to succeed in real estate finance.

Learning Outcomes: 1. Demonstrate a deep understanding of the history and composition of both debt and equity components of real estate capital markets. 2. Understand the main drivers of real estate capital flows and capital pricing. 3. Describe the structure of residential and commercial mortgage-backed securities. 4. Perform a comprehensive valuation of a REIT. 5. Structure the capitalization for a given project type. Credits: 3.00

MGMT 43905 - Real Estate Industry Project

Credit Hours: 3.00. This course gives students opportunities of working on real-world projects provided by commercial corporations or organizations. Through the experiential learning experience, students have the opportunities to develop knowledge and skills in managing real estate projects. Depending on the available projects, students will work on topics related to real estate investment and development, facility design and renovation, asset management and other issues. The focus is on developing students' ability in applying what they've learned to solve real-world challenges and receiving coaching and feedback from industry experts.

Learning Outcomes: 1. Learn how to organize your investment or development project by analyzing key characteristics and external constraints that affect schedule, budget, and outcomes. 2. Plan and manage financial and physical resources by a well-planned schedule with appropriate tasks. 3. Monitor project progress and make necessary adjustments to the project schedule manpower and costs. 4. Develop team leadership and communication skills. Credits: 3.00

MGMT 43907 - Advanced Topics In Real Estate

Credit Hours: 3.00. This course covers selected and timely topics in real estate that are not covered in other regular courses. The topics are determined by the instructor offering the course. The instructor may also include advanced analytical techniques for real estate investment decisions, real estate valuation, and other analyses. Cases and research reports may be used in this course.

Learning Outcomes: 1. Recognize and understand issues and their impacts on the real estate industry. 2. Assess the impacts of certain issues on a company. 3. Understand and apply advanced analytical methods in real estate decisions. 4. Develop a life-long learning ability for future issues in real estate. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal

concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

MGMT 44310 - China, America And Artificial Intelligence

Credit Hours: 3.00. The key to business success is to read broadly and to understand how culture, economics, history, and politics converge. Through frequent writing assignments, close readings of personal accounts, and daily class discussions, students will gain insights into how culture, economics, history, and politics intersect to influence human behavior and worldviews. Case studies and examples will be drawn from the United States, China, and Taiwan. Finally, we will apply what we have learned to the practice of global cultural dexterity. Students will identify cultural nuances and subtleties in order to share examples of how each student has adapted or failed to adapt to different cultural dynamics.

Learning Outcomes: 1. Identify and to analyze cultural, economic, historical, political, and social variables. 2. Understand how culture, economics, history, politics and society converge to influence human behavior and worldviews. 3. Gain knowledge of cultural worldview frameworks. 4. Acquire an attitude of openness. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 44363 - Confident Transitions And Leadership

Credit Hours: 1.00. In this course offered by the Brock Wilson Center for Women in Management, graduating senior women will prepare for a confident transition from student to professional. Students will focus on common issues for new employees as well as be paired with an alumni mentor. They will develop a personal plan for their transition from college student to successful professional through reading and discussing key business leadership books. Through this course, each student will build a plan for the first six months of their job and decide what a successful transition looks like for them. Permission of instructor required.

Learning Outcomes: 1. Understand the core principles of successful professionals and how they apply to a first job. 2. Explain and reflect on best practices for launching a successful career. 3. Formulate a plan for the first six months of your new position and what success will look like. 4. Utilize your unique MyStrengths as part of your plan for a Confident Transition. Credits: 1.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial

decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44429 - Talent Management

Credit Hours: 3.00. This course focuses on the employer-employee relationship at work, and how managers work with employees to improve employee performance. Attention is given to the history of labor relations and performance management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing employee performance.

Learning Outcomes: 1. Identify and understand the tools and techniques of contemporary employee relations at work. 2. Identify and understand the tools and techniques of contemporary performance management at work. 3. Ability to apply these techniques. Credits: 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Describe workforce planning implementation issues and the importance of continuous refinement of the plan. 2. Define talent acquisition and differentiate between recruiting and selection processes. 3. Understand the various talent acquisition organization models. 4. Use tangible and intangible data to build a business case for effective talent acquisition. 5. Articulate the steps in a common talent analysis and translate the analysis into selection criteria and methods. 6. Conduct a job-fit and organization-fit analysis and translate the analysis into selection criteria and methods. 7. Develop behavior-based and situation-based interview questions derived from job analysis and conduct a professional interview. 8. Design a process for final candidate evaluation. 9. Highlight various strategies to orient and onboard new acquired talent. 10. Articulate an employer's legal responsibilities in the talent acquisition process. Credits: 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys.

Learning Outcomes: 1. Evaluate the difference Total Rewards programs can make in organizations. 2. Distinguish between total rewards and compensation and identify compensation and non-compensation elements of total rewards. 3. Recognize various reward systems, their relationship and connection to a total compensation and benefits philosophy, and how they impact the quality of work life and productivity organizations. 4. Assess the practical issues in compensation and employee benefits in light of a company's management philosophy and human resources strategies. 5.

Define job evaluation and its use to develop internally equitable compensation systems. 6. Identify the implications of using salary surveys to ensure externally equitable and fiscally responsible compensation systems. 7. Explain the concepts of salary administration and application of compensation programs in the business environment. 8. Better understand effective salary and wage structures in organizations today. 9. Explain the relationship between performance evaluation methods and reward systems. 10. Discuss the legal aspects of compensation, benefits and performance appraisals. Credits: 3.00

MGMT 44433 - Leading And Working In Teams

Credit Hours: 3.00. This course will explore the forces that affect behavior in teams, and the factors that lead to team success. We will use a variety of readings, cases, activities, and class discussions to build concrete skills related to leading and working in teams. The course will explore the specific challenges associated with leading teams, some of which include: building and designing teams, managing information exchange within and across teams, structuring effective group decision processes, igniting creative thinking, enabling complex problem solving, managing team diversity and conflict, and managing systems of teams. Permission of instructor required.

Learning Outcomes: 1. Identify and define concepts related to team functioning and effectiveness. 2. Apply those concepts to understand and diagnose issues associated with team effectiveness. 3. Develop a course of action to improve team functioning. Credits: 3.00

MGMT 44434 - Human Resources Analytics

Credit Hours: 3.00. This course introduces concepts, tools, and methods used in collecting, interpreting, and presenting HR data. Students will learn how to gain new insights, solve problems, and drive performance through HR analytics. A central focus of this course is the ethics of HR analytics. This course teaches students how to ask the right questions in order to intelligently use HR analytics and metrics for business decisions. It discusses the implications of internet AI, business AI, perception AI, and autonomous AI for HR. This course will cover applications including the intelligent use of analytics related to employee engagement, healthcare expenditure, learning and development, performance management, and safety.

Learning Outcomes: 1. Gain an understanding of the different analytical approaches used by HR Professionals to solve real business problems. 2. Examine actual business cases and apply problem solving and critical thinking skills through group case studies. 3. Learn how to make impact with data by using effective storytelling techniques. 4. Build on presentation skills and demonstrate the ability to work effectively in teams. Credits: 3.00

MGMT 44630 - Innovation Management

Credit Hours: 3.00. In this course you learn why organizations struggle to innovate, how to successfully analyze and implement an innovation strategy, and you learn to manage the innovation process. The course consists of two pillars (or 'walls') that enable a company to become innovative (Innovation Strategy and Organization Design) and the innovation process itself. The innovation process contains how to generate, select, implement, protect, experiment, scale, and diffuse ideas. Consequently, this course will provide you the skills and knowledge to manage innovations. Permission of department required.

Learning Outcomes: 1. Analyze the potential and implication of ideas and innovations for an organization and environment. 2. Formulate an innovation strategy. 3. Develop an innovation process. 4. Distinguish the different approaches to designing an innovative organization. Credits: 3.00

MGMT 44670 - The Great Leaders Book Club

Credit Hours: 3.00. One way to learn about leadership and being an effective leader is to learn from other leaders past and present. Numerous articles and books have been written about leadership and/or profile one or more leaders. We will study leaders through historical and contemporary review and analysis of selected books that illustrate important leadership principles and situations. Course readings will typically include books that one would find on bookshelves of top-level leaders in organizations and institutions. Each week students and instructor meet to discuss the assigned readings and identify key leadership lessons and takeaways. These discussions are reinforced through role play and in-class exercises. Students are expected to be active co-participants and will be challenged

to ask curious questions and develop critical thinking skills. This class is designed for high potential leaders who take leadership seriously and wish to develop their leadership capability to its fullest. Permission of instructor required.

Learning Outcomes: 1. Identify what leadership is and what it is not. 2. Summarize key differences between effective and ineffective leaders. 3. Deconstruct and differentiate leader attributes and behaviors that contribute to leader outcomes. 4. Identify and use influence techniques to influence others. 5. Recognize differences in situations that may call for different leadership approaches. Credits: 3.00

MGMT 44671 - Corporate Conscience

Credit Hours: 3.00. Is there a moral component to leadership? Does a moral person translate to a moral manager? What does leading ethically entail? Where have organizations and their leaders failed to act in a way that advances the interests of their employees and society at large? This course takes a case study approach to understanding ethical leadership. We look inside organizations, through case study, to evaluate an organization's corporate conscience, defined here as the extent to which a company or organization prioritizes ethics and demonstrates ethical behavior or unethical behavior. We examine the drivers of ethical decision making and the qualities of what it means to be a servant leader. Permission of instructor required.

Learning Outcomes: 1. Identify the components of ethical behavior. 2. Summarize ways of thinking about ethics. 3. Differentiate ""means"" based ethics and ""ends"" based ethics. 4. Create a personal code of ethics. 5. Identify behaviors that define what it means to be a servant leader. 6. Integrate ethical concepts in analysis of real world, organization-based case studies. Credits: 3.00

MGMT 44672 - Transformational Leadership Development Immersion Experience

Credit Hours: 1.00 to 4.00. Courses involve leadership immersion trips to develop one's leadership acumen and enable one to reflect on one's guiding principles. Immersion learning takes place in novel, inspiring settings where real leadership is/was required. Permission of instructor required.

Learning Outcomes: 1. Generate a list of strategic leadership advantages; finding the "high ground" and positioning for success. 2. Carry out communication with others and influence them for strategic advantage. 3. Differentiate both the rational and emotional components of being a transformational leader. 4. Reflect on how transformational leadership can be utilized for strategic advantage. 5. Identify the traits and characteristics of some of history's greatest leaders during the Civil War and Battle of Gettysburg and apply their leadership principles to today's challenges, whether they be in your family, community, school, or organization. 6. Deconstruct how leadership, discipline, trust and teamwork drove many of the successes in the early history of NASA. 7. Summarize factors in an organization or team that can derail the team and lead to sub-optimal outcomes including issues of structure, process, conflict, power, politics and differing perceptions of risk. 8. Identify the root causes of failure and develop successful interventions for leading in VUCA (volatile, uncertain, complex, ambiguous) environments. 9. Differentiate the relationship between vulnerability, humility, trust, control, and credibility. 10. Use skills that will create the confidence to lead a team in novel, stressful, difficult situations. 11. Reflect on the inspirational power and natural beauty of Yosemite and appreciate how the magnificence of nature contributes to developing one's personal humility. 12. Identify team roles and use one's understanding of roles to lead by example. 13. Carry out teaming skills that develop willingness to be vulnerable to others in uncertain, challenging situations. 14. Differentiate transformational and pseudo-transformational leadership. 15. Generate a set of ethical leadership principles and compare to the actions of historical and contemporary leaders. 16. Reflect on their own leadership

guiding principles and the impact a good or bad leader can have, not just on a team or organization, but civilization. 17. Summarize the principles of power and influence; Recognize the conditions under which a population (e.g., nation) could be vulnerable to and be transformed by the false promises of a highly charismatic leader. 18. Reflect upon and attempt to find inspiration in the stories of courage and sacrifice that won WWII for the Allies in Europe. Credits: 1.00 to 4.00

MGMT 44673 - Intensive Leadership Sprint

Credit Hours: 1.00. Intensives are rapid leadership development experiences condensed over a weekend, with topics focused on self-leadership, teambuilding, conflict resolution, decision-making, communication, influence, and visioning. Permission of instructor required.

Learning Outcomes: 1. Identify the connection between personality and leadership. 2. Identify the qualities of effective teaming and what it means to be a team-player. 3. Carry out effective teaming behaviors and recognize how individual personality and communication style differences affect team success. 4. Design/develop strategies that will motivate self and others. 5. Summarize the ways people resolve conflict. 6. Determine one's own conflict resolution style and its implications for leadership. 7. Differentiate the ways we get people to go along and their implications on organizational outcomes. 8. Create new ways demonstrate influence tactics and apply them to influence other team members. 9. Contribute more effectively to a team. 10. Recognize and avoid costly team mistakes that plague many teams. 11. Create a crisis management plan for an organization. 12. Use their problem solving and decision-making skills to solve team challenges and problems. 13. Deconstruct the leader's role in leading a team to effective decision-making. 14. Identify their own personal ""why"" or leader purpose. 15. Reflect upon and summarize one's own limitations and strengths as a leader. 16. Deconstruct the role of vision and strategic decision-making at various levels of leadership in an organization. 17. Create a vision for themselves and other organizations. Credits: 1.00

MGMT 44680 - Experiential Learning And Team Consulting Projects

Credit Hours: 1.00 to 4.00. This course is for independent team experiential consulting projects. Students work on solving a real-world problem. Projects will typically involve an external corporate or alumni partner that sponsors a project and provides a problem to be solved. Student teams will work with the client to define the scope of engagement, develop a project plan, conduct a needs assessment, provide benchmark data and market analysis, solve problems, make decisions and present recommendations. In addition, students will develop professionalism skills in communicating and interacting with corporate clients through written and oral communication, including a final presentation to corporate stakeholders. Permission of instructor required.

Learning Outcomes: 1. Develop professionalism through written and verbal communication. 2. Develop teamwork skills by working in a cross-functional team. 3. Use and apply consulting methodologies and frameworks. 4. Analyze and assess current client situation. 5. Apply management tools such as SWOT analysis. 6. Conduct internal and external research and benchmarking. 7. Provide recommendations to solve real-world business problems. Credits: 1.00 to 4.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze

negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 44710 - Competitive Strategy

Credit Hours: 3.00. This course focuses on the dynamics between a firm and the marketplace including interaction with competition. Strategy implementation occurs over multiple periods and is highly dependent on choices and behavior of competition. The course material covers how these dynamics and expectations of competitor response will shape the decisions of managers. This is inclusive of signaling intent to competitors and mutual forbearance to avoid negative sum gain competition.

Learning Outcomes: 1. Improve ability at market and competitive analysis. 2. Recognize opportunities and problems for market entry that may follow from market and competitive analysis. 3. Improve decision making knowledge and skills. Credits: 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage.

Learning Outcomes: 1. Improve ability to assess technology and innovation from a competitive perspective. 2. Learn about disruptive innovation and its effects on incumbents and new firms. 3. Consider internal processes for innovation management in existing firms. 4. Improve decision-making and skills with respect to technology and innovation. Credits: 3.00

MGMT 45200 - Manufacturing Strategy And Process Innovation

Credit Hours: 3.00. This course examines the management challenges posed by the growth in worldwide manufacturing capabilities, markets, and competition and by rapid advances in technology and the concomitant decline in product life cycles. The manufacturing function is considered within a broader context encompassing design, engineering, purchasing, marketing, and customer service in an effort to assess the degree to which existing management structures successfully meet the challenges arising from the changing manufacturing environment.

Learning Outcomes: 1. Identify the tradeoffs made between operations flexibility and cost. 2. Identify proper alignment between manufacturing strategy and business strategy. 3. Identify the pros and cons of different types of plant network strategies. 4. Identify the behavioral issues associated with implementation of rigid project management tools. 5. Identify the potential long term implications of outsourcing on the development of competition. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 45600 - Legal Foundations For Business II

Credit Hours: 3.00. A study of commercial law as prescribed by the Uniform Commercial Code, including the law of sales, documents of title, negotiable instruments, and the law relating to security interests. Additional material is presented covering the legal aspects of real estate transactions and personal property transfer.

Learning Outcomes: 1. Have a good basic understanding of the structure of the U.S. legal system. 2. Be able to understand and apply basic legal terms and concepts in almost every

area of the law. 3. Be able to recognize common legal and ethical issues which will arise in the course of doing business. 4. Demonstrate your knowledge in classroom discussion and through the four (4) exams given during the semester. 5. Have the ability to more effectively communicate with and assist counsel on legal matters in your future business career. Credits: 3.00

MGMT 45900 - International Management

Credit Hours: 3.00. This course focuses on the challenges top managers face in developing strategies and management policies in multinational corporations (MNCs). Major topics usually covered include foreign market entry strategies, motivations and organizational challenges of internationalization, analyzing global industries, managing MNC/host government relations, building competitive advantage in global industries, international alliances and acquisitions, structuring and controlling MNCs, risk management, and the country manager role.

Learning Outcomes: 1. Understand the range of competitive opportunities and challenges companies and managers face in creating value worldwide. 2. Appreciate the complexities of national institutions and the dynamics of industry competition. 3. Deal with a company's multiple stakeholders including its internal constituents. 4. Integrate the concepts, principles, skills, and knowledge acquired in functional courses. Credits: 3.00

MGMT 46200 - Advanced Manufacturing Planning And Control Systems

Credit Hours: 3.00. The course examines key concepts in the planning, control, and improvement of processes in manufacturing and service operations. Specific topics covered in the course include: (i) Product/service characteristics that provide value to customers and competitive priorities, (ii) Role of processes and key operations choices to support the competitive priorities, (iii) Process analysis and scheduling, (iv) Throughput principles to deal with adverse impacts of process uncertainties and bottlenecks, (v) Managing capacity and lead times, (vi) Throughput principles to deal with wastes and errors, including the Toyota Production System and Lean Operations, and (vii) Coordinating material/order flows in supply chain - MRP, and Resources and Production Planning - Aggregate Production Planning. The class uses a combination of lectures, cases, simulations, outside speakers, experiential exercises, and student presentations. An important component of the course is a hands-on exercise where students in teams of seven or eight design and run a production process to meet demand for a quality-conscious customer. The teams then present the lessons learned to the class.

Learning Outcomes: 1. Learn the details of production planning, master scheduling, materials planning, short range capacity planning, production floor execution, and quality control. Credits: 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required.

Learning Outcomes: 1. Gain analytical insights on major supply chain tradeoffs. 2. Know supply chain functions: demand forecasting, procurement, inventory, transportation, pricing, contract, revenue management, reverse supply chain and integration of multiple functions. 3. Know a systematic set of analytical methodologies to use effectively in their future careers. Credits: 3.00

MGMT 46400 - Logistics: Concepts And Models

Credit Hours: 3.00. The course familiarizes students with main concepts and models of business logistics management. Through the course, students develop an ability to design, improve, and manage logistics operations such as Inventory, Transportation, Warehousing, and Logistics Network Design. Since logistics decisions often require certain trade-offs to be made, students develop necessary quantitative and qualitative analytical skills to improve their decision-making. At the end of the course, students should be able to analyze logistics strategy of a firm, identify problems and tradeoffs in different logistics functions, formulate the corresponding models, identify quantitative methods to solve it, obtain results and interpret them for small-size problems using standard spreadsheet software, communicate the results to a broader audience using

business language, discuss issues and challenges in same-day delivery, humanitarian logistics, physical internet.

Learning Outcomes: 1. Know vocabulary of Logistics, and Supply Chain. 2. Design, improve and manage processes by learning decision making tools. 3. Become familiar with the key issues and problems facing an operations manager. Credits: 3.00

MGMT 46501 - Strategic Sourcing And Procurement Operations Analytics

Credit Hours: 3.00. This elective course will serve as an important complement to the existing OM modules (e.g., MGMT 36100 Operations Management) to introduce more in-depth knowledge about supply chain management to undergraduate students, especially those major in SC&OM, focusing on strategic sourcing and procurement operations which are the building blocks for supply chain operations. More specifically, this course will introduce procure-to-pay process, category management, supplier selection and evaluation, supplier relationship management, vertical integration, global sourcing, outsourcing, auctioning, supply contract design and negotiation, business ethics, legal and compliance issues, etc. Sourcing and procurement is the major job title for supply chain operations jobs in the industry and our course can also help students to get the professional certificate of sourcing and procurement. Hence, it may also help senior students prepare for the job placements.

Learning Outcomes: 1. Master the working knowledge and vocabulary of strategic sourcing and procurement. 2. Know how to design and manage the business process in sourcing operations. 3. Know how to align sourcing strategies with corporate strategies. 4. Know how to model the key decision-making process of sourcing operations. 5. Apply data analytics techniques to develop sourcing strategies. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

MGMT 46700 - Big Data & Cloud Computing

Credit Hours: 3.00. Cloud computing and big data technologies are rapidly enhancing an organization's business intelligence ecosystem. Two modules of the course are specially designed for students to gain valuable hands-on experience in collecting, cleaning, formatting, integrating, and storing massive amounts of data that may be structured or unstructured, archived, or streaming in a cloud platform. The first module will introduce cloud computing fundamentals, its enabling technologies, main building blocks, and hands-on experience through projects utilizing Google Cloud Platform (GCP). The second module will cover processes for creating data pipelines in GCP so that the student will be able to curate big data for training, analysis, and prediction using AI/ML and other data science techniques.

Learning Outcomes: 1. Configure rapidly GCP to meet any analytics related challenge. 2. Build Data Lakes and Data Warehouses for big data analytics. 3. Use BigQuery and related services for advanced, real-time analytics. 4. Use BigQuery ML for classification and regression. 5. Build complex data pipelines using GCP's Dataflow, Cloud pub/sub, and Cloud Function to prepare data for machine learning algorithms. Credits: 3.00

MGMT 46800 - Supply Chain Technology

Credit Hours: 3.00. The course will introduce the major SCM information systems and technologies utilized by industry leaders to integrate SCM operations and achieve coordination within and across various business functions. The students will learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. The course will provide students the opportunity to study, analyze, and observe the information systems and technology tools. Topics include Enterprise Resource Planning Systems (ERP), Blockchain, Warehouse Management System (WMS), Transportation Management Systems (TMS), Internet of Things (IOT) in retail. The students will learn how to use the SAP

software to execute SCM operations. The course will review the technology implementation process and how such projects should be organized and managed.

Learning Outcomes: 1. Learn how to manage SCM operations, including: sales & distribution, materials management, production planning and control, warehouse management, retail operations. Methods of Evaluation: HWs, Quizzes. 2. Study, analyze, and observe the information systems and technology tools. Methods of Evaluation: Case studies, lab sessions, online discussions. 3. Learn how to use the SAP software to execute SCM operations. Methods of Evaluation: Lab exercises, team workshop, games. Credits: 3.00

MGMT 46900 - Supply Chain & Operations Analytics Consulting

Credit Hours: 3.00. This supply chain experiential learning course aims to provide students opportunities to apply theories and methods learned from supply chain and operations management courses to tackle real-world supply chain problems. A salient feature of this course is that it consists of two pillars. The first pillar is the partnerships with leading companies (e.g., Wabash, Corteva and Rolls Royce) to offer project opportunities and assign internal experts to advise student teams. Students will have opportunities to visit company sites, interact with domain experts, and present their findings to leadership teams. The second pillar is the partnership with a group of Purdue alumni to leverage their extensive supply chain consulting and corporate leadership experiences to advise students the consultation approach to problem-solving: how to approach problems, engage stakeholders, and professionally manage project delivery processes as internal or external consultants for business organizations.

Learning Outcomes: 1. Apply knowledge and skills learned in classes to real-world supply chain and operations problems. 2. Identify and approach real-world supply chain problems. 3. Collect, process and analyze real-world data. 4. Communicate and interact with supply chain executives. 5. Manage supply chain projects as a consultant. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks.

Learning Outcomes: 1. Demonstrate working knowledge of relationship databases, SQL queries, and efficient sampling. 2. Demonstrate working knowledge of RStudio to perform EDA, visualization, and data mining techniques. 3. Demonstrate working knowledge of data visualization and exploration using Tableau. 4. Demonstrate practical understanding of popular unsupervised and supervised learning methods.

Credits: 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests.

Learning Outcomes: 1. Generate a valid predictive analytics solution by following a structured process. 2. Demonstrate practical understanding of frequently used predictive analytics techniques. 3. Demonstrate a working knowledge of RStudio and SAS Enterprise Miner to build an access predictive models. 4. Demonstrate project poster and presentation of a predictive analytics solution to a business problem. Credits: 3.00

MGMT 47500 - Machine Learning For Business

Credit Hours: 3.00. This course concerns the latest techniques in machine learning, focusing on deep learning and reinforcement learning, with applications to computer vision, natural language understanding, speech recognition, news recommendation, and others. The course plans to cover Neural Nets, Backpropagation, Convolutional neural network, Recurrent Networks, Autoencoders and other architectures in Deep Learning in the rst half. Next, the course plans to cover multi-armed bandits, Contextual bandits, Markov decision process, and Policy gradient methods in Reinforcement Learning.

Learning Outcomes: 1. Perceive the scope and importance of machine learning. 2. Understand and evaluate modern machine learning algorithms. 3. Apply appropriate programming skills to administer a machine learning algorithm in a real-world problem. 4. Communicate the machine learning results in an appropriate level of detail for an intended audience. Credits: 3.00

MGMT 47600 - Employment Law For Business

Credit Hours: 3.00. Employment Law for Business is designed to help students navigate the complex legal challenges businesses face in employment. Students will explore key topics like defining the employment relationship, addressing discrimination and harassment, and managing technology and privacy issues in the workplace. Through real-world examples, students will learn about critical regulations, including the Fair Labor Standards Act, FMLA, OSHA, and laws governing employee benefits. By the end of the course, students will develop the skills to approach employment law issues with confidence, applying legal, managerial, and ethical perspectives to solve problems effectively.

Learning Outcomes: 1. Analyze and apply legal principles and legislation to evaluate employment decisions in business scenarios. 2. Explain and evaluate the legal protections and responsibilities of managers in various business contexts. 3. Identify and assess the fundamental components of litigation and analyze the financial and reputational costs of HR law violations. 4. Apply best practices in management, ethical frameworks, and legal mandates to resolve employment law issues effectively. 5. Develop and apply communication, analytical, and logical reasoning skills through case studies and writing exercises, demonstrating proficiency in at least three key areas. 6. Analyze the impact of public policy changes on legal frameworks, with examples of recent legislative shifts. Credits: 3.00

MGMT 47700 - Accenture Innovating Industry

Credit Hours: 3.00. Delve into the transformative role of innovation in driving industry growth and competitiveness. Students will explore how businesses can harness emerging technologies, evolving market dynamics, and disruptive business models to reshape industries. Through a combination of case studies, business world examples, and hands-on projects, the course emphasizes the importance of strategic thinking, design thinking, and creative problem-solving in identifying opportunities for innovation across sectors.

Learning Outcomes: 1. Analyze key drivers of innovation within different industries. 2. Apply innovation frameworks to solve business world challenges. 3. Design and prototype new business models that address tech-driven industries. 4. Lead initiatives that use

technology to help businesses grow by creating relevance with their customers. 5. Evaluate the impact of technological and social trends on industry evolution. 6. Deliver a solution to a corporate partner that satisfies their needs in an agile fashion. Credits: 3.00

MGMT 47800 - Experiential Project In Analytics

Credit Hours: 3.00. Most degree programs offer students an opportunity to apply the knowledge learned from their studies in an applicable area via a thesis, a research project, or capstone. This course provides such an opportunity and is designed specifically for Business Analytics & Information Management undergraduate students that will pursue analytical-type careers (e.g., Data/OR Analyst, Data Scientist, Decision Scientist, Consultant, Developer, etc.). This course is designed to polish and integrate the knowledge, skills, and abilities you have developed from your coursework by successfully developing an analytics solution with an industry partner in a structured fashion. Thus, most of your time will be devoted to working with your project teammates to provide the answers and deliverables specified by the partner over the course of many sprints. Every project team will be provided with a project description, data dictionary, and access to the dataset (or directions in where to find the necessary data), as well as an NDA to read, understand, sign, and return to your professor before you can gain access to the data. These are tasks that might be required of you to perform when you work on a new project or have a new client. Students are expected to be familiar with at least one programming language (e.g., Python, R). Permission of instructor required.

Learning Outcomes: 1. Formulate a business problem into an analytical problem. 2. Deliver an analytical solution to stakeholders in an agile fashion in programming languages. 3. Communicate effectively with stakeholders. 4. Work effectively in a team. Credits: 3.00

MGMT 47900 - Data Visualization

Credit Hours: 2.00 or 3.00. This course is an introduction to the techniques and algorithms for creating effective data visualization. Visualizations are graphical depictions of data that can improve comprehension, communication, and decision making. This course emphasizes application in business settings where visual representation methods that are covered in this course will improve our understanding of complex data and models. We focus in particular on pattern identification, difference and trends in data sets across categories, space, and time. In addition to participating in in-class discussions, students will have sufficient hands-on experience with the tools and techniques covered in this course. Students will be expected to complete several short programming and data analysis assignments. Students will also have an opportunity to work as groups on a final project. Permission of department required.

Learning Outcomes: 1. Understand the key techniques and theory used in visualization, including data models and graphical perception. 2. Apply perception and cognition principles in visualization. 3. Become familiar with a large number of data visualization tools. 4. Transform large database for visual displays using various representation techniques. 5. Critique various visualization representation and interaction techniques. 6. Read and discuss research papers from the visualization literatures. Credits: 2.00 or 3.00

MGMT 48400 - Management Of Entrepreneurial Ventures

Credit Hours: 3.00. This course teaches skills required to become an entrepreneur, succeed in a start-up venture, work in venture capital, join a family business, or develop a franchise operation. Students will learn about how to identify and shape emerging market opportunities, innovate new business models, prepare and evaluate business plans, raise capital, build a skilled founding team, network for resources, and grow an initial market.

Learning Outcomes: 1. Identify and shape emerging market opportunities. 2. Innovate new business models. 3. Prepare and evaluate business plans. 4. Raise capital. 5. Build a skilled founding team, network for resources, and grow an initial market. Credits: 3.00

MGMT 48800 - Data-Driven Decisions In Digital Markets

Credit Hours: 3.00. This course analyzes the changes in business models that have been enabled by Internet technologies, and exposes students to hands-on data analyses to quantify the impact these technologies and business models have on firms, economies, and people. A programming course such as MGMT 28800 Programming for Business Applications or MGMT 38800 Python for Business or CS 17600 Data Engineering in Python or CS 17700 Programming with Multimedia Objects or CNIT 17500 Visual Programming or CS 18000 Problem Solving & Object Oriented Programming and a

statistics course such as STAT 30301 Probability & Statistics for Business or MGMT 30500 Business Statistics is highly recommended.

Learning Outcomes: 1. Recognize the role of business models and data-driven decisions in digital markets. 2. Measure, evaluate, and improve online technology usage, advertisement campaigns, and product pricing to meet specific business objective like better serving customers, customer acquisition, quantifying network effects, etc. 3. Analyze the sheer amount of data ("traces") collected by businesses from different touch points - Google Glass, Apple Watch, smart phones, or simple computing devices - and make critical business decisions. Credits: 3.00

MGMT 49000 - Problems In Industrial Management

Credit Hours: 1.00 to 4.00. Investigation in a specific management field. Arrange with instructor before enrolling. Permission of instructor required.

Credits: 1.00 to 4.00

MGMT 49200 - Intellectual Property Management

Credit Hours: 2.00. Intellectual property (IP) has become a strategic opportunity for creating value for the firm. Firms are tasked with understanding how to utilize intellectual property as a competitive advantage in multiple market contexts. In the current economic environment, intellectual assets can be the largest portion of a firm's total wealth. Strategic management of these assets is very critical. Managing intellectual property is about transforming a firm's ideas, know-how, etc., into learning, products, and ultimately cash flow. In Managing Intellectual Property, we examine this topic by viewing intellectual property as both a legal asset (property ownership) and business asset (value-adding). The focus of Managing Intellectual Property is on the integration of IP generation, IP protection, and strategizing functions of the firm in creating value with an IP portfolio. Concepts and frameworks discussed/developed in lecture are exercised in case studies from multiple contexts.

Learning Outcomes: 1. Understand key elements in intellectual property management. 2. Aware of the different types/forms of intellectual property. 3. Understand how the difference in the types of intellectual property provides strategic opportunities. 4. Confidence in your own abilities to manage intellectual property. 5. Aware of the role of multiple functions in creating an intellectual property portfolio (e.g. R&D, Marketing, Legal, Merger & Acquisition, Business Development, Human Resources, Finance). Credits: 2.00

MGMT 49300 - Storytelling With Data

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course (Storytelling with Data) is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and effective skills to express your ideas in ways that connect.

Learning Outcomes: 1. Understand the importance of communication context, elements of good storytelling, and basic principles of human information processing as related to data visualization. 2. Apply this understanding to the communication of complex (i.e., data-driven) information. 3. Analyze data visualization design choices. 4. Evaluate the effectiveness of data communication. 5. Create a compelling story using data with the tools and skills taught in this course. Credits: 2.00

MGMT 49400 - IBE Capstone

Credit Hours: 3.00. The objective of the IBE Capstone course is to provide students with the opportunity to apply and integrate what they have learned from prior courses in "Real World" settings. There are no traditional classes. Rather, students will work in self-managed teams of 5-6 on projects that have both business and engineering elements with the support of a mentor; in many cases the mentor will be from a sponsoring company. The role of the company mentor is to provide advice and guidance to the student team as well as to expose the students to the approaches and processes used in industrial and commercial organizations. The course instructors will also meet with the student teams on a weekly basis to assess progress and provide guidance. Possible options for the projects include: 'Product Design' and 'Business Solution'. The Product Design projects would be focused on the marketing, technical, and economic feasibility of a new product concept. The Business Solution projects would be focused on technical

issues in a business context and developing solutions to a "real world" problem presented by a sponsoring company. Examples of these projects might include use of 3-D printing for spare and replacement parts or incorporation of autonomous transportation into a company's operations and supply chain.

Learning Outcomes: 1. Exhibit integrity, accept responsibility, take initiative, and provide leadership necessary to ensure project success. 2. Produce product designs or business solutions that meet important performance requirements while satisfying relevant societal, legal/regulatory, and professional constraints. 3. Establish relationships and implement practices with team members, advisors, and other stakeholders that support high performance and continuous improvement. 4. Plan, monitor, and manage project schedule, resources, and work assignments to ensure successful project completion. 5. Utilize and synthesize prior knowledge, independent research, published information, and original ideas in addressing problems and generating solutions. 6. Make decisions based on customer and user needs, product design or business solution requirements, resource availability, and associated risks. 7. Demonstrate effective use of contemporary tools for engineering and business analysis. 8. Test and defend performance of a product design or business solution with respect to key requirements. 9. Use formal and informal communications with team, advisor, and other stakeholders to document and facilitate progress and to enhance impact of design products. Credits: 3.00

MGMT 49600 - Management Consulting Practicum

Credit Hours: 3.00. Management Consulting Practicum is an elective course consisting of consulting engagements with clients and projects from the Purdue Foundry and other sources. This course uses class time for students working in teams to receive timely guidance on applying a wide range of consulting skills and tools to supplement the client engagements.

Learning Outcomes: 1. Apply core consulting skills in solving real-life problems. 2. Collaborate and build relationships with business clients. 3. Analyze and identify various sources of data, prepare deliverables, and report results. Credits: 3.00

MGMT 49700 - The Science Of Working Well

Credit Hours: 3.00. What does it truly mean to "work well"? From burnout and physical exhaustion to lack of motivation and meaning in their work, to not feeling socially connected to others-there are many factors that can influence the extent to which employees feel like they are able to thrive at work and at home. In this course, we will explore individual; relational/dyadic; organizational; and community influences on working well by diving into the common challenges employees' face in their daily work, both in managing their well-being and the well-being of others as leaders, coworkers, and community members. Together we will work towards identifying solutions to challenges that influence our ability to work well based on the scientific evidence.

Learning Outcomes: 1. Identify key definitions and theories of well-being at work and at home. 2. Distinguish antecedents of well-being at work and home stemming from individual, relational, organizational, and community-level factors. 3. Analyze data for "intervention points" to help offer improved support and programs for employees' well-being. 4. Plan habits or routines that promote your well-being at work and at home. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction

between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

OBHR 49000 - Problems In Organizational Behavior

Credit Hours: 1.00 to 4.00. Supervised readings and reports in various subjects. Arrange with instructor before enrolling. Permission of instructor required.

Credits: 1.00 to 4.00

College of Education

opt_EDU_2016

Mission Statement

The College of Education provides leadership through exemplary teaching, research and engagement while embracing collaboration, creativity, respect and diversity. The college's mission is to advance scientific discovery in both applied and scholarly learning; prepare students to become exceptional teachers and education professionals; and maximize educational outcomes through inspired teaching, research and public service.

To further its mission, the College of Education creates knowledge through innovative inquiry and superior scholarship; delivers a contemporary and innovative professional curriculum; empowers faculty, staff and students to effect professional, social and technological change in a global, multi-cultural and diverse society; engages in cross-disciplinary collaboration to seek solutions to critical educational challenges both locally and globally; informs educational programs and policy; and attracts and retains talented and diverse faculty, staff and students.

Organization and Purpose

The College of Education consists of the Department of Curriculum and Instruction and the Department of Educational Studies.

The Department of Curriculum and Instruction offers undergraduate instruction in elementary education and social studies education as well as courses in teaching methods for all programs leading to initial teacher licensure offered at Purdue. At the graduate level, the department offers degree programs in curriculum studies, education for work and community, educational technology, literacy and language education, mathematics education, science education and social studies education. At the graduate degree level, the department prepares master teachers, curriculum specialists, teacher educators, educational researchers, instructional designers, educational technology specialists and university faculty members.

The Department of Educational Studies offers undergraduate-level and graduate-level instruction in counseling and development, cultural foundations, educational leadership, educational psychology, gifted education, measurement and research methods and special education. At the graduate degree level, the department prepares educational researchers; educational policy analysts; school principals and superintendents; counseling psychologists; teacher educators; and specialists in gifted education, measurement and the social and philosophical foundations of education. There is a counseling psychology doctoral program accredited by the American Psychological Association.

College of Education

Admissions Information

Successful completion of all Teacher Education Program (TEP) Requirements, including a minimum 2.5 Teacher Education Overall GPA are required to progress beyond each TEP Milestone. All Professional Education courses, including Learner Specialty Concentration/Pathway courses, must be completed with no grade lower than a "C" and no "I" (Incompletes). Degree requirements must be fulfilled to qualify for TEP completion. A minimum passing score on all required licensure examinations and completion of licensure requirements are necessary to be eligible for an Indiana Instructional Educator License.

-

Licensure Information

- Technology Integration- Blended and Online Teaching (Ti-BOT)

Summary of Teacher Education Milestones

Admission to Teacher Education Program

Admission to the Teacher Education Program (TEP) is directly granted upon acceptance and enrollment at Purdue University, West Lafayette. The Teacher Education Program is aligned with national and state accreditation and licensure standards, regulations, and rules; university guidelines; and prescribed Plan(s) of Study (POS) as defined by Admission Year or as otherwise authorized by the Office of Teacher Education and Licensure (OTEL).

TEP Program Progression by Milestone (Milestones A-F)

Successful TEP progression and completion are achieved by attaining each TEP Milestone at or above Standard as outlined within the 2025-2026 Program Requirements and Milestones for each individual content area/major and as referenced and assigned within the 2025-2026 University Catalog, 2025-2026 Teacher Education Program Directory, the Brightspace course 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements, Plan(s) of Study (POS), and course syllabi.

Required Brightspace Course

Every incoming 2025-2026 Teacher Education (TE) student will be enrolled in the REQUIRED 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements Brightspace course. This course serves as the official/primary manner for which the Office of Teacher Education and Licensure (OTEL) will communicate and monitor cohort-specific requirements, milestones, timelines, notifications, tutorials, actions, student engagement, etc. for each TE student. Course commitment is continuous beginning upon arrival to the university and concludes when Milestones A-F are attained.

Course Substitutions

Course substitutions must fulfill degree requirements, associated Teacher Education Program (TEP) key and/or common assessments, and licensure standards/requirements. Prior approval by the Office of Teacher Education and Licensure is required for all course substitutions.

Milestone A: Methods Qualified

Milestone A - Teacher Education Program Progression Status

- Exceeds Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone A Criteria as defined by Content Area/Admission Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.
- Milestone A Decision Deferred to Milestone B: Reserved for transfer students. Additional time is necessary to acquire an adequate number of measurable Milestone outcomes.

Milestone A - Review Schedule

- Conducted - Close of Spring Semester 2026
- Decision/Notification - Early Fall Semester 2026

1. 2.50/4.00 Overall GPA (at time of Milestone A review)
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone A review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete three (3) Ti-BOT badges (at the time of Milestone A review).
7. No unresolved Professional Dispositions issues/concerns.
8. Adhere to the Criminal Background Check Policy.
9. Complete TEP Brightspace Assignments, including but not limited to attendance at the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
10. Attend the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
11. Submit the Teacher Education Program Agreement (TEPA).
12. Identify via the Teacher Education Program Agreement (TEPA) one of four chosen Learner Specialty Pathways. Learner Specialty Concentration/Pathway requirements are specific to individual content area/major.

Milestone B: Student Teaching/ Placement

Milestone B - Student Teaching Placement

- Exceeds Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone B Criteria as defined by Content Area/Admission Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.
- Milestone B Decision Deferred to Milestone C: Reserved for transfer students. Additional time is necessary to acquire an adequate number of measurable Milestone outcomes.

Milestone B - Review Schedule

- Conducted - Close of Fall Semester 2027
- Decision/Notification - Early Spring Semester 2028

1. 2.50/4.00 Overall GPA (at time of Milestone B review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C"

or higher, no "I" (Incomplete), no "Pass/Fail".

3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone B review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete five (5) total Ti-BOT badges (at the time of Milestone B review).
7. No unresolved Professional Dispositions issues/concerns.
8. Complete TEP Brightspace Assignments.
9. Attend the mandatory Student Teaching Clinical Acceptance Process (CAP) Workshop provided by the Office of Clinical Practice (OCP) AND submit your CAP Application as directed by OCP.

- Expanded Student Teaching practicums and full-time Student Teaching occur over two consecutive semesters.
- Verify from the CAP Application projected Student Teaching semester/year.

Milestone C: Student Teaching Authorization

Milestone C - Student Teaching Authorization

- Exceeds Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone C Criteria as defined by Content Area/Admission Year.

Milestone C Criteria must be attained At Standard before the Office of Teacher Education and Licensure (OTEL) will authorize enrollment reinstatement for Student Teaching.

Milestone C - Review Schedule

- Conducted - Close of Fall Semester 2028
- Decision/Notification - Early Spring Semester 2029

1. 2.50/4.00 Overall GPA (at time of Milestone C review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone C review).
5. **Successful completion and target met on Foundations Portfolio (submission and target met on Common Lesson Plan in Semester 7).
6. ***Successfully complete ten (10) total Ti-BOT badges (at the time of Milestone C review).
7.

Successfully complete all Professional Education (including Foundation and Methods), Learner Specialty Pathway, and degree courses prior to student teaching (Semester Eight).

8. Attempt all required content test(s) before the Student Teaching semester per the timeline below; Test Requirements (ets.org)

Content Test Attempts for Major

For Fall Student Teaching: Official Score Reports due to OTEL no later than July 1.

For Spring Student Teaching: Official Score Reports due to OTEL no later than December 1.

Content Test Attempts for Pathways/Concentrations (High Ability and English Language Learning)

For Fall Student Teaching: Test Registrations received in OTEL by May 15th confirming a test date scheduled no later than June 30th.

For Spring Student Teaching: Test Registrations received in OTEL by October 15th confirming a test date scheduled no later January 31st.
Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts; If completing a Learner Specialty Pathway that leads to licensure (High Ability or English Language Learners), the associated content exam must be attempted prior to the Student Teaching (Semester 8).

9. No unresolved Professional Dispositions issues/concerns.

10. Adhere to the Criminal Background Check Policy.

Milestone D: Teacher Education Program Completion

Milestone D - Teacher Education Program Completion

- Exceeds Standard: *Meets Milestone D Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone D Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone D Criteria as defined by Content Area/Admission Year.*

Milestone D - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-C met.
2. 2.50/4.00 Overall GPA (at time of Milestone D review).
3. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
4. Verify degree is conferred on Transcript/Academic Record.
5. *Be in Good Standing with the University (at time of Milestone D review).
6. No unresolved Professional Dispositions issues/concerns.
7. ****Successful completion and target met on

all Common Assessments (submission and target met on CPAST and edTPA in Semester 8).

Milestone E: Licensure Eligible

Successful completion of the Purdue University Agricultural Education Program, Agricultural Education, BS, and the State of Indiana licensure requirements for an Indiana REPA 3 Initial Instructional License in Career and Technical Education (CTE): Agriculture (5-12) and *Blended and Online Teaching (5-12).

Milestone E - Licensure Eligible

- Exceeds Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone E Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone E - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-D met.
2. Resolve any holds on academic records (if applicable).
3. Successfully complete the required pedagogy test; Test Requirements (ets.org). Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
4. Successfully complete all required content test(s) Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
5. For all Career and Technical Education (CTE) majors ONLY- Verify that the required number of clock hours has been completed and received by your advisor. Students must complete 4,000 clock hours of successful employment in the appropriate CTE area, or 1,500 clock hours of supervised work in the appropriate CTE area under an approved Teacher Education Program or an equivalent combination.

Milestone F: Licensure Action(s)

Milestone F - Licensure Actions

- Exceeds Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone F Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone F - Review Schedule

- Conducted - Upon Licensure Application - Summer 2029
- Decision/Notification - Upon Formal Action

1. Milestones A-E met.
2. Complete and upload with your Indiana License Application CPR/Heimlich Maneuver/AED certification or card (must include a hands-on, face-to-face skills demonstration).
3.

Complete and upload with your Indiana License Application documentation of Suicide Prevention certification (training must be at least one hour).

4. Submit Indiana License Application online via Licensing Verification and Information System (LVIS) at https://license.doe.in.gov/.
5. Allow three weeks (given all licensure criteria are met) for Purdue University to certify and the Indiana Department of Education (IDOE) to grant the Indiana License.
6. After receipt of an Indiana License, apply for out-of-state licensure (if desired).

*For purposes of reports and communications to other institutions or agencies, and in the absence of any further qualifications of the term, a student shall be considered in Good Standing unless the student has been dismissed, suspended, or dropped from the University and not readmitted. A student is considered in Good Academic Standing if both a student's semester and cumulative GPA are above a 2.00/4.00.

**Foundation Courses linked with the Foundations Portfolio Common Assessments include EDCI 20002, EDCI 28500, EDCI 35000, EDPS 20001, EDPS 23500, EDPS 24800, EDPS 32700, EDPS 36201, EDPS 43010, and EDST 20010. These may be subject to change.

***The Blended and Online Teaching (5-12) License is required for students on Admission Year Fall 2024-Spring 2025. The Blended and Online Teaching (Ti-BOT) License requirements are embedded into coursework for all Teacher Education Undergraduate majors. Some exceptions apply.

****Common Assessments include Foundations Portfolio, Field Experience Dispositions, CPAST, edTPA, Common Lesson Plan, and Licensure. Common Assessments for Early Childhood Education and Special Needs align with the National Association for the Education of Young Children (NAEYC).

Beginning July 1, 2025 - According to the Indiana State Board of Education, students seeking an Initial Indiana License in a content area involving literacy instruction, including special education, must obtain a licensure addition in Early Literacy (P-5), as required under IC 20-28-5-19.7.

Licensure Information

The Office of Teacher Education and Licensure (OTEL) is the formal liaison with the Indiana Department of Education and serves as the official repository for Purdue West Lafayette Teacher Education Program Progression and Licensure actions. OTEL maintains and permanently retains a *Teacher Education Program and Licensure Credential Portfolio* for each current and former Purdue University Teacher Education Candidate/Student. OTEL provides reliable, career-long guidance on Indiana Teacher Education and Licensure Standards, Rules, and Procedures. Indiana Licensing Rules and Regulations are subject to change by the Indiana State Board of Education, Indiana Department of Education (IDOE), and/or the Indiana General Assembly.

Welcome to the Office of Advising and Recruiting

The Office of Advising and Recruiting welcomes you to take advantage of our services so we can assist you with your academic career. We assist current and prospective College of

Education students by providing quality advising about College of Education programs and referrals to additional academic, personal, and career counseling, as needed. Our primary purpose is to assist students in accomplishing their academic and lifelong learning goals.
A team of professional academic advisors work with students, faculty, staff, departments, and administration to maintain and improve the quality of education in the College of Education and Purdue University, as a whole. As advisors, we are committed to supporting each student in developing and implementing an individualized plan for academic success and career development.

Department of Curriculum and Instruction

Overview

Welcome to the Department of Curriculum & Instruction (C&I)

We offer high quality learning programs to prepare education professionals for positions in schools, higher education, and the workplace. Undergraduates in C&I may enroll in programs leading to teacher licensure in elementary education or social studies education. In addition, C&I offers courses in teaching methods for all programs leading to initial teacher licensure at Purdue. At the graduate level, students may pursue advanced degrees in education disciplines including curriculum studies, education for work and community, educational technology, literacy and language education, mathematics education, science education, and social studies education.
Our faculty conducts research that links theory to practice leading to new discoveries in many aspects of the teaching and learning process across a wide variety of educational contexts. C&I serves the needs of society through engagement with our local, state, national, and international communities. We value collaboration, community, diversity, global perspectives, inquiry, and reflection, and we aspire to provide educational leadership in an increasingly diverse, interconnected, and technology-rich world.
Sincerely,
Janet M. Alsup
Head of the Department of Curriculum & Instruction

Mission Statement

We aspire to collaborate on issues associated with the teaching and learning process by linking theory and practice in a wide variety of educational contexts. We value community, collaboration, diversity, inquiry, and reflection.
We fulfill our mission by:

- Preparing education professionals for school, community, business, and government
- Providing educational experiences, built upon a common core of research and foundational knowledge, through innovative, coherent programs that include: diverse and field-based experiences, the infusion of technology, the integration of content and pedagogy, and ongoing assessment

- Fostering university-wide collaboration
- Reflecting diverse and international perspectives
- Engaging in teaching, inquiry, scholarship, service, and outreach activities

Elementary Education, BA

Global Studies Minor

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common

inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. (EDCI 20002) This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works well with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 20700 - Construction And Textile Lab Management

Credit Hours: 3.00. A lecture/lab course which provides clothing construction and textile science content to be applied in the secondary family and consumer sciences classroom.

Learning Outcomes: 1. Demonstrate clothing construction concepts. 2. Apply basic textile science to fabric and clothing selection. 3. Manage a clothing and/or textile lab within a secondary family and consumer sciences classroom. Credits: 3.00

EDCI 21000 - Education Scholars Program I

Credit Hours: 1.00 to 3.00. EDCI 21000 is the first course in a two course, introductory sequence for College of Education students enrolled in the Honors College and/or DeVito Program scholarship recipients. In this course, we will examine key concepts and ideas in educational thought and research, understand what research is, and begin to explore individual students' research interests.

Learning Outcomes: 1. Introduced to key concepts and ideas in educational thought, e.g. democracy; diversity; equity; teaching, learning, and testing; creativity; and technology. 2. Examine how educational researchers conceptualize and conduct research. 3. Explore research interests in education, and how to access resources to further develop those interests. 4. Introduced to campus-based academic resources. 5. Complete multiple writing assignments to develop scholarly writing skills. Credits: 1.00 to 3.00

EDCI 21100 - Education Scholars II

Credit Hours: 1.00 to 3.00. This is the second course in a two course, introductory sequence for College of Education students enrolled in the Honors College and/or DeVito Program scholarship recipients. In this course, students will work on a research project with a faculty mentor, will participate in reflection and discussion of that research experience, will participate in seminars with faculty to read and discuss research, and continue to explore their own research interests and campus resources.

Learning Outcomes: 1. Participate in a semester-long research project with a faculty mentor for 3-4 hours per week. 2. Participate in structured written and oral reflection on their semester-long research experiences. 3. Interact with faculty in the College of Education through 3-4 seminars focused on discussion of their research and scholarship. 4. Explore their research interests, and campus resources. 5. Present their research projects during a public presentation session at the end of the semester. Credits: 1.00 to 3.00

EDCI 21510 - Language & Literacy Foundations For Teachers

Credit Hours: 1.00. The goal of the course is to provide background information in language and literacy necessary for success in literacy methods courses. The course will address basic linguistics and phonetic patterns of English, as well as the structures of literature and literary terms.

Learning Outcomes: 1. Compare and contrast levels of language structure: phoneme, morpheme, root, affix, phrase, sentence. 2. Differentiate graphic from phonological elements of language (e.g., grapheme vs phoneme). 3. Compare and contrast vocabulary terms (e.g. synonym, homonym, homograph). 4. Define and articulate written elements (e.g. digraphs, consonant clusters, long/short vowels). 5. Identify morpho-syntactic structures and phonological patters in written and spoken language. 6. Compare and contrast literary genres (e.g. narrative, non-narrative, fiction, nonfiction). 7. Distinguish the organizational structures of fictional genres from those of nonfictional genres. 8. Identify literary terms in context (e.g. alliteration, character traits, plot, stanza). Credits: 1.00

EDCI 21610 - Teaching History: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching history in powerful, exciting and innovative ways through a topical study (e.g., American Civil Rights Movement) approach. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national history standards. 2. Use research and theory about how grades 5-12 students learn history. 3. Merge historical content and processes with pedagogy to forge pedagogical content knowledge. 4. Employ appropriate history-specific academic language in history lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful and purposeful history teaching and learning

grades 5-12. Credits: 1.00

EDCI 21710 - Teaching Geography: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching geography in powerful, exciting and innovative ways through a study of geographic concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum. Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national geography standards. 2. Use research and theory about how secondary students learn geography. 3. Merge geographical content and process with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful geography lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary geography teaching and learning. Credits: 1.00

EDCI 21810 - Teaching Civics And Government: Standards And Strategies

Credit Hours: 1.00. Course prepares students for teaching civics and government in powerful, exciting and innovative ways through a study of civics and political science concepts within the framework of inquiry design model (IDM) and an inquiry-based curriculum Required for all Social Studies Education majors.

Learning Outcomes: 1. Develop knowledge of appropriate state and national civics and government standards. 2. Use research and theory about how secondary students learn civics and government. 3. Merge political science content and processes with pedagogy to forge pedagogical content knowledge. 4. Plan standards-based powerful civics and government-oriented lessons. 5. Utilize new understandings to draw conclusions about what constitutes powerful secondary civics and government teaching and learning. Credits: 1.00

EDCI 21910 - Teaching For Economic Literacy: Developing An Economic Way Of Thinking

Credit Hours: 1.00. Course focuses on preparing students in the social studies education licensure program to teach high school economics and to integrate economics into other middle and/or high school social studies courses. Course addresses issues of economic pedagogy. It will address economic content/concepts specifically and only in a way to illustrate/expand on the teaching ideas, resources, methods, and assessment.

Learning Outcomes: 1. Develop a rationale for teaching high school economics. 2. Identify state and national standards addressing economic content. 3. Explore methods for active teaching/learning in economics. 4. Identify resources appropriate for the active teaching/learning of economics. Credits: 1.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and

qualitative) methods. Credits: 3.00

EDCI 22222 - Integrated Health And Physical Education For Elementary Teachers

Credit Hours: 3.00. This course provides elementary education majors with a comprehensive understanding of the critical role health and physical education play in the overall development of young learners. Students will explore how physical activity and health education contribute to cognitive, social, emotional, and physical growth. The course emphasizes the importance of integrating movement and health topics such as personal safety, nutrition, and emotional health into the elementary classroom to enhance academic performance, promote wellness, and develop lifelong healthy habits. Through a blend of theory, practical strategies, and hands-on activities, students will learn to design inclusive, developmentally appropriate physical education lessons and comprehensive school health education (CSHE) plans that cater to diverse learners. By the end of the course, students will be equipped to create engaging, safe, and supportive environments that foster both physical well-being and academic success.

Learning Outcomes: 1. Understand health-related fitness concepts and principles related to physical activity and wellness. 2. Promote physical, emotional, and social well-being in elementary students. 3. Understand and teach proper nutrition, including the relationship between healthy eating, physical activity, and overall wellness. 4. Promote mental and emotional health by teaching coping strategies, stress management, and emotional regulation. 5. Teach personal safety and injury prevention, including strategies for safe play, accident prevention, and emergency response. 6. Integrate physical activity into daily classroom activities, promoting active learning and encouraging students to develop positive attitudes toward physical activity. 7. Develop inclusive and developmentally appropriate physical education lessons, ensuring students of all abilities can participate in and benefit from physical education. Credits: 3.00

EDCI 22550 - Mathematics Education Seminar

Credit Hours: 1.00. In this course, students will be introduced to many aspects of mathematics education, including pedagogies, professional organizations, standards, research, lesson planning, technology, etc. In addition, they will have opportunities to get to know others in their major earlier in their program.

Learning Outcomes: 1. Examine critically current pedagogical practices used in secondary mathematics classrooms. 2. Explore alternative pedagogies to enhance student engagement and conceptions of the relevance of mathematics. 3. Become familiar with technologies available for use in mathematics teaching and learning, mathematics education research, and professional organizations and standards. Credits: 1.00

EDCI 25000 - Professional Development In Family And Consumer Sciences Education

Credit Hours: 0.00 to 2.00. This course focuses on students' professional development as family and consumer sciences educators. Characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; the Purdue Family and Consumer Sciences Education program; and expectations for Indiana FCS teacher-licensure are emphasized. Includes participation in professional organizations and meetings.

Learning Outcomes: 1. Formulate and implement plans for building and documenting one's professional identity, competence, and career development as a family and consumer sciences educator. 2. Examine characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; coursework and field-based experiences in the Purdue Family and Consumer Sciences Education (FCSE) program; and licensure requirements and standards for teachers of family and consumer sciences. Credits: 0.00 to 2.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the

classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 28500 - Multiculturalism And Education (UCC: BSS)

Credit Hours: 2.00 to 3.00. This course integrates an understanding of multiculturalism with principles of democratic education. Historical, sociological, cultural, political, philosophical, and pedagogical foundations of multiculturalism are explored and related to issues of pedagogy in a pluralistic society.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop awareness of issues and concerns related to multicultural education. 2. Develop knowledge of how multiculturalism impacts teachers, schools, classrooms, and society. 3. Develop skills of critical thinking and reflection that will enable educators to contribute to meeting the needs of students in a multicultural and global world. Credits: 2.00 to 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDCI 30101 - Inquiry Into Teaching And Learning In K-2

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the K-2 classroom. Admission to Teacher Education required. Cannot be taken concurrently with EDCI 30002.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach, assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6.

Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 30102 - Inquiry Into Teaching And Learning In 3-6

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the 3-6 classroom. Admission to Teacher Education is required. Cannot be taken concurrently with EDCI 30101.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6. Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 31100 - Media For Children

Credit Hours: 3.00. Books and other resources designed for children and adolescents are studied and evaluated in terms of literary theory and aesthetic appreciation. Emphasis is placed on literature and its place in the child's world.

Credits: 3.00

EDCI 31101 - Integrating Media In The K-2 Classroom

Credit Hours: 2.00. The goal of the course is for teacher candidates to understand how to choose and evaluate children's literature and media to use in K-2 classroom, develop ways to integrate literature and understanding of literature and media using a variety of methods, select appropriate materials for individual student's needs, and assess student's learning. Admission to Teacher Education is required.

Learning Outcomes: 1. Evaluate both fiction and nonfiction resources for the use in classroom including identifying media which is broadly representative of the world in which we live using a variety of rubrics and evaluation forms. 2. Determine cross-curricular connections, teaching ideas, and assessment methods of individual titles for use in the K-2 classroom. 3. Develop materials (i.e., graphic organizers, vocabulary activities, comprehension supports) to use with literature which may be differentiated for individual learner's needs. Credits: 2.00

EDCI 31102 - Integrating Media In The 3-6 Classroom

Credit Hours: 1.00. The goal of the course is for teacher candidates to understand how to choose and evaluate children's literature and media to use in the 3-6 classroom, develop ways to integrate literature and media throughout the curriculum,

support students' understanding of literature and media using a variety of methods, select appropriate materials for individual student's needs, and assess students' learning.

Learning Outcomes: 1. Evaluate both fiction and nonfiction resources for use in the classroom including identifying media which is broadly representative of the world in which we live. 2. Determine cross-curricular connections, teaching ideas, and assessment methods of individual titles for use in the 3-6 classroom. 3. Develop materials (i.e., graphic organizers, vocabulary activities, comprehension supports) to use with literature which may be differentiated for individual learner's needs. 4. Research and develop a rationale for including social justice topics at part of the 3-6 curriculum. Credits: 1.00

EDCI 31103 - Integrating Media In The K-6 Classroom

Credit Hours: 3.00. This course prepares teacher candidates to select, evaluate, and integrate children's literature and media in K-6 classrooms. Focusing on high-quality, diverse texts and media, candidates will learn to choose materials that are developmentally appropriate and reflect the diversity of the world in which we live. Emphasis will be placed on the critical role literature and media play in fostering vocabulary development, enhancing critical thinking skills, and supporting literacy development across subjects. The course will focus on how K-6 students learn to use comprehension strategies independently and efficiently as they progress through elementary school fostering both their academic growth and their ability to engage with diverse texts.

Learning Outcomes: 1. Integrate literature and media into content area lessons to enhance vocabulary (including academic language skills), critical thinking, and comprehension. 2. Select and evaluate three trade books to read aloud during a math, a social studies, and a science lesson. 3. Identify instructional strategies supported by the Science of Reading that teach k-6 students' academic language skills, vocabulary knowledge, and reading and listening comprehension. Credits: 3.00

EDCI 31950 - Approaches To English Learner Education

Credit Hours: 3.00. This course addresses English language instruction and content instruction for English Learning students in mainstream classrooms. The purpose of this course is to provide information necessary to the design of materials and instructional strategies for English Language Learners in K-12 context. In this course, we will focus on current issues and techniques in instruction for ELL students who are at different stages of English language acquisition in the K-12 school context. The course will also consider the nature of immigrants' experiences of a new country and school context. Practical field experiences integrated into the course will provide students with the opportunity to apply and demonstrate principles and strategies presented in the course.

Learning Outcomes: 1. Use essential techniques for instruction of ELLs across various grade levels. 2. Evaluate the language used in resources for ELL content instruction. 3. Examine the role of visual and verbal language in ELL instruction. 4. Analyze the ways in which students use literacy as writing, drawing, and talk. 5. Describe the language characteristics of important school genres. 6. Apply the teaching and learning cycle in the genre approach to lesson planning. 7. Implement and reflect on a multimodal, content area ELL lesson. 8. Discuss the role of home language and culture in ELL instruction. 9. Apply an understanding of the role of culture and family background in the student's experience of the classroom. Credits: 3.00

EDCI 32250 - Physical Education In The Elementary School

Credit Hours: 2.00. Current conceptions of elementary school physical education, with a particular emphasis on curriculum implementation.

Learning Outcomes: 1. Competence in instructional and organizational strategies appropriate for effective elementary gymnasium practice. 2. Ability to develop and implement warm-up, concept-based fitness, skill-based, and culminating activity instructional episodes.

3. Ability to provide developmentally appropriate assessment for skill-based physical education lessons. Credits: 2.00

EDCI 32500 - Literacy In The Early Childhood Classroom

Credit Hours: 3.00. Students will study how children's oral language develops, how children learn to read and write in early childhood/K3 settings, and the teacher's role in this process. Students will learn how phonemic awareness, phonics, fluency, vocabulary and comprehension influence children's literacy development. Students will learn how to select appropriate instructional materials; employ teaching strategies to meet the cognitive and affective literacy needs of all children; and collect, interpret, and use data from various types of assessments to inform literacy teaching and learning processes.

Learning Outcomes: 1. Develop a sound background in theory and research about children's language and literacy development and learning in grades K-3. 2. Learn how literacy learning, teaching, and assessment in phonemic awareness, phonics, fluency, vocabulary, comprehension and writing can be effectively and systematically integrated and diversified to meet individual or group needs in grades K-3. 3. Design and implement developmentally appropriate instruction for K-3 grade students. Credits: 3.00

EDCI 32501 - Teaching Literacy In K-2

Credit Hours: 2.00. Students will study how children's oral language develops, how children learn to read and write in primary grade settings, and the teacher's role in this process. Students will learn how phonemic awareness, phonics, fluency, vocabulary and comprehension influence children's literacy development. Students will learn how to select appropriate instructional materials; employ teaching strategies to meet the cognitive and affective literacy needs of all children, and collect, interpret, and use data from various types of assessments to inform literacy teaching and learning processes.

Learning Outcomes: 1. Develop a sound background in theory and research about children's language and literacy development and learning. 2. Learn how literacy learning, teaching, and assessment in phonemic awareness, phonics, fluency, vocabulary, comprehension and writing can be effectively and systematically integrated and diversified to meet individual or group needs. 3. Design and implement developmentally appropriate instruction for primary grade students. Credits: 2.00

EDCI 32600 - Literacy In The Intermediate Classroom

Credit Hours: 3.00. This course includes a field-based component. Students will build on material learned in EDCI 32500 . They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children; and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Develop a sound understanding of student literacy needs in the intermediate grades with a focus on comprehension strategies, strategic reading, vocabulary development, literary analysis, content area reading, and the writing process. 2. Assess student's learning and use this information to design and implement developmentally and culturally appropriate instruction in literacy and social studies. 3. Learn how literacy learning, teaching, and assessment can be effectively and systematically integrated and diversified to meet individual or group needs. Credits: 3.00

EDCI 32602 - Teaching Literacy In 3-6

Credit Hours: 2.00. Students will build on material learned in EDCI 32501. They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children, and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Demonstrate an understanding of theoretical and evidence-

based foundations that guide reading, writing processes, and instruction. 2. Design developmentally appropriate instruction that addresses the needs of all learners. 3. Teach developmentally appropriate lessons/units in the school setting. 4. Assess student learning by designing/using/adjusting formative and summative assessments for your group of students, and pre-assessments. 5. Reflect and analyze your own teaching. Credits: 2.00

EDCI 32650 - Introduction To Linguistics And Language Acquisition In Education

Credit Hours: 3.00. This course addresses foundational knowledge in language and linguistics for pre-service teachers and educational researchers. The purpose of this course is to survey linguistics, the study of the science of language. In this course, we will focus on phonetics, phonology, morphology, syntax, and semantics. These topics will be discussed in terms of theory, as well as in the context of ESL classroom instruction, materials development, and assessment.

Learning Outcomes: 1. Understand and describe core concepts and terminology of descriptive linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics. 2. Apply course concepts to analyze linguistic data and gain a fuller understanding of the systematic nature of language. 3. Apply descriptive linguistic concepts to instruction to support the four domains of speaking, listening, reading, and writing. 4. Research and describe the biological, social, and cultural dimensions of linguistics, including pragmatics, discourse, dialects, bilingualism, and language in education. 5. Discuss the role of home language and culture in ELL instruction. 6. Apply an understanding of the role of culture and family background in the student's experience of the classroom. Credits: 3.00

EDCI 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00. Given the needs of struggling/striving readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine a number of reading models and instructional approaches designed to ensure all students have access to effective, research-based literacy instruction. The goal is to ensure students complete the semester with a range of essential tools for working with this population.

Learning Outcomes: 1. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 2. Implement Tier 1 and Tier 2 reading practices in a classroom. 3. Establish an understanding of reading difficulties/disabilities. 4. Extend knowledge of unique needs of struggling readers. Credits: 2.00

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to

contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

EDCI 35001 - Tanzania Seminar

Credit Hours: 2.00. In this course, we will prepare for the Maymester in Tanzania study abroad program in a variety of ways, including investigating the history and culture of Tanzania, beginning to learn Kiswahili, conceptualizing service learning experiences, and collaborating on a plan for program logistics.

Learning Outcomes: 1. Critically explore common conceptions of Africa. 2. Investigate the history and culture of Tanzania. 3. Describe the educational system of Tanzania. 4. Read, write, and speak basic phrases and sentences in Kiswahili. 5. Conceptualize and engage in service learning experiences. Credits: 2.00

EDCI 35002 - International Comparative Education

Credit Hours: 3.00. In this course, students will explore the education system in an international context and compare particular aspects of the system (e.g., equity, funding, language, accessibility) to their own experiences with, and knowledge of, education in the United States. Students will consider the range of schools and policies in both countries in terms of issues of social justice (e.g., redistribution, recognition, representation).

Learning Outcomes: 1. Experience, first-hand, the educational system of Tanzania and read accounts of this system from a range of perspectives which draw attention to its strengths and challenges. 2. Investigate issues of social justice (e.g., redistribution, recognition, representation) in education systems. Credits: 3.00

EDCI 35003 - Knowing Africa Through Literature

Credit Hours: 3.00. Through a set of texts, this course will offer opportunities to understand, broaden and question a new (to you) and significantly different culture and your experiences in that culture. You will read a variety of African literature, including short stories, novels, and poetry, in order to investigate perspectives on African history, culture, language and education. You will then draw upon your personal encounters and activities while in Tanzania to extend your learning.

Learning Outcomes: 1. Investigate "growing up" cultural, and traveling experiences in Africa from a range of perspectives. 2. Extend understanding of Africa through the study of literature, including short stories, novels, and poetry. Credits: 3.00

EDCI 35004 - History, Culture, And Language In Tanzania

Credit Hours: 3.00. This course is a component of the Maymester in Tanzania study abroad program. In this course, students will study the history, culture, and language of Tanzania through experiences in local schools and the community, supplemented by course readings, assignments, discussions, and service learning projects.

Learning Outcomes: 1. Explore the history of Tanzania, including its identification as the cradle of mankind, colonization, independence, and the impacts of socialism and capitalism. 2. Engage in cultural and linguistic immersion in a rural Tanzanian village and schools. 3. Experience, first-hand, the educational system of Tanzania and read accounts of this system from a range of perspectives which draw attention to its strengths and challenges. 4. Collaborate with Tanzanian residents on developing and implementing service learning projects in the community. Credits: 3.00

EDCI 35600 - Career Education In Family And Consumer Sciences

Credit Hours: 3.00. Examination of middle and high school career education accomplished through family and consumer sciences, including (1) life and career exploration and planning; (2) analysis of career paths and opportunities in family and consumer sciences; and (3) career preparation through laboratory and cooperative education programs. Historical and contemporary foundations for career education in family and consumer sciences is also are addressed. Includes observations and interactions with students and teachers in career-education programs and participation in professional meetings.

Learning Outcomes: 1. Examine purposes, curriculum, and implementation strategies for career education accomplished through family

and consumer sciences, including FCS careers, FCS supporting content, and FCS life and career foundations. 2. Examine the structure and delivery of career and technical education in the United States and Indiana, state and federal laws and regulations pertaining to career and technical education, and important events and developments in the history of career and technical education and family and consumer sciences education. 3. Engage in ethical professional practice professional development, and outreach in family and consumer sciences education, including advocacy and working with local advisory committees. 4. Analyze instructional strategies and procedures for career education in family and consumer sciences, including integration of career and technical student organizations, particularly the Family, Career and Community Leaders of America (FCCLA) and coordination of students' work-based learning experiences through in-school laboratories and community-based placements. Credits: 3.00

EDCI 35950 - Content Area Instruction For English Learners

Credit Hours: 3.00. This course identifies the linguistic challenges faced by English language learners (ELLs) in the content areas of English language arts, mathematics, science, and the social studies. Participants will learn to describe how language varies in the way it presents knowledge in different content areas. The course links these challenges to English language instruction and subject-matter instruction in English for ELLs who are in general education classrooms. The course emphasizes assessment tools designed to assess content knowledge and links these students' English language development. Participants will describe academic tasks that require advanced levels of reading and writing and the expectations for the development of academic literacy as ELLs move from elementary to secondary "literacy" contexts, or the kinds of meaning-making typical of secondary and postsecondary education.

Learning Outcomes: 1. Evaluate the linguistic challenges of academic language in the English language arts, mathematics, science, and the social studies for ELLs. 2. Assess the development of academic literacy as ELLs move from elementary into secondary and postsecondary education. 3. Evaluate how standardized tests pose challenges for ELLs. 4. Analyze how various issues of assessment affect ELL student learning. 5. Create standards-based ESL and content instruction in a supportive learning environment for ELLs with different Limited English Proficiency (LEP) levels. 6. Implement a variety of standards-based teaching strategies, tools, and techniques for developing and integrating the four skills and for assessing the grade-level curriculum. 7. Apply academic tasks that require advanced levels of reading and writing. Credits: 3.00

EDCI 36000 - Curriculum And Instruction In Family And Consumer Sciences: Middle School

Credit Hours: 3.00. Instructional program development for family and consumer sciences. Developmental needs and issues of early adolescents; study of adolescent literacy; and curriculum integration of language arts, math, and other content areas are emphasized. Development of a comprehensive unit of instruction that incorporates standard-based curriculum, assessment, and instruction for family and consumer sciences is a major component of the course. Includes observations and interactions with family and consumer sciences teachers and students and participation in professional meetings.

Learning Outcomes: 1. Utilize middle school philosophy/perspectives, state-level resources, and community assets to guide curriculum development in Family & Consumer Sciences that is challenging, exploratory, integrative, and diverse, and which fosters learning that is active, purposeful, and democratic. (FCS TEd 7) 2. Integrate professional knowledge/behaviors supportive of middle-level education learner development (physical, cognitive, socio-emotional, psychological) into FCS curricula/practices, attentive to the health, wellness, and social-emotional competence of learners. (FCS TEd 8) 3. Employ professional

and other resources to develop a "literary" classroom environment that reflects all students. (FCS TEd 11) 4. Identify and collect resources, references, and other materials that support the identity, intellect, skill, and criticality development of students across FCS content. (FCS-Ted) 5. Create student-centered learning experiences in blended and online settings using UDL principles that are culturally responsive (TIBOT competency 3; FCS-Ted 7, 8, 11) 6. Review and critique FCS curriculum materials and practices for alignment with best practices for inclusion, access, equity, and diversity. (FCS-TEd 7, 8) 7. Relate family and consumer sciences programs to broader educational program goals and to community assets and needs. 8. Integrate foundational FCS perspectives (historical lens, Body of Knowledge, Critical Science approach) into professional schema. (FCS-TEd 12) 9. Develop and reflect on personal/professional characteristics that shape optimal middle school/FCS educator practice. (FCS-TEd 12) Credits: 3.00

EDCI 36100 - Social Studies In The Elementary School

Credit Hours: 3.00. Provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to elementary school children. Encourages participants to reflect on social studies knowledge, skills and dispositions, how students learn these most effectively, and how best to teach social studies. Includes a field-based experiential component. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Students will work to identify the most important social studies knowledge, skills and dispositions. 2. Investigate how students learn most effectively. 3. Utilize their new understandings to draw conclusions about what constitutes powerful teaching in the social studies. Credits: 3.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36102 - Teaching Social Studies In 3-6

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practices strategies for teaching social studies to children in the 3-6 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how 3-6 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the 3-6 grades.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the 3-6 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the 3-6 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the 3-6 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36300 - Literacy In The Elementary School II

Credit Hours: 3.00. Focuses on teaching children who experience difficulty acquiring literacy. Assessments of children's strengths and needs are used to plan and evaluate instruction. Strategies for helping children develop more mature literacy understandings are applied in weekly small-group instructional sessions. Includes a field-based experiential component. Taken concurrently with EDPS 43000.

Learning Outcomes: 1. Know the literacy processes so that they are able to make decisions about the use of appropriate assessment measures and instructional strategies for children who are experiencing difficulty learning to read and write. Credits: 3.00

EDCI 36303 - Literacy Teaching And Assessment In K-6

Credit Hours: 2.00 to 3.00. This course is an undergraduate, elementary education course designed to provide preservice teachers with classroom and practicum experiences focused on literacy instruction for children experiencing difficulty learning to read and write. Students learn to administer and analyze individual assessments to determine the strengths and needs of a struggling reader/writer and set intervention goals based on these results. Application of appropriate research-based reading instructional strategies for developing (structured literacy instruction) phonological awareness, phonics, comprehension, vocabulary, and fluency is the focus of weekly literacy teaching in local elementary schools.

Learning Outcomes: 1. Demonstrate the importance of providing instruction to meet the needs of all children through their teaching. 2. Implement a framework for assessment and instruction that allows the teacher to evaluate and adjust for an optimal match between the reader/writer, the text and the literacy context. 3. Translate assessment findings into a plan for instructional support that is realistic in view of the child's needs and the available resources. 4. Use assessment as an ongoing guide to instructional decisions. 5. Become skillful in observing, planning, implementing, and evaluating literacy lessons. 6. Demonstrate knowledge of materials, procedures, and strategies for individual and group literacy instruction. 7. Examine a range of assessment and evaluation tools and strategies. 8. Report to others their assessments of students' literacy learning. 9. Work as a team with peers and school personnel. Credits: 2.00 to 3.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36402 - Teaching Mathematics In Grades 3-6

Credit Hours: 2.00. Focuses on teaching mathematics in the elementary school grades 3-6. Students learn what it means to teach mathematics interactionally using children's ideas, beliefs, and experiences as primary resources. Mathematical reasoning, problem solving, communication, and connections are foci.

Learning Outcomes: 1. Develop, apply, analyze, and evaluate strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Know and analyze methods of assessing and responding to the needs of mathematics learners labeled in schools. 3.

Analyze and apply student's mathematical conceptual understanding and procedural knowledge to the development of problem-solving based mathematics lessons. 4. Create and analyze instructional activities drawing from student's conceptual understanding and procedural knowledge as primary resources. Credits: 2.00

EDCI 36404 - Mathematics In The Elementary School

Credit Hours: 4.00. Focuses on teaching mathematics in the elementary school. Students learn what it means to teach mathematics when reasoning, problem solving, communication, and connections are the foci. Includes a field-based experiential component.

Learning Outcomes: 1. Learn, practice, and reflect on strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Gain skill in assessing, evaluating, and responding to the needs of diverse learners in mathematics. 3. Understand ways to assess students mathematical understanding and learning. 4. Plan and carry out problem-solving mathematics instruction with a focus on students conceptual and procedural understanding. Credits: 4.00

EDCI 36500 - Science In The Elementary School

Credit Hours: 3.00. Investigates ways children learn science as a basis for planning, enacting, and assessing science curriculum and instruction. State and national standards, teaching cases, and science lab experiences are used as tools for reflecting on practice. Includes a field-based experiential component. Taken concurrently with EDCI 36400 and EDCI 37000.

Learning Outcomes: 1. Explore the instruction of elementary science through pedagogically appropriate methods. Lesson design will follow the learning cycle (5 E format) and lessons will be designed in a discovery/inquiry fashion using hands-on instruction. 2. Study in-depth teacher/student and student/student interactions in the classroom and to better understand how knowledge of children can inform the teaching-learning process, especially in science instruction. 3. Explore planning processes in several subject areas to learn to integrate science into other curricular areas, as well as developing both weekly and daily lesson plans. 4. Examine the nature of teaching and teacher growth through reflection. 5. Demonstrate through the planning and teaching of lessons, that you possess the subject matter knowledge necessary to provide quality educational experiences for children in grades K-6. 6. Examine management routines, teacher rationale for those routines, procedures, and management in the classroom. 7. Examine methods of evaluation, including anecdotal records, alternative assessments, performance assessments, general record keeping, and grading. 8. Examine the school as a community of diverse learners. 9. Examine your philosophy of education throughout this field experience. Credits: 3.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-

cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDCI 36502 - Teaching Science Through Design In Grades 3-6

Credit Hours: 2.00. The aim of this course is to prepare students to teach science, engineering, and computational thinking with grade 3-6 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade 3 through 6 learners. At least 9 credits of science content courses are required.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 2.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDCI 38100 - Teaching For Social Justice: Culturally And Linguistically Diverse Learners

Credit Hours: 3.00. This course builds on the content of EDCI 28500 (Multicultural Education) with specific attention to issues of social justice related to literacy and linguistic diversity. Within this framework, students will learn strategies for teaching English language learners, deconstruct deficit perspectives of dialectical differences, and consider approaches to classroom management. Additionally, a field experience component with an ELL teacher will be included in the course.

Learning Outcomes: 1. Engage with the following concepts via reading, analysis/critique,

and consideration of how they might apply in future classrooms: culturally relevant pedagogy and culturally sustaining pedagogy, code switching and code meshing, restorative justice. 2. Learn pedagogical strategies for working with ELLs in secondary English classrooms. 3. Understand the school-to-prison pipeline phenomenon and develop classroom management principles accordingly. 4. Participate in a field experience that requires interaction with culturally and linguistically diverse students in a local ELL classroom. Credits: 3.00

EDCI 42100 - The Teaching Of Biology In Secondary Schools

Credit Hours: 3.00. The rationale, objectives, methods, and materials of teaching biology and life science in junior and senior high schools. Extensive use of multimedia resources in planning specifically for the student teaching experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Have a conceptual understanding of science, how to develop a learning community within a classroom, and an understanding of and strategies to implement educational equity in a classroom. 2. Learn how to carry out the practical activities of science teaching, develop worksheets, hold class discussions, develop and grade tests, and use textbooks. 3. Learn about the nature of scientific understanding and classroom communities, and how to use theoretical knowledge of learners & communities to guide their teaching. Credits: 3.00

EDCI 42200 - The Teaching Of English In Secondary Schools

Credit Hours: 3.00. Explores a wide variety of instructional practices suitable for teaching middle and high school English including language, literature, and writing - addressing specific pedagogical issues such as teaching diverse learners and developing cohesive units of instruction.

Learning Outcomes: 1. Explore different philosophical and instructional applications for secondary English teaching. 2. Examine diverse issues affecting teaching and learning in the secondary English classrooms. 3. Develop the reflective and critical thinking skills necessary for secondary English teachers. 4. Increase pedagogical competency in diverse aspects of teaching and learning, including classroom instruction, student interaction, and teacher development. Credits: 3.00

EDCI 42300 - The Teaching Of Social Studies In Secondary Schools

Credit Hours: 3.00. The purpose of this course is the development of a theoretical framework and pedagogical skills necessary to teach social studies to middle and high school students. Students are introduced to the general issues involved in planning and organizing a social studies curriculum.

Learning Outcomes: 1. Develop theoretical understanding and pedagogical skills necessary to teach social studies to middle and high school students. 2. Develop understanding of cross collaboration, communication, and the characteristics of the community, school, and classroom. 3. Develop specific and relevant understanding of student characteristics, approaches to learning, or skills and prior learning. 4. Learn general issues involved in planning and organizing a social studies curriculum. 5. Obtain the knowledge, skills, and attitudes necessary to become a reflective and skilled social studies teacher. Credits: 3.00

EDCI 42400 - The Teaching Of Earth And Physical Science In The Secondary Schools

Credit Hours: 3.00. The methods and materials needed for the teaching of chemistry, earth-space, physics, and general science in the secondary schools, including field experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. May be taken for two credits (no field experience) by students who are enrolled in another methods course with field experience.

Learning Outcomes: 1. State your goals for

secondary science teaching based on an informal position. 2. Use questions, demonstrations, and activities to probe students' concepts. 3. Describe teaching strategies which motivate students and which foster learning. 4. Describe teaching strategies to encourage meaningful problem solving. 5. Plan a science unit using a model of science teaching which takes student conceptual change into account. 6. Teach a lesson, lab, or demonstration employing appropriate strategies. 7. Choose appropriate assessment techniques to evaluate various learning outcomes. 8. Compare and evaluate secondary science curriculum materials, including audio-visual and computer materials. 9. Be able to store and/or dispose of materials properly and select experiments based on appropriate safety guidelines. 10. Describe strategies to provide appropriate learning for a diverse student population. Credits: 3.00

EDCI 42500 - Teaching Of Secondary Mathematics - Methods I

Credit Hours: 3.00. This is the first of two methods courses designed for students who are planning to be secondary mathematics teachers. The course content is organized around principles of equity, curriculum, teaching, learning, assessment and technology. It also focuses on the cycle of effective teaching, which includes justifying planning decisions, analyzing teaching, and using data to inform instruction. The courses addresses NCTM's principles and standards, as well as the content and process standards included in Indiana Academic Standards for Mathematics, and pedagogical strategies for teaching these in ways that serve the diverse population of mathematics learners.

Learning Outcomes: 1. Develop an understanding of students' thinking and the processes by which they come to learn mathematics and think mathematically. 2. Develop an understanding of teaching and learning environments through analyzing classroom interactions and the interplay among mathematics, classroom tasks, teacher moves, and students' ways of thinking and being. 3. Develop an understanding of the scope and significance of school mathematics through an examination of state and national standards and mathematics education research. 4. Develop professional attitudes and work habits and identify professional organizations and resources locally and nationally. 5. Continue learning mathematics, especially in ways that promote inquiry and investigation. Credits: 3.00

EDCI 42600 - Teaching Of Secondary Mathematics - Methods II

Credit Hours: 3.00. This is the second of two methods courses designed for students who are planning to be secondary mathematics teachers. The course content is organized around principles of equity, mathematical task design, classroom discourse, classroom environment assessment and technology. It also focuses on the cycle of effective teaching, which includes justifying planning decisions, analyzing teaching, and using data to inform instruction. The courses addresses NCTM's Professional Standards as well as the content and process standards included in Indiana Academic Standards for Mathematics and pedagogical strategies for teaching in ways that serve the diverse population of mathematics learners.

Learning Outcomes: 1. Develop an understanding of students' thinking and the processes by which they come to learn mathematics and think mathematically. 2. Develop an understanding of teaching and learning environments through analyzing classroom interactions and the interplay among mathematics, classroom tasks, teacher moves, and students' ways of thinking and being. 3. Develop an understanding of the scope and significance of school mathematics through an examination of state and national standards and mathematics education research. 4. Develop professional attitudes and work habits and identify professional organizations and resources locally and nationally. 5. Continue learning mathematics, especially in ways that promote inquiry and investigation. Credits: 3.00

EDCI 42700 - Teaching Of World Languages

Credit Hours: 3.00. This is one of the two methods courses required for World Language Teaching major. While LC 47500 is a theoretical course, this course is a practical course on world language teaching in secondary school.

Learning Outcomes: 1. Design lesson plans that draw on knowledge of content areas. 2. Write language learning assessment documents (diagnostic formative, and summative). 3. Design language assessment rubrics. 4. Evaluate their own and others' teaching effectiveness. 5. Plan lessons that incorporate strategies to monitor student learning. 6. Build collaborative relationships with other language teaching professionals. 7. Identify resources for the developing foreign language teaching, including textbooks, scholarly journals, pedagogy associations and conferences. Credits: 3.00

EDCI 42800 - Teaching Science In The Middle And Junior High School

Credit Hours: 2.00. Designed to prepare preservice teachers to teach science in the middle and junior high school (grades 5-9). No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Gain knowledge about Indiana's middle school science standards. 2. Gain knowledge about curriculum of the courses that they will be student teaching. 3. Gain knowledge about relevant professional organizations and communities. 4. Gain skills to write a high school science lesson plan and teach. 5. Gain skills to write a lab lesson plan. 6. Gain skills to identify and use resources from professional communities. 7. Gain skills to develop project-based learning unit. 8. Gain skills to write a lesson plan to teach NOS. 9. Gain skills to collaborate in a team of teachers. Credits: 2.00

EDCI 43300 - Advanced Social Studies Methods

Credit Hours: 2.00. Foundations of social studies; methods, techniques, strategies of teaching, and activities - with special attention to skills of planning, questioning, and testing. Includes observation, participation, and microteaching in social studies classrooms. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Develop knowledge of social studies content, appropriate state and national standards, and social studies specific pedagogy. 2. Develop and apply knowledge of middle level learners' academic needs and interests. 3. Utilize their new understandings to draw conclusions about what constitutes powerful social studies teaching and learning in middle school. Credits: 2.00

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

EDCI 44400 - Methods For Teaching Family And Consumer Sciences

Credit Hours: 4.00. The culminating on-campus teacher-education course for the Purdue University Family and Consumer Sciences program. The course builds and consolidates teacher-candidates' knowledge and skills for teaching family and consumer sciences. Emphasis placed on

standards-based instructional planning and materials; instructional strategies, including laboratories, assessment of student learning, and classroom management. Course includes field experiences. Program content requirements should be completed previous to or concurrent with this course.

Learning Outcomes: 1. Establish a comprehensive knowledge base of standards in a range of family and consumer sciences content areas, with a corresponding knowledge base for integrating standards in other areas such as financial literacy, technology, English Language Arts, and mathematics. 2. Design and implement standards-based curriculum, teaching/learning strategies, and assessment of student learning to meet the needs of diverse learners. 3. Apply knowledge of student behavior, organizational skills, and classroom and laboratory management skills to create a safe, supportive, and productive learning environment. 4. Enable student learning of family and consumer sciences concepts and skills through instructional strategies and laboratory experiences that build student capacities for self-directed learning, critical-thinking, problem-solving, decision-making, leadership, and managent. Credits: 4.00

EDCI 44600 - Directed Observation For Family And Consumer Sciences

Credit Hours: 1.00 to 4.00. Field-based experience in a middle or high school, a Cooperative Extension setting, or other applicable career setting for family and consumer sciences educators. Build professional capacity through focused, participatory experiences that include interactions with family and consumer sciences educators, other school/agency personnel, and students/clients. Thirty-five hours of documented experience in approved setting needed for one credit.

Learning Outcomes: 1. Develop knowledge and awareness of family and consumer sciences education professional setting, including purposes, structures, day-to-day activities, and interactions among participants. 2. Examine professional responsibilities of family and consumer sciences educators, and corresponding knowledge, skills, and capacities for professional effectiveness. 3. Build professional experiences and capacity as a family and consumer sciences educator. 4. Assess personal competence, goals, and areas for continued professional growth as a family and consumer sciences educator. Credits: 1.00 to 4.00

EDCI 45200 - Global Studies Seminar

Credit Hours: 1.00. (EDPS 45200) The course builds on students' international cross-cultural experiences, particularly Study Abroad. The course is required for those wishing to complete the Global Studies minor in the College of Education.

Learning Outcomes: 1. Discuss economic, social, and cultural diversity within a global context. 2. Describe the cultural, social and historical dynamics that influence individuals and groups. 3. Explain the perspective of the culture of another country through the study of world languages, arts, spiritual traditions, mythology/literature, and/or through study abroad. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. 5. Clearly communicate a central message with the supporting materials. Credits: 1.00

EDCI 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

EDCI 49200 - Honors Scholarly Project Capstone

Credit Hours: 1.00 to 6.00. This course is designed to provide students with an introduction to designing and writing a proposal for the Honors Scholarly Project.

Learning Outcomes: 1. Identify a research question for the Honors Scholarly Project. 2. Learn how to review relevant literature, identify a methodology/approach forthe research,

design the research study (or equivalent scholarly project) and identify an appropriate mentor. 3. Write, present, and submit a proposal for approval for the Honors Scholarly Project. Credits: 1.00 to 6.00

EDCI 49600 - Student Teaching In The Elementary School (UCC: OC)

Credit Hours: 6.00 to 16.00. Full-time elementary classroom teaching experiences and a student teaching seminar under the mentorship of the classroom teacher and a University supervisor.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each child's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each child's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDCI 49601 - Elementary Education Expanded Student Teaching

Credit Hours: 1.00 to 8.00. This course is the initial residency experience that precedes a full semester of student teaching. The seminar and field experience focus on induction into the broader elementary school context and building mentoring relationships as both a mentee and mentor. Students will develop their identity as a professional educator who advocates for the profession, themselves, and their students. Includes a field experience. Admission to Teacher Education required.

Learning Outcomes: 1. Integrate their learning from Foundations and Methods courses into their teaching experiences in the classroom. 2. Design and deliver instruction that meets learner needs, continually assess student learning, and use assessment to drive instruction. 3. Develop their skills and professional identity as an educator through self-reflection, analysis of student learning, and analysis of feedback. 4. Use observation, academic and personal engagement, and assessment data to develop an understanding of their students as learners at the individual and group level. Credits: 1.00 to 8.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

Department of Educational Studies

Overview

Welcome to the Department of Educational Studies (EDST)
Cast against a vibrant history of innovation, research, teaching, and learning that continues to contribute to the enhancement of human potential in a wide variety of learning environments, our internationally recognized faculty offer world-class opportunities for study that emphasizes discovery of new knowledge. Amidst a collaborative, nurturing atmosphere in which professors know students by name, educational experiences are targeted at cutting-edge advances from the very people who have discovered them.
The EDST faculty is comprised of distinguished teachers and scholars who investigate, apply, practice, and disseminate information related to: the education of diverse learners; science, technology, engineering, and mathematics as well as the liberal arts; and effective instruction. In addition, EDST offers undergraduate majors that encourage students to work alongside faculty, who emphasize hands-on and exploratory experiences in Learning Sciences and Special Education.
Our graduates historically are successful in a diversity of positions in both the private and public sector. Depending on the program completed, graduates are employed as college and university faculty, researchers, consultants, educational research analysts, program evaluators, assessment specialists,

clinicians, or therapists.
Whether you are a hard-working undergraduate, an ambitious graduate student, or a distinguished alumnus, we value your interest in EDST!
Warmly,
Ala Samarapungavan
Interim Department Head

Mission Statement

The Department of Educational Studies (EDST) seeks to contribute to the discovery and development of human potential in diverse learning environments. This mission is accomplished through the discovery, application, and dissemination of new knowledge centered on three key themes: We aim to develop future generations of innovative, engaged, and skilled education professionals through our high quality undergraduate and graduate programs. The department supports the mission of the College of Education and the goals and objectives of the college. We are committed to fostering a collaborative culture that values inquiry, diversity, and engagement among students, faculty, staff, and community as we move forward with our educational mission.

General Education: Educational Studies, BA (non-licensure)

Special Education/Elementary Education, BA

Collaborative Leadership Certificate

Learning Sciences in Educational Studies Minor

Special Education Mild and Intense Intervention P to 12, BA

EDPS 10101 - Learning In Context-An Introduction To The Learning Sciences

Credit Hours: 3.00. This introductory course is designed to acquaint first year Learning Science students with the core concepts, principles, and research findings of the learning sciences as they apply to a wide range of formal and informal educational contexts. The course provides students with opportunities to interact with and learn about the scholarship of College of Education faculty who conduct research within the framework of the learning sciences. Students will learn about faculty projects that exemplify key features of the Learning Sciences such as attention to the complexity of learning environments, the study of social and cultural as well as individual dimensions of learning, and the cross-disciplinary nature of the field.

Learning Outcomes: 1. Identify the features of education as a design discipline. 2. Identify core principles, questions, and challenges, that define educational research and practice from a Learning Sciences perspective. 3. Identify the varied sources of cross-disciplinary knowledge that contribute to the design and study of effective learning environments. Credits: 3.00

EDPS 10500 - Academic And Career Planning (UCC: IL)

Credit Hours: 3.00. Builds understanding of career interests and personality characteristics related to academic and career decisions. Expands knowledge of Purdue academic programs and of the world of work. Introduces decision-making strategies.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Describe and explain multiple facets of your identity. 2. Identify and analyze potential academic majors. 3. Identify and analyze potential careers. 4. Evaluate potential majors and careers in relation to yourself. Credits: 3.00

EDPS 10600 - Mapping Your Career

Credit Hours: 1.00. A course designed to help students explore professional development and create an individualized career plan toward their career goals. Students can use this career plan while meeting educational goals at Purdue.

Learning Outcomes: 1. Describe your interests, skills, values, and motivations. 2. Identify and research potential career opportunities that match your career goals. 3. Develop verbal, written, and physical ("body language") communication skills. 4. Expand your knowledge of what a career is and plan for life beyond college. 5. Create a portfolio of professional tools you can use in the real world. Credits: 1.00

EDPS 17700 - Learning And Regulation Strategies For College Success

Credit Hours: 3.00. This course is designed to help students improve their college academic success by studying more efficiently and effectively, through strategic engagement, learning, and performance. We examine and apply evidence-based learning, motivation, and regulation strategies beneficial for college and lifelong learning. Educational psychology provides the theoretical framework for practical application of intentional and informed learning, cognition, motivation and behavior regulation.

Learning Outcomes: 1. Integrate evidence-based strategies to strengthen learning across environment and disciplines. 2. Apply self-regulation techniques to strengthen learning. 3. Develop confidence in implementing learning strategies for college success, including working in groups. Credits: 3.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that

connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may

experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 24000 - Children With Gifts, Creativity, And Talents

Credit Hours: 1.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted children youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). Cannot be taken concurrently with EDPS 24800.

Learning Outcomes: 1. Understand who gifted, creative and talented children are and how their talent development needs can be met in the school setting. 2. Recognize the diversity that exists within the gifted, creative, and talented population. 3. Understand the history, philosophical traditions, and paradigms of practice in gifted education. 4. Develop awareness of specific strategies for supporting gifted, creative and talented students within the school context. 5. Develop awareness of key professional resources in the field of gifted education and talent development. 6. Develop a personal identity as a practitioner of gifted education. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC

Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 24800 - Differentiating Curriculum And Instruction

Credit Hours: 1.00. This course provides a solid foundation and set of principles for differentiating curriculum and instruction in any classroom at any grade level. Students will explore a variety of evidence-based strategies, tools, and curriculum models that effectively meet the diverse needs of all learners. Through readings, online classroom meetings and discussions, case studies, differentiated instruction examples, direct application and reflection, students will deepen their understanding and need to differentiate. With an overarching goal of increasing achievement and developing student talents, this course includes the following major components: creating positive learning environments that support a) high-quality curriculum; b) diagnostic, formative and summative assessments to inform instructional decision-making; and c) flexible grouping addressing student differences in readiness, interest, and learning profile (including learning preference, intelligence preference, gender, culture, language preference, locale, and opportunities to learn) and appreciating how these differences influence the ways in which students learn. Understanding that process of differentiation involves modifying content, process, product, learning environment, and/or affect incorporating higher-order thinking skills, creative problem solving, project-based learning, authentic/respectful tasks, collaborative learning, and other evidence-based strategies to promote student achievement and talent development understanding how differentiation of curriculum and instruction fits within specific educational interventions and models, such as scaffolding, flexible grouping, Response to Intervention (Rtl), and Multi-Tiered System of Support(MTSS). Effective teachers do more than teach content; they teach unique individuals who enter classrooms with various levels of expertise, skills, abilities, social-emotional needs, and learning expectations. Effective teachers differentiate curriculum by personalizing content based on the particular needs and interests of their students. Effective teachers differentiate instruction by applying various grouping strategies, technology applications and thinking skills. The goal of every effective teacher is that every child learns something new every day. Cannot be taken concurrently with EDPS 24000. Learning Outcomes: 1. Describe and implement the concept of differentiation as a response to the needs, interests and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. 2. Demonstrate proficiency in assessing students readiness, interests, and learning profiles and in creating differentiated lessons that utilize instructional strategies and technologies to engage special populations of students in learning. 3. Develop, implement, and evaluate various differentiated instructional plans designed to maximize learning and demonstrate proficiency in analyzing and evaluating differentiated lessons taught by other teachers. 4. Evaluate and reflect upon your course experience and plan for your future use of knowledge and skills gained in this course. Credits: 1.00

EDPS 26500 - The Inclusive Classroom

Credit Hours: 3.00. Characteristics of students with special needs/talents; strategies for helping students learn and develop in general educational settings. Emphasis placed upon research evidence, case studies, problem-based learning, and development of a plan for an inclusive classroom. A field-based component is included.

Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with

disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities.
Credits: 2.00

EDPS 27001 - Characteristics Of Individuals With Mild Disabilities

Credit Hours: 3.00. This course addresses the characteristics of students with mild disabilities and the social, legal, and ethical issues that surround their academic and social-emotional concerns, educational experiences, implications and life-long outcomes. This course has a shared field experience with EDPS 36201.

Learning Outcomes: 1. Engage in legal discourse involving students with mild disabilities. 2. Demonstrate knowledge and understanding of mild disabilities. 3. Engage in data-driven decision making regarding lesson plan development. 4. Design a lesson plan that meets the needs of target learner with a mild disability. Credits: 3.00

EDPS 30000 - Student Leadership Development

Credit Hours: 1.00 to 3.00. Leadership in students is developed through lectures and experiential activities. Topic areas include leadership styles; campus organizational structures; program planning; social and intellectual activities; human relations and cultural differences; motivation; team building; public relations. Permission of instructor required.

Credits: 1.00 to 3.00

EDPS 30100 - Peer Counseling Training

Credit Hours: 1.00 to 3.00. Students are trained to help peers deal with their problems and concerns. Training modules are used to build knowledge and skills in the duties of peer helpers; student development, communication, goal setting, and use of community resources are stressed. (EDPS 30100 and 30100 are for Horizon students only.) Permission of instructor required.

Credits: 1.00 to 3.00

EDPS 30101 - Motivation To Learn

Credit Hours: 3.00. This course introduces students to current social-cognitive and sociocultural theories of motivation for learning and academic achievement, and research framed by those theories. Both individual-level and contextual factors associated with motivation will be considered. The course will also address applications of theory in educational settings, including motivational interventions.

Learning Outcomes: 1. Be familiar with predominant social-cognitive theories of motivation and their related constructs. 2. Understand how social-cognitive and socio-cultural approaches to studying motivation differ conceptually, methodologically, and empirically. 3. Be familiar with a range of methodologies that are used to measure student motivation, and strengths and weaknesses of each. 4. Understand and think critically about research design issues in motivation research, including descriptive correlational, quasi-experimental, and design research. 5. Understand the implications of motivation for student learning and achievement, and how this association is affected by affective, behavioral, and cognitive

engagement. 6. Be familiar with proximal and distal contextual factors that are associated with motivation, and reasons for those associations. 7. Be familiar with ways that teaching and learning practices can facilitate or impede optimal student motivation. Credits: 3.00

EDPS 30102 - Social-Emotional Aspects Of Learning In Diverse Environments

Credit Hours: 3.00. The course examines the role of social emotional competence in learning and builds understandings of the inter-relationships between theory, empirical evidence, and instructional practice. It takes the perspective that experiences across different learning contexts are interrelated and may influence each other in reciprocal ways. The course views social-emotional dimensions of learning as: embedded in person-environment transactions; tied to specific instructional (formal and/or informal) contexts over time; co-evolving with cognition and language; critical to psychological, behavioral, and learning outcomes. The focus is on intersection of social-emotional competence, learning, and instruction. The course is intended to provide the foundations (theoretical and empirical) that can help those interested in formal and informal instructional environments make informed educational decisions by considering the social-emotional dimensions of learning.

Learning Outcomes: 1. Students will develop familiarity with major theoretical perspectives that inform social and emotional development in learning contexts. 2. Students will be able to define and distinguish core theoretical principles and connect them to empirical evidence and instructional practices in formal and informal learning contexts. 3. Students will be able to think critically about and evaluate the characteristics of different learning environments (and the instructional practices within these environments) and their relationship to learner development. 4. Students will develop familiarity with research methods for studying and assessing social development in different contexts. 5. Students will be familiar with key dimensions of social-emotional competence. 6. Students will develop the ability to think critically about the dimensions of social-emotional competence and their links to learner development in different contexts. 7. Students will be familiar with the social processes that operate in key contexts. Credits: 3.00

EDPS 30200 - Adolescents Classroom Teacher

Credit Hours: 3.00. Students will develop understanding of physical, intellectual, emotional and social development of learners. Emphasis on individual differences and behavior patterns that influence the establishment of an orderly, healthy learning environment, and upon the teacher as an influence of the learning environment.

Credits: 3.00

EDPS 30400 - Assessment And Transition (Data-Based Decision-Making)

Credit Hours: 3.00. This course addresses assessment techniques and transition planning in special education, with applications to curriculum. It includes norm-referenced and curriculum-based measurement, error analyses, observational ratings, data-based decision-making, and transition planning from early intervention to post-secondary settings.

Learning Outcomes: 1. Apply their understanding of specialized curricula to inform their programmatic and instructional decisions for individuals with exceptionalities across a variety of contexts and the continuum of placement options (CEC 3.2) 2. Develop, select, administer, analyze, and interpret multiple measures of student learning, behavior, and the classroom environment to evaluate and support classroom and school-based systems of intervention for students with and without exceptionalities (CEC 4.1). 3. Develop, select, and administer multiple, formal and informal, culturally and linguistically appropriate measures and procedures that are valid and reliable, to contribute to eligibility determination for special education services CEC 4.2). 4. Assess, collaboratively analyze, interpret, and communicate students' progress toward measurable outcomes, using technology as appropriate, to inform both short and long-term planning, and make ongoing adjustments to instruction (CEC 4.3). 5. Utilize appropriate

progress monitoring skills in order to develop individualized education plans (IEPs) for students. Credits: 3.00

EDPS 30500 - Special Education Seminar: Perspectives On Disability

Credit Hours: 1.00. This course is designed to broaden student understanding of disability by exploring across related fields including disability studies, neurodiversity, speech language development, and behavioral characteristics. The goal of this seminar is for students to make connections between special education theory and practice and theories and views of disability beyond special education. Through lecture, discussion, and reflection, students will learn about the construct of disability and how individual strengths, needs, services, and supports extend across the lifespan and beyond the special education classroom.

Learning Outcomes: 1. Identify key theories on disability and describe practices for how these theories can influence teacher practices across various education field placements. 2. Reflect critically on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 3. Complete a minimum of 20 hours in the required field experience setting. 4. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 30900 - Systematic And Explicit Instruction

Credit Hours: 3.00. Students will learn evidence based instructional strategies for students with disabilities. The key components of systematic and explicit instruction will be explored. Students will learn how to use explicit instructional strategies to foster engagement and motivation. Methods for implementing systematic instruction across academic, functional, communication, social, and behavior goals will be addressed. Additionally, implementation in a variety of settings including 1:1, small group, and large group settings will be explored. Planning for generalization and maintenance of skills will also be addressed.

Learning Outcomes: 1. Contrast and compare a range of pedagogical models (e.g. Constructivist, Cognitive, Behavioral, etc) in special education. 2. Use formative and summative assessment to identify students current level of performance and inform instructional planning and decision making. 3. Identify instructional strategies necessary for promoting engagement, motivation, and opportunities to respond. 4. Identify components of systematic instruction. 5. Identify and implement a variety of strategies necessary for preparing the setting to support learning. 6. Demonstrate understanding of how to use flexible grouping to meet individual and large group needs. Credits: 3.00

EDPS 31001 - Characteristics Of Individuals With Disability Who Require Intense Intervention

Credit Hours: 3.00. This course addresses the characteristics of individuals who require intense intervention and how learning, behavioral, social-emotional, and communicative needs impact their lives. This course will also explore the cultural differences, legal and ethical guidelines, family impact, transition to adulthood, and wraparound services. A field experience will provide opportunities to observe and participate in a school setting (early childhood through age 21).

Learning Outcomes: 1. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students requiring intense intervention. 2. Understand how language, culture, family background, and environment impact the education and development of individuals requiring intense intervention. 3. Investigate services within the school and community based on the individual target learner and his/her family needs. 4. Demonstrate ability to assess and address individual academic, social, communication, daily living, and employment goals EC-21. Credits: 3.00

EDPS 31100 - Supporting Exceptional Learners: Foundations And Mathematics

Credit Hours: 3.00. Teaching students with special needs

requires the ability to locate evidence-based interventions, implement those interventions with fidelity, and track student performance over time. Mathematics is a content area in which success or failure yields major ramifications for postsecondary success. This course will cover the common math interventions employed for mild to severe disabilities across grade levels K-12.

Learning Outcomes: 1. Develop standards-based lesson plans for math that consider individual abilities, interests, learning environments, and cultural and linguistic factors. 2. Use technologies to support instructional assessment, planning, and delivery of mathematics for individuals with exceptionalities. 3. Identify strategies for teaching to mastery and promote generalization of learning in mathematics for both fluency and world problem solving. 4. Produce standards-based lesson plans for numeracy that incorporate evidence-based practices, classroom resources (e.g. peer and paraprofessional), and technological supports for use with students who have diverse learning needs. Credits: 3.00

EDPS 31200 - Inclusive Practices In Cross-Content Curriculum

Credit Hours: 3.00. This course aims to teach best practices for cross-content integration in an inclusive or self-contained classroom. It develops pre-service teacher understanding of core curricula along with how to integrate the curricula across subject areas. This course will also cover curricula to implement a well-rounded education (e.g., visual arts, dance, theater, music, etc.), provide methods for inclusive practices within the content, and discuss the implementation of collaborative approaches to cross-content planning and delivery.

Learning Outcomes: 1. Apply understanding of curricula across curricular content areas to develop integrated units of study which provide a well-rounded education. 2. Develop curricular content knowledge in order to develop learning progressions for individuals with exceptionalities. 3. Select appropriate curricula for individuals with exceptionalities across multiple content areas. 4. Teach cross-disciplinary knowledge and skills (e.g., critical and creative thinking, problem-solving) through integrated lesson planning and curricular units of study. 5. Implement cross-content curriculum across a wide range of settings through collaborative practices. Credits: 3.00

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

EDPS 31600 - Collaborative Leadership: Cross-Cultural Settings (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the cultural nuances of leadership in the United States as well as around the world. This course will include impact of globalism as a context for leadership, conflict resolution in a global environment, and other important factors that impact culturally diverse or global teams.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Better understand what a culture is, broadly defined, and how it functions. 2. Better understand the importance

of culturally aware, knowledgeable, and skillful leaders. 3. Increase professional and personal self-awareness in relation to leadership in diverse settings. 4. Better understand the importance of making cultural issues central for constructive conflict management. 5. Understand the complexity of leader-other interaction and impact of psycho-social variables on this interaction. Credits: 3.00

EDPS 31700 - Collaborative Leadership: Mentoring

Credit Hours: 3.00. The purpose of this course is to provide a theoretical and experiential overview of the basic elements of mentoring as a key aspect of effective collaborative leadership. The hallmark of this course is the inclusion of a service-learning component in which students will be paired with undergraduate mentees and required to participate in weekly mentoring meetings for the duration of the semester. This learning experience is designed to promote development of the knowledge, skills, and dispositions required for competent mentorship. Emphasis on peer mentoring.

Learning Outcomes: 1. Differenitate among various types, purposes, roles of mentoring/mentors. 2. Identify the essential elements of effective mentoring relationships. 3. Examine and discuss the ethical considerations involved in mentoring. 4. Acquire knowledge regarding how issues of diversity interact with the process of mentoring. 5. Evaluate empirical findings associated with mentoring. 6. Consider various approaches to evaluating mentoring and the outcomes of mentoring programs. Credits: 3.00

EDPS 32000 - Happiness And Well-Being: Introduction To Positive Psychology

Credit Hours: 3.00. Happiness and Well-Being: An Introduction to Positive Psychology is an undergraduate course designed to provide students with an introduction to the field of positive psychology while also learning valuable, impactful life skills that can improve individual well-being, resilience, flow, happiness, and mindfulness for those enrolled. The course is designed in such a way time is devoted to both lecture and discussion based learning as well as experiential activities in the classroom designed to expose students to positive psychology constructs. Students will be exposed to strength oriented approaches to understanding human behavior, the instillation of hope and optimism, and multiple other positive psychology concepts that augment understanding of psychology. Students should be willing to participate in experiential exercises using positive psychology methods designed to promote self-awareness and growth. Though this course derives material from psychology, applications of the material can be made across fields and majors; thus, all students will benefit from better understanding human behavior, happiness, and well-being from an inclusive, positive psychology perspective. This class introduces the student to the major topics of the growing area of positive psychology. Students will learn theories, techniques and research associated with methods that promote happiness and psychological well-being. This introductory class will begin the journey into positive psychology and provides a foundation for further study of applied psychology and counseling at the graduate level.

Learning Outcomes: 1. Understand the importance of balancing psychological understanding by integrating positive psychology concepts and positive assets/characteristics into conceptualization of deficit and difficulty most often found in psychology. 2. Develop an understanding of positive psychology concepts and their practical implications. 3. Identify the impact that positive psychology concepts can have in your specific fields and future careers. 4. Understand human social behavior from a lens that incorporates understanding of the positive assets with individuals, communities, and systems. 5. Develop the ability to implement positive psychology concepts in your own life with the hope of improving well-being and happiness. Credits: 3.00

EDPS 32600 - Health, Wellness, And Adaptive Physical Education

Credit Hours: 3.00. Through a blend of theoretical knowledge and practical application, students will acquire the skills necessary to design and implement effective programs that promote overall student wellness. Students will gain a comprehensive understanding of health, wellness, and physical education of school-aged children with and without disabilities: emphasizing the importance of inclusive instruction. Additionally, students in this course will examine the responsibilities and opportunities for teachers in supporting and

enhancing student health, with an emphasis on developing effective strategies for creating a healthy and safe learning environment for everyone.

Learning Outcomes: 1. Identify and explain how nutrition and common diseases promote health-related fitness and are associated with disease and injury prevention, for students with and without disabilities. 2. Identify and explain how, basic functions and structures of human body systems, including human growth and development, basic motor skills, movement patterns, and physical activities, promote participation and responsible behaviors and safety in various physical activities for students with and without disabilities. 3. Identify and describe the influence of family, peers, culture, media, technology, as well as student interpersonal relationships and communication, have on various health behaviors for students with and without disabilities. 4. Assess, design, and perform evidence-based health, wellness, and physical education instruction, for students with and without disabilities in promoting their overall health and physical well-being. Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 33500 - Reading Instruction For Tier 1 And Tier 2

Credit Hours: 2.00 to 3.00. Given the needs of variety of needs of readers throughout the educational system, this class will focus on effective interventions from the primary grades through high school. Instructors will present a balance of theoretical and practitioner-oriented aspects of reading development and instruction. The course will also examine evidence-based science of reading approaches designed to ensure all students have access to effective, researched-based literacy instruction.

Learning Outcomes: 1. Establish an understanding of P-12 science of reading principles and practices. 2. Develop an understanding of effective Tier 1 and Tier 2 reading instruction. 3. Understand how to implement Tier 1 and Tier 2 reading practices in a classroom. 4. Establish an understanding of reading difficulties/disabilities. 5. Extend knowledge of unique needs of struggling readers. Credits: 2.00 to 3.00

EDPS 34100 - Introduction To Philosophical Underpinnings And Concepts Of Applied Behavior Analysis

Credit Hours: 3.00. This course is the first of four courses in the Applied Behavior Analysis pathway for undergraduates in teacher licensure programs and is also part of the course content required to become a Board Certified Assistant Behavior Analyst (BCaBA). The course will provide an introduction into the primary concepts and principles of applied behavior analysis. Students will be introduce to the fundamental knowledge and experiences for understanding Applied Behavior Analysis principles, concepts, and techniques, including operant behavior, reinforcement, punishment, choice, antecedent stimulus control, and verbal behavior. Students learn concepts and principles to increase or decrease target behavior, to facilitate behavior maintenance and generalization, and to evaluate effectiveness of instruction. This course includes a field placement.

Learning Outcomes: 1. Define and provide examples of behavior, response, and response class. 2. Define and provide examples of

stimulus and stimulus class. 3. Define and provide examples of respondent and operant conditioning. 4. Define and provide examples of positive and negative reinforcement contingencies. 5. Define and provide examples of schedules of reinforcement. 6. Define and provide examples of positive and negative punishment contingencies. 7. Define and provide examples of automatic and socially mediated contingencies. 8. Define and provide examples of unconditioned, conditioned, and generalized reinforces and punishers. 9. Define and provide examples of operant extinction. 10. Define and provide examples of stimulus control. 11. Define and provide examples of discrimination, generalization, and maintenance. 12. Define and provide examples of motivating operations. 13. Define and provide examples of rule-governed and contingency-shaped behavior. 14. Define and provide examples of verbal operants. Credits: 3.00

EDPS 34200 - Applied Behavior Analysis - Assessment And Intervention

Credit Hours: 3.00. This course is one of four courses in the Applied Behavior Analysis pathway for undergraduates in teacher licensure programs and is also part of the course content required to become a Board Certified Assistant Behavior Analyst (BCaBA). This course offers the interventionist with the techniques for designing, implementing, and evaluating instructional and behavioral interventions grounded in the theories of applied behavior analysis. Specifically, the learner will be exposed to techniques for measuring target academic, behavior, social and adaptive skills, as well as methods for displaying and interpreting data. Additionally, learners will design interventions, and monitor progress and will be exposed to the foundational concepts and methods of ABA including defining behaviors, collecting data, and understanding the three-term contingency of behavior. This course includes a field placement.

Learning Outcomes: 1. Identify and define the basic concepts of applied behavior analysis including the foundations of ABA, interrelated domains, and dimensions of ABA. 2. Identify factors to consider when selecting target goals including client and environmental factors. 3. Define target skills utilizing observable and measurable terms including all components of an appropriate learning goal. 4. Identify measurable dimensions of behavior and appropriate measurement procedures, including advantages and disadvantages of each. 5. Demonstrate knowledge about the various single subject research designs and variations of each, including advantages and disadvantages of each, including those most appropriate for practice and ongoing documentation. 6. Identify potential interventions based on assessment results as well as client/student preferences and current repertoires. 7. Use stimulus prompts and fading (e.g., errorless, most-to-least, least-to-most, prompt delay, stimulus fading). 8. Describe the role of imitation and modeling in learning and demonstrate procedures for implementation. 9. Define stimulus control and strategies for establishing. 10. Describe and implement discrete trial and naturalistic teaching arrangement. Credits: 3.00

EDPS 34201 - Curriculum And Program Development In Gifted Education

Credit Hours: 3.00. This course is an introduction to curricular materials, curriculum development, and programs for gifted, creative, and talented (GCT) students. It serves the needs of pre-service teachers who are preparing to teach gifted students in mixed-ability, general education or specialized classrooms. Students will be exposed to established program and curriculum models, as well as the nuts and bolts of developing curricular plans, materials, and specialized programs that support the advanced learning needs of gifted students. Major assignments will assess students' understanding and application of foundational concepts related to the education of students with gifts, creativity, and talent. Permission of instructor required.

Learning Outcomes: 1. Determine the degree of alignment between a gifted program's stated goals, continuum of services, and curriculum resources. [NAGC-CEC Standards (2013): 2.4, 3.1, 3.3, -4.4, 4.5, 5.1-5.3, 5.5, 6.1, 7.3] 2.

Describe the most widely used curriculum and program models in gifted education. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] 3. Determine which curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. You may conclude that particular models "fit" different grade levels better than others. [NAGC-CEC Standards (2013): 3.1, 3.4, 4.4, 5.1, 5.2, 6.1]. 4. Justify the use of differentiation to meet the academic needs of gifted students. [NAGC-CEC Standards (2013): 3.2-3.4, 4.2, 4.4, 5.1] 5. Evaluate educational materials and practices to assess their suitability for use with high-ability students. [NAGC-CEC Standards (2013): 2.4,3.3, 4.1-4.4, 5.1-5.3, 6.1] 6. Practice designing and revising lessons to incorporate instructional strategies well-suited for high-ability students. [NAGC-CEC Standards (2013): 2.1-2.4, 3.1-3.4, 4.2, 4.4, 4.5,5.1-5.5] Credits: 3.00

EDPS 34501 - Social And Affective Development Of Gifted Students

Credit Hours: 3.00. This course focuses on the social and emotional development of gifted and talented students and provides you with knowledge and skills needed to effectively support healthy psychosocial development through your work with gifted students. As well as providing an overview of the characteristics and needs of gifted students, we will also discuss special populations of gifted learners, diversity issues, family and peer relationships, and current educational approaches and counseling interventions, including considerations for career development for gifted students. Permission of instructor required.

Learning Outcomes: 1. Recognize the social and affective characteristics and needs of high-ability students; describe and apply research-based practices to support their affective developments across home, school, and community. [NAGC-CEC Standards: 1.1, 1.2, 2.1] 2. Practice designing products that incorporate meaningful and engaging social and affective components that promote social-emotional well-being, including coping skills, proactive, adaptive behaviors, performance skills, and social skills. [NAGC-CEC Standards: 2.1-2.3, 3.1, 3.4, 4.5, 5.1] 3. Discuss characteristics and needs of subpopulations of high-ability learners and the implications for academic instruction, ethical leadership development, and/or counseling interventions. [NAGC-CEC Standards: 2.1-2.3, 4.1-4.5, 6.1, 6.3] 4. Increase knowledge and experience through regular participation in class discussion boards, interaction with gifted students and their parents, and completion of an in-depth, original affective case study of a high-ability students K-12. [NAGC-CEC Standards: 3.1, 4.3, 4.5, 7.1-7.2] Credits: 3.00

EDPS 36100 - Use Of Assessment Techniques In Special Education

Credit Hours: 3.00. Assessment techniques for the exceptional child, with applications to curriculum. Includes norm-referenced and curriculum-based measurement, error analyses, and observational ratings. Admission to Teacher Education Program, passage of Gate A.

Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach

appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDPS 36300 - Psychoeducational, Medical, And Physical Aspects Of Individuals With Disabilities

Credit Hours: 3.00. Introduction to characteristics of individuals with mild and severe intellectual disabilities: defining characteristics, etiological factors, assessment, social, legal and educational issues, and basic physical or medical disability management issues and techniques. Admission to Teacher Education Program, passage of Gates A required.

Learning Outcomes: 1. Demonstrate the knowledge of the roles and responsibilities of the educational team. 2. Demonstrate the knowledge of instructional strategies needed to promote independence. 3. Demonstrate the knowledge of motor tone and motor patterns. 4. Demonstrate the knowledge of proper positioning, lifting, and handling techniques. 5. Demonstrate the knowledge of feeding and toileting techniques. 6. Demonstrate the knowledge of infection control. 7. Demonstrate the knowledge of assessment and monitoring techniques of major health conditions. Credits: 3.00

EDPS 40099 - Topics In Design Based Research, Assessment And Evaluation

Credit Hours: 3.00. Design-Based Research (DBR) is inquiry that is driven by educational practice- the desire to understand and improve the practice of teaching and learning. Learning scientist employ DBR in order to implement innovative designs for teaching and learning in a variety of formal and informal educational settings (e.g., schools, museums, and extramural clubs) and to conduct research no teaching and learning that occurs in the context of their design innovations. The focus of this course is to help students develop a set of core competencies for systemically studying the teaching and learning of science in designed environments.

Learning Outcomes: 1. Understand the various forms of design-based research that are conducted in education. 2. Critically evaluate the strengths and limitations of examples of design-based research in the literature on science teaching and learning. 3. Develop a proposal for a design-based research study and present this proposal, both orally and in writing to a review panel of peers (classmates). Credits: 3.00

EDPS 40200 - P-12 Reading Methods For Exceptional Learners

Credit Hours: 2.00 to 3.00. This course is designed to meet the expectations of CEC, NCTQ, IDA and REPA 3 and prepare students in the science of reading for exceptional learners (including students with dyslexia and those with intensive needs) in Tiers 2 and 3. This course will provide implementation details on Response to Intervention (RTI) and Multi-tiered Systems of Support (MTSS). The course will present strategies and programs used in strategic and intensive intervention efforts for those learners needing additional, unique, and/or more focused remediation efforts. Topics will include understanding reading intervention research, the behavior analytic and learning sciences' contributions to understanding the reading process, the sequence of learning to read (systematic instruction), reading to learn, and the five components of reading instruction for P-12 learners. This course will specifically address the REPA 3 Standard: Focused work using (interventions that are direct, explicit, and multi-sensory) as a component of scientifically-based reading.

Learning Outcomes: 1. Review the five components of effective reading instruction for those in P-3 and those in grades 4-12. 2. Explain the models for remediation of prereading/reading difficulties and describe how they function: RTI, MTSS. 3. Describe and demonstrate how to use various screeners and progress monitoring assessments for P-12 students in Tiers 2 and 3. 4. Describe the meaning of direct and systematic instruction. 5. Demonstrate mastery of Corrective Reading sounds. 6. Demonstrate methods of increasing student engagement. 7. Discuss strategies to enhance content area reading performance. 8. Illustrate a scope and sequence for reading remediation for readers needing strategic and intensive intervention. 9. Explain how reading instruction can be made more explicit for those

needing more focused efforts 10. Demonstrate how to provide systematic and explicit small group/one-on-one reading instruction. 11. Describe Big Direct Instruction and published scientifically-based programs that are designed based on the science of reading instruction and demonstrate how they are implemented. 12. Describe the use of Universal Design for Learning and assistive technology approaches to increase access to reading materials and/or improve reading skills. Credits: 2.00 to 3.00

EDPS 40300 - Individual Social, Emotional, Behavioral Supports

Credit Hours: 3.00. This course is designed to prepare students with advanced knowledge and skills in designing and delivering individualized social-emotional and behavioral supports for learners. Emphasis will be placed on functional behavior assessment and function-based interventions and supports. Learning Outcomes: 1. Identify the advanced principles of behavior and provide classroom examples. 2. Articulate the connection between social-emotional skills and challenging behavior. 3. Define learner behaviors. 4. Select an appropriate behavior measurement system for learner outcomes. 5. Measure and graph learner behavior. 6. Conduct a functional behavior assessment. 7. Develop and implement a behavior support plan. 8. Analyze learner data to guide educational programming decisions. Credits: 3.00

EDPS 41001 - Collaboration And Transition Practices For Individuals With Disabilities

Credit Hours: 3.00. This course addresses the professional collaborative practices for special educators, who work with school age students with disabilities. The topics of this course include collaboration with professionals, ancillary personnel, agencies, and families, problem-solving and dealing with conflict, co-teaching, and transition planning from early intervention to post-secondary settings. The possible products from this course include community resources, transition plans, co-teaching plans, and family interviews. No undergraduate student may be enrolled in this undergraduate course until they have been admitted to the teacher education program and passed Gates A and B. Learning Outcomes: 1. Become familiar with the legal requirements of IDEA and other related laws, both federal and state as they relate to collaboration and transition. 2. Demonstrate proficiency in writing and interpreting transition plans. 3. Demonstrate knowledge in the use of both formal and informal assessments in determining student transition needs and supports. 4. Develop comprehensive plans for community-based instruction (including ecological inventories, site analyses, site development, instructional strategies, behavior management plans, data collection). 5. Demonstrate knowledge of interagency collaboration, professional development, and community resource development for the purpose of providing effective transition services. 6. Demonstrate a basic understanding of the government benefits (e.g., SSI, AFDC) for which persons with disabilities may be eligible. They will be familiar with the impact of work or other financial resources on maintaining these benefits. 7. Know about accessing and implementing information related to school and post-school private resources for persons with disabilities in the areas of government benefits, vocational services, estate planning, independent living, social and recreational services, transportation services, community integration and related services. 8. Demonstrate an understanding of the issues and barriers encountered by students, parents, and service providers as students with disabilities transition between grade and school levels. 9. Identify solutions to issues and barriers for all parties as individuals with disabilities transition through grade and school levels. Credits: 3.00

EDPS 41700 - Special Education Knowledge And Skills For General Educators

Credit Hours: 3.00. This course is the capstone course for the Special Education certificate and pathway. This course is

designed to expose students to innovative strategies and best practices for promoting inclusive education. Students in this course will develop the habits of ongoing training and professional development to support the variety of student needs in inclusive general education classes.

Learning Outcomes: 1. Describe shared instructional responsibility and the roles of school personnel who support the educational needs of students with disabilities. 2. Provide equitable access to and participation in the general curriculum for students with disabilities. 3. Know where to access current educational research that informs practice in the field. 4. Understand their responsibility for implementing IEP's. 5. Understand school policies regarding special education including those regarding referral, assessment, eligibility, and services for students with disabilities. 6. Understand when to consult with others who possess specialized expertise. 7. Understand students who have disabilities within the broader context of their families, cultural backgrounds, socioeconomic classes, languages, communities and peer/social groups. 8. Reflect on practices. Credits: 3.00

EDPS 42100 - Supporting Exceptional Learners: Social Studies And Science

Credit Hours: 3.00. This course is designed to prepare special educators to deliver social studies and science content to children and adolescents with disabilities across PK-12 settings. It will also prepare special educators to make programmatic and instructional decisions related to least restrictive environment, appropriate educational supports, assistive technology, accommodations, and modification specific to science and social studies instruction. This course includes assignments that will be linked to EDPS 46100 the Special Education Student Teaching Residency.

Learning Outcomes: 1. Use knowledge of general and specialized social studies curricula to individualize learning for individuals with exceptionalities. 2. Use knowledge of general and specialized science curricula to individualize learning for individuals with exceptionalities. 3. Use strategies to enhance language development and communication skills of individuals with exceptionalities across social studies and science content area. Credits: 3.00

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for

building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 44100 - Introduction To Ethics And Practice Of Applied Behavior Analysis

Credit Hours: 3.00. This course is the final course in the Applied Behavior Analysis pathway for undergraduates in teacher licensure programs and is also part of the course content required to become a Board Certified Assistant Behavior Analyst (BCaBA). This course will address the professional and ethical responsibilities of behavior analysts. Key issues of responsible conduct as it relates to areas such as confidentiality, consent, consultation, treatment planning, and research will be discussed and applied through case studies. Learners will be able to consider ABA techniques within the bounds of both legal and ethical frameworks.

Learning Outcomes: 1. Demonstrate understanding of BACB guidelines for the responsible conduct of applied behavior analysis. 2. Discuss scenarios involving ethical issues and describe appropriate solutions using BACB guidelines. 3. Identify appropriate ethical practices in ABA research. 4. Demonstrate understanding of empirically validated practices vs pseudoscience and non-validated practices within the context of service delivery. Credits: 3.00

EDPS 44200 - Advanced Intervention In Applied Behavior Analysis

Credit Hours: 3.00. This course is one of four courses in the Applied Behavior Analysis pathway for undergraduates in teacher licensure programs and is also part of the course content required to become a Board certified Assistant Behavior Analyst (BCaBA). This course will provide fundamental knowledge and experiences for understanding instructional and behavior interventions grounded in the principles of Applied behavior Analysis including a pivotal response training, functional communication training, video modeling, self-management, social skills training, and augmentative and alternative communication (AAC). Students learn procedures to increase or decrease target behavior, to facilitate behavior maintenance and generalization, and to evaluate effectiveness of instruction. Students will also learn strategies for consultation with other service providers as well as practices for effective supervision of others such as paraeducators.

Learning Outcomes: 1. Identify, distinguish between, and provide examples of core (basic and advanced) concepts and principles in the field of behavior analysis. 2. Describe the concepts of motivating operations and stimulus control and demonstrate application to instruction. 3. Demonstrate procedures for implementing functional communication training and describe the principles of ABA involved. 4. Describe processes and demonstrate procedures for implementing a variety of instructional strategies including pivotal response training, peer mediating learning, video modeling, augmentative and alternative communication, social skills training. 5. Describe strategies and procedures for implementing group contingencies. 6. Describe and demonstrate how to implement self-management programs. 7. Synthesize procedures for supervising implementors (e.g. paraeducators) through implementation of ABA strategies including behavior skills training. 8. Discuss strategies for consulting with other school and community-based providers including parents. Credits: 3.00

EDPS 45200 - Global Studies Seminar

Credit Hours: 1.00. (EDCI 45200) The course builds on students' international cross-cultural experiences, particularly Study Abroad. The course is required for those wishing to complete the Global Studies minor in the College of Education.

Learning Outcomes: 1. Discuss economic, social, and cultural diversity within a global context. 2. Describe the cultural, social and historical dynamics that influence individuals and groups. 3. Explain the perspective of the culture of another country through the study of world languages, arts, spiritual traditions, mythology/literature, and/or through study abroad. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. 5. Clearly communicate a central message with the supporting materials. Credits: 1.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

EDPS 45901 - Assistive Technology (UCC: STS)

Credit Hours: 1.00. This course explores the use of Universal Design for Learning as a framework for Differentiated Instruction. Additionally, this course addresses the use of Augmentative and Alternative Communication and Assistive Technology by individuals with disability requiring mild, moderate, and intense intervention.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand the principals of UDL as a framework for differentiated instruction. 2. Understand the legal and ethical issues regarding UDL, Differentiated Instruction, AAC, and AT. 3. Assess individuals with disability for appropriate technology services and devices. 4. Demonstrate data-based decision-making to differentiate instruction and/or identify appropriate technology of a target learner requiring mild, moderate, or intense intervention. Credits: 1.00

EDPS 46000 - Strategies For Teaching Individuals With Mild And Moderate Disabilities Primary & Elementary Grades

Credit Hours: 3.00. This course is designed to prepare future special educators to plan and provide content area instruction in the core content areas to primary and elementary students with mild and moderate disabilities. Course content will include information on assessment, instructional design, and development of individualized education programs, research-based practices for promoting academic and behavioral growth, and content area literacy and numeracy, and your professional role as a teacher of students with mild disabilities. This course has a required concurrent enrollment in EDPS 46100.

Learning Outcomes: 1. Identify the legal requirements of academic goals and learning supports within individualized education plans (IEPs) and demonstrate understanding of assessment and monitoring procedures necessary to evaluate student progress. 2. Identify the principal instructional arrangements common to P-6 settings for students with mild disabilities, how the arrangement impacts classroom organization, and how to modify the arrangement to meet individual student needs. 3. Identify the common characteristics of evidence-based behavioral and instructional strategies implemented in P-6. These include class-wide (Tier 1) and targeted (Tier II) interventions. 4. Produce standards-based lesson plans for literacy and numeracy that incorporate evidence-based practices,

classroom resources (e.g., peer and paraprofessional), and technological supports for use with students who have diverse learning differences. 5. Distinguish between accommodations, modifications, and interventions within the assessment, teaching and IEP development process. Credits: 3.00

EDPS 46100 - Practicum In Strategies For Teaching Individuals With Disabilities

Credit Hours: 1.00 to 6.00. Practicum experience in assessment and teaching of individuals with disabilities. Experience in design, delivery, implementation, and evaluation of instruction. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A and B.

Learning Outcomes: 1. Provide instruction that is responsive to student differences and promotes development and learning for all students. 2. Match expectations to the unique characteristics, abilities, developmental levels, and behavior of students. 3. Identify characteristics of students with disabilities and design classroom accommodations. 4. Adjust instruction according to student needs and performances. 5. Use a variety of evidence-based instructional strategies. 6. Plan and deliver standards-based, data-driven differentiated instruction that actively engages students in the learning process. 7. Demonstrate an appreciation and concern for students as individuals and interact with them in positive ways that encourage and teach appropriate behavior. 8. Model effective use of language. 9. Demonstrate effective classroom and behavior management and establish a positive, productive, and safe learning environment with high expectations for all students. 10. Integrate instructional technology by creating instructional materials, delivering instruction using technology, or encouraging student use of technology in assignments. 11. Reflect on practices. 12. Engage in professional development activities to remain current with best practices. 13. Collaborate effectively with colleagues, parents, and others to increase the effectiveness of instruction and engage in professional growth. Credits: 1.00 to 6.00

EDPS 46300 - Teaching Individuals With Severe Disabilities

Credit Hours: 3.00. Education of individuals with severe or multiple disabilities. Application of innovative technology, design of individual educational programs, strategies and methods for instruction, evaluation of instruction, community-based instruction, generalization and maintenance of skills. Admission to Teacher Education Program, passage of Gate A required.

Learning Outcomes: 1. Demonstrate the knowledge of the various aspects of trial management. 2. Demonstrate the knowledge of the ability to record, graph, and interpret ongoing data of student performance. 3. Demonstrate the knowledge of the ability to apply the principles of learning and strategies of instruction. 4. Demonstrate the knowledge of the components of community referenced curriculum and community-based instruction. 5. Demonstrate the knowledge of the inclusionary/collaborative strategies for students with severe disabilities. Credits: 3.00

EDPS 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

EDPS 49100 - Topics And Issues In Education

Credit Hours: 1.00 to 3.00. Provides student with opportunity to strengthen preparation through study of selected educational topics and issues based upon individual needs and interests. One topic is considered in each enrollment.

Credits: 1.00 to 3.00

EDPS 49500 - Practicum In Gifted Education

Credit Hours: 3.00. The Practicum in Gifted, Creative, and Talented (GCT) Education is designed to be the culminating experience for those who are pursuing the GCT pathway as part of their teacher education undergraduate licensure program, with or without Indiana licensure. The overall goal of the course is derived from Standard 6 of the NAGC-CEC Teacher Preparation Standards in Gifted and Talented Education. Includes experiential learning. Required for those seeking GCT pathway in teacher education.

Learning Outcomes: 1. Develop as reflective practitioners who set and evaluate their progress toward personal goals for professional growth. 2. Create professional networks that can be sustained beyond the practicum experience. 3. Practice continuous improvement in teaching gifted, creative, and talented students. 4. Demonstrate the key ideas, standards, guiding principles, theories, models, and instructional strategies learned in EDPS 24000, 24800, 54200, & 54500. 5. Formalize philosophies of and personal identities as practitioners of GCT education. Credits: 3.00

EDPS 49800 - Supervised Teaching- Special Education (UCC: OC)

Credit Hours: 1.00 to 16.00. A student planning to enroll in EDCI 49600, EDCI 49800, EDCI 49900; EDPS 49800, EDPS 49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. Admission to Teacher Education Program, passage of Gates A, B, and C.

University Core Curriculum (UCC): (UCC: OC)
Credits: 1.00 to 16.00

EDPS 49900 - Supervised Teaching Or Practicum In Endorsement Area

Credit Hours: 3.00 to 9.00. A student planning to enroll in EDCI 49600 , EDCI 49800 , EDCI 49900; EDPS 49800 , EDPS 49900, EDPS 56100, or EDPS 56600 in the spring or fall semester of any academic year must secure, complete, and submit a student teaching application form between the middle of September and November 1 preceding the academic year during which he or she will be enrolled in the course. Failure to file the application during or prior to this time will make it virtually impossible for the student to receive a student teaching assignment for that year. Application forms may be obtained in and submitted to Room 3241, Liberal Arts and Education Building. Teaching full time in an endorsement area in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. completion of education courses required for the endorsement area and admittance to teacher education program.

Credits: 3.00 to 9.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDST 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

EDST 49100 - Topics And Issues In Education

Credit Hours: 1.00. Provides student with opportunity to strengthen preparation through study of selected educational topics and issues based upon individual needs and interests. One topic is considered in each enrollment.

Credits: 1.00

College of Engineering page

Overview

Highly Ranked

U.S. News and World Report has ranked our programs in the Top 10 nationwide, with our graduate program at No. 4, our undergraduate program at No. 9, and online graduate program at No. 3. Purdue's College of Engineering has the largest top 10 undergraduate engineering program in the U.S. The College includes 13 academic programs, all with high rankings; Agricultural and Biological Engineering is No. 1 for graduate and undergraduate studies.

Accelerated Growth

Purdue's College of Engineering is rapidly accelerating progress toward the Pinnacle of Excellence at Scale. Among the signs, we have more than 10 federally funded centers, each with at least $10 million in research funding; we are constructing the largest academic facility on campus and preparing to erect a building for leading-edge hypersonics research; and we are the first non-medical public college to raise more than $1 billion in philanthropic gifts in a campaign.

Beyond the Classroom: Interdisciplinary, Global, Diverse Learning

Beginning in their first year, students have abundant opportunities to augment and enrich their education through experiential learning and contributions to world-improving technologies. Teaching and research programs **transcend traditional academic and grade-level boundaries, often engaging industry, government, alumni and other university partners**. Leveraging our diversity and incorporating all perspectives, we're **equipping students to excel in an ever-evolving and increasingly global economy**. G.R.I.T.+ initiatives offer Purdue Engineers experiential learning opportunities, such as study and work abroad, industry co-ops and internships, hands-on research, community service, and entrepreneurship projects.
To find out more about Purdue Engineering, check out the rest of this Web site. You can also contact us, or please come for a visit to see what Purdue and you can do together.

Engineering Departments

College of Engineering Administration	School of Engineering Education
School of Aeronautics and Astronautics	Division of Environmental and Ecological Engineering

Weldon School of Biomedical Engineering	School of Materials Engineering
Davidson School of Chemical Engineering	School of Mechanical Engineering
Lyles School of Civil and Construction Engineering	School of Nuclear Engineering
Elmore Family School of Electrical and Computer Engineering	

Admissions (website)

First-Year Engineering at Purdue

The First-Year Engineering (FYE) program is the entry point for all beginning engineering students. In the FYE program, students complete foundational coursework in math, science,

engineering, and communications (oral and written). After this common first year, students choose their discipline of engineering and start to follow the plan of study of a particular degree program. The mission of this student-oriented program is to advise, prepare and retain outstanding students for degree programs in Purdue's College of Engineering.
See First-Year Engineering for more information.

Advising Information

Talk to an FYE Advisor

- make an appointment to meet with your FYE advisor
- learn about the walk-in schedule for FYE advisors or for Student Representatives of Professional Engineering Schools

Global Engineering Studies Minor

Innovation and Transformational Change Minor

ENGR 10000 - First-Year Engineering Lectures

Credit Hours: 0.00 or 1.00. An introduction to the engineering profession.

Credits: 0.00 or 1.00

ENGR 10300 - Introduction To Engineering In Practice

Credit Hours: 1.00. Weekly small group seminars led by faculty designed to introduce a specific topic, problem, or discipline of engineering to First-Year Engineering students. Seminars are designed to help students explore a single area of engineering and/or to assist in their decision of an engineering degree program.

Credits: 1.00

ENGR 10301 - Introduction To Engineering In Practice

Credit Hours: 1.00. Weekly small seminars led by faculty designed to introduce a specific topic, problem or discipline of engineering to First-Year Engineering students. Seminars are designed to help students explore a single area of engineering and/or assist in their decision of an engineering degree. Permission of department required.

Learning Outcomes: 1. Introduce a specific topic, problem or discipline of engineering to First-Year Engineering students. Credits: 1.00

ENGR 10351 - Space Engineering Seminar

Credit Hours: 1.00. The purpose of this course is to help you see and appreciate the multi-disciplinary nature of space engineering, to give you an awareness that will aid you in developing your career. Space engineering includes a vast number of topics where expertise is needed by industry and NASA and a good understanding of this if vital to finding opportunities for your own interest and expertise to start you on a career.

Learning Outcomes: 1. Identify multiple career paths pursued by people in aerospace with various degrees; including those of people still working in aerospace and those of people who used their aerospace engineering degree as a

basis for a career in a different field. 2. Recognize the broad range of products, topics, applications and systems on which aerospace engineers work. 3. Understand the variety of topical expertise needed for space commerce and exploration. 4. Have an awareness of issues related to inclusion and intercultural teams. Credits: 1.00

ENGR 10400 - Introduction To Engineering And Purdue

Credit Hours: 1.00. Weekly small group seminars led by upper-class engineering students, enabling a broader understanding of engineering disciplines at Purdue, covering skills and techniques for academic success, and offering instruction and practice in career preparation and employment-finding skills.

Learning Outcomes: 1. Successfully transition to Purdue by balancing academic and personal life. 2. Develop life skills it takes to succeed as an engineering student. 3. Understand the academic and career opportunities within the different fields of engineering. 4. Develop a mentor-mentee relationship with your Peer Mentors. 5. Develop a network of classmates with whom to study and socially interact. 6. Learn about Purdue University resources. 7. Learn more about the fields of engineering you want to study and with which you may work. Credits: 1.00

ENGR 10500 - First-Year Engineering Seminar

Credit Hours: 1.00. A selection of invited lectures, participation exercises, and lab tours designed to acquaint exceptionally well-motivated students with opportunities to enhance their undergraduate engineering education through independent study, special research projects, overseas study, and other opportunities that may be available for students who are inclined to seek extraordinary challenges.

Credits: 1.00

ENGR 11700 - First-Year Engineering Honors Seminar

Credit Hours: 3.00. A course in computer programming, covering fundamentals of the C programming language. Other language(s) or materials will be covered to prepare Honors students to do the best possible work in their professional school courses. Students will be introduced to structured problem-solving and top-down programming techniques. Laboratory exercises will accelerate learning of fundamental materials through supervised repetitive practice, while more traditional individual and team projects will provide practice in the decomposition and solution of larger problems.

Credits: 3.00

ENGR 12600 - Engineering Problem Solving And Computer Tools

Credit Hours: 3.00. Introduction to the solving of open-ended engineering problems and the use and of computer software, including UNIXTM, computer communications, spreadsheets, and MATLAB. Explicit model-development activities are utilized, and students are expected to develop skill at working in teams. This is emphasized both in laboratories and on projects.

Credits: 3.00

ENGR 13000 - Transforming Ideas Into Innovations (UCC: IL)

Credit Hours: 4.00. This introductory course to engineering teaches skills in managing complex problems related to design, systems analysis with computational tools, and academic professional development. Through multiple experiences, students will learn effective methods to design and analyze behaviors of complex engineering systems with an eye for innovation. These experiences will develop their skills in teaming, project management, logical reasoning, sustainability, coupled with oral, written and visual communication for multiple audiences. This course also develops students ability to build computational tools (e.g., Python, MATLAB and Excel) to analyze the performance of systems using fundamental concepts associated with physical science and data science (e.g., mathematical modeling, data processing, numerical modeling, statistics). Professional identify development is critical to preparing students for making an informed decision in their choice of major and the development of professional skills to succeed in that major. Therefore, the course includes learning experiences to help them gather and process information about all the engineering academic pathways they could choose at Purdue. Permission of instructor required.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 4.00

ENGR 13100 - Transforming Ideas To Innovation I (UCC: IL)

Credit Hours: 2.00. A partnership between Schools and Programs within the College of Engineering, introduces students to the engineering professions using multidisciplinary, societally relevant content. Developing engineering approaches to systems, generating and exploring creative ideas, and use of quantitative methods to support design decisions. Explicit model-development activities (engineering eliciting activities, EEAs) engage students in innovative thinking across the engineering disciplines at Purdue. Experiencing the process of design and analysis in engineering including how to work effectively in teams. Developing skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB).

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Use a problem formulation and solving process to translate written problem statements into a mathematical model that allows for a logical comparison of approaches and tradeoffs in an engineering design. 3. Communicate technical information orally and visually and develop basic knowledge and introductory skills for cross-cultural communication. 4. Explain how an engineering problem solving process in related to a design process. 5. Apply a design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 6. Implement simple algorithmic solutions to engineering problems and in design using the most appropriate engineering tool. 7. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 8. Exhibit a work ethic appropriate for the engineering profession. Credits: 2.00

ENGR 13200 - Transforming Ideas To Innovation II

Credit Hours: 2.00. A partnership between Schools and Programs within the College of Engineering continues building on the foundation developed in ENGR 13100. Students take a more in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. Extending skills in project management engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g., Excel and MATLAB).

Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Apply engineering fundamentals and basic engineering science concepts to create feasible engineering solutions that are justifiable. 3. Use a problem identification process to create written engineering criteria to satisfy a problem. 4. Use an engineering formulation and solving process to translate an engineering scenario into a model. 5. Explain how an engineering problem solving process relates to a design process. 6. Design a process to communicate technical information orally and visually and demonstrate skills for cross-cultural communication. 7. Apply an engineering problem solving and design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 8. Apply a systems approach in solving engineering problems and in undertaking design projects. 9. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 10. Exhibit a work ethic appropriate for the engineering profession. Credits: 2.00

ENGR 13300 - Transforming Ideas To Innovation, EPICS/VIP (UCC: IL)

Credit Hours: 2.00. Introduces students to the engineering professions using multidisciplinary, societally relevant content. Students will develop engineering approaches to systems, generate and explore creative ideas, and use quantitative methods to support design decisions. Students will experience

the process of design and analysis in engineering including how to work effectively in teams, and will develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB). An emphasis will be placed on computing logic development and builds upon the co-requisite experience of the students in the EPICS class.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Examine and analyze career information from various resources to make informed decisions about which engineering discipline to pursue. 2. Develop metacognitive skills in evaluating own teamwork and leadership abilities, recognizing how own behavior impact the whole team, and make team process adjustments when necessary. 3. Explain critical and diverse use of modeling in engineering to understand problems, represent solutions, compare alternatives, make predications, etc. 4. Use multiple models, estimation, and logic to triangulate and evaluate information coming from various data sources. 5. Collect, analyze, and represent data to make informative explanations and persuasive arguments. 6. Develop a logical problem solving process which includes sequential structures, conditional structures, and repetition structures for fundamental engineering problems. 7. Solve fundamental engineering problems using computer tools. 8. Perform basic file management tasks using an appropriate computer tool. 9. Work effectively and ethically as a member of a technical team. 10. Develop a work ethic appropriate for the engineering profession. 11. Reflect on personal and team performance to achieve continuous improvement. Credits: 2.00

ENGR 14100 - Honors Creativity And Innovation In Engineering Design I (UCC: IL)

Credit Hours: 3.50. This course introduces students to the engineering professions using multidisciplinary, societally relevant content. Students develop engineering approaches to systems, generate and explore creative and innovative ideas, and use of computational methods to support design decisions. Design challenges and projects engage students in innovative thinking across the engineering disciplines at Purdue. Students experience the process of design and analysis in engineering including how to work effectively in teams. Students also develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel®, LabView®, MATLAB®, and Python).

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Describe the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Understand and apply engineering fundamentals and basic engineering science concepts to model, analyze, predict build, and evaluate an object of engineering interest using a design process. 3. Develop the ability to evaluate complex systems. 4. Develop strategies to facilitate generating creative ideas for complex design challenges. 5. Show how the engineering problem solving is related to the design process. 6. Use the engineering problem solving process to translate written problem statement into a mathematical model that is suitable for algorithmic development. 7. Communicate technical information to justify decision made during a problem solving situations (e.g. design, troubleshoot, or product selection). 8. Develop a logical and systematic problem solving process and use that process for software development, which includes sequential structures, conditional structures, and repetition structures. 9. Implement simple algorithmic forms of engineering models/problems using the most appropriate computer tool (LabVIEW, MATLAB, and Python). 10. Perform basic file management tasks using an appropriate computer tool. 11. Demonstrate appropriate knowledge and behaviors for effective and ethical membership on a technical team (i.e., teaming skills). 12.

Develop skills for cross-cultural communication. 13. Exhibit a work ethic appropriate for the engineering profession. Credits: 3.50

ENGR 14200 - Honors Creativity And Innovation In Engineering Design II

Credit Hours: 3.50. This course continues building on the foundation developed in ENGR 14100 . Students take a more in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students extend and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g., C, Excel®, LabView®, MATLAB®, and Python).

Learning Outcomes: 1. Describe, in greater depth, the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Apply engineering fundamentals and basic engineering science concepts to create feasible engineering solutions that are justifiable. 3. Use a problem identification process to create written engineering criteria to satisfy a problem. 4. Use an engineering formulation and solving process to translate an engineering scenario into a mathematical model. 5. Explain how an engineering problem solving process relates to a design process. 6. Design a process to communicate technical information orally and visually and demonstrate skills for cross-cultural communication. 7. Further development of strategies to facilitate generating creative ideas for complex design challenges. 8. Apply an engineering problem solving and design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 9. Implement complex algorithmic solutions to engineering problems/designs using the most appropriate computer tool (C , Excel, LABVIEW, MATLAB, and Python) and be able to explain your rationale for your choice. 10. Apply a systems approach in solving engineering problems and in undertaking design projects. 11. Synthesize your knowledge of effective and ethical membership on a technical team (i.e., teaming skills) to appropriately behavior. 12 Exhibit a work ethic appropriate for the engineering profession. Credits: 3.50

ENGR 16100 - Honors Introduction To Innovation And The Physical Science Of Engineering Design I (UCC: IL/SCI)

Credit Hours: 4.00. This course introduces students to the engineering profession using physics-based, multidisciplinary, societally relevant content. Students develop engineering approaches to systems, generate and explore creative and innovative ideas, and use of computational methods to support design decisions. In particular, the students will develop the ability to model and investigate physical systems at the microscopic and macroscopic levels with a focus on vectors analysis, linear momentum, angular momentum, work-energy, and solid material interactions. Design challenges and projects will explore a wide range of natural phenomena experimentally and computationally (utilizing MATLAB and Python) and engage students in innovative thinking across the engineering disciplines at Purdue. They will learn the basics of descriptive statistics, data analysis, sensitivity analysis, and decision-making. Students experience the process of design and analysis in engineering including how to work effectively in teams. Students also develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools.
*(Both ENGR 16100 AND ENGR 16200 are required to meet the IL or SCI requirement)

University Core Curriculum (UCC): (UCC: IL/SCI) Learning Outcomes: 1. Discuss the engineering education process, courses, and options, explain and compare engineering job functions and roles, and use this information to prepare a moderately well-informed course of study for academic and career success (3). 2. Employ academic and career success strategies including managing your personal learning approach, using time management techniques, and demonstrating a personal growth mindset to thoughtfully pursue course activities and the course as a whole (2). 3. Plan

and implement systematic design processes using formal engineering management and design tools such as work breakdown structures and House of Quality to design innovative products and systems (6). 4. Investigate and decompose systems in order to design and construct mathematical or computer models that can be employed to better understand or control the systems (6). 5. Describe a wide range of physical phenomena using a few fundamental physical laws (12). 6. Learn how to implement a unified approach that relates microscopic behavior to macroscopic behavior. These include mechanical theories based on particle, spring, and material models (10). 7. Model natural phenomena using computer simulations (5). 8. Demonstrate professional communication skills in the areas of technical writing to produce engineering reports, in presentations to convey engineering evidence and findings verbally and graphically to audiences, and in interpersonal communication to work with other members of the class (2). 9. Work alongside individuals with diverse backgrounds, utilizing the team environment to learn interdependently, give and demand accountability, and accomplish engineering tasks, while recognizing teaming as an open-ended problem that needs to be actively managed and reflected upon (3). 10. Evaluate engineering problems to reach evidence-based conclusions, drawing upon one or more sources of information and data interpretation skills including interpolation, regression, curve fitting, statistics, and data cleaning (5). 11. Incorporate the consideration of engineering ethics, including social, safety, and sustainability issues into instances of engineering thinking and engineering problem solving so that the broader impacts of engineering work are evaluated and accounted for (3). 12. Apply fundamental engineering skills and knowledge relating to units, dimensions, estimation, visualization, significant digits, and the problem presentation method to engineering applications (2). 13. Display proficiency in the applications of engineering content knowledge including basic statistics (5). Credits: 4.00

ENGR 16200 - Honors Introduction To Innovation And The Physical Science Of Engineering Design II (UCC: IL/SCI)

Credit Hours: 4.00. Students will take an in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students continue to explore more complicated models of physical systems, especially internal energy, entropy, models of gases and fluids, and statistical thermodynamics. The students will extend the concepts learned in ENGR 16100 and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g. MATLAB and Python). In addition, students will learn how to use hypothesis testing to make informed, quantitative decisions. Finally, they will build systems that incorporate feedback control in an effort to identify and characterize physical material systems.
*(Both ENGR 16100 AND ENGR 16200 are required to meet the IL or SCI requirement)

University Core Curriculum (UCC): (UCC: IL/SCI) Learning Outcomes: 1. Utilize knowledge of the engineering education process, courses, and options, and engineering job functions and roles to prepare a final course of study for academic and career success (3). 2. Develop a unified approach to microscopic and macroscopic behavior of gases and fluids, especially the use of statistics and quantized atomic levels to motivate basic thermodynamic theories (10). 3. Apply the unified approach to material interactions to a broad array of applications including asteroids, black holes, nuclear fission and fusion, quantization in atoms and molecules, and heat capacity (7). 4. Model natural phenomena using computer simulations (7). 5. Integrate engineering ethics, including social, safety, and sustainability issues into engineering thinking and engineering problem

solving to ensure that the broader impacts of engineering work are consistently evaluated and accounted for (3). 6. Display proficiency in the applications of engineering content knowledge including statistics, statics, mechanics of materials, the universal accounting equation, electrical theory, and design of experiments (8). 7. Employ academic and career success strategies including managing your personal learning approach, using time management techniques, and seeking opportunities for self-improvement to thoughtfully pursue course activities and the course as a whole (2). 8. Plan and implement systematic design processes using formal project management and design tools such as work breakdown structures and House of Quality to design innovative products and systems (2). 9. Investigate and decompose systems in order to design and construct mathematical or computer models that can be employed to better understand or control the systems (6). 10. Analyze and translate problems into algorithms composed of logical constructs and be able to create programming-language-independent system charts and flow diagrams embodying those algorithms (5). 11. Demonstrate professional communications skills in the areas of technical writing, presentations, and interpersonal communication, to produce engineering reports, convey engineering findings and evidence in writing, verbally, and graphically to readers or audiences, and to work with other members of the class (3). 12. Work alongside individuals with diverse backgrounds in teams, learn interdependently in the team environment, give and demand accountability, and accomplish engineering tasks, while recognizing teaming as an open-ended problem that needs to be actively managed and reflected upon (3). 13. Investigate engineering problems to reach evidence-based conclusions, drawing upon one or more sources of information and data interpretation skills including interpolation, regression, curve fitting, statistics, and data cleaning (3). 14. Apply fundamental engineering skills and knowledge relating to units, dimensions, estimation, spatial reasoning, graphical representation, significant digits, and the problem presentation method to engineering challenges (2). Credits: 4.00

ENGR 17600 - Professional Internship I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by department with cooperation of participating employers. Students submit a summary report.

Credits: 0.00

ENGR 18000 - Minorities In Engineering Seminar

Credit Hours: 1.00. Explores the challenges that minority engineering students have in making a smooth and informed transition to college from high school. The content and activities may be of particular interest to engineering students from underrepresented groups as they adjust to the University's environment. The course provides a setting for entering students to explore career opportunities in the various fields of engineering. Open to all entering engineering students.

Credits: 1.00

ENGR 18500 - Engineering Career Planning

Credit Hours: 1.00. An engineering-oriented course designed to assist students in planning for their educational, career, and personal development. Individual and group projects, computer-aided guidance. Course will incorporate autobiographies, resumes, and academic and career planning exercises. Interest inventories and personal appraisal surveys will be utilized. Computer-based guidance systems will be utilized, including ESCAPE (Engineering Specific Career Advisory Problem-solving Environment). (Eight-week session)

Credits: 1.00

ENGR 19400 - Women In Engineering Seminar

Credit Hours: 1.00. An overview of the career opportunities for women in engineering. The content and activities of the course may be of particular interest to women. Speakers from a variety of engineering organizations discuss their career paths and share their strategies for success. Students also meet weekly in

small groups led by engineering seniors for additional information, interaction, and support from their peers in engineering. Open to all entering engineering students.

Credits: 1.00

ENGR 19500 - First-Year Engineering Projects

Credit Hours: 1.00 to 6.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 6.00

ENGR 19700 - Introduction To Programming Concepts

Credit Hours: 2.00. Basic concepts and applications of software programming for solving engineering problems. Topics include techniques for developing structured algorithms, data input and output, conditional statements, loops, recursion, functions, arrays, and elementary concepts in mathematical programming. Examples, homework, and applications of programming concepts make extensive use of the C programming language.

Credits: 2.00

ENGR 20000 - Cooperative Education Practice I

Credit Hours: 1.00. A semester or summer of external, full time, related career experiences designed to enhance the student's preparedness for an intended career with business, industry or government agency. A comprehensive written report on the internship practice is required. A minimum of 10 weeks and 200 hours are required for credit.

Credits: 1.00

ENGR 20010 - Engineering Career Enrichment Internship I

Credit Hours: 1.00. Semester of external career related experiences designed to enhance the student's preparedness for entering an initial or second career. A minimum of 10 weeks and 200 hours are required for credit.

Credits: 1.00

ENGR 23099 - Cooperative Education Seminar I

Credit Hours: 1.00 or 2.00. (PSY 23099) This seminar course is optional for Co-Op students when they are on campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Prerequisite: Student must have completed at least one Co-Op work term. May be repeated once after the second work term. Can be taken for two credits subsequent to completing two back-to-back work terms. Instructor permission required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the engineering profession. 3. Learn from the experiences of other participants and apply that knowledge to the situation. Credits: 1.00 or 2.00

ENGR 25000 - Cooperative Education Practice II

Credit Hours: 1.00. A semester or summer of external, full time, related career experiences designed to enhance the student's preparedness for an intended career with business, industry or government agency. A comprehensive written report on the internship practice is required. A minimum of 10 weeks and 200 hours are required for credit.

Credits: 1.00

ENGR 25010 - Engineering Career Enrichment Internship II

Credit Hours: 1.00. Semester of external career related experiences designed to enhance the student's preparedness for entering and initial or second career.

Credits: 1.00

ENGR 26099 - Learning While Working Full-Time Co-Op I

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4.

Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 27199 - Professional Practice Flex Co-Op I

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. In the Flex Co-Op program, students must work for their first employer for a minimum of two work sessions, and then have the option to continue for one-to-three additional work sessions; or, after completing two work sessions with the first employer, the student may elect to start with a second employer. If the student elects to change employers, they must notify their first employer and their Faculty Coordinator in writing at the conclusion of the second work session. The student must commit to work for the second Co-Op employer for a minimum of two work sessions. Permission of instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses course outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a technical report written by the student summarizing their experience. Credits: 0.00

ENGR 27299 - Professional Practice Flex Co-Op II

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. In the Flex Co-Op program, students must work for their first employer for a minimum of two work sessions, and then have the option to continue for one-to-three additional work sessions; or, after completing two work sessions with the first employer, the student may elect to start with a second employer. If the student elects to change employers, they must notify their first employer and their Faculty Coordinator in writing at the conclusion of the second work session. The student must commit to work for the second Co-Op employer for a minimum of two work sessions. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses course outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a technical report written by the student summarizing their experience. Credits: 0.00

ENGR 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ENGR 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ENGR 29600 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the freshmen/sophomore level on a temporary basis to test the viability of offering the course on a permanent basis.

Learning Outcomes: n/a Credits: 0.00 to 6.00

ENGR 29701 - Global Engineering Orientation

Credit Hours: 1.00. Forum in preparation of study and work abroad. Understanding of cultural differences and collaborating across cultural boundaries, professionalism and ethics in foreign

work and academic environments, leadership and teamwork options in foreign environments. Permission of instructor required.

Learning Outcomes: 1. Be provided with foundation in global engineering communication skills. 2. Outline teamwork and leadership opportunities available through participation in the global engineering community. 3. Be provided with globally diverse and multicultural experiences and discuss case studies to prepare them for upcoming international internships and semester study abroad. 4. Identify resources available for academic studies and industrial work experience abroad. 5. Develop a strong ethical framework and cultural sensitivity to prepare for the global professional workplace. Credits: 1.00

ENGR 30301 - Business Essentials Executive Forum

Credit Hours: 2.00. This course will provide undergraduate engineering students access to Purdue Engineering alumni working in the C-suite, as well as basic knowledge regarding the understanding of corporate financial statements. The forum is a lecture-discussion course featuring executives from engineering firms, tech companies, and other organizations. Emphasis is placed on the actual practice of leadership in corporate America, on career selection and mobility, on styles of leadership, and on other business topics not normally covered in undergraduate engineering courses.

Learning Outcomes: 1. Have a fundamental understanding of basic financial statements, ratios, and methods used to make business decisions. 2. Understand the backgrounds, traits, qualities, and mindsets of Purdue undergraduate engineering alumni at the executive level. 3. Acquire up-to-date knowledge of business essentials needed for corporate leadership. 4. Discover career opportunities for engineers in the business function of organizations. Credits: 2.00

ENGR 30500 - Fundamentals Of Innovation Theory And Practice

Credit Hours: 3.00. This course is designed to provide students with initial exposure to the fundamental patterns, mindsets, behaviors, attributes, tools, and methods employed in the innovative activity of individuals and organizations. Emphasis is placed on understanding and effectively utilizing techniques to systematically drive innovation that are drawn from the fields of business, design, problem-solving, engineering, and the social sciences. Lecture, in-class small group activities, and individual and team assignments are employed across an array of contemporary socio-technical challenges to provide students with the opportunity to apply conveyed theory and methods to rigorously structure problems, understand involved stakeholders, utilize innovation motifs and analogical reasoning to develop robust views of potential solutions spaces, tailor solution design to stakeholder context, consider the full suite of functional, social, and emotional dimensions that could influence solution prioritization, and document and systematically assess underlying solution assumptions to iterate toward a viable and sustainable forward-looking plan that could achieve target outcomes. This course counts toward, serves as a required entry course for, the College of Engineering Minor in Innovation and Transformational Change.

Learning Outcomes: 1. Develop working knowledge of established innovation forms and motifs. 2. Demonstrate ability to link innovation motifs to specific classes of problems. 3. Understand, and be able to pursue, the core aspects of an end-to-end innovation process. 4. Recognize the mental models, mindsets and behaviors of innovators. 5. Gain awareness of the approaches various forms of organizations take to systematically innovate. 6. Acquire leadership and communication skills through teamwork, oral presentations, and written deliverables. Credits: 3.00

ENGR 31000 - Engineering In Global Context (UCC: STS)

Credit Hours: 3.00. This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the

course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields. 2. Understand the historical development of engineering education and the engineering profession in the United States. 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering. 4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts. 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice. 6. Demonstrate written communication capabilities at the level of emerging or higher (as defined by the Purdue Core Curriculum guidelines). Credits: 3.00

ENGR 33099 - Cooperative Education Seminar II

Credit Hours: 1.00 or 2.00. This seminar is optional for Co-Op students when they are on campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Prerequisite: Student must have completed at least two Co-Op work terms. May be repeated once after the fourth work term. Can be taken for two credits subsequent to completing two back-to-back work terms. Instructor permission required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the engineering profession. 3. Receive feedback from the instructor and seminar participants. 4. Continue professional development. Credits: 1.00 or 2.00

ENGR 35000 - Cooperative Education Practice IV

Credit Hours: 1.00. A semester or summer of external, full time, related career experiences designed to enhance the student's preparedness for an intended career with business, industry or government agency. A comprehensive written report on the internship practice is required.

Credits: 1.00

ENGR 36099 - Learning While Working Full-Time Co-Op II

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 36199 - Learning While Working Part-Time Co-Op I

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-

20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 36299 - Learning While Working Part-Time Co-Op II

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 37399 - Professional Practice Flex Co-Op III

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. In the Flex Co-Op program, students must work for their first employer for a minimum of two work sessions, and then have the option to continue for one-to-three additional work sessions; or, after completing two work sessions with the first employer, the student may elect to start with a second employer. If the student elects to change employers, they must notify their first employer and their Faculty Coordinator in writing at the conclusion of the second work session. The student must commit to work for the second Co-Op employer for a minimum of two work sessions. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses course outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a technical report written by the student summarizing their experience. Credits: 0.00

ENGR 37499 - Professional Practice Flex Co-Op IV

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. In the Flex Co-Op program, students must work for their first employer for a minimum of two work sessions, and then have the option to continue for one-to-three additional work sessions; or, after completing two work sessions with the first employer, the student may elect to start with a second employer. If the student elects to change employers, they must notify their first employer and their Faculty Coordinator in writing at the conclusion of the second work session. The student must commit to work for the second Co-Op employer for a minimum of two work sessions. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses course outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a technical report written by

the student summarizing their experience. Credits: 0.00

ENGR 37599 - Professional Practice Flex Co-Op V

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. In the Flex Co-Op program, students must work for their first employer for a minimum of two work sessions, and then have the option to continue for one-to-three additional work sessions; or, after completing two work sessions with the first employer, the student may elect to start with a second employer. If the student elects to change employers, they must notify their first employer and their Faculty Coordinator in writing at the conclusion of the second work session. The student must commit to work for the second Co-Op employer for a minimum of two work sessions. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses course outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a technical report written by the student summarizing their experience. Credits: 0.00

ENGR 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of Instructor required.

Learning Outcomes: 1. The Director of the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students after each academic work session b) assess course outcomes via student evaluation of work sessions, supervisor evaluation of student and work session technical report Credits: 0.00

ENGR 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of Instructor required.

Learning Outcomes: 1. The Director of the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students after each academic work session b) assess course outcomes via student evaluation of work sessions, supervisor evaluation of student and work session technical report Credits: 0.00

ENGR 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional experience in Engineering. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of Instructor required.

Learning Outcomes: 1. The Director of the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students after each academic work session b) assess course outcomes via student evaluation of work sessions, supervisor evaluation of student and work session technical report Credits: 0.00

ENGR 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ENGR 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in engineering.

Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ENGR 39501 - Breakthrough Thinking Complex Challenges

Credit Hours: 3.00. This course is intended to help students understand and effectively employ the principles underlying breakthrough thinking. Students will participate in cross-disciplinary teams to design solutions to a complex societal challenge in conjunction with a partner organization, in an experiential learning setting. Case discussions of historical breakthroughs will be used to introduce techniques for the identification of opportunities, the design of solutions, and the launch, test, and iteration of such solutions. Emphasis will be placed on the effective use of techniques from various fields, such as business, design, problem-solving, engineering, and the social sciences.

Credits: 3.00

ENGR 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ENGR 39600 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the junior level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 0.00 to 6.00

ENGR 39602 - Undergraduate Experiential Training - Research

Credit Hours: 0.00. This course is meant to promote meaningful reflection on the different experiential learning research environments a student may participate in such as Summer Undergraduate Research Fellowship and Research for Pay internship. Additional data will be collected on each student's experience regarding pay, project, position, etc. Assignments will include goal setting, goal evaluation, reflection, and resume writing. Guidance will be provided within the Brightspace page and throughout the pre/post-experience survey assignments. Permission of instructor required.

Learning Outcomes: 1. Have enhanced critical thinking, problem-solving skills, and intellectual growth. 2. Gain practical skills, research methodologies, and confidence in their abilities. 3. Be better prepared for graduate studies. Credits: 0.00

ENGR 39603 - Undergraduate Experiential Training - Semiconductors

Credit Hours: 0.00. This course is meant to promote meaningful reflection on the different experiential learning environments a student may participate in which focus on workforce development and the acquisition and practice of technical skills. This course will supplement the Summer Training Awareness & Readiness for Semiconductions (STARS) program. Additional data will be collected on each student's experience regarding pay, project, position, etc. Assignments will include goal setting, goal evaluation, reflection, public speaking as it relates to the workforce domain, and resume writing in addition to industry/sector-specific technical training. Guidance will be provided within the Brightspace page and throughout the pre/post-experience survey assignments. Permission of instructor required.

Learning Outcomes: 1. Have enhanced critical thinking, problem-solving skills, and intellectual growth. 2. Gain practical skills, research methodologies, and confidence in their abilities. 3. Be better prepared for the semiconductor sector-specific technical training. Credits: 0.00

ENGR 39697 - Global Engineering Projects

Credit Hours: 1.00 to 3.00. Students will work in teams to formulate solutions to engineering problems. Project topics will focus on a problem outside the U.S. and/or incorporate teammates from international universities. International teams may work remotely with the possibility for international travel and in-person collaboration. Permission of instructor required.

Learning Outcomes: 1. Obtain practical skills through engagement in a real-life project utilizing engineering principles. 2. Enhance communication and teamwork skills through experience working on a diverse team. Credits: 1.00 to 3.00

ENGR 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students submit a summary report and company evaluation. Permission of Instructor required.

Learning Outcomes: 1. The Director of the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students after each academic work session b) assess course outcomes via student evaluation of work sessions, supervisor evaluation of student and work session technical report Credits: 0.00

ENGR 39700 - Global Engineering Experience

Credit Hours: 1.00. Forum for students participating in an international internship or study abroad experience. Students will complete weekly guided writing assignments during the first 15 weeks of their international experience. Assignments will aid students with integration into the host community. Students will demonstrate increased awareness of the nature and complexities of intercultural communication by applying various theories to their lived experiences. To be taken concurrently with international internship/study abroad experience. Permission of instructor is required.

Learning Outcomes: 1. Apply cultural theories to their personal experiences. 2. Deepen understanding of cultural differences, inter-cultural communication and their cultural competency. 3. Develop strategies to bridge cultural gaps and the ability to identify, manage, communicate and apply emotions effectively and appropriately. 4. Understand challenges of studying or working in a foreign country and develop a strong ethical framework and cultural sensitivity to succeed in a global workplace. Credits: 1.00

ENGR 39799 - GEARE Domestic Internship

Credit Hours: 0.00. Domestic internship experience for GEARE program. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students to obtain professional practice with domestic employers within industry, government or small business. Permission of instructor required.

Learning Outcomes: 1. The Assistant Director of Global Professional Practice Programs in the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students through the requirements of the GEARE program requirements b) assess course outcomes via student evaluation of work sessions and work session technical report Credits: 0.00

ENGR 39899 - GEARE Global Internship

Credit Hours: 0.00. Global internship experience for GEARE program. Program coordinated by Office of Professional Practice with cooperation of participating employers. Students to obtain professional practice with global employers within industry, government or small business. Permission of instructor required.

Learning Outcomes: 1. The Assistant Director of Global Professional Practice Programs in the Office of Professional Practice serves as the facilitating body to: a) moderate the progress of students through the requirements of the GEARE program requirements b) assess course outcomes via student evaluation of work sessions and work session technical report Credits: 0.00

ENGR 40400 - Instruction, Mentorship And Leadership

Credit Hours: 1.00. This course provides students with valuable mentorship, leadership, and instructional opportunities through participation in the College of Engineering mentorship programs. The weekly seminar will feature a combination of student-led discussions, guest speakers, and practical team-building skills.

Learning Outcomes: 1. Articulate the core tenets of their own philosophy of mentorship. 2. Apply effective mentoring strategies to overcome the challenges of mentorship. 3. Evaluate their own mentorship ability and style, as well as evaluate their own mentorship needs. 4. Build effective relationships with mentees. Credits: 1.00

ENGR 40600 - Engineering Ambassador Leadership Seminar

Credit Hours: 1.00. Students will engage in a weekly seminar that includes topics such as leadership, professional skills, teamwork, and Purdue culture. Students will utilize these skills while representing Purdue College of Engineering to current and prospective students, alumni, donors, legislators, and other supporters of Purdue College of Engineering. Student must be selected as a College of Engineering Ambassador; be currently enrolled full-time in the College of Engineering; have completed no less than three academic semesters at Purdue; have a cumulative GPA of 2.8 or higher. Permission of department required.

Learning Outcomes: 1. Provide students with theoretical and experiential basis from which they may acquire and enhance their knowledge and skills in the areas of: Leadership principles and models; Purdue structure, culture, and engineering education opportunities; Personal/professional effectiveness, including teamwork and public speaking. 2. Provide students with the opportunity to develop a personal philosophy of leadership that includes an understanding of self, others, and community. Credits: 1.00

ENGR 43099 - Cooperative Education Seminar III

Credit Hours: 1.00 or 2.00. This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Prerequisite: Student must have completed at least three Co-Op work terms. Can be taken for two credits subsequent to completing two back-to-back work terms. Instructor permission required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the engineering profession. 3. Learn for the experiences of other participants and apply that knowledge to the situation. Credits: 1.00 or 2.00

ENGR 46099 - Learning While Working Full-Time Co-Op III

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 46399 - Learning While Working Part-Time Co-Op III

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year

terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 46499 - Learning While Working Part-Time Co-Op IV

Credit Hours: 0.00. Co-Op is an academic program with oversight by assigned Faculty Coordinators who serve as the instructor for participating students. Learning While Working participants are undergraduate students who work part-time (10-20 hours per week) in paid computer science, engineering, polytechnic, or management positions during the academic year terms (fall and spring semesters) for an employer with a local operations or offering a remote work opportunity. During the summer term, Learning While Working students work in full-time positions at any location offered by the employer. During the academic year, Learning While Working students register for a full-time course load, and also for this zero-credit hour Learning While Working course. During the summer term, Learning While Working students register for a zero-credit hour Co-Op course. This course will help students set goals for their work experiences and reflect on skill growth and receive feedback from their employer supervisor and Purdue Co-Op supervisor. Prerequisite: Student must be eligible to participate in the Cooperative Education (Co-Op) program and have written documentation of valid work session with approved Co-Op employer. Permission of instructor required.

Learning Outcomes: 1. Set goals for a work experience. 2. Articulate how classroom learning is applied to the workplace. 3. Translate work experiences to their resume. 4. Articulate how the work experience improved skills such as communication, teamwork, and problem-solving. Credits: 0.00

ENGR 49001 - Breakthrough Thinking For Complex Challenges

Credit Hours: 3.00. This course helps students learn and effectively employ high-impact design principles and structured problem solving methods to address complex multi-stakeholder socio-technical challenges. Case discussions of historical and contemporary high impact solutions to complex challenges are used to introduce techniques to frame problems, structure ambiguity, intentionally design non-incremental solutions, and communicate, trial, and iterate solutions to drive adoption and multifaceted sustainability. Techniques are drawn from multiple schools of thought such as business, design, engineering, and the social sciences. Over the course of the term, multi-disciplinary student teams directly apply cumulative learning to address selected parts of a real-world complex societal challenge in close collaboration with a partner organization, in an experiential learning format. This course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation. Permission of instructor required.

Learning Outcomes: 1. Employ rigorous issue analysis methods to develop mutually-exclusive collectively-exhaustive structured inventories of the issues involved in a major challenge. 2. Understand stakeholder motivation and interpret the funds, services, and influence exchanged in stakeholder ecosystems. 3. Understand the benefits and limitations of qualitative and quantitative methods to identify and interpret stakeholder needs. 4. Gain familiarity with habit conversion methodologies and the role they can play in design activities. 5. Recognize the importance of empathy in solution design and apply structured ideation methods to engender empathy in designers. 6. Understand patterns of innovation success and the contextual circumstances in which they apply. 7. Understand combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 8. Discern the broader societal impacts of

design activities. 9. Develop robust assessments of the assumptions underlying new ideas and means to test those assumptions rapidly and at low cost. 10. Recognize and define influence paths and communication methods to drive awareness, consideration, conversion, and retention of new solutions. Credits: 3.00

ENGR 49400 - Women In Engineering Senior Seminar: Gender In The Workplace

Credit Hours: 1.00. This course provides junior and senior engineering students an opportunity to maximize their earning potential, promotion opportunities, and retention within engineering or related fields. Enrolled students will 1) become aware of and discuss solutions for internal and external barriers which can prevent women from reaching their greatest potential in the workforce; 2) enhance professional development and transition skills required to move successfully from an academic to professional environment; and 3) acquire skills and knowledge to serve as engineering role models/ambassadors for diverse populations. The content and activities of the course may be of particular interest to women. Permission by instructor required.

Learning Outcomes: 1. Identify and develop solutions to internal and external barriers which prevent attainment of career trajectory. 2. Define and apply professional and transition skills to move from academic to professional environment in order to improve the workforce experience and promotion opportunities. 3. Recognize and engage in engineering stewardship opportunities to build general public knowledge about the field of engineering. 4. Utilize coaching skills developed in class to assist themselves and others in making decisions/taking action. Credits: 1.00

ENGR 49600 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the senior level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 0.00 to 6.00

ENGR 49700 - Global Engineering Capstone

Credit Hours: 1.00. Forum for students returning from international internship and/or study abroad experience. Students will explore personal development resulting from the international experience as it relates to changes in world-view, understanding of culture, interpersonal skills and career aspirations. They will learn to highlight international experiences on resumes and in interviews. Students will apply and share their cultural knowledge through structured activities and summarize their entire global experience through a poster presentation. To be taken in semester following international internship/study abroad experience. Permission of instructor is required.

Learning Outcomes: 1. Identify skills gained through the international experience. 2. Able to highlight experiences on resumes and in interviews. 3. Apply skills to current and future inter-cultural situations and develop a strong ethical framework and cultural sensitivity to succeed in a global workplace. Credits: 1.00

EPCS 10100 - First Year Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and education organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project team for two or more semesters. First-year students participating in EPCS 10100 gain insight into the specific project, and more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected attend all team meetings. Under the mentorship of the team's sophomores, juniors and seniors they perform and report upon tasks consistent with their level of discipline expertise. May be repeated for credit.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand the design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on

multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EPCS 10200 - First Year Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). Participants in EPCS 10200 gain insight into the specific project, and more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected to attend all team meetings. Working with team's sophomores, juniors and seniors they perform and report upon tasks consistent with their level of discipline expertise. EPCS 10200 is offered for two credits and is intended for students who have exhibited significant achievement in EPCS 10100 and desire the level of responsibility that is appropriate for two credits. May be repeated for credit. Permission of department required.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate of the role that their discipline can play in social contexts. Credits: 2.00

EPCS 11100 - First Year Participation In EPICS I (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one-year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and education organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project team for two or more semesters. First-year students participating in EPCS gain insight into the specific project, and more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected to attend all team meetings. Under mentorship from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsibility. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 1.00

EPCS 12100 - First Year Participation In EPICS II (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and educational organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project for two or more semesters. First-year students participating in EPICS gain insight into the specific project, and more generally, into the design and development process. Under mentorship

from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Ability to apply material from their discipline to the design of community-based projects. 2. Understanding of design as a start-to-finish process. 3. Ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Awareness of the customer. 5. Ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Ability to communicate effectively with audiences with widely-varying backgrounds. 7. Awareness of professional ethics and responsibility. 8. Appreciation of the role that their discipline can play in social contexts. Credits: 1.00

EPCS 20100 - Sophomore Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). Sophomores participating in EPCS 20100 gain insight into the specific project, and, more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected attend all team meetings. Under the mentorship of the team's juniors and seniors they perform and report upon tasks consistent with their level of discipline expertise. EPCS 20100 is offered for one credit.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand the design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EPCS 20200 - Sophomore Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). Sophomores participating in EPCS 20100 gain insight into the specific project, and, more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected attend all team meetings. Under the mentorship of the team's juniors and seniors they perform and report upon tasks consistent with their level of discipline expertise. EPCS 20200 is offered for two credits. Permission of instructor required.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand the design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material

from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 40100 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100/EPCS 40200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 40100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EPCS 40200 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100 /40200 to fulfill capstone or design requirements where approved for their

major may be required to satisfy additional course requirements specified by their degree program. EPCS 40200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 41100 - Senior Design Participation In EPICS

Credit Hours: 1.00. Continuation of EPICS courses. Seniors using EPCS 41100 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 41100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 41100 and EPCS 41200 students. Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the first year, sophomores and juniors. May not be taken concurrently with EPCS 41200 .

Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsibility. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 1.00

EPCS 41200 - Senior Design Participation In EPICS

Credit Hours: 2.00. Continuation of EPICS courses. Seniors using EPCS 41200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 41200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 41100 and EPCS 41200 students. Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the first year, sophomores and juniors. May not be taken concurrently with EPCS 41100 .

Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsiblity. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 2.00

EPCS 49000 - EPICS Special Topics Course

Credit Hours: 1.00 to 3.00. Projects of special interest outside the scope and structure of the standard EPICS courses. Interested students seek a faculty advisor in their area of special

interest and together prepare a brief description of the work to be undertaken. Permission of instructor required.

Credits: 1.00 to 3.00

GEP 10000 - Global Design Team I

Credit Hours: 1.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required.

Learning Outcomes: 1. Real-world, full-cycle design experience in the context of a different culture and geographical region. 2. Increased global awareness and competence. 3. Global humanitarian impact. Credits: 1.00

GEP 20000 - Global Design Team II

Credit Hours: 0.00 to 2.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required.

Learning Outcomes: 1. Real-world, full-cycle design experience in the context of a different culture and geographical region. 2. Increased global awareness and competence. 3. Global humanitarian impact. Credits: 0.00 to 2.00

GEP 30000 - Global Design Team III

Credit Hours: 1.00 to 3.00. Global Design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required.

Learning Outcomes: 1. Real-world, full-cycle design experience in the context of a different culture and geographical region. 2. Increased global awareness and competence. 3. Global humanitarian impact. Credits: 1.00 to 3.00

GEP 40000 - Global Design Team IV

Credit Hours: 1.00 to 3.00. Global design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Learning Outcomes: 1. Real-world, full-cycle design experience in the context of a different culture and geographical region. 2. Increased global awareness and competence. 3. Global humanitarian impact. Credits: 1.00 to 3.00

VIP 17910 - First-Year Participation In Vertically Integrated Projects (VIP) Lim (UCC: STS)

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically integrated teams (first year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in a limited number of professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management,

intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies, and development tools. Permission of department required.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Apply engineering design to create a product that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 1.00

VIP 17911 - First Year Participation In Vertically Integrated Projects (VIP) I (UCC: STS)

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Apply engineering design to create a product that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design

experience in global, economic, environmental, and societal contexts. Credits: 1.00

VIP 17912 - First Year Participation In Vertically Integrated Projects (VIP) II

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 2.00

VIP 47930 - Senior Participation In Vertically Integrated Projects (VIP) Ext

Credit Hours: 3.00. This course provides an opportunity for

undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environment, and societal contexts. Credits: 3.00

First-Year Engineering

First-Year Engineering

First Year Engineering Program Requirements - Other Options

School of Aeronautics and Astronautics

Aeronautical and Astronautical Engineering

The curriculum emphasizes the disciplines of aerodynamics, aerospace systems, astrodynamics and space applications, propulsion, structures and materials, dynamics and control, and further provides courses that integrate these disciplines into the design of flight vehicles to perform the required mission.
The field of aeronautical and astronautical engineering addresses the challenging problems encountered in the design and operation of many types of aircraft, missiles, and space vehicles and places a constant demand on research and development groups for an even greater understanding of basic physical phenomena.
Employers from around the world contact the School of Aeronautics and Astronautics with information regarding positions available within their organizations.

Mission Statement

To serve the State of Indiana and our Nation by providing degree granting programs - recognized as innovative learning experiences - that prepare students to be exceptional, recognized contributors to aeronautical and astronautical engineering in industry, government laboratories and universities.
To develop and maintain quality graduate research programs in technical areas relevant to Aeronautics and Astronautics and to foster a collegial and challenging intellectual environment necessary to conduct enabling and breakthrough research for aerospace systems.

Graduate Information

For Graduate Information please see Aeronautics and Astronautics Graduate Program Information .

Aeronautical and Astronautical Engineering, BSAAE

Space Engineering Certificate

AAE 20000 - Undergraduate Sophomore Seminar

Credit Hours: 0.00. The courses are intended to provide a forum for guest speakers, organizational and informational meetings with undergraduates, and to provide a venue for discussion of professional development.

Learning Outcomes: 1. Learn the requirements for earning a BSAAE degree. 2. Learn advising and registration processes in AAE. 3. Learn professional ethics. 4. Learn current events in Aerospace Engineering. Credits: 0.00

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 20401 - Aeromechanics II Laboratory

Credit Hours: 1.00. Introduction to strain gauges, dial gauges, and photoelasticity. Tensile test. Torsion of solid and hollow propeller shafts. Stress concentration around skin cut-outs. Bending of symmetrical box wing beams. Combined axial and flexural test of aircraft stringers. Buckling of slender stringers.

Credits: 1.00

AAE 25100 - Introduction To Aerospace Design

Credit Hours: 3.00. The role of design in aerospace engineering. Introduction to aerodynamics, performance, propulsion, structures, stability and control, and weights. Layout and general arrangement of aerospace vehicles. Design concept generation and selection. Computational methods for design. Trade studies and graphical optimization. Conceptual design exercise involving aircraft, spacecraft, or both. Technical

presentations and communication for aerospace engineering.

Learning Outcomes: 1. Acquire and apply basic technical knowledge about aerospace engineering. 2. Develop intuition about aerospace engineering and aerospace vehicles. 3. Understand and implement the design process for aerospace systems. 4. Use computers in aerospace design. 5. Solve problems as part of a team. 6. Design an aerospace vehicle/system. 7. Give oral presentations and write technical reports required of design engineers. Credits: 3.00

AAE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

AAE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

AAE 30000 - Undergraduate Junior Seminar

Credit Hours: 0.00. The courses are intended to provide a forum for guest speakers, organizational and informational meetings with undergraduates, and to provide a venue for discussion of professional development.

Learning Outcomes: 1. Learn how to program options within the AAE degree and how to choose them. 2. Learn how to interview. 3. Learn how to get an internship or other engineering experience. 4. Learn professional ethics. 5. Learn about current events in Aerospace Engineering. Credits: 0.00

AAE 30100 - Signal Analysis For Aerospace Engineering

Credit Hours: 3.00. Signal processing and spectral analysis for aerospace engineering. Fourier and fast Fourier transforms. Vibration analysis; estimation of natural frequencies, wing vibrations. Introduction to linear circuits, operational amplifiers and filtering. Noise suppression.

Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain

boundary-layer flow properties. Credits: 3.00

AAE 33301 - Fluid Mechanics Laboratory

Credit Hours: 1.00. A laboratory course designed to illustrate various aerodynamic phenomena. Experiments in incompressible viscous flow; flow measurement and visualization; laminar and turbulent boundary layers; wakes.

Learning Outcomes: 1. Measure and differentiate between absolute, differential, and gauge pressure. 2. Make basic pressure and velocity measurements. 3. Utilize elementary flow visualization tools. 4. Deduce fluid physics information from flow visualization. 5. Calculate flow characteristics such as Reynolds number, friction factor, pressure and drag coefficient from laboratory measurements. 6. Identify and discuss foundation-level fluid phenomena including boundary layers, wakes, laminar to turbulent transition, turbulence, flow separation, drag on a body, and surface pressure distributions. 7. Design an experiment to meet a defined objective, conduct the experiment, analyze the data, and draw conclusions. Credits: 1.00

AAE 33400 - Aerodynamics

Credit Hours: 3.00. Incompressible airfoil and lifting line theory. Steady and unsteady, one-dimensional, linear and nonlinear flows. Normal shock waves. Steady, supersonic, two-dimensional linear and nonlinear flows. Oblique shock waves. Perturbation theory for wings and bodies. Design applications.

Credits: 3.00

AAE 33401 - Aerodynamics Laboratory

Credit Hours: 1.00. A laboratory course designed to illustrate various aerodynamic phenomena. Airfoil pressure distribution. Finite wing lift, drag, and moment. Supersonic flow around bodies. Shock waves.

Credits: 1.00

AAE 33800 - Thermal Sciences

Credit Hours: 3.00. A fundamental course covering a range of topics selected from the disciplines of engineering thermodynamics, fluid mechanics, heat transfer and combustion, with an emphasis on their application to propulsion. This is an entry level course to prepare students for advanced analysis of propulsion and energy systems. Upon completion of this course, students are expected to be able to apply fundamental principles to perform thermodynamic analysis for thermophysical problems involving fluid flow, heat transfer and combustion.

Learning Outcomes: 1. Identify types of problems from thermo-fluid systems. 2. Perform heat conduction analysis for steady and unsteady problems. 3. Perform analysis for radiation heat transfer. 4. Develop deeper understanding of the laws of thermodynamics and their applications to various problems. 5. Apply fundamentals of fluid mechanics to various fluid flow problems. 6. Analyze convection heat transfer problems. 7. Conduct analysis of simple combustion systems such as adiabatic or chemical equilibrium. 8. Analyze simple thermo-fluid systems using fundamentals we learn from the class. Credits: 3.00

AAE 33900 - Aerospace Propulsion

Credit Hours: 3.00. Survey of air-breathing and rocket propulsion systems for AAE students not in the propulsion option. Thermodynamic cycles, analysis of air-breathing systems and components. Rocket Equation, rocket cycles, liquid and solid propellants, chemical equilibrium.

Learning Outcomes: 1. Knowledge of propulsion applications that use gas turbine engines and rockets. 2. Understanding of the Brayton cycle and ability to calculate enthalpy and work balance. 3. Ability to solve mass, momentum, and energy balances using a control volume approach. 4. Ability to perform top-level performance and sizing calculations of gas turbine engines. 5. Ability to apply Euler's work equation to compressors and turbines to calculate work. 6. Ability to use the Rocket Equation to calculate impulse requirements and size rocket thrusters. Credits: 3.00

AAE 34000 - Dynamics And Vibrations

Credit Hours: 3.00. Kinematics and kinetics of particles and

rigid bodies. Topics include a particle in orbit, systems of particles, vibrations, Euler's equations of motion, Eulerian angles, and aerospace vehicle dynamics.

Learning Outcomes: 1. Analyze the free and forced response of a spring/mass/damper. 2. Formulate the EOMs of particles, systems of particles and rigid bodies. 3. Solve the EOMs numerically. 4. Understand the various forms of Euler angles and be able to apply them to rigid body dynamics. 5. Simulate the motion of a spacecraft in MATLAB. Credits: 3.00

AAE 35103 - Aerospace Systems Design

Credit Hours: 3.00. Aerospace system lifecycle and design process. Stakeholder needs elicitation and requirements generation. Quality function deployment and hierarchical objective trees. Concept generation and creativity techniques. Introduction to safety, risk, cost and value analysis. Critical evaluation of the applicability of systems engineering techniques in specific contexts. Application of these techniques to a team semester design project.

Learning Outcomes: 1. Identify appropriate tools, methods and processes to formulate an aerospace system design problem including realistic constraints from technical, economic, social, political, safety, and other relevant contexts. 2. Apply those tools, methods and processes to generate solutions to the aerospace system design problem. Credits: 3.00

AAE 35200 - Structural Analysis I

Credit Hours: 3.00. Properties of wing and fuselage sections. Beam-column moments. Torsion of thin-walled and skin-stringer multiple-cell sections. Nonsymmetrical bending of skin-stringer wing sections. Flexural shear in open and closed thin-walled and skin-stringer sections. Loads and stresses in the rib system. Cutouts and shear lag. Modified beam theory for wing and fuselage design. Deflection by energy method. Introduction to composite structures.

Learning Outcomes: 1. Use analytical/empirical tools for determining the distribution of load (or displacement) in typical aerospace components. 2. Understand and implement the procedures for relating applied loads (or displacements) to component "failure." 3. Select of materials to resist structural failure. 4. Be exposed to other professional development topics are also to be presented as time permits (e.g., technical communications, teamwork issues, economic considerations, engineering ethics, case histories, regulatory and certification, topics, etc.). Credits: 3.00

AAE 35201 - Structural Analysis I Laboratory

Credit Hours: 1.00. Location of shear center. Torsion of thin-walled open and closed sections. Torsion of multiple-cell, thin-walled section. Nonsymmetrical bending of skin-stringer cross section. Shear lag effect. Bending of composite beam.

Credits: 1.00

AAE 36400 - Control System Analysis

Credit Hours: 3.00. Modeling and analysis of dynamical systems with aerospace applications. Laplace transforms, transfer functions, block diagrams. Transient and steady-state response of dynamical systems. Root Locus, Bode, Nyquist methods for control systems analysis. Introduction to controller design.

Credits: 3.00

AAE 36401 - Control Systems Laboratory

Credit Hours: 1.00. Enhance student awareness of control systems by providing hands-on experience using dynamic systems representative of air and space vehicles. Design of a control system from start to finish by mapping requirements into control solutions through the process of modeling, identification, and controller design (PID and Lead-Lag).

Credits: 1.00

AAE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

AAE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

AAE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

AAE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

AAE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

AAE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

AAE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in aeronautics and astronautics. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

AAE 40000 - Undergraduate Senior Seminar

Credit Hours: 1.00. A lecture-demonstration series emphasizing evaluation of career options, identification and development of professional skills. Example of career-related topics include choosing a job, and post graduate education in engineering or other disciplines. Examples of professional skills topics covered include interviewing, writing, and ethics. Assessment of student achievement of AAE program learning outcomes.

Learning Outcomes: 1. Learn how to get a job 2. Learn how to get into graduate school (and why) 3. Learn how to succeed in the workplace 4. Learn about current events in Aerospace Engineering Credits: 1.00

AAE 41200 - Introduction To Computational Fluid Dynamics

Credit Hours: 3.00. Introductory course in the formulation and application of finite difference methods for solving fluid flow problems. Classification of partial differential equations and formulation of well-posed problems. Discrete approximation of partial differential equations: stability, consistency, and convergence. Finite-volume formulations. Survey of methods for solving hyperbolic, elliptic, and parabolic problems. Formulation of discrete boundary conditions. Application of methods to one- and two-dimensional flow problems.

Credits: 3.00

AAE 41600 - Viscous Flows

Credit Hours: 3.00. Navier-Stokes equations, boundary layer theory, frictional drag and heating, separation and transition. Turbulent flows. Computational methods for laminar and turbulent flows.

Credits: 3.00

AAE 41800 - Zero-Gravity Flight Experiment

Credit Hours: 3.00. Team-based design-build-test engineering experience to maximize the benefits of student participation in the NASA Reduced Gravity Student Flight Opportunity Program (or similar). Gravity, orbits, and weightlessness. Low-gravity capillary fluid physics, scaling laws, and components. Experiment design for multiple short zero gravity test times. Technical proposal writing, design for manufacturability, experiment fabrication, planning, testing, and execution.

Credits: 3.00

AAE 42100 - Flight Dynamics And Control

Credit Hours: 3.00. Flight vehicle rigid-body equations of motion; linearization via small perturbation techniques. Trim analysis, static and dynamic stability, aerodynamic stability derivatives and control effectiveness. Vehicle transfer functions, stability augmentation, aircraft handling qualities. Introduction to flexible vehicle effects.

Credits: 3.00

AAE 43200 - Orbital Analysis

Credit Hours: 3.00. The design and operation of spacecraft is a multidisciplinary endeavor covering many aspects of engineering. This course introduces the physics of the orbits and the space environment near the Earth as well as mission trajectory analysis including constraints, launch windows, ground tracks, some communications and tracking, some constellations, relative motion and contingencies.

Learning Outcomes: 1. Apply basic technical knowledge about spacecraft trajectory and architecture requirements. 2. Understand the physics and demonstrate intuition behind motion in space. 3. Design and characterize orbits. 4. Define launch geometry, time windows, and maneuvers to reach the operative orbits. 5. Retrieve orbital information from ground tracks and characterize spacecraft visibility from ground. Credits: 3.00

AAE 43800 - Air-Breathing Propulsion

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of propulsion systems for air-breathing aerospace vehicles. Ramjet, turbojet, turbofan and turboprop cycle analysis. Propeller analysis and design. Analysis of flow through inlets, combustors, nozzles, compressors, and turbines. Component matching. Not open to students with credit in ME 43800.

Learning Outcomes: 1. Determine the thrust and fuel consumption of gas turbine and turboprop engines. 2. Understand advantages/disadvantages of turbojet, turboprop, turbofan, and ramjet air-breathing propulsion systems. 3. Understand the thermodynamics of the Brayton cycle and how they contribute to overall propulsion system performance. 4. Understand the role and fundamental performance of gas turbine components. 5. Determine the basic performance and/or design of axial turbines and compressors. 6. Determine the basic performance of air breathing combustors.
Credits: 3.00

AAE 43900 - Rocket Propulsion

Credit Hours: 3.00. Flight mechanics and the propulsion system requirements for terrestrial and interplanetary flight. Converging-diverging nozzle analysis and design. Thermochemistry of propellants and performance calculations. Solid rocket motor interior ballistics and design. Thrust chamber and turbo machinery analysis and design. Liquid rocket engine cycle analysis and design. Elements of nuclear and electric propulsion systems.

Learning Outcomes: 1. Determine the thrust and fuel consumption of gas turbine and turbo prop engines. 2. Understand advantages/disadvantages of turbojet, turboprop, turbofan, and ramjet air-breathing propulsion systems. 3. Understand the thermodynamics of the Brayton cycle and how they contribute to overall propulsion system performance. 4. Understand the role and

fundamental performance of gas turbine components. 5. Determine the basic performance and/or design of axial turbines and compressors. 6. Determine the basic performance of air-breathing combustors. Credits: 3.00

AAE 44000 - Spacecraft Attitude Dynamics

Credit Hours: 3.00. Description of orientation, angular velocity, and angular acceleration in terms of direction cosines, Euler parameters, and angles. Forces and moments acting on space vehicles. Attitude stability of various types of satellites in circular and elliptic orbits. Spin stabilization and gravity gradient torques. Gyroscopic devices and energy dissipation. Introduction to attitude control.

Credits: 3.00

AAE 45000 - Spacecraft Design

Credit Hours: 3.00. Senior students perform a team-based spacecraft design, requiring application of the education and skills developed in the aerospace curriculum. Components include analysis methods for preliminary design, development of an initial vehicle concept, and development of a complete numerical model of the mission, culminating in oral and written reports by the teams.

Learning Outcomes: 1. Understand and implement the design process for aerospace systems. 2. Solve problems as part of a team. 3. Conduct open-ended, iterative tasks associated with spacecraft, rocket and mission design and system integration. 4. Properly integrate a variety of systems and sub-systems within a spacecraft, rocket and mission to demonstrate design feasibility. 5. Demonstrate design viability through testing, both real and virtual. 6. Prioritize design requirements and organize work schedules. 7. Use formal, structured design methods to develop superior products that meet or surpass customer expectations. 8. Give oral presentations and write technical reports required of design engineers. Credits: 3.00

AAE 45100 - Aircraft Design

Credit Hours: 3.00. Senior students perform a team-based aircraft design, requiring application of the education and skills developed in the aerospace curriculum. Aircraft mission requirements include engine cycle selection and airframe/engine integration, performance, stability and control, structures, human factors, avionics, sensors, and manufacturing processes. The teams present oral and written reports on their designs.

Learning Outcomes: 1. Deepen your knowledge of topics relevant to aircraft design. 2. Identify and formulate the design requirements for an aircraft. 3. Conduct a set of trade studies to make decisions about the aircraft design. 4. Describe an aircraft design that is likely to meet the set of requirements. 5. Use modern engineering tools to complete the design process. 6. Apply engineering knowledge and skills acquired in previous classes to the design problem. 7. Solve problems as part of a team. Credits: 3.00

AAE 45400 - Design Of Aerospace Structures

Credit Hours: 3.00. Design/failure criteria for aerospace structures, materials selection, introduction to manufacturing methods, structural assemblies, component details, concurrent engineering, and interdisciplinary design teams.

Credits: 3.00

AAE 49000 - Special Problems In Aeronautical Engineering

Credit Hours: 0.00 to 18.00. Hours and credit to be arranged. Permission of instructor required.

Credits: 0.00 to 18.00

AAE 49700 - Independent Study In Aerospace Engineering

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance or of special interest outside the scope of the standard undergraduate curriculum. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. Permission of instructor required.

Credits: 0.00 to 6.00

Department of Agricultural and Biological Engineering

All information is available at the main department:

Department of Agricultural and Biological Engineering

Weldon School of Biomedical Engineering

Biomedical Engineering

Students in the Weldon School of Biomedical Engineering learn to apply tools from engineering and life sciences to design solutions for challenges in human biology, medicine, and healthcare delivery.
Biomedical Engineering students complete coursework in math, physics, chemistry and the life science in combination with engineering principles and design courses to understand the physical and chemical properties of human tissues, computational modeling and analyses of biomedical data, molecular transport, biomechanics, human physiology, and biomedical systems and instrumentation. Essential experiential and practical training includes small group problem-based and inquiry-based learning, study abroad programs, internships with a broad range of medically related companies, research in faculty labs, and engineering design projects to solve real medical needs.
The home of the Weldon School of Biomedical Engineering is the Martin C. Jischke Hall of Biomedical Engineering (MJIS), a $25M, 91,000 sq. ft. facility opened in 2006. This state-of-the-art building is specifically designed to enhance both teaching and research. In 2019, an $18M, 30,000 sq. ft. Innovation Wing was added to support the continued growth of biomedical engineering in the 21st century.
Programs of focus and faculty expertise include imaging, instrumentation, engineered biomaterials and biomechanics, and quantitative cellular and systems engineering.

Biomedical Engineering, BSBME

BME 19500 - Selected Topics In Biomedical Engineering

Credit Hours: 0.00 to 4.00. Specialized topic areas in BME for which there are not specific courses, workshops, or individual study plans, but having sufficient student interest to justify the formalized teaching of a course.

Learning Outcomes: 1. Students will gain knowledge of topics relevant to the practice and research in Biomedical Engineering. Credits: 0.00 to 4.00

BME 20200 - Thermodynamics In Biomedical Engineering

Credit Hours: 3.00. The major objective for this course is to understand and exploit basic principles of thermodynamics as they apply to biological systems and biological processes.

Specifically, the course will focus on biological processes across scales: from the nanometer scale of biomolecules, the micrometer scale of cells, the millimeter and meter scales of tissues and organisms, all the way up to the 100+ meter scale for bioprocess equipment and industry-scale production with a focus on dynamic behaviors of systems. The course can be loosely classified into two parts: (i) guiding principles and fundamental equations for thermodynamics in biological and biomedical engineering, and (ii) applications of engineering principles to the study of biological systems.

Learning Outcomes: 1. Understand basic principles of Mass, Energy, and Entropy balance equations that describe thermodynamic processes. (SO 1, 6, 7) 2. Apply the following concepts to solve problems in the biological engineering and biomedical engineering disciplines: First & Second Law of Thermodynamics; Open vs closed systems; Balances of mass, heat, work, and entropy/energy flow; Reversibility/irreversibility. (SO 1, 6, 7) 3. Gain knowledge of main factors that determine numerical values of physical-chemical properties associated with bioprocesses. (SO 7) 4. Solve problems for thermodynamic processes using the computer. (SO 1, 2, 5, 7) 5. Develop the attitudinal dimensions of computational thinking: Confidence in dealing with complexity; Persistence in working with difficult problems; Tolerance for ambiguity; The ability to deal with open-ended problems; The ability to communicate and work with others to achieve a common goal or solution. (SO 2) 6. Gain experience in working with non-linear systems and systems away from equilibrium. (SO 1, 6) Credits: 3.00

BME 21400 - Introduction To Biomechanical Analysis

Credit Hours: 3.00. The goal of this course is to provide a foundation in biomechanics (analysis of forces, moments, and stresses) that will allow students to quantify the loads in the skeleton as well as design surgical tools and total joint replacements. In addition to the topics on vectors, particle equilibrium, and rigid body mechanics one would expect in a classical mechanics course, biomedical engineers must also have a working knowledge of skeletal anatomy. Consequently, anatomical descriptions and anthropometric data will be incorporated throughout the course. As part of the implant design, students will also be introduced to more advanced topics in mechanics such as Hertz contact theory, shear-lag theory, and composite beam theory.

Learning Outcomes: 1. Understand particle statics, rigid body statics, and the mechanics of deformable solids and their applications to problems in orthopedics. 2. Analyze selected biomechanical systems and measurements at a range of biologically relevant length scales. 3. Evaluate quality and reliability of assumptions and methods used in selected biomechanics applications. Credits: 3.00

BME 21401 - Biomechanical Analysis Laboratory

Credit Hours: 1.00. This course provides hands-on training in engineering and biological principles of biomechanics. Topics include translation of theoretical vector and equilibrium calculations to three-dimensional body problems, computer aided design and finite element analysis, harvest and storage of biological samples, and tension, compression and bending testing with mechanical testers. A design project reinforces the mechanical testing skills learned in class, combining skill-building in group work and experimental design. This course will prepare students for deeper study of biomechanics.

Learning Outcomes: 1. Describe the importance of regulatory guidance documents and voluntary consensus standards as they relate to the design, development, and testing of new therapeutic and diagnostic devices. 2. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts (SO 4). 3. Implement the experimental design process, including proper maintenance of a design laboratory notebook and use of appropriate statistical analysis methods, as it applies to mechanical performance of materials used for medical device design (SO 6). 4. Employ fundamental tools, testing procedures,

and analyses relevant to computer-assisted design (CAD), FEA, and biomechanics, for rapid prototype development, analysis of mechanical properties of tissues, materials, and devices (SO 7). 5. Reflect on your knowledge and experiences that contribute to your understanding of what it means to be an engineer. Credits: 1.00

BME 22000 - Biomolecules: Structure, Function, And Engineering Applications

Credit Hours: 3.00. Classes of molecules (biomolecules) such as sugars, lipids, proteins, and nucleic acids that form the cellular components of living organisms. Explores the chemistry behind the structure and function of these important classes of biological molecules. Hydrogen-bonding, hydrophobic forces, electrostatic interactions along with other weak interactions discussed with reference to their importance in biomolecular systems in an engineering context.

Learning Outcomes: 1. Describe the importance of regulatory guidance documents and voluntary consensus standards as they relate to the design, development, and testing of new therapeutic and diagnostic devices. Credits: 3.00

BME 22201 - Introductory Biomeasurements

Credit Hours: 3.00. The foundations of basic circuit theory are introduced including voltage-current characteristics of resistive and reactive elements, Ohm's and Kirchhoff's Laws, equivalent sources, transformations and superposition, transient response, instantaneous and average power, AC impedance, dynamic response of first and second order systems. Permission of department required.

Credits: 3.00

BME 22400 - Biomeasurements Lab

Credit Hours: 1.00. Laboratory exercises will reinforce the foundations of basic circuit theory. Electronic instruments are used in the context of biomedical signal measurement and processing and include the use of oscilloscopes, function generators, transducers, electrodes, biopotential amplifiers and digital data collection and analysis. Laboratory exercises utilize industrially relevant instruments for measurement and acquisition of time varying signals arising from electronic and bioelectric sources. Permission of department required.

Credits: 1.00

BME 23100 - Bioinstrumentation and Circuit Theory

Credit Hours: 3.00. In this course, we'll delve into the core principles of circuit theory, covering topics such as voltage-current relationships in resistive and reactive components, Ohm's Law, Kirchhoff's Laws, and source equivalency. We will also explore advanced concepts like transient responses, AC impedance, and the dynamic behavior of first and second-order systems. Students will gain proficiency in phasor analysis of sinusoidal signals, complex number calculations, signal sampling, and spectral analysis. We'll also touch on linear time-invariant systems, frequency response, and both the design and implementation of filters. A portion of the course will focus on control systems via the s-domain. To enrich your understanding and skill set, we will also introduce programming through Python, which will facilitate data processing and deepen your conceptual grasp. This course serves as a preparatory steppingstone for BME 33000 (Bioelectricity), equipping you with the essential physics knowledge and skills required for more advanced studies.

Learning Outcomes: 1. Reflect on your knowledge and experiences that contribute to your understanding of what it means to be an engineer. Credits: 3.00

BME 23101 - Bioinstrumentation and Circuit Theory Lab

Credit Hours: 1.00. Introduction of laboratory instruments used to measure physiological events. Stimulation and conduction of electric signals within the mammalian nervous system and other excitable tissues are demonstrated. Fundamental circuit elements and concepts include resistance, capacitance, inductance, op-amps, impedance, voltage, current, power, and frequency, following the content introduced in BME 231. Fundamental analog measurement concepts include adequate bandwidth and amplitude and phase linearity. Integrative design project emphasizes the practical aspects of quantitative physiological measurements. This course is to prepare learners with sufficient physics knowledge and lab skills to pursue the Bioinstrumentation and Imaging Depth Areas. Moreover, students are introduced to programming (using Python) to deepen the understanding of basic concepts and learn basic skills in data processing. SPICE software will be used throughout the course to design/simulate various analog circuits.

Learning Outcomes: 1. Appraise the validity of established bioelectricity hypotheses and circuit models based on quantitative physiological measurements. 2. Document procedures,

measurements, and subsequent data analysis in clear and cohesive laboratory reports. 3. Design an analog bioinstrumentation measurement system meeting prescribed specifications to accurately record a physiological event. 4. Design and simulate analog circuits using SPICE. 5. Create simple Python code to plot, analyze, and denoise physiological data. Build functions to simulate a simple bioinstrumentation system. 6. Recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. Credits: 1.00

BME 24101 - Introductory Biomechanics

Credit Hours: 3.00. This course uses didactic lecture material to introduce students to the principles of mechanics and how these concepts apply to musculoskeletal tissues. Permission of department required.

Credits: 3.00

BME 24300 - Biomechanics Laboratory

Credit Hours: 1.00. This course uses laboratory experiments to introduce students to the principles of mechanics and how these concepts apply to musculoskeletal tissues. Permission of department required.

Credits: 1.00

BME 25600 - Physiological Modeling In Human Health

Credit Hours: 3.00. Introduction to the physiology and medicine underlying practical problems in biomedical engineering, especially with respect to medical device development. Engineering skills taught and practiced within the context of human disease, injury, and illness on extended problem sets which include mathematical modeling and problem solving with appropriate documentation. Main physiological systems of focus are cardiovascular, pulmonary, and renal, and common afflictions thereof.

Learning Outcomes: 1. Understand the physiology and medicine underlying practical problems in biomedical engineering, especially with respect to medical device development. 2. Understand the process of mathematical modeling of human anatomy and physiology, including technical description of objectives, methods, results, and conclusions from modeling exercises. Credits: 3.00

BME 28000 - Frontiers In Biomedical Engineering

Credit Hours: 1.00. This course introduces the rapidly emerging field of biomedical engineering by exposing students to a wide range of research activities in the Weldon School and to a variety of experiential learning opportunities. Topics addressed include career paths, professional development opportunities, and career development skills including creating a plan of study, informational and job interviewing, writing a resume, technical writing, preparing effective oral presentations, and peer-editing.

Learning Outcomes: 1. Construct a logical and articulate argument in written format from independent collection of information. 2. Construct and deliver a logical and articulate oral presentation based on independent collection of information. 3. Evaluate oral and/or written presentations for clarity and content. 4. Identify and/or describe how biomedical engineering solutions affect society 5. Identify multiple career pathways that are available to a biomedical engineer. 6. Recognize opportunities that enhance professional career development. 7. Recognize contemporary issues impacting biomedical engineering. Credits: 1.00

BME 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in biomedical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the

profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

BME 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in biomedical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

BME 29500 - Selected Topics In Biomedical Engineering

Credit Hours: 1.00 to 4.00. Specialized topic areas for which there are no specific courses, workshops, or individual study plans, but having sufficient interest to justify the formalized teaching of a course. Permission of instructor required.

Credits: 1.00 to 4.00

BME 29600 - Biomedical Engineering Projects

Credit Hours: 1.00 to 4.00. Individual research projects to be approved by the supervising faculty member before registering for the course. An approved written report is required. Permission of instructor required.

Credits: 1.00 to 4.00

BME 30200 - Professional Development And Design In Biomedical Engineering

Credit Hours: 2.00. This course explores design, career, and professional topics in Biomedical Engineering. To prepare students for capstone and engineering practice, students will engage in case study design encompassing conceptualization, requirements generation and system design. Essential design elements such as user need, ideation, constraints, regulatory, and documentation will be reviewed and applied. Additional career and professional topics include resume writing, interviewing, and professional conduct; post-graduate education and life-long learning; and industrial, clinical, and research opportunities in Biomedical Engineering.

Credits: 2.00

BME 31300 - Biofluid Mechanics

Credit Hours: 3.00. Fundamental concepts and principles of fluid mechanics in the context of biomedical applications. Governing equations of flow and transport are derived from the first principles and applied to conditions characteristic of the human circulatory system.

Learning Outcomes: 1. Formulate differential equations and determine appropriate boundary conditions to model biomedical fluid mechanics problems. 2. Apply conservation laws of flow physics to describe the fluid flow in various geometries, particularly for flow in a cylindrical tube. 3. Recognize and quantitatively describe flow conditions characteristic of blood flow in human circulation in health and disease. Credits: 3.00

BME 31400 - Experimental Methods In Biomechanics

Credit Hours: 3.00. This course focuses on the concepts and applications of mechanics, imaging, and instrumentation methods towards evaluating experimental biomechanics at multiple length scales. Core concepts include mechanics of materials, dynamics, contact theory, and the simplifying assumptions and standardizations often needed to conduct experiments on biomaterials and living systems. Experimental methods may include atomic force microscopy, digital image correlation, and motion analysis.

Learning Outcomes: 1. Understand solid mechanics and dynamics principles and concepts underlying experimental methods. 2. Apply mathematical equations and underlying assumptions of biomechanics to experimental methods. 3. Analyze selected biomechanical systems and measurements across a range of relevant length scales. 4. Evaluate quality and reliability of assumptions and methods used in selected biomechanics applications. Credits: 3.00

BME 32000 - Introduction To Biomaterials Science And Engineering

Credit Hours: 3.00. This junior-level course will introduce fundamental materials science and biomaterial concepts to BME students and will lay the foundation for more advanced courses in biomaterials and tissue engineering. The course will introduce the vocabulary and technical concepts in biomaterials science relevant for problems in medical device, biotechnology, or biomaterials industries. The course material will present phenomena at the intersection of materials science and biology.

Learning Outcomes: 1. Identify the basic classes of biomaterials and understand their chemical makeup. 2. Understand the relationship between chemical structure and biomaterial properties. 3. Understand interactions of implantable biomaterials with proteins and cells. 4. Describe the major components of the biological response to implanted materials. 5. Select basic in vitro and in vivo tests to evaluate material biocompatibility. 6. Understand regulations and standards that dictate biomaterial testing. Credits: 3.00

BME 32001 - Biomolecules And Biomaterials Laboratory

Credit Hours: 1.00. Introductory laboratory experience focused on engineering concepts and practices in the analysis of biomolecules and cells. Topics include fundamental quantitative techniques of analysis, methods of isolation, identification, and quantification of biomolecules and cells, and analysis of integrated biosystems. Concludes with student-driven design project.

Learning Outcomes: 1. Independently describe the theoretical basis of, and put into practice, fundamental analytical tools and techniques used in the isolation, characterization, and quantification of biomolecules and cells. 2. Collect, record, process, statistically analyze and report experimental data related to the analysis of biomolecules and cells in an accurate and understandable manner. 3. Conceptually design a simple analytical method and/or tool for solving a medically-relevant problem based upon detection/analysis of a specific biomolecular or cellular related abnormality. Credits: 1.00

BME 32200 - Probability, Statistics, And Applications In Biomedical Engineering

Credit Hours: 3.00. Probability theory and statistical methods are developed for life science applications. Analytical tools such as hypothesis testing, estimation of moments, sampling theory, correlation and spectral analysis are developed and applied to identifying underlying processes in biological systems, developing realistic models of physiological processes, designing experiments, and interpreting biological data.

Learning Outcomes: 1. Solve probability problems with biomedical engineering applications using the basic axioms of probability (1). 2. Describe the fundamental properties of probability density functions with applications to single and multivariate random variables (1,6). 3. Describe the functional characteristics of probability density function frequently encountered in life-science research such as the Binomial, Uniform, Gaussian, and Poisson (1,6). 4. Calculate confidence intervals and levels of statistical significance using fundamental measures of expectation and variance for a given biological data set (6). 5. Quantify the correlation between sets of random processes for given mathematical functions and biological data sets (1,6). 6. Identify the distribution function underlying a given biological process or medical application (1,6). 7. Model and describe behavior of biological systems by means of random processes (1,3). 8. Apply basic statistical concepts including descriptive statistics, Bayes Theorem, statistical inference, and hypothesis testing to biological and medical systems (1). 9. Design a statistical experiment using appropriate control and test conditions (1,6). 10. Apply statistical tools (e.g. Student's t-test) to interpret experimental results (1,6). 11. Apply statistics testing to the evaluation and acceptance of medical

processes, devices, and systems (1). Credits: 3.00

BME 33000 - Bioelectricity

Credit Hours: 3.00. Fundamentals of bioelectricity of the mammalian nervous system and other excitable tissues. Passive and active forms of electric signals in both the single cell and cell-cell communication, tissue and systematic bioelectricity, mathematical analysis including Nernst equation, Goldman equation, linear cable theory, and Hodgkin-Huxley Model of action potential generation and propagation.

Learning Outcomes: 1. Examine, describe, and solve membrane models underlying bioelectrical function and physiology. This includes but is not limited to ion-channel dynamics, membrane filtering, sub-threshold signaling, action-potential generation and propagation, chemical signaling, and basic neural circuit dynamics. 2. Formulate and appreciate the intricate similarities between silicon circuits and biological circuits. Specifically, by interfacing the two in simple recording and stimulation experiments. Furthermore, this objective will also introduce the students to instrumentation techniques to map currents and voltages from cells. 3. Solidify basic quantitative techniques in solving bioelectrical dynamics. This includes but is not limited to the use of ODE's and PDE's in solving signal propagation, Hodgkin-Huxley dynamics, and neural circuit dynamics. Overall, this will provide a sound theoretical framework to begin exploring electrophysiological devices with biomedical engineering applications.

Credits: 3.00

BME 33100 - Biosignals And Systems

Credit Hours: 3.00. This course applies mathematical analysis tools to biological signals and systems. Frequency analysis, Fourier and Laplace transforms, and state equations are used to represent and analyze continuous and discrete-time biosignals. Classic feedback analysis tools are applied to biological systems that rely on negative feedback for control and homeostasis.

Learning Outcomes: 1. Understand how media influence perceptions of political issues and events. 2. Recognize the importance of media in the formation and maintenance of individual attitudes and public opinion. 3. Create and analyze political messages in the context of campaigns. 4. Understand gender, race, ethnicity, sexual orientation, and other forms of diversity in relation to mass and political communications. 5. Write correctly and clearly in forms and styles appropriate for communications professions and audiences.

Credits: 3.00

BME 33400 - Biomedical Computing

Credit Hours: 3.00. This course explores computational approaches to analyzing biological data and solving biological problems. Students will fit and interpret biological data, apply probabilistic and differential equation modeling techniques to biological processes, and assess numerical tools for biomedical applications. Special attention is given to the built-in analysis functions of MATLAB.

Credits: 3.00

BME 35200 - Cell And Tissue Mechanics

Credit Hours: 3.00. This course will explore the biological principles of cellular/tissue behaviors and properties. Topics include: fundamental concepts of cellular structure and tissue organization, biomolecular elements and their properties, cell shape, cell adhesion and migration, mechanotransduction, pattern formation in embryos, and stem cell and tissue regeneration.

Credits: 3.00

BME 35400 - Cell And Tissue Laboratory

Credit Hours: 1.00. This course develops quantitative biomechanical methods to analyze cell/tissue behavior and properties and to solve biomechanical engineering problems. Topics include: bio viscoelasticity, failure, filament dynamics, membrane dynamics, biofluid dynamics, cellular dynamics, and tissue dynamics.

Credits: 1.00

BME 35600 - Mathematical Models And Methods In Physiology

Credit Hours: 3.00. This course uses real-world engineering problems to introduce advanced analytical tools and concepts

relevant to biomedical engineering design. Each topic is briefly introduced, and students work in small teams to investigate physical mechanisms involving human anatomy and physiology using mathematical models and methods. Group work is done during scheduled class periods and other times by arrangement. Topics include brain concussions and protective helmets, origin of the electrocardiogram and bi-ventricular pacing, and deep brain stimulation for Parkinson's disease. Mathematical methods include coupled linear and nonlinear differential equations, finite element analysis, and simulated annealing. Creation of custom computer code is required. Students prepare extensive and detailed written technical reports. A midterm and a final examination encourage individual accountability and understanding.

Learning Outcomes: 1. Accurately describe, with proper use and pronunciation of medical terms, the anatomy of a selected body organ or system, and a related disease process after independently conducting research using resources from various sources including the Internet. 2. Create a useful biomechanical model of a body organ or tissue, describing the function of the body organ system in terms of algebra, calculus, and/or governing differential equations, evaluating constants in mathematical models on the basis standard normal physiology and routine medical observations. 3. Write full length technical research progress reports and discuss the strengths and limitations of a particular mathematical model, with graphs and charts and a comprehensive bibliography of relevant research literature. 4. Correctly solve equations, including second order, linear differential equations, and systems of equations, including coupled linear or nonlinear differential equations, by the method of undetermined coefficients, via programming in MATLAB or a suitable computational engine including the use of arrays and subroutines. 5. Effectively work in diverse teams, both face-to-face and online, to enhance productivity and eliminate errors, while reconciling theoretical calculations with experimental observations and validating mathematical models by comparison with known analytical solutions. Credits: 3.00

BME 35700 - Foundations Of Biomedical Data Science

Credit Hours: 3.00. This course presents foundational data science methods for analysis of complex biological datasets encountered in biomedical engineering research and applications. After a brief (1-2 weeks) introduction and review of mathematical concepts necessary for data science, the course will cover representative areas of regression, supervised machine learning, unsupervised machine learning, model evaluation, and uncertainty quantification. Assignments and exams will focus on practical examples spanning basic science, engineering, and medical applications.

Learning Outcomes: 1. Identify the appropriate statistical tests to analyze data fitting a given probability distribution. 2. Propose an analysis plan for large datasets that tests a hypothesis or answers an exploratory analysis question. 3. Implement the appropriate computational model for their analysis plan and interpret the model results with appropriate consideration of uncertainty. Credits: 3.00

BME 36000 - Introduction To Biomedical Imaging

Credit Hours: 3.00. The main focus of this course is on basic principles and modes of major bioimaging modalities. This course covers image characterization, interactions of electromagnetic radiation with tissue, fundamental principles in imaging and detection, and modes of imaging modalities (e.g., reflection, transmission, absorption, and emission). Conventional bioimaging modalities will be used to teach the topics. This course is particularly aimed at students in science and engineering interested in gaining a conceptual understanding of several critical biological and biomedical imaging methods, including optical microscopy, ultrasound, X-ray imaging, computed tomography, nuclear medicine, magnetic resonance imaging, and mobile health. Overall, this course provides a conceptual framework for biomedical imaging in a reasonably concise and understandable format (with minimal mathematical approaches).

Learning Outcomes: 1. Explain the principles of conventional Bioimaging modalities. 2. Distinguish advantages and disadvantages of each modality. 3. Describe utilizations of imaging in biological and medical fields. 4. Determine appropriate bioimaging methods for particular studies and applications. Credits: 3.00

BME 38000 - Professionalization In Biomedical Engineering

Credit Hours: 2.00. This active learning course covers standards of practice, regulatory and legal requirements, and moral and ethical issues; increases awareness of career paths; and addresses current and emerging trends and challenges at the frontiers of the field of biomedical engineering. Most class sessions will consist of a short introduction to a topic followed by a breakout session for active investigation of the topic. During the breakout sessions, course instructors will be available to guide discussion and answer questions.

Learning Outcomes: 1. Recognize and describe professional and ethical codes of conduct, and ethical dilemmas which pertain to a practicing biomedical engineer. 2. Use basic technical writing skills to clearly and concisely synthesize relevant technical information, data, and ideas from multiple sources. 3. Generate personal statements, curriculum vitae and other professional documents that are used in choses career pathways that are available to biomedical engineers. 4. Describe contemporary issues in biomedical engineering and understand their impact on personal and public health. 5. Identify skills and opportunities that enhance professional career development. Credits: 2.00

BME 38100 - Implantable Materials And Biological Response

Credit Hours: 3.00. BME 381 combines biomaterials, their biological response, and interactions between implantable materials and biological systems. Materials science of implantable materials; overview of implantable biomaterials and interactions between implants and biosystem; in vitro and in vivo biocompatibility tests; and specific examples on implant-tissue interactions, biocompatibility, and evaluation tools are presented.

Credits: 3.00

BME 38300 - Implantable Materials Laboratory

Credit Hours: 1.00. BME 38300 is a corequisite course to BME 38100, supplementing the basic science of BME 38100 with quantitative, analytical examples and problems related to fundamental engineering principles in implantable materials. Topics include: microstructure, phase transformation, processing and design issues related to major engineering materials used for implantation purposes.

Credits: 1.00

BME 38800 - Applied Biomaterials

Credit Hours: 3.00. This course covers foundational knowledge in the fields of materials science and engineering. Emphasis is placed on the materials used in biomedical applications and the relationship between material properties and the performance of these biomaterials.

Learning Outcomes: 1. Describe the structure-function relationship between chemical and bulk properties of materials. 2. Provide examples of biomedical applications for different classes of materials. 3. Identify material properties that are critical for the proper function of metallic, polymeric, ceramic, and composite biomaterials. 4. Interpret phase diagrams for single- and multiple-component materials. 5. Describe corrosion of metals and degradation of polymers and identify the possible consequences of each. 6. Select appropriate biomaterials for specific applications, considering function, biocompatibility, and relevant engineering constraints. 7. Propose appropriate processing techniques for improving material properties for specific biomaterial applications. 8. Identify the important biomaterial design criteria for specific biomedical applications. 9. Communicate effectively, both in oral and written formats, with regards to biomaterials science and engineering. Credits: 3.00

BME 38900 - Junior Experimental Design Laboratory

Credit Hours: 2.00. Practical experience with engineering design principles is presented through inquiry-based modules. Each module contains computer simulation, experimental design, implementation, and data analysis. Modules address biomedical applications in different areas of BME.

Learning Outcomes: 1. Use theoretical equations from fluid, heat, and mass transport to describe, model, analyze, and explain

biomedical data. 2. Design experiments to investigate biomedical transport phenomena, collect relevant data, and compile a comprehensive report that clearly demonstrates the findings and implications of the data. 3. Work in a term to simulate and experimentally model biomedical transport, and use peer-and self-reviews to describe how each team member contributed to group efforts. Credits: 2.00

BME 39000 - Professional Development And Design In Biomedical Engineering

Credit Hours: 2.00. Introduction to a diverse spectrum of current topics relevant to the technical, professional, and career aspects of Biomedical Engineers. The course topics will focus on the early stages of the design process (e.g. need identification, problem formulation, innovation and idea generation), professional communication skills (e.g. written and oral reporting and documentation), and ethics of biomedical design and research (e.g. ethical codes and decision making, animal care and use in research and testing, authorship and intellectual property, social and environmental impact of design).

Learning Outcomes: 1. Able to identify medical needs relevant to Biomedical Engineering solutions, an understanding of realistic constraints which impact biomedical engineering design 2. Understand ethical and professional responsibilities which impact design 3. Understand the need for a multidisciplinary team to solve biomedical engineering design projects. 4. Able to independently acquire knowledge from a variety of sources including biology and medicine as well as other engineering disciplines. 5. Able to communicate effectively in written form and evaluate written reports 6. Able to identify a career development pathway that is relevant to their personal identity and training as Biomedical Engineers. Credits: 2.00

BME 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in biomedical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

BME 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in biomedical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

BME 39500 - Selected Topics In Biomedical Engineering

Credit Hours: 1.00 to 4.00. Specialized topic areas for which there are no specific courses, workshops, or individual study plans, but having sufficient student interest to justify the formalized teaching of a course. Permission of instructor required.

Credits: 1.00 to 4.00

BME 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in biomedical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

BME 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

BME 40100 - Mathematical & Computational Analysis Of Complex System Dynamics In Biology, Medicine, & Healthcare

Credit Hours: 3.00. An introduction to analysis of complex system dynamics that appear in biology, medicine, and healthcare. Key topics include nonlinear dynamical concepts associated with phase plane, bifurcation, stability diagram, oscillation, and chaotic systems along with concepts from discrete systems and stochastic processes. These topics are taught within the context of mathematical and computational models related to both non-communicable diseases (i.e. cancer) and communicable diseases (i.e. HIV/AIDS). Courses projects are drawn from recent literature.

Learning Outcomes: 1. Graphically, analytically, and numerically analyze nonlinear dynamical models and numerically analyze discrete-event and stochastic models of biological, medical, or healthcare systems. 2. Describe possible behaviors of a given system, including how a system may be manipulated within the inherent boundaries. 3. Present, in oral and written format, an analysis and critique of the application of dynamical modeling of a biological system to solve or understand an engineering problem. Credits: 3.00

BME 40500 - Biomedical Engineering Design Project

Credit Hours: 4.00. Design and management of biomedical engineering projects. Teams design and implement a solution to a biomedical engineering problem utilizing skills gained in previous course work. Oral and written presentation of design and demonstration of function are required.

Credits: 4.00

BME 41100 - Quantitative Physiology

Credit Hours: 3.00. This course applies systems theory and explores feed forward and feedback control in the context of physiological systems. Control, frequency response, and linear systems concepts are applied to action potential generation, motor control, heart rate regulation, and other physiological processes.

Credits: 3.00

BME 41101 - Quantitative Physiology In Biomedical Engineering

Credit Hours: 4.00. This course is an introductory course in physiological systems and an introductory course in classical feedback control theory for biomedical engineers. It aims to apply systems theory and classical feedforward and feedback control in the context of physiological. Control, frequency response, and linear systems concepts are applied to action potential generation, motor control, heart rate regulation, and other physiological processes. Approximately a third of the course will be devoted to physiological systems, a third to classical control theory and a third to the application of classical control and systems theory to physiological systems.

Learning Outcomes: 1. Describe major physiological features the neuromuscular, cardiac, pulmonary, and renal systems. 2. Analyze, reduce and implement a dynamic in-silico model of a Plant (standard engineering systems and physiological systems) using linear systems theory descriptors in the frequency and state-space domains. 3. Analyze the characteristics of the linearized Plant model and design a classical feedback controller . 4. Define specifications of the normal operation of a system in nominal operation. 5. Analyze the system stability of a Plant. 6. Analyze frequency response and construct Bode plots. 7. Work in teams to understand and implement a model of a physiological system. 8. Group project work and reporting. Credits: 4.00

BME 41400 - Computational Mechanics In Biomedical Engineering

Credit Hours: 3.00. Teaches modeling methods for biomedical engineering problems with focus on fluid/solid mechanics. Students are introduced to the most common numerical techniques in biomedical engineering and will learn the applications of these techniques to biomechanical problems at various length scales, such as cardiac contraction and blood flow. The first half of this course focuses on modeling based on ordinary differential equation (ODE) and partial differential equation (PDE) as well as on how we integrate these equations analytically or numerically using software packages such as MATLAB. The other half focuses on fundamentals of fluid/solid mechanics and also on the application of COMSOL or similar software to solving relevant biomechanical problems.

Learning Outcomes: 1. Solve biomechanical problems involved with physical situations of real biomedical systems by formulating ordinary and partial differential equations and solving the equations via MATLAB. 2. Investigate complicated fluid flows observed in biomedical systems by applying knowledge in fluid mechanics and using COMSOL. 3. Analyze stress and strain of biomedical materials by applying continuum mechanics and using COMSOL. Credits: 3.00

BME 43000 - Introduction To Bioimaging

Credit Hours: 3.00. Provides a conceptual framework for understanding the theory and technical principles behind major Bioimaging modalities. The main focus is on basic principles and modes of imaging involving interactions of electromagnetic radiation with biological tissue. Main concepts include imaging and detection, modes of imaging modalities (e.g. reflection, transmission, absorption, and emission), and basic image characterizations. Applications include several critical biological and biomedical imaging methods, such as optical microscopy, ultrasound, X-ray imaging, computed tomography, positron emission tomography, and magnetic resonance imaging. Demonstrations of conventional Bioimaging modalities are used to teach the topics.

Credits: 3.00

BME 43100 - Neural Engineering

Credit Hours: 3.00. An introduction to Neural Engineering - an emerging field of developing and applying engineering solutions to research or translational problems concerning the brain. The course will cover a broad range of topics about neural sensing, modeling, stimulation, interface, and prosthetics. Course projects are drawn from real-world problems and experimental data.

Learning Outcomes: 1. Analyze neural signals in various spatial and temporal scales. 2. Examine relationships between neural activity and sensation/behavior. 3. Identify existing ways and mechanisms to modulate neural circuit functions. 4. Identify existing applications of neural prosthetics, implants, and robotics. 5. Identify, formulate, and solve engineering problems in brain research. 6. Apply knowledge of mathematics, science and engineering to neural data. Credits: 3.00

BME 44200 - Biofluid Mechanics

Credit Hours: 3.00. This course explores fluid mechanics in the context of the human circulatory system. Principal equations are derived from differential analysis of fluid flow, and models of characteristic flow conditions are fully analyzed. Biofluid mechanics, vessel biomechanics, and hemodynamic analysis of the circulation system will also be discussed.

Credits: 3.00

BME 45000 - Deep Learning For Medical Imaging

Credit Hours: 3.00. Teaches the foundation of neural network (aka Deep Learning) approaches and applications to medical imaging: or how to create computable models of biological neural systems, in particular large-scale neural networks, for processing medical images and data. Drawing inspiration from neuroscience and statistics, Deep Learning introduces the basic background on neural networks, presents computable neuron models and extends to large networks of neurons. Students study deep learning with both real and artificial neural networks, along with methods of deep learning about the environment by applying back propagation, Boltzmann machines, auto-encoders, convolutional neural networks and recurrent neural networks. Students will explore how Deep Learning is impacting our understanding of intelligence and contributing to the practical design of automatic medical imaging tools that are able to augment expert medical personnel, enhance diagnosis accuracy and speed, and lower health-care costs.

Learning Outcomes: 1. Understand and simulate a large biological neural network with several million of neurons. 2. Design and use a bio-inspired deep-learning network for

application in medical imaging. 3. Write algorithms that learn to segment, track, categorize, and classify objects of interest. Credits: 3.00

BME 46000 - Cardiovascular Mechanical Support And Devices

Credit Hours: 3.00. Designed to expose students to state-of-the-art medical technologies being utilized in the treatment of patients with cardiovascular diseases, the course emphasizes the role of the biomedical engineer in the design, development and implementation of these technologies for therapeutic impact. Students completing this course will have an understanding of the role of biomedical engineers in clinical engineering and clinical research. The three components of the course, didactic presentations and discussions, laboratory dissections, and clinical shadowing are integrated throughout to teach concepts such as cardiovascular physiology, heart failure and vascular disease, treatments and treatment complications, and future directions. Clinical experts in cardiovascular diagnosis and treatment are frequent guest lecturers.

Learning Outcomes: 1. Identify key anatomical and physiological features of the cardiovascular system. They will learn this by dissecting mice and pig hearts, viewing illustrations, and both reading research articles and the textbook focused on EKGs. 2. Identify unmet clinical needs and practice brainstorming possible solutions by writing an in depth report and giving an oral presentation based on both the course material and their clinical experiences. 3. Recognize fundamental engineering concepts used to design and utilize cardiovascular medical devices by writing shadow reports based on their immersion within a clinical setting. 4. Describe and diagnose various cardiac and vascular diseases by completing a mid semester and final examination covering the course material. 5. Explain the role of a biomedical engineer in the development and implementation of cardiovascular disease treatment in healthcare by interacting with multiple health care professionals during and after their guest lectures. Credits: 3.00

BME 46100 - Transport Processes In Biomedical Engineering

Credit Hours: 3.00. This course explores engineering principles in mass and other transport processes in biological systems. Topics covered include diffusion, convection, reaction kinetics, transport in porous and fluid mediums, etc. Mathematical models of transport are developed and applied to biomedical problems and physiological systems such as the kidney/renal and oxygen/arterial systems.

Credits: 3.00

BME 47000 - Biomolecular Engineering

Credit Hours: 3.00. The course covers key chemical concepts one needs in order to modify existing biomolecules, link biomolecules with other (bio)molecules, link biomolecules with inorganic entities, create composite (bio)structures, modify specific properties of biomolecules, alter/enhance biomolecule functionality. Taken together, the rational application of these biological, chemical, and engineering tools can be used to; engineer new biomolecules, design sensors for molecular detection, create diagnostic tests, develop new imaging modalities, and design and test novel biomaterials, to name a few examples.

Learning Outcomes: 1. Describe and discuss the physiochemical properties of biomolecules. 2. Design new molecules to perform new functions. 3. Able to critically analyze literature on biomolecular engineering. Credits: 3.00

BME 48900 - Senior Design Project Lab

Credit Hours: 2.00. The biomedical engineering design process is completed starting from a preliminary system design. Student will work with their teammates to implement (e.g. build, test, iterate and evaluate) a solution to address a biomedical engineering problem statement and meet the technical specifications set forth. The resulting project design is presented and evaluated through an oral presentation, laboratory demonstration, and a final written document.

Learning Outcomes: Students will have demonstrated the ability to: 1. Integrate and

apply knowledge and skills obtained in earlier work with new concepts and practices essential to the design and testing of a system or device to meet desired needs. 2. Implement the engineering design process and project management within the context of relevant design constraints. 3. Effectively communicate skills in oral and written form, both individually and as part of a team. 4. Explain/discuss realistic design constraints, including regulatory issues, societal influences, and ethical and professional responsibilities of biomedical engineers, as related to the engineering design process. Credits: 2.00

BME 48901 - Senior Design Project Lab

Credit Hours: 3.00. The biomedical engineering design process is completed starting from a preparatory design course, BME 39000, through a preliminary system design, build and test in Senior Design Project Lab. Students will work with their teammates to implement (e.g. build, test, iterate and evaluate) a solution to address a biomedical engineering problem statement and meet the technical specifications set forth. The resulting project design is presented and evaluated through an oral presentation, laboratory demonstration, and a final written document.

Learning Outcomes: 1. Demonstrate ability to integrate and apply knowledge and skills obtained in earlier course work with new concepts and practices essential to the design and testing of a system or device to meet desired needs. 2. Implement the engineering design process and project management within the context of relevant design constraints. 3. Effectively communicate skills in oral and written form, both individually and as part of a team. 4. Explain/discuss realistic design constraints, including regulatory issues, societal influences, and ethical and professional responsibilities of biomedical engineers, as related to the engineering design process. Credits: 3.00

BME 49000 - Professional Elements Of Design

Credit Hours: 1.00. This course advances and enhances design tools, concepts, and knowledge relevant to biomedical engineering design. Students work individually and in small teams to investigate the topic within the context of their specific senior design project in preparation for their lab. Topics include project management, human and animal subjects, ethics, regulatory affairs, literature and patent searching, and entrepreneurship.

Learning Outcomes: 1. Effectively communicate skills in oral and written form, both individually and as part of a team. 2. Explain/discuss realistic design constraints, including regulatory issues, social influences, and ethical and professional responsibilities of biomedical engineers, as related to the engineering design process. 3. Generate and justify solutions to a medical and/or biological problems that addresses customer needs and realistic constraints. Credits: 1.00

BME 49100 - Biomedical Engineering Design I

Credit Hours: 3.00. This course prepares students for engineering practice through a major design experience, encompassing conceptualization, requirements generation, and system and detailed design. Essential design constraints will be reviewed and applied including: safety, economics, and manufacturability. The course encompasses lectures, case studies, team formation, project assignments and generation of initial design.

Credits: 3.00

BME 49101 - Biomedical Engineering Design

Credit Hours: 2.00. This course prepares students for engineering practice through a major design experience, encompassing conceptualization, requirement generation, and system and detailed design. Essential design constraints will be reviewed and applied including: safety, economics, and manufacturability. The course encompasses lectures, case studies, team formation, project assignments and generation of initial design.

Learning Outcomes: 1. Identify and formulate the design problem, including bringing precision to the problem statement through a requirements specification. 2. Use critical

thinking in the design process. 3. Conduct design using an organized design process, including planning, literature search, requirements specification, consideration of alternative approaches, determination of strategies, and design reviews. 4. Conduct design using design principles. 5. Apply engineering principles, mathematics, and science in engineering design, including methods, tools and techniques. 6. Apply technical knowledge to design, including methods, tools and techniques. 7. Analyze and interpret data. 8. Apply analytical tools and techniques to solve a design problem at the interface of engineering and biology. 9. Function effectively on a multi-disciplinary team through mutual support, consensus seeking, cooperation, and sharing responsibility. 10. Write a progress report, adhering to the specified format using an appropriate writing style, grammar, and spelling. Credits: 2.00

BME 49200 - Biomedical Engineering Design II

Credit Hours: 3.00. This course continues the design experience from BME 491 with verification, validation, and re-design of student projects. Regulatory and ethical design constraints will be discussed. Oral presentation and report writing are required. Learning Outcomes: 1. Use critical thinking in the testing and redesign process. 2. Make appropriate measurements necessary for testing the design, addressing the problems associated with the interaction between living and nonliving systems. 3. Apply engineering principles, mathematics, and science in engineering redesign, including methods, tools and techniques. 4. Apply technical knowledge to testing and redesign, including methods, tools and techniques. 5. Analyze and interpret testing and verification data. 6. Discuss ethical issues in engineering design for biological and medical applications. 7. Determine ways to test a design to determine its functionality (success of the design). 8. Apply knowledge of regulatory constraints to engineering design. 9. Function effectively on a multi-disciplinary team through mutual support, consensus seeking, cooperation, and sharing responsibility. 10. Write a final report, adhering to the specified format using an appropriate writing style, grammar, and spelling. 11. Make an oral presentation using effective visual aids. Credits: 3.00

BME 49500 - Selected Topics In Biomedical Engineering

Credit Hours: 1.00 to 4.00. Specialized topic areas for which there are no specific courses, workshops, or individual study plans, but having sufficient student interest to justify the formalized teaching of a course. Permission of instructor required.

Credits: 1.00 to 4.00

BME 49800 - Biomedical Engineering Projects

Credit Hours: 1.00 to 4.00. Individual research projects to be approved by the supervising faculty member before registering for the course. An approved written report is required. Permission of instructor required.

Credits: 1.00 to 4.00

Davidson School of Chemical Engineering

Chemical Engineering Overview

Chemical Engineering remains a premier source of well-educated, well-prepared chemical engineers, educating students using innovative technologies and fostering an environment that inspires leading-edge research.
Chemical engineers work in a wide range of industries with worldwide impact. Applications include energy; pharmaceuticals and biological materials; the nutritional value of food; environmental protection and restoration; materials for computing, sensing, and communications; personal care, home care, and home health products; and system and data management.

Chemical engineers rely on their knowledge of mathematics and science - particularly chemistry - to overcome technical problems in industry and society. While the chemist studies basic chemical reactions, the chemical engineer applies the results of chemical research and transforms laboratory processes into efficient, full-scale processes or facilities. With their strong problem-solving skills and fundamental background in mathematics, physics, chemistry and biology, chemical engineers can seize opportunities to translate industrial problems into competitive advantages. Currently, chemical engineers demand among the highest salaries for college graduates with a bachelor's degree.
Research here is currently being conducted with polymers and materials, nanoscale science and engineering, fluid mechanics, catalyst design and engineering, sensors, biotechnology, and many others.

Graduate Information

For Graduate Information please see Chemical Engineering Graduate Program Information .

Chemical Engineering, BSCHE

CHE 20000 - Chemical Engineering Seminar

Credit Hours: 1.00. An orientation course to inform students of the various areas in chemical engineering, to assist them in selection of electives suited to their particular abilities and interest, and to instill a sense of professional ethics and responsibility. Lectures drawn from all fields of chemical engineering.

Learning Outcomes: 1. Demonstrate an understanding of the need for academic and professional integrity and ethical behavior. 2. Demonstrate an understanding of contemporary issues encountered in the professional practice of chemical engineering including business practices, environmental, health, and safety issues and other public interests. 3. Demonstrate an appreciation of the need for engaging in life-long learning to maintain and enhance the professional practice of chemical engineering. Credits: 1.00

CHE 20100 - Cooperative Seminar I

Credit Hours: 0.00. Lectures by faculty and students on subjects that relate the academic work and the industrial experience. Written reports on the industrial experience are required and will include a documentation of the student's success in finding application of specified academic activities. For students returning from the first and second work periods.

Credits: 0.00

CHE 20500 - Chemical Engineering Calculations

Credit Hours: 4.00. Quantitative applications of steady-state mass and energy balances to solve problems involving multi-component systems and multi-unit chemical processes. Single-component and multi-component phase equilibria, single-reaction and multiple-reaction stoichiometry, coupled mass and energy balances, chemical processes involving bypass and recycle streams.

Learning Outcomes: 1. Estimate physical properties of real chemical systems. 2. Evaluate introductory single-component and multi-component phase equilibria and incorporate these concepts into solutions of mass and energy balance problems. 3. Solve steady state and transient mass and energy balance problems for both reacting and non-reacting systems with or without recycle using analytical and computational methods. 4. Work professionally and ethically in teams to solve new mass and energy balance problems. 5. Identify contemporary chemical engineering problems, including their societal, environmental, and global impacts. Credits: 4.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CHE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in chemical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CHE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in chemical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CHE 30000 - Chemical Engineering Seminar

Credit Hours: 1.00. Continuation of CHE 20000. Lectures to acquaint the junior students with professional ethics, career choices, including graduate studies, and services of professional societies.

Learning Outcomes: 1. Identify the wide range of career opportunities offered by the Bachelor in Chemical Engineering degree. 2. Demonstrate an understanding of the need for developing leadership skills, professional integrity and ethical decision making in the

professional practice of chemical engineering. 3. Demonstrate an understanding of contemporary issues encountered in the professional practice of chemical engineering including business practices, environmental, health, and safety issues and other public interests. 4. Demonstrate an appreciation of the need for engaging in life-long learning to maintain and enhance the professional practice of chemical engineering. Credits: 1.00

CHE 30100 - Cooperative Seminar II

Credit Hours: 0.00. Continuation of CHE 20100 . For students returning from the third and fourth work periods.

Credits: 0.00

CHE 30600 - Design Of Staged Separation Processes

Credit Hours: 3.00. The application of equilibria and mass and energy balances for the design of staged separation processes. Use of various equilibrium data and thermodynamic principles for the design of batch and continuous distillation, absorption, stripping, and extraction systems. Stagewise calculations and graphical methods for design of binary systems. Design of multicomponent separators. Determination of stage efficiency and column size.

Learning Outcomes: 1. Utilize the concepts and relations of phase equilibria, particularly VLE, in the analysis, design, and simulation of separation processes. 2. Use mass and energy balances in the analysis of separation processes. 3. Use the McCabe-Thiele diagram for the solution of problems in binary separations. 4. Use reflux and multi-stage cascades to increase separation of a given component. 5. Use process simulators for binary and multi-component systems to solve, understand, and design separation processes. 6. Apply the basic principles of distillation, absorption/stripping, extraction and other unit operations for the solution of problems in separations. 7. Identify the safety aspects of various separation processes. 8. Communicate effectively the results of a designed separation process in writing. Credits: 3.00

CHE 32000 - Statistical Modeling And Quality Enhancement

Credit Hours: 3.00. Statistical modeling methods, design of experiments, error analysis, curve fitting and regression, analysis of variance, confidence intervals, quality control and enhancement: emphasizes preparation for designing chemical engineering laboratory experiments and analyzing data.

Learning Outcomes: 1. Utilize the concepts of probability for use with the normal and t distributions, confidence intervals, and hypothesis testing. 2. Apply least squares fitting of data by use of linear algebra with computers. 3. Apply regression and model building from data with experimental error obtained with replicates to establish an adequate model. 4. Design experiments for single and multiple factors and apply regression to model the results. 5. Apply propagation of error and sources of variation or variance components. 6. Apply statistical quality control and improvement with various charts such as average, range, and cusum (concepts of consumer and producer risk and capability index are included). Credits: 3.00

CHE 33000 - Principles Of Molecular Engineering

Credit Hours: 3.00. Application of concepts of atomic and molecular bonding, solid microstructure, phase equilibria, and rate processes to the design of solid materials for specific engineering objectives.

Credits: 3.00

CHE 34800 - Chemical Reaction Engineering

Credit Hours: 4.00. Application of kinetic rate equations, mass balances and energy balances to the analysis and design of chemical reactors involving homogeneous and heterogeneous chemical reactions. Chemical equilibria, kinetic rate equations for homogeneous and heterogeneously catalyzed reactions, design of ideal isothermal reactors, effects of non-isothermal operation, effects of diffusion in porous catalysts and non-ideal mixing in continuous flow reactors.

Learning Outcomes: 1. Apply fundamental material balances to derive the design

equations for CSTR, PFR, PBR, and batch reactors. 2. Derive rate expressions from both elementary steps and reaction kinetics data for both homogeneous and heterogeneous reactions. 3. Use material and energy balances with kinetic data for both single and multiple reactions to design and analyze the behavior of isothermal and non-isothermal reactors. 4. Utilize effectiveness factors governing the coupling of reaction and diffusion in the description of heterogeneously catalyzed reactions. 5. Work professionally and ethically in teams to conduct reaction-based laboratory experiments. 6. Effectively report results in written form and practice safety as an integral part of laboratory work. 7. Apply appropriate computational tools for the solution of chemical reaction engineering problems. Credits: 4.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CHE 37800 - Heat And Mass Transfer

Credit Hours: 4.00. Macroscopic and differential energy balances. Heat transfer coefficients for free and forced convection and phase change. Conductive and radiative heat transfer. Applications to heat transfer equipment design and compressible fluid flow. Macroscopic and differential species balances. Mass transfer coefficients and analogies. Mass transfer with and without chemical reaction. Mass transfer equipment design.

Learning Outcomes: 1. Identify and explain the three mechanisms of heat transfer: conduction, convection, and radiation. 2. Apply microscopic and macroscopic thermal energy balances incorporating Fourier's Law for the solution of problems describing steady-state and transient conduction, including convective heat transfer. 3. Utilize mass and thermal energy balances for the design of heat transfer equipment and the analysis of its operation. 4. Identify and explain the two main mechanisms of mass transfer: convection and diffusion. 5. Apply microscopic and macroscopic species mass balances incorporating Fick's Law for the solution of problems describing steady-state and transient diffusion, including relevant rate equations and convective mass transfer. 6. Identify and apply the analogies between momentum, heat, and mass transfer. 7. Utilize mass balances and appropriate phase equilibrium relations for the design of continuous mass transfer equipment and the analysis of its operation. 8. Work professionally and ethically in teams to conduct heat and mass transfer-based laboratory

experiments. 9. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CHE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

CHE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

CHE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the engineering profession. 3. Receive feedback from the instructor and seminar participants. 4. Continue professional development. Credits: 0.00

CHE 38499 - Professional Practice Cooperative IV

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Learning Outcomes: 1. Varies due to students academic work sessions. Credits: 0.00

CHE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in chemical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CHE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CHE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in chemical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CHE 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

CHE 40000 - Chemical Engineering Seminar

Credit Hours: 1.00. Continuation of CHE 30000. Lectures to acquaint the senior students with professional ethics, services of professional societies, and help them in the transition from being an undergraduate student to becoming a successful professional or graduate student.

Learning Outcomes: 1. Demonstrate an understanding of the need for developing leadership skills, professional integrity and ethical decision making in the professional practice of chemical engineering. 2. Demonstrate an understanding of contemporary issues encountered in the professional practice of chemical engineering including business practices, environmental, health, and safety issues and other public interests. 3. Identify the wide-reaching effects that engineering decisions have on society, our global community and our natural environment. 4. Demonstrate an appreciation of for engaging in life-long learning to maintain and enhance the professional practice of chemical engineering. Credits: 1.00

CHE 40100 - Cooperative Seminar III

Credit Hours: 1.00 to 3.00. Continuation of CHE 30100. For senior students returning from the last work period.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the chemical engineering profession. 3. Receive feedback from the instructor and seminar participants. 4. Continue professional development. Credits: 1.00 to 3.00

CHE 41100 - ChE Undergraduate Research

Credit Hours: 1.00 to 4.00. Experience in chemical engineering science research or development; either directed or independent work that can be experimental or theoretical. Permission of instructor required.

Learning Outcomes: 1. Gain skills and experiences through independent research projects in Chemical Engineering. Credits: 1.00 to 4.00

CHE 41200 - Chemical Engineering Design Research Problems

Credit Hours: 1.00 to 4.00. Experience in chemical engineering design research or development; either directed or independent work that can be experimental or theoretical. Permission of instructor required.

Credits: 1.00 to 4.00

CHE 42000 - Process Safety Management And Analysis

Credit Hours: 3.00. Develop knowledge of process safety management and analysis in the process industries, including hazard identification, hazard analysis and risk management.

Learning Outcomes: 1. Demonstrate knowledge and understanding of the elements of process safety management. 2. Apply the techniques, analytical skills, and modern computational tools necessary for performing process safety calculations in the design of safety. 3. Demonstrate an understanding and appreciation of the need for professional integrity and ethical decision making to promote safety in the workplace. 4. Be able to pro-actively identify and analyze safety hazards. 5. Demonstrate an understanding of the detrimental effects of the unsafe operation of chemical facilities on environmental, health, and safety issues and other public interests. Our graduate will be aware of the wide-reaching effects that engineering decisions have on society, our global community and our natural environment. 6. Demonstrate knowledge and understanding of risk management tools, programs and processes associated with process safety. Credits: 3.00

CHE 43500 - Chemical Engineering Laboratory

Credit Hours: 4.00. Quantitative experimental study of projects involving problems in fluid mechanics and heat and mass transfer or operation and evaluation of equipment; projects include analysis and data-based design of operations involving mass transfer such as distillation, absorption, drying, humidification, etc; study of rates and equilibria in simple chemical reaction systems; study of chemical processes;

application of methods of data analysis in practice; some library work; emphasis on group work, report writing, and oral communication.

Learning Outcomes: 1. Determine the intrinsic performance data required to complete the design of a given process or process equipment. 2. Design and conduct an experimental program to determine the required performance data. 3. Use the requisite performance data to obtain a technically feasible and economical design to meet desired needs. 4. Effectively report experimental results, performance data analyses and process designs both orally and in writing. 5. Use appropriate analytical and computational tools for the analysis and design of experiments. 6. Work effectively as a member of an engineering team in a professional and ethical manner, including different team roles. 7. Practice appropriate experimental safety measures. Credits: 4.00

CHE 44200 - Chemistry And Engineering Of High Polymers

Credit Hours: 3.00. Introduction to basic principles of polymer engineering, including the chemical structure and use of a variety of industrial polymers, polymerization mechanisms and kinetics, techniques for molecular and morphological characterization, polymer processing, and a variety of engineering properties.

Credits: 3.00

CHE 45000 - Design And Analysis Of Processing Systems

Credit Hours: 4.00. Use of process synthesis methods and concepts; detailed design of unit operation equipment, the economics of chemical plants and flow sheet optimization methods. Synthesize, develop, and evaluate a preliminary design of a chemical process that meets market requirements for a specific product. Analysis of design alternatives using case studies and optimization methods.

Learning Outcomes: 1. Apply systematic strategies for synthesizing chemical process designs that involve conventional unit operations. 2. Describe both the difference between steady state and batch chemical processes and the implications on their design and operation. 3. Demonstrate the ability to obtain reliable information on industrial chemical processes, process operating parameters, equipment costs, cost of chemicals and materials, and associated safety and environmental hazards. 4. Describe the role of physical property estimates on process design and be able to use appropriate physical property estimation methods in unit operations design. 5. Estimate the capital and operating cost of a process and to assess its profitability. 6. Use process simulators and other tools to perform detailed analyses for the successful design of a chemical plant. 7. Communicate effectively project progress and final results in a professional manner both orally and in writing. 8. Work effectively in a team to execute open-ended design projects with time-bound deliverables in a professional and ethical manner, including different team roles. Credits: 4.00

CHE 45600 - Process Dynamics And Control

Credit Hours: 3.00. Dynamic response and control of chemical processing equipment, such as heat exchangers, chemical reactors, and absorption towers. Use is made of fundamental techniques of servomechanism theory, such as block diagrams, transfer functions, and frequency response. Introduction to advanced control techniques.

Learning Outcomes: 1. Develop a physically relevant mathematical model as a surrogate for a chemical process. 2. Apply appropriate analytical and computer packages for analyzing the process control behavior based on the developed model. 3. Design, model, and test a hierarchical control system on a complex process. 4. Describe the role of process control in meeting stringent safety, economic, environmental, societal, and corporate goals. 5. Describe the building blocks of process control

and their synthesis for providing complete process control solutions. 6. Work effectively in a team to execute process control computer-based assignments in a professional and ethical manner. Credits: 3.00

CHE 46100 - Biomedical Engineering

Credit Hours: 1.00. An introduction to the field of biomedical engineering, with particular stress on the chemical engineer's role.

Credits: 1.00

CHE 46300 - Applications Of Chemical Engineering Principles

Credit Hours: 3.00. Team-based design projects in materials transport, heat transfer, mass transfer, separations, chemical reactors. Emphasis on team operation and decision-making. Consideration of current technical challenges, societal and economic issues.

Learning Outcomes: 1. Demonstrate ability to apply principles of chemical engineering to design practical systems. 2. Participate in team-based projects to understand team operation and decision-making. 3. Gain experience in and appreciation of the need for individual learning about new systems, equipment, etc. 4. Understand the role of the engineer in promoting safe operation and consideration of environmental issues in technical decisions. 5. Develop an appreciation of current issues and challenges which you may well be addressing as professionals. Credits: 3.00

CHE 49500 - Chemical Engineering Study Abroad

Credit Hours: 1.00 to 3.00. Short term study abroad experience to expose chemical engineering undergraduate students to the academic and industrial environments across the globe. Each experience location play an important economic role and offer good examples of industrial and engineering development, as well as allow for interaction with Purdue alumni, and cultural aspects through immersion during their time abroad.

Learning Outcomes: 1. Demonstrate an awareness of cultural diversity, personal growth and intercultural competency while also gaining career readiness and leadership skills that are relevant for a global world. Credits: 1.00 to 3.00

CHE 49700 - Special Topics In Chemical Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for subject areas for which there is no specific course offered. Areas of study will deal with topics that have enough student interest to justify the teaching of specialized courses on a trial basis. The course can be repeated by a student as long as the topic being taught is not repeated. Permission of instructor required.

Credits: 1.00 to 4.00

CHE 49800 - Undergraduate Thesis Research I

Credit Hours: 3.00. Individual research projects for students completing an undergraduate thesis. Requires prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required.

Credits: 3.00

CHE 49900 - Undergraduate Thesis Research II

Credit Hours: 3.00. Individual research projects for students completing an undergraduate thesis. Continuation of CHE 49800. Includes submission of written thesis and public oral presentation. Permission of instructor required.

Credits: 3.00

Lyles School of Civil and Construction Engineering

Lyles School of Civil and Construction Engineering

About Civil and Construction Engineering

Civil and Construction Engineers shape communities, protect natural habitats, and establish global standards by creating safe forms of shelter, protecting our coastlines and waterways, supplying clean energy, providing access to clean water and sanitation, and

allowing for safe and efficient movement of people and goods and more. Graduates are prepared to tackle critical challenges-from enhancing infrastructure resilience to advancing environmental sustainability. Two degree programs are offered by the School: Bachelor of Science in Civil Engineering (**BSCE**) and Bachelor of Science in Construction Engineering (**BSCNE**).

The skillsets needed by a successful Civil and Construction Engineer include: strong math, science, and computer skills; creativity; ability to collaborate and communicate with a wide array of audiences; and an aptitude for applying science and engineering methods to solve problems. The curriculum offered by the Lyles School of Civil and Construction Engineering is designed to help students develop these skills and prepare them for their careers after graduation.

Graduates from the Lyles School of Civil and Construction Engineering find successful careers in both private and public organizations here in the US and abroad. Civil and Construction Engineers have a broad range of flexible options in where and how they work. Because our graduates have a tangible impact in our communities and on the environment, they can work anywhere. Civil and Construction engineers also have the option of working in the field or in an office or both. Our graduates work on a diverse range of projects in engineering design, consulting, construction, aviation/aerospace, energy, water resources/environment, transportation industries and more.

Two Bachelor's Degree Programs are offered by the School:

Civil Engineering is broad and encompasses planning, designing, building, and operating the infrastructure systems that create and sustain our communities while also protecting and preserving the natural environment. Students can focus in any of the nine specialty areas or remain general. 30 credits of technical electives allow students flexibility to design their academic plan to fit their passion and interests.

Construction Engineering is the discipline focused on the planning, design, management, and execution of construction projects, with a commitment to safety, sustainability, and community stewardship. Students will find the degree program offers a comprehensive blend of theory and practice, emphasizing a strong industry-driven curriculum that incorporates curriculum-based experiential learning including three 12-week internships.

Graduate Information

For Graduate Information please see Civil Engineering Graduate Program Information .

Architectural Engineering Minor

Civil Engineering, BSCE

Construction Engineering, BSCNE

Construction Engineering Minor

CE 19100 - Civil Engineering Practice I

Credit Hours: 0.00. Practice in industry and written reports of this practice. For cooperative program students only.

Credits: 0.00

CE 20300 - Principles And Practice Of Geomatics

Credit Hours: 4.00. This course provides a broad overview of geomatics engineering including fundamental principles required for practical geomatics applications. This course includes subjects in traditional surveying, GPS surveying, remote sensing, photogrammetry, laser scanning, and Geographic Information Systems (GIS). Basic concepts on

these subjects are applied to solve practical problems in various civil engineering applications; including computations for engineering project control and construction layout; theory of error propagation; fundamental concepts of horizontal and vertical curves; topographic mapping using various geospatial data acquisition technologies from ground, air, and space; GIS for visualization and analysis of geospatial data.

Learning Outcomes: 1. Design and execute a leveling survey. 2. Design and execute a traverse survey. 3. Use survey data to produce a topographic map. 4. Perform horizontal and vertical curve computations. 5. Collect GPS/RTK/RTN data with survey grade accuracy. 6. Perform remote sensing image classification. 7. Measure digital photographs and perform camera calibration. 8. Use software to generate 3D point cloud from digital imagery. 9. Perform multi-image bundle block adjustment. 10. Manipulate 3D point cloud data from a laser scanner, and extract engineering parameters. 11. Select appropriate geodetic references and map projections for geomatics applications. 12. Collect and register geospatial data from multiple sources for engineering applications. 13. Map and visualize collected geospatial data. Credits: 4.00

CE 21101 - Thermal And Energy Sciences

Credit Hours: 3.00. This course includes applications of thermal science and energy fundamentals to civil engineering topics. Emphasis is placed on fundamental concepts of properties of materials, work, heat, internal energy, entropy, equilibrium, and relations derived from the first and second laws of thermodynamics. Example applications include: power plants; fluid flow in ducts/pipes; thermal properties of building/construction materials and processes; geothermal systems; heating, ventilation, and air conditioning (HVAC) processes; energy balances in buildings; refrigeration; hydroelectric power; contaminant transport in air, water, and soil; climate change; the urban heat island effect; and energy use in the transportation sector.

Learning Outcomes: 1. Explain the principles of mass and energy conservation and their use in civil engineering applications. 2. Evaluate thermodynamic systems and several forms of work, energy, and heat transfer. 3. Apply conservation of mass and energy for closed systems and control volume processes. 4. Explain the second law of thermodynamics, entropy changes, and device efficiencies. Credits: 3.00

CE 22200 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. The objective of this course is to introduce concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity of construction equipment as well as the costs associated with construction equipment and construction labor. 4. Calculate the peak financial requirement for a given project based on project revenue and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

CE 27000 - Introductory Structural Mechanics

Credit Hours: 4.00. Loads; structural forms; analysis of axially loaded members, flexural members, torsional members; combined loading conditions; buckling. Basic behavioral characteristics of structural elements and systems illustrated by laboratory experiments.

Credits: 4.00

CE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of

department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CE 29202 - Contemporary Issues In Civil Engineering

Credit Hours: 2.00. This course provides a forum on issues in the civil engineering profession in a contemporary context. Topics include professionalism and ethics, entrepreneurship, cultural differences, and collaborating globally. Students have interactions with engineering faculty and professionals outside the University. Guidance on the preparation of individual plans of study and information on civil engineering career options are provided. Students learn and apply fundamental aspects of written communication in professional settings. Emphasis is placed on delivery of technical and managerial content. Students will compile a professional portfolio of communication assignments, including lab reports prepared in other CE courses.

Learning Outcomes: 1. Ability to communicate effectively. 2. Ability to understand the impact of engineering solutions in a global and societal context. 3. Knowledge of contemporary issues, particularly with respect to nuclear topics. 4. Understanding of professional and ethical responsibility. Credits: 2.00

CE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

CE 29900 - Civil Engineering Projects

Credit Hours: 0.00 to 18.00. Topics vary. Projects, special topics, or supplemental instruction. Arrange Hours and Credit. Permission of instructor required.

Credits: 0.00 to 18.00

CE 31100 - Architectural Engineering

Credit Hours: 3.00. This course introduces energy efficiency, thermal comfort, indoor environmental quality and green building design concepts. The course covers engineering fundamentals required for the design and analysis of building systems such as thermodynamics, fluid mechanics, heat and mass transfer, light and sound transmission. The course presents engineering principles and selected applications related to hydrothermal analysis of building enclosures, air conditioning processes in heating, ventilating and air conditioning systems, building illumination, and building acoustics.

Learning Outcomes: 1. Identify and analyze the characteristics of building environmental loads,

building construction, and building operations as they define the requirements for a comfortable and healthy indoor environment. 2. Demonstrate knowledge of thermodynamics , fluid mechanics, heat and mass transfer, photometric quantities and sound transmission for use in building design. 3. Identify, formulate and solve realistic Architectural Engineering problems related to hygrothermal analysis of building enclosures, air conditioning processes in Heating Ventilating and Air Conditioning Systems, pipe and duct flow, building illumination and building acoustics. 4. Demonstrate an understanding of building systems integration to achieve efficient operation. Credits: 3.00

CE 32201 - Project Control And Life Cycle Execution Of Constructed Facilities

Credit Hours: 3.00. The objective of this course is to continue an introduction to construction management and engineering concepts for future engineers, contractors and owner representatives involved at different stages in the life-cycle of constructed faculties. Building on the broad framework introduced in the prerequisite course, this course develops further ability with analytical tools and extends the basic foundation for advanced topics in construction engineering and management. Specifically, this course focuses on the principles, tools, and procedures used in the construction industry for project selection and financing, advanced planning and scheduling techniques, resource management, and project monitoring.

Learning Outcomes: 1. Demonstrate an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. 2. Demonstrate an ability to design a process to meet desired needs within realistic constraints. Credits: 3.00

CE 33100 - Engineering Materials II

Credit Hours: 3.00. A continuation of CE 23100.

Credits: 3.00

CE 33500 - Civil Engineering Materials

Credit Hours: 4.00. An introduction to the relationships between fundamental structure of materials and their properties presented through a combination of materials science and engineering approaches. Emphasis on materials of particular interest for civil engineering applications, including metals, aggregates, portland cement concrete, bituminous materials, asphalt binders, asphalt mixtures, wood, polymers, composites, and masonry. Laboratory exercises illustrate atomic structure, elastic and inelastic properties, and demonstrate applications of selected principle of mechanics, testing of aggregates, as well as designing and testing of asphalt and concrete mixtures.

Learning Outcomes: 1. Formulate equations that describe the properties of composite materials based on boundary conditions, assumptions and constituent properties. 2. Design and conduct experiments, as well as to analyze and interpret data. 3. Use non-destructive tests to estimate material properties. 4. Use non-destructive test to locate flaws in engineering systems. 5. Compare and contrast strength of materials and fracture mechanics solutions. 6. Use mathematics, science and engineering principles to estimate the influence of cracks on the mechanical response of engineering materials. 7. Use scientific and engineering principles to predict the elastic and viscoelastic of a material. 8. Interpret engineering properties from test data. 9. Use standardized test procedures to describe the properties of engineering materials. 10. Use mathematical, scientific and engineering principles to compute the influence of material proportions on the structure property relationships for concrete materials. 11. Design the proportions for a concrete mixture. 12. Explain the relationship between the properties

of an asphalt mixture and its performance. 13. Select engineering materials for specific applications. 14. Communicate effectively using graphs. 15. Communicate effectively using an executive summary. 16. Communicate effectively using an engineering report. 17. Communicate the expected accuracy obtained from engineering data. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

CE 36100 - Transportation Engineering

Credit Hours: 3.00. Transportation functions; transportation systems, including land, air, and marine modes; transportation system elements, including traveled way, vehicle, controls, and terminals; techniques of transportation system planning, design, and operation.

Credits: 3.00

CE 37100 - Structural Analysis I

Credit Hours: 3.00. Stress resultants (reactions, axial forces, shear forces, and bending moments) for beams and framed structures. Deflections of beams and frames by geometric methods (moment-area theorems and applications; conjugate beam analogy). Analysis of statically indeterminate beams and frames by classical stiffness methods; slope deflection and moment distribution. Influence functions and their applications.

Credits: 3.00

CE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Credits: 0.00

CE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Credits: 0.00

CE 38300 - Geotechnical Engineering I

Credit Hours: 3.00. Introduction to the nature and origin of soils and rocks; engineering significance of geologic landforms and soil deposits; identification and engineering classification of soils; engineering behavior and properties of soils; permeability, compressibility, shearing resistance; soil compaction.

Credits: 3.00

CE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Credits: 0.00

CE 39201 - Technical Communication In Civil Engineering

Credit Hours: 2.00. This course will build upon the technical communication components of CE 29202 , adding instruction in oral communication, projects, and working in teams. This course involves both individual and team assignments intended to offer students the opportunity to practice preparing and delivering written correspondence and reports, as well as oral presentations. These activities may be coordinated with other CE courses being taken by students in CE 39201.

Learning Outcomes: 1. Know the value of clear and concise communication. 2. Understand the audience and structuring of communications. 3. Employ the forms of arguments/reasoning. 4. Apply knowledge of scientific vocabulary and technical data-driven communication. 5. Work effectively in teams. 6. Employ issue analysis to plan team project work. 7. Understanding of good listening; oral communications. 8. Employ PowerPoint and visual communications effectively. 9. Deliver team technical presentations. 10. Develop and present lab reports. 11. Knowledge to prepare ""How-To"" video project. 12. Conduct meetings; running brainstorming sessions. 13. Develop persuasive presentations. 14. Prepare effective resumes, cover letters, and job searches. 15. Employ job interview skills. Credits: 2.00

CE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the

profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CE 39500 - Fundamentals Of Innovation Theory And Practice

Credit Hours: 3.00. This course is designed to provide students with initial exposure to the fundamental patterns, mindsets, behaviors, attributes, tools, and methods employed in the innovative activity of individuals and organizations. Emphasis is placed on understanding and effectively utilizing techniques to systematically drive innovation that are drawn from the fields of business, design, problem-solving, engineering, and the social sciences. Lecture, in-class small group activities, and individual and team assignments are employed across an array of contemporary socio-technical challenges to provide students with the opportunity to apply conveyed theory and methods to rigorously structure problems, understand involved stakeholders, utilize innovation motifs and analogical reasoning to develop robust views of potential solutions spaces, tailor solution design to stakeholder context, consider the full suite of functional, social, and emotional dimensions that could influence solution prioritization, and document and systematically assess underlying solution assumptions to iterate toward a viable and sustainable forward-looking plan that could achieve target outcomes. This course counts toward, serves as a required entry course for, the College of Engineering Minor in Innovation and Transformational Change.

Learning Outcomes: 1. Develop working knowledge of established innovation forms and motifs. 2. Demonstrate ability to link innovation motifs to specific classes of problems. 3. Understand, and be able to pursue, the core aspects of an end-to-end innovation process. 4. Recognize the mental models, mindsets and behaviors of innovators. 5. Gain awareness of the approaches various forms of organizations take to systematically innovate. 6. Acquire leadership and communication skills through teamwork, oral presentations, and written deliverables. Credits: 3.00

CE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem-solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in civil engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

CE 39700 - Undergraduate Professional Internship

Credit Hours: 0.00. Professional experience in Civil Engineering. This internship experience is intended to complement the student's academic coursework and help prepare the student for a career as a practicing engineer. Program coordinated by school with cooperating employers. A written report is required. Permission of department required.

Credits: 0.00

CE 39800 - Introduction To Civil Engineering Systems Design

Credit Hours: 3.00. An introduction to engineering economy and systems analysis. A systematic approach to the engineering method of design and problem solving.

Credits: 3.00

CE 41300 - Building Envelope Design And Thermal Loads

Credit Hours: 3.00. This course discusses the basic thermal processes in buildings and presents comprehensive methods for thermal design of envelope assemblies in commercial and residential buildings. The first part of the course includes steady-state transient conduction through envelope assemblies, convection and radiation heat transfer in buildings, solar radiation and solar gains, thermal performance of windows, internal gains, ventilation and infiltration. The second part of the course considers surface and room energy balance equations and presents analytical and computational models for calculation of hourly heating and cooling loads throughout the year. Climate-based standards, passive solar design, advanced energy guides, and innovative technologies for high performance buildings are discussed. The course also includes a design project on analytical heating/cooling load calculations for a commercial building.

Learning Outcomes: 1. Calculate heat transfer through envelope assemblies for commercial and residential buildings. 2. Solve energy balance equations for building surfaces and room air. 3. Calculate solar and internal gains and predict transient hourly heating and cooling loads for a building throughout the year using analytical and computational models. 4. Design building envelopes according to national standards. 5. Understand principles of passive solar design and the application of innovative envelope technologies. Credits: 3.00

CE 41400 - Building Mechanical And Electrical System Design

Credit Hours: 3.00. This course covers the design of building mechanical and electrical systems. In the first part of the course students learn principles of designing and integrating heating, ventilation, and air conditioning systems into building air delivery systems, mechanical cooling and heating technologies, duct design and layout, blower and pump selection, and hydronic systems. They also learn to design heating, ventilation, and air conditioning systems within the constraint of achieving satisfactory occupant thermal comfort in buildings. The second part of the course covers design concepts related to building electrical systems; including, single and three-phase power systems, motors, transformers, switching, and relays. The course includes a design project related to mechanical and electrical systems for a commercial building.

Learning Outcomes: 1. Utilize building thermal load information together with a knowledge of industry standards and numerical methods to design and integrate efficient heating, ventilation, and air conditioning systems into commercial and residential buildings. 2. Understand the benefits and drawbacks of conventional and innovative mechanical systems, and identify appropriate opportunities for the selection and integration of both. 3. Evaluate the performance and estimate energy consumption of common mechanical systems and components. 4. Understand the operating characteristics and appropriately size the components that are integrated into building electrical systems. Credits: 3.00

CE 44000 - Urban Hydraulics

Credit Hours: 3.00. Sources and distribution of water in urban environment, including surface reservoir requirements, utilization of groundwater, and distribution systems. Analysis of sewer systems and drainage courses for the disposal of both wastewater and storm water. Pumps and lift stations. Urban planning and storm drainage practice.

Credits: 3.00

CE 44200 - Introduction To Hydrology

Credit Hours: 3.00. Description, measurement, and analysis of hydrologic processes: precipitation, evapotranspiration, infiltration, and runoff. Hydrograph analysis: unit and synthetic unit hydrographs and flood routing. Statistical analysis of hydrologic data. Fundamentals, budget, and yield analysis of groundwater flows; well hydraulics. Case studies illustrating the application of principles in both surface and groundwater flows.

Credits: 3.00

CE 44300 - Introductory Environmental Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluid flow. Differential

equations for environmental fluid flows, including effects of variable density and rotation. Ideal fluid flow; boundary layer approximation; turbulence; water waves.

Credits: 3.00

CE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (EEE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management.

Learning Outcomes: 1. Understand design principles and practice of wastewater treatment. 2. Apply the knowledge to select the best process to treat wastewater. 3. Design a wastewater treatment component or process to meet water quality goals. 4. Critically review relevant literature or contemporary issues in wastewater treatment. Credits: 3.00

CE 45700 - Air Pollution Control And Design

Credit Hours: 3.00. Fundamental concepts and design procedures for the removal of particulates, gases, and toxic air pollutants from waste gas streams. Problem assessment; characterization of exhaust gas streams; fan characteristics.

Credits: 3.00

CE 46100 - Roadway And Pavement Design

Credit Hours: 3.00. Design of highway and airport pavement systems, subgrades, subbases and bases, soil stabilization, flexible and rigid pavements; cost analysis and pavement selection; quality control; drainage; earthwork; pavement evaluation and maintenance.

Credits: 3.00

CE 46300 - Highway Transportation Characteristics

Credit Hours: 3.00. Analysis of basic characteristics of highway transportation systems and the elements influencing these characteristics: drivers, vehicles, pedestrians, flow, density, speed, travel time, delay, stream flow, intersection performance, capacity, accidents, traffic demand, and parking. Techniques used include experimental observation, deterministic and probabilistic queueing theory, probability and statistics, and graphical analysis.

Credits: 3.00

CE 47000 - Structural Steel Design

Credit Hours: 3.00. The elements of structural steel design, including tension members and their connections; structural connections, including welding, and high-strength bolts; compression members; rolled and built-up flexural members; and combined axial and flexural loading effects.

Credits: 3.00

CE 47300 - Reinforced Concrete Design

Credit Hours: 4.00. Design and behavior of reinforced concrete beams, one-way slabs, and columns.

Credits: 4.00

CE 47400 - Structural Analysis II

Credit Hours: 3.00. Determination of deflections by the method of virtual work; analysis of trusses, continuous beams, and frames by direct stiffness method; approximate methods of analysis.

Credits: 3.00

CE 47900 - Design Of Building Components And Systems

Credit Hours: 3.00. Design of simple floor and roof systems and load bearing walls; uses of building materials; fundamentals of design of metal form decking, steel joists, masonry (beams, columns and load bearing walls), and timber (beams, trusses, and mechanical connections).

Credits: 3.00

CE 48300 - Geotechnical Engineering II

Credit Hours: 3.00. Subsurface investigations and techniques for sampling soils, lateral earth pressures, and stability of retaining structures; stability of earth slopes; shallow and deep foundations design.

Credits: 3.00

CE 49700 - Civil Engineering Projects

Credit Hours: 0.00 to 18.00. Topics vary. Permission of instructor required.

Credits: 0.00 to 18.00

CE 49800 - Civil Engineering Design Project

Credit Hours: 3.00. Planning, design, and analysis of a civil project; an integrated and realistic group project involves as much as possible all major aspects of the civil engineering profession.

Credits: 3.00

CE 49900 - Research In Civil Engineering

Credit Hours: 0.00 to 18.00. Credit arranged. Permission of instructor required.

Credits: 0.00 to 18.00

CEM 18000 - Construction Engineering Pre-Professional Development

Credit Hours: 1.00. Online course consisting of 8 sessions and 1 module (10 hour OSHA training) is intended to be completed before the student's first work session (internship) in order to prepare the student in the form of oral and written communication that will assist them in being successful in their experiential learning opportunities within industry. This course will also introduce the students to the construction industry relative to office and field requirements and introduce the student to professional skills that will be needed for their experiential learning opportunities including but not limited to: verbiage and acronyms, tools, software platforms, and general business etiquette and ethics.

Learning Outcomes: 1. Demonstrate an ability to apply knowledge of mathematics, science and engineering. 2. Demonstrate an understanding of professional and ethical responsibility. 3. Demonstrate ability to communicate effectively. 4. Demonstrate the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. Demonstrate recognition of the need for, and an ability to engage in life-long learning. 6. Demonstrate knowledge of contemporary issues. Credits: 1.00

CEM 20100 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. This course introduces concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role of estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed. Prerequisite: First Year Engineering Curriculum must be completed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity and the costs associated with construction equipment labor. 4. Calculate the peak financial requirement for a given project based on project revenues and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

CEM 28000 - Construction Engineering Professional Development I

Credit Hours: 1.00. This course will prepare the student for professional practice in construction engineering including information on careers and issues in construction industries; History and Culture of the U.S. Construction Industry; Engineering Ethics and Preparation for Leadership. Information and assistance is also provided related to minors and selections associated with the plan of study; student's organizations; opportunities for construction research and community outreach at Purdue. Guest speakers with be utilized to enhance the experience. The guest speakers include industry partners as well as faculty and staff. There will be an emphasis on written and oral communication.

Learning Outcomes: 1. Demonstrate an ability to apply knowledge of mathematics, science and engineering. 2. Demonstrate an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. Demonstrate an ability to function on multidisciplinary teams. 4. Demonstrate an ability to identify, formulate, and solve

engineering problems. 5. Demonstrate an understanding of professional and ethical responsibility. 6. Demonstrate ability to communicate effectively. 7. Demonstrate the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 8. Demonstrate recognition of the need for, and an ability to engage in life-long learning. 9. Demonstrate knowledge of contemporary issues. 10. Demonstrate an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

CEM 29100 - Construction Internship II

Credit Hours: 0.00. Second of three internship periods and a continuation of that described. Typically, experience emphasizes the office-based activities of the sponsor.

Credits: 0.00

CEM 29199 - Experiential Learning Session I

Credit Hours: 0.00. The Construction Engineering and Management (CEM) curriculum-based experiential learning courses allow students to bridge the gap between classroom theory and real-world practice through intentional partnerships with industry leaders. Students are systematically and deliberately aligned with industry partners to immerse themselves in authentic, real-world scenarios within the construction engineering and management field. Student experiences will be captured in the assigned courses (listed below) to document the learning outcomes based on carefully crafted learning objectives encompassing a range of essential skills and competencies necessary for success in the industry. The courses represent experiential learning work sessions with industry partners as a full-time employee charged with responsible work activities/tasks. Our primary goal is cultivating a holistic understanding of key concepts while fostering critical thinking, problem-solving abilities, and professional development. For additional information and best practices, please refer to the Experiential Learning Handbook A Guide for Students and Supervisors in Purdue's Construction Engineering and Management Program Fifth Edition 2022.

Learning Outcomes: 1. Communicate ideas, information, and progress updates professionally, both verbally and in written form, with colleagues, supervisors, and external stakeholders. 2. Demonstrate the ability to pay attention to detail and ensure thoroughness in completing assigned tasks, projects, and reports within specified timelines and quality standards; utilizing codes, standards, and standard operating procedures. 3. Understand and apply safety protocols, regulations, and best practices in the construction industry to ensure a safe working environment for themselves and their colleagues. They will make informed decisions regarding safety in their work and when overseeing the work of others. 4. Gain a comprehensive understanding of field operations within the construction industry, including hands-on experience with equipment, tools, materials, and procedures commonly used in the field. 5. Acquire fundamental knowledge and skills related to estimating, including cost estimation, quantity take-offs, bidding processes, and interpreting project specifications and drawings. 6. Develop a foundational understanding of project management principles and practices, including project planning, scheduling, budgeting, resource allocation, risk management, and client communication. 7. Demonstrate the ability to adapt to changing project requirements, solve problems creatively, identify potential issues, and propose practical solutions to overcome challenges encountered during the internship experience. 8. Participate in team-based projects, collaborate with diverse teams, contribute ideas, respect diverse perspectives, and demonstrate effective interpersonal skills to achieve common goals. 9. Uphold professional ethics, integrity, and accountability in all aspects of their work, including respecting confidentiality, adhering to company policies and procedures, and conducting themselves honestly and fairly. 10. Use reflective practices to evaluate their internship experiences, identify

areas for improvement, set personal and professional goals, seek feedback from mentors and supervisors, and demonstrate a commitment to lifelong learning and professional development. Credits: 0.00

CEM 29299 - Experiential Learning Session II

Credit Hours: 0.00. The Construction Engineering and Management (CEM) curriculum-based experiential learning courses allow students to bridge the gap between classroom theory and real-world practice through intentional partnerships with industry leaders. Students are systematically and deliberately aligned with industry partners to immerse themselves in authentic, real-world scenarios within the construction engineering and management field. Student experiences will be captured in the assigned courses (listed below) to document the learning outcomes based on carefully crafted learning objectives encompassing a range of essential skills and competencies necessary for success in the industry. The courses represent experiential learning work sessions with industry partners as a full-time employee charged with responsible work activities/tasks. Our primary goal is cultivating a holistic understanding of key concepts while fostering critical thinking, problem-solving abilities, and professional development. For additional information and best practices, please refer to the Experiential Learning Handbook A Guide for Students and Supervisors in Purdue's Construction Engineering and Management Program Fifth Edition 2022.

Learning Outcomes: 1. Communicate ideas, information, and progress updates professionally, both verbally and in written form, with colleagues, supervisors, and external stakeholders. 2. Demonstrate the ability to pay attention to detail and ensure thoroughness in completing assigned tasks, projects, and reports within specified timelines and quality standards; utilizing codes, standards, and standard operating procedures. 3. Understand and apply safety protocols, regulations, and best practices in the construction industry to ensure a safe working environment for themselves and their colleagues. They will make informed decisions regarding safety in their work and when overseeing the work of others. 4. Gain a comprehensive understanding of field operations within the construction industry, including hands-on experience with equipment, tools, materials, and procedures commonly used in the field. 5. Acquire fundamental knowledge and skills related to estimating, including cost estimation, quantity take-offs, bidding processes, and interpreting project specifications and drawings. 6. Develop a foundational understanding of project management principles and practices, including project planning, scheduling, budgeting, resource allocation, risk management, and client communication. 7. Demonstrate the ability to adapt to changing project requirements, solve problems creatively, identify potential issues, and propose practical solutions to overcome challenges encountered during the internship experience. 8. Participate in team-based projects, collaborate with diverse teams, contribute ideas, respect diverse perspectives, and demonstrate effective interpersonal skills to achieve common goals. 9. Uphold professional ethics, integrity, and accountability in all aspects of their work, including respecting confidentiality, adhering to company policies and procedures, and conducting themselves honestly and fairly. 10. Use reflective practices to evaluate their internship experiences, identify areas for improvement, set personal and professional goals, seek feedback from mentors and supervisors, and demonstrate a commitment to lifelong learning and professional development. Credits: 0.00

CEM 29700 - Experimental Course

Credit Hours: 1.00 to 6.00. This course is required to assist in the development and testing of new courses for either residential or online delivery. Initially, there may be more residential courses than online due to faculty availability and/or workload.

Learning Outcomes: 1. Introduce students to essential elements of engineering theories, practices, and applications in the field of

construction engineering. Courses may address two or more ABET outcomes. 2. Able to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics. 3. Able to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 4. Able to communicate effectively with a range of audiences. 5. Able to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 6. Able to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 7. Able to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions. 8. Able to acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00 to 6.00

CEM 30100 - Project Control And Life Cycle Execution Of Constructed Facilities

Credit Hours: 3.00. This course continues an introduction to construction management and engineering concepts for future engineers, contractors and owner representatives involved at different stages in the life-cycle of constructed facilities. Specifically, this course focuses on the principles, tools, and procedures used in the construction industry for project selection and financing, advanced planning and scheduling techniques, resource management, and project monitoring.

Learning Outcomes: 1. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. 2. Able to design a process to meet desired needs within realistic constraints. Credits: 3.00

CEM 32100 - Construction Engineering Materials Lab

Credit Hours: 1.00. The nature and performance of materials under load stress. Important engineering materials for evaluation of physical and mechanical properties include ferrous and nonferrous metals, plastics, bituminous materials, Portland cement, aggregates, concrete, timber, and particulate systems.

Learning Outcomes: 1. Evaluate the behavior and properties of engineering materials. 2. Assess the nature and performance of materials under load: Theory vs. Reality. 3. Facilitate the understanding of the strength and weakness of major construction engineering materials and their application. 4. Design and conduct experiments, and analyze and interpret data. Credits: 1.00

CEM 32400 - Human Resource Management In Construction

Credit Hours: 3.00. Introduce a broad set of fundamental topics regarding management of people in engineering and construction organizations in the U.S. Subjects include labor-management relations (laws, regulations and practices affecting construction workers and organizations); worker motivation, productivity, and training; roles and practices of managers; construction safety; management of quality.

Learning Outcomes: 1. Understand managerial aspects of the engineering and construction industry. 2. Know the background and the principal laws and practices concerning labor-management relations for the union and nonunion jobs. 3. Know current management practices involving worker supply and demand, workforce training, EEO and workforce diversity, professional ethics and construction safety. 4. Gain basic knowledge to help you become an effective manager in engineering and construction organizations. 5. Enhance communication skills. Credits: 3.00

CEM 35100 - Foundations Of Architectural Design (UCC: HUM)

Credit Hours: 3.00. Contemporary humans spend most of our time directly engaging with architecture; it is the context in which

we live our lives. This course introduces the demands ('tasks') and methods ('tools') inherent to the practice of architectural design. In other words, the problems architects address through design and the ways in which they do so. These two sets of topics are presented in tandem through historical and contemporary examples, along with selected case-studies and readings. Success in the course will provide a foundation for richly experiencing, critically assessing, and productively engaging the development of our built environment.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify features exhibiting distinct qualities (historical, cultural, technical, etc.) in built examples. 2. Explain how an architectural design may have developed as it did. 3. Demonstrate how ideas from one source can be applied to the analysis of another. 4. Distinguish how a case study example exhibits specific traits. Credits: 3.00

CEM 38000 - Construction Engineering Professional Development II

Credit Hours: 1.00. This course will build upon the topics discussed in CEM 28000 to further prepare students for their work in the construction industry. A focus of this class will be on presentation skills. By utilizing the first or last hour of CEM 42500 - Construction Practice Project, the students of CEM 38000 will have the opportunity to present and also participate as an audience and active participant in CEM 42500 Construction Practice Project. The presentations of CEM 38000 will consist of their required Summer Internship Reports, which are a compilation of the work they have completed and skills they have learned in their first two internships (CEM 19100 and CEM 29100).

Learning Outcomes: 1. Demonstrate an ability to apply knowledge of mathematics, science and engineering. 2. Demonstrate an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. Demonstrate an ability to identify, formulate, and solve engineering problems. 4. Demonstrate an understanding of professional and ethical responsibility. 5. Demonstrate an ability to communicate effectively. 6. Demonstrate the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 7. Demonstrate recognition of the need for, and an ability to engage in life-long learning. 8. Demonstrate knowledge of contemporary issues. Credits: 1.00

CEM 39100 - Construction Internship III

Credit Hours: 0.00. Third, and last, of required internships. It typically emphasizes the project management activities of the sponsor. Actual assignments to a student may vary from sponsor to sponsor.

Credits: 0.00

CEM 39399 - Experiential Learning Session III

Credit Hours: 0.00. The Construction Engineering and Management (CEM) curriculum-based experiential learning courses allow students to bridge the gap between classroom theory and real-world practice through intentional partnerships with industry leaders. Students are systematically and deliberately aligned with industry partners to immerse themselves in authentic, real-world scenarios within the construction engineering and management field. Student experiences will be captured in the assigned courses (listed below) to document the learning outcomes based on carefully crafted learning objectives encompassing a range of essential skills and competencies necessary for success in the industry. The courses represent experiential learning work sessions with industry partners as a full-time employee charged with responsible work activities/tasks. Our primary goal is cultivating a holistic understanding of key concepts while fostering critical thinking, problem-solving abilities, and professional development. For additional information and best practices, please refer to the Experiential Learning Handbook A Guide for Students and Supervisors in Purdue's Construction Engineering and Management Program Fifth Edition 2022.

Learning Outcomes: 1. Communicate ideas, information, and progress updates professionally, both verbally and in written form, with colleagues, supervisors, and external stakeholders. 2. Demonstrate the ability to pay attention to detail and ensure thoroughness in completing assigned tasks, projects, and reports within specified timelines and quality standards; utilizing codes, standards, and standard operating procedures. 3. Understand and apply safety protocols, regulations, and

best practices in the construction industry to ensure a safe working environment for themselves and their colleagues. They will make informed decisions regarding safety in their work and when overseeing the work of others. 4. Gain a comprehensive understanding of field operations within the construction industry, including hands-on experience with equipment, tools, materials, and procedures commonly used in the field. 5. Acquire fundamental knowledge and skills related to estimating, including cost estimation, quantity take-offs, bidding processes, and interpreting project specifications and drawings. 6. Develop a foundational understanding of project management principles and practices, including project planning, scheduling, budgeting, resource allocation, risk management, and client communication. 7. Demonstrate the ability to adapt to changing project requirements, solve problems creatively, identify potential issues, and propose practical solutions to overcome challenges encountered during the internship experience. 8. Participate in team-based projects, collaborate with diverse teams, contribute ideas, respect diverse perspectives, and demonstrate effective interpersonal skills to achieve common goals. 9. Uphold professional ethics, integrity, and accountability in all aspects of their work, including respecting confidentiality, adhering to company policies and procedures, and conducting themselves honestly and fairly. 10. Use reflective practices to evaluate their internship experiences, identify areas for improvement, set personal and professional goals, seek feedback from mentors and supervisors, and demonstrate a commitment to lifelong learning and professional development. Credits: 0.00

CEM 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in Construction Engineering and Management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CEM 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in Construction Engineering and Management. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

CEM 39700 - Experimental Course

Credit Hours: 1.00 to 6.00. This course is required to assist in the development and testing of new courses for either residential or online delivery. Initially, there may be more residential courses than online due to faculty availability and/or workload.

Learning Outcomes: 1. Introduce students to essential elements of engineering theories, practices, and applications in the field of construction engineering. Courses may address

two or more ABET outcomes. 2. Able to identify, formulate, and solve complex engineering problems by applying principles of engineering, science and mathematics. 3. Able to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 4. Able to communicate effectively with a range of audiences. 5. Able to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 6. Able to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 7. Able to develop and conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions. 8. Able to acquire and apply knowledge as needed using appropriate learning strategies. Credits: 1.00 to 6.00

CEM 40100 - Critical Thinking In Construction Engineering

Credit Hours: 3.00. This course introduces the concepts of critical thinking and why acting in our 'comfort zone' can result in discomfort. Students will explore a number of simulated and actual problems that challenge understanding of the situation and require additional investigation or analysis. Problems will cover the entire building life-cycle from development of a project plan, through design, project risk analysis for bidding, controlling the project, project recovery, and project handover. Guest speakers will present examples of projects where critical thinking was applied to resolve project issues or avoid a significant error.

Learning Outcomes: 1. Understand the complex nature of construction through the schematic nature of design and the physical realities of construction sequences and processes. 2. Explore different approaches to accomplishing the same goal. 3. Learn from several case studies where solutions may appear obvious but where the better solution is less obvious. Professional writing and presentation skills are required. 4. Evaluate a specific construction case in depth and report on their findings and recommended approach. Credits: 3.00

CEM 42501 - Construction Engineering Capstone I

Credit Hours: 2.00. The capstone senior design course for construction engineering and management majors. Working in teams in a realistic engineering practice environment, students use an actual construction project to accomplish open-ended project planning and systems design. Course covers construction project strategy, cost estimating and bidding, constructability analysis, project scheduling, contract conditions, project organization, site analysis and development, safety and quality management, and information systems design. Comprehensive written submittals and oral presentations require integration of knowledge gained in previous courses and in construction internships.

Learning Outcomes: 1. Know phases and aspects of construction project planning, engineering, and management at the project level. 2. Know complexities and uncertainties of planning and decision-making in a realistic environment. 3. Know how construction activities by the constructor are influenced by owner needs and project design basis and features. 4. Demonstrate methods and skills of oral and written communication. 5. Demonstrate methods, techniques and experience of working in teams. Credits: 2.00

CEM 42502 - Construction Engineering Capstone II

Credit Hours: 2.00. The capstone senior design course for construction engineering and management majors. Working in teams in a realistic engineering practice environment, students use an actual construction project to accomplish open-ended project planning and systems design. Course covers construction project strategy, cost estimating and bidding, constructability analysis, project scheduling, contract conditions, project organization, site analysis and development, safety and quality management, and information systems design.

Comprehensive written submittals and oral presentations require integration of knowledge gained in previous courses and in construction internships.

Learning Outcomes: 1. Able to read a contract and determine the scope of work to be provided and under what terms. 2. Able to assemble a schematic design and design development set of plans & specifications representative of the schedule and budget. 3. Able to create appropriate types of schedules based on work composition using various scheduling programs. 4. Able to select the appropriate equipment, labor resources, and materials including temporary structure to perform the work. 5. Able to develop an estimate and budget based on plans and specifications. Credits: 2.00

CEM 43100 - Introduction To Facility Engineering And Management

Credit Hours: 3.00. This course introduces students to the field of facility engineering and management, the operation of constructed facilities to ensure efficient operation, meet stakeholder needs, and preserve the facility for its intended life. The course is a technical elective for Construction Engineering and Management students who are familiar with the delivery of capital construction projects and provides an owner/operator perspective of capital construction and ongoing operations. The course focuses on the different capital construction types (buildings, roads, bridges, tunnels, water treatment facilities, and industrial facilities). Guest speakers will be used to present the challenges specific to individual facility types. Methods and tools to develop the needed management and annual operational plans for facilities will be used. Case studies will be used to demonstrate the application of methods and tools.

Learning Outcomes: 1. Understand what is required to operate and manage a constructed facility. 2. Describe what resources are needed to operate and manage facilities of different types. 3. Examine the needs of individual facility types to ensure successful operation. 4. Analyze a facility to determine what is required for planning purposes. Credits: 3.00

CEM 45100 - Integrative Building Design

Credit Hours: 3.00. This course introduces the architectural and constructive challenges of comprehensive, integrated building design. In lectures, the range of constituent systems (active and passive) that combine to produce contemporary buildings will be presented with particular attention to the specific parameters and metrics that drive their functionality and performance. The central project is an extended exercise in design modeling: applying iterative refinements to introduce additional layers of systemic complexity and to respond to specific analytical measures of building performance. Success in this course will support the ability to productively contribute to building and construction projects from a variety of specific roles.

Learning Outcomes: 1. Understand building systems fundamentals. 2. Apply knowledge of building systems to a model case. 3. Compare the outcomes of different design/system application choices. 4. Develop a design solution based on a range of input parameters. 5. Communicate project outcomes clearly and effectively. Credits: 3.00

CEM 45500 - Temporary Structures In Construction

Credit Hours: 3.00. This course will cover the design and construction of various temporary structures and systems used in building and transportation construction. The course describes not only design issues of temporary structures such as formwork, falsework, bracing, earth retention systems, scaffolding, cofferdams, and so forth by providing lectures and design examples, but it also covers business aspects associated with the design and construction of temporary structures in the real world such as business practice, legal aspects, and design philosophy.

Learning Outcomes: 1. Develop an understanding of design and performance of various systems. 2. Develop an understanding of the importance and value of these systems and the responsibilities that will be carried into a professional career. Credits: 3.00

CEM 45600 - Design-Build Project Delivery Method For Engineers

Credit Hours: 3.00. This course presents traditional project delivery methods and contrasts them with design-build project delivery. The course focuses on the principles, tools, and procedures used in the design-build project delivery method. It provides students with sufficient education to become certified (following additional examination) by the Design Build Institute of America as an Associate Member and dependent on employment experience, a full Member. Traditional project delivery methods, Design-Bid-Build, Construction Manager as

Agent, 'Fast Track', and other 'rip and read' methods are losing popularity to project delivery methods that take a more collaborative approach. Collaboration requires a different way of thinking about a capital construction project and working with others in project delivery. Constructors must move from a transactional, arms-length relationship where the project is viewed as a low-price commodity to a full-suite delivery of services resulting in a high-value product. This requires collaboration with the Owner and other members of the project delivery process, something that has been missing from traditional project delivery methods. Active student participation is required. Student participation will be facilitated through assigned presentations, in-class projects, field trips to local projects, and guest lectures. Students who complete the course and achieve DBIA's minimum requirements (Fundamentals of Project Delivery, Principles of Design-Building Project Delivery, Post Award, and Contracts & Risk Management) will be eligible for recognition by DBIA.

Credits: 3.00

CEM 45700 - Inland Navigation Engineering

Credit Hours: 3.00. This course teaches detailed elements of Inland Navigation Structures, primarily in the United States. Students will become familiar with how waterways are conceived, planned, designed and constructed. Engineering Design Manuals for Locks and Dams will be reviewed. A primary focus will be on a new Corps of Engineers Lock and Dam currently under construction. The students will thoroughly review the Plans and Specifications as well as Construction Photos and Videos taken during construction. Various marine construction equipment and techniques will be presented.

Learning Outcomes: 1. Describe the attributes of all major project delivery methods, procurement methodologies, and contracting approaches. 2. Identify the appropriate project delivery method based on owner requirements. 3. Evaluate the attributes of design-build project delivery. 4. Assess the critical elements of the request for qualifications/request for proposals (RFQ/RFP) process and overall project management for design-build projects. 5. Understand the risk management and contract implications of a design-build project versus other project delivery methods. 6. Apply the attributes learned in this course to case studies. 7. Be prepared to be a meaningful participant on a real design-build project. Credits: 3.00

CEM 48500 - Legal Aspects Of Construction Engineering

Credit Hours: 3.00. This course will cover legal principles and landmark cases relevant to civil and construction engineering. Specific subjects covered include contracts, torts, agency, professional liability, labor laws, insurance, expert testimony, arbitration, patents and copyrights, sureties and ethics.

Learning Outcomes: 1. Read, comprehend and interpret construction contract plans and specifications for lock and dam facilities and other inland navigation structures. Through detailed study of project plans and specs as well as construction photos, students will be taken through the process of building these facilities from planning through construction. 2. Understand how a lock and dam facility functions. 3. Identify various components of lock and dam structures. 4. Understand various types of marine equipment necessary to construct a navigation facility in the dry or wet.

Credits: 3.00

CEM 49700 - Construction Engineering Projects

Credit Hours: 0.00 to 4.00. Topics vary. Permission of department required.

Credits: 0.00 to 4.00

CEM 50100 - Leadership And Advanced Project Management

Credit Hours: 3.00. This course will focus on the first ten years of the student's professional career. It will introduce concepts relating to development of the leader-manager, advanced project management techniques that will assist the student towards success in the construction industry, and developing a business plan on starting a small engineering or construction company. Guest speakers provide learning from entrepreneurs who got their start utilizing the systems taught in the course.

Learning Outcomes: 1. Recognize the importance of their personal values, attitudes, and communication skills in developing the leader-manager within. 2. Understand that modern leadership is "Taking people from where they are to where they have never been" and that "Leaders build leaders". 3. Work within

a team atmosphere and understand conflict management. 4. Develop their planning skills with specific focus on Lean Construction and story boarding & resource leveling techniques. 5. Understand the importance and impact that marketing and relationship development can have on the individual construction company's success and survival. 6. Expand their financial and cash management skills, including real estate development. 7. Develop business plans for an emerging engineering or construction business. Credits: 3.00

Elmore Family School of Electrical and Computer Engineering

About Electrical and Computer Engineering

Electrical and Computer engineering encompasses all areas of research, development, design, and operation of electrical and electronic systems and their components, including software. Emphasis in such varied areas as bioengineering, circuit theory, communication sciences, computers and automata, control systems, electromagnetic fields, energy sources and systems, and materials and electronic devices is available. Two degree programs are offered by the School: Bachelor of Science in Electrical Engineering (BSEE) and Bachelor of Science in Computer Engineering (BSCmpE).

Engineers in both fields must have a strong background in mathematics and physics, a broad base in the humanities, and a command of the English language in order to provide the scope of knowledge essential for optimum professional growth. The curriculum offered by the School of Electrical and Computer Engineering meets these objectives.

Graduates from the School of Electrical and Computer Engineering are sought after by all major industries. Electrical engineers hold many unusual and challenging positions in the aerospace, chemical, nuclear, automotive, medical, metallurgical, textile, railway, petroleum, and other basically non-electrical industries, as well as in computers, electronics, communications, power, and other electrical industries. Their professional roles span industrial activity, research, development, design, production, marketing, operation, field testing, and maintenance of many types of equipment for government, industry, farm, and home.

Two degree programs are offered by the school:

Electrical Engineering encompasses the development, design, research, and operation of electrical and electronic systems and components. Disciplines include VLSI and circuit design, communication and signal processing, computer engineering, automatic control, fields and optics, energy sources and systems, and microelectronics and nanotechnology.

Computer Engineering is a specialization within electrical and computer engineering offering an in-depth education in both hardware and software aspects of modern computer systems.

Electrical and Computer Engineering provides students with a versatile education that will prove valuable looking toward a professional future. Along with problem-solving and design skills, students develop a strong foundation in math, science, and core electrical/computer engineering fundamentals. This skillset prepares them for research and development positions in industry, management, sales, teaching, medical school, and law school.

At Birck Nanotechnology Center, engineers and scientists conduct research in emerging fields where new materials and tiny structures are built atom by atom or molecule by molecule.

ECE 19595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not

taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

ECE 20008 - Electrical Engineering Fundamentals II Lab

Credit Hours: 1.00. This is a course in electronic measurement, circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments including discrete semiconductor measurement, transistor amplifiers, motor control, and operational amplifier internals. The experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20002 Electrical Engineering Fundamentals II; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in other courses.

Learning Outcomes: 1. Ability to competently select, use, and automate electronic measurement instruments. 2. Design, wire, and troubleshoot electronic circuits. 3. Ability to simulate electronic circuits. 4. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 5. Demonstrate knowledge of laboratory safety precautions. 6. Maintain laboratory notes and create professional experiment reports. Credits: 1.00

ECE 20200 - Linear Circuit Analysis II

Credit Hours: 3.00. Continuation of ECE 20100. Use of Laplace Transform techniques to analyze linear circuits with and without initial conditions. Characterization of circuits based upon impedance, admittance, and transfer function parameters. Determination of frequency response via analysis of poles and zeros in the complex plane. Relationship between the transfer function and the impulse response of a circuit. Use of continuous time convolution to determine time domain responses. Properties and practical uses of resonant circuits and transformers. Input - output characterization of a circuit as a two-port. Low and high-pass filter design.

Learning Outcomes: 1. Able to compute impedances and admittances of components and circuits. 2. Able to compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Able to compute responses to linear circuits using transfer function and convolution techniques. 4. Able to analyze and compute responses of linear circuits containing mutually couples inductors and ideal transformers in the s-domain. 5. Able to analyze basic two port circuits using the various types of two port parameters and be able to construct such parameters from a given circuit. 6. Able to analyze and design basic LP, BP, HP and resonant circuits in the s-domain. Credits: 3.00

ECE 20400 - Introduction To Electrical And Electronic Circuits

Credit Hours: 4.00. Students will learn basics of electrical and electronic circuits including introduction to analog and digital electronic circuits. Measurement of electrical signals using meters, probes, and oscilloscopes are covered in the laboratory component of the course. Circuits are designed for minimum hardware with emphasis on understanding analog and digital electronics with particular use of digital and analog microchips. Non-ECE majors who complete this course can continue the digital course sequence offered by the ECE department including microprocessor systems and interfacing, and digital signal processing. No credit will be given for ECE majors.

Credits: 4.00

ECE 20700 - Electronic Measurement Techniques

Credit Hours: 1.00. Experimental exercises in the use of laboratory instruments. Voltage, current, impedance, frequency, and wave form measurements. Frequency and transient response. Elements of circuit modeling and design.

Credits: 1.00

ECE 20800 - Electronic Devices And Design Laboratory

Credit Hours: 1.00. Laboratory experiments in the measurement of electronic device characteristics. Design of biasing networks, small signal amplifiers, and switching circuits.

Credits: 1.00

ECE 20869 - Discrete Math For Computer Engineering

Credit Hours: 3.00. This course introduces discrete mathematical structures and finite-state machines. Students will learn how to use logical and mathematical formalisms to formulate and solve problems in computer engineering. Topics include formal logic, proof techniques, recurrence relations, sets, combinatorics, relations, functions, algebraic structures, and finite-state machines.

Learning Outcomes: 1. Define, reason about, and operate on sets using basic set operations and Recursive definition. [1,7] 2. Represent and verify entailment arguments in predicate logic, both syntactically and semantically. [1,3,7] 3. Argue carefully using a variety of informal proof techniques, including mathematical induction. [1,3,7] 4. Count in a wide range of settings including permutations, combinations, countable infinities, and recurrence equations. [1,7] 5. Define and reason about functions and binary relations and work with their useful properties. [1] 6. Have an ability to define finite-state automata and regular expressions for languages, and relate these formalisms using non-determinism. [1,7] 7. Formulate algorithmic problems as decision problems and reason about their decidability and scalable solvability. [1,7] Credits: 3.00

ECE 20875 - Python For Data Science

Credit Hours: 3.00. This course will introduce Python programming to students through data science problems. Students will learn Python concepts as well as introductory data science topics, and will use their knowledge of Python (and prior programming experience) to implement data analyses.

Learning Outcomes: 1. Understand of regular expressions [1, 2]. 2. Use Python to write data analyses [1, 2, 6]. 3. Explain when data analyses are appropriate [1, 2, 3, 6]. 4. Explain the results of data analyses [2, 3, 5]. 5. Incorporate classes in their Python programs [1, 2, 6]. 6. Incorporate associative arrays in their programs [1, 2, 6]. Credits: 3.00

ECE 21000 - Electrical And Computer Engineering Sophomore Seminar

Credit Hours: 1.00. An introduction to the School of Electrical and Computer Engineering, ECE program objectives and outcomes, BSEE and BSCmpE degree requirements, and professional development.

Credits: 1.00

ECE 25500 - Introduction To Electronic Analysis And Design

Credit Hours: 3.00. Diode, bipolar transistor, and FET circuit models for the design and analysis of electronic circuits. Single and multistage analysis and design; introduction to digital circuits. Computer-aided design calculations, amplifier operating point design, and frequency response of single and multistage amplifiers. High-frequency and low-frequency designs are emphasized.

Learning Outcomes: 1. Able to identify and correctly utilize the external lead structure and basic electrical characteristics of common semiconductor devices (pn junctions, MOSFETs, ad BJTs). 2. Able to analyze and design d.c. bias circuits. 3. Able to utilize d.c. and a.c. models of semiconductor devices in both analysis and design. 4. Able to analyze and design single and multistage amplifiers at low, mid and high frequencies. 5. Able to use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 28200 - UNIX Programming For Engineers

Credit Hours: 1.00. Introduction to the UNIX operating system, including the UNIX file system, UNIX tools, and utilities. Introduction to Shell programming. The emphasis will be on how these tools/utilities are utilized in the Computing Engineering field.

Credits: 1.00

ECE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in electrical and/or computer engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in electrical and/or computer engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 29401 - Electrical And Computer Engineering Sophomore Seminar

Credit Hours: 1.00. An introduction to the School of Electrical and Computer Engineering, the program's objectives, and outcomes, BSEE and BSCmpE degree requirements, professional writing and multicultural and professional development.

Learning Outcomes: 1. Knowledge of the ECE educational objectives and required outcomes. 2. Knowledge of the BSEE and/or BSCmpE degree requirements. 3. Ability to prepare a satisfactory plan-of-study. 4. Ability to write effectively in the English language. 5. Appreciation for ethical, professional and academic conduct. Credits: 1.00

ECE 29595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate

effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 29600 - Electrical And Computer Engineering Projects

Credit Hours: 0.00 to 18.00. Projects in Electrical and Computer Engineering. Permission of Department required.

Learning Outcomes: 1. Ability to apply knowledge of mathematics, science, and engineering. 2. Recognition of the need for, and an ability, to engage in life-long learning. 3. Ability to use techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 0.00 to 18.00

ECE 30010 - Introduction To Machine Learning And Pattern Recognition

Credit Hours: 3.00. Intelligent information processing, search and retrieval, classification, recognition, prediction and optimization with machine learning and pattern recognition algorithms such as neural networks, support vector machines, decision trees and data mining methods, current models and architectures, implementation topics especially in software, applications in areas such as information processing, search and retrieval of internet data, forecasting (prediction), classification, signal/image processing, pattern recognition, optimization, simulation, system identification, communications, control, management and finance. Topics covered will also be illustrated with the software package MATLAB and related toolboxes. Permission of instructor required.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design and conduct experiments, as well as to analyze and interpret data. 3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. An ability to function on multi-disciplinary teams. 5. An ability to identify, formulate, and solve engineering problems. 6. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. 7. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. Credits: 3.00

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's

theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 30200 - Probabilistic Methods In Electrical And Computer Engineering

Credit Hours: 3.00. An introductory treatment including probability of events, discrete and continuous random variables, multiple random variables, sums of random variables and long-term averages, and elementary random processes. Applications involving uniform, Gaussian, exponential, geometric and related random variables. Introduction to parameter estimation and hypothesis testing. Discussion of wide-sense stationary random processes, including correlation functions, spectral densities and the response of linear time invariant systems. Course examples are drawn from signal processing, wireless communications, system reliability, and data science.

Credits: 3.00

ECE 30411 - Electromagnetics I

Credit Hours: 3.00. This course is a continued study of vector calculus, electrostatics, magnetostatics, and Maxwell's Equations. It serves as an introduction to electromagnetic waves and transmission lines, which is continued in ECE 30412.

Learning Outcomes: 1. Work with electrostatic fields and find electric and potential fields from charge distributions including the presence of dielectric materials. 2. Work with magnetostatic fields and find magnetic fields from current distributions including the presence of magnetic materials. 3. Work with time varying fields including wave propagation. 4. Work with transmission lines in the time and frequency domains. Credits: 3.00

ECE 30412 - Electromagnetics II

Credit Hours: 3.00. Electromagnetics II builds on Electromagnetics I (ECE 31100) and emphasizes time-varying electromagnetic fields. Both fundamental understanding and an appreciation for applications that span all technologies related to electrical and computer engineering are emphasized. The topics covered include: Maxwell's equations, plane waves, transmission lines, waveguides and cavities, and antennas and radiation. Applications addressed relate to photonics, communications, and imaging and sensing. More generally, illustrations cover the basic principles on which devices and systems used every day operate.

Learning Outcomes: 1. Understand time-varying fields and Maxwell's equations. 2. Understand plane electromagnetic waves. 3. Understand the theory and application of transmission lines. 4. Understand waveguides and cavity resonators. 5. Understand antennas and radiating systems. Credits: 3.00

ECE 30414 - Elements Of Fiber Optics, Lasers And Optoelectronics

Credit Hours: 3.00. Fundamental of photonics, guided-wave optics, optical fibers, lasers, photon detectors, integrated optical components, optical information processing, devices in communication and sensor applications. Topics include generation, transformation, modulation and detection of laser beams and their applications.

Learning Outcomes: 1. Analyze simple optical systems including dielectric slabs, thin lenses, reflectors, and optical resonators. 2. Analyze optical waveguides, examine fiber modes and waveguide properties. 3. Know the operations of gas lasers, semiconductor lasers and light emitting diodes. 4. Know the operational principles of optical detectors, including various optical detection schemes. 5. Understand of the key components of optical fiber communication systems. 6. Understand of novel concepts in photonics, including ultrafast optics, photonic crystals, optical interconnects, metal optics, and metamaterials. Credits: 3.00

ECE 30415 - Fiber Optics And Lasers Laboratory

Credit Hours: 1.00. This laboratory course exercises in lasers, modulation of laser beams, fiber components and systems. It covers some simple optical measurements like Power and beam spot measurement of Gaussian beams. Students learn about lens-pinhole spatial filters and beam expanders. Fourier transform, convolution and correlation are covered. Characteristics of LEDs and ILDs are shown. Students become familiar with optical fibers related experiments like Fiber-optic microbend intensity sensors, Electrooptic modulation, Fiber optic Mach-Zehnder interferometer etc. Students also learn how to build laser systems based on the knowledge acquired from previous labs and with some simple set up. Finally there is a

final project where students can design a practical optical instrument based on their knowledge from the lab.

Learning Outcomes: 1. Handle basic optical components and equipment properly. 2. Assemble and align necessary optical components to perform simple optical experiments. 3. Design and test simple fiber communication systems. Credits: 1.00

ECE 30416 - Basics Of Engineering Optics

Credit Hours: 3.00. Fundamental of photonics, guided-wave optics, optical fibers, lasers, photon detectors, integrated optical components, optical information processing, devices in communication and sensor applications. Topics include generation, transformation, modulation and detection of laser beams and their applications.

Learning Outcomes: 1. Analyze simple optical systems including dielectric slabs, thin lenses, and reflectors. 2. Model Gaussian beams and the transformation of beams. 3. Analyze and design polarization systems, including polarizers and wave plates. 4. Know of optical interferometers and the operations of interferometers such as the Michelson, Fabry-Perot and double-slit. 5. Analyze diffraction patterns. Credits: 3.00

ECE 30417 - Engineering Optics Laboratory

Credit Hours: 1.00. A set of laboratory experiments dealing with fundamentals and basic applications of geometrical optics, beams, polarization optics, wave optics and Fourier optics. Permission of instructor required.

Learning Outcomes: 1. Handle basic optical components and equipment properly. 2. Assemble a set of optical components to perform simple optical measurements. 3. Design and test simple free-space optical measurements and instruments. Credits: 1.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 30600 - Electronic Circuits And Systems Laboratory

Credit Hours: 1.00. Experiments in electronic circuits and systems, including spectral analysis techniques, sampling, distortion measurements, random signals, signal-to-noise ratio and correlation.

Credits: 1.00

ECE 30653 - Introduction To Nanotechnology And Quantum Science & Technology

Credit Hours: 3.00. This interdisciplinary course offers an introduction to nanotechnology and quantum science and technology for undergraduate students in science and engineering. The students will develop understanding of interdisciplinary nature of these fields and utilize concepts in physics, chemistry and mechanics to describe and analyze unique properties of quantum and nanoscale objects. The course will provide the opportunity to get exposed to highly interdisciplinary nature of today's most active and rapidly expanding fields of research and technologies.

Learning Outcomes: 1. Define major types of nanoparticles and their sources. 2. Illustrate by simple calculations unique physical properties of nanoscale objects, e.g. calculate de Broglie wavelength, surface energy, melting point. 3. Describe basic nanostructure measurement methods. 4. Give examples of economic benefits of nano and quantum technology. 5. Describe approaches for managing security, health and environmental risks. Credits: 3.00

ECE 30700 - Electromagnetic Fields And Waves Laboratory

Credit Hours: 1.00. Experimental exercises illustrating concepts in electric and magnetic fields, transmission lines, electromagnetic fields, simple waveguides, and antennas.

Credits: 1.00

ECE 30800 - Systems Simulation And Control Laboratory

Credit Hours: 1.00. Instruction and laboratory exercises in the

solution of differential equations that arise in the modeling of physical systems. Instruction in the principles of operation and design of linear control systems.

Credits: 1.00

ECE 30834 - Fundamentals Of Computer Graphics

Credit Hours: 3.00. Fundamental principles and techniques of computer graphics. The course covers the basics of going from a scene representation to a raster image using OpenGL. Specific topics include coordinate manipulations, perspective, basics of illumination and shading, color models, texture maps, clipping and basic raster algorithms, fundamentals of scene constructions. Permission of department required.

Learning Outcomes: 1. An understanding of the design issues for creating raster graphics. 2. An ability to apply rendering techniques to an actual computer graphics problem and associated datasets. 3. An understanding of object transformations, representations, transformations and perspective projections. 4. An understanding of color, illumination, and shading techniques. 5. An understanding of the rendering and rasterization techniques. 6. An understanding of the application of computer graphics techniques to visualization, animation, and computer aided design. Credits: 3.00

ECE 30861 - Software Engineering

Credit Hours: 3.00. Introduction to the technical and social aspects of software engineering principles, with special emphasis on the process, methods, and tools needed to develop and test quality software products and systems.

Learning Outcomes: 1. Conduct object-oriented design and use unified modeling language. 2. Understand different models of software development processes. 3. Analyze requirements and write project specifications. 4. Develop a team software project on time and meet the specifications successfully. Credits: 3.00

ECE 30862 - Object-Oriented Programming In C++ And Java

Credit Hours: 3.00. C++ and Java programming languages, including classes, inheritance, encapsulation, polymorphism, class derivation, abstract classes, interfaces, static class members, object construction and destruction, namespaces, exception handling, function, overloading and overriding, function name overload resolution, container classes, and template classes.

Learning Outcomes: 1. An understanding of the concepts of inheritance and polymorphism. 2. An ability to overload operators in C++. 3. An understanding of the difference between function overloading and function overriding. 4. An ability to incorporate exception handling in object-oriented programs. 5. An ability to use template classes and the STL Library in C++. 6. An ability to write object-oriented programs of moderate complexity in Java. 7. An ability to write programs with multiple threads and use synchronization among threads. Credits: 3.00

ECE 30864 - Software Engineering Tools

Credit Hours: 1.00. This course will acquaint students with the toolkit of the modern software engineer. Students will learn the tools surrounding the software application itself, e.g., tools for software process, software construction, and software deployment. Examples include: integrated development editors (IDEs), version control systems, project management, bug tracking, scripting languages, testing aids, deployment technologies.

Learning Outcomes: 1. Use orchestration languages to manipulate diverse software systems. 2. Understand testing tools to assess software reliability and correctness. 3. Use software management tools. 4. Have an awareness of software deployment technologies and tradeoffs. Credits: 1.00

ECE 31032 - Power Systems Engineering

Credit Hours: 3.00. Introduction to the economic operation of power systems, three-phase circuit analysis, modeling of transformers and transmission lines, steady-state network analysis using a power flow, analysis during faults and state estimation.

Learning Outcomes: 1. Understand the function of the main components in a power system, and the basis of their circuit models. 2. Build a

system representation from components' circuit models and to apply solution techniques to certain operational needs. Credits: 3.00

ECE 31033 - Power Electronics

Credit Hours: 3.00. Introduction to the fundamental operating principles of power conditioning circuits that are currently being used to effect power flow from AC to DC and vice versa. Emphasis is on the relationship between form and function of these circuits. Circuits discussed will include AC/DC line-commutated converters, DC/DC converters, DC/variable frequency converters, resonant converters, and AC/AC converters. Computer simulations will be used as a part of the coursework.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a microcontroller-based digital system. 2. Understand the engineering design process. 3. Function on a multidisciplinary team. 4. Be aware of professional and ethical responsibility. 5. Communicate effectively, in both oral and written form. Credits: 3.00

ECE 31100 - Electric And Magnetic Fields

Credit Hours: 3.00. Continued study of vector calculus, electrostatics, and magnetostatics, and Maxwell's equations. Introduction to electromagnetic waves, transmission lines, and radiation from antennas.

Credits: 3.00

ECE 31500 - Fundamentals Of Electrical Energy Engineering

Credit Hours: 3.00. Resistive circuit analysis with controlled sources. Sinusoidal frequency response, filters and Bode plots. Complex power in AC circuits, ideal transformers and three-phase power. Power electronic circuits including diodes, transistor switches, rectifiers and AC-DC converters. Magnetic circuits, magnetic materials and B-H curves. Transformer equivalent circuit models. No credit will be given for ECE majors.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering. 2. Design and construct experiments, as well as to analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, societal, political, ethical, health and safety, manufacturability, and sustainability. 4. Function on multi-disciplinary teams. 5. Identify, formulate, and solve engineering problems. 6. Understanding of professional and ethical responsibility. 7. Communicate effectively. Credits: 3.00

ECE 32100 - Electromechanical Motion Devices

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications are presented.

Learning Outcomes: 1. Analyze/design electromagnetic circuits/devices. 2. Understand the concepts and principles of electromagnetic energy conversion. 3. Understand the concept of time-varying transformations in the analysis of time-varying systems. 4. Analyze dc machines. 5. Understand converters for dc drives. 6. Analyze brushless dc machines. 7. Analyze induction machines. Credits: 3.00

ECE 32300 - Electromechanical Motion Devices And Systems Laboratory

Credit Hours: 1.00. Experiments closely coordinated with ECE 32100 involving measurement of fundamental parameters of various electromechanical devices using modern instrumentation techniques. Computer simulation is used to predict steady-state and dynamic operating characteristics. Comparison of predicted and measured performance is emphasized.

Learning Outcomes: N/A Credits: 1.00

ECE 32600 - Engineering Project Management

Credit Hours: 3.00. (ME 32600) Project management is an important skill that is needed in the private and public sectors as well as specialty businesses. This course will explore the challenges facing today's project managers and will provide a broad understanding of the project management environment focused on multiple aspects of the project.

Learning Outcomes: 1. Use library resources and internet resources to find information

necessary for the project. 2. Use critical thinking in its design process. 3. Use creative approaches when necessary to obtain project objectives. 4. Analyze and interpret data. 5. Function effectively on a multi-disciplinary team through mutual support, consensus seeking, cooperation, and sharing responsibility. 6. Write a project report, adhering to the specified format using an appropriate writing style, grammar, and spelling. 7. Make an oral presentation using effective visual aids. 8. An understanding of professional and ethical responsibility. 9. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 10. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

ECE 32700 - Engineering Economics

Credit Hours: 3.00. (ME 32700) Engineering Economics is designed as an overview of economics with a focus on how it relates to the practice of engineering. Topics include interest formulas, rate of return, life cost analysis, depreciation, taxes, and cash flow.

Learning Outcomes: 1. Understand the terminology used in engineering economic analysis. 2. Understand time-value-of-money concepts such as net present worth analysis, equivalent uniform annual worth analysis, benefit/cost analysis, internal rate of return analysis, loans, leveraging, and fixed-income investment analysis. 3. Understand the criteria for making economic-based decisions. 4. Analyze before-tax and after-tax cash flows. 5. Understand economic risk analysis techniques. 6. Conduct minimum life cycle cost tradeoffs between initial and repair costs. 7. Formulate economic solutions to real-world case study problems. 8.Demonstrate capability to use Excel spreadsheet analysis in solving economic problems. 9. Experience working in a project team to solve an economic problem and make a presentation of the solution using PowerPoint. 10. Write a project report, adhering to the specified format for business reports using appropriate writing style, grammar, and spelling. 11. Learn how to estimate costs and perform an economic analysis in support of capstone design and other term projects. 12. Develop cash flow analysis problem solving techniques for passing exams including the Engineering Economics portions of the EIT exam. Credits: 3.00

ECE 33700 - ASIC Design Laboratory

Credit Hours: 2.00. Introduction to standard cell design of Application Specific Integrated Circuits (ASICs) using modern hardware description languages (HDLs). Emphasis on how to write HDL code that will map readily to hardware. Laboratory experiments using commercial grade computer-aided design (CAD) tools for HDL based design, logic simulation, automatic placement and routing, timing analysis and verification.

Learning Outcomes: 1. Design combinational and sequential logic in a variety of styles and awareness of resource usage. 2. Use, modify, create scripts to control logic synthesis. 3. Create a test bench and use it to verify a design that incorporates multiple sequential blocks. 4. Place, route, and verify timing of an ASIC design. 5. Determine the RTL architecture implied by HDL code of moderate complexity. 6. Explain the difference between various ASIC and digital system design approaches - standard cell, full custom, and programmable device. Credits: 2.00

ECE 34000 - Simulation, Modeling, and Identification

Credit Hours: 3.00. Investigation and evaluation of design problems through simulation of systems described by ordinary differential and difference equations. Development of simulation models from physical parameters and from experimental data. Topics include continuous, discrete, and hybrid models of electrical, mechanical, and biological systems. Laboratory experiences demonstrate concepts studied in text and lecture.

Credits: 3.00

ECE 36200 - Microprocessor Systems And Interfacing

Credit Hours: 4.00. An introduction to basic computer organization, microprocessor instruction sets, assembly language programming, and microcontroller peripherals.

Learning Outcomes: 1. Show ability to program a microcontroller to perform various tasks. 2. Show an ability to interface a microcontroller to various devices. 3. Show an ability to effectively utilize microcontroller peripheral. 4. Show an ability to design and implement a microcontroller-based embedded system. Credits: 4.00

ECE 36800 - Data Structures

Credit Hours: 3.00. Provides insight into the use of data structures. Topics include stacks, queues and lists, trees, graphs, sorting, searching, and hashing.

Learning Outcomes: 1. Understand various basic data structures, including stacks, queues, and trees. 2. Able to analyze time complexity and space complexity of algorithms. 3. Able to apply appropriate sorting and searching algorithms for a given application. 4. Able to apply graph theoretic techniques, data structures and algorithms for problem solving. 5. Able to design and implement appropriate data structures and algorithms for engineering applications. Credits: 3.00

ECE 36900 - Discrete Mathematics For Computer Engineering

Credit Hours: 3.00. This course introduces discrete mathematical structures and finite-state machines. Students will learn how to use logical and mathematical formalisms to formulate and solve problems in computer engineering. Topics include formal logic, proof techniques, recurrence relations, sets, combinatorics, relations, functions, algebraic structures, and finite-state machines.

Credits: 3.00

ECE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

ECE 38200 - Feedback System Analysis And Design

Credit Hours: 3.00. In this course, classical concepts of feedback system analysis and associated compensation techniques are presented. In particular, the root locus, Bode diagram, and Nyquist criterion are used as determinants of stability.

Credits: 3.00

ECE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

ECE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

ECE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in electrical and/or computer engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 39401 - Professional Communications And Diversity

Credit Hours: 1.00. This course provides ECE students with practice in relevant aspects of communication. Topics include: successfully seeking employment, working effectively in teams,

delivering engaging presentations, and leveraging the advantages and challenges of diversity and inclusion.

Learning Outcomes: 1. Ability to function effectively on a team whose members create a collaborative and inclusive environment, plan tasks, and meet objectives. 2. Communicate effectively with a range of audiences. 3. Develop and explain solutions to engineering problems, taking public health and cultural factors into consideration. Credits: 1.00

ECE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in electrical and/or computer engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 39595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in electrical and/or computer engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 39600 - Industrial Practice Seminar I

Credit Hours: 1.00. A special seminar for cooperative education and curricular practical training students. Permission of instructor required.

Learning Outcomes: 1. Understanding of how an engineering internship or co-op work experience benefits academic and career goals. Credits: 1.00

ECE 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

ECE 40020 - Sound Reinforcement System Design

Credit Hours: 3.00. An introduction to computational tools used in the measurement and analysis of electro-acoustic systems, and their application to sound reinforcement system

engineering. Service learning based projects, serving the needs of community clients, provide the context for application of sound reinforcement system design principles and practices.

Learning Outcomes: 1. An ability to apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design a sound reinforcement system. 2. An understanding of the engineering design process. 3. An ability to function on a multidisciplinary team. 4. An awareness of professional and ethical responsibility. 5. An ability to communicate effectively, in both oral and written form. Credits: 3.00

ECE 40100 - Engineering Ethics and Professionalism

Credit Hours: 1.00. Some ethical, social, political, legal, and ecological issues that practicing engineers may encounter. (ECE 401 and ME 401 are cross-listed courses; students may not get credit for both ECE 401 and ME 401.)

Credits: 1.00

ECE 40400 - Introduction To Computer Security

Credit Hours: 3.00. Introduction to security issues related to the operation of computers and the workings of computer networks. Topics covered include introduction to cryptography, authentication protocols, digital signature algorithms, internet vulnerabilities, worms and virus propagation, denial of service attacks, etc. The students will also learn how to design firewalls to protect a system against unwanted intrusions. Permission of department required.

Credits: 3.00

ECE 40655 - Digital Integrated Circuit Analysis And Design

Credit Hours: 3.00. As applied to digital integrated circuits, the MDs transistor is studied in depth-from its fabrication to its electrical characteristics. Combinational, sequential, and dynamic logic circuits are considered. While the focus of the course is on CMOS technology, bipolar, nMOS, and BiCMOS circuits are introduced as well. SPICE is used as both an analysis and design tool. Semiconductor memory circuits are also discussed.

Learning Outcomes: 1. Demonstrate a basic knowledge of CMOS IC processing and layout. 2. Demonstrate an understanding of CMOS inverter operation, both static and dynamic. 3. Demonstrate an understanding of CMOS combinational logic circuit design and analysis. 4. Demonstrate an understanding of basic CMOS arithmetic circuits. 5. Demonstrate an understanding of CMOS digital array design. 6. Demonstrate an understanding of basic CMOS sequential logic analysis. 7. Demonstrate an understanding of memory technologies and designs. 8. Demonstrate an ability to design, and analyze and simulate a CMOS digital circuit. Credits: 3.00

ECE 40656 - CMOS Analog And Mixed Signal Integrated Circuits

Credit Hours: 3.00. This course is a review of technology and modeling of CMOS transistors; Analysis, and design of CMOS monolithic integrated circuits for analog and mixed-signal applications. Consideration of amplifier circuit design, and fabrication techniques with circuit simulation using Cadence. Simple and advanced CMOS operational amplifiers, comparators, sample and hold circuits, switch capacitor circuits and data converters; Design of analog and mixed-signal circuit building blocks.

Learning Outcomes: 1. Design a simple single-stage amplifier in a standard CMOS technology and verify the design using simulation. 2. Design a simple CMOS operational amplifier and verify the design using simulation. 3. Design an advanced operational amplifier in a standard CMOS technology and verify the design using simulation. 4. Analyze a voltage comparator in a standard CMOS technology and verify the design using simulation. 5. Analyze a sample and hold circuit and perform simulations. 6. Analyze a switched capacitor circuit and perform simulations. 7. Analyze a data-convertor circuit. Credits: 3.00

ECE 40801 - Introduction To Computer Vision

Credit Hours: 3.00. This course is an introduction to computer vision. The course will cover both classical and deep-learning approaches to recognizing objects in images and activities in video. Topics to be covered include scene classification, object localization, segmentation, and activity recognition. The course will cover both the theory behind methods to solve these

problems as well as how they are implemented in systems like PyTorch. Permission of department required.

Learning Outcomes: 1. Construct and train a neural network. 2. Construct and train an object detector. 3. Construct and train an activity classifier. 4. Work in a team to construct a solution to a computer vision problem. Credits: 3.00

ECE 40802 - Introduction To Natural Language Processing

Credit Hours: 3.00. This course is an introduction to modern natural language processing and computational linguistics. This course covers morphological, syntactic, semantic, and pragmatic processing as well as applications such as information extraction, question answering, and machine translation. This course will cover fundamental topics as well as recent advances from the literature.

Learning Outcomes: 1. Design and implement a natural language parser. 2. Construct a semantic representation from natural-language input. 3. Train and use a neural network for NLP. 4. Use natural-language technology to construct and demo a new application. Credits: 3.00

ECE 40862 - Software For Embedded Systems

Credit Hours: 3.00. This course provides an introduction to software design for embedded computing systems. Major topics covered include the importance of time and timing in embedded systems, embedded software organization (FSM-based program design, polled loop systems, foreground-background systems, event driven architectures, multi-tasking, etc.), real-time scheduling and real-time operating systems, wired/wireless networked embedded systems, debugging techniques for embedded software, and advanced topics such as memory-safe programming, implementing reentrant functions, and minimizing code space, memory usage, and power consumption. The course features a series of integrated assignments using state-of-the-art embedded hardware platforms, embedded software design tools, and real-time operating systems that reinforce the concepts taught in the lectures.

Learning Outcomes: 1. Understand the embedded software design process and tools used. 2. Understand various software architectures for embedded systems. 3. Apply advanced debugging techniques to embedded software. 4. Analyze and implement real-time embedded applications. 5. Design and implement distributed applications for networked embedded systems. Credits: 3.00

ECE 40875 - Data Mining Basic Concepts And Techniques

Credit Hours: 3.00. This course introduces fundamental techniques in data mining, such as the techniques that extract useful knowledge from a large amount of data. Topics include data preprocessing, exploratory data analysis, association rule mining, clustering, classification, anomaly detection, recommendation and graph analysis. The applications of these techniques in real-world decision making in various domains, such as science, business, biology, health care, transportation, will be discussed.

Learning Outcomes: 1. Describe and explain the process of data mining. 2. Formulate problems in real-world applications into data mining tasks and solve the problems using data mining techniques. 3. Implement software programs that conduct data mining and evaluate the output of data mining programs. 4. Work in a team and present data mining solutions to people in scientific or other disciplines. Credits: 3.00

ECE 41015 - Introduction To Smart Grid

Credit Hours: 3.00. This course is an introduction to the concepts of data communications, cybersecurity, and information privacy on a smart-grid environment. Understanding the differences between power grid employed worldwide since the end of the 19th century and the new power grid system with distributed energy sources, this course outlines the key issues involved in enhancing: the distribution system, engaging electricity demand and utility regulation. Students will learn the main challenges and solutions to mitigate the issues associated with the integration of variable energy resources, transmission expansion and the impact of distributed generation and electric vehicles.

Learning Outcomes: 1. Describe the operation of conventional power grid systems including its generation, transmission and distribution, and the new power grid system with distributed energy sources along the transmission and distribution lines. 2. Develop simplified models

to describe different components on both traditional and the smart grid. 3. Design and specify renewable energy systems (e.g., solar and wind energy sources) as well as storage devices (e.g., batteries) connected to the smart grid. 4. Develop load flow analysis of power grids. 5. Understand the main data communications standards. 6. Classify the cybersecurity vulnerabilities and understand the risks of an attack on the grid. Credits: 3.00

ECE 41023 - Electromechanical Motion Control

Credit Hours: 3.00. The operation, analysis, and control of electromechanical systems are covered, including a treatment of electromechanical devices, power electronics, and control systems. Sample applications include servo-systems, propulsion drives, and variable-speed rotational equipment.

Learning Outcomes: 1. Understand the structure, design, and operating characteristics of dc drive systems including dc/dc converters, associated switching strategies, dynamic-average-value models, and speed/position/trajectory motion control systems. 2. Understand the structure, design and operating characteristics of brushless dc drive systems including dc/ac inverters, associated switching strategies, dynamic-average-value models, and speed/position/trajectory motion control systems. 3. Understand the operating principles and control of stepper motors including the design of optimum acceleration/deceleration profiles. 4. Understand the operating principles and control of field-oriented induction motor drives. 5. Understand the structure, operating characteristics, and modeling of switched reluctance motor drive systems. Credits: 3.00

ECE 41200 - Introduction To Engineering Optics

Credit Hours: 3.00. The control and characteristics of optical radiation are covered. Applications to optical instrumentation, thin films, holography, and polarizing optics are discussed.

Learning Outcomes: 1. Analyze simple optical systems (dielectric slabs, thin lenses, reflectors). 2. Model Gaussian beams and the transformation of beams. 3. Analyze and design polarization systems, including polarizers and wave plates. 4. Know optical interferometers and the operations of interferometers such as the Michelson, Fabry-Perot and double-slit. 5. Analyze diffraction patterns. Credits: 3.00

ECE 41300 - Introduction To Optics Laboratory

Credit Hours: 1.00. A set of laboratory experiments dealing with fundamentals and applications of geometrical optics, polarization optics, wave optics, and Fourier optics.

Learning Outcomes: 1. Design, construct, and test a simple optical system by assembling a set of optical components. 2. Test the operation of simple interferometers. 3. Make holograms using lab equipment. 4. Design practical optical system (e.g.; barcode scanner, laser microphone, etc.) and analyze its performance. Credits: 1.00

ECE 41400 - Elements Of Electro And Fiber Optics

Credit Hours: 3.00. Introduction to the use of lasers, fiber and integrated optical components and devices in communication and sensory applications. Topics include generation, transformation, modulation, deflection, and detection of laser beams, and their applications in fiber communication sensory systems.

Credits: 3.00

ECE 41500 - Electro- And Fiber Optics Laboratory

Credit Hours: 1.00. Laboratory exercises in lasers, hologram, modulation and deflection of laser beams, fiber components, and systems.

Credits: 1.00

ECE 43200 - Elements Of Power System Engineering

Credit Hours: 3.00. Fundamental concepts of power system analysis, transmission line parameters, basic system models, steady-state performance, network calculations, power flow solutions, fault studies, symmetrical components, operating

strategies, and control.

Learning Outcomes: 1. Understand the function of the main components in a power system, and the basis of their circuit models. 2. Able to build a system representation from components' circuit models and to apply solution techniques to certain operational needs. Credits: 3.00

ECE 43201 - Elementary Power Systems Engineering

Credit Hours: 3.00. Fundamental concepts of power systems analysis, transmission line parameters, basic system models, steady state performance, network calculations, power flow solutions, fault studies, symmetrical components, operating strategies and control.

Learning Outcomes: 1. Understand the functions of the main components in a power system, and the basis of their circuit models. 2. Build a system representation from components' circuit models and to apply solution techniques to certain operational needs. Credits: 3.00

ECE 43500 - Object-Oriented Design Using C++ And Java

Credit Hours: 3.00. Review of OO design with C++ and Java. Difficulties caused by multiple inheritances in C++. Taking advantage of Run-Time Identification in C++. Multi-threading, AWT, and Network Programming in Java. Discussion of Java applets, beans, and servlets. Unified modeling language. Use-case analysis. Constructing conceptual models. System sequence diagrams. "Gang of Four" design patterns. Case studies. Permission of instructor required.

Credits: 3.00

ECE 43700 - Computer Design And Prototyping

Credit Hours: 4.00. An introduction to computer organization and design, including instruction set selection, arithmetic logic unit design, datapath design, control strategies, pipelining, memory hierarchy, and I/O interface design.

Credits: 4.00

ECE 43800 - Digital Signal Processing With Applications

Credit Hours: 4.00. The course is presented in five units. Foundations: the review of continuous-time and discrete-time signals and spectral analysis; design of finite impulse response and infinite impulse response digital filters; processing of random signals. Speech processing; vocal tract models and characteristics of the speech waveform; short-time spectral analysis and synthesis; linear predictive coding. Image processing: two-dimensional signals, systems and spectral analysis; image enhancement; image coding; and image reconstruction. The laboratory experiments are closely coordinated with each unit. Throughout the course, the integration of digital signal processing concepts in a design environment is emphasized.

Credits: 4.00

ECE 44000 - Transmission Of Information

Credit Hours: 4.00. Analysis and design of analog and digital communication systems. Emphasis on engineering applications of theory to communication system design. The laboratory introduces the use of advanced engineering workstations in the design and testing of communication systems.

Learning Outcomes: 1. Recognize and analyze in the time and frequency domain the performance of amplitude and frequency modulated analog communications systems in the presence of noise. 2. Understand the importance, computation, and measurement using modern test equipment of standard performance measures of analog systems, which include bandwidth and signal to noise ratio. 3. Recognize and analyze in the time and frequency domains the performance of various digital modulation formats, including ASK, QAM, PSK, and FSK in the presence of noise. 4. Understand the importance, computation, and measurement using modern test equipment of standard performance measures of digital systems which include bandwidth and hit error probability. 5. Understand the basics of information theory and error control codes including the effect of error control codes on the bandwidth and bit error probability of digital systems. Credits: 4.00

ECE 44100 - Distributed Parameter Systems

Credit Hours: 3.00. Transient and steady-state behavior of transmission lines, wave guides, antennas, propagation, noise, microwave sources, and system design.

Credits: 3.00

ECE 45300 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. Nanoelectronic devices are an integral part of our life, including the billion-plus transistors in every smartphone, each of which has an active region that is only a few hundred atoms long. This course is designed to convey the key concepts developed in the last 25 years which constitute the fundamentals of nanoelectronics and mesoscopic physics, assuming a minimal set of prerequisites. Topics covered include the new Ohm's law, conductance quantization, the nanotransistor, spin valves, thermoelectricity, quantum systems and the non-equilibrium Green's function (NEGF) method.

Learning Outcomes: 1. Ability to perform semiclassical analysis of charge flow in nanoelectonic devices. 2. Ability to perform semiclassical analysis of spin flow and heat flow in nanoelectronic devices. 3. Ability to perform quantum analysis of nanoelectonic devices.

Credits: 3.00

ECE 45500 - Integrated Circuit Engineering

Credit Hours: 3.00. Analysis, design, and fabrication of silicon bipolar and MOSFET monolithic integrated circuits. Consideration of amplifier circuit design and fabrication techniques with circuit simulation using Spice-2. Integrated operational amplifiers with difference amplifiers, current sources, active loads, and voltage references. Design of IC analog circuit building blocks.

Credits: 3.00

ECE 45600 - Digital Integrated Circuit Analysis And Design

Credit Hours: 3.00. As applied t digital integrated circuits, the MDs transistor is studied in depth-from its fabrication to its electrical characteristics. Combinational, sequential, and dynamic logic circuits are considered. While the focus of the course is on CMOS technology, bipolar, nMOS, and BiCMOS circuits are introduced as well. SPICE is used as both an analysis and design tool. Semiconductor memory circuits are also discussed.

Credits: 3.00

ECE 45700 - Electronic Design Laboratory

Credit Hours: 1.00. Laboratory exercises illustrating the design and application of electronic circuits. Case studies of circuits presently in existing instruments, such as the color television receiver sampling oscilloscope, are used as a basis for the circuits investigated or designed. Pulse and analog circuits studied, as well as high voltage and power supplies. Signal processing, modulation, and sampling are used to demonstrate the circuits as interconnected into a complete system.

Credits: 1.00

ECE 46300 - Introduction To Computer Communication Networks

Credit Hours: 3.00. An introduction to the design and implementation of computer communication networks. The focus is on the concepts and the fundamental design principles that have contributed to the global Internet success. Topics include: digital transmission and multiplexing, protocols, MAC layer design (Ethernet/802.11), LAN interconnects and switching, congestion/flow/error control, routing, addressing, performance evaluation, internetworking (Internet) including TCP/IP, HTTP, DNS etc. This course will include one or more programming projects.

Learning Outcomes: 1. An understanding of the fundamental principles underlying packet switching networks, and different Local Area Network technologies. 2. An ability to implement network protocols using network socket programming. 3. An understanding of the key principles behind retransmission protocols, congestion control algorithms, and TCP. 4. An understanding of the basic concepts of routing.

Credits: 3.00

ECE 46800 - Introduction To Compilers And Translation Engineering

Credit Hours: 4.00. The design and construction of compilers and other translators. Topics include compilation goals, organization of a translator, grammars and languages, symbol tables, lexical analysis, syntax analysis (parsing), error handling, intermediate and final code generation, assemblers, interpreters, and an introduction to optimization. Emphasis is on engineering a compiler or interpreter for a small programming language - typically a C or Pascal subset. Projects involve the stepwise implementation (and documentation) of such a system. Department permission required.

Credits: 4.00

ECE 46900 - Operating Systems Engineering

Credit Hours: 4.00. The design and construction of operating systems for both individual computers and distributed (networked) systems. Basic concepts and methods for managing processor, main memory, block-structured storage, and network resources are covered. Detailed examples are

taken from a number of operating systems, emphasizing the techniques used in networked versions of UNIX. These techniques are applied to design improvements of portions of a simplified, networked, UNIX-based operating system; the improvements are implemented and their performance is evaluated in laboratory experiments.

Credits: 4.00

ECE 47000 - Curricular Practical Training

Credit Hours: 0.00. An electrical and/or computer engineering work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role as a practicing engineer. A letter from the prospective employer stating the period of employment, hours per week, job title, job qualifications, and job minimum period of employment is required. This course may not be taken in successive semesters. Permission of department required.

Credits: 0.00

ECE 47001 - Part-Time Curricular Practical Training

Credit Hours: 0.00. A part-time electrical and/or computer engineering work experience. This internship experience is intended to complement the student's academic plan of study and help prepare him/her for his/her future role as a practicing engineer. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Build skills realted to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic professional principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ECE 47100 - Embedded Microcontroller, Microprocessor, and DSP-Based Systems

Credit Hours: 3.00. A structured approach to the development and integration of embedded microcontroller/microprocessor/DSP-based systems. The course provides students with design experience of embedded systems. The course covers the microprocessor selection, the configuration of peripheral components, and the hardware abstraction techniques. The course also covers the C programming techniques for embedded systems and using a fixed point microprocessor for floating point calculations.

Credits: 3.00

ECE 47300 - Introduction To Artificial Intelligence

Credit Hours: 3.00. The course introduces fundamental areas of artificial intelligence: knowledge representation and reasoning; machine learning; planning; game playing; natural language processing; and vision.

Learning Outcomes: No change Credits: 3.00

ECE 47700 - Digital Systems Senior Project

Credit Hours: 4.00. A structured approach to the development and integration of embedded microcontroller hardware and software that provides senior-level students with significant design experience applying microcontrollers to a wide range of embedded systems (e.g., instrumentation, process control, telecommunications, and intelligent devices). The primary objective is to provide practical experience developing integrated hardware and software for embedded microcontroller systems in an environment that models one which students will most likely encounter in industry. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a microcontroller-based digital system. 2. Understand the engineering design process. 3. Function on a multidisciplinary team. 4. Be aware of professional and ethical responsibility. 5. Communicate effectively, in both oral and written form. Credits: 4.00

ECE 48300 - Digital Control Systems Analysis And Design

Credit Hours: 3.00. The course introduces feedback computer controlled systems, the components of digital control systems, and system models on the z-domain (z-transfer functions) and on the time domain (state variable representations.) The objectives for system design and evaluation of system performance are considered. Various discrete-time controllers are designed including PID-controllers, state and output feedback controllers, and reconstruction of states using observers. The systems with the designated controllers are tested by simulations.

Learning Outcomes: 1. Understand digital feedback control systems. 2. Know constructing discrete-time mathematical model system. 3,

Know the analyzing system behavior using discrete-time model and evaluating the system performance. 4. Know to use controller design techniques to make the system behavior satisfy specified design objectives. 5. Evaluate and test the system performance using digital simulations. Credits: 3.00

ECE 49022 - Electrical Engineering Senior Design Projects

Credit Hours: 4.00. Lecture sessions provide the student with background information on the design and management of projects. Formal lectures cover, for example, design for manufacturability, design for quality, test and evaluation, reliability and ethics, patents and copyrights, plus case studies. During the laboratory sessions, the students work in teams on challenging open-ended electrical engineering project that draws on previous coursework. Projects routinely involve standard design facets (such as consideration of alternative solutions, feasibility considerations, and detailed system descriptions) and include a number of realistic constraints (such as cost, safety, reliability, and aesthetics). Lectures require use of the I-Clicker system.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a system, component, or process to meet desired needs. 2. Understand the engineering design process. 3. Function on an interdisciplinary team. 4. Acquire an awareness of professional and ethical responsibility. 5. Develop effective communication skills, both oral and written. Credits: 4.00

ECE 49401 - Professional Communication Capstone

Credit Hours: 1.00. This course provides ECE students an opportunity to refine their professional communication skills before launching into the workplace or graduate school. Topics include: ethics in ECE, workplace communication (written and verbal), and plans for professional growth.

Learning Outcomes: 1. Communicate effectively with a range of audiences. 2. Function effectively on a team whose members together create a collaborative and inclusive environment, plan tasks, and meet objectives. 3. Ability to make informed judgments based ethical and professional responsibilities in engineering situations, giving consideration to global, economic, environmental, and/or societal contexts. Credits: 1.00

ECE 49500 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 4.00. Topics vary. Permission of department required.

Credits: 1.00 to 4.00

ECE 49595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 49600 - Electrical And Computer Engineering Projects

Credit Hours: 0.00 to 18.00. Arrange Hours and Credit. Topics vary. Permission of department required.

Learning Outcomes: 1. Apply fundamental laws of electrical and electronic circuits to analyze systems and circuits. 2. Assemble and test circuits (virtual and real), measuring electrical

quantities using standard instrumentation. 3. Decompose a system into functional blocks; and in some applications, blocks into circuits. 4. Utilize technology to control electronic circuit actions. 5. Utilize structured problem solving techniques to analyze fundamental applications in electronics. 6. Demonstrate knowledge of and apply electrical safety. Credits: 0.00 to 18.00

School of Engineering Education

School of Engineering Education

Within the School of Engineering Education, two distinct degree options are offered. Interdisciplinary Engineering Studies (IDES) and Multidisciplinary Engineering (MDE) are each unique pathways that serve student populations with different career interests. In particular, the IDES degree is often referred to as a "pre-professional school" program, which offers a bachelor of science degree (BS). Alternatively, MDE confers a bachelor of science in engineering (BSE). Further details of each program follow below.

The **Multidisciplinary Engineering** (MDE) mission, goals, and objectives are designed to prepare graduates to practice engineering. Typically, a plan of study is developed around a focused concentration. Students may develop their own individual plan of study or select one of these established concentrations:

- Acoustical Engineering
- Engineering Management
- General Engineering
- Visual Design Engineering
- Lighting Engineering
- Nano-Engineering
- Humanitarian Engineering
- Theatre Engineering (Limited Enrollment)
- Educational Engineering (not a teaching certified program)

Interdisciplinary Engineering Studies (IDES) is for students who want an engineering education but do not plan to practice engineering. Students are often looking ahead to attending a professional school, such as Medical School, or looking for some engineering coursework and other broad educational exposure. Choose from these concentrations:

- Engineering Science Studies
- Pre-Professional Engineering Studies (In preparation for a professional school: Pre-Med; Pre-Law; Pre-Vet; etc)

Students must complete the requirements of the First-Year Engineering Program to be accepted into either IDES or MDE. These programs offer students the opportunity to advance to graduate school or pursue a career in industry.
Features of these undergraduate programs include:

- Flexible plan of study
- Limited enrollment
- Student planning is required in collaboration with intensive advisor counseling

Faculty

Students interested in pursuing undergraduate research opportunities in the School of Engineering Education are encouraged to contact faculty who conduct research in their areas of interest. A comprehensive list of engineering faculty is provided here.

ENE 49800 - Undergraduate Research In Engineering Education

Credit Hours: 1.00 to 3.00. Individual research projects for students with the approval of their academic advisors. Requires prior approval of, and arrangement with, a faculty research advisor in the Department of Engineering Education. Written and oral final reports are required. Permission of instructor required.

Credits: 1.00 to 3.00

IDE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the

professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IDE 38199 - Professional Practice Three-Session Coop I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38299 - Professional Practice Three-Session Coop II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38399 - Professional Practice Three-Session Coop III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

IDE 38500 - Design Methodologies For Diverse Stakeholders

Credit Hours: 3.00. This course focuses on engineering design methodologies with a concern for the needs of diverse stakeholders. The course brings together topics drawn from a variety of disciplines (including anthropology, education, psychology, human-computer interaction and engineering) to introduce interdisciplinary engineering approaches to: (1) design tools, systems, and/or environments to support cognitive processes and (2) engage in human-centered and learner-centered design. The semester design project provides a context for students to apply these methods. Permission of Instructor required.

Learning Outcomes: 1. Learn about cognitive

processes (including learning processes), how to design products, processes and environments to support cognition. 2. Learn methodologies and develop skills to be able to apply human-centered principles in the design of interfaces, every-day products and learning environments, whether in industrial or academic settings. 3. Engage in reflective practices to connect the course material to previous learning experiences as well as personal learning goals, with a goal of furthering their life-long learning skills. Credits: 3.00

IDE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IDE 39699 - Professional Practice Internship

Credit Hours: 0.00. Internship experience in multidisciplinary engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

IDE 48000 - Engineering Ethics In Interdisciplinary Contexts

Credit Hours: 3.00. The purpose of this course is to provide students with tools and strategies to reason through situations with ethical issues that they may encounter as engineering students and in their future careers. To this end, this course seeks to enhance students' awareness of ethical issues in interdisciplinary engineering contexts, ability to reason through ethical challenges in diverse engineering contexts, courage to respond to ethical issues in their future practice, ability to work effectively on teams, and the ability to communicate with others.

Learning Outcomes: 1. Identify ethical issues affecting ethical engineering practice in interdisciplinary engineering contexts. 2. Apply a consistent reasoning process toward ethical issues in an engineering context and formulate appropriate courses of action to respond to the issue. 3. Feel prepared to respond to ethical issues they may encounter in their future work. 4. Collaborate on interdisciplinary teams while

considering and responding to challenging ethical scenarios. 5. Communicate ethical considerations to their peers and other key stakeholders. Credits: 3.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this

understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 49500 - Special Topics In Interdisciplinary Engineering

Credit Hours: 1.00 to 4.00. Primarily designed for interdisciplinary engineering subject areas for which there is no specific course offered, but for which there is sufficient student interest to justify teaching a specialized course on a trial basis. May be repeated for credit as long as the topic being taught is not repeated.

Credits: 1.00 to 4.00

Division of Environmental and Ecological Engineering

EEE Main Page

About Environmental and Ecological Engineering

Environmental and Ecological Engineering (EEE) offers BS, MS and PhD degrees that train students to approach problems from an integrated perspective, considering both environmental issues and ecological interactions. This high-impact method addresses challenges in the built environment, while also striving to understand interactions between the human and natural worlds.

Of the 14 "Grand Challenges of Engineering" identified by the National Academy of Engineering, six are in the environmental and ecological engineering domain. A degree in Purdue EEE teaches graduates to apply their technical expertise in systems engineering, biology, and chemistry to develop holistic strategies to protect human and environmental health, design sustainable systems and technologies, and manage Earth's limited resources and ecosystems so they will be available for generations to come.

Our program is led by a multidisciplinary community of faculty jointly appointed in EEE and schools/departments including Agricultural and Biological Engineering, Agronomy, Civil Engineering, Forestry and Natural Resources, Industrial Engineering, Materials Engineering, and Mechanical Engineering.

Our curriculum is distinctive in that it focuses on both Classic Environmental Engineering, which develops processes to treat, control, and manage contaminated media, and Industrial Sustainability, which deals with designing and managing engineering systems to avoid waste and preserve natural resources.

Purdue EEE was established in 2006 with this two-pronged philosophy in mind. Our students and faculty address the management of industrial waste within water, soil and air, while also identifying its origins to prevent environmental challenges before they start.

EEE graduates are equipped to enter a wide range of employment sectors in environmental and engineering fields, such as consulting and engineering services, manufacturing, industrial and construction, government, municipal and public service, non-governmental organizations (NGOs), and academia.

Environmental and Ecological Engineering, BSEEE

Environmental and Ecological Engineering Minor

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

EEE 25000 - Environmental, Ecological, And Engineering Systems

Credit Hours: 3.00. An overview of systems thinking and examples, and applications to environmental, ecological, and engineering systems. Students will develop an understanding of complex and global systems, along with the tools and analysis methods required to deal with them. Basic environmental and ecological science concepts are also included.

Learning Outcomes: 1. Understand the types of relationships and dynamics common in complex systems, including environmental systems, ecological systems, and engineering systems. 2. Able to apply fundamental systems tools and modeling approaches to a wide variety of engineering, environmental, and ecological problems. 3. Understand the foundational concepts and vocabulary of global environment and ecological systems. 4. Appreciate the complexity of contemporary issues related to society and EEE, including and understanding of the roles and responsibilities of stakeholders. Credits: 3.00

EEE 29001 - Introduction To Environmental & Ecological Engineering Seminar

Credit Hours: 2.00. Guest presenters, peer panelists, and small group discussions introduce students to the knowledge, skills, and abilities needed in order to exhibit the highest levels of professionalism & stewardship expected of an Environmental and Ecological Engineering graduate. Topics include planning a course of study; internship, research, study abroad opportunities; career planning and placement skills; professional responsibility and ethics; and functioning as a professional.

Learning Outcomes: 1. Communicate professionally in both formal and informal settings. 2. Create career documents (e.g., resumes, cover letters, LinkedIn Profiles) that demonstrate professionalism and critical thinking. 3. Understand how their actions and/or inactions are perceived in professional settings. 4. Identify and justify their curricular path at Purdue University. 5. Identify a variety of curricular, extra-curricular, and professional opportunities that will best support the

achievement of their career goals. Credits: 2.00

EEE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 29500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credit. Permission of instructor required.

Credits: 0.00 to 6.00

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 36000 - Environmental And Ecological Engineering Laboratory

Credit Hours: 1.00 to 3.00. An introduction to laboratory methods of analysis of Environmental and Ecological Engineering systems. Topics will change from semester to semester and will be announced in advance. The list of possible topics includes experimental design, treatment of data, the analytical determination of chemical and biological constituents in water, soil, and air; analysis of environmental and ecological engineering processes; analysis of life-cycle characteristics and impacts of consumer products and commodities; methods of prevention and remediation of manufacturing waste streams.

Learning Outcomes: 1. Ability to acquire experimental data and evaluate experimental error and variability. 2. Understanding of data reduction, analysis and presentation. 3. Ability to produce professional technical communication of experimental conclusions. 4. Ability to summarize results of quantitative analysis to propose management strategies for environmental problems. Credits: 1.00 to 3.00

EEE 36001 - Water Quality And Treatment Laboratory

Credit Hours: 3.00. Laboratory procedures are described and performed that examine chemical, physical, and biological properties and constituent concentrations of natural waters. In addition, water treatment process experiments are performed to show how constituent concentrations can be altered during water treatment processes. Procedures include the analytical determination of several chemical and biological constituents in water by titrimetric, colorimetric, or chromatographic methods, whereas treatment processes include reactor design, pH adjustment, ion exchange, lime softening, coagulation, and disinfection.

Learning Outcomes: 1. Apply physical, chemical, and biological principles to each experimental procedure or measurement technique. 2. Conduct laboratory experiments, making quantitative measurements to assess water quality and water treatment process performance. 3. Organize, report, and graphically display experimental data in common software packages. 4. Analyze and evaluate experimental data on its quality and significance (i.e., usefulness). 5. Identify issues (i.e., problems) with data collection and data uses. Credits: 3.00

EEE 36002 - Environmental Sustainability For Industry, Laboratory

Credit Hours: 3.00. This lab course provides an opportunity for students to gain hands-on experience with the physical and analytical tools of industrial sustainability. These include

experimental methods for product testing and air quality measurement; design and planning of experiments; statistical interpretation of experimental data; design and environmental assessment of building energy use, combustion systems, and electrical circuits; and life-cycle management of electronic equipment and other household products. Students are encouraged to complete their statistics requirement.

Learning Outcomes: 1. Develop a hypothesis and design experiments to test the hypothesis. 2. Conduct/interpret statistical analysis of experimental results. 3. Describe power and energy demand in multiple contexts including electricity, combustion, and heat transfer. 4. Propose energy efficiency solutions and evaluate their economic and environmental consequences. 5. Design and measure the material and environmental impacts of a product's life cycle, including production, waste handling, and end-of-life scenarios. 6. Produce technical reports that clearly communicate methods, results, and conclusions for a professional audience. Credits: 3.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations.

Learning Outcomes: 1. Apply the First and Second Laws of thermodynamics to closed and open systems. 2. Understand, identify, and quantify the environmental impacts of closed and open systems, based on mass and energy transfer. 3. Analyze full-scale systems, and compare actual and theoretical operation. 4. Understand the structure and reactivity of environmentally relevant organic compounds. 5. Calculate concentrations of different components in equilibrium and non-equilibrium environmental systems. Credits: 3.00

EEE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional experience in Environmental and Ecological Engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional engineering context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the engineering profession and practice, basic engineering principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (AGRY 38500) Designed as an upper-level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5).

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic,

political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 4.00

EEE 39000 - Environmental And Ecological Engineering Professional Practice Seminar

Credit Hours: 1.00. Seminar lectures and discussions to introduce students to aspects of professional practice within Environmental and Ecological Engineering. Topics include career planning and placement skills, professional responsibility and ethics, functioning as a professional, and other current important topics in the profession. Students will interact with several practicing Environmental and Ecological Engineers.

Learning Outcomes: 1. Develop professional skills that will allow them to enter into the professional Environmental and Ecological Engineering field. 2. Gain an understanding of major professional issues. 3. Begin development of a personal approach to ethical professionalism. 4. Gain experience in professional communication. 5. Gain knowledge of the range of opportunities available in the profession. Credits: 1.00

EEE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 39500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credits. Permission of instructor required.

Credits: 0.00 to 6.00

EEE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in environmental and ecological engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 39699 - Professional Practice Internship

Credit Hours: 0.00. One-session professional experience in environmental and ecological engineering. Program coordinated by EEE with cooperation of participating employers and the Office of Professional Practice. Students submit summary report and company evaluation. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the

professional engineering context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the engineering profession and practice, basic engineering principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

EEE 43000 - Industrial Ecology And Life Cycle Analysis

Credit Hours: 3.00. The outputs and processes associated with industrial systems are examined, with special emphasis placed on interactions of these systems with environmental and ecological systems. A full product life cycle perspective is stresses, including energy and material flows, processes used to produce materials and realize products, and the management of end-of-life products.

Learning Outcomes: 1. An understanding of the principles of industrial ecology and an ability to apply these principles to specific engineering and manufacturing systems in order to create designs with reduced environmental and ecological impact. 2. Knowledge of life cycle analysis (LCA), its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. The ability to perform a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 4. An understanding of the complex interactions between industrial and environmental systems. Credits: 3.00

EEE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (CE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management.

Learning Outcomes: 1. Understand design principles and practice of wastewater treatment. 2. Apply the knowledge to select the best process to treat wastewater. 3. Design a wastewater treatment component or process to meet water quality goals. 4. Critically review relevant literature or contemporary issues in wastewater treatment. Credits: 3.00

EEE 47200 - Community-Engaged Engineering & Design

Credit Hours: 3.00. Utilizing a transdisciplinary approach in a real-world, client-based service-learning design experience, students will lead the design and implementation of community-engaged sustainability projects integrating not only their discipline-specific knowledge, but community partner and stakeholder knowledge as well. This course will require travel outside of class to community partner sites to collaborate in the design process. Sustainability projects to improve the health and wellness of communities will be implemented at multiple sites. The complex and dynamic relationships between social, economic, environmental, and political sectors in such community-engaged projects will be investigated.

Learning Outcomes: 1. Display social responsibility, civic engagement, and leadership in addressing sustainability issues: evaluate and apply diverse perspectives from multiple stakeholders to site-specific design solutions; connect and extend academic knowledge to improve the health and wellness of communities; take informed, responsible action to address ethical, social, and environmental challenges related to sustainability at partner sites; communicate project efforts in a creative, well-organized, and logical manner. 2. Design novel, context-appropriate solutions to sustainability issues using a transdisciplinary knowledge production model: describe the interconnectivity between environmental, social, political, and economic issues surrounding technical solutions; apply a transdisciplinary knowledge production model; propose solutions to open-ended design problems that demonstrate a deep comprehension of the issues. 3. Engage in the complexities of a

negotiated design process occurring between multiple stakeholders in a professional and ethical manner: demonstrate empathy and adaptability in working with teammates and stakeholders with varied skills, talents, abilities, and work strategies; create project deliverables that demonstrate cohesive stakeholder functionality; critically evaluate personal and others' contributions to the overall success of the projects. Credits: 3.00

EEE 48000 - Environmental And Ecological Engineering Senior Design

Credit Hours: 1.00 to 3.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required.

Learning Outcomes: 1. An ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. An understanding of the complete design process and an ability to perform the process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An ability to function on multidisciplinary teams. 5. An ability to communicate professional design and design decisions effectively. 6. An awareness of professional ethics and responsibility of engineers. 7. An appreciation of the role of engineering and of EEE in social contexts. Credits: 1.00 to 3.00

EEE 48001 - Environmental And Ecological Engineering Senior Design I

Credit Hours: 1.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Have an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 1.00

EEE 48002 - Environmental And Ecological Engineering Senior Design II

Credit Hours: 2.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Gain an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 2.00

EEE 48100 - Reflective Practitioner

Description: Credit Hours: 1.00. Reflective practice is a term coined by Donald Schon in The Reflective Practitioner (1983). Reflective practice is the capacity to reflect on action to engage in a process of continuous learning. Reflective practice can be an important tool in practice-based professional learning settings where people learn from their own professional experiences, rather than from formal learning or knowledge transfer. It may be the most important source of personal professional development and improvement. It is also an

important way to bring together theory and practice. A person who reflects throughout their practice is not just looking back on past actions and events, but is taking a conscious look at emotions, experiences, actions, and responses, and using that information to add to their existing knowledge base and reach a higher level of understanding. Critical reflection as part of experiential education generates, deepens, and documents learning. As a result of this course, you will be able to articulate the value of your experiential education opportunities toward marketing yourself for potential job opportunities and develop the skills needed to become a reflective practitioner for promotional growth in your future career. Permission of department required.

Learning Outcomes: 1. Reflect on experiential education experiences; Identify knowledge and skills gained from experiences; Identify connections between experiences and disciplinary knowledge. 2. Apply theories and concepts to practical sustainability problems; Identify ways in which individual actions within experiences contributed to improving sustainability; Identify ways to individually contribute to improving sustainability in future professional practice. 3. Synthesize experiential education experiences into a career development plan; Articulate strengths and weaknesses observed within experiences; Develop a self-improvement plan for future professional practice; Identify a potential career path; Synthesize knowledge and skills gained into high-quality LinkedIn page and Strengths Statement. Credits: 1.00

EEE 49500 - Experimental Course

Credit Hours: 0.00 to 6.00. Topics Vary. Arrange hours and credit. Permission of instructor required.

Credits: 0.00 to 6.00

EEE 49800 - Environmental And Ecological Engineering Projects

Credit Hours: 0.00 to 6.00. Topics vary. Arrange hours and credits. Permission of instructor required.

Credits: 0.00 to 6.00

School of Industrial Engineering

About Industrial Engineering

Industrial engineers design, analyze, and manage complex human-integrated systems such as manufacturing systems, supply chain networks, and service systems. These systems typically consist of a combination of people, information, material, and equipment. In such systems industrial engineers determine how to optimize the system for maximum efficiency, effectiveness, throughput, safety, or some other objective of interest to the stakeholders of the system. To achieve these objectives, an industrial engineer draws upon knowledge of mathematics, along with physical, engineering, management, and behavioral sciences to function as a problem-solver, innovator, designer, coordinator, and system integrator.
Industrial engineers are employed in and apply their skills in an extremely wide range of organizations, including manufacturing industries, service industries, and governmental agencies.
The complexity of these organizations and the emphasis on increased effectiveness, efficiency, and productivity have led to a growing need for industrial engineering analysis and design, resulting in an increased demand for industrial engineering graduates. This increased demand recognizes the modern industrial engineer's versatility and responsiveness to the challenges of a rapidly changing society. Industrial engineering is one of the nation's largest and most rapidly growing engineering professions.
The industrial engineering program prepares graduates for careers in all phases of industrial engineering and enables them to perform both technical and managerial functions that require scientific and engineering backgrounds. By combining the study of science, mathematics, engineering fundamentals, design, and management principles, an industrial engineering education provides a unique background and a sound basis for lifelong career development in engineering practice, research, or management.
Senior design projects consist of a real-world application of IE principles by teaming students with a local industry in Indiana. Teams have taken on full-scale projects like designing floor layouts for factories and hospitals, designing operations to improve system efficiency, reducing time and waste in processing, allocating resources to optimize system performance, and developing a safety plan for preventing work-related injuries.

For Graduate Information please see Industrial Engineering Graduate Program Information .

Manufacturing Minor

A minor in Manufacturing is available to students in the College of Engineering and Polytechnic Institute.

Industrial Engineering, BSIE

IE 20000 - Industrial Engineering Seminar

Credit Hours: 0.00. An orientation course to inform students of the major options in the industrial engineering program, assistance in selection of appropriate electives to meet career objectives, introduction to the faculty, and selection of an academic advisor.

Credits: 0.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 30000 - Honors Program Seminar

Credit Hours: 0.00. An orientation course intended for juniors who have demonstrated exceptional academic ability and desire to conduct meaningful independent research or solve unique engineering design projects during their senior year of study.

Credits: 0.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical

tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

IE 33200 - Computing In Industrial Engineering

Credit Hours: 3.00. Introduction to computing in industrial engineering. Reinforcement of scientific programming skills on typical IE tasks, together with introduction to simulation and related computer tools.

Credits: 3.00

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs.

Credits: 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38300 - Integrated Production Systems I

Credit Hours: 3.00. Basic concepts in the design and operational control of integrated production systems. Includes topics on facility layout and material handling, material flow and information flow, resource and capacity planning, and shop floor control and scheduling.

Credits: 3.00

IE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. Professional practice with qualified employers in industry, government, or small business and a comprehensive written report of this practice. Professional Practice students only. Permission of department required.

Credits: 0.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

IE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in industrial engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

IE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional practice with qualified employers within industry, government, or small business and a comprehensive written report of this practice. Permission of department required.

Credits: 0.00

IE 43100 - Industrial Engineering Design

Credit Hours: 3.00. Capstone design experience for industrial engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations. Prerequisite: all 30000-level industrial engineering courses required for the BS IE degree.

Credits: 3.00

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools.

Learning Outcomes: 1. Create any object using 3D CAD design software (modeling, texturing, and animation). 2. Evaluate and optimize 3D designs for different manufacturing processes and materials. 3. Apply the principles of engineering tolerance to 3D CAD design. 4. Use rapid prototyping techniques (laser cutting, laser engraving, injection molding, and 3D printing) to

manufacture 3D CAD designs. Credits: 3.00

IE 47400 - Industrial Control Systems

Credit Hours: 3.00. Introduction to automatic controls with reference to automation of industrial machines and processes, including linear dynamic systems, feedback control, and elements of systems analysis. Introduction to digital control.

Learning Outcomes: 1. Able to design basic control systems using block diagrams. 2. Able to determine the feedback equation of block diagrams. 3. Able to interpret state-space models. 4. Able to compute state-spaced equations. 5. Able to conduct basic dynamic modeling of a control system. 6. Able to classify a linear time-invariant system into known classes. 7. Able to compute the dynamic response of a control system. Credits: 3.00

IE 48100 - Introduction To System Simulation

Credit Hours: 3.00. The course presents a general introduction to simulation concept and methodology. It covers simulation modeling in specialized simulation environments. Practical application of simulation to diverse systems will be discussed. Proper design and analysis of the simulation experiment is emphasized. Permission of department required.

Learning Outcomes: 1. Construct discrete-event simulation models using a representative simulation software package. 2. Identify different types of simulation models and determine scenarios where each would be appropriate. 3. Perform analysis of data for the development of input models. 4. Design simulation experiments and conduct statistical analysis. 5. Verify and validate a simulation model. Credits: 3.00

IE 48400 - Integrated Production Systems II

Credit Hours: 3.00. Extensions of topics on the design and operational control of integrated production systems. Includes production databases, facility layout, material handling, advanced control and scheduling, and physical distribution. Case studies, lab assignments, and projects.

Credits: 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600 . Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems.

Credits: 3.00

IE 49000 - Special Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Special topic courses and projects of contemporary importance or of special interest that are outside the scope of the standard undergraduate curriculum. Permission of instructor required.

Credits: 1.00 to 6.00

IE 49500 - Industrial Practices Seminar

Credit Hours: 1.00. Solution of industrial engineering problems, with particular emphasis on current industrial experience obtained through the cooperative engineering education program. For cooperative program students only.

Credits: 1.00

IE 49900 - Research In Industrial Engineering

Credit Hours: 1.00 to 6.00. Individual research projects for students with honors standing, or other students with the approval of their advisors. Permission of instructor required.

Credits: 1.00 to 6.00

School of Materials Engineering

An Overview

Materials Engineering

Materials have enabled improvement in the products humans use since the beginning of recorded history. For example without the development of high purity silicon most of today's electronic devices would not exist. New low density, high stiffness composite materials have replaced metals and wood in tennis racquets. The performance of these materials stems from their properties which depend on their microscopic structure, also known as microstructure. Microstructure in turn

depends upon materials processing, the fabrication of materials into functional shapes. Materials Engineering is the study of the interrelationships between processing, structure, properties and performance of materials.
Materials engineers study the structure and composition of materials on scales ranging from the electronic and atomic through the microscopic to the macroscopic. They develop new materials, improve traditional materials and are key people in the manufacturing process to produce materials reliably and economically. They seek to understand phenomena and to measure materials properties of all kinds, and they predict and evaluate the performance of real materials as structural or functional elements in engineering systems. Employment opportunities span all types of industry, such as aerospace, automotive, chemical, electronic, energy and primary material-producing companies.

Materials Engineering, BSMSE

Materials Science and Engineering Minor

MSE 19000 - Introduction To Materials Engineering

Credit Hours: 1.00. An introduction to materials science and engineering. Emphasis on the "processing, structure, properties, performance" relationships that lead to the development of materials for society's needs. Examples drawn from the major materials classes.

Learning Outcomes: 1. Recognize and give examples of the "processing, structure, properties, performance" relationships for the major materials classes. Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 23500 - Second Year Materials Engineering Laboratory

Credit Hours: 3.00. Laboratory experiments using standard equipment to measure material properties, characterize material structure and composition, and explore processing methods to form functional shapes, and modify properties of the formed shapes. Experiments are carried out with metal, ceramic, and polymeric materials to illustrate property-structure-processing relationships.

Learning Outcomes: 1. Identify and properly utilize primary sources and online databases to find information about material structures, properties, and processing techniques. 2. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 3. Apply characterization techniques appropriate for the class of material analyzed. 4. Assess validity of experimental data and recognize experimental factors affecting data. 5. Accurately and clearly report engineering data using figures, graphs, and tables and proper statistical methods. 6. Display effective written communication in

technical reports. Credits: 3.00

MSE 25000 - Physical Properties In Engineering Systems

Credit Hours: 3.00. Class connects math, science and engineering practice and applications. Presents foundational aspects of engineering problem solving, use of computer math tools for engineering problem solving, basic engineering statics, dynamics and mechanics, group problem solving approaches, and introductory aspects of design and materials selection.

Credits: 3.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of

surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties.

Credits: 3.00

MSE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 33000 - Processing And Properties Of Materials

Credit Hours: 3.00. An introduction to the relationships between the processing of materials and their properties. Heat treating, forming, casting, consolidation, and other more material-specific manufacturing processes. Elucidation of the role of phenomena such as heat flow, mass diffusion, nucleation, interfacial tension, elastic and plastic deformation, precipitation, grain growth.

Credits: 3.00

MSE 33500 - Materials Characterization Laboratory

Credit Hours: 3.00. The principles of analytical methods for characterization of materials for structure and composition; optical microscopy, scanning electron microscopy, X-ray spectroscopy and diffraction, atomic absorption, emission spectroscopy, and mass spectrometry. Laboratory experiments in X-ray spectroscopy, X-ray diffraction, optical microscopy, and scanning electron microscopy.

Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

MSE 36700 - Materials Processing Laboratory

Credit Hours: 3.00. This laboratory is intended as an intensive experience in processing techniques used for ceramics, metals, and polymers. Sintering of a ceramic, casting and post-processing (work hardening, heat treatment, etc.) of a metal, and preparation and extrusion of a polymer are the suggested processes. The measurements (e.g., powder size, compaction force, temperature, grain size, molecular weight) applicable to the successful processing of the material and the final properties (e.g., hardness, ductility, strength, stiffness) will be emphasized.

Learning Outcomes: 1. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 2. Demonstrate effective written communication in lab reports. 3. Demonstrate effective oral communication in final project presentation. 4. Characterize the physical mechanisms that underlie the basic interactions between macroscopic shaping processes and microstructure development for the core bulk processing routes of each of the main classes of materials and how they relate to properties. 5. Assess validity of experimental data and recognize experimental factors affecting data. 6. Identify specific processing capabilities and limitations for the main classes of materials. Credits: 3.00

MSE 37000 - Electrical, Optical, And Magnetic Properties Of Materials

Credit Hours: 3.00. An introductory course to provide basic background on the behavior of materials; electronic band structure, electronic and ionic conduction, electronic processes in semiconductors, dielectric, optical, and magnetic properties, and superconductivity; emphasis is on the relation between the properties and the structural aspects of materials.

Credits: 3.00

MSE 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 38200 - Mechanical Response Of Materials

Credit Hours: 3.00. This course encompasses deformation-based microscopic mechanisms, including dislocation motion, diffusion, and viscoplasticity. Macroscopic mechanical response of metals, ceramics, polymers, and composites will be related to elasticity and plasticity concepts for single crystal, polycrystalline, and amorphous materials. Practical design considerations for deformation will be included as well as an introduction to fracture mechanisms.

Learning Outcomes: 1. Conversant with conventional nomenclature, units and notation of mechanical behavior. Examples: Stress, strain, yield strength, fracture strength; yield criteria, flow rules, creep, fracture. 2. Estimate relative ranges and values for important properties of common engineering materials. Examples: Young's modulus at room temperature for steels versus most polymers; yield strength ranges for ductile metals. 3. Recognize mechanisms for important mechanical behaviors. Examples: Plastic deformation by dislocation glide; plastic deformation by molecular rearrangement; dilatant deformation processes; strengthening mechanisms in crystalline solids. 4. Predict mechanical responses based on given information. Examples: Will yielding occur given a stress state and properties? Will fracture occur given a stress state and properties? How will the material change shape for the applied deformation? Which slip system(s) will be operative? 5. Explain the fundamental basis for important deformation mechanisms or processes. Examples: Dislocation glide, cross-slip, dislocation climb, precipitation strengthening; molecular orientation; Nabarro-Herring creep; plane strain fracture. 6. Apply the mechanisms of deformation to component design or alloy design. Credits: 3.00

MSE 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain practice with qualified employers within industry, government, or small business. Permission of Department required.

Credits: 0.00

MSE 39000 - Materials Engineering Seminar

Credit Hours: 0.00. Presentation and discussion of current topics in materials engineering.

Credits: 0.00

MSE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in materials engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSE 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in Materials Engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Learning Outcomes: 1. Develop the ability to function on multi-disciplinary teams and receive the broad education necessary to understand the impact of engineering solutions in global, economics, environmental and societal context. Credits: 0.00

MSE 42000 - Structure And Properties Of Organic Materials

Credit Hours: 3.00. This course presents information on the chemical and physical structure and basic material properties of organic materials, including synthetic plastics and specialty polymers and surfactants as well as select natural materials (e.g., proteins, carbohydrates, lipids). Fundamental concepts from organic chemistry will be presented along with descriptions of how the chemical and physical structures of organic molecules directly impact the properties of bulk materials over multiple length scales, from the molecular-level to the macroscale. This course will prepare students to be successful in higher-level polymer and soft material elective courses in materials engineering.

Learning Outcomes: 1. Describe atomic-scale bonding and identify common hydrocarbon units in organic molecules and describe common organic reactions involving those units. 2. Select the appropriate characterization techniques for chemical structures, physical structures, and bulk material properties and interpret basic data from selected techniques. 3. Explain how

macromolecules are synthesized and outline the most common synthesis reactions. 4. Distinguish between chemical and physical structures or organic materials and classify different structures into appropriate material length scales. 5. Explain important structure-property relationships over multiple length scales. Credits: 3.00

MSE 43000 - Materials Processing And Design I

Credit Hours: 3.00. Experience in the initiation and execution of a specific materials project or study involving research, processing, and design; a written proposal on the project prepared by the student under the supervision of an individual faculty member; oral progress report at the end of the semester.

Learning Outcomes: 1. Ability to apply knowledge of mathematics, science, & engineering to problems in materials engineering. 2. Ability to exhibit effective oral and written communication skills. 3. Recognition of the need for, and an ability to engage in life-long learning. 4. A knowledge of contemporary issues, particularly as they relate to materials engineering. Credits: 3.00

MSE 44000 - Materials Processing And Design II

Credit Hours: 3.00. Continuation and completion of the materials project or study initiated in MSE 43000 and presentation of a written dissertation on the results and conclusions. Competence in technical writing is emphasized in the preparation of the dissertation.

Learning Outcomes: 1. Exhibit effective oral and written communication. 2. Become aware of the complexity of working in teams to achieve goals, including issues related to the importance of individual ownership of project assignments, communication, leadership roles, establishing goals, and recognizing a diversity of talents among group members. 3. Have a basic understanding of different ethical systems, including legal positivism, ethical egoism, utilitarianism, deontological, etc. 4. Understand consequences of unethical behavior in the profession. 5. Understand and apply the basic tools of engineering design. 6. Draw simple logic diagrams that relate the important precedent relationships for tasks required to complete an engineering program. 7. Develop and learn necessary modelling, processing and characterization tools needed to successfully execute the project. 8. Use statistical analysis to infer conclusions from experiments. Credits: 3.00

MSE 44500 - Materials Engineering Systems Analysis And Design

Credit Hours: 3.00. Integration of materials engineering core coursework with statistical, economic and environmental considerations for analysis and design of systems. Analysis of primary materials processing operations using mathematical and statistical models for predicting interactive effects and process optimization. Specification of materials and processes for mechanical designs, incorporating properties assessment and tradeoffs, cost analysis, and performance optimization with multiple constraints.

Learning Outcomes: 1. Translate performance attributes in a given design to the corresponding nominal material properties. 2. Derive and apply material indices to materials selection for single- and multi-objective designs using the CES materials database and software tools. 3. Specify manufacturing processes for a given component design (material, shape, production rate) using basic cost modeling. 4. Apply a computational model for simulating a materials production and/or processing operation. 5. Quantify material properties, processing and performance variability using statistical methods. Examples: error analysis, probability distributions, sampling theory, statistic intervals and statistical process control charts. 6. Perform basic calculations for engineering cost analysis and use those results to make choices among trade-offs in product design or process operation. 7. Locate and evaluate design information for specific materials and

processes. Examples: testing standards, processing specifications, commercial data and patents. 8. Apply quantitative trade-off strategies in selection of materials for designs with conflicting objectives. 9. Apply computational models for materials production and/or processing operations to predict interactive effects of inputs on material quality, production rates, cost minimization, and environmental impact. 10. Optimize material and process selection simultaneously, based on refined functional relationships between processing, properties and costs. Credits: 3.00

MSE 48900 - Ethics In Engineering Practice

Credit Hours: 3.00. Presentation and discussion of common ethical theories, including ethical egoism, legal positivism, utilitarianism, duties and rights, and virtue ethics. Application of these theories to the practice of engineering, including professionalism, codes of ethics, trust and loyalty, confidentiality, whistle blowing, respect for legitimate authority, risk and reliability, and fraud. Examples of application of ethical theory and case studies drawn from across the engineering profession and include discussion of the interrelated technical and ethical issues.

Learning Outcomes: 1. Identify and discuss common ethical theories. 2. Describe how these theories apply these theories to the practice of engineering. 3. Analyze case studies of failures of engineering products and organizations. Credits: 3.00

MSE 49000 - Directed Studies In Materials Engineering

Credit Hours: 1.00 to 3.00. Supplementary individual instruction for students from other engineering schools enrolled in 30000-50000 level MSE courses. Permission of instructor required.

Credits: 1.00 to 3.00

MSE 49700 - Selected Topics In Materials Engineering

Credit Hours: 0.00 to 18.00. Topics vary. Permission of instructor required.

Credits: 0.00 to 18.00

MSE 49900 - Research In Materials Engineering

Credit Hours: 0.00 to 18.00. Available upon prior approval of, and arrangement with, a faculty research advisor. Permission of instructor required.

Credits: 0.00 to 18.00

School of Mechanical Engineering

Overview

Mechanical Engineering is, simply, applying engineering principles to machines that have movement. If you think that sounds all-encompassing, well, you're right. Mechanical Engineering is the broadest of all Engineering majors, and their students can do just about anything, because they have a broad understanding of the principles of mechanical sciences, thermal-fluid sciences, control systems and design.
In the job world, you can take these skills to almost any industry. Many Mechanical Engineering students end up in the automotive or manufacturing industries, but many also pursue biotech, law, renewable energy, electronics, or any number of emerging industries. NASA loves Purdue students, and many mechanical engineers find places in the aerospace and defense industries. And some ME graduates don't go into engineering at all, but use their problem-solving skills to start a business, or go into sales or management. The foundational know-how of Mechanical Engineering will serve you, wherever in the world you choose to go.

Faculty (website)

Mechanical Engineering has approximately 90 faculty members, pursuing research in numerous fields. Are you interested in doing research as an undergrad? Contact a faculty member whose research interests you.

-

Engineering and Public Policy Minor

A minor in Engineering and Public Policy is available to students in the College of Engineering.

Intellectual Property Law for Engineers Minor

A minor in Intellectual Property Law is available to students in the College of Engineering.

Sustainable Engineering Minor

Mechanical Engineering, BSME

Motorsports Engineering, BSMSPE (Indianapolis Only)

ME 16400 - Geometric And Annotation Modeling

Credit Hours: 3.00. This course focuses on CAD-based modeling and engineering graphics standards (national - ANSI/ASME and international - ISO), including coordinate and geometric dimensioning and tolerancing practices. It covers principles and techniques of three-dimensional surface and solid modeling. This course teaches students how to model real-world engineering objects and assemblies using the capabilities of commercial CAD systems. Conceptual, preliminary and detailed part and assembly models are assigned as exercises to reinforce the classroom lectures. This course teaches the graphics language and standards necessary for engineering students to read, understand, and sign off engineering drawings and documents. Students are required to detail (create engineering drawings) their CAD models, demonstrating their ability to both read and apply graphic standards.

Learning Outcomes: 1. Improve sketching. 2. Understand wireframe, surface and solid modeling techniques found in a modern commercial CAD package. [3] 3. Create CAD models of basic machine components and assemblies. [2] 4. Design and create CAD models of average to complex mechanical components. [2] 5. Understand the approaches and processes used in component and assembly modeling, i.e., top-down and bottom-up design. [2] 6. Read and understand engineering drawings composed of multiple views with standard dimensioning and tolerancing nomenclature. [3] 7. Read and understand engineering drawings that contain geometric dimensioning and tolerancing symbols. [3] 8. Use of standards for geometric modeling, dimensioning, and tolerancing. [2] 9. Work in collaboration with fellow teammates to accomplish both the learning of the CAD tool and the executing of the modeling projects. [5] Credits: 3.00

ME 19800 - PMEA Leadership Program

Credit Hours: 1.00. A weekly seminar that includes topics such as leadership, professional skills, teamwork, and the Mechanical Engineering culture. Students will utilize these skills while representing Mechanical Engineering to current and prospective students, alumni, donors, and other visitors to the school.

Learning Outcomes: 1. Able to function effectively with a student run team whose members create a collaborative and inclusive environment, plan events, and meet the objectives of the ME Undergraduate Program. 2. Communicate effectively with a range of audiences. 3. Develop a personal philosophy of leadership that includes an understanding of self, others, and community. Credits: 1.00

ME 19900 - How Stuff Works

Credit Hours: 1.00. An introduction to Mechanical Engineering for First-Year Engineering students interested in exploring a

career in ME. The course is student led and involves a mix of presentations from successful mechanical engineers about their chosen careers coupled with fun hands-on experiences related to better understand how everyday products work from a mechanical engineering perspective. A variety of common products are disassembled, evaluated, and reassembled to understand the underlying engineering design and fabrication fundamentals. Little or no mechanical experience is required.

Learning Outcomes: 1. Learn from successful alumni about their career paths and common products that they have helped to design and market. 2. Become familiar with common products and how they work. 3. Gain hands-on experience and develop your mechanical aptitude by dissecting products, studying the basic engineering and operation of the products and reassembling the products. 4. Become familiar with common engineering terminology used in describing the various parts and assemblies of products. Credits: 1.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ME 22001 - Fundamentals Of Energy Materials

Credit Hours: 3.00. This course examines the chemistry and structure of materials and their correlation with various electrochemical properties including their suitability for use in conversion and storage of electrochemical energy, energy related materials, and chemical and renewable energy sources.

Credits: 3.00

ME 22501 - Mechanical Engineering Laboratory I

Credit Hours: 1.00. Experiments in thermodynamics, parametric design and component fabrication.

Credits: 1.00

ME 22510 - Energy Engineering Laboratory I

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.

Credits: 1.00

ME 23900 - Introduction To Data Science For Mechanical Engineers

Credit Hours: 1.00. Introduction to data science for sophomore mechanical engineers with no prior knowledge of the topic; Overview of Python basics using Jupyter notebooks; review of probability theory as the language of uncertainty, Monte Carlo sampling for uncertainty propagation; basics of supervised (Bayesian generalized linear regression, logistic regression, deep neural networks, convolutional neural networks), and unsupervised learning (k-means clustering, principal component analysis, Gaussian mixtures).

Learning Outcomes: 1. Represent uncertainty in parameters in engineering or scientific models using probability theory. 2. Propagate uncertainty through physical models to quantify the induced uncertainty in quantities of interest. 3. Solve basic supervised learning tasks, such as regression and classification. 4. Solve basic unsupervised learning tasks, such as clustering, dimensionality reduction, and density estimation. 5. Develop and apply various Python coding skills. 6. Load and visualize data sets in Jupyter notebooks. 7. Visualize uncertainty in Jupyter notebooks. 8. Recognize basic Python software (e.g., Pandas, numpy, scipy, scikit-learn) and advanced Python software (e.g., pytorch, pyrho, Tensorflow) commonly used in data analytics. Credits: 1.00

ME 24000 - Basic Engineering Mechanics

Credit Hours: 4.00. This course is an introductory mechanics course in energy engineering, covers force systems and couples, equilibrium, centroids, friction, kinematics, kinetics of particles & rigid body, Newton's second law, energy, and momentum methods; equations of motions, and application to machine elements. Permission of department required.

Credits: 4.00

ME 25001 - Mechanical Engineering Laboratory II

Credit Hours: 1.00. Experiments on data analysis, hands-on programming with devices and fabrication.

Credits: 1.00

ME 25010 - Energy Engineering Laboratory II

Credit Hours: 1.00. Experiments on testing of thermodynamics, parametric design and electrochemistry.

Credits: 1.00

ME 26000 - Sustainable Energy

Credit Hours: 3.00. The objective of this course is to familiarize the students with various forms of available energy. The concept of these energies in terms of efficiency, raw material, safety, economy and environmental impact will be introduced. Permission of department required.

Credits: 3.00

ME 26201 - Design, Ethics, And Entrepreneurship

Credit Hours: 2.00. Basic concepts of the design process. Innovative engineering design of real life applications. Engineering ethics topics. Fundamentals of Entrepreneurship. Design projects focus on open-ended problems. Design modeling, simulation, documentation and communication. Implementation and use of modern computer tools in solving design problems and completing team design projects in the area of Energy Engineering.

Credits: 2.00

ME 26300 - Introduction To Mechanical Engineering Design, Innovation And Entrepreneurship

Credit Hours: 3.00. The product design process. Development of product design specifications using customer inputs, benchmarking, product/market research and patent review. Concept generation and evaluation using brainstorming, functional decomposition, modeling and decision matrices. Detailed product design including assembly, economic analysis, CAD, and bill of materials. Oral and written design reviews. Key skills developed include teamwork, communication, project planning, innovation, design, and entrepreneurship.

Learning Outcomes: 1. Instill the philosophy that real engineering design problems are open-ended and multifaceted. 2. Teach a systemic design methodology. 3. Provide guidance in applying engineering principles to open-ended problems. 4. Develop the ability to mathematically model and analyze engineering systems. 5. Sharpen skills in leadership, teamwork, communication, project planning, innovation, design and entrepreneurship. 6. Instill a philosophy of professional and ethical behavior. 7. Provide a foundation for the rest of the mechanical engineering curriculum and future careers. Credits: 3.00

ME 26400 - Introduction To Manufacturing For Mechanical Design

Credit Hours: 3.00. Introduction to manufacturing processes for typical engineering materials. Basics of material properties and behavior for manufacturing processes. Material selection and manufacturing process selection for mechanical design. Hands-on projects in the lab reinforce the knowledge of manufacturing processes.

Learning Outcomes: 1. Understand material properties and behavior for design and manufacturing. 2. Gain a fundamental knowledge of manufacturing processes. 3. Gain knowledge of the practice of measurements and manufacturing processes through laboratory experiments. 4. Enhance knowledge on the selection of materials and manufacturing processes for product design. 5. Enhance technical communication skills through short technical lab reports. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical

communication skills. Credits: 3.00

ME 27200 - Mechanics Of Materials

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design for strength of various machine components. Reliability principles. Design documentation and communication. Laboratory experiments on mechanical design and strength.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

ME 28500 - Industrial Practice I

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only.

Credits: 0.00

ME 28600 - Industrial Practice II

Credit Hours: 0.00. Professional practice of engineering in industry. Comprehensive written report of this experience required. For cooperative program students only.

Credits: 0.00

ME 29000 - Global Engineering Professional Seminar (UCC: STS)

Credit Hours: 1.00. Forum on contemporary issues in the global profession of mechanical engineering. Professionalism and ethics. Interactions with engineering faculty and with professionals outside the University. Quizzes on assigned readings in the areas of globalization, cultural difference and collaborating across cultural boundaries. Individually developed professional profiles describe technical interests and convey awareness of ethical responsibilities in global context.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Provide a solid foundation in global engineering skills. 2. Introduce the in global engineering community and encourage active involvement with professional associations such as ASME and SAE to develop teamwork and leadership skills. 3. Explore the ME Curriculum and identify resources available for planning a academic program including global literacies (language and area studies) and for obtaining diverse industrial experience appropriate for developing global competencies. 4. Support the development of a strong ethical framework for global professional workplace, including an appreciation for cultural differences, as a responsible member of the global engineering community. Credits: 1.00

ME 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking,

problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 29500 - Engineering Topics

Credit Hours: 1.00 to 5.00. Topics of contemporary importance of special interest that are outside the scope of the standard undergraduate curriculum can be offered temporarily under the selected topics category until the course receives a permanent number. Typically offered Summer Fall Spring.

Credits: 1.00 to 5.00

ME 29601 - Experimental Courses

Credit Hours: 0.00 to 6.00. Experimental classes offered at the freshman or sophomore level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 0.00 to 6.00

ME 29700 - Mechanical Engineering Sophomore Projects

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest. Students submit a summary report. Permission of instructor required.

Credits: 0.00 to 6.00

ME 30000 - Thermodynamics II

Credit Hours: 3.00. Properties of gas mixtures, air-vapor mixtures, applications. Thermodynamics of combustion processes, equilibrium. Energy conversion, power, and refrigeration systems.

Credits: 3.00

ME 30800 - Fluid Mechanics

Credit Hours: 3.00. Continuum description, velocity field, fluid statics, manometers, basic conservation laws for systems and control volumes, dimensional analysis. Bernoulli's equation along a streamline and with head losses. Flow over submerged bodies, boundary layers. Viscous flows in pipes, turbomachinery, system performance. One-dimensional gas dynamics.

Learning Outcomes: 1. Develop the ability to identify and classify the various types of flows one may encounter. 2. Develop (from rigorous first principles) the control volume formulation of the basic laws with emphasis on conservation of mass and Newton's 2nd law. 3. Apply the control volume formulation of the basic laws to model physical systems. Credits: 3.00

ME 30801 - Fluid Mechanics Laboratory

Credit Hours: 1.00. This course is the lab component of an already established ME 30900 Fluid Mechanics (4 cr) course, which is now being split into an ME 30800 (3 cr) Fluid Mechanics lecture course, and the material covered in this new ME 30801 (1 cr) Fluid Mechanical Laboratory. The content of both of these courses remains unchanged. The splitting of the lab from the lecture will enable better enrollment load balancing in the existing ME undergraduate laboratory facilities. Details of this new laboratory are outlined in the appended material below.

Learning Outcomes: 1. Know physical experiments in fluid mechanics. 2. Know application of fluid mechanics theory and fundamental concepts to measuring and analyzing fluid systems and flows. 3. Learn a laboratory design project on a flow system reinforces the design process. Credits: 1.00

ME 31002 - Fundamentals Of Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernoulli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.

Credits: 3.00

ME 31401 - Fundamentals Of Heat And Mass Transfer

Credit Hours: 3.00. Fundamental principles of heat transfer by conduction, convection, and radiation; mass transfer by diffusion and convection. Application to engineering situations.

Credits: 3.00

ME 31500 - Heat And Mass Transfer

Credit Hours: 4.00. Fundamentals of heat transfer by conduction, convection, and radiation; mass transfer by convection. Relevance to engineering applications.

Learning Outcomes: 1. Develop the ability to identify the relevant transport processes (heat, momentum and energy) when confronted with a particular problem. [1, 7] 2. Develop the ability to model and analyze heat and mass transfer processes. [1, 2, 3, 5, 7] 3. Augment the ability to design and conduct experiments to solve open-ended engineering problems. [2, 3, 5, 6, 7] 4. Reinforce technical written and oral communication skills through a formal project report. [3, 4, 5] Credits: 4.00

ME 31600 - Fluid Mechanics

Credit Hours: 3.00. Continua, velocity fields, fluid statics, basic conservation laws for systems and control volumes, dimensional analysis. Euler and Bernouilli equations, viscous flows, boundary layers, flows in channels and around submerged bodies, and one-dimensional gas dynamics.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

ME 32301 - Mechanics Of Materials Laboratory

Credit Hours: 1.00. Experimental methods and techniques employed for the measurement of mechanical properties and evaluation of mechanical structures. Application of mechanics of materials and fundamental concepts to measuring and analyzing mechanical structures. A laboratory design project on mechanical structures.

Learning Outcomes: 1. Conduct simple experiments and analyze data. 2. Enhance systematic problem-solving skills and sharpen written-communication skills through short technical laboratory memos. 3. Complete a design project on a mechanical structure. Credits: 1.00

ME 32500 - Dynamics Of Physical Systems

Credit Hours: 3.00. Development and solution of linear models; translational and rotational mechanical systems, electrical systems, electromechanical systems, thermal systems, hydraulic systems. The Laplace transform, transfer functions, and Bode plots, state variable representation and solutions. Computer analysis and simulation.

Learning Outcomes: 1. Develop a mathematical model generally consisting of ordinary differential equations for a given system. 2. Determine the equilibrium conditions, and where appropriate, obtain a linearized model for a nonlinear system. 3. Rearrange the equations that make up the system model in a new form suitable for an analytical solution and use them to build and simplify block diagrams. 4. Solution for a first order system by the method of time domain response. 5. Use Laplace transform method to find the time response, to determine the role of the transfer function on the system response, and where appropriate, to find the time constraints, damping ratios, and undamped natural frequencies. 6. Use a suitable software (i.e. Simulink - Matlab) to simulate and analyze the behavior of the dynamic systems. 7. Use block diagrams and computer simulations as aids in modeling and analysis of dynamic systems. Credits: 3.00

ME 32501 - Mechanical Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Mechanics of Materials and Fluid Mechanics.

Credits: 1.00

ME 32510 - Energy Engineering Laboratory III

Credit Hours: 1.00. Experiments on testing of Fluids Mechanics and energy engineering.

Credits: 1.00

ME 32600 - Engineering Project Management

Credit Hours: 3.00. (ECE 32600) Project management is an

important skill that is needed in the private and public sectors as well as specialty businesses. This course will explore the challenges facing today's project managers and will provide a broad understanding of the project management environment focused on multiple aspects of the project.

Learning Outcomes: Upon successful completion of the course, students should be able to 1. Use library resources and internet resources to find information necessary for the project. 2. Use critical thinking in its design process. 3. Use creative approaches when necessary to obtain project objectives. 4. Analyze and interpret data. 5. Function effectively on a multi-disciplinary team through mutual support, consensus seeking, cooperation, and sharing responsibility. 6. Write a project report, adhering to the specified format using an appropriate writing style, grammar, and spelling. 7. Make an oral presentation using effective visual aids. 8. An understanding of professional and ethical responsibility. 9. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 10. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

ME 32700 - Engineering Economics

Credit Hours: 3.00. (ECE 32700) Engineering Economics is designed as an overview of economics with a focus on how it relates to the practice of engineering. Topics include interest formulas, rate of return, life cost analysis, depreciation, taxes, and cash flow.

Credits: 3.00

ME 33000 - Modeling And Analysis Of Dynamic Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems; electrical, mechanical, fluid, and thermal components; linear system response; Fourier series and Laplace transform.

Credits: 3.00

ME 33010 - Modeling And Measurements Of Dynamic Systems

Credit Hours: 3.00. This course will cover the fundamentals of instrumentation, measurement, and dynamic systems modeling. Design, selection, and usage of the instrumentation systems and the interpretation of experimental results are also introduced. Basic concepts of measurements methods, measurement system response, assessment, uncertainty analysis of measured data, sensors, signal conditioning, recording / display devices, digital techniques, instrument interface, and measurement theories on stress and strain, temperature, pressure, fluid flow and velocity will also be covered. Additionally, fundamentals of dynamic systems including mechanical, electrical, and electromechanical systems will be introduced. Laplace transform, block diagram, transient and frequency response of linear first and second order system will be covered as well.

Credits: 3.00

ME 34001 - Instrumentation And Measurement Systems

Credit Hours: 2.00. Modeling and formulation of differential equations for dynamic systems, including mechanical vibratory systems, thermal systems, fluid systems, electrical systems, and instrumentation systems. Analysis of dynamic systems and measuring devices including transient response and frequency response techniques, mechanical systems, transducers, and operational amplifiers. Consideration of readout devices and their responses to constant, transient, and steady-state sinusoidal phenomena. Calibration and data analysis techniques are introduced. Both analog and digital computation are included.

Credits: 2.00

ME 34400 - Introduction To Engineering Materials

Credit Hours: 3.00. Introduction to the structure and properties of engineering materials, including metals, alloys, ceramics, plastics, and composites. Characteristics and processing affecting behavior of materials in service.

Credits: 3.00

ME 34600 - Renewable Energy Systems And Design

Credit Hours: 3.00. This course is designed to introduce the system and design of energy conversion and storage devices for renewable energy sources. Students will first learn about energy sources available on earth including kinetic, solar, and chemical. Next, the course will provide students with a review of the thermodynamic concepts behind energy constant and

energy transfer via an energy conversion device. Finally, this course will tie together concepts of renewable energy sources and thermodynamics teaching students about design elements for energy conversion and storage devices, in which renewable energy sources are converted and stored. Permission of Instructor required.

Credits: 3.00

ME 35001 - Mechanical Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of Dynamic Systems, Heat & Mass transfer, and Materials.

Credits: 1.00

ME 35010 - Energy Engineering Laboratory IV

Credit Hours: 1.00. Experiments on testing of heat and mass transfer, and energy engineering.

Credits: 1.00

ME 35200 - Machine Design I

Credit Hours: 4.00. Introduction to the principles of design and analysis of machines and machine components. Design for functionality, motion, force, strength, and reliability. Review of fatigue failure theories and analysis of fatigue stresses. Laboratory experience provides open-ended projects to reinforce the design process.

Credits: 4.00

ME 35400 - Machine Design

Credit Hours: 3.00. Design, analysis, and selection of machine components for fluctuating loading. Application of design fundamentals to mechanical components and integration of components to form systems. Open-ended design projects reinforce the design process.

Learning Outcomes: 1. Apply Statics, Dynamics, and Strength of Materials to the realization of machine components. 2. Understand fatigue failure mechanisms 3. Apply fatigue failure theories to create reliable mechanical components. 4. Select standard machine components and materials. 5. Enhance problem-solving and communication skills through design projects. Credits: 3.00

ME 35401 - Machine Design Laboratory

Credit Hours: 1.00. Physical experiments on static and fatigue failure of mechanical parts. Application of failure theories to design of mechanical components and systems. Open-ended design projects to reinforce the design process.

Learning Outcomes: 1. Experiment on static and fatigue failure. 2. Compare theory with physical experiments and simulation. 3. Apply failure theories to design of machines. 4. Learn open ended design projects. Credits: 1.00

ME 36300 - Principles And Practices Of Manufacturing Processes

Credit Hours: 3.00. Manufacturing processes for engineering materials, both metallic and non-metallic. Fundamentals of manufacturing processes with a "hands-on" laboratory sequence. Analysis and design of processes for various engineering materials and their link to engineering design. Hands-on experiences through laboratory experiments and demonstrations. Not open to students with credit in IE 37000.

Credits: 3.00

ME 36400 - Systematic Engineering Design

Credit Hours: 3.00. The engineering design process including planning and clarification, conceptual design, embodiment design, and detail design. Identification of customer requirements and development of engineering specifications. Concept generation and selection. Rules and guidelines for embodiment design. Design considerations including quality, modularity, manufacturing, assembly, and economics. Detail design to support manufacturing.

Learning Outcomes: 1. Understand and apply a systematic design method. 2. Understand customer needs and translate needs to engineering specifications. 3. Generate concepts and use ideation techniques. 4. Develop layouts using embodiment design techniques. 5. Generate designs that are manufacturable. 6. Communicate design effectively to various stakeholders. 7. Work effectively in a team environment. 8. Acquire and apply new knowledge and tools to support the design process. Credits: 3.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general

importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.

Learning Outcomes: 1. Provide a fundamental knowledge of the theory of measurement sciences. (A2, A3, A4) 2. Gain knowledge of the practice and art of measurements through laboratory experiments. (A2, A3, A4) 3. Sharpen skills in problem formulation and integration of a broad range of technical capabilities through certain deliberately ill-defined experimental procedures. (A2, A3, A4) Credits: 3.00

ME 37200 - Design Of Mechanisms

Credit Hours: 3.00. Kinematic and dynamic analysis of linkages and mechanical systems. Analytical and graphical approaches to analysis. Vector loop and relative velocity/acceleration solutions. Design and analysis of cams and gears. Static and dynamic balancing. Design documentation report writing and communication.

Credits: 3.00

ME 37500 - Measurement And Control Systems II

Credit Hours: 3.00. This course provides an introduction to modeling electrical, mechanical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Modeling techniques based on physical laws and principles are used to generate subsystem and system transfer functions. Closed-loop system analysis will include the use of proportional, integral, and derivative elements to control system response.

Learning Outcomes: 1. Introduce a systematic and unified system level modeling of lumped dynamic systems in different domains using first principles. (A2, A3) 2. Provide necessary mathematical tools for analyzing and predicting the performance of an engineered system based on its dynamic response. (A2, A3) 3. Provide an introductory treatment of designing feedback controllers to achieve closed-loop stability and specified system performance. (A2, A3) Credits: 3.00

ME 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

ME 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to

identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

ME 39600 - Professional Internship II

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit a summary report.

Credits: 0.00

ME 39699 - Professional Practice Internship

Credit Hours: 0.00. Professional experience in mechanical engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Permission of department required.

Credits: 0.00

ME 39700 - Selected Topics In Mechanical Engineering

Credit Hours: 0.00 to 6.00. Topics of contemporary importance or of special interest in Mechanical Engineering. Permission of instructor required.

Credits: 0.00 to 6.00

ME 40600 - Robust Design, Standards And Contemporary Issues

Credit Hours: 1.00. The role of standards, robust design and lifelong learning in engineering design. Application to contemporary issues.

Credits: 1.00

ME 40700 - HVAC Design

Credit Hours: 3.00. The fundamentals required to design and analyze HVAC systems used in buildings. This includes the fundamentals of the thermodynamics of HVAC systems and buildings, the thermodynamics of moist air (psychometrics), calculating building heating / cooling loads, application of HVAC equipment to buildings, HVAC component analysis, energy reduction strategies. Application to real building designs.

Credits: 3.00

ME 41200 - Additive Manufacturing: Fundamentals, Equipment, And Applications

Credit Hours: 3.00. Introduction to additive manufacturing through lecture and project-based learning. The focus is additive process fundamentals, materials, characterization, and testing. Students will develop and understanding of processes and equipment for additive manufacturing; design for additive manufacturing; Implementation of Additive Manufacturing for Product Applications.

Learning Outcomes: 1. Understand the fundamentals of materials, properties, and testing for additive manufacturing. 2. Develop understanding of processes and equipment for additive manufacturing. 3. Understand design(s) for additive manufacturing with material(s) and process(es) for application specific functionality. 4. Complete a project based on product innovation or novel research. Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.

Credits: 3.00

ME 41400 - Thermal-Fluid Systems Design

Credit Hours: 3.00. Application of basic heat transfer and fluid flow concepts to design of thermal-fluid systems. Emphasis on design theory and methodology. Design experience in thermal-fluid area such as piping systems, heat exchangers, HVAC, and energy systems. Design projects are selected from industrial applications and conducted by teams.

Credits: 3.00

ME 41500 - Energy Systems Engineering

Credit Hours: 3.00. Application of Thermodynamics, fluid mechanics, and heat transfer fundamentals to the design of energy systems. Applications include thermal regulation in buildings, electronic equipment, energy generation, conversion, and storage, manufacturing processes, and combustion processes. Beyond the fundamentals, this course will focus on design and analysis techniques, including analysis of energy costs, economics, and environmental issues.

Credits: 3.00

ME 41800 - Engineering Of Environmental Systems And Equipment

Credit Hours: 3.00. Design and analysis of systems and equipment used in conditioning buildings. Review of fundamentals in thermodynamics, heat transfer, fluid mechanics, economics, non-linear equation solving, optimization. Analysis of building heating and cooling requirements for design and annual energy use. Design and selection of equipment.

Credits: 3.00

ME 42301 - Introduction To Nanotechnology

Credit Hours: 3.00. The course introduces students to the scale of nanotechnology, materials used in nanotechnology, forces acting in nanomaterials, electronic and mechanical behaviors on the nanometer scale, and applications in industries and life sciences. Nano-versus micro-technology in the evaluation of potential risks and benefits will be covered with emphasis on their impact on society.

Learning Outcomes: 1. Describe the status of nanotechnology infrastructure and products in the USA in instrumentation, devices, materials, and applications. 2. Compare nanotechnology to micro-technology issues. 3. Demonstrate knowledge of nanotechnology standards, tools, and Nano-manufacturing. 4. Explain the features of nanoscale electronics. 5. Communicate team project or team research term paper work through oral presentation and technical report. Credits: 3.00

ME 42501 - Mechanical Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of Mechanical Measurements and Control Systems.

Credits: 1.00

ME 42510 - Energy Engineering Laboratory V

Credit Hours: 1.00. Experiments on testing of mechanical measurements, control systems and alternative energy systems.

Credits: 1.00

ME 43000 - Power Engineering

Credit Hours: 3.00. Rankine cycle analysis, fossil-fuel steam generators, energy balances, fans, pumps, cooling towers, steam turbines, availability (second law) analysis of power systems, energy management systems, and rate analysis.

Credits: 3.00

ME 43300 - Principles Of Turbomachinery

Credit Hours: 3.00. Unified treatment of principles underlying fluid mechanic design of hydraulic pumps, turbines and gas compressors. Similarity and scaling laws. Cavitation. Analysis of radial and axial flow machines. Blade element performance. Radial equilibrium theory. Centrifugal pump design. Axial compressor design.

Learning Outcomes: 1. Understand principles of operation of pumps, fans, compressors and turbines. 2. Develop the ability to size and select turbomachinery for a specific application. 3. Develop the ability to analyze the performance of turbomachinery. 4. Master the concepts of classic mean-line and quazi-3D design methods. Credits: 3.00

ME 43400 - Gas Turbines For Power And Propulsion

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet,

turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component matching and off-design performance. Coursework in thermodynamics and fluid mechanics.

Learning Outcomes: 1. Apply basic performance characteristics of shaft power gas turbine engines. 2. Apply basic performance characteristics of gas turbines for aircraft propulsion. 3. Apply cycle analysis. 4. Apply component performance analysis. 5. Apply design and off-design operation. Credits: 3.00

ME 43500 - Dynamical Systems

Credit Hours: 1.00. This course introduces the modeling and analysis of dynamical systems providing the tools for problem-solving of complex mechanical, electromechanical, and aerospace systems. The course focuses on providing a unified approach to derive equations of motion of diverse linear systems the solution of which can be obtained in generic fashion. The course is designed to draw from differential equations, dynamics, and control systems courses, thereby unifying seemingly diverse concepts and tools under the dynamical systems umbrella.

Learning Outcomes: 1. Gain familiarization with energy-based methods for equations of motion derivation. 2. Understand derivation and analysis of linear dynamical systems via canonical forms of equations of motion. 3. Gain familiarization with general solution approaches to linear dynamical systems. Credits: 1.00

ME 44000 - Automotive Prime Movers: Green Engines And Clean Fuel

Credit Hours: 3.00. Internal combustion engines (ICE), hybrid engines (HE), fuel-cell engines (FCE), and alternative/renewable fuels. ICEs topics- engines with advanced combustion systems such as clean diesels, direct-injection spark-ignition engines (DISI), and low-temperature combustion (LTC) compression-ignition. HE topics- different components of hybrid engines and the powertrain design. FCE topics- fundamentals of fuel cells and automotive applications. Clean fuel topics- biofuels, hydrogen, and natural gas, as well as, other cleaner fossil fuels for automotive applications. Well-to-wheel energy and cost analysis of prime mover designs/fuels.

Learning Outcomes: 1. Relate processes in automotive prime movers to engineering fundamentals. 2. Study low-carbon emitting, and LEV, ULEV, SULEV, PZEV, and ZEV prime mover designs. 3. Study prime mover designs that are alternative to conventional combustion engines. 4. Study cleaner alternatives to conventional fossil fuels. 5. Carry out analysis of prime mover designs and fuel alternatives to identify cost and energy tradeoffs. Credits: 3.00

ME 44400 - Computer-Aided Design And Prototyping

Credit Hours: 3.00. Introduction to advanced computer-aided design (CAD) for product design, modeling, and prototyping. Individual use and team-based environment to design and prototype a functional and marketable product. Projects include use of the advanced design tools to produce a working prototype that is manufacturable. Application to design, manufacturing, and analysis.

Credits: 3.00

ME 44700 - Compressible Flow And Renewable Kinetic Energy

Credit Hours: 3.00. This course is designed to introduce compressible flow, turbomachines and design of kinetic energy conversion and storage devices for wind, wave and tidal renewable energy sources. Students will first learn about compressible flow, turbomachines concepts and kinetic energy sources available on earth. Next, the course will provide students with analysis, design parameters and control renewable kinetic energies.

Credits: 3.00

ME 45500 - Vehicle Design And Fabrication

Credit Hours: 3.00. Open-ended project course to design and build competitive prototype vehicles. Integration of design concept formulation, engineering analysis and testing, and prototype fabrication. Product development activities in a hands-on setting. Design constraints imposed by manufacturing limitations, funding constraints and market competition. Permission of instructor required.

Learning Outcomes: 1. Apply the design process to the design of a vehicle. 2. Apply engineering fundamentals to evaluate the design of a vehicle. 3. Apply team-work skills to management of the Mini-Baja or Formula SAE teams. 4. Learn the effect of design choices by building and testing students' designs. Credits: 3.00

ME 45900 - Mechanism And Machine Theory

Credit Hours: 3.00. Introduction to the principles of the analysis and design of mechanisms and machinery. Design for functionality, motion constraints, inertia force effects, and static and dynamic balancing.

Learning Outcomes: 1. An understanding of the kinematics of mechanisms. 2. An understanding of the kinetics and dynamics of machines. 3. Enhance problem-solving techniques in mechanism and machine theory. 4. Appreciation of the design of different types of machinery. Credits: 3.00

ME 46200 - Capstone Design

Credit Hours: 3.00. Concurrent engineering design concept is introduced. Application of the design is emphasized. Design problems from all areas of mechanical engineering are considered.

Credits: 3.00

ME 46300 - Engineering Design

Credit Hours: 3.00. Application of the design process to the design of various engineering components and systems. Mathematical modeling in design is emphasized. Design problems from all areas of mechanical engineering are considered.

Learning Outcomes: 1. Reinforce the philosophy that engineering design problems are open-ended and multifaceted. [1, 2, 3, 5] 2. Exercise a collaborative design methodology. [2, 3, 4, 5, 6, 7] 3. Broaden skills in leadership, teamwork, communication, project planning, innovation, design, and entrepreneurship. [3, 5] 4. Experience the application of core course materials, engineering design methods, and testing to practical open-ended design problems. [1, 2, 6] 5. Reinforce a philosophy of professional and ethical behavior. [4] 6. Provide a practical foundation for knowledge acquisition and continued learning as needed in students' future careers. [7] Credits: 3.00

ME 47500 - Automatic Control Systems

Credit Hours: 3.00. Controller design in frequency domain with introduction to digital systems and control.

Credits: 3.00

ME 48200 - Control System Analysis And Design

Credit Hours: 3.00. (MSTE 36000) Classical feedback concepts, root locus, Bode and Nyquist techniques, state-space formulation, stability, design applications. Students may not receive credit for both ECE 38200 and ME 48200.

Credits: 3.00

ME 48900 - Introduction To Finite Element Analysis

Credit Hours: 3.00. Introduction to finite element analysis with focus on linear elasticity and heat transfer. Matrix analysis and assembly of solutions. Strong form and weak form as a general solution process for differential equations.

Learning Outcomes: 1. Introduce concepts of finite element analysis. 2. Learn the use of matrix methods for solution of truss structures. 3. Learn strong and weak form for the solution of differential equations. 4. Learn how to define finite elements and finite element approximations. 5. Learn how to solve weak form formultions as a finite element approximation. 6. Apply these concepts to linear elastic and heat transfer problems. 7. Apply a commercial finite element code to linear elastic and heat transfer problems. 8. Understand the use of the Finite Element Analysis in engineering practice. Credits: 3.00

ME 49200 - Technology And Values

Credit Hours: 3.00. The impact of science and technology on personal and societal value systems. The special responsibility of engineers. Practical methods for using human values to guide future technological developments. Societal problems considered: warfare, energy, overpopulation, resource depletion, and environmental degradation. Interdisciplinary approaches stressed. Offered in alternate years.

Credits: 3.00

ME 49601 - Experimental Courses

Credit Hours: 1.00 to 6.00. Experimental classes offered at the junior or senior level on a temporary basis to test the viability of offering the course on a permanent basis.

Credits: 1.00 to 6.00

ME 49700 - Mechanical Engineering Projects

Credit Hours: 1.00 to 6.00. Projects or special topics of contemporary importance or of special interest outside the scope of the standard undergraduate curriculum. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. Permission of instructor required.

Credits: 1.00 to 6.00

ME 49800 - Research In Mechanical Engineering I

Credit Hours: 0.00 to 6.00. Individual research projects for students with honors classification. Requires prior approval of, and arrangement with, a faculty research advisor. Honors classification. Permission of instructor required.

Credits: 0.00 to 6.00

ME 49900 - Research In Mechanical Engineering II

Credit Hours: 0.00 to 6.00. Continuation of ME 49800. Requires submission of a written thesis, public presentation, and oral defense of the research project. Honors Classification. Permission of instructor required.

Credits: 0.00 to 6.00

MSPE 29000 - Motorsports Engineering Seminar

Credit Hours: 1.00. An overview of the motorsports industry including types of vehicles, types of competition, careers available, historical perspective, development of pertinent technologies, and brief discussions of engineering related topics that will be covered in more detail in future classes. Interactions with motorsport and mechanical engineering faculty along with motorsports engineers currently working in the industry. Professionalism and ethics are discussed along with topical discussions as related to the motorsports industry in the areas of globalization, cultural differences, and collaboration across cultural boundaries.

Learning Outcomes: 1. Demonstrate knowledge of the motorsports industry and recognize techniques, skills and modern tools of the motorsports industry. 2. Apply current knowledge and solve introductory problems relevant to the motorsports industry. 3. Possess a general knowledge of the history and evolution of motor racing nationally and internationally. 4. Develop technical writing skills beyond those learned in first-year engineering. 5. Recognize professional, ethical, and societal responsibilities in the context of the motorsports industry. Credits: 1.00

MSPE 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 29701 - Computer Modeling For Motorsports

Credit Hours: 2.00. An introductory course detailing methods for designing and modeling motorsports components using Computer Aided Design (CAD) software.

Learning Outcomes: 1. Understand Bottom-up Design of systems and components. 2. Utilize modern engineering tools to model components as solid models in 3 dimensions. 3. Utilize modern engineering tools to generate detail two-dimensional detail drawings of components. 4. Utilize modern engineering tools to model and constrain component assemblies in 3 dimensions. 5. Communicate thoughts and ideas. Credits: 2.00

MSPE 29800 - Programming And Computer Modeling For Motorsports

Credit Hours: 2.00. Introductory course detailing methods for creating virtual models of vehicle systems for design, analysis and optimization. Virtualization methods include object-oriented programming techniques for creating mathematical models in Excel, Matlab and Python. Students will learn the basics of data regression consistent with the analysis methods conducted in the motorsports industry. The methods introduced through this course lay the foundation for advanced courses in vehicle design, simulation, and analysis.

Learning Outcomes: 1. Introductory understanding of Object-Oriented Programming using Excel VBA and C#. Credits: 2.00

MSPE 31201 - Business of Motorsports

Credit Hours: 0.00 or 3.00. This course covers the unique aspects of the motorsports industry, especially race teams, including organizations, budgeting, marketing, and sponsorships through an examination of literature and guest speakers.

Credits: 0.00 or 3.00

MSPE 31700 - Motorsports Practicum I

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a professional motorsports organization.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team. 10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 32000 - Motorsports Design I

Credit Hours: 3.00. Introduction to the principles of design and analysis of vehicle subsystems and components within those subsystems. Vehicle subsystems are reviewed and evaluated for functionality, and reliability with emphasis on the utilization of analytical tools in design. Analytical methods developed in vehicle dynamics are utilized to support the understanding of forward and reverse engineering principles.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to solution of design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively. Credits: 3.00

MSPE 33000 - Systems Engineering For Motorsports

Credit Hours: 3.00. Systems engineering encompasses the engineering knowledge to specify, design, program and analyze the electrical systems of a motorsports vehicle. The course will explore those systems to provide the engineering foundation in instrumentation, data analysis, data reduction, and system programming. Project work will supplement the learning outcomes through direct engagement of designing and specifying a data system for a motorsports vehicle, manufacturing a motorsports vehicle sensor loom, and

programming the communication pathways between different vehicle electrical systems.

Learning Outcomes: 1. Understand the fundamentals of the data acquisition systems installation, operation, software, and maintenance, while appreciating the importance of data integrity 2. Understand the implications of design decisions when designing the data acquisition system or designing around the data acquisition system. 3. Understand the limitations and possibilities of the data acquisition system. 4. Utilize data acquisition analysis tools to properly import and display data signals. 5. Understanding on how to write math channels to interpret and analyze data. 6. Initial understanding of how recorded data represents vehicle and driver performance. 7. Utilize motorsports wiring tools to manufacture a motorsports sensor harness. 8. Understand the basics of digital car communication including the math associated with communicating digital signals throughout the vehicle. Credits: 3.00

MSPE 33001 - Data Acquisition For Motorsports I

Credit Hours: 2.00. This course introduces students to motorsports data acquisition systems and the associated hardware and software that are comprised therein. A hands-on lab component is included int he class where in students learn how to specify a motorsports data system, understand vehicle network communication and build a motorsport industry standard data acquisition wiring harness.

Credits: 2.00

MSPE 33100 - Data Acquisition For Motorsports II

Credit Hours: 3.00. This course explores the appliaction of vehicle dynamics principles to motorsport vehicles. Students will utilize engineering software tools to develop motorsport engineering worksbooks for vehicle performance analysis. Driver performance analysis and race strategy topics are introduced to provide the student with the full fundamentals of race engineering.

Credits: 3.00

MSPE 34000 - Dynamic Signals And Systems

Credit Hours: 3.00. Introduction to dynamic engineering systems and continuous-time and discrete-time signals, mechanical electromechanical components, linear system response, Fourier and Laplace Transforms. The course is designed to teach the student the basic concept for modeling the behavior of dynamic systems.

Credits: 3.00

MSPE 35000 - Computer Aided Design And Manufacturing

Credit Hours: 3.00. This course provides the basis for the computer-aided engineering and analysis skills needed in the Motorsports Industry. The ability to visualize and conceptualize a real part in the physical world and produce graphical representations of it in 2D and 3D in Solidworks or an equivalent is a primary objective. Further skills to be developed include the ability to produce large assemblies of such parts with appropriate tolerancing, free form surfacing, casting shapes and casting machining, 2D drawings for use in 3D sheet metal fabrication including shrink and stretch, use of 3D models to facilitate Finite Element Analysis, Conversation of CAD model to programming of CAM machining.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to problems involving the design and manufacturing of components and systems. 2. Design a system, component, or process to meet desired needs. 3. Identify, formulate, and solve engineering problems involving the design and manufacturing of components and systems. 4. Use the techniques, skill, and modern engineering tools necessary for engineering practice. Credits: 3.00

MSPE 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking,

problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in motorsports engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

MSPE 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

MSPE 41400 - Motorsports Design II

Credit Hours: 3.00. This is the culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project with the Motorsports Industry.

Learning Outcomes: 1. Apply knowledge of mathematics, science and engineering to the solution of complex and comprehensive design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs pertinent to the motorsports industry. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively in written reports and oral presentations. 7. Use the technique, skill, and modern engineering tools necessary for engineering practice in the motorsports industry. Credits: 3.00

MSPE 41700 - Motorsports Practicum II

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a race team in the motorsports industry. Students will be expected to show mastery of at least 12 of the 12 skills outlined in the Course Objectives.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team.

10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 42600 - Internal Combustion Engines

Credit Hours: 3.00. This course will cover fundamentals of hybrid electric and battery electric transportation systems with particular emphasis on high performance vehicles. It will cover powertrain configurations of Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV), and Battery Electric Vehicle (BEV). Component sizing and energy management topics will also be covered.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools needed for design and analysis of engines. 2. Apply current knowledge and adapt to emerging applications in engine development. 3. Conduct, analyze and interpret experiments and apply results to improve processes. 4. Function effectively on teams. 5. Identify, analyze and solve technical problems. 6. Communicate effectively. Credits: 3.00

MSPE 43100 - Race Engineering

Credit Hours: 3.00. Motorsports engineering knowledge obtained throughout the curriculum are brought together to create foundational knowledge in the discipline. Analytical tools in Excel or Matlab along with data analysis tools from Cosworth or Motec are utilized to guide the application of motorsports engineering principles to vehicle performance optimization. Race strategy topics are investigated to provide foundational knowledge beyond vehicle system.

Learning Outcomes: 1. Utilize Excel or Matlab to analyze vehicle systems and performance. 2. Utilize Cosworth Toolbox or Motec i2 software to analyze vehicle systems and performance. 3. Calculate fuel error and its impact on race strategy. 4. Understand tire degradation principles and its impact on race strategy. 5. Write technical reports to disseminate the technical information in a clear and concise manner. Credits: 3.00

MSPE 47200 - Vehicle Dynamics

Credit Hours: 3.00. Analytical and mathematical model development of the automotive and motorsports vehicles to understand how key vehicle parameters influence vehicle performance. Areas of focus include rectilinear motion, lateral motion, suspension kinematics, tire dynamics and drivetrain modeling.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools necessary for analysis of vehicle dynamics and design of vehicle systems. 2. Apply current knowledge and adapt to emerging applications appropriate to the topic of vehicle dynamics. 3. Conduct, analyze and interpret experiments and apply experimental results to improve processes. 4. Apply creativity in the design of systems, components or processes appropriate to program objectives. 5. Function effectively on teams. 6. Identify, analyze and solve technical problems. 7. Communicate effectively. Credits: 3.00

MSPE 48200 - Motorsports Aerodynamics

Credit Hours: 3.00. A focused introductory course into the study of aerodynamics principles as applied to automotive and motorsports vehicles. Broad range of topics introduce students to the complexity of fluid flow in and around the vehicle. Analytical methods including Computational Fluid Dynamics are utilized to emphasize key aerodynamics principles taught in the course.

Learning Outcomes: 1. Students will understand the basics of aerodynamic analysis and design as applied to motorsports vehicles. 2. Students will be able to apply Computational Fluid Dynamics modeling and analysis techniques to motorsports design. 3. Students will be able to integrate the various aspects of motorsports modeling and design. Credits: 3.00

MSPE 49000 - Motorsports Engineering Independent Study

Credit Hours: 1.00 to 3.00. This is an independent study course

for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.

Credits: 1.00 to 3.00

MSPE 49700 - Motorsports Design Project

Credit Hours: 3.00. This is an independent study version of the MSPE 41400 culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project within the Motorsports Industry. Permission of instructor required.

Credits: 3.00

MSPE 49900 - Motorsports Engineering Special Topics

Credit Hours: 1.00 to 3.00. This is a special topics course for students wishing to pursue advanced studies under the direction of a faculty advisor. Permission of instructor required.

Credits: 1.00 to 3.00

School of Nuclear Engineering

Overview

Nuclear engineering is firmly grounded in the understanding and application of modern physics. It has demonstrated vast potential for growth in power generation, medicine, industrial processes, plasmas, space technologies, and national defense. **Nuclear engineers** at Purdue contribute to such advanced technologies as fission and fusion power generators, new medical technologies and procedures, improved food safety, advanced materials processing, advanced imaging, and the safe treatment and disposal of spent nuclear fuel.
Indiana's first and only nuclear reactor has its home in Purdue University's Electrical Engineering Building. It headlines field trips for high-school juniors and seniors who participate in demonstrations and experiments. Students in the undergraduate program have an opportunity to work with the reactor in their courses.

For Graduate Information please see Nuclear Engineering Graduate Program Information .

Nuclear Engineering, BSNE

Nuclear Engineering Minor

NUCL 11000 - Introduction To Energy Engineering

Credit Hours: 1.00. This course, designed for first-semester freshmen, reviews and discusses the history of energy use by the world, the relation between energy usage and quality of life, the social impact of energy use, and the environmental constraints on energy usage. In particular, the role that engineering disciplines play in solving energy problems will be discussed. The full impact that the various energy alternatives have on economic and environmental issues will be reviewed in order to provide a rational basis for energy choices for the future.

Credits: 1.00

NUCL 12000 - Freshman Research Project

Credit Hours: 1.00. In this course, the student performs a small independent project in nuclear engineering under direct faculty supervision.

Credits: 1.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized.

Credits: 2.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

NUCL 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility.

Credits: 0.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

NUCL 30500 - Nuclear Engineering Undergraduate Laboratory II

Credit Hours: 2.00. Continuation of NUCL 20500 . Experiments with scintillation detectors, multichannel analyzers, neutron detectors, the subcritical pile, and the reactor will be performed. Measurements will be made to demonstrate neutron activation analysis techniques, neutron slowing down, neutron flux distributions, and the effects of control rods on neutron fluxes.

Credits: 2.00

NUCL 31000 - Introduction To Neutron Physics

Credit Hours: 3.00. Development of diffusion theory for neutrons. Neutron interactions and development of one-group neutron diffusion theory with point, plane, and fission sources. Application to one- and two-region reactors. Introduction to buckling, multiplication constants, critical size, neutron slowing down, and resonance capture. Applications using two-group theory.

Credits: 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design.

Credits: 3.00

NUCL 32500 - Nuclear Materials Laboratory

Credit Hours: 3.00. Nuclear materials laboratory that evaluates various characterization techniques and technologies, tensile properties, hardness, fracture toughness, microstructures, X-ray diffraction, electron microscopy, mechanical properties of thin-films, NDE techniques and data acquisition in materials characterization techniques.

Learning Outcomes: 1. Understanding of what materials are, and how they perform and fail. 2. Understand the conceptual tools dealing with materials phenomena. 3. Be able to communicate with professionals about materials problems. 4. Be able to address the limitations of materials in design, and improve them.

Credits: 3.00

NUCL 35000 - Nuclear Thermal-Hydraulics I

Credit Hours: 3.00. The first of an integrated two-course sequence introducing the concepts of nuclear reactor thermal transport and associated hydraulics with applications to design and safety. Macroscopic balances, dimensional analysis, and flow measurement. Fluid behavior, momentum transfer, and applications to reactor systems and design.

Credits: 3.00

NUCL 35100 - Nuclear Thermal-Hydraulics II

Credit Hours: 3.00. Emphasis is given to the fluid transport of heat from reactor fuel elements. Heat transfer in fluids, analogies, and applications to reactor coolant channel analysis. Two-phase flow and convective boiling. Radiative heat transfer. Applications to safety analysis and reactor design.

Credits: 3.00

NUCL 35500 - Nuclear Thermohydraulics Laboratory

Credit Hours: 3.00. Laboratory course corresponding to NUCL 35000 and NUCL 35100 . Various fluid flow and heat transfer phenomena applied to nuclear reactor systems and design.

Credits: 3.00

NUCL 38199 - Professional Practice Co-Op I

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 38299 - Professional Practice Co-Op II

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 38399 - Professional Practice Co-Op III

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Professional Practice students only. Permission of department required.

Credits: 0.00

NUCL 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and

teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nuclear engineering. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1.Apply knowledge to identifying and solving problems in the professional context. 2.Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3.Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUCL 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800 .

Credits: 0.00

NUCL 40200 - Engineering Of Nuclear Power Systems

Credit Hours: 3.00. Principles and practice of power plant systems with design applications; thermal cycles, heat transport, mechanical designs, control, safety analysis, shielding analysis, fuel cycles; resources, optimization, options, waste management. Fusion and alternate energy sources.

Credits: 3.00

NUCL 41000 - Introduction To Reactor Theory And Applications

Credit Hours: 3.00. Intermediate treatment of reactor theory and its relevance to routine design engineering calculations, including introduction to transport theory, criticality evaluation, multi-group theory, isotopic depletion, and concludes with short overview of multi-level reactor design calculations, critical experiments, and treatment of neutronic uncertainties. List of Topics: Derivation of Boltzmann transport equation, and its reduction to steady state and time dependent diffusion equation. Introduction to multi-group theory, and evaluation of group parameters in both wide and narrow resonance approximations. Introduction to homogenization theory, and evaluation of lattice parameters. Evaluation of criticality condition for bare and reflected reactor geometries. Development of discretization techniques for the time-dependent multi-group diffusion theory equation. Reactor kinetics, reactivity coefficients and reactivity balance equation. Flowchart of multi-level reactor design calculations. Introduction to critical experiments and startup reactor physics test. Sources and treatment of uncertainties in reactor calculations.

Learning Outcomes: 1. Develop an understanding of reactor physics value for engineering design calculations, and to learn how it is applied to make engineering design decision regarding material choice, composition, type, and operating conditions to sustain and control chain reactor over reactor operating horizon. 2. Learn how to develop a computer code to solve a reactor physics problem. Credits: 3.00

NUCL 42001 - Radiation Interaction With Materials And Applications

Credit Hours: 3.00. Fundamental of radiation interaction with materials and applications, types of radiation and radiation sources, physical mechanisms of radiation interaction with solids, radiation damage, ion mixing, applications in nuclear fission and fusion reactors, applications in materials synthesis.

Learning Outcomes: 1. Learn the types and sources of radiation. 2. Understand the physical mechanisms of radiation interaction with materials and model these interactions quantitatively. 3. Understand and model the phenomenon of radiation damage to bulk, surfaces and interfaces. 4. Relate the concepts of radiation damage to neutron interaction with solids in both fission and fusion reactors. 5. Understand the technological applications of radiation interaction with materials. Credits: 3.00

NUCL 44900 - Senior Design Proposal

Credit Hours: 1.00. The course outcome is the writing and presentation of a proposal for the senior design project, NUCL 45000 . The tasks include the selection of project design topics (various nuclear engineering components and systems designs), the selection of teams, introduction to design process, team management, communication, and engineering ethics, literature and patents survey, initiation of design activities and familiarization with design tools (for example software).

Credits: 1.00

NUCL 45000 - Design In Nuclear Engineering

Credit Hours: 3.00. Application of the design process to the project design topics identified in NUCL 44900 . The design process usually includes, but not limited to, mathematical modeling in design, neutronic, thermal-hydraulics and safety studies, risk assessment, economics, policy and regulation, environmental impact.

Credits: 3.00

NUCL 46000 - Introduction To Controlled Thermonuclear Fusion

Credit Hours: 3.00. Energy resources and the potential role of nuclear fusion. Ignition and breakeven conditions for fusion power plants. Particle and energy confinement in linear and toroidal magnetic fields. Review of magnetic and inertial confinement experiments and conceptual reactor configurations.

Credits: 3.00

NUCL 47000 - Fuel Cell Engineering

Credit Hours: 3.00. The principles of electromechanical energy conversion for a single fuel cell, fuel cell stack, process engineering in the fuel and oxidizer supply systems. Principles, components, operation and performance for alkaline, phosphoric acid, solid polymer, molten carbonate and solid oxide fuel cells. Provides broad insight into science, technology, system design, and safety concerns in design and operation of fuel cells.

Credits: 3.00

NUCL 48000 - Nuclear Engineering Technical Communications

Credit Hours: 3.00. This course makes students aware of the importance of communication skills-written, oral, graphical and interpersonal-in a successful nuclear engineering career and gives them the opportunity to develop and practice those skills. Students will learn how to access, evaluate, use and synthesize relevant technical literature. In addition, through the writing and speaking assignments, students develop team work skills, gain an understanding of professional and ethical responsibilities of engineering, learn to write a simple propose and learn about selected contemporary global economic, social and political issues, particularly with respect to nuclear topics.

Learning Outcomes: 1. Ability to communicate effectively. 2. The ability to understand the impact of engineering solutions in a global and societal context. 3. A knowledge of contemporary issues, particularly with respect to nuclear topics. 4. An understanding of professional and ethical responsibility. Credits: 3.00

NUCL 49000 - Independent Study In Nuclear Engineering

Credit Hours: 1.00 to 6.00. Projects or research of contemporary importance or special interest. Interested students seek a faculty advisor in their area of special interest and together prepare a brief description of the work to be undertaken. May be taken for 1-6 credits in Fall, Spring, or Summer. May be repeated as many times as desired, but only 6 credits may be counted for the technical elective requirement. Permission of instructor required.

Learning Outcomes: 1. Learning objectives vary based on varying coursework. Credits:

1.00 to 6.00

NUCL 49700 - Selected Topics In Nuclear Engineering

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Learning Outcomes: 1. Learning objectives will vary with coursework. Credits: 1.00 to 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies.

Credits: 0.00

Exploratory Studies

Department of Exploratory Studies

Explorer Ambassadors

Who We Are

https://www.purdue.edu/exploratory/

Exploratory Studies is a program that helps students discover the major that best reflects their interests and ambitions. Students are given the space and time to explore, balanced with professional guidance intended to encourage students' proactive career research and reflection. Some key features of our program include the following:

- Exploring students will take EDPS 10500, Academic and Career Planning, in their first semester. This is a full semester, 3-credit, graded course that allows students to "try on" and evaluate many majors and careers before having to commit to one.
- Each student is assigned an experienced academic advisor who is familiar with all Purdue schools and degree programs. Our advisor to student ratio is kept at 1:150, which allows advisors time to really get to know their advisees!
- A unique course schedule is created for students specifically tailored to their interests and ambitions. We strive for a balance of University Core requirements and available major courses.
- Students can remain in Exploratory Studies for up to four semesters (two Fall-Spring school years) but can declare their major any time during that period!

Our **vision** for Exploratory Studies to "be an exemplary advising program in the nation for exploratory students" has remained unchanged since its inception and is recognized by many as a model program for how to successfully support undecided students through their journey.

Our History

In April 1995, the Purdue University Senate approved a three-year pilot program for beginning, exploratory, undecided freshmen students. This pilot, called the Undergraduate Studies Program (USP), was modeled after a program at The Pennsylvania State University. In August 1996, 212 students started with USP. In February 1999, the Purdue University Senate approved USP as a permanent program for entering freshmen students, effective August 1999.

In June 2001, the University Division of the Office of the Dean of Students was merged with USP, adding reentry, readmit, and change of degree objective continuing students to the population served by USP.

In 2013, USP changed its name to Exploratory Studies.

Our Mission

The mission of Exploratory Studies at Purdue University is to assist and empower students to:

- IDENTIFY strengths, interests, and values
- EXPLORE academic and career possibilities
- REFLECT on the intersection of self-discovery and future career goals

We value:

- Affirming the uniqueness of individual students
- Relationship-building and open conversations
- Curiosity and open-mindedness
- Fostering a growth mindset
- Coaching and mentoring

• Diversity in our community

Minimum Admission Requirements

- **Beginners:** Admissions High School Course Requirements
- **Transfers: (for undecided students)**

Purdue admits to individual majors. Transfer students must meet Purdue's overall transfer criteria, as well as any major-specific requirements. Before you apply, check the requirements for transfer to Exploratory Studies: https://www.purdue.edu/exploratory/prospective/transfer-students.php

Minimum GPA: 2.7

Additional Requirements: At the time of enrollment, CANNOT have more than 30 graded hours (or the equivalent quarter or trimester hours) of courses taken in college or 45 graded hours of college courses and concurrent/dual high school credit combined. Required to enroll in EDPS 10500 during first semester on campus.

CODO Requirements

To be eligible to CODO into Exploratory Studies, a student must have no more than 83 completed college credits.

- Credit counted toward completed college credits includes the following: credit earned by exam, transfer credit, credit earned in P/NP courses, credit for courses in which students earned Fs, and credit for currently enrolled courses.
- Students bringing into Exploratory Studies 77-83 completed college credits should be able to complete the requirements necessary to CODO to a degree-granting program at the completion of one semester in Exploratory Studies.

NOTE: All students who CODO into Exploratory Studies and maintain a freshman classification (going into the 2nd term) MUST take EDPS 10500 "Academic & Career Planning" in Exploratory Studies:
https://www.purdue.edu/exploratory/prospective/edps-10500.php

College of Health and Human Sciences

Health Main Photo

Overview

In the College of Health and Human Sciences (HHS), we seek to improve the quality of human lives by generating groundbreaking knowledge and educating excellent practitioners to help us all invent our best lives. This creative and dynamic interdisciplinary college is uniquely positioned to solve some of the most pressing challenges of our time. Our people, academic programs, research and engagement efforts focus on developmental health and wellness, healthy lifestyles and vital longevity, and sustainable and thriving organizations and communities. We see tremendous opportunity for HHS to make pioneering discoveries in areas such as digital health and wellness, optimal nutrition and obesity prevention, and vital longevity and end-of-life care.
HHS prepares students for dynamic careers in the ever-expanding fields of health and human sciences. You'll be amazed by the wide-range of career options HHS majors can offer. Just click on the links below and see for yourself!

- Health and Kinesiology
- Health Sciences
- Hospitality and Tourism Management
- Human Development and Family Sciences
- Nursing
- Nutrition Science
- Psychological Sciences
- Public Health
- Speech, Language, and Hearing Sciences

Today's competitive workplace demands more than just classroom learning. HHS offers students experiences beyond the classroom, such as undergraduate research, study abroad, real world healthcare training (clinicals) and internships.

HHS Pass / Not-Pass Policy

Students enrolled in the College of Health & Human Sciences may take courses under the Pass / Not-Pass option subject to the following regulations:

1. A maximum of 24 credits of elective courses under the Pass / Not-pass grading option can be used toward graduation requirements
2. A student may elect the Pass / Not-Pass option for elective courses only, unless a department / academic unit requires that a specific departmental course/s be taken Pass / Not-Pass.
3. The option may not be adopted for any courses used to fulfill any HHS minor requirements.
4. In addition to elective courses, students may elect to take University Core Curriculum (UCC) courses Pass / Not-Pass; however, some major Plans of Study require courses that also fulfill UCC foundational outcomes.In such cases, students may not elect the Pass / Not-Pass option.
1. If the Pass / Not-Pass option is exercised for a UCC course, students must pass the course in which the foundational outcome is addressed based on Purdue's approved grading scale (including a grade of P). Passing the course indicates that the student has satisfactorily met the foundational outcome **(Provost Curriculum FAQ).**
5. If a student elects to take a course P/NP, the student will indicate which course is taken P/NP at the time the student registers. Standard registration procedures, such as the rules governing drop/add, withdrawal from courses, etc., will be followed. The deadlines for when the grade mode of a course can be modified can be found on the drop/add/modify calendar.
6. The Pass / Not-Pass option cannot be elected for a course that already appears on a student's academic record, with the exception of when a student repeats a course previously taken with the Pass / Not-Pass option.
7. A student who passes a course, which is required by an HHS department / academic unit, under the option, while enrolled in another school or college at Purdue University, and switches / CODOs into an HHS program, will be required to complete the course for a grade. With departmental / academic unit approval, switch/CODO students could use a P/NP course to satisfy a program requirement.

PROCEDURAL NOTE:

Regarding "G" of the proposed policy: until the University Educational Policy and Curriculum (EPC) Committee amends the current repeat regulation, the Registrar will permit exceptions to repeat with a grade if previously taken P/N in another program with an e-mail from the advisor indicating it is a degree requirement.

Admissions

Successful completion of all Teacher Education Program (TEP) Requirements, including a minimum 2.5 Teacher Education Overall GPA are required to progress beyond each TEP Milestone. All Professional Education courses,

including Learner Specialty Concentration/Pathway courses, must be completed with no grade lower than a "C" and no "I" (Incompletes). Degree requirements must be fulfilled to qualify for TEP completion. A minimum passing score on all required licensure examinations and completion of licensure requirements are necessary to be eligible for an Indiana Instructional Educator License.
[[permalink=12524|new:{'title':1}]][[/permalink]]

- Licensure Information
- Technology Integration- Blended and Online Teaching (Ti-BOT)

Summary of Teacher Education Milestones

Admission to Teacher Education Program

Admission to the Teacher Education Program (TEP) is directly granted upon acceptance and enrollment at Purdue University, West Lafayette. The Teacher Education Program is aligned with national and state accreditation and licensure standards, regulations, and rules; university guidelines; and prescribed Plan(s) of Study (POS) as defined by Admission Year or as otherwise authorized by the Office of Teacher Education and Licensure (OTEL).

TEP Program Progression by Milestone (Milestones A-F)

Successful TEP progression and completion are achieved by attaining each TEP Milestone at or above Standard as outlined within the 2025-2026 Program Requirements and Milestones for each individual content area/major and as referenced and assigned within the 2025-2026 University Catalog, 2025-2026 Teacher Education Program Directory, the Brightspace course 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements, Plan(s) of Study (POS), and course syllabi.

Required Brightspace Course

Every incoming 2025-2026 Teacher Education (TE) student will be enrolled in the REQUIRED 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements Brightspace course. This course serves as the official/primary manner for which the Office of Teacher Education and Licensure (OTEL) will communicate and monitor cohort-specific requirements, milestones, timelines, notifications, tutorials, actions, student engagement, etc. for each TE student. Course commitment is continuous beginning upon arrival to the university and concludes when Milestones A-F are attained.

Course Substitutions

Course substitutions must fulfill degree requirements, associated Teacher Education Program (TEP) key and/or common assessments, and licensure standards/requirements. Prior approval by the Office of Teacher Education and Licensure is required for all course substitutions.

Milestone A: Methods Qualified

Milestone A - Teacher Education Program Progression Status

- Exceeds Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone A Criteria as defined by Content Area/Admission

Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.

- Milestone A Decision Deferred to Milestone B: Reserved for transfer students. Additional time is necessary to acquire an adequate number of measurable Milestone outcomes.

Milestone A - Review Schedule

- Conducted - Close of Spring Semester 2026
- Decision/Notification - Early Fall Semester 2026

1. 2.50/4.00 Overall GPA (at time of Milestone A review)
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone A review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete three (3) Ti-BOT badges (at the time of Milestone A review).
7. No unresolved Professional Dispositions issues/concerns.
8. Adhere to the Criminal Background Check Policy.
9. Complete TEP Brightspace Assignments, including but not limited to attendance at the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
10. Attend the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
11. Submit the Teacher Education Program Agreement (TEPA).
12. Identify via the Teacher Education Program Agreement (TEPA) one of four chosen Learner Specialty Pathways. Learner Specialty Concentration/Pathway requirements are specific to individual content area/major.

Milestone B: Student Teaching/ Placement

Milestone B - Student Teaching Placement

- Exceeds Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone B Criteria as defined by Content Area/Admission Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.
- Milestone B Decision Deferred to Milestone C: Reserved for transfer students. Additional time is necessary to acquire an adequate number of

measurable Milestone outcomes.

Milestone B - Review Schedule

- Conducted - Close of Fall Semester 2027
- Decision/Notification - Early Spring Semester 2028

1. 2.50/4.00 Overall GPA (at time of Milestone B review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone B review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete five (5) total Ti-BOT badges (at the time of Milestone B review).
7. No unresolved Professional Dispositions issues/concerns.
8. Complete TEP Brightspace Assignments.
9. Attend the mandatory Student Teaching Clinical Acceptance Process (CAP) Workshop provided by the Office of Clinical Practice (OCP) AND submit your CAP Application as directed by OCP.

- Expanded Student Teaching practicums and full-time Student Teaching occur over two consecutive semesters.
- Verify from the CAP Application projected Student Teaching semester/year.

Milestone C: Student Teaching Authorization

Milestone C - Student Teaching Authorization

- Exceeds Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone C Criteria as defined by Content Area/Admission Year.

Milestone C Criteria must be attained At Standard before the Office of Teacher Education and Licensure (OTEL) will authorize enrollment reinstatement for Student Teaching.

Milestone C - Review Schedule

- Conducted - Close of Fall Semester 2028
- Decision/Notification - Early Spring Semester 2029

1. 2.50/4.00 Overall GPA (at time of Milestone C review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional

requirements in the Purdue University Catalog).

4. *Be in Good Standing with the University (at time of Milestone C review).
5. **Successful completion and target met on Foundations Portfolio (submission and target met on Common Lesson Plan in Semester 7).
6. ***Successfully complete ten (10) total Ti-BOT badges (at the time of Milestone C review).
7. Successfully complete all Professional Education (including Foundation and Methods), Learner Specialty Pathway, and degree courses prior to student teaching (Semester Eight).
8. Attempt all required content test(s) before the Student Teaching semester per the timeline below; Test Requirements (ets.org)

Content Test Attempts for Major

For Fall Student Teaching: Official Score Reports due to OTEL no later than July 1.

For Spring Student Teaching: Official Score Reports due to OTEL no later than December 1.

Content Test Attempts for Pathways/Concentrations (High Ability and English Language Learning)

For Fall Student Teaching: Test Registrations received in OTEL by May 15th confirming a test date scheduled no later than June 30th.

For Spring Student Teaching: Test Registrations received in OTEL by October 15th confirming a test date scheduled no later January 31st.

Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts; If completing a Learner Specialty Pathway that leads to licensure (High Ability or English Language Learners), the associated content exam must be attempted prior to the Student Teaching (Semester 8).

9. No unresolved Professional Dispositions issues/concerns.
10. Adhere to the Criminal Background Check Policy.

Milestone D: Teacher Education Program Completion

Milestone D - Teacher Education Program Completion

- Exceeds Standard: *Meets Milestone D Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone D Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone D Criteria as defined by Content Area/Admission Year.*

Milestone D - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-C met.
2. 2.50/4.00 Overall GPA (at time of Milestone D review).
3. Professional Education (including

Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".

4. Verify degree is conferred on Transcript/Academic Record.
5. *Be in Good Standing with the University (at time of Milestone D review).
6. No unresolved Professional Dispositions issues/concerns.
7. ****Successful completion and target met on all Common Assessments (submission and target met on CPAST and edTPA in Semester 8).

Milestone E: Licensure Eligible

Successful completion of the Purdue University Agricultural Education Program, Agricultural Education, BS, and the State of Indiana licensure requirements for an Indiana REPA 3 Initial Instructional License in Career and Technical Education (CTE): Agriculture (5-12) and *Blended and Online Teaching (5-12).

Milestone E - Licensure Eligible

- Exceeds Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone E Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone E - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-D met.
2. Resolve any holds on academic records (if applicable).
3. Successfully complete the required pedagogy test; Test Requirements (ets.org). Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
4. Successfully complete all required content test(s) Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
5. For all Career and Technical Education (CTE) majors ONLY- Verify that the required number of clock hours has been completed and received by your advisor. Students must complete 4,000 clock hours of successful employment in the appropriate CTE area, or 1,500 clock hours of supervised work in the appropriate CTE area under an approved Teacher Education Program or an equivalent combination.

Milestone F: Licensure Action(s)

Milestone F - Licensure Actions

- Exceeds Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone F Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone F - Review Schedule

- Conducted - Upon Licensure Application - Summer 2029
- Decision/Notification - Upon Formal Action

1. Milestones A-E met.
2. Complete and upload with your Indiana License Application CPR/Heimlich Maneuver/AED certification or card (must include a hands-on, face-to-face skills demonstration).
3. Complete and upload with your Indiana License Application documentation of Suicide Prevention certification (training must be at least one hour).
4. Submit Indiana License Application online via Licensing Verification and Information System (LVIS) at https://license.doe.in.gov/.
5. Allow three weeks (given all licensure criteria are met) for Purdue University to certify and the Indiana Department of Education (IDOE) to grant the Indiana License.
6. After receipt of an Indiana License, apply for out-of-state licensure (if desired).

*For purposes of reports and communications to other institutions or agencies, and in the absence of any further qualifications of the term, a student shall be considered in Good Standing unless the student has been dismissed, suspended, or dropped from the University and not readmitted. A student is considered in Good Academic Standing if both a student's semester and cumulative GPA are above a 2.00/4.00.

**Foundation Courses linked with the Foundations Portfolio Common Assessments include EDCI 20002, EDCI 28500, EDCI 35000, EDPS 20001, EDPS 23500, EDPS 24800, EDPS 32700, EDPS 36201, EDPS 43010, and EDST 20010. These may be subject to change.

***The Blended and Online Teaching (5-12) License is required for students on Admission Year Fall 2024-Spring 2025. The Blended and Online Teaching (Ti-BOT) License requirements are embedded into coursework for all Teacher Education Undergraduate majors. Some exceptions apply.

****Common Assessments include Foundations Portfolio, Field Experience Dispositions, CPAST, edTPA, Common Lesson Plan, and Licensure. Common Assessments for Early Childhood Education and Special Needs align with the National Association for the Education of Young Children (NAEYC).

Beginning July 1, 2025 - According to the Indiana State Board of Education, students seeking an Initial Indiana License in a content area involving literacy instruction, including special education, must obtain a licensure addition in Early Literacy (P-5), as required under IC 20-28-5-19.7.

Licensure Information

The Office of Teacher Education and Licensure (OTEL) is the formal liaison with the Indiana Department of Education and serves as the official repository for Purdue West Lafayette Teacher Education Program Progression and Licensure actions. OTEL maintains and permanently retains a *Teacher Education Program and Licensure Credential Portfolio* for each current and former Purdue University Teacher Education Candidate/Student. OTEL provides reliable, career-long guidance on Indiana Teacher Education and Licensure Standards, Rules, and

Procedures. Indiana Licensing Rules and Regulations are subject to change by the Indiana State Board of Education, Indiana Department of Education (IDOE), and/or the Indiana General Assembly.

Advising

Academic advising is essential to student success at Purdue University. The central goal for the academic advising relationship is to assist students in the purposeful creation of an educational plan that includes curricular, co-curricular and extracurricular goals, objectives, and activities.
For information about academic advising and what you can expect, click here.
Click the following link for a listing of HHS academic advisors: HHS Student Services Directory

Contact Information

HHS student services staff members are located in offices in the Hampton, Lambert, Johnson, Marriott, and Young Halls. Our central office location is in Young Hall, 6th floor. Please feel free to stop by and schedule an appointment, request information and a tour, or just ask a question.

HHS 10100 - Introduction To Health And Human Sciences

Credit Hours: 1.00. This course is intended to introduce the various programs, majors and academic units within the College of Health and Human Sciences (HHS). In addition to providing an overview of each academic unit and the majors contained within, the course content is also structured to introduce students to career pathways within each respective unit.

Learning Outcomes: 1. Describe the majors and academic units within the College of Health and Human Sciences, and their various specializations. 2. Identify the various career paths, professions, and post-baccalaureate educational opportunities available to students in each major. 3. Describe resources available to students to help establish a strong foundation for success at Purdue. Credits: 1.00

HHS 30000 - Peer Mentoring In The Health And Human Sciences

Credit Hours: 1.00. This course will explore mentoring through training, practice, and reflection. Sophomores, juniors, and seniors in the College of Health and Human Sciences must be selected as HHS mentors prior to taking this course. Student mentors will actively participate in peer mentoring in one-on-one and group settings, use knowledge and skills gained in training and reflect on their experiences. Permission of instructor required.

Learning Outcomes: 1. Use skills and knowledge developed through training, course participation, and their own experiences to mentor first-year students for college success. 2. Recognize and reflect on how mentoring knowledge, relationships and skills align with and impact their future personal and professional goals. Credits: 1.00

HHS 30100 - Peer Mentoring Leadership In The Health And Human Sciences

Credit Hours: 2.00. This course will explore mentoring and leadership through training, practice, and reflection. Juniors and seniors in the College of Health and Human Sciences must be selected as HHS Core Leadership Team mentors prior to taking this course. Student mentors will actively participate in peer mentoring in one-on-one and group settings, develop activities for their peers, use knowledge and skills gained in training, and reflect on their experiences. Permission of instructor required.

Learning Outcomes: 1. Use skills and knowledge developed through training, course participation, and their own experiences to mentor 1 first-year student for college success and 5-8 undergraduate peer mentors for mentoring success. 2. Plan, lead, and execute group mentor/mentee engagement activities. 3. Recognize and reflect on how mentoring knowledge, relationships and skills align with and impact their future personal and professional goals. Credits: 2.00

HHS 40000 - Intercultural Learning In Health And Human Sciences - Lived Experiences

Credit Hours: 1.00 to 6.00. This course focuses on intercultural learning in health and human sciences through direct experiences in a foreign country, whose culture is unique as a whole yet diverse across its different regions. Students will be guided in cognitive and affective learning through observing the destination's culture and society and interacting with its people. By direct exposure to the local customs, health conditions, history, human relations, lifestyle, and religion as they travel across the foreign destination, students are expected to develop a deeper appreciation and empathy for cultural values and traditions that are different from their own. The course will emphasize the students' understanding of how individuals and communities can benefit from learning about others in improving their quality of life. Permission of instructor required.

Learning Outcomes: 1. Report an increase in their intercultural openness and willingness to interact with people who are culturally different from themselves through daily program activities. 2. Describe their own growing cultural self-awareness and report on cultural norms that shape their identity and biases. 3. Demonstrate curiosity about other cultures in relation to health conditions and human relations and begin to describe deeper interest in learning about additional cultures. 4. Exhibit an appreciation of a sense of place defined by cultural values, traditions, customs, and history that are different from their own through hands-on and interactive activities in the settings of health and human sciences. 5. Discover the impacts of political, economic, and environmental factors on the physical and subjective well-being of the local people as well as their overall quality of life. 6. Identify and explain the key elements of interdependence required for the co-existence and human relations among peoples of different cultural backgrounds. 7. Identify how biases, stereotypes, and perceptions are formed with regard to other cultural groups. 8. Demonstrate self-confidence, travel-related skills, and a deeper appreciation for the increasingly interconnected world of many cultures. Credits: 1.00 to 6.00

Department of Health and Kinesiology

Health & Kinesiology Overview

Purdue University's Department of Health and Kinesiology (HK) confronts issues related to health through research, student learning and community engagement that focuses on human movement, sports performance and management, exercise and fitness, and disease prevention. Utilizing a multidiscipline, team approach, Health and Kinesiology is a leader in faculty-led, student-centered research.

We are shaping the future by preparing the next generation - HK students - to help others develop and sustain a healthy and active lifestyle. From physical activity and health professionals to researchers and policymakers, HK graduates are tackling global health concerns across the lifespan. We invite you to explore our website to learn more about HK's degree options, hands-on learning, facilities, and outstanding faculty.

Graduate Information

For Graduate Information please see Health and Kinesiology Graduate Program Information .

Kinesiology, BS

HK 10000 - Foundations Of Kinesiology

Credit Hours: 3.00. This course will provide an introduction to the physical and behavioral sciences underlying kinesiology, the study of human movement. The course will cover foundational concepts in exercise physiology, biomechanics, motor behavior, sport and exercise psychology, and sociology and history of physical activity. The course will take an interdisciplinary perspective, exploring both key concepts in each of these sub-areas of kinesiology, and how they are integrated to understand problems in human movement, exercise, physical activity, sport, and healthy lifestyles.

Learning Outcomes: 1. Explain basic concepts in exercise physiology, biomechanics, motor behavior, sport and exercise psychology, and sociology and history of physical activity. 2. Apply and integrate concepts from the sub-disciplines of kinesiology to better understand human behavior. Credits: 3.00

HK 13500 - Introduction To Health And Kinesiology

Credit Hours: 1.00. Overviews the disciplines of health and kinesiology. Students explore skills and academic interests in theses areas. Describes career opportunities and options for graduate study. Provides strategies for professional and portfolio development. Students complete five hours of community service per semester. Permission of instructor required.

Credits: 1.00

HK 21000 - History And Philosophy Of Physical Education

Credit Hours: 2.00. Introduction to the history and philosophy of physical education to prospective teachers. Emphasis is placed on the impact of societal history on physical education and the role of philosophic thinking in curricular activities. For majors and minors only.

Credits: 2.00

HK 21300 - Clinical Field Experience In Health And Fitness

Credit Hours: 0.00 to 3.00. This course is a coordinated clinical/professional experience designed to expose students to various positions within the wellness community and how clinical interactions are embedded within fitness centers. In addition to weekly in-person class meetings, students will observe and practice professional and foundational skills at different clinical sites. Professional communication, interdisciplinary interactions, and self-reflection are key skills developed in this practicum.

Learning Outcomes: 1. Describe effective and critically assess client-provider interactions, including professionalism in physical presentation and verbal/written communication. 2. Demonstrate the following personal/professional competencies needed in future clinical roles: communication skills, teamwork, customer service, leadership, independence, and initiative. 3. Professionally carry out all expected duties/responsibilities and identify individual strengths and areas for improved growth. 4. Develop a personalized health, fitness, and wellness philosophy, based on interactions with individual clients. Credits: 0.00 to 3.00

HK 22200 - Foundations For The Health And Fitness Professional

Credit Hours: 3.00. Designed to introduce the emerging Health and Fitness professional to current trends in health and physical activity and provide effective hands-on methodology for implementation of physical activity and exercise in different settings. Students will be able to identify the role of a clinician, coach, trainer, etc. Students will obtain skills in client consultation, program design and strategies for implementing programs to the general population. Students will also be introduced to the skills and knowledge required for working with clinical populations. This course is designed to help students prepare for future clinical practice and certification.

Learning Outcomes: 1. Review current national health and physical activity status, guidelines, and implications. 2. Learn basic health screenings and fitness assessments. 3. Discover effective interaction and consultation skills with patients/clients in different settings. 4. Establish a knowledge base for basic cardiorespiratory fitness and muscular conditioning exercise prescription. 5. Assess, instruct, evaluate, and apply various exercise techniques. 6. Develop comprehensive exercise programs for general population and begin developing a working framework to modify

exercise programs for clinical population. 7. Establish and practice basic instruction /coaching skills to implement as a clinician. 8. Obtain knowledge and skills related to methodologies and practices for alter professional application. Credits: 3.00

HK 25300 - Principles Of Motor Development

Credit Hours: 3.00. This course provides an introduction to motor development from a life-span perspective. Students will learn how infants develop from mainly reflexive beings into children and adults that are capable of interacting with the world in a goal-directed manner. This course specifically examines how changes in physical growth, aging, and maturation of the central nervous system influence motor performance. Finally, the decline of motor skills associated with advanced age is discussed.

Learning Outcomes: 1. Students will be able to describe how motor skills develop in children and decline in older adults. 2. Students will be able to apply the principles of motor development to clinical, education, and sport sciences settings. Credits: 3.00

HK 25800 - Foundations Of Motor Skill Learning

Credit Hours: 3.00. Concepts and principles of motor skill learning, with emphasis on the acquisition and retention of gross movement and sport skills.

Credits: 3.00

HK 26300 - Biomechanical Foundations Of Motor Skills

Credit Hours: 3.00. Fundamental anatomical and mechanical concepts and procedures for analyzing motor skills, with particular reference to sport, dance, and aquatic activities.

Learning Outcomes: 1. Describe motion with mechanical and anatomical terminology. 2. Quantify linear and angular characteristics of motion. 3. Describe and quantify the cause and effect relationship between force and motion. 4. Collect, analyze and interpret biomechanical measures of human movement. Credits: 3.00

HK 26400 - Principles Of Motor Learning, Development, And Biomechanics

Credit Hours: 3.00. This course surveys the fundamental processes and variables related to motor development, motor learning, and biomechanics. Students will be exposed to concepts relevant to teaching motor skills and critical issues to increase knowledge of human movement.

Learning Outcomes: 1. Describe motion with mechanical and anatomical terminology. 2. Describe the linear and angular characteristics of motion. 3. Describe the relationship between force and motion. 4. Define terms of motor control. 5. Define the optimal conditions for learning new skills. 6. Describe how factors related to the individual, task, and environment affect the learning of skills movement. 7. Define terms of development, growth, and maturation. 8. Describe reflexes and motor milestones. 9. Describe the development of body control, reaching and locomotion. Credits: 3.00

HK 28500 - Fieldwork In Athletic Training - Collegiate

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an intercollegiate setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include history of athletic training, governance, and professional foundation and ethics.

Learning Outcomes: 1. Define athletic training and the athletic training profession. 2. Know the location of athletic facilities, athletic training supplies and equipment. 3. Demonstrate proper opening and closing procedures of the Purdue athletic training rooms. 4. Properly perform cleaning and maintenance of facility athletic training room equipment. 5. Learn proper inventory and equipment check-out procedures. 6. Articulate the history of the profession and important milestones and prominent individuals who shaped the profession. 7. Describe the governance of the profession and the

advantages and disadvantages associated with the current governance structure. Credits: 1.00

HK 28600 - Fieldwork In Athletic Training - Secondary School

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in secondary school setting. Under supervision of the certified athletic trainer, students will observe facility operation and duties of the athletic trainer. Topics of instruction include basics of taping and wrapping, selection and fitting of protective equipment, and principles of risk management.

Learning Outcomes: 1. Discuss the differences in wound care techniques. 2. Select the appropriate technique to dress and care for a wound. 3. Select and apply basic taping and wrapping procedures commonly used in athletic training on a simulated patient. 4. Discuss the legal principles of equipment liability. 5. Select and apply protective equipment commonly used by patients in contact-collision sports. Credits: 1.00

HK 28700 - Fieldwork In Athletic Training - Clinic/Industry

Credit Hours: 1.00. Students will learn about and explore the athletic training profession through classroom and experiential learning in an emerging athletic training setting. Under supervision of the certified athletic trainer, students will observe facility operations and duties of the athletic trainer. Topics of instruction include basics of wound care, setup and operation of therapeutic modalities, and basic rehabilitation principles.

Learning Outcomes: 1. Define risk management and discuss how it applies to athletic training settings. 2. Inventory an athletic training facility and appraise the risk management strategies used. 3. State the differences between different methods of stretching. 4. Demonstrate proper flexibility and stretching techniques. 5. Match the appropriate stretching technique to a patient condition or injury. 6. Discuss correct application techniques for basic cryotherapy and thermotherapy modalities. 7. Administer a simulated treatment for a patient using the appropriate modality. Credits: 1.00

HK 30200 - Applied Clinical Anatomy

Credit Hours: 3.00. An introduction to the regional anatomical study of the human body for undergraduate allied health students. Lectures will be supplemented by observation and demonstration of prosected cadaver material, radiographs, osteology, and surface anatomy.

Credits: 3.00

HK 30500 - Injury Assessment I

Credit Hours: 4.00. A guided lecture and laboratory experience designed to teach the student injury assessment techniques normally required of an athletic trainer. Topics include splinting and transportation, equipment fitting and fabrication, lower extremity injury evaluation, taping and bracing.

Learning Outcomes: 1. Identify specific anatomical structures such as bony landmarks, soft tissue and joint structures in the lower extremities and spine. 2. Identify different methods of prevention for many injuries commonly seen in the lower extremities and spine. 3. Identify common risk factors and causes of injury commonly seen in athletics and the physically active. 4. Explain gender differences in the musculoskeletal system and the impact on injury management for the lower extremities. 5. Identify anatomical growth and development characteristics of males and females in the following stages: pre-adolescent and adolescent. 6. Demonstrate general treatment and rehabilitation protocols to use with injuries in the lower extremities. 7. Demonstrate general treatment and rehabilitation protocols to use with injuries in the spine. 8. Identify the role and function of commonly used prescription and non-prescription pharmacological agents in the treatment of injuries/illness commonly seen in the upper extremities and spine. 9. Demonstrate through low fidelity simulation sound evaluation techniques of lower extremity and spinal conditions. 10. Explain the different

psychomotor test characteristics - validity, reliability, sensitivity, specificity, likelihood ratios, odds ratios, etc., as they relate to selection of special tests. 11. Synthesize test psychometric data to select appropriate tests and measures during assessment. 12. Formulate a clinical question and perform a literature search to answer the question. Credits: 4.00

HK 30800 - Athletic Health Care

Credit Hours: 3.00. Provides students with foundational knowledge and skills for the prevention, recognition, and management of common athletic injuries and illnesses, as well as emergency conditions encountered by sports medicine professionals.

Learning Outcomes: 1. Identify basic components of an athletic injury/illness prevention program. 2. Acquire knowledge related to athletic protective equipment and prophylactic braces. 3. Develop an understanding of the physiological effects of injury in order to provide proper treatment and care. 4. Develop practical knowledge of the mechanisms, signs, and associative anatomy for common athletic injuries associated with the upper extremity, lower extremity, head, spine, and thorax. 5. Develop practical knowledge related to the recognition and treatment of environmental conditions. This will include an understanding of appropriate hydration requirements for physical activity. 6. Develop an understanding of the acute care and emergency management of athletic injuries. Credits: 3.00

HK 31300 - Clinical Field Experience In Healthcare

Credit Hours: 3.00. This course will provide students with observation in various clinical settings. Students will establish a mentor with at least 1 site. Students may choose to pursue observations in various patient care environments, such as, physical therapy, occupational therapy, physician clinics, cardiac rehab, etc. Permission of department required.

Learning Outcomes: 1. Observe patient/practitioner interactions and patient centered care. 2. Demonstrate basic skills related to medical practices in the field (i.e., therapy techniques, treatment modalities, medical procedures, patient assessment/screening, etc.). 3. Describe how skills and content learned in previous courses can be applied to a clinical setting. 4. Explain current best practices and scope of care necessary in their clinical setting. 5. Model the behaviors and skills appropriate to the profession and clinical setting. Credits: 3.00

HK 31500 - Group Fitness Leadership

Credit Hours: 2.00. This course is designed to provide students with an overview of the educational concepts, program design, and instruction/leadership skills needed to design and teach instructor-led exercise programs for small (2-3 individuals) and large (10+) groups with and without music. The course will include basic analysis and application of safe and effective exercise procedures for all fitness levels. Students will be expected to lead group classes throughout the semester as assigned by the course instructor. Preparedness and ability to execute will be assessed. This course is designed to help students prepare of future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist.

Learning Outcomes: 1. Develop an appropriate sequence of movement in an instructor-led exercise program: to include methods of linear transitions, combination techniques, and building sequence development. 2. Modify instructor-led exercise programs for special health and physical concerns. 3. Develop, design and implement group based muscle conditioning programs for healthy adults. 4. Develop the ability to lead/coach components of a group physical activity sessions. Credits: 2.00

HK 31600 - Foundations Of Strength And Conditioning

Credit Hours: 2.00. This course will provide students with an in-depth analysis of strength and conditioning principles, and application strategies to cardiorespiratory conditioning, strength training, and flexible exercise. Students will assess the foundational application of anatomy, physiology, and biomechanics to various forms of exercise training based on

standards of the American College of Sports Medicine, National Strength and Conditioning Association, and the National Academy of Sports Medicine. A major focus of this class will also prepare students to instruct and coach on an individual level to ensure proper mechanics, engagement, and execution of exercise movement. This course is designed to help students prepare for future clinical practice and certification as an ACSM Certified Clinical Exercise Physiologist.

Learning Outcomes: 1. Identify and define skeletal and muscle anatomy, physiology, and biomechanics as related to cardiorespiratory activity, resistance training, and flexibility. 2. Identify and define the Human Movement System and causes of dysfunction/impairment that can effect exercise outcomes. 3. Perform, assess, and instruct various resistance training exercises. 4. Develop a program for cardiorespiratory health, strength and flexibility. Credits: 2.00

HK 31800 - Strength And Conditioning And Exercise Instruction Across The Lifespan

Credit Hours: 3.00. This course is designed to provide students with an overview of educational concepts, program design and instructional/leadership skills for designing and instructing exercise programs. Students will obtain hands-on experience conducting exercise programs for strength and conditioning, cardiorespiratory fitness, and flexibility throughout the semester. Students will learn to work with a variety of populations throughout the semester. Students will be evaluated on their effectiveness in designing and instruction exercise sessions for both individual and group-led scenarios. This course is designed to help students prepare for future clinical practice and certifications, such as the ACSM Certified Clinical Exercise Physiologist. Must have CPR/AED, First Aid certifications.

Learning Outcomes: 1. Describe musculoskeletal anatomy, physiology and biomechanics related to exercise and the effects of resistance training, cardiorespiratory training and flexibility. 2. Perform fitness assessments and client intake interviews to acquire clients' baseline fitness, health history, exercise background and goals, to allow for proper exercise program development. 3. Develop and administer group exercise and/or group personal training classes incorporating muscle conditioning, aerobic training, HIIT, circuit training, etc. 4. Develop and implement resistance training programs for client/s based upon initial assessment data and intake information, and adjust the program throughout the semester. 5. Describe modifications and appropriate precautions required when developing and instructing exercise programs for populations with special health/physical concerns. Credits: 3.00

HK 32700 - Introduction To Sports Management

Credit Hours: 3.00. This course introduces the foundations and principles of sport management, focusing on the leadership, administration, business practices, and operation of sport organizations at all levels. This course offers students the opportunity to gain information and an understanding of the various practices and procedures associated with sport management and the sport industry. Students are presented with an overview of the business of sport, including a variety of different career opportunities in a multitude of sport settings as they explore the value of professional management within sport organizations. Finally, this course uses a semester-long major project that allows students to use the skills and knowledge gained from lectures, readings, and discussions to develop a comprehensive business plan integrating the various modules and topics from the semester into a cohesive administrative plan.

Learning Outcomes: 1. Describe the career possibilities in sport management, as well as the skills and strategies necessary to be successful in the field. 2. Explain the development of the sport business industry and the defining characteristics of the modern sport business industry. 3. Identify concepts of management theory and how these concepts help managers and sport organizations succeed. 4. Explain the central role that leadership plays in sport organizations and how leadership theories apply to management. 5. Identify the characteristics, similarities, and differences among various sport management sites (community, interscholastic), intercollegiate, professional, and international sport). 6. Recognize the unique characteristics of sport marketing and how a marketing plan is

linked to an organization's mission, values, and strategy. 7. Recognize the necessary steps in managing a facility and a corresponding risk management plan. 8. Demonstrate the components and workings of sport media and its interaction with the sport industry, including the increasing influence of social media and the internet within the sport industry. 9. Describe the basic principles of economics as they pertain to the sport industry and be able to describe the business structure of sport organizations. 10. Discuss the social and cultural significance of sport in our society. Credits: 3.00

HK 32800 - Business Of Professional Sports

Credit Hours: 3.00. This course examines the rise and growth of professional sport into a multibillion-dollar industry worldwide that is both an economic giant as well as a pop cultural phenomenon. The course takes a look at the historical development of professional sport while also examining current trends that continue to shape the industry. Students learn the basics of how pro leagues and teams operate by participating in an interactive and engaging fantasy sports simulation that sees them create their own league and manage and operate their own team. In the simulation, students deal with issues real-life pro sports managers have to address every day, including roster construction and management, pricing their product, and marketing and branding their franchise and league overall.

Learning Outcomes: 1. Explain fundamental economic concepts, particularly as these concepts relate to the sports industry. 2. Analyze differences in organizational structure across the major American sports leagues, such as the generation and distribution of revenues, restrictions on player salaries, and the promotion of competitive balance. 3. Discuss the interplay between sports leagues and antitrust policy and the seminal court cases that have led to full and/or partial exemptions to federal antitrust laws for certain leagues. 4. Compare and contrast the various funding mechanisms state and local municipalities have used to attract and/or keep a sports franchise as well as critically analyze the economic benefits of a sports franchise to a city. 5. Explain the labor market in professional sports, particularly the determination of player salaries and key disputes between player unions and league management. Credits: 3.00

HK 34500 - The Coaching Of Interscholastic Sports

Credit Hours: 2.00. Discussion and practical experience in organizing, training, and coaching interscholastic athletes in a selected sport. A partial list of sports that may be selected: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling.

Credits: 2.00

HK 34600 - Field Experience In Coaching

Credit Hours: 2.00. Students will be assigned to assist in coaching a team in a public-, parochial-, or selected university-sponsored program. A partial list of sports available: baseball, basketball, football, gymnastics, soccer, swimming, track/field/cross country, volleyball, and wrestling. Permission of instructor required.

Credits: 2.00

HK 36800 - Exercise Physiology I

Credit Hours: 3.00. Physiological concepts and principles underlying human responses and adaptations to exercise stress. Included are selected methods and techniques of assessing physiological function in the laboratory setting.

Credits: 3.00

HK 37200 - Sport And Exercise Psychology I

Credit Hours: 3.00. This course focuses on social and psychological factors related to participation in sport, exercise, and physical activity. The class explores both (a) how social and psychological factors influence participation and performance in physical activity, and (b) how sport, exercise, and physical activity participation affects psychological well-being. Topics include personality, socialization, learning and feedback, stress and coping, self-perceptions, motivation, and psychological methods for enhancing personal development and physical performance.

Learning Outcomes: 1. Develop an understanding of social and psychological processes that operate in physical activity. 2. Acquire the knowledge to successfully apply

social psychological principles within a variety of physical activity settings. Credits: 3.00

HK 37600 - History Of Sport

Credit Hours: 3.00. A prior course in American or world history is recommended but not required. A survey of historical events that have shaped classical and modern sport, with a focus on recent history of American sport.

Learning Outcomes: 1. Examine the historical themes, factors, and particular events influencing the nature of sport within the larger context of United States history and culture. 2. Describe how sport shaped aspects of American culture and identify the critical place of sport in the emergence of American culture. 3. Investigate the ways gender, race, ethnicity, and class have influenced sporting experiences in the past and present, and determine the cultural and human diversity within sports in the United States. Credits: 3.00

HK 40900 - Seminar In Sports Medicine

Credit Hours: 3.00. A review of selected medical aspects of sports. Liberal use of guest medical professionals. A broad look at the field of sports medicine.

Learning Outcomes: 1. Explain the various professional disciplines within the sports medicine profession and those healthcare providers that interact with athletic training. 2. Explore current trends at the state, district and national level in athletic training involving clinical practice or education. 3. Develop athletic training students' understanding of contemporary medical information required in different sports medicine practice settings. Credits: 3.00

HK 41500 - Exercise As Medicine

Credit Hours: 3.00. Provide students with the concepts, techniques, and skills to investigate the scientific evidence on physical activity and health; and to design and implement interventions to make physical activity a part of daily campus culture. Permission of instructor required.

Learning Outcomes: 1. Recognize and describe the consequences of regular physical activity (PA) and inactivity on individual and community health. 2. Recognize and describe the causes of and solutions for health disparities in communities. 3. Develop activities to promote physical activity on campus. 4. Develop activities to promote physical activity through social media and online content. 5. Evaluate the success of activities promoting physical activity. Credits: 3.00

HK 42100 - Health Screening And Fitness Evaluation And Design

Credit Hours: 3.00. This course provides the learner with the knowledge and skills to successfully administer and interpret the results of health evaluations and fitness assessments for the purposes of analysis and the development of individualized exercise programs.

Learning Outcomes: 1. Apply specific physiological principles to individual physical health prescription: Cardiovascular Health, Body Composition, Posture, Muscular Strength, Muscular Endurance, Flexibility, ROM. 2. Explain verbally identified fitness assessment tests as would to a client indicating what, why, and how they are each performed. 3. Administer pre-exercise screening questionnaire/informed consent and identify needs for a medical clearance. 4. Administer accurately identified fitness assessment tests to a client and classify results. Credits: 3.00

HK 42200 - Basic Concepts In Exercise Program Design

Credit Hours: 3.00. Introduces basic program design concepts and rationale to design fitness programs for healthy adults emphasizing cardiovascular training, strength training, flexibility training, and balance.

Learning Outcomes: 1. Design and implement a safe and effective warm up and cool down protocol specific to the individual. 2. Create and implement well-planned, individualized, and progressive resistance training programs. 3.

Develop progressive and individualized cardiovascular training programs. 4. Describe the role of exercise in healthy weight management. 5. Apply the scientific concepts to design exercise programs to improve athletic performance and optimize fitness in non-athlete healthy persons. Credits: 3.00

HK 42700 - Sports Marketing

Credit Hours: 3.00. This course introduces and examines marketing within various levels of the sport industry, with an emphasis on consumer behavior, branding, and sponsorship. This course first introduces students to the marketing of sport services, sport teams, and sport programs by examining basic marketing strategies as they relate specifically to sport settings. Second, the course examines key consumer behaviors regarding sport fans and sport fan communities. Finally, the course enables students to formulate original and creative sport marketing mixes to provide students with the hands-on practice necessary to become an effective sport marketer.

Learning Outcomes: 1. Explain the unique characteristics of sport marketing. 2. Recognize what motivates individuals to engage in sport-related consumer behavior. 3. Identify practices for developing and socializing sport fans and sport fan communities. 4. Interpret data sources for segmenting, targeting, and positioning strategies within sport. 5. Synthesize existing marketing ideas in original ways. 6. Formulate and analyze sponsorship proposals. 7. Design and implement sport marketing strategies characterized by high degrees of innovation, divergent thinking, and risk-taking. Credits: 3.00

HK 42800 - Sports Facility And Event Management

Credit Hours: 3.00. This course is meant to introduce students to the foundations and principles of effective facility and event management. Sport facilities and the types of events they can host are essential components to understanding the field of sport management. In this course, we will explore the concepts of facility design, planning, systems, risk management, marketing, and ownership. In terms of event management, we will explore the concepts of event creation, impact on hosts, marketing/sponsorship, and the potential positive and negative outcomes of sport events.

Learning Outcomes: 1. Define and apply key facility and event management terminology and concepts to the sport and recreation industry. 2. Engage critically with facility and event management sites and evaluate the potential positive and negative outcomes associated with sport facility and/or sport event development. 3. Display the ability to organize, coordinate, and execute operational plans for various sizes of facilities and events. Credits: 3.00

HK 44300 - Neuroscience Of Movement

Credit Hours: 3.00. In this course students will learn about the neuroscience behind the control, sensation and perception of human movement. The course is divided into five sections. In the first section, students learn about the sensory systems with human movement. In the second section, students learn about the basic CNS building blocks underlying movement control and perception. In the third section, the control of balance and locomotion is the central topic. In the fourth section, students learn about the higher brain functions involved in cognition. The final section of the class examines issues regarding learning, development, and brain plasticity.

Learning Outcomes: 1. Able to describe basic principles of the neuroscience behind the control of human movement. 2. Able to apply principles of the neuroscience of movement to clinical, educational, research, and sports science setting using specialized laboratory equipment. Credits: 3.00

HK 44400 - Balance Rehab In Older Adults

Credit Hours: 3.00. In this course, students learn about the decline in motor function that occurs in older adults and techniques to improve motor function in an older population. Topics include decreased balance control, loss of muscle strength, and declines in adaptive locomotion as a function of age. Students enrolled in this class also participate in an off-campus lab. In the lab, students are paired with an older adult and use the knowledge gained in lecture to improve the motor function of the older adult. This class provides students with a unique opportunity to gain hands-on experience working with an older population. Permission of instructor required.

Learning Outcomes: 1. Describe the declines in motor function that occur in older adults. 2. Critically assess intervention research with aims

to improve motor function in older adults. 3. Describe and evaluate types of interventions and their effectiveness. 4. Use quantitative equipment to assess balance and mobility of younger and older adults. Credits: 3.00

HK 45300 - Motor Coordination And Development

Credit Hours: 3.00. An advanced undergraduate motor development course that examines the processes and coordination principles related to motor behavior development across the life span. Material and concepts are concentrated around specific skills areas and SPAN a broad range of ages and theoretical approaches.

Learning Outcomes: 1. Describe how motor abilities develop in infancy and childhood both in typically developing and clinical populations. 2. Apply basic research designs in motor developments to clinical populations. Credits: 3.00

HK 45800 - Principles Of Motor Control And Learning

Credit Hours: 3.00. Discussion of the principles of motor learning and control. Relevant research literature will be surveyed with an historical perspective. Students will be expected to design and/or conduct a mini research project.

Credits: 3.00

HK 46300 - Analysis Of Human Motion

Credit Hours: 3.00. An analytic approach to the mechanical analysis of human motion, including modeling procedures and computer-generated display techniques.

Credits: 3.00

HK 46500 - Research Methods

Credit Hours: 3.00. This course will be conducted in a lecture/lab format. The lectures will introduce the basic knowledge necessary to understanding the entire research process as it is found in health and kinesiology. The laboratories will be designed to give students practice in discovering research questions, preparing research proposals, evaluating existing research, and applying research to practical problems.

Learning Outcomes: 1. Describe the nature of research and the scientific method. 2. Describe the different types of research conducted within health and kinesiology, and the value of each type of research. 3. Provide an overview of the ethical, conceptual, and logistical considerations involved in designing, conducting, and critically evaluating research in basic and applied settings. 4. Identify a potential topic/issue to examine and conduct a review of the existing research literature and summarize and critically evaluate a research article. 5. Describe the steps involved in developing a research proposal, collecting and analyzing data, and reporting the results of a research project. Credits: 3.00

HK 46800 - Advanced Exercise Physiology II

Credit Hours: 3.00. An advanced undergraduate course in the area of exercise and human performance. Further examination of the physiological mechanisms and theories involved in the exercise response.

Credits: 3.00

HK 46900 - Exercise Testing And Prescription In Special Populations

Credit Hours: 3.00. Examines responses to exercise testing and prescription in healthy adults compared to exercise responses and special considerations for individuals with chronic diseases and conditions and issues of concern to pregnant women, children, and older adults, among others.

Learning Outcomes: 1. Identify the difference in testing and prescription for individuals with chronic conditions. 2. Evaluate critically the risks and benefits associated with exercise participation. 3. Apply appropriate emergency procedures in various exercise settings. 4. Deliver unique exercise programs to special populations. Credits: 3.00

HK 47200 - Sport And Exercise Psychology II

Credit Hours: 3.00. Course presents topics not covered in PE 37200 and emphasizes application of psychological principles in sport and exercise settings. Topics include group dynamics, psychological benefits of exercise; exercise addiction; body image; leadership and communication; and performance enhancement principles and techniques.

Learning Outcomes: 1. Describe the basic principles of the psychological processes in sport and exercise contexts. 2. Synthesize and apply theoretical and empirical knowledge in sport and exercise psychology through active learning processes and interaction with fellow students. 3. Apply critical thinking, group interaction, public speaking, research, and writing skills. Credits: 3.00

HK 47600 - Olympic Games: Ancient And Modern

Credit Hours: 3.00. A historical study of the nature and significance of the ancient and modern Olympic Games. Topics include genesis of the games; evolution of events; the amateur ideal; social, economic, and commercial influences; politics; modern controversies; and various reform movements.

Credits: 3.00

HK 47700 - Sport And Exercise Psychophysiology

Credit Hours: 3.00. The purpose of this course is to give students an understanding of the psychological, behavioral, and social processes as related to and revealed through physiological principles and events underlying human movements in the context of sport and exercise. This course will utilize traditional lectures combined with student-led group discussions to examine topics including, but not limited to, the following: (1) introduction, principles, and measurements of psychophysiology, (2) psychophysiological characteristics of optimal mental state and superior performance, (3) biofeedback and neurofeedback training in performance enhancement, and (4) acute and chronic effects of sport and exercise participation on cognition and emotion.

Learning Outcomes: 1. Describe and explain the study of psychophysiological processes that operate in the context of human movements in sport and exercise. 2. Describe and explain the methods and theories in the study of sport and exercise psychophysiology. 3. Evaluate major sport and exercise psychophysiology studies on topics such as enhancements in athletic performance, cognition, and emotion in terms of their methods, results, conclusions, and implications. 4. Analyze and synthesize concepts and theories across topics, readings, and discussions. 5. Communicate ideas in writing and group discussion in a clear, coherent, and logical style. 6. Acquire the knowledge to apply psychophysiological principles within sport and exercise settings. Credits: 3.00

HK 49000 - Special Topics In Health And Kinesiology

Credit Hours: 1.00 to 3.00. Individualized readings, topics, or projects in health and kinesiology appropriate for undergraduate students. Permission of instructor required.

Credits: 1.00 to 3.00

HK 49100 - Research Experience In Health & Kinesiology

Credit Hours: 1.00 to 3.00. Individualized activities related to a faculty member's research in health and kinesiology appropriate for undergraduate students; no project presentation required. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 3.00

HK 49500 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the university. Permission of department required.

Credits: 1.00 to 3.00

HK 49600 - Mentored Research In Kinesiology

Credit Hours: 1.00 to 3.00. Students are engaged in a research project under the guidance of a faculty member in one of the areas of inquiry in the kinesiology major. Permission of instructor required.

Credits: 1.00 to 3.00

PES 11100 - Lifetime Fitness

Credit Hours: 2.00. Provides students opportunities to assess levels of physical fitness, develop an exercise plan, and experience activities designed to improve cardiovascular condition, strength, and flexibility. Presents current findings and provides laboratory experiences regarding techniques of initiation, maintaining, and evaluating personal fitness. For non-H&K majors only.

Credits: 2.00

PES 11200 - Aquatic Movement Forms

Credit Hours: 1.00. Instruction and practice in aquatic movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: beginning swimming; intermediate swimming; advanced swimming; synchronized swimming.

Credits: 1.00

PES 11400 - Exercise And Conditioning

Credit Hours: 1.00. Instruction and practice in various types of exercise programs. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: body conditioning; exercise and fitness; exercise to music; jogging and running; swimnastics; relaxation techniques; weight training; exercise and principles of weight control.

Learning Outcomes: 1. Articulate the benefits of regular physical activity. 2. Explain the importance of training intensity relative to efficiency in engagement of physical activity. 3. Participate in a regular physical activity program, and reflect on what they have learned/gained throughout each session.

Credits: 1.00

PES 11500 - Individual And Dual Movement Forms I

Credit Hours: 1.00. Instruction and practice in individual and dual movement forms conducted in an indoor setting. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: badminton; billiards; bowling; fencing; judo; karate; beginning gymnastics; intermediate gymnastics; squash; racquetball; yoga; kung fu; personal defense. Special fee required.

Credits: 1.00

PES 11600 - Individualized And Dual Movement Forms II

Credit Hours: 1.00. Instruction and practice in individual and dual movement forms conducted mainly in outdoor settings. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: beginning golf; intermediate golf; advanced golf; bicycling; beginning tennis; intermediate tennis; advanced tennis; track and field. Special fee required.

Credits: 1.00

PES 11700 - Team Movement Forms

Credit Hours: 1.00. Instruction and practice in team movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: basketball; field hockey; lacrosse; softball; soccer; power volleyball I; power volleyball II.

Credits: 1.00

PES 11800 - Horseback Riding

Credit Hours: 1.00. Instruction and practice in hunter seat equitation. Class meets off campus, and students are expected to provide their own transportation. Following is a partial list of offerings: beginning; intermediate; advanced; combined training.

Credits: 1.00

PES 12000 - Officiating

Credit Hours: 1.00. Theory and practice in officiating movement forms. Students select from the activities listed in the current schedule of classes. Following is a partial list of activities: basketball; field hockey; gymnastics; swimming; softball; volleyball; track and field.

Credits: 1.00

PES 14600 - Advanced Golf Applications

Credit Hours: 1.00. Designed for the student who has either already taken PES 11600, or established themselves as a golfer by having a golf handicap, or by playing on a golf team in the past. Students learn methods to improve course management and strategies on the golf course. Students will receive intense levels of one on one instruction, utilizing video to analyze every student's swing. In addition to instruction, a league will be formed in which the students play 9 holes each week.

Learning Outcomes: 1. Play golf at an advanced level. 2. Identify dysfunctional movement. 3. Apply corrective measures to dysfunctional movement. 4. Develop course management strategies. 5. Effectively participate in team communications and competitive golf. Credits: 1.00

School of Health Sciences

HS pic 17-18

About Health Sciences

Undergraduate majors in Purdue's School of Health Sciences (HSCI) prepare students for fulfilling health-related careers. Our challenging curriculum offers a common core of courses in mathematics, physics, biology, and chemistry. Within Health Sciences, students have the opportunity to participate in multiple health-related student organizations, gain real-world experience through internships, and conduct groundbreaking undergraduate research. Graduates from the School of Health Sciences have found excellent success in gaining employment and admission to professional school programs including medicine, dentistry, physical therapy (PT), occupational therapy (OT), optometry, public health, and physician assistant (PA) as well as other graduate programs.

Recent alumni of the School of Health Sciences work for a variety of companies including Google, Amazon.com, Johnson & Johnson, Subaru, Alcoa, Indiana State Department of Health, Purdue University, Indiana State Police, IU Health, St. Elizabeth Hospital, Lyondell Basell, and Flint Hills Resources.

HSCI 10100 - Introduction To The Health Sciences Professions

Credit Hours: 2.00. This course will present an overview of the fields in both the preventive, Public Health, as well as the clinical, Private Health, sides of the Allied Health Science Professions as it presents the holistic nature of health maintenance. Students will have the opportunity to hear from health professionals practicing in the allied health and preprofessional concentrations as well as from School of Health Sciences faculty in their areas of expertise in the fields of industrial hygiene, ergonomics, radiological sciences, toxicology and environmental health science.

Credits: 2.00

HSCI 11000 - Careers And Research In Occupational And Environmental Health

Credit Hours: 1.00. The goal of this course is to familiarize students to the variety of research and careers available within the broad field of environmental and occupational health. The course will focus on two areas: current research in occupational and environmental health and careers in occupational and environmental health. This content will be delivered through interactive lectures and discussions with a variety of guest speakers as well as HSCI faculty. Advice and guidance on applying for internships/jobs in the field will also be provided. A highlight of the event is a student/professional networking event which will be coordinated towards the end of the program.

Learning Outcomes: 1. Understand and apply key terms within occupational and environmental health. 2. Describe current research in occupational and environmental health. 3. Describe the extent and variety of careers available in occupational and environmental health. 4. Deliver an oral presentation about a contemporary issue in occupational and environmental health. Credits: 1.00

HSCI 13000 - Introduction To Medical Laboratory Science

Credit Hours: 1.00. An introduction to career opportunities in medical technology. Preprofessional and professional requirements. A survey of the major clinical laboratory departments and their applications to patient care and management. Discussion and interpretation of some of the major diagnostic tests, i.e., for cardiac enzymes, cholesterol, blood cells, diabetes, and drug monitoring.

Learning Outcomes: 1. Have a clearer and more in depth understanding of the field of medical laboratory science. 2. Have an appreciation for the diverse disciplines and thus career opportunities within this field. 3. Have an opportunity to engage in and contribute to your own knowledge gain. 4. Have the ability to translate a simple job description into an exciting professional career. Credits: 1.00

HSCI 13100 - Introduction To Medical Terminology

Credit Hours: 3.00. This self-paced learning course is designed to familiarize the student with terms used in medicine. Each body system will be studied individually. Word roots, prefixes, and suffixes will be used to build words relating to the system. Diagnostic and symptomatic terms will be introduced. CTL:IPO 1820 Medical Terminology

Learning Outcomes: 1. Offer a comprehensive vocabulary that can be used in the medical field. 2. Become proficient in the medical language. 3. Build confidence with this vocabulary that will open new doors to each student. Credits: 3.00

HSCI 19000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for freshmen students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 19501 - School Of Health Sciences Freshman Honors Seminar

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting designed to orient and familiarize Freshman HSCI Honors students with the

School of Health Sciences including research areas and current topics in public health and biomedical research. Students will interact with guest speakers and expand their knowledge base in health science research. In addition to the seminar, students will be matched to a faculty mentor in a research area of their interest during the fall semester. Students will develop and design a research project with their faculty mentor (to be conducted in HSCI 19601 during the spring semester). In the spring semester, students will enroll in the seminar series (HSCI 19501) and in the research project course (HSCI 19601) to complete their project. Each student will be responsible for presenting and reporting on their research project during the spring seminar series. Permission of departmental required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Learn basic research skills such as how to do a literature search and report research findings. 3. Learn how to give and evaluate a research presentation. Credits: 1.00

HSCI 19601 - School Of Health Sciences Freshman Honors Project

Credit Hours: 1.00. This course is for Freshman students in the School of Health Sciences Honors Program. In this course students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course during the spring semester concurrently with HSCI 19501 . During the fall semester in HSCI 19501 , students will be matched to a faculty mentor in the research area of their choice and complete a Project Description Form based upon the work to be completed during this course. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 20100 - Principles Of Public Health Science (UCC: STS)

Credit Hours: 3.00. This course begins with a definition of public health and a review of its history and its role in disease prevention. The basic tools of public health practice, vital statistics and epidemiology, are then presented. After gaining an understanding of how these tools are used in assessing the health status of a community, the etiology and control of infectious and non-infectious threats to our health will be examined. The course concludes with risk analysis as a basis for public health policy determination.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HSCI 20200 - Essentials Of Environmental, Occupational, And Radiological Health Sciences (UCC: STS)

Credit Hours: 3.00. This course is designed to introduce the essential concepts of Environmental, Occupational, and Radiological Health Science. The principles of these three fields including the environmental impacts on human health and disease, environmental toxicology, occupational health concerns, contemporary occupational health issues, radioactivity, and the human health effects of exposure to ionizing radiation will be discussed.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

HSCI 22500 - Healthcare Leadership And Safety

Credit Hours: 3.00. This course will present topics related to effective leadership and management strategies within an organization. The course will focus on implementation of these strategies from a health and safety perspective. Specific leadership and management topics to be discussed include communication strategies, motivation, conflict management, negotiation, ethics, and professional development. In addition, important safety topics, such as fire & life safety, workplace violence, terrorism, hazard communication, and slip & fall hazards will also be addressed.

Learning Outcomes: 1. Discuss principles of and various levels of leadership. 2. Explain ethical issues in health & safety and justify a response to those issues. 3. Explain principles of motivation and effective application to health and safety leadership. 4. Relate conflict management approaches to workplace issues. 5. Develop a fire and life safety plan for the

workplace. 6. Recognize situations in which violence may occur in the workplace and identify strategies to prevent incidents from occurring. Credits: 3.00

HSCI 26000 - Clinical Urinalysis And Body Fluid

Credit Hours: 1.00 to 10.00. Clinical Urinalysis And Body Fluid.

Credits: 1.00 to 10.00

HSCI 29000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for sophomore students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 29501 - School Of Health Sciences Sophomore Honors Seminar

Credit Hours: 1.00. This course is for sophomore students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 29601 - School Of Health Sciences Sophomore Honors Project

Credit Hours: 1.00. This course is for Sophomore students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both fall and spring semesters (concurrently with HSCI 29501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 30500 - Basics Of Oncology

Credit Hours: 3.00. This course will introduce the student to the biology of cancer and some basics of oncology. Focus will be placed on what makes cancer different from normal tissues and how those differences can be leveraged for diagnostic and treatment purposes. This course will touch on topics of epidemiology, cancer biology, common therapeutic and diagnostic approaches, and other considerations of cancer care.

Learning Outcomes: 1. Identify the major risk factors of cancer. 2. Understand the difference between cancer and normal tissue. 3. Enumerate the major hallmarks of cancer. 4. Explain the link between cancer biology and diagnostic imaging. 5. Describe how cancer therapies target the hallmarks of cancer. Credits: 3.00

HSCI 31000 - Imaging In Medicine

Credit Hours: 3.00. This course will introduce students to develop essential understandings of all primary medical imaging techniques utilized in hospitals such as Computer tomography, X-ray imaging, MRI, Ultrasound and Nuclear medicine imaging modalities. The course will cover basic scientific principles of each modality and introduce their underlying clinical requirements and applications. In addition, this course introduces the student to human anatomy as seen in the transverse, coronal, and sagittal planes. Anatomy of the brain, thorax, abdomen, and pelvis will be studies using CT and MRI images. Normal anatomy, anatomic variants, and selected pathologies will be discussed in the various body regions.

Learning Outcomes: 1. Understand (at an elementary level) the physical basis and limitations of diagnostic imaging techniques and

correctly distinguish between the following imaging techniques: plain X-rays, CT scans, MRI scans, PET scans and ultrasound. 2. Differentiate major anatomical regions and identify major anatomical structures in the transverse, coronal, and sagittal plane. 3. Acquire basic knowledge of the fundamental principles and techniques of all the major imagine modalities including, CT, MRI, Ultrasound and nuclear medicine (PET and SPECT). 4. Understand basic sectional (transverse, sagittal and coronal) anatomy in medical imaging. Credits: 3.00

HSCI 31200 - Radiation Science Fundamentals

Credit Hours: 3.00. This course introduces principles and concepts related to nuclear energetics, radioactive decay, the interactions of ionizing radiation with matter, and the human health effects of exposure to ionizing radiation. Fundamental concepts related to atomic and sub-atomic physical processes as well as relevant aspects of modern physics are briefly reviewed. Students gain practical experience and enhance their understanding of radiation protection by participating in a radiological emergency response exercise (RERE).

Learning Outcomes: 1. Have a sense of scale for the atomic and sub-atomic world with regard to size and energies involved. 2. Recognize the major types of radioactive decay, calculate the rates of particle emission, and apply the theory of radioactive decay to decay chains, medical imaging applications and radio dating. 3. Describe and apply the mechanisms of interactions of radiation with matter. 4. Explain and apply mechanisms of radiation detection and quantification. 5. Know and quantify the biological effects of exposure to radiation using dosimetry principles. 6. Be proficient at manipulating the physical quantities and systems of units used in the radiological sciences and at applying critical thinking and problem-solving skills. Credits: 3.00

HSCI 31300 - Principles Of Radiation Detection And Measurement

Credit Hours: 2.00. Course presents an introduction to the principles of radiation detection and measurement, including statistical models, counting statistics, error analysis, detection limits, ionization chambers, proportional counters, GM counters, scintillation counters, gamma-ray spectroscopy, solid-state detectors, TLDs, track-etch and bubble detectors.

Learning Outcomes: 1. Understand the fundamentals of 3 types of ionization radiation. 2. Understand radiation safety. 3. Understand how to choose the radiation detection devices that fit for a specific purpose. 4. Understand what their capabilities and limitations are. 5. Understand how to interpret and use the output from radiation detectors. 6. Understand medical applications of radiation or radioactive materials. 7. Understand basic principles to detect the radioactive materials injected into human or animal subjects. 8. Understand different nuclear imaging procedures. 9. Understand fundamentals of molecular imaging. 10. Understand the receptor-based radiotracers for imaging and radiotherapy. Credits: 2.00

HSCI 33300 - Introduction To Immunology

Credit Hours: 3.00. Introduction to Immunology will meet twice weekly and provide an overview of this evolving field of science with an emphasis on the clinical implications and application of learned knowledge. The immunologic mechanisms associated with the normal and abnormal immune response will be discussed and students will put this knowledge into practice by directing their own case study. In addition, a number of common clinical concerns with respect to immunity will be reviewed. Furthermore, we will explore the critical role our knowledge of this branch of science plays in patient diagnosis, treatment and care both now and in the future.

Learning Outcomes: 1. Have solid understanding of the science of Immunology and the Immune Response. 2. Have an appreciation for the complexity of the immune system, its cellular components, its regulation and implications of its dysfunction. 3. Have a clearer understanding of the clinical applications

and implications of the immune response. 4. Have enhanced knowledge of the course material. 5. Have the ability to transfer the written word into practical application of its principles. Credits: 3.00

HSCI 33400 - Lung Physiology And Medicine

Credit Hours: 2.00. This course will explore the normal functioning of the respiratory system, along with a variety of diseases and disorders affecting this system. Special emphasis will be placed upon diseases which result from, or are aggravated by, environmental pollutants. The course will begin with discussing the anatomy and physiology of the respiratory system. Individual lung disorders will then be discussed with consideration of the sources of air pollution contaminants and the interaction of those contaminants with normal lung tissue.

Learning Outcomes: 1. Describe the normal anatomy and physiology of the respiratory system. 2. Identify the lung volumes and how lung volumes relate to lung capacities. 3. Describe the pathophysiology of major types of lung disorders. 4. Relate lung disorders to air pollution contaminants. Credits: 2.00

HSCI 33500 - Heart Physiology And Medicine

Credit Hours: 2.00. This course will provide a discussion about diseases affecting the heart and cardiovascular system. The normal anatomy and physiology of the heart and blood vessels with be discussed. Various diseases of the heart and vasculature, including atherosclerosis, cardiomyopathies, valvular heart disease, hypertension, and stroke will be explored. Included in the discussion of each disease process will be environmental agents, which are associated with disease development and progression.

Learning Outcomes: 1. Describe the normal anatomy of the hear. 2. Discuss the cardiac steps of the cardiac cycle. 3. Describe disease processes of the heart and blood vessels. 4. Identify environmental exposures associated with an increased risk of heart disease. Credits: 2.00

HSCI 33600 - Eye Physiology And Disease

Credit Hours: 2.00. This course will cover the fundamental structure and function of the eye and visual nervous system. Brief review lectures will be provided on basic cell biology and neuroscience to provide a strong foundation for topics such as phototransduction, retinal neural circuit function, and disease etiology. The first half of the course will be focused on the normal and healthy anatomy and physiology of the eye. The second half the course will be focused on eye and visual diseases and their associated pathophysiology and clinical manifestations. This part of the course will include lessons on eye imaging techniques and cutting-edge treatments used for detection and treatment of eye diseases. This course will be beneficial for any student interest in clinical or medical research, and highly recommended for those interested in optometry, ophthalmology, and visual research careers. Permission of department required.

Learning Outcomes: 1. Describe the normal anatomy of the eye and visual pathways in the brain. 2. Discuss neural circuit and cell signaling pathways in phototransduction. 3. Describe the cellular etiology of ocular disease processes. 4. Understand the basic approaches to studying and assessing eye function. Credits: 2.00

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed.

Learning Outcomes: 1. Discuss the historical background of the fields of occupational and environmental health and events leading to the establishment of current related regulations. 2. Understand the major principles and terminology of toxicology, epidemiology, and environmental exposure assessment as they are applied to environmental and occupational health. 3. Understand the units of airborne contaminant concentration, and be able to perform basic calculations and conversions involving these concentrations. 4. Identify classes of environmental contaminants, their major health effects, and typical environments where they are of concern. 5. Understand the

operations of OSHA, NIOSH, EPA, ACGIH, their important interactions with industry, and their principle types of regulations and/or guidelines. 6. Understand the use of different types of respiratory protective equipment. Credits: 3.00

HSCI 34600 - Industrial Hygiene Engineering Control

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Describe/understand different approaches for controlling exposures in the occupational environment, and give hypothetical and real situations in terms of the best control methods. 2. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a complete ventilation system. 3. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 4. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to prevent it in the workplace. 5. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 6. Synthesize and apply knowledge of the IH paradigm (AREC) in analyzing practical industrial hygiene/occupational health problems. Credits: 4.00

HSCI 34800 - Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. Sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Explain the rationale of the sampling strategy. 2. Perform basic sampling procedures for certain gases, vapors, particulates, noise, and heat, including proper selection, set-up, and operation of equipment. 3. Summarize the basic principles of the sampling procedures and explain why they function as they do. 4. Describe the limitations of sampling and analysis in real-world situations and how to deal with them. 5. Collect, analyze, interpret, and summarize laboratory data into a well-written report. 6. Describe the advantages as well as the difficulties of working together on a team. Credits: 3.00

HSCI 35300 - Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and frontline employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the frontline employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the frontline employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the frontline employees and upper management together in their vision of a safe and healthy workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting

safety training in an organization. 5. Plan an effective safety management system for an organization. 6. Demonstrate group and team building strategies as it relates to health and safety. Credits: 3.00

HSCI 36000 - Everyday Toxicology: Poisonings From Clinics To Courtrooms

Credit Hours: 2.00. Exposure to chemicals happens every day in human life through the living environment and diet; yet the health impact and toxicological consequences of these exposures are often unknown to general populations. This 300-level course examines basic concepts of toxicology in human health as they apply to the exposure of environmental agents, e.g., chemicals, metals, and poisons in daily life and attempted poisoning in criminal cases and political assassins. With an emphasis on historical accounts of poisonings and case analyses, the course describes commonly encountered chemicals and poisons, their symptoms, clinical diagnosis, basic toxicological mechanisms, and medical interventions. Students will also learn some of the large-scale environmental and occupational incidents that have led to legal actions, and the role of toxicology in forensic investigation of purposed poisoning. The course is ideal to students who are inspired to become a future healthcare professional in any of the health-oriented pre-professional programs or students with majors in biomedical health sciences, environmental and occupational health sciences, medical laboratory science, and/or public health.

Learning Outcomes: 1. Define the concepts of poisoning, forensics, and toxicology. 2. Describe the dose-response relationship and routes of exposure for common chemicals. 3. Discuss common poisons from a historical perspective. 4. Explain signs and symptoms, diagnosis, and treatments related to typical poisons. 5. Illustrate basic biological mechanisms leading to adverse health outcomes. 6. Understand professions and duties involved in the field of clinical toxicology. Credits: 2.00

HSCI 39000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for junior students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 39501 - School Of Health Sciences Junior Honors Seminar

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 39601 - School Of Health Sciences Junior Honors Project

Credit Hours: 1.00. This course is for Junior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students enroll in this course in both the fall and spring semesters (and concurrently with HSCI 39501 in the spring semester). An updated Project Description Form will be due at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Some students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of departmental required.

Learning Outcomes: 1. Gain an understanding of the research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

HSCI 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

HSCI 40000 - International Special Topics

Credit Hours: 1.00 to 8.00. Courses taken during an International experience that is recognized by the University. Permission of Department required.

Credits: 1.00 to 8.00

HSCI 41500 - Introduction To Nuclear And Radiological Source Security

Credit Hours: 3.00. The course focuses on the basic elements of nuclear and radiological source security. It examines methods for planning and evaluating nuclear security activities at the state and facility level, establishing nuclear security culture in different types of nuclear and radiological installations, and examines nuclear cyber and information security measures. Issues and approaches for nuclear security concerns, both state-level (e.g., nonproliferation and deterrence) and asymmetric concerns (e.g., nuclear smuggling and nuclear terrorism) will be addressed. Group exercises and simulations in applied nuclear security scenarios will complement lectures. This course is designed for both "technical" (engineering and science) and "non-technical" (policy) students and the interaction between students of different backgrounds is encouraged.

Learning Outcomes: 1. Obtain a broad picture of nuclear security components and their interconnections, and of the planning of nuclear security activities at the state and facility level. 2. Learn the basic concept of nuclear security. 3. Learn the basics of nuclear security planning at the facility and state level. 4. Learn proliferation efforts, framing them within the historical and security-related context. 5. Create a foundational understanding of relevent security, safeguards and nonproliferation treaties and agreements. 6. Leverage existing technical knowledge in coming to policy conclusions. 7. Develop both a regime and state specific knowledge base. 8. Illustrate understanding through technical and policy oriented exercises. 9. Expand relevant technical knowledge base as well as introduce students to new instrumentation and concepts. Credits: 3.00

HSCI 42000 - Applied Anatomy For Medicine

Credit Hours: 4.00. With a focus on preparing students to be practitioners of health sciences, Applied Anatomy for Medicine (HSCI 42000) will build upon the foundational knowledge of form and function obtained in prerequisite courses through enhancement of the relationship between bony structures, musculature, innervation, vascular perfusion, and interconnectedness with respect to human health. The significance of regional anatomy and important anatomical landmarks from a clinical perspective will be learned. The incorporation of student driven dissection will promote a more comprehensive understanding of the correlation between structure, function, dysfunction and disease signalments. The integration of clinical application and case study investigation will facilitate the transition from learner to practitioner.

Learning Outcomes: 1. Identify the bones, associated bony prominences, muscles, innervation, action and vascular perfusion. 2. Identify and demonstrate the relationship between superficial and deep structures including dermatome maps. 3. Identify regional anatomy and important clinical landmarks, and aid in deciphering imaging diagnostics. 4. Identify anatomical design both in health as well as modifications due to disease. 5. Understand the critical role anatomical design plays in the maintenance of health, development and manifestation of disease, diagnostic assessment, intervention and treatment. Credits: 4.00

HSCI 44400 - Exposure Assessment In OEHS

Credit Hours: 3.00. Exposure assessment is an essential component of Environmental Health Science and industrial hygiene. This course provides students basic scientific knowledge of exposure assessment, with emphasis on practical aspects of exposure science, including study design, data and measurement collection, data analysis, and results interpretation and presentation. Course topics include major exposure media and pathways (air, water, food, soil, etc.) and important exposure routes (inhalation, ingestion, dermal absorption); exposure measurement and assessment; strengths and weaknesses of various exposure assessment techniques, how to link exposure assessment with environmental health,

and human subject research in exposure studies. The course includes case studies and group projects. Students are expected to develop entry-level skills for designing exposure studies applicable to human exposure monitoring, epidemiologic investigations and health risk assessment.

Learning Outcomes: 1. Describe basic components of exposure assessment studies. 2. Design a study to conduct basic assessments of exposure to chemical hazards at workplace or in a community setting. 3. Obtain and analyze existing data, collect and analyze measurement data, prepare technical reports, and present results. 4. Discuss ethical and professional responsibilities in exposure studies. 5. Function effectively on a team that identify, evaluate and solve problems related to exposures in occupational and environmental settings. Credits: 3.00

HSCI 44500 - Industrial Hygiene Internship

Credit Hours: 2.00. Discussion class based on applied work experience as an industrial hygiene assistant or technician at an industrial, consulting, hospital, government, or education and research institution. Topics covered also include professional and ethical aspects derived from students' work experiences. Written and oral reports as well as other classroom assignments. Restricted to industrial hygiene majors who have completed an acceptable industrial hygiene work experience.

Credits: 2.00

HSCI 44600 - Applied Industrial Hygiene

Credit Hours: 3.00. This course allows the student to synthesize his or her basic industrial hygiene fundamentals to understand how they apply in the real world. Issues faced by industrial hygienists will be addressed by a variety of guest speakers. Class projects add to the diversity of this senior capstone course.

Credits: 3.00

HSCI 44700 - Global Workplace Health

Credit Hours: 2.00. This course will examine health and safety issues, particularly those which occur in the work setting, in various countries around the world. A particular focus will be toward developing countries in which the regulatory environment and resources to control hazards are less than those of more developed countries. Students will participate through an established professional organization. They will virtually work on specific projects in various countries, with the goal of improving the health and safety environment.

Learning Outcomes: 1. Identify exposures to harmful environmental agents which may adversely affect human health. 2. Apply their knowledge and skills of occupational health to recommend methods to reduce exposure to harmful environmental agents. 3. Be able to function as part of team to address issues involving human health. 4. Be able to describe the differences in exposure to hazardous agents for different parts of the world. 5. Obtain a knowledge of current events and identify how the events relate to disparities in human health across different cultures and countries. 6. Obtain an understanding of professional ethics in relation to differing health and safety policies. Credits: 2.00

HSCI 45100 - Clinical Biochemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide principles of biochemistry for clinical application for medical technologists. The course encompasses an introduction to carbohydrate, amino acid, and lipid metabolism. Also included are lectures on basic endocrinology, enzymes, and biosynthesis of steroid hormones. Physiological principles are stressed with respect to liver, lung, and kidney function. Special emphasis is placed on correlation of the theoretical and clinical areas.

Credits: 1.00 to 10.00

HSCI 45200 - Clinical Chemistry

Credit Hours: 1.00 to 10.00. This course is designed to provide the medical technologist with the principles and application of clinical chemistry. Methods of instrumental analysis include a variety of automated procedures, electrophoresis, immunoelectrophoresis, immunodiffusion, radioisotopes, steroids, hormone assay, and toxicology. Quality control for clinical chemistry is included. Supervised clinical laboratory experience is offered, with students rotating through the various areas of clinical chemistry on a sequential rotational basis.

Credits: 1.00 to 10.00

HSCI 45300 - Clinical Hematology

Credit Hours: 1.00 to 10.00. Study of the functions, maturation, and morphology of blood cells. Blood cells, platelets, and reticulocyte counting procedure. Experiences in the study of

cellular content of other body fluids are offered. Lectures and laboratory are designed to teach techniques of sedimentation rates, hematocrits, corpuscular indices, hemoglobin red cell fragility, and special staining procedures. Also, routine and special coagulation studies are taught. Supervised experience in clinical hematology offers opportunities for study in routine and special hematology and coagulation procedures.

Credits: 1.00 to 10.00

HSCI 45400 - Clinical Immunohematology

Credit Hours: 1.00 to 10.00. A review of serologic principles and technical fundamentals of transfusion practice; a comprehensive consideration of all blood groups, with emphasis on ABO and Rh-Hr blood group systems. Extensive practice is gained in pre-transfusion techniques and antibody identification in the laboratory. Other blood types and antigen-antibody relationships are taught in laboratory and lectures. Also included are blood donor room procedures; preparation of blood components; correlation of blood component therapy with disease states; quality control of all reagents, procedures, and equipment used; and laboratory safety measures, all of which offer the best patient care and protection of laboratory personnel.

Credits: 1.00 to 10.00

HSCI 45500 - Clinical Microbiology

Credit Hours: 1.00 to 10.00. Lectures and clinical laboratory experience in diagnostic procedures as aids to the diagnosis of human disease. Proper selection of techniques for the isolation and identification of medically important bacteria. Special emphasis is placed on newer methods for anaerobic bacteria identification. Also includes lectures and laboratory identification in the fields of mycology and microbacteriology, with emphasis on isolation and identification. Practical applications of fluorescent antibody tests are performed.

Credits: 1.00 to 10.00

HSCI 45700 - Clinical Parasitology

Credit Hours: 1.00 to 10.00. Techniques of specimen examination, identification of cysts and ova, life cycles of parasites.

Credits: 1.00 to 10.00

HSCI 45800 - Clinical Serology

Credit Hours: 1.00 to 10.00. Lectures and a laboratory experience in serology, including the preparation of antigen, flocculation tests for syphilis, heterophile antibody tests, creative proteins, RA test, FTA, rubella testing. Also included are lectures in immunology that include classifications of immunoglobulins; mechanism of antibody formation; immune response; types of antigen-antibody reactions; and theories of radioimmunoassay.

Credits: 1.00 to 10.00

HSCI 46000 - Clinical Urinalysis

Credit Hours: 1.00 to 10.00. Routine analysis, chemical tests, sediment identification, renal function tests, pregnancy tests.

Credits: 1.00 to 10.00

HSCI 46500 - Introduction To Laboratory Education And Management

Credit Hours: 1.00 to 3.00. A study of the principles and techniques of clinical instruction, and inservice and continuing education as well as administration and supervision.

Credits: 1.00 to 3.00

HSCI 48500 - Health Physics Internship

Credit Hours: 1.00 to 8.00. Applied work experience as a health physics assistant or technician at a nuclear power generating station, government laboratory, hospital, or education and research institution. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 49000 - Special Topics

Credit Hours: 1.00 to 8.00. Special topics, projects, or readings in selected areas of health sciences at a level appropriate for senior students. Permission of instructor required.

Credits: 1.00 to 8.00

HSCI 49200 - Professional Experience In Health Sciences Internship

Credit Hours: 0.00 to 3.00. Professional experience in Health Sciences. This experiential offering is coordinated by Health Sciences in cooperation with participating employers. Students will submit company evaluations related to the experience or summary reports and assignments related to professional development in Occupational, Environmental or other Health Sciences areas. Permission of department is required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in a professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication and teamwork. 3. Increase knowledge of the application of occupational, environmental or other areas of

health sciences in a professional capacity. Credits: 0.00 to 3.00

HSCI 49501 - School Of Health Sciences Senior Honors Seminar

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Program. This course consists of a 50-minute weekly seminar meeting to discuss current topics in health science, public health, and biomedical research. Students will interact with guest speakers and expand their knowledge base in health sciences research. In addition, each student will be responsible for presenting and reporting on their ongoing honors research project. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Build on the skill to give and evaluate a research presentation. Credits: 1.00

HSCI 49601 - School Of Health Sciences Senior Honors Project

Credit Hours: 1.00. This course is for Senior students in the School of Health Sciences Honors Program. In this course, students will earn credit for work completed on their Honors Project under supervision of their faculty mentor. Students will enroll in this course in both fall and spring semesters (and concurrently with HSCI 49501 in the spring semester). An updated Project Description Form will be at the beginning of each semester based on the progress and any changes to the research plan. Course meeting times and frequency are to be set by the student and faculty mentor with an estimated commitment of 3-4 hours per week. Hours are to be arranged between the student and the faculty mentor, with at least weekly or biweekly meetings set aside for a one-on-one session between the student and faculty mentor. Students may also be matched to professional mentors off campus depending on their interests and future goals. The regular meeting times should be set during the first week of class. Working hours must not conflict with other course obligations or consume too much of students' study time. Permission of department required.

Learning Outcomes: 1. Gain an understanding of the current research areas in health sciences. 2. Develop and design an honors research project specific to the student's research interests. 3. Conduct and complete an individualized research project to gain further understanding of the student's specific research area of interest. Credits: 1.00

White Lodging-J.W. Marriott Jr. School of Hospitality and Tourism Management

About White Lodging-J.W. Marriott Jr. School of Hospitality and Tourism Management

At Purdue's White Lodging-J.W. Marriott, Jr. School of Hospitality and Tourism Management (HTM), we redefine industries by transforming the way people engage with the world. As experience engineers, our students develop the expertise to empower financial security, elevate hospitality and tourism, revolutionize retail, and drive sales innovation.
Whether guiding clients toward financial well-being in Financial Counseling and Planning, designing unforgettable guest experiences in Hospitality and Tourism Management, creating immersive commerce in Retail Management, or developing customer-driven strategies in Selling and Sales Management, our graduates leave ready to make an impact.
Through a combination of academic rigor, hands-on learning, and industry collaboration, we prepare students to think critically, solve complex challenges, and create meaningful connections. Here, learning extends beyond the classroom into real-world applications that drive innovation and elevate professional success.

Event and Meeting Management Minor

HTM International Studies Minor

CSR 10000 - Introduction To CSR

Credit Hours: 1.00. A workshop to familiarize students with the CSR department, department majors, advising resources, and major requirements. Special emphasis on basic freshman survival skills.

Credits: 1.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

CSR 12800 - Introduction To Apparel Design

Credit Hours: 3.00. This course introduces the fundamentals of the Apparel industry, design, and assembly through lectures, discussions, readings and application in an Apparel laboratory. The student will learn the proper operation of industrial garment production equipment. Further, the course will introduce the manufacturing standards of apparel assembly through garment construction, principles of fit and fiber, and fabric performance.

Learning Outcomes: 1. Explain the basics of the nature, materials, producers, and markets of and for fashion and the apparel industry. 2. Identify basic apparel assembly and design techniques, principles of fit, and fiber and fabric performance characteristics within specific types of garments. 3. Operate garment

production equipment in a safe and appropriate manner. Credits: 3.00

CSR 20000 - Professional Development In Consumer Science

Credit Hours: 1.00. Professional Development in Consumer Sciences & Retailing is a required course that will provide the necessary techniques to manage job search skills and career development for both current and future professional needs. The covered topics will expose students to on-campus resources, opportunities to gain key networking skills, and establish their professional identity to better prepare students for the current job market.

Learning Outcomes: 1. Provide life-long job search skills. 2. Enable students to effectively navigate career fairs & networking events. 3. Educate students about Purdue's resources regarding career and academic development. 4. Develop student's professional documents. 5. Assist students in creating their personal professional brand. 6. Perpare students on the transition from college to the professional world. Credits: 1.00

CSR 20100 - Introduction To Professional Sales

Credit Hours: 3.00. Introduction to sales process, business to business communication strategies, and expectations of a sales professional.

Learning Outcomes: 1. Describe the operationalization of sales and the purchasing function within a business. 2. Define the variety of sales roles and determine best fit. 3. Demonstrate the skills necessary to succeed in a sales role. 4. Apply sales process to a role play sales call. Credits: 3.00

CSR 20900 - Introduction To Retail Management

Credit Hours: 3.00. Retail career paths, management training, merchandise control, organization and service structure, and a comparison of store types.

Credits: 3.00

CSR 21500 - Textile Industry

Credit Hours: 3.00. Fundamentals of the textile industry addressing the lifecycle of textile products beginning with the source and properties of textile fibers to the steps in the production of textile products and their impact on product performance and consumer satisfaction. Generate an awareness of the global textile industry as it relates to the impact on the environmental and social communities. Emphasis on retail, apparel, and interior design applications.

Learning Outcomes: 1. Predict fabric performance and end-use based on knowledge of fibers, yarns, fabric constructions, and finishes. 2. Possess a working knowledge of the many facets of processing textiles from raw materials to the finished product, including laws and requirements that regulate textile labeling. 3. Generate awareness of the scope and complexity of the global textile industry as well as the challenges it faces, environmentally and socially. 4. Assess the impact of consumer buying behavior, use, care and disposal decisions on textiles and related industries. Credits: 3.00

CSR 22000 - Apparel Design I

Credit Hours: 3.00. Introductory course that deals with the evolution of apparel design through the principles of flat pattern design, three-dimensional draping, and computer-aided design (CAD for pattern design). Fundamentals for apparel design. Students create designs for a basic, sleeveless, collarless top.

Learning Outcomes: 1. Recognize and apply the creative process: inspiration, designer's resources, visual consumer, garment engineering, and fashion sketching. 2. Recognize, name, and use pattern making tools, equipment, and terminology. 3. Produce and apply the use of a croquis (sketch/design/inspiration) book. 4. Create and continuously add personal designs and inspirations of design to a croquis book. 5. Understand and apply proper use of fabric grain in pattern making and draping. 6. Drape a set of basic block patterns to properly fit an industrial model form: bodices, skirts and sleeves. 7. Understand and apply the use of design principles #1 dart manipulation, and other

patternmaking design details. 8. Create and sketch an original design, complete the patterns, and complete the assembly of: a sleeveless/collarless garment to fit the upper torso only or both upper and lower torso. Credits: 3.00

CSR 22100 - Apparel Design II

Credit Hours: 3.00. Continued development of apparel design from concept to finished product through the application of flat pattern design, draping, and computer-aided design. Building on the introductory course to create apparel wear design that includes sleeves, collars, blouses/shirts, dresses, pants, and skirts. Introduction to pattern grading manually and through CAD, and marker for apparel production.

Learning Outcomes: 1. List, define, and apply sewn products industry and patternmaking terminology as related to apparel design. 2. Measure the human figure and industrial model form for the development and drafting of patterns for apparel. 3. Identify and appropriately make sure of various patternmaking / drafting tools. 4. Apply principles of flat pattern drafting to the production of patterns for original design apparel items of pants, collars, sleeves, and skirts. 5. Apply the principles of draping to the production of patterns for original design apparel items of skirt, pants, collars, sleeves, and torso. 6. Render presentation boards for color story, design inspirations / sketches, target customer profile, item selection of line or collection, fabric trim selection, and technical sketches (flats or production drawings). 7. Create, render, and continuously add personal designs and inspirations of design to a croquis book. 8. Create original design garments from conception of design through rendering to drafted patterns to assembled garment. Credits: 3.00

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

CSR 30000 - Field Experience In Retail Management

Credit Hours: 1.00. Approved in-service training, a total of 140 hours; development of activities plan; and report of activities. Recommended for semesters 3,4,5, or 6. Advance approval of director and employer and attendance at pre- and post-organizational meeting is required. Permission of instructor required.

Credits: 1.00

CSR 30700 - Field Experience In Selling And Sales Management

Credit Hours: 1.00. Approved in-service training and supervised work experience in selling and sales management. Total of 140 hours required with in-depth report and analysis of activities. Permission of department required.

Learning Outcomes: 1. Provide exposure to career options in a real world setting through direct practice or by observation and interaction with colleague at the internship site. 2. Apply theory and relevant coursework in a professional setting, where the student will combine academic and work site assignments. 3. Advance skills and professional experience to enhance the student's career development. Credits: 1.00

CSR 30900 - Leadership Strategies

Credit Hours: 3.00. Provides knowledge of humanistic processes that contribute to development of effective leadership.

Learning Outcomes: 1. Identify leadership principles and skills for the 21st-century organization. 2. Understand and apply ethical leadership. 3. Connect theory to applied solutions. 4. Apply critical thinking to leadership

principles through in-class discussion and written assignments. Credits: 3.00

CSR 31000 - Buying Of Merchandise

Credit Hours: 3.00. Principles of volume buying applicable to department, chain, specialty, and independent stores.

Learning Outcomes: 1. Demonstrate knowledge of the buying and merchandising functions, and their role in a retail organization. 2. Describe definitions and concepts of terminology related to merchandising math. 3. Apply basic mathematical concepts to solve typical merchandising problems and make decisions. 4. Use data to analyze and evaluate the performance of merchandising strategies. Credits: 3.00

CSR 31500 - Relationship Selling

Credit Hours: 3.00. This course focuses on long-term relationship selling. The course is organized around a seven-step selling process which has proven to be effective. The course adds to this process some principles of marketing and business strategy. The elements are necessary for the success of professional salesperson both in successful prospecting and making strategic choices as to how to allocate their time within the territory. Important to the learning process is actually practice of principles. Students will do various exercises of principles such as prospecting and negotiation. At the end of the semester, students will hone the skills learned through the semester with a series of role plays designed to put them in position of both seller and buyer.

Learning Outcomes: 1. Recognize that selling is a process which can be taught versus an innate trait. 2. Have an organized approach to the process of selling which can be applied to any industry. 3. Know principles of marketing and strategy which students can apply to the selling process. 4. Know principles of negotiation and handling objections both through class assignments and role playing. 5. Know how to do effective product presentation and frame benefits to the clients through a series of role play scenarios. Credits: 3.00

CSR 32300 - Visual Merchandising

Credit Hours: 3.00. Creative experimentation, production, and analysis of promotional formats for merchandising of product in a retail setting. Study of the elements and principles of design and their application for promotion of retail merchandise and/or services.

Credits: 3.00

CSR 32800 - Apparel Art And Design

Credit Hours: 3.00. Exploration and experimentation of creative rendering of apparel design through the use of various media. Opportunity for the students to develop their own unique style of illustrating fashion.

Credits: 3.00

CSR 33100 - Consumer Behavior

Credit Hours: 3.00. An interdisciplinary survey of consumer behavior theory focused on psychological, sociological, and cultural influences on consumer choice and use of products and services. Credit will not be given for both CSR 33100.

Credits: 3.00

CSR 33200 - Cross-Cultural Marketing And International Retailing

Credit Hours: 3.00. Examination of marketing/retail practices used to target domestic and global consumer market segments. Development of successful retail and marketing strategies is stressed.

Credits: 3.00

CSR 34100 - Luxury Brand Management

Credit Hours: 3.00. Students examine the innovation and creativity that foster the development of luxury brands in the current business environment. A key facet of this course is the opportunity to develop unique brand strategies that generate social, aesthetic, quality, and emotional value for luxury consumers. Students learn the ways brands tailor services, products, and experiences to achieve these goals.

Learning Outcomes: 1. Define the psychological and cultural elements of luxury brand experiences. 2. Explain the connections between service excellence, craftsmanship, and creative direction within the management of luxury brands. 3. Analyze social, economic, and technological trends within the luxury

market. 4. Describe the ethical and social challenges of managing luxury brands. 5. Develop strategies that create brand prestige and generate value for luxury consumers. Credits: 3.00

CSR 34200 - Personal Finance

Credit Hours: 3.00. The class covers a comprehensive discussion of investments, consumer credit, insurance and retirement issues. The goal is to show how these components are interconnected in order to create a complete picture of financial health of an individual. CTL:IPO 1811 Personal Finance

Credits: 3.00

CSR 34400 - Fundamentals Of Negotiations

Credit Hours: 3.00. This course is designed to be relevant to the broad spectrum of bargaining "problems" that are traditionally faced by the manager, sales personnel and financial advisors. The course explores the processes of bargaining and negotiation as social and managerial activities. Special emphasis will be given to the areas of interpersonal and interpersonal and intergroup conflict, in addition to the interpersonal influence techniques and the tactics and strategies involved with improved bargaining and negotiation. The major purpose of the course is for each student to gain insight into his or her own negotiating style and to become a more effective negotiator, as well as a more astute observer of social process. The course will involve extensive use of cases, role-plays, and related participative activities, enhanced by rigorous self-review and introspection.

Learning Outcomes: 1. Explore the major concepts and theories of the psychology of bargaining and negotiation. 2. Understand the dynamics of interpersonal and intergroup conflict and its resolution. 3. Help develop the sophistication to analyze bargaining and conflict relationships. 4. Learn about your own individual "bargaining" style. 5. Development appropriate negotiation strategies and tactics for specific situations. Credits: 3.00

CSR 35700 - Retail Technology: Merchandise Planning And Allocation

Credit Hours: 3.00. The application of software technology in retail merchandising, planning and allocation systems. Builds on basic knowledge of buying functions utilizing industry software, to develop skills needed in higher-order planning and allocation of merchandise. Students apply knowledge and skills through simulations with real-world data.

Learning Outcomes: 1. Explain the relationship between planning and buying merchandise. 2. Explain the relationship between allocation and supply chain. 3. Evaluate the effects of planning/allocation on revenue & profit. 4. Demonstrate analytical skills through the application of industry software, to make effective merchandising decisions. Credits: 3.00

CSR 36300 - Retail Technology: Category Management

Credit Hours: 3.00. Category management is used by retailers and consumer products companies to reduce costs and increase revenue, based on consumer behavior. Technology to implement category management is used at all levels of the value chain, from producer to procurement to the retail store. Students in this course learn about the theory behind category management from both sales and retail perspectives, then apply that knowledge using industry software to create and analyze visual and data sales plans.

Learning Outcomes: 1. Demonstrate via discussion and examination, concepts of space planning and category management. 2. Create planograms using space planning knowledge and skills. 3. Develop a sales plan utilizing category management process and sales data. 4. Analyze effects on profit and revenue based on category management applications and planogram sales data. 5. Design a retail space that includes: consumer purchasing decisions, coordinates product selection and supply, shelf merchandising, promotion and pricing. Credits: 3.00

CSR 38600 - Risk Management

Credit Hours: 3.00. The course includes principles of insurance, analysis and evaluation of risk exposures, legal aspects of insurance, insurance needs and analysis, policy selection, and insurance company selection and due diligence. Types of insurance that are studied include: property and casualty, health, life, long-term care, disability and general business liability.

Credits: 3.00

CSR 39000 - Undergraduate Special Problems

Credit Hours: 1.00 to 6.00. Individual participation, supervised reading, laboratory or field experiments, or research in special areas of the field. Permission of instructor required.

Credits: 1.00 to 6.00

CSR 39500 - Special Projects

Credit Hours: 1.00 to 6.00. Individual participation in supervised undergraduate project. Open to qualified upperclassmen. Permission of department required.

Credits: 1.00 to 6.00

CSR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for CFS Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Credits: 1.00 to 3.00

CSR 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an International experience that is recognized by the University. Permission of department required.

Credits: 1.00 to 6.00

CSR 39900 - Undergraduate Special Topics In CSR

Credit Hours: 1.00 to 6.00. Various topics that may change from semester to semester are presented by CSR faculty. Permission of department required.

Credits: 1.00 to 6.00

CSR 40300 - Retail Management Internship

Credit Hours: 3.00. A supervised full-time internship in retail and related industries. This experience will enable students to further develop their professional interests and skills. Prior field experience and completion of application and pre-approval of internship by internship director and attendance at pre- and post-organization meetings is required. Permission of department required.

Credits: 3.00

CSR 40400 - Strategic Management For Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. Through the analysis of internal and external forces, students develop strategies to help an organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of an organization. The course is structured to enhance students' analytical, critical thinking, and verbal skills by integrating academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Demonstrate through effective written and oral communication, the ability to conduct a strategic situational analysis of a service organization. 2. Develop a business strategy for a service organization. 3. Integrate and apply prior knowledge areas from your major to propose a functional strategy that aligns with the strategic vision of your service organization. Credits: 3.00

CSR 40600 - E-Retailing

Credit Hours: 3.00. To provide understanding of the technological and retail infrastructure that underlines doing retailing over the internet. Build an understanding of business strategies over the net. To identify management issues and consumer issues in e-retailing.

Learning Outcomes: 1. Understand the technological and retail infrastructure that underlies doing retailing over the Internet. 2. Learn the vocabulary to discuss e-retailing. 3. Build and understand business strategies over the Internet. 4. Acquire power to exploit any business opportunities that jump out your way. 5. Provide the ability to get your hands dirty and use some of the most important net marketing tools. 6. Understand the "business case" for Internet commerce in retailing (or other business). 7. Identify management issues in e-retailing. 8. Understand the consumer issues in e-retailing. 9. Acquire skill sets that allow a competitive market advantage in interviews, jobs and careers. Credits: 3.00

CSR 41500 - Sales Force Management

Credit Hours: 3.00. An introduction to sales force management. An examination of the sales force management process, including principles of recruiting and selecting, training, compensation, motivation, supervision, and evaluation. Planning skills, including sales force deployment and the role of the sales force in sales forecasting, are also covered.

Learning Outcomes: 1. Identify the appropriate balance between the theoretical, analytical, and pragmatic dimensions of professional sales management through discussions and examples of the diverse sales concepts, issues and activities. Credits: 3.00

CSR 41600 - Retail Supply Chain Management

Credit Hours: 3.00. Supply chain management is a set of approaches utilized to efficiently integrate all parties of the supply chain to fulfill a request from a customer. Companies like Amazon, Zara, Walmart, Toyota, Dell, and Procter & Gamble are proof that excellence in supply chain management is a must to achieve industry leadership. With increasing competition around the globe, supply chain management is both a challenge and an opportunity for companies. The main goal of this course is to introduce you to the key concepts and techniques that will allow you to analyze, manage and improve supply chain processes for different industries. The course is a combination of lectures, case studies, in-class exercises, and games with the goal of defining key tradeoffs that managers need to understand and evaluate to successfully manage complex supply chains. Quantitative tools designed to evaluate these tradeoffs will be studied and used extensively throughout the course. Topics that will be covered in this course include: Managing inventory, forecasting in supply chains, the optimal design of the supply chain, transportation and distribution, bullwhip effects and dealing with uncertainty, sourcing and supply contracts.

Learning Outcomes: 1. Develop an understanding of how supply chain management can improve operations efficiency and market responsiveness under uncertainty. 2. Utilize and apply theories, concepts, and optimization techniques in analyzing, managing and improving supply chain processes for various industries. 3. Obtain skills to assess supply chain performance and make recommendations to enhance supply chain competitiveness in today's business environment. 4. Identify current issues and trends in global supply chain management such as sustainability, consumer health, and national security. Credits: 3.00

CSR 41800 - Selling And Sales Management Capstone

Credit Hours: 3.00. A capstone course in advanced professional selling taught in a seminar format and designed to prepare students for the transition from student to professional. Students are introduced to practitioner-focused issues involved in long-term, major B2B account sales and an emphasis is placed on professional presentation skills. Students will complete a senior group research project and a major account sales project. Professional dress code from business-casual to full-business attire required based on the scheduled day-to-day activity.

Learning Outcomes: 1. Construct a complete selling and sales management program (term project). 2. Demonstrate the ability to analyze selling and sales management situations, and apply skills to solving selling and sales management problems and developing effective selling strategies (exams; quizzes; class exercises). 3. Identify how diversity, ethical, global, and multicultural considerations affect the selling and sales management decision-making processes (exams; class exercises). 4. Demonstrate effectively communication skills by the presentation of a research project in an oral presentation and in a written paper (term project presentations and project updates). Credits: 3.00

CSR 42100 - Apparel Design III

Credit Hours: 3.00. Creation of apparel product line or collection from concept to consumer. Application of principles of apparel design from rendering, technical sketches, pattern design, pattern grading, marker making, and construction of several apparel garments from the line or collection.

Credits: 3.00

CSR 48000 - Financial Counseling And Planning Internship

Credit Hours: 1.00. Supervised internship in the financial

services industry. The experience will enable students to develop their professional interest and skills. Attendance at a pre-planning meeting required. Permission of department required.

Credits: 1.00

CSR 48100 - Ethics And Behaviors In Financial Planning

Credit Hours: 3.00. As research in behavioral finance makes increasingly clear, understanding the psychology of financial behaviors is a critical skill for financial planners. Simultaneously, understanding ethical challenges to financial planners' own behaviors, and complying with new and ever more complex regulations, is a key requirement of successful and relevant financial planning and advice-giving. The course will enable students to be better financial planners by reviewing rules of behaviors for financial planners, improving students' capacity to provide fiduciary advice, and enhance their ability to integrate psychological insights into customers' financial behavior throughout the financial planning process.

Learning Outcomes: 1. Identify ethical issues and compliance matters in the field of financial counseling and planning. 2. Evaluate client and planner attitudes, values, biases, behaviors, and their impact on the financial planning relationship. 3. Demonstrate understanding of The CFP Board's Code of Ethics and Professional Responsibility and Rules of Conduct; Disciplinary Rules and Procedures, and Financial Planning Practice Standards. 4. Apply basic knowledge of behavioral finance and its impacts on clients' financial needs (including in times of crisis). Credits: 3.00

CSR 48400 - Consumer Investment And Savings Decisions

Credit Hours: 3.00. A survey of consumer investment alternatives, with emphasis on financial assets.

Learning Outcomes: 1. Analyze investment decisions and investment risk management through portfolio management, capital market equilibrium and asset pricing theories. Credits: 3.00

CSR 48500 - Case Studies In Financial Planning

Credit Hours: 3.00. Financial planning principles and practice. Course utilizes a case study approach toward financial planning for upper- and middle-income households. Business calculator required.

Learning Outcomes: 1. Demonstrate a comprehensive understanding of the content found within the Financial Planning curriculum and effectively apply and integrate this information in the formulation of a financial plan. 2. Effectively communicate the financial plan, both orally and in writing, including information based on research, peer, colleague or simulated client interaction and/or results emanating from synthesis of material. 3. Collect all necessary and relevant qualitative and quantitative information required to develop a financial plan. 4. Analyze personal financial situations, evaluating clients' objectives, needs, and values to develop an appropriate strategy within the financial plan. 5. Demonstrate logic and reasoning to identify the strengths and weaknesses of various approaches to a specific problem. 6. Evaluate the impact of economic, political, and regulatory issues with regard to the financial plan. 7. Apply the CFP Board Financial Planning Practice Standards to the financial planning process. Credits: 3.00

CSR 48600 - Retirement Planning And Employee Benefits

Credit Hours: 3.00. Analysis of employee benefit plans, retirement needs analysis, and types of retirement plans including employer-sponsored plans and participant-directed plans.

Learning Outcomes: 1. Evaluate a client's retirement income and savings need. 2. Explain important provisions of Social Security, The Affordable Care Act and Medicare. 3. Differentiate between individual Retirement Arrangements including those used by individuals and small businesses. 4. Know the rules relating to qualified retirement plans. 5. Conduct an in-depth analysis of qualified plans (e.g. defined benefit, profit sharing, 401(k)

plans, stock bonus plans, and ESOPs). 6. Employ rules and strategies for appropriate retirement decumulation. 7. Understand deferred compensation plans, stock option plans, and planning for executive compensation. Credits: 3.00

CSR 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required.

Credits: 1.00 to 4.00

CSR 49700 - Honors Research Project

Credit Hours: 1.00 to 4.00. The completion of the independent honors research project for CFS Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Credits: 1.00 to 4.00

HTM 10010 - Exploring Transformational Experiences In Hospitality And Tourism

Credit Hours: 1.00. In an age where experiences have become the new currency, businesses must adapt and thrive in the experience economy to succeed. This course introduces students to the concept of transformational experiences within the experience economy, providing them with the knowledge and skills needed to navigate this dynamic landscape. Students will gain a better understanding of where their passions lie within the broader scope of hospitality and tourism, preparing them for academic and career-related success.

Learning Outcomes: 1. Describe transformational experiences that drive business success in the experience economy. 2. Outline current and trending transformational experiences in hospitality, tourism, and affiliated industries. 3. Identify potential career paths within hospitality, tourism, and affiliated industries. Credits: 1.00

HTM 10100 - Hospitality And Tourism Student Seminar

Credit Hours: 1.00. Course assists the student new to Purdue to become acquainted with the Purdue system and with the HTM department and program. Information presented to assist students with developing strategies for academic and career-related success at Purdue.

Learning Outcomes: 1. Describe the curriculum of the Hospitality and Tourism Management Department; the Purdue University registration process and apply that knowledge to plan their academic program and develop a schedule each semester at Purdue. 2. Use the principles of time management in planning their time commitments. 3. Demonstrate individual skills and interests related to career choice. 4. Define and apply civic engagement principles in the local community in service to a non-profit hospiitality or tourism related business. 5. Create a professional resume and understand the interview process in searching for employment. Credits: 1.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

HTM 16200 - Introduction To Event And Meeting Planning Industry

Credit Hours: 3.00. Upon completion of this course, students will have a comprehensive overview of the event and meeting industry. Topics will include the supply and demand side of event and meeting management, the basic planning process needed for any event or meeting, sustainability, business ethics, and keeping pace with current industry trends through guest lectures from event and meeting planners.

Learning Outcomes: 1. Develop a comprehensive overview of the essential supply and demand components of the event industry including corporations, associations, and the government in terms of organization, type, decision makers, attendees, and marketing efforts. 2. Compare and contrast the advantages and disadvantages of major venues of hotels, convention centers, conference centers, cruise ships, and unusual venues to those who demand and plan events. 3. Identify the key players and pioneers of the event planning industry. 4. Identify the basic needs of event planners and consumers. 5. Identify the basic principles and concepts of sustainability as applied to the event management industry. 6. Summarize the major characteristics of event planning with respect to planning, directing, organizing, controlling and assessing events. 7. Identify ethical business practices associated with the event industry. Credits: 3.00

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries.

Learning Outcomes: 1. Explain the tourism system including the roles of travelers, tourism businesses and destinations, and other tourism system components. 2. Describe the impacts of tourism and the basic components of sustainable tourism practices. 3. Identify the key principles of destination marketing and management. 4. Describe key factors that influence consumer travel behavior including personal, interpersonal, and environmental factors. 5. Describe how to apply experience design principles to develop tourism products, services, and experiences. Credits: 3.00

HTM 18000 - Hospitality Operations

Credit Hours: 3.00. Hospitality leaders require a deep understanding of the fundamental principles and practical aspects of managing operations within the dynamic and fast-paced hospitality industry to effectively run a business. This course will address topics including principles of management, organizational structures, managerial decision-making, hospitality metrics, and the responsibilities of managers. Through these topics, the course will strengthen students' understanding of the hospitality industry as it exists today while preparing them for the industry of the future.

Learning Outcomes: 1. Describe the key principles of management. 2. Identify organizational structures, including brands, management, and ownership. 3. Compute key hospitality metrics. 4. Explain how work groups in major types of hospitality businesses interconnect. 5. Understand the responsibilities of leaders in hospitality operations. Credits: 3.00

HTM 18100 - Introduction To Lodging Management

Credit Hours: 3.00. History, features, operation procedures and management of lodging facilities both in the United States and in other parts of the world. The course involves an experiential learning component.

Learning Outcomes: 1. Describe the evolution of the lodging sector in the United States (U.S.) and around the world. 2. Identify hotel types, brands as well as management and ownership structures in 21st century lodging business. 3. Describe how work is organized in hotels. 4. State the duties and responsibilities of positions within lodging business. 5. Describe and critically evaluate front office and housekeeping procedures in hotels. 6. Identify internal and

external reports (such as the STR Report) commonly used in lodging business. 7. Compute basic key performance indicators (KPIs) (such as occupancy percent, ADR, RevPar). 8. Discuss some of the latest technological advances in lodging business. 9. Describe common unethical practices and innovative strategies in reducing such practices in lodging business. 10. Describe other tourism business sectors that interconnect with lodging. Credits: 3.00

HTM 18101 - The Union Club Hotel Experience

Credit Hours: 1.00. Hospitality businesses are complex operations requiring unique managerial approaches to deliver exceptional guest and employee experiences. The Union Club Hotel is ideally positioned to expose students to managerial roles in a multi-million-dollar asset. Students will shadow managers who oversee hotel departments and interact with corporate leaders through this experiential course while learning how managers ensure an exceptional guest experience, provide a positive employee experience, and execute efficient hospitality operations. The knowledge gained in this course is transferable to all hospitality businesses, making this course valuable for all.

Learning Outcomes: 1. Identify principles of management as demonstrated by managers of a hospitality operation. 2. Describe how various departments of a hospitality business interconnect to deliver the guest experience. 3. Describe the importance of fostering a positive work environment for hospitality employees. Credits: 1.00

HTM 19100 - Sanitation And Health In Foodservice, Lodging, And Tourism

Credit Hours: 3.00. This course introduces students to the foodservice component of the Hospitality and Tourism industry and explores food safety and other health-related issues. Application of sanitation principles in restaurants, hospitals, schools, hotels, cruise ships, airlines, and international travel are covered. Students must pass a National Sanitation Certification Examination to receive credit.

Learning Outcomes: 1. Identify the causative agents, symptoms, contributing factors to foodborne illnesses, and the processes used to prevent foodborne illnesses from occurring. 2. Describe how food should be safely handled from purchasing through service to the customer. 3. Describe the role and responsibilities of federal and state governments, local regulatory agencies, and foodservice managers in promoting and maintaining consumer food safety. 4. Describe the overall foodservice inspection system, how inspections are conducted, and how managers should use inspections to improve their food safety. 5. Describe additional health issues relevant to the foodservice, lodging and travel industries and what these industries should do in regards to these health issues. 6. Describe how to effectively communicate with government agencies and the general public as part of normal operations and during crisis management. 7. Describe what and how food safety training of employees should be done. Credits: 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an

internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

HTM 20200 - Hospitality And Tourism Work Experience

Credit Hours: 1.00. This course is a supervised paid industry work experience in the hospitality and tourism industry. Students are required to present a signed agreement from their employer prior to initiating employment. Students are also required to prepare a series of work and reflective reports. A minimum of 320 work hours is required for completion during either a summer or semester period. Permission of department required.

Learning Outcomes: 1. Develop skills necessary to seek their first positions in a hospitality organization. 2. Develop skills to analyze issues in a hospitality organization through the use of various required work experience reports. 3. Analyze the culture and work environment in an organization and determine its strengths and weaknesses. 4. Identify the functions of the various departments within the specific type of operation in which they work. 5. To be able to distinguish between engaged employees and those employees who are disengaged. 6. Describe effective customer service encounters versus those which were not handled properly by their organization. Credits: 1.00

HTM 21200 - Leading For Success In Service Industries

Credit Hours: 3.00. Effective leaders possess knowledge of organizational behavior and skills which provide the capacity to enhance organizational performance. Drawing upon leadership and organizational behavior theories, this course will provide students with the tools necessary to lead teams in service industries. Areas of focus include understanding individual differences and team dynamics, motivating and developing employees, effective decision-making, communication, influence, diversity, and leading change. This course will include preparation for a leadership development certificate, such as the Dale Carnegie Leadership certificate, to be earned upon successful completion of the course.

Learning Outcomes: 1. Describe the roles of managers and leaders in hospitality and tourism and the concepts of organizational efficiency and effectiveness. 2. Identify and explain basic management principles of planning, organizing, directing and controlling as applied to the hospitality and tourism business. 3. Identify basic leadership skills that effective managers in the hospitality and tourism industry possess, including business communication, motivation, decision making, and change management. 4. Identify contemporary management and leadership issues facing the hospitality and tourism industry. 5. Explain the basics of human behavior in organizations, including individual behavior and team dynamics. 6. Discriminate between ethical and non-ethical behaviors on the part of individuals inside and outside the organization. 7. Analyze the impacts of culture and diversity on organizations. Credits: 3.00

HTM 21800 - Creating Experiences For A Diverse Society

Credit Hours: 3.00. This course will provide students with knowledge and skills related to diversity, equity, and inclusion (DEI), and provide students an opportunity to actively increase their cultural competence to help them work with others effectively in professional settings. The course provides frameworks, terminology, and tools for engaging in productive conversations around difficult topics related to DEI. Students use critical and reflective thinking, as well as effective problem solving to create inclusive experiences for all stakeholders.

Learning Outcomes: 1. Define and apply terminology and concepts related to diversity, equity, and inclusion (DEI). 2. Develop awareness and knowledge of DEI best practices to create inclusive experiences for all stakeholders. 3. Demonstrate an understanding of issues related to DEI within the White Lodging-J.W. Marriott, Jr. School of Hospitality and Tourism Management disciplines. 4. Engage in inclusive and interdisciplinary collaborations. 5. Apply best practices to address and propose solutions to current DEI topics within students' academic disciplines. 6.

Demonstrate effective oral, written, and visual communication. Credits: 3.00

HTM 23100 - Marketing In Service Industries

Credit Hours: 3.00. Marketing plays a crucial role in service industries, addressing unique service challenges. Its importance lies in engaging customers, establishing trust and credibility, distinguishing from competitors, boosting revenue, and fostering sustainable growth and success. This course equips students with a customer-centric approach to service industry marketing, emphasizing the integral role of marketing in a service organization's strategic planning. The course exposes students to service marketing principles, components, and marketing practices.

Learning Outcomes: 1. Explain the unique challenges in marketing and managing services. 2. Describe the role of marketing in supporting the strategic direction of a service organization. 3. Evaluate the role of the service marketing mix in solving marketing related problems and promoting the overall success for service organizations. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

HTM 25500 - Advanced Spreadsheet Techniques For Hospitality And Tourism Management

Credit Hours: 2.00. This course builds upon information and skills obtained in an entry-level-computing course. It will take students to the next level by introducing them to more advanced techniques used in Hospitality, Tourism, Retail, and Sales Management.

Learning Outcomes: 1. Demonstrate proper utilization of spreadsheet techniques to effectively organize and analyze data for management presentations. 2. Explain the purpose of selected spreadsheet techniques and describe how they are used in Hospitality, Tourism, Retail, and Sales Management. 3. Demonstrate advanced spreadsheet techniques, such as: Advanced Spreadsheet Formulas; Statistical Analysis; Validating Data Entry; Conditional Formatting; Advanced Charting Techniques; Pivot Tables; Spreadsheet Dashboards; Recording and Using Spreadsheet Macros; Power Query; Advanced Cell/Column/Row/Table Formatting; Creating Templates. Credits: 2.00

HTM 25501 - Fundamentals Of Excel And Data Analytics In Service Industries

Credit Hours: 3.00. The proper application of data analytics is important for optimizing the performance of service enterprises. Spreadsheet programs make it easy to manage and visualize data as well as perform basic data analyses. Microsoft Excel is one of the primary tools used for business reporting and decision-making tasks. In this course, students will receive hands-on training in a wide range of Excel functionalities including using functions and formulas, working with tables, creating charts, and analyzing data using PivotTables. This course will use practical, real-world applications to train students how to make business decisions.

Learning Outcomes: 1. Apply built-in Excel functions and create formulas necessary to analyze data. 2. Apply data visualization techniques to identify and communicate business issues. 3. Demonstrate proficiency using Excel to formulate and solve business problems. Credits: 3.00

HTM 26200 - Festivals And Special Events

Credit Hours: 3.00. This course offers a comprehensive overview of the theory and procedures associated with the

coordination of festivals and special events. Essential topics will include the conceptualization, planning, coordination, sponsorship, marketing, funding, staffing, legal issues, and assessment of festivals and special events. Students will gain hands-on experience by volunteering to work a minimum of six hours to set up, help coordinate, or tear down a large-scale festival or special event.

Learning Outcomes: 1. Classify the types and purpose of festivals and special events. 2. Compare and contrast traditional events and meetings to festivals and special events. 3. Develop a basic understanding of the size and scope and the employment potential of festivals and special events. 4. Describe the key steps necessary to plan, manage, staff, organize, and assess the stated objectives of a festival or special event. 5. Knowledge of economic, financial, and accounting principles and practices of festivals and special events. 6. Apply the principles of sustainability to festivals and special events. 7. Read relevant research and apply it to festival and special events management. 8. Differentiate between ethical and non-ethical business practices. Credits: 3.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

HTM 29102 - Introduction To Foodservice Management

Credit Hours: 3.00. An introduction to food preparation methods and service techniques in quantity food settings. Students become familiar with ingredients and culinary terminology, and learn to read, write and evaluate menus. Recipe conversion, inventory and costing skills are developed. Production methods, equipment, and product flow are examined. Front-of-the-house service techniques as well as front-and-back-of-the-house interactions will be studied.

Learning Outcomes: 1. Describe kitchen operations including culinary terminology, basic cooking methods, equipment and technology, and basic food handling skills, such as food preparation, safety, and quality. 2. Describe service techniques including a la carte and buffet setup and service, cycle of service

(ordering through payment), tableside cooking and service recovery. 3. Describe and demonstrate proper kitchen management systems, such as cost control, inventory control, sales history, and menu development. 4. Explain the importance of timing and quality production in regards to the distribution of goods and services. 5. Describe the relationship between international foods and factors, such as geography, climate, and culture. 6. Identify current foodservice trends, such as: healthy food, menu labelling, and sustainability. 7. Discriminate between ethical and non-ethical behavior on the part of individuals and organizations. Credits: 3.00

HTM 29700 - Introduction To Honors Research

Credit Hours: 1.00. Introduces students to the design and implementation of an honors research project.

Credits: 1.00

HTM 30000 - Semester Internship Experience In Hospitality And Tourism

Credit Hours: 0.00. Mechanism to recognize students in the Purdue system the semester they are off campus participating in an approved semester internship program with a hospitality company. Permission of department required.

Credits: 0.00

HTM 30200 - Hospitality And Tourism Industry Internship I

Credit Hours: 1.00 or 2.00. Opportunities for learning through professional work experience that is practical, meaningful, and aligned with career aspirations are important for career development, planning, and goal setting. As part of the professional development curriculum, this internship course provides students with entry-level experience within the hospitality and tourism industry, broadening their exposure and understanding of the industry to explore potential career paths. Guided by the Ray Kavanagh Career Center and the National Association of Colleges and Employers (NACE) Career Readiness Competencies, students apply what they are learning in the classroom to the workplace.

Learning Outcomes: 1. Develop and apply interviewing and negotiating skills during the process of seeking and being hired into an internship. 2. Recall and explain the strengths and weaknesses of departments and work units from the hospitality operation in which they interned. 3. Describe and explain interactions with the hospitality operation's guests and the development of a positive service oriented attitude. 4. Compare and contrast the differences and similarities of management styles and leadership skill of the supervisors they worked with; evaluate the effectiveness of supervisor or manager; analyze which type of style or skill fits best with their style. 5. Identify new and different experiences encountered during the internship; distinguish the positive and negative aspects of the experience, and appraise these experiences as to their value to their future Hospitality management career. 6. Recall coursework related knowledge and apply and demonstrate this knowledge in areas of Human Resource Management, Finance, Management, Law, and other applicable areas in a hospitality organization. 7. Synthesize the total internship learning experience by completing comprehensive management reports. Credits: 1.00 or 2.00

HTM 31100 - Procurement Management For Foodservice

Credit Hours: 3.00. Identifies and describes food, supplies, and related merchandise used in the foodservice industry. Provides methods and criteria for recognizing quality, evaluating, specifying, purchasing, and inspecting these products. Discusses the use of technology in the purchasing component of the foodservice industry.

Learning Outcomes: 1. Explain foodservice procurement principles such as steps in the procurement process, procurement-menu relationship, quality standards, and vendor relations. 2. Explain factors impacting procurement decisions such as ethics, government regulations, global economic conditions, sustainability, distribution sales channels, technology, competitors, consumer

behavior, and skills and knowledge of buyers. 3. Apply foodservice procurement principles, factors, and data analysis to formulate decisions related to product, quantity, price, supplier/producer/manufacturer, and inventory management. Credits: 3.00

HTM 31200 - Talent Management For Service Industries

Credit Hours: 3.00. Service organizations are labor-intensive, requiring effective talent management to be successful. Managers must be able to attract, develop, motivate, and retain employees to deliver exceptional service. Building on leadership skills and management principles, this course will emphasize the strategic role of human resource management with topics that span the lifecycle of a job (e.g., recruitment, selection, training, performance management, compensation, etc.). Students will explore the science behind effective talent management, developing knowledge and skills that will prepare them to manage a growing and diverse workforce.

Learning Outcomes: 1. Explain the importance of the various elements of strategic human resource management and their contribution to organizational performance. 2. Critique human resource practices by applying theories and research. 3. Create solutions that would address current human resource issues in service industries such as associate engagement, diversity, ethics, and employee well-being. Credits: 3.00

HTM 31400 - Franchising

Credit Hours: 3.00. The study of franchise administration, operations, and marketing, with a special emphasis on hospitality-related franchises. Includes a study of the legal regulation of franchises, the franchisee-franchisor relationship, and unique problems in operating a franchise.

Credits: 3.00

HTM 31500 - Club Management And Operations

Credit Hours: 3.00. A study of the organization, administration, operation, and opportunities within the private club industry, with emphasis on the manager's duties.

Learning Outcomes: 1. Describe the various types of clubs, and the job of a club manager, including attributes of successful club managers. 2. Describe the career prospects in managing clubs; the issues facing clubs today and prospects for the future of the club industry. 3. Explain the fundamentals of good human resource management as it applies to clubs. 4. List issues that are unique or particularly significant to clubs, including legal, technological and financial issues. 5. Explain the differences and similarities between clubs and public hospitality operations. 6. Describe and discuss the products, activities and services in the club industry and how a manager works toward identifying, understanding and improving these in their club. Credits: 3.00

HTM 31700 - Business Etiquette For Managers

Credit Hours: 1.00. A review of contemporary standards of human interaction in the workplace. How manners, etiquette and style affect and enhance everyday dealings with others.

Credits: 1.00

HTM 32200 - Hospitality Facilities Management

Credit Hours: 3.00. Technical and managerial issues relating to the operation and maintenance of the physical plant and equipment in hospitality industry facilities.

Learning Outcomes: 1. Develop systematic solutions to a wide range of facility management problems and evaluate those potential solutions to ensure they are fiscally sound. 2. Explain how systems within a facility function, and what is involved in keeping them functioning properly. 3. Describe what's involved in operating a maintenance department and evaluate their efforts. 4. Describe how to make facilities more sustainable reduce its negative environment impact both during construction and operation. 5. Describe the different regulatory requirements that apply to hospitality facilities such as building codes, licensing, and permit requirements and state the importance of compliance with those requirements. Credits:

3.00

HTM 33100 - Hospitality And Tourism Sales And Service

Credit Hours: 3.00. Application of sales and customer service methods used to generate revenues for hospitality and tourism businesses. Emphasis is placed on a hands-on assignment which requires students to identify a product that they will market and sell, as well as participate in a sales blitz.

Learning Outcomes: 1. Develop systematic solutions to a wide range of facility management problems. 2. Explain how systems within a facility function, and what is involved in keeping them functioning properly. 3. Describe what's involved in operating a maintenance department and evaluate their efforts. 4. Describe the functions of the major pieces of food service equipment and how to purchase each. 5. Describe how operations can conserve utilities and the basic criteria for LEED certification. 1. Apply marketing principles to the sales process in hospitality and tourism industry. 2. Distinguish between ethical and non-ethical behaviors on the part of sales professionals. 3. Identify the buying style of the customer and adapt sales pitch and pace to maximize sales potential. 4. Design a strategy to work with others to accomplish sales goals. 5. Identify, market, and sell a tangible product to the general public. 6. Apply professionalism and customer service principles to the sales process. 7. Apply fundamental accounting skills to formulate, monitor, and accomplish self-imposed sales goals. 8. Apply sales techniques in an actual hospitality and tourism business setting. Credits: 3.00

HTM 34100 - Operations Control And Analysis In The Hospitality Industry

Credit Hours: 3.00. Applications of the control process and quantitative analysis to effectively manage an efficient and profitable hospitality business. The emphasis is on planning budgets, controlling operational activities, and evaluating performance.

Learning Outcomes: 1. Explain the importance of control process to the success of an operation. 2. Describe behavior of costs and evaluate their effects on the operating income in the hospitality industry. 3. Analyze and interpret financial statements. 4. Establish appropriate cost standards and procedures in each state of the product cycle. 5. Construct a labor schedule that will satisfy customer demand, meet employee requests, and keep labor cost down. 6. Apply regression, moving average, and exponential smoothing to forecasting revenue and customer counts. 7. Identify and eliminate excessive food and beverage costs and describe how to eliminate them. 8. Develop an operating budget based on revenue and expense forecasts. 9. Apply revenue management concepts to create demand and maximize revenue for the given demand in restaurants. 10. Prepare visual representations of operational and financial data. Credits: 3.00

HTM 34200 - Financial Management For Service Industries

Credit Hours: 3.00. To create value for owners, managers need to understand the implications of long-term investment and the importance of securing finance to ensure sustainable growth. The primary purpose of this course is to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, and capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Demonstrate proficiency in using Excel to model cash flows and calculate returns in the capital budgeting process. 3. Explain how the risk-return relationship affects cost of capital and stocks/bonds valuation. 4. Explain how capital structure affects firm value and dividend decisions. Credits: 3.00

HTM 35700 - Disruption And Innovation In Hospitality & Tourism

Credit Hours: 3.00. Hospitality and tourism businesses face unprecedented industry shifts requiring proactive leaders. Through this course students will develop an innovative mindset, rethink the status quo, and amplify their creative thinking in designing solutions to current and future business challenges.

Learning Outcomes: 1. Describe innovation theories and trends. 2. Explain how building and sustaining a culture of innovation is a competitive advantage. 3. Describe the core aspects of an end-to-end innovation process. 4. Develop and evaluate innovative solutions to product and service challenges. Credits: 3.00

HTM 36200 - Event And Meeting Management

Credit Hours: 3.00. The principles and practices of event and meeting management will be covered in this course, including: strategic event planning process, project management, risk management, financial management, human resources, stakeholder management, meeting or event design, site location and management, marketing, professionalism, and ethics. Students will gain hands-on experience planning, directing, organizing and controlling a small-scale event.

Learning Outcomes: 1. Determine the purpose of a meeting and identify the relationship of a meeting to organizational strategy. 2. Develop and manage a budget for a meeting/event. 3. Develop the complete plan to meet the goals and objectives of the event (such as reserving rooms, securing meeting space, transportation, and food and beverage). 4. Review the event to determine if the goals and objectives were met. 5. Differentiate between ethical and non-ethical business practices. 6. Work with a team to plan, direct, organize and control a small scale event. Credits: 3.00

HTM 37000 - Sustainable Tourism And Responsible Travel

Credit Hours: 3.00. This course will examine issues associated with sustainability in the hospitality and tourism industry. It will examine how principles of sustainable development and the triple bottom line (economic, social and environmental) are applied to hospitality and tourism. The course will address sustainability across a variety of tourism sectors including destination management, lodging, restaurants and meetings. The course will also examine consumer issues associated with sustainability.

Learning Outcomes: 1. Define sustainability and describe its applications in the tourism and hospitality system. 2. Explain the relationship between tourism and the UN Sustainable Development Goals/Grand Challenges. 3. Describe the components of sustainability programs in tourism and hospitality organizations. 4. Analyze sustainability programs in various tourism sectors to determine their effectiveness in achieving social and environmental goals. 5. Apply and evaluate environmental performance programs in the hospitality industry. 6. Explain the major consumer issues associated with sustainability in the tourism and hospitality industry. 7. Identify and explain principles of ethics as applied to the tourism industry. 8. Identify career opportunities associated with sustainability in tourism and hospitality. Credits: 3.00

HTM 37200 - Global Tourism Geography (UCC: BSS)

Credit Hours: 3.00. Introduction and analysis of specific world travel destinations, including the exploration of geographic features, customs and tradition, population centers, visitor attractions, political, religious, language and other cultural differences as these relate to the hospitality and travel industry. The course is designed to teach students specific geographic knowledge and develop a deeper understanding and empathy for cultural values and traditions that exist outside their own culture.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Identify and explain the interactions of tourism with the culture, economy, and environment of global destinations. 2. Identify international travel patterns and explain their impact on tourism management in promoting cultural understanding and global peace. 3. Locate various countries, major cities, natural wonders,

historic sites and other tourism attractions, both man-made and natural. 4. Describe how the physical environment in specific geographic regions affects the ability of humans to live there and influences inbound and outbound travel. 5. Explain how political, economic, and environmental factors affect travel both positively and negatively. 6. Explain international travel patterns and identify the major travel generating and travel receiving areas. 7. Compare and contrast different cultures throughout the world with your home culture. Identify and explain key differences and their influence on travel. 8. Identify and explain the key elements of interdependence required for the existence of modern day world travel. Credits: 3.00

HTM 38110 - Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management plays a vital role in guiding service businesses to allocate resources efficiently, understand customer behavior, stay competitive, and achieve long-term sustainability and profitability. This course provides students with the theoretical foundation and practical applications of revenue management in service industries. The course cultivates students' revenue optimization mindset and analytical skills. Students will have the opportunity to earn an industry-recognized certification.

Learning Outcomes: 1. Describe the evolution of revenue management in lodging business. 2. Explain commonly used terms in revenue management. 3. Describe the duties and responsibilities of the hotel revenue manager. 4. Demonstrate knowledge of common revenue management activities. 5. Apply the concepts of constrained capacity, market segmentation, and differential pricing when setting prices. 6. Forecast demand. 7. Explain the trade-off between dilution and spoilage when allocating capacity. 8. Set Booking limits with overbooking policies. 9. Explain the role of distribution channels in market competition. 10. Apply revenue management fundamentals to other areas of lodging business such as to food and beverage and meeting and events in hotels. 11. Differentiate between ethical and unethical practices in revenue management. 12. Identify latest technologies used in revenue management. 13. Discuss contemporary issues affecting revenue management." Credits: 3.00

HTM 38600 - Fundamentals Of Hotel Asset Management

Credit Hours: 3.00. The value of a hotel is based on both its operation and the real estate holding. A successful manager needs to understand the relationship between operations and the management of the real estate asset. Hotel asset management involves overseeing operating performance and real estate planning with the goal of achieving long-term profitability and enhancing the value of the hotel property. This course will introduce students to the principles and practices of hotel asset management including real estate management, contracts, as well as the planning and execution of hotel investments. Students with an interest in hospitality finance and real estate investment are encouraged to take graduate-level courses in this area and explore the finance and real estate minors following the successful completion of this course.

Learning Outcomes: 1. Explain the foundations and process of asset management. 2. Identify the key issues related to planning and managing real estate and physical assets. 3. Analyze the effects of contracts on hotel operations and asset value. 4. Apply financial theories and concepts in planning and executing hotel investments. Credits: 3.00

HTM 39000 - Undergraduate Special Problems

Credit Hours: 0.00 to 6.00. Individual or group participation in supervised reading, laboratory experiences, field experiences, or research in special areas of the field. Permission of instructor required.

Credits: 0.00 to 6.00

HTM 39001 - Undergraduate Research In Hospitality And Tourism Management

Credit Hours: 1.00 to 3.00. This course allows undergraduate students to gain valuable experience and knowledge through research in the hospitality and tourism industry. Permission of instructor required.

Learning Outcomes: 1. Demonstrate a basic

understanding of research by participating in a research project under the supervision and guidance of a HTM faculty member. Credits: 1.00 to 3.00

HTM 39200 - Classical Cuisine

Credit Hours: 1.00. Supervised hands-on cooking experience to enhance competencies needed in professional cooking. Permission of instructor required.

Credits: 1.00

HTM 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for CFS Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Credits: 1.00 to 3.00

HTM 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 6.00

HTM 39900 - Special Topics In HTM

Credit Hours: 1.00 to 6.00. Various topics that may change from semester to semester are presented by HTM faculty.

Credits: 1.00 to 6.00

HTM 40000 - Career Mastery: Navigating Your Career And Professional Development Seminar

Credit Hours: 1.00. Successful professionals possess a strong sense of self and the ability to observe the world around them, reflecting, synthesizing, and responding effectively. As the capstone to the professional development curriculum, students have the ability to refine these skills through discussion and reflection in this seminar-style course. Guided by the National Association of Colleges and Employers (NACE) Career Readiness Competencies, this course focuses on honing various aspects of personal and professional development, with a focus on contemporary issues in the workplace, ensuring students are prepared to be effective leaders. Students will be confident, proactive, and well-prepared professionals with a mindset required to successfully transition into the professional world.

Learning Outcomes: 1. Demonstrate a strong sense of professional self-awareness, leadership competencies, and areas for future development. 2. Refine personal brand that best positions self in the competitive job market. 3. Critique complex workplace issues to formulate effective leadership strategies. 4. Formulate a career plan trajectory to achieve identified career goals post-graduation. Credits: 1.00

HTM 40200 - Hospitality And Tourism Industry Internship II

Credit Hours: 1.00. Career development is an ongoing process of refinement and reflection of professional aspirations as one moves along their career path accumulating work experience. As part of the professional development curriculum, and building on the HTM 30200 entry-level internship experience, this course provides students with a graduate-ready experience in their chosen field, focusing on leadership skill development. Through hands-on experiences and guided learning, students gain real-world professional experience while refining their leadership abilities. Students reflect on their performance to foster personal growth in preparedness for careers post-graduation.

Learning Outcomes: 1. Apply theoretical knowledge gained in the classroom to the workplace. 2. Practice career readiness competencies as defined by National Association of Colleges and Employers (NACE) to entry-level management experience. 3. Demonstrate proficiency in effective leadership skills and styles relevant to an entry-level management position. 4. Assess leadership skill development and strengths through self-reflection. Credits: 1.00

HTM 41100 - Hospitality And Tourism Law

Credit Hours: 3.00. Legal issues can damage or even destroy businesses. The primary goal of this course is to educate students to identify behaviors and situations that are likely to result in legal liability for themselves and their operation. By identifying potential legal liabilities, students will be able to develop strategies to reduce their exposure and better determine when to involve a lawyer. Topics include court procedures, civil rights, contracts, negligence, legal and ethical relationships with patrons, employment law, real estate law, ethics, and risk management. Students will use critical thinking and effective problem-solving to analyze cases and determine potential ways to reduce the likelihood of similar legal problems in the future.

Learning Outcomes: 1. Discuss the framework of the legal system and how a case progresses. 2. Analyze legal and ethical standards for hospitality and tourism enterprises including interactions with guests, other patrons, tenants, suppliers, and employees to determine potential consequences if they have not been met. 3. Analyze torts impacting hospitality and tourism enterprises and describe their legal impacts. 4. Describe the dynamics of risk management and develop strategies to mitigate losses. Credits: 3.00

HTM 42200 - Hospitality Facilities Design And Management

Credit Hours: 3.00. The facility is the largest asset for most hospitality operations and profoundly impacts guest experience. How it is designed and managed can be the difference between operational success and failure. The primary goal of this course is to foster student understanding of facility design and physical plant maintenance. Students will learn standard language and concepts along with problem-solving and project management techniques to enable cost-effective decisions in creating a physical environment that maximizes the guest experience.

Learning Outcomes: 1. Explain how systems within a facility function and are maintained in a cost-effective, environmentally friendly manner that meets regulatory requirements and promotes a welcoming, safe environment for employees and guests. 2. Analyze a wide range of facility design and physical plant problems and improvement opportunities to develop cost-effective solutions using systematic problem-solving techniques. 3. Apply standard project management tools and techniques to design a hospitality facility space, including physical plant elements, that promotes a positive guest experience that is ergonomically friendly to guests and employees. Credits: 3.00

HTM 43600 - Customer-Centric Service Design And Management

Credit Hours: 3.00. This course explores and informs the design, management, and innovative strategies of customer-centric firms through the theoretical and empirical services management literature. The course uses conceptual frameworks and cases from a variety of industry sectors.

Learning Outcomes: 1. Describe and apply basic service management principles. 2. Identify strategies that satisfy both customer needs and business performance. 3. Create a service blueprint and use it to inform service design or redesign. 4. Explain how service management differs from customer service. 5. Perform a service audit. 6. Design service strategies. 7. Describe how to develop a service centric culture. 8. Develop strategies that optimize tangible and intangible returns on service excellence. Credits: 3.00

HTM 44100 - Financial Management For The Hospitality Industry

Credit Hours: 3.00. This course deals with subjects and issues facing a financial manager in the hospitality and tourism industry. The primary purposes of this course are to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Explain financial statements and perform financial statement analysis. 3. Utilize financial concepts/tools such as the time value of money. 4. Apply applicable capital budgeting techniques to the hospitality and tourism industry. Determine initial investment cash flows. 5. Explain the concepts of risk/return, and risk preference, investment portfolio, and the Capital Asset Pricing Model (CAPM). 6. Explain the cost of capital concept, cost of debt and stock, weighted average cost of capital, and marginal cost and investment decisions. 7. Explain a firm's capital structure and describe how to choose optimal capital structure. 8. Explain dividend fundamentals and describe factors

affecting dividend policy. 9. Describe interest rates, bond valuation, and stock valuation.
Credits: 3.00

HTM 44300 - Hospitality Operations Control And Analysis

Credit Hours: 3.00. To be successful, a business must maximize revenue and efficiently control costs. This course will equip students with the knowledge and skills needed to plan, analyze, and control service operations. Students will learn essential managerial skills such as establishing operational standards, forecasting sales, budgeting, controlling, and evaluating performance throughout the product cycle.

Learning Outcomes: 1. Identify and monitor operational standards at each stage of the product cycle. 2. Analyze financial statements to identify the strengths and weaknesses of a business. 3. Make business decisions based on the cost structure and business environment. 4. Forecast future demand based on historical and advanced booking data. 5. Develop operational plans and incorporate in operations budgeting.
Credits: 3.00

HTM 46200 - Advanced Event And Meeting Management

Credit Hours: 3.00. Advanced aspects of meeting and event management principles and practices will be covered in this course. A focus is placed on: strategic planning, project management, finance and risk management, event design, site management, and ethics.

Learning Outcomes: 1. Formulate mission, goals and objectives to ensure effective meeting management and monitor and evaluate activities to ensure they meet desired outcomes and contribute to event effectiveness and sustainability. 2. Management meeting or event to achieve mission, goals and quality standards within the meeting's scope, time and budget. 3. Prepare and determine program components and sequence; development selection criteria for, negotiate and execute contracts for speakers; determine food and beverage requirements; design environment (themes and decor) and requirements for staging and technical equipment and production; develop admittance credential systems and related crowd management control systems. 4. Develop, monitor and revise project budget; monitor revenue streams and cash flow; make ongoing effective decisions and wise resource allocations; manage registration processes. 5. Identify and analyze risks for a specific meeting. 6. Develop and implement risk management plans to reduce the probability and impact of undesirable situations. 7. Differentiate between ethical and non-ethical business practices.
Credits: 3.00

HTM 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required.

Credits: 1.00 to 4.00

HTM 49110 - Wine Sommelier Certification

Credit Hours: 1.00. This course involves the application of previously learned information about the principles of wine including vine growing, wine production, sensory evaluation of wine and practices involved in selection and sales of wine in a foodservice establishment. Students are immersed in the analysis and application of the principles and practices of the Guild of the Master Sommelier Program including Level one Certification. Student must be at least 21 years of age.

Learning Outcomes: 1. Describe the historical role of the wine sommelier and the purpose of the International Guild of the Master Sommelier. 2. Identify the major global wine producing regions in terms of Terroir, wine grape growing and wine making practices and traditions specifying whether the region is an Old World or New World area. 3. Identify wine production methods, quality standards, merchandising and pairing with food items for any given wine product. 4. Identify, describe and apply the Guild of the Master Sommelier Wine Evaluation process to specific wine types. 5. Identify and describe (given a specific wine producing

region) the quality control system for that region or area and the wine production factors that are controlled through those regulations; a representative wine for each specific wine producing sub-region and/or district of that region, and specific production steps and wine production terms for the wine produced there. Credits: 1.00

HTM 49111 - Beverage Operation Management

Credit Hours: 1.00. This course teaches students the historical background and modern day principles and management practices regarding the production, selection, purchasing, storage, and service of beverage alcohol in all aspects of the hospitality industry. Students must pass the ServSafe Responsible Service of Alcohol certification examination to earn course credit.

Learning Outcomes: 1. Describe the historical role of alcoholic beverages and the beverage operation in our society. 2. Describe and explain the strategies involved in management of a modern day operation selling beverage alcohol including the design and layout of the operation. 3. Identify the components necessary to manage a successful beverage operation, including purchasing, distribution, and security of beverage alcohol; cost control and pricing strategies; maintaining and controlling inventory. 4. Identify and describe how legal, ethical and social responsibilities impact the management of a beverage alcohol operation. 5. Identify, describe and apply the principles, policies and actions necessary to serve beverage alcohol in a responsible manner. 6. Identify the role of marketing and merchandising in the overall management of a beverage operation. Credits: 1.00

HTM 49112 - Management And Service Of Beverage Alcohol

Credit Hours: 2.00. This course introduces the principles and practices associated with the production of beverage alcohol in the hospitality industry. Lectures and structured tastings will guide students in identifying and describing the unique characteristics of fermented beverages commonly found in the hospitality industry. Course fee. Students will be tasting alcohol as part of this course, they need to be at least 21 years of age to do so legally. Department permission required.

Learning Outcomes: 1. Identify and describe the categories of beverage alcohols including spirits, wine, beer, and ale including the factors involved in the fermentation and distillation of beverage alcohols. 2. Describe and explain the major global wine producing regions and production practices, product varieties, characteristic flavors, service styles, and appropriate food pairings associated with wine. 3. Identify and describe the agricultural principles associated with viticulture, such as geography, climate, harvesting, and dominant grape varietals, and their impact on wine production. 4. Describe and explain regional differences in the labeling of wine. 5. Identify and describe the specific factors unique to wine, through structured tastings. 6. Describe and explain the production methods, styles and characteristics associated with the production of beers, ciders, ales, and distilled beverage alcohols. 7. Identify and describe the specific factors unique to beer, ciders and ales, through structured tastings. 8. Identify and describe the specific factors unique to distilled beverage alcohols, through structured tastings. Credits: 2.00

HTM 49200 - Advanced Foodservice Management

Credit Hours: 4.00. Utilize managerial skills and techniques with planning, organizing, directing and controlling a full-service restaurant operation. Management teams of two to three students develop, market, and operate a restaurant that is open to the public. Emphasis is placed on utilizing effective management skills to create a high-quality, profitable operation with well planned systems and highly motivated, organized employees.

Learning Outcomes: 1. Identify and apply the principles of idea generation and brainstorming in the development of a restaurant concept;

demonstrate the ability to design a menu and marketing campaign responsive to the economic and aesthetic requirements of the concept. 2. Demonstrate the ability to forecast production schedules and staffing needs; explain and demonstrate the ability to work cohesively in a team environment, and demonstrate an appropriate level of professional supervision of a restaurant concept. 3. Apply principles of production flow and timing; demonstrate facility and equipment operation and maintenance and demonstrate competency in utilizing a POS system in the current restaurant concept. 4. Apply principles of purchasing and selection of materials; product storage and rotation and service quality appropriate to the current restaurant concept. 5. Demonstrate the ability to analyze and effectively decrease food costs and increase contribution margins to the current restaurant concept. 6. Identify and apply principles of safety and sanitation (in accordance with Indiana law), and principles of quality food production and wine service to the current restaurant concept. 7. Describe and apply an appropriate ethical standard of conduct in dealings with customers, staff, fellow students and instructors in all parts of the lab and classroom experience. Credits: 4.00

HTM 49201 - Hospitality Operation Management And Leadership

Credit Hours: 4.00. Students apply managerial skills and techniques in organizing, directing and controlling a full-service restaurant operation as they rotate through a variety of managerial positions. Students will also participate in lectures, assignments, and projects on topics related to leadership, such as interpersonal communications (emphasis on culture, gender and age differences), ethical leadership (emphasis on integrity and credibility), public speaking, teamwork and critical thinking. Permission of department required.

Learning Outcomes: 1. Design and implement a marketing campaign targeting one or more of the food service operations. 2. Work cohesively in a team environment, and demonstrate an appropriate level of professional supervision of a restaurant. 3. Coordinate production flow and sequence of service to maximize service quality. 4. Demonstrate facility and equipment operation and maintenance in the restaurant. 5. Apply principles of purchasing and selection of materials, product storage, and rotation appropriate to the restaurant. 6. Identify and apply principles of food safety and sanitation, responsible alcohol service, and quality food production in the restaurant. 7. Describe and apply appropriate ethical standards in dealings with customers, staff, fellow students and instructors in all parts of the lab and classroom experience. 8. Demonstrate the ability to analyze and effectively decrease food costs and increase contribution margins to the current restaurant concept. 9. Compare and contrast issues associated with leading employees from different cultures, ages and genders. 10. Practice interpersonal communication skills by delegating, coaching, and presenting feedback. 11. Evaluate leadership issues in terms of ethics, integrity, and credibility. Credits: 4.00

HTM 49700 - Honors Research Project

Credit Hours: 1.00 to 4.00. The completion of the independent honors research project for CFS Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Credits: 1.00 to 4.00

HTM 49900 - Feasibility Studies And Business Development In Hospitality And Tourism

Credit Hours: 3.00. The study of business development. The course will cover all stages in the feasibility and development process. Emphasis will be on strategic planning, design of systems, models and problem analysis, leading to the opening of a successful hospitality or tourism business.

Learning Outcomes: 1. Review, prepare and present the various components that are involved in a feasibility study. 2. Assess the

various aspects of and create a situational/operational analysis for a hospitality or tourism operation. 3. Explain the various perspectives and operations philosophies. 4. Assess various management and operations philosophies. 5. Analyze and evaluate project planning and project management activities from conceptualization to completion. 6. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting feasibility studies to potential investors and interested others. Credits: 3.00

HTM 49901 - Strategic Management In Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. By analyzing internal and external forces, students develop strategies to help a service organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy development and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of a service organization. The course is structured to enhance students' analytical, critical thinking, and communication skills by integrating their academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Integrate and apply prior knowledge areas from the HTM curriculum in developing a business. 2. Develop and analyze the feasibility, situational, and operational aspects of a hospitality and tourism business. 3. Select and implement an appropriate business model in development of a business plan. 4. Describe the characteristics of a successful business and apply that knowledge to mitigate situational and operational risks. 5. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting a business development plan to potential stakeholders. 6. Prepare and present a business development plan. Credits: 3.00

Division of Consumer Science

FCSE pic 17-18

About the Division of Consumer Science

The **Division of Consumer Science** is passionate about providing transformative scholarship, teaching, and research in order to make a difference in people's lives. Our goal is to equip students with the education and experience needed to succeed and make an impact in their chosen fields. The faculty and staff serve the needs of students, industry, and the community by focusing talents and resources to improve people's lives and meet the needs of the future.
Our **undergraduate majors** in the department include: Financial Counseling and Planning, Selling and Sales Management, and Retail Management. Students in Retail Management can choose an optional concentration in Apparel Design and Technology

Department of Human Development and Family Science

HDFS pic 17-18

About the Department of Human Development and Family Science

The Department of Human Development and Family Science develops knowledge, skills, and programming to promote people's well-being, from the youngest to the oldest ages, and across a wide variety of settings and contexts. The department is widely regarded as a leader in the study of families and individuals of all ages. The department's academic programs prepare specialists at the bachelor's and PhD levels. Faculty conduct significant research on a range of critical issues facing individuals and families in today's society. And, the department employs innovative outreach efforts that extend knowledge to policymakers, employers, professionals, and citizens in Indiana and beyond.

At the undergraduate level, the Human Development and Family Science Department prides itself on providing an educational experience which includes great academic preparation, personal attention, and real-world experience. Each of the majors in the department includes multiple opportunities for hands-on experience applying students' new knowledge to real-life situations. In particular, each major includes a required capstone experience focused on in-depth, applied, experiential learning.

Human Development and Family Science Minor

Human Services, BS

Gerontology Certificate

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 22500 - Human Development Across Cultures

Credit Hours: 3.00. This course provides a basis for interdisciplinary exploration of cross-cultural human development and family relations throughout the lifespan. Key topics include international variation in cultural understandings of parent-child relationships, gender roles, education, work, social relationships, and health/wellness. Students will explore professional applications in an increasingly globalized world.

Learning Outcomes: 1. Understand and respect the diversity of children, youth and families around the world. 2. Identify how family values and traditions vary across cultures and how these variations have emerged within broader ecologies (e.g., economics, treaties, history) of the culture. 3. Articulate processes of intergenerational transmission of culture with a

particular focus on parent-child relationships. 4. Compare and contrast various cultural responses to issues important to children and families, such as conceptions of childhood, gender roles, education, and work-family relationships. 5. Describe how individual characteristics such as friendship, altruism, leadership, academic achievement, delinquency, conflict management, aggression, and morality vary across cultures. 6. Analyze the reasons for migration and immigration and their impacts on children and families. 7. Develop skills for working across cultures, including cross-cultural communication and adapting to culture contrasts when interacting with those from a culture different from one's own. Credits: 3.00

HDFS 26000 - Young Children With Exceptional Needs

Credit Hours: 3.00. A broad overview of learner characteristics and service delivery models for young children (birth-8 years) who are at-risk or have identified disabilities. Students gain understanding of disabilities in young children, of laws relating to persons with disabilities, and roles of special and general educators in providing services to students with identified disabilities.

Learning Outcomes: 1. The student will demonstrate knowledge of: (a) Philosophical, historical, and legal foundations of special education. (b) How principles of development, motivation, behavioral and cognitive learning theories are related to learner differences. (c) Characteristics of learners with exceptionalities, including individual and group diversity that may impact learning. (d) Issues related to environmental and personal barriers that hinder accessibility and acceptance of persons with disabilities and their families. (e) Applicable laws, rules and regulations, and procedural safeguards regarding the planning and implementation of early children special education interventions, including management of behaviors, of children with special learning needs. (f) Issues related to teacher professionalism and ethical practice. 2. The student will demonstrate skills to: (a) Articulate current issues in special education. (b) Define and describe and characteristics of learners with exceptionalities. 3. The student will demonstrate appropriate dispositions regarding: (a) The right of all children through the age of 21 to receive a free and appropriate public education. (b) Access to the natural environment and to the general curriculum as the starting point for special education and early intervention services. Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 30500 - Biosocial Foundations Of The Family

Credit Hours: 3.00. Family ties and family processes in the promotion of individual health and management of disease across the life course are covered. Course reviews research on families and health from multiple disciplinary perspectives.

Learning Outcomes: 1. Describe evolutionary and biosocial theory as the basis of development, using a life course perspective from conception through old age. 2. Identify the

key biological systems involved in behavior, and how they are measured in biosocial research. 3. Explain the direct implications for biological and environmental interactions for families, children, adolescents, and adults. Credits: 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B.

Learning Outcomes: 1. Understand the primary components of child guidance at different developmental stages. 2. Plan and implement developmentally appropriate methods of child guidance and discipline. 3. Understand the influential theoretical perspectives of child guidance/discipline. 4. Modify expectations and guidance strategies appropriately for children with diverse abilities, family demographic characteristics, and cultural backgrounds. 5. Promote and create environments and lessons that prevent challenging behaviors. 6. Demonstrate desirable modeling of behavior. 7. Increase understanding and skills surrounding effective communication with children and parents about child guidance. 8. Gain critical knowledge of the importance of understanding diverse family and community characteristics and how they influence child behavior. 9. Increase understanding and skills for engaging with families, other educators,
and practitioners on child guidance. 10. Demonstrate growth in professionalism as early childhood educators. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

HDFS 31200 - Adult Development

Credit Hours: 3.00. An in-depth study of developmental processes from the transition to adulthood through old age. Particular emphasis is placed on understanding the influence of contexts on adult development.

Learning Outcomes: 1. Identify biological, psychological, social, and demographic aspects of adult development and how they interact over time. 2. Identify theoretical perspectives on human development, and apply them in understanding life trajectories. 3. Understand and apply the process of doing research in adult development. 4. Communicate academic ideas clearly and effectively. Credits: 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment.

Learning Outcomes: 1. Critically evaluate popular conceptions of adolescence and adolescents. 2. Compare and contrast theoretical perspectives on normative development during adolescence. 3. Identify the diversity in the developmental pathways during adolescence. 4. Acquire a framework for assessing the connections between interpersonal development and the larger social context. Credits: 3.00

HDFS 31400 - Atypical Child Development

Credit Hours: 3.00. Atypical child development from conception to adolescence can emerge from genetic, medical/health, educational, psychological, and/or contextual factors. This course will survey factors (e.g., premature birth, obesity, neurodevelopmental disorders, learning difficulties, child abuse, and war) that contribute to atypical child development. It will assess how and when typical and atypical developmental trajectories diverge and the roles of measurement and intervention.

Learning Outcomes: 1. Describe at least three theories of atypical child development. 2. Differentiate typical and atypical child development and describe the roles measurement/assessment may play in this distinction. 3. Identify biological and contextual factors that may promote resilience or atypical development during the following developmental periods: prenatal, infancy, early to middle childhood, and adolescence. Credits: 3.00

HDFS 31801 - Developmental Assessment

Credit Hours: 3.00. This course provides an introduction to the variety and characteristics of developmental assessments for young children, birth to age 8. Students learn formal and informal strategies for documenting individual development and learning; linking assessment and instruction; and, the use of assessment for determining eligibility for early intervention/early childhood special education. Students learn partnering with families, other professionals, as well as cultural and ethical issues in assessment.

Learning Outcomes: 1. Explain appropriate uses of assessment with young children, birth - 8 years of age, for instruction and intervention. 2. Describe the appropriate use of standardized and non-standardized approaches to assessment with young children, including family-centered assessment strategies. 3. Describe and be able to apply the linked systems of assessment, intervention, and evaluation, including in the context of IEP/IFSP development, progress monitoring, and program evaluation. 4. Conduct assessments, accurately interpret results, and critically evaluate assessment data. 5. Explain approaches to inclusion of family members in assessments, including identification of resources and priorities, and strategies for communicating assessment results to families. 6. Describe ethical considerations in assessment as well as cultural, language, and developmental differences that effect assessment implementation and outcomes. 7. Exhibit growth in professional behavior related to assessment of young children and for the field of early childhood education / early childhood special education. Credits: 3.00

HDFS 32500 - Health And Health Care For Children And Families

Credit Hours: 3.00. This course discusses leading causes of child health problems as well as examines the child and family reactions and adjustment to illness and disability. A developmental perspective on coping with health problems from early childhood through adolescence is presented. An overview on global child health disparities is also addressed.

Learning Outcomes: 1. Discuss the impact of illness on children, adolescents, and families. 2. Examine and analyze the leading causes of child and adolescent health. 3. Examine and compare health disparities among national and international children. 4. Determine the complexities and implications of health care policy and barriers to access to care on children, adolescents and families. 5. Determine the importance of implementing family centered

care and interdisciplinary collaboration while providing care for children and adolescents. 6. Identify professional opportunities in child and family health. Credits: 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals, couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents.

Learning Outcomes: 1. Construct a basic knowledge of human sexuality as it pertains to family relations in the personal and professional settings. 2. Compare and describe social, cultural, historical, and technological trends and the interrelationships between these trends and their impact on sexuality, family relations, and personal values and attitudes. 3. Differentiate and examine the many different aspects of sexuality including biological, developmental, medical, cultural, historical, and interpersonal. 4. Demonstrate knowledge that helps to develop a better understanding of students' own feelings and attitudes related to sexuality and how those attitudes and feelings influence their beliefs about individuals, couples, and families. Credits: 3.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

HDFS 33200 - Stress And Coping In Contemporary Families

Credit Hours: 3.00. Examines theoretical perspectives related to family stress and resilience in multicultural and diverse family settings, and connects these perspectives to empirical work on family dynamics, coping, and dysfunction across the lifespan. Topics such as economic stress and poverty, immigrant families, single-parent families, homeless families, adoption, military families, maltreatment, and families coping with illness are explored. The class focuses on environmental, cultural, as well as biological contributions to both risk and resilience processes in individuals and families.

Learning Outcomes: 1. Describe theory and research concerning family stress, coping and social support. 2. Understand how an individual's or family's context plays a role in his/her exposure to and coping with stressors. 3. Explain how individual, familial and environmental processes contribute to risk and resilience in individuals and families. 4. Apply the principles of Family Stress Theory and Risk and Resilience Theory to case studies of families. 5. Demonstrate an ability to understand and empathize with total life experiences (physical. psychological, social) of others by identifying possible motivations/explanations for individual and family behavior. Credits: 3.00

HDFS 34100 - Working With Parents

Credit Hours: 3.00. This course focuses on developing and maintaining effective relationships between parents and professionals working with children, within the context of family-centered practices. Issues related to cultural, linguistic, economic, and developmental differences that affect relations between families and professionals are examined.

Learning Outcomes: 1. Demonstrate an understanding of the development tasks and concerns of parents across the life course. 2. Demonstrate an understanding of the content and design of innovative professional practices and program strategies that seek to promote positive parenting outcomes or reduce/prevent unhealthy parenting outcomes in each developmental stage of parenting. 3. Demonstrate an understanding of how diverse family characteristics and circumstances shape the developmental tasks, concerns, and needs of parents. 4. Demonstrate an understanding of the implications of diverse family characteristics and circumstances for professional practices and program strategies aimed at supporting parents. 5. Demonstrate an understanding of how to creatively work with students colleagues to develop an original program idea that supports parents during a particular developmental stage. Credits: 3.00

HDFS 34300 - Assessment And Case Management

Credit Hours: 3.00. This course is an introduction to case management as a service delivery approach for helping individuals and families in need. This course provides opportunities to practice basic helping and case management skills such as building rapport, assessing client needs, developing intervention plans, professional ethics, and professional writing.

Learning Outcomes: 1. Explain the case management approach to addressing the health and human service needs of children, adults, and families. 2. Differentiate among the various phases and task responsibilities of case management. 3. Analyze how individual differences in human development and motivation for change influence case management work. 4. Apply basic assessment and case management skills in practice interviews with individuals and families. 5. Demonstrate professional documentation and writing ability through the preparation of assessment reports, case notes, and intervention plans. 6. Demonstrate professional helping capacities such as ethical behavior and reflective practice. Credits: 3.00

HDFS 34600 - Research Design And Program Evaluation

Credit Hours: 3.00. This course is an introduction to research methods as used in community programs for children and families including review and application of existing research literature, generating research questions, conducting program needs assessments, evaluating processes and outcomes of existing programs, designing and interpreting applied research studies, and understanding ethical responsibilities in the use and application of research. Instruction has been designed to provide the skills necessary to use existing research and generate new data to benefit programs.

Learning Outcomes: 1. Understand the role of research (and the necessity of using strong research methodology) in the acquisition of knowledge. 2. Acquire knowledge, skills, and professional perspectives for the comprehension, application, analysis, synthesis, interpretation, and evaluation of research/finding. 3. Become familiar with the methods and tools of research, including common research search engines. 4. Develop the basic knowledge and skills needed to understand the research process, including generating a research question, designing a study, analyzing data, and interpreting results. 5. Understand the ethics of conducting and using/not using empirical research findings in academic and professional practice settings. 6. Demonstrate an ability to apply research results to ethical decision making practice. 7. Develop an appreciation for the value of research in improving the quality of professional practice. 8. Write a critical and comprehensive review of the literature on a topic of educational or professional significance and design a research study (using the APA formatting style) as part of a research proposal. 9. Effectively present

research studies and findings to a group. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

HDFS 39000 - Special Topics In HDFS

Credit Hours: 1.00 to 6.00. Supervised readings, discussion, lectures and/or research on special topics in family and individual development. Permission of instructor required.

Credits: 1.00 to 6.00

HDFS 39800 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 6.00

HDFS 40000 - Social Studies In Preschool And Primary Grades

Credit Hours: 2.00. This course focuses on teaching social studies in preschool and primary grade classrooms. It covers the developmental foundations and curriculum applications of social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.

Learning Outcomes: 1. Describe the purposes and importance of social studies in early childhood, including supporting children's understanding of themselves and the diverse nature of their communities, history, economics, citizenship, leadership, and civics and government. 2. Explain appropriate strategies for facilitating children's development of social studies skills. 3. Plan, implement, and evaluate developmentally appropriate instruction in social studies, including responding to the needs of diverse learners. 4. Demonstrate an understanding of Indiana State Standards for social studies for children from birth-3rd grade. 5. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 2.00

HDFS 40500 - Language, Literacy, And Social Studies In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching language, literacy and social studies in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of language, literacy and social studies teaching in pre-kindergarten and of social studies in primary grades and includes ways to plan, implement and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English.

Learning Outcomes: 1. Understand the purposes and importance of reading and writing in early childhood classrooms and homes, including the importance of supporting children's vocabulary, language comprehension, alphabet knowledge, phonemic awareness, and concept and functional use of print. 2. Understand the purposes and importance of social studies in early childhood, including supporting children's understanding of themselves and the diverse nature of their communities, history, economics,

citizenship, leadership, and civics and government. 3. Understand strategies for facilitating children's development of language, literacy, and social studies skills. 4. Plan, implement, and evaluate developmentally appropriate instruction in language, literacy, and social studies, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for literacy and social studies for children from birth-3rd grade (www.doe.in.gov/primetime/foundations and http://dc.doe.in.gov/Standards/AcademicStandards/index.shtml). 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus. Credits: 3.00

HDFS 40510 - Literacy In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching literacy in preschool and primary-grade classrooms. It covers the developmental foundations and curriculum applications of literacy teaching in pre-kindergarten and primary grades and includes ways to plan, implement, and evaluate developmentally appropriate instruction for children with and without disabilities and children who are learning English. Field hours will be required.

Learning Outcomes: 1. Describe the purposes and importance of reading and writing in early childhood classrooms and homes, including the importance of supporting children's vocabulary, language comprehension, alphabet knowledge, phonemic awareness, and concept and functional use of print. 2. Explain the science of reading, particularly the current state of reading research and implications of research for reading instruction. 3. Practice strategies for facilitating children's development of literacy skills. 4. Plan, implement, and evaluate developmentally appropriate instruction in literacy including responding to the needs of diverse learners. 5. Describe the importance and demonstrate the use of Indiana State Standards for literacy for children from birth-3rd grade. 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus. Credits: 3.00

HDFS 40600 - Mathematics In Preschool And Primary Grades

Credit Hours: 4.00. This course focuses on teaching mathematics in preschool and primary grade classrooms. It covers the developmental foundations and curriculum applications of mathematics teaching and includes ways to plan, implement and evaluate developmentally appropriate mathematics instructions for children with and without disabilities and children who are learning English. Field-based experiences in preschool or primary-grade classrooms are included.

Learning Outcomes: 1. Describe principles of developmentally appropriate early childhood education and intervention as they relate to teaching mathematics. 2. Demonstrate an understanding of how children think about mathematical concepts. 3. Identify key mathematics knowledge that children need to learn during the early childhood and primary years 4. Critically and creatively plan, implement, and evaluate developmentally appropriate instruction in mathematics, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for Mathematics for children from birth-3rd grade (www.in.doe.gov/primetime/foundations.html and http://dc.doe.in.gov/Standards/AcademicStandards/index.shtml). 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Note: A 3 hour/week field experience provides students the opportunity to apply knowledge to practice as reflected in objectives 4-6 above. Credits: 4.00

HDFS 40800 - Early Intervention / Early Childhood Special Education: Issues And Professional Practices

Credit Hours: 4.00. An introduction to the field of early intervention / early childhood special education including its origin, services, and practices in working with young children ages birth through eight with or at risk for developmental delays and disabilities and their families. Designing curriculum, environments, and services where all children are included, have equal opportunity for access and engagement, and feel a sense of belonging is addressed. For Early Childhood Education and Exceptional Needs majors only. A field experience in preschool or primary-grade classrooms is included.

Learning Outcomes: 1. Discuss origins of early intervention / early childhood special education including key legislation affecting young children (0-8) who have or are at risk for developmental delays and disabilities and their families. 2. Describe the value of and process for fostering family participation and professional-family collaboration in order to plan and implement family concerns, priorities, and access resources in intervention and education of young children (0-8) who have or are at risk for developmental delays and disabilities and their families. 3. Explain considerations including individualized and culturally / linguistically appropriate service delivery models, assessment, and curriculum for designing and organizing learning environments and experiences for young children (0-8) who have or are at risk for developmental delays and disabilities. 4. Evaluate, select, implement, and reflect on individually and culturally/linguistically appropriate evidence-based instructional strategies and interventions for young children (0-8) who have or are at risk for developmental delays and disabilities. 5. Utilize appropriate teaming and collaboration models, skills, processes, and strategies to engage with families and other professionals in the development of individualized intervention and transition plans. 6. Discuss current issues in providing effective early intervention / early childhood special education services for young children and their families. 7. Exhibit growth in professional behavior related to the field of early intervention / early childhood special education. Credits: 4.00

HDFS 40900 - Science In Preschool And Primary Grades

Credit Hours: 3.00. This course focuses on teaching science in preschool and primary grade classrooms. Developmental foundations and curriculum applications of science teaching including ways to plan, implement and evaluate developmentally appropriate science instruction for young children with and without disabilities and those who are learning English.

Learning Outcomes: 1. Describe principles of developmentally appropriate early childhood education and intervention as they relate to teaching science. 2. Demonstrate an understanding of how children think about science concepts at developmental levels between birth and 8 years. 3. Demonstrate understanding of critical approaches to scientific thinking. 4. Understand key science knowledge and skills that children need to learn from Pre-K to Grade 3 as represented in current science education standards. 5. Assess children's science knowledge, skills, and dispositions, and use the assessment data to plan science education activities. 6. Plan, implement, and evaluate developmentally appropriate classroom science activities, including responding to the needs of diverse learners. 7. Demonstrate positive dispositions and skills of an early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 3.00

HDFS 41200 - Professionalism And Music And Movement In Early Childhood

Credit Hours: 3.00. This course focuses on foundations of

professionalism in early childhood education and early childhood special education. Additionally, this course discusses music and movement in early learning environments. It covers the developmental foundation and curriculum applications of music and movement activities and includes ways to plan, implement and evaluate developmentally appropriate music and movement instruction for children with and without disabilities and children who are learning English.

Learning Outcomes: 1. Demonstrate a comprehensive understanding of the ethical and professional standards in early childhood education, including the importance of maintaining confidentiality, respecting diversity, teaming will colleagues, and upholding the well-being of children and families. 2. Describe principles of developmentally appropriate early childhood education and intervention as they relate to music and movement in early childhood and primary grades. 3. Demonstrate an understanding of children's development of creative expression through music and movement. 4. Plan, implement, and evaluate developmentally appropriate visual music and movement instruction, including responding to the needs of diverse learners. 5. Demonstrate an understanding of Indiana State Standards for Physical Education and Health and Music for children from birth-3rd grade. 6. Demonstrate the dispositions and skills of a developing early childhood teacher, as described in this syllabus and in the practicum evaluation. Credits: 3.00

HDFS 41500 - Approaches To Early Childhood Education

Credit Hours: 3.00. The historical and theoretical basis for early childhood education and early intervention is emphasized. Relations between theory and practice are examined and illustrated with model early childhood programs. Addresses cultural/developmental diversity, ethics, and standards in early childhood education and intervention.

Learning Outcomes: 1. Discuss recommended practices in early childhood education and early intervention, including historical and theoretical sources and reasons for these practices with young children. 2. Describe, evaluate, and apply ideas from influential early childhood curriculum models while incorporating cultural and developmental diversity among young children, families, and the profession. 3. Clearly articulate to others your theoretical assumptions, goals, and practices as an early childhood professional. 4. Describe ethical guidelines and best practice recommendations for early childhood teachers and early interventionists and be able to apply those principles to everyday problems in early childhood education and early intervention. 5. Read, think, speak, and write about the course material, demonstrating your development as a professional, with increased confidence that what you do every day as a teacher is grounded in theory, recommended best practices, cultural sensitivity, and research-based knowledge. Credits: 3.00

HDFS 41800 - Understanding Autism

Credit Hours: 3.00. (PSY 41800, SLHS 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associated with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society.

Learning Outcomes: 1. Describe and explain the behavioral characteristics used to diagnose ASD. 2. Describe and explain the strategies and symptoms used in the early identification of

ASD. 3. Describe and explain the current theoretical perspectives about the causes of ASD and the increasing prevalence of the disorder. 4. Describe and explain the current scientific knowledge on the genetic and neurobiological underpinnings of ASD and how these are related to behavioral symptoms. 5. Describe and explain the range of available evidence-based and non-evidenced-based interventions for ASD. 6. Critically evaluate the empirical research findings as well as media reports related to ASD. Credits: 3.00

HDFS 42000 - Developmental Foundations Of Infant And Toddler Curriculum

Credit Hours: 3.00. Study of typical and atypical development in infants and toddlers as well as implication for practice. Focuses on infant toddler developmental assessment and designing and implementing learning activities in all developmental areas and enhancing parent/professional relationships. Includes a practicum experience with infants and toddlers.

Learning Outcomes: 1. Acquire knowledge of the needs, normal development patterns, and important variations in development (including delays and disabilities) of children from prenatal period to 3 years. 2. Acquire skills in designing, maintaining, and evaluating safe, supportive, stimulating environments for infants and toddlers. 3. Acquire knowledge and skills in implementing developmentally-appropriate and culturally-appropriate assessment and programming for infants and toddlers. 4. Acquire skills providing basic care, education, and guidance for children under 3 years that may be applied in child care settings, family homes, or health care settings. 5. Acquire skills in developing supportive caregiving relationships with infants and toddlers. 6. Acquire skills in collaborating with key adults in infants' and toddlers' lives, including parents, other family members, and allied professionals. Credits: 3.00

HDFS 43030 - Human Development And Family Studies Student Mentors

Credit Hours: 1.00 to 3.00. Advanced undergraduate students selected for this opportunity to serve as mentors to beginning and prospective HDFS students in the department's orientation course (HDFS 10000). Mentors will be matched with a small group of students with similar major/career interests. Mentors will lead small group discussions, provide guidance and feedback, and otherwise serve as a role model to the students. Mentors will receive support and training to be effective in this role. Permission of instructor required.

Learning Outcomes: 1. Develop and communicate a thorough understanding of what they have done to achieve success throughtout their college career. 2. Act as role models to beginning and prospective HDFS students. Credits: 1.00 to 3.00

HDFS 44000 - Expanded ECEEN Student Teaching

Credit Hours: 1.00 to 3.00. This is a full semester of supervised expansion of student teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will occur the semester prior to full-time student teaching and be supervised by an HDFS faculty member and the classroom cooperating teacher. Monthly HDFS sponsored professional development seminars will also be required.

Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Division for Early Childhood of the Council for Exceptional Children. 3. Engage in developmentally appropriate instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. Credits: 1.00 to 3.00

HDFS 45000 - Supervised Teaching In Inclusive Programs For Young Children (UCC: OC)

Credit Hours: **16.00.** This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Council for Exceptional Children. 3. Design developmentally appropriate instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the student teaching environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. 5. Create and conduct one-to-one, small group and/or large group instruction, guidance, intervention, and developmental activities in the student teaching environment. 6. Design and implement appropriate child assessment and evaluation procedures that influence the teaching and learning process. 7. Evaluate their own teaching practices through self-reflection and the analysis of child learning Credits: 16.00

HDFS 45010 - Supervised Teaching In Inclusive Programs For Young Children

Credit Hours: 12.00. This is 16 full-time weeks of supervised teaching in an approved environment that serves children ages birth through 3rd grade with and without disabilities. This experience will be supervised by a HDFS faculty member and the classroom cooperating teacher. Monthly HDFS-sponsored professional development seminars and additional teacher education meetings will also be required. This will partially fulfill requirements for the Indiana Early Childhood Education and the Early Childhood Special Education teaching license. Admission to Student Teaching required.

Learning Outcomes: 1. Apply previously acquired knowledge to the care and education of all young children including those with various abilities and disabilities. 2. Demonstrate competency in the application of the standards outlined for early childhood professionals by the National Association for the Education of Young Children and the Council for Exceptional Children. 3. Design developmentally appropriate instruction and intervention strategies based on community, school and classroom resources that meet the various needs of all young children in the student teaching environment. 4. Demonstrate the ability to work as part of an educational/intervention team for appropriate care and education of all young children. 5. Create and conduct one-to-one, small group and/or large group instruction, guidance, intervention, and developmental activities in the student teaching environment. 6. Design and implement appropriate child assessment and evaluation procedures that influence the teaching and learning process. 7. Evaluate their own teaching practices through self-reflection and the analysis of child learning. Credits: 12.00

HDFS 45100 - Internship & Career Preparation For Human Services

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue

Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship. 5. Develop and apply professional interview skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

HDFS 45400 - Internship & Career Preparation For Developmental And Family Science

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship search. 5. Develop and apply professional interviewing skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

HDFS 45500 - Human Services Capstone Internship

Credit Hours: 6.00 or 12.00. Supervised full-time or half-time internship in human services, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in human services. Students will use and enhance their skills in direct service to client or indirect service. Students will work in the placement setting secured during HDFS 45400. Example field placement sites include: government or community agencies; social service agencies; hospitals; and recreational settings. Permission of Department required. Must be a student in good academic standing during the internship semester.

Learning Outcomes: 1. Synthesize previously acquired and new knowledge about individual development, family processes, and broader social contexts and apply it to their responsibilities in their internship setting. 2. Demonstrate skills in direct service to children, adults, and/or families in the planning, evaluation, management, or support of human services programs. 3. Exhibit professional work attitudes and behavior. Credits: 6.00 or 12.00

HDFS 45800 - Development And Family Science Capstone Internship

Credit Hours: 6.00. Supervised internship for the Developmental & Family Science major, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in developmental and family science. Students will use and enhance their skills in child development, family and community health, or another area related to developmental and family science. Students will work in the placement setting secured during HDFS 45400. Must be a student in good academic standing during the internship semester. Permission of Department required.

Learning Outcomes: 1. Synthesize previously acquired and new knowledge about individual development, family processes, and broader social contexts and apply it to responsibilities in the internship setting. 2. Demonstrate relevant workplace skills including direct service to clients, program development and evaluation, and/or other appropriate tasks. 3. Exhibit professional work attitudes and behavior. Credits: 6.00

HDFS 49000 - Independent Study

Credit Hours: 1.00 to 4.00. Independent study. Permission of instructor required.

Credits: 1.00 to 4.00

HDFS 49101 - Mentored Research In Human Development And Family Studies I

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member.

Involves developing a research proposal, beginning the project, and submitting a summary of the project plan and progress. First semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required.

Learning Outcomes: 1. Critically and creatively synthesize knowledge and skills gained as a DVFS major, using them in a research project of the student's interest. 2. Synthesize and apply previously acquired and new knowledge of the HDFS field through in-depth exploration of a topic of interest. 3. Observe and participate in the research process, including generating a written report of the project. 4. Work collaboratively with a research mentor and/or research team. 5. Make decisions using the logic of the scientific method. Credits: 3.00

HDFS 49102 - Mentored Research In Human Development And Family Studies II

Credit Hours: 3.00. Independent study in which student engages in research under the supervision of a faculty member. Involves completing a research project, writing up the results, and presenting the results to a new audience. Second semester of a two-semester sequence to fulfill the requirements of the capstone thesis for the Developmental & Family Science major. Permission of instructor required.

Learning Outcomes: 1. Critically and creatively synthesize knowledge and skills gained as a DVFS major, using them in a research project of the student's interest. 2. Synthesize and apply previously acquired and new knowledge of the HDFS field through in depth exploration of a topic of interest. 3. Observe and participate in the research process, including generating a written report of the project. 4. Work collaboratively with a research mentor and/or research team. 5. Make decisions using the logic of the scientific method. Credits: 3.00

School of Nursing

About

The School of Nursing is responsible for administering all degree programs in nursing offered at the West Lafayette campus of Purdue University.

A broad liberal and scientific education is necessary to prepare baccalaureate nursing program students for professional nursing practice. The Purdue University School of Nursing curriculum provides each student with a firm foundation in the liberal arts, supportive sciences, and professional education. Education of the professional nurse is enriched by a diverse faculty who have clinical expertise and scholarly achievement by participation in continuing education and in professional nursing organizations.

Following successful completion of the program of study, the nursing graduate may apply to take the National Council Licensure Examination (NCLEX) for licensure as a registered nurse (RN). There are specific requirements for eligibility to take the examination. Any person who applies to the Indiana State Board of Nursing for license to practice as a registered nurse must not have been convicted of a crime that has a direct bearing on the person's ability to competently practice or have committed an act that would constitute a ground for disciplinary sanction under Indiana statutes.

Eligibility requirements in other states may vary. You may request a copy of eligibility requirements by writing to the Board of Nursing in the state in which you are seeking licensure.

Nursing, BSN

Accelerated Nursing, BSN

NUR 10800 - Introduction To Nursing

Credit Hours: 1.00. Introduce students entering the nursing profession to foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements and responsibilities within the profession. Students are introduced to the rigor of the curriculum and begin to build a sense of community within the Purdue School of Nursing.

Learning Outcomes: 1. Explain the relationship between the Essentials of Baccalaureate Education for Professional Nursing Practice document and Purdue's baccalaureate nursing curriculum. 2. Describe the roles of the professional nurse in the healthcare delivery system. 3. Describe individuals, families, communities, and populations as consumers of nursing care. 4. Reflect upon personal and professional responsibilities in relation to the nursing profession. 5. Communicate in oral and written form at a professional level. 6. Identify personal behaviors necessary for success in an academic and professional career. 7. Engage in student and/or nursing organizations as an aspect of professional growth and development. Credits: 1.00

NUR 10900 - Introduction To Nursing II

Credit Hours: 1.00. Using knowledge acquired in NUR 10800 students will examine the profession of nursing and their role and responsibilities within the profession. Topics to be discussed include informatics and technology, the importance of professional communication in oral and written form, the global image of nursing, wellness and self-care, and preparation for progression into the sophomore year. Permission of department required.

Learning Outcomes: 1. Demonstrate the ability to communicate in oral and written form at a professional level. 2. Explore the roles of the professional nurse in both domestic and global healthcare delivery systems. 3. Examine the role of social media and its impact on healthcare. 4. Identify components of effective and ineffective communication in the healthcare environment. 5. Discuss the use of informatics in documenting the management of patient care. 6. Identify skills and personal behaviors necessary for success in an academic and professional career. Credits: 1.00

NUR 21801 - Health Assessment And Essentials Of Nursing Practice I

Credit Hours: 5.00. Focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client centered safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients from the healthy to chronically ill populations. 2. Develop critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 3. Discuss the impact of evidence based nursing research in guiding practice. 4. Identify the effect of personal values and beliefs on professional practice. 5. Develop basic physical and psychosocial clinical

assessment skills for the client across the lifespan, including interviewing techniques, and comprehensive history and physical exam. 6. Employ basic principles of documentation to describe clinical findings. 7. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 8. Use informatics appropriately in simulation and in the clinical setting. 9. Identify methods and resources for personal and professional growth. Credits: 5.00

NUR 21901 - Pathopharmacology I

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort and the pharmacotherapies utilized as treatment for alterations and disease states. This introductory knowledge provides the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe primary regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations in body structure and function affecting homeostasis; metabolic processes; immune response; circulation; renal elimination; fluid/electrolyte and acid/base balance; sensory perception and comfort. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and comfort. 4. Idenify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contraindications, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22001 - Essentials Of Nursing Practice II

Credit Hours: 5.00. Continues to expand on the professional nursing role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients in the clinical setting. 2. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 3. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 4. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 5. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 6. Identify client adaption and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 5.00

NUR 22101 - Pathopharmocology II

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function and the

pharmacotherapies utilized as treatment for alterations and disease states. This course builds on the learning objectives from Pathopharmacology I to provide the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe the primary regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 4. Identify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contradictions, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into the overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22201 - Population Health

Credit Hours: 2.00. A comprehensive introduction to population health concepts and practices through examination of philosophy, purpose, functions, activities and tools. Multiple determinants (genetics, cultural, social, and behavioral factors) that influence population health and illness are explored including the contribution of these factors to health disparities. Population-focused initiatives for health promotion and disease prevention are examined within the context of local to global public health systems.

Learning Outcomes: 1. Describe the context and scope of public health from a historical and modern perspective. 2. Describe the methodology used by public health to define and address population health issues. 3. Identify public health's interprofessional nature and the contributions of different disciplines to improving population health. 4. Describe the ethical, legal, organizational, financial, and structural aspects of the current US and selected global health care delivery systems. 5. Discuss the contribution that biostatistics, epidemiology, information technology, and evidence-based practice make in improving health and preventing, detecting and minimizing the impact of disease and injuries. 6. Explain how multiple determinants (genetics/genomics, social, behavioral, environmental factors) contribute to specific population health outcomes from a local to global perspective. 7. Describe the principles needed to understand population health issues including planning, implementing and evaluating interventions across the lifespan. 8. Identify public health's roles in addressing the needs of vulnerable populations and eliminating health disparities across the lifespan. Credits: 2.00

NUR 22301 - Foundations Of Research And Evidence-Based Practice (UCC: IL)

Credit Hours: 3.00. Students gain foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. Students learn the principles of research process and identify strengths and limitations of research articles in relation to EBP in nursing and healthcare.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently to Information Literacy Competency Standards for Higher Education. 3.

Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical practice. 5. Examine economic, legal and ethical issues related to conducting research. Credits: 3.00

NUR 22401 - Nursing Practice Foundations I: Health Assessment

Credit Hours: 4.00. Designed for second degree students, this course focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical experience, learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client-centered, safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Develop beginning critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 2. Discuss the impact of evidence based nursing research in guiding practice. 3. Identify the effect of personal values and beliefs on professional practice. 4. Develop basic physical and psychosocial clinical assessment skills for the client across the lifespan including interviewing techniques, and comprehensive history and physical exam. 5. Employ basic principles of documentation to describe clinical findings. 6. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 7. Use informatics appropriately in simulation and in the clinical setting. 8. Identify methods and resources for personal and professional growth. Credits: 4.00

NUR 22501 - Nursing Practice Foundations II: Fundamentals

Credit Hours: 4.00. Designed for second degree students, this course continues to expand on the professional nurse role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients representing healthy to chronically ill populations. 2. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients in the clinical setting. 3. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 4. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 5. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 6. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 7. Identify client adaptation and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 4.00

NUR 22601 - Topics In Nursing Research And Evidence-Based Practice

Credit Hours: 3.00. Introduces foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. The principles of research process and strengths and limitations of research articles in relation to EBP in nursing and healthcare are identified.

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently according to Information Literacy Competency Standards for Higher Education. 3. Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical research. 5.

Examine economic, legal, and ethical issues related to conduction research. 6. Discuss the process of translating research evidence into practice. 7. Demonstrate the characteristics of an innovator that are necessary for EBP, which include leadership, a sense of inquiry, flexibility to change, awareness of self and of the environment, effective communication, critical thinking, lifelong learning, and professionalism. Credits: 3.00

NUR 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 31401 - Health Alterations In Adults I

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of well-being as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in tissue integrity related to surgical interventions, cellular division, reproductive function, elimination, nutrition and sensory function that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision-making when caring for diverse populations of adults experiencing selected illnesses. 2. Utilize the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related (including gerontologic) pathophysiology when providing care to diverse populations of adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence- based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to client, client's family, and other members of the healthcare team. 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes. 10. Utilize patient care technologies, information systems, and communication devices to access, retrieve,

organize and communicate information in a professional manner. Credits: 6.00

NUR 31501 - Nursing Of Childbearing Families

Credit Hours: 5.00. Promotes the development of nursing skills when caring for families and their newborns during uncomplicated and/or complicated childbearing experiences within a variety of clinical settings. Emphasizes the study and application of the nursing process, integrating evidence based practice while meeting the health and safety needs of diverse childbearing families.

Learning Outcomes: 1. Integrate theory and evidence to guide nursing practice and clinical decision-making throughout the care of childbearing families. 2. Incorporate childbearing family participation throughout health promotion, disease prevention, and risk reduction processes. 3. Address the childbearing family's developmental, physiologic, and psychological needs. 4. Assess ethical, legal, and sociocultural influences on resource utilization and compassionate maternal-child health care delivery. 5. Design targeted plans of care via a partnership with childbearing families, intra- and interprofessional teams, professional organizations, and institutions. 6. Utilize information technology to enhance learning, practice, and communication. Credits: 5.00

NUR 31601 - Integration Seminar I

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and obstetrical diagnoses. Through the course activities the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medical-surgical and obstetrical populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

NUR 31701 - Health Alterations In Adults II

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of wellbeing as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in health related to oxygenation, circulatory dynamics, endocrine regulation, neurological regulation, immune regulation and musculoskeletal dynamics that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision making when caring for diverse populations of adults experiencing selected illnesses. 2. Demonstrate appropriate use of the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related pathophysiology when providing care to adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence-based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to the client, client's family, and other members of the health care team 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate

the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes that emphasize client safety and evidence-based practice. 10. Use patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31801 - Psychiatric And Mental Health Nursing

Credit Hours: 5.00. Focuses on providing nursing care that supports mental health and the care of persons with mental illness while providing a conceptual integration of the nursing process, theories, and research from the biopsychosocial sciences and humanities. Demonstrates the relevance of psychiatric-mental health nursing concepts to all areas of professional practice.

Learning Outcomes: 1. Examine the effects of myths, stereotypes, stigma, values, beliefs and culture on the practice of psychiatric nursing. 2. Compare past, current, and projected systems in delivery of evidence based mental health care and its social implications. 3. Identify legal and ethical implications involved in the practice of psychiatric mental health nursing. 4. Utilize the nursing process in the phases ofthe therapeutic nurse-client relationship to delineate the complex needs of clients with psychiatric disorders.. 5. Identify the principles of communication and therapeutic relationships in the care of clients with psychiatric disorders. 6. Determine specific nursing care interventions for acute and serious behavioral health issues that demonstrate developmentally and culturally appropriate strategies. 7. Utilize the ANA Standards of Psychiatric and Mental Health Nursing Practice as a basis for safe and competent care. 8. Incorporate theory, research and evidence from the psychobiological sciences, biological sciences, and humanities into an evidenced based practice approach to psychiatric nursing care. 9. Utilize client care technologies, information systems, and communication resources to access, organize and communicate information in a professional manner. 10. Establish therapeutic, collaborative relationships with members of the interdisciplinary treatment team. 11. Demonstrate personal and professional growth and skill development when providing evidence-based nursing care to clients with psychiatric disorders. Credits: 5.00

NUR 31901 - Integration Seminar II

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and psychiatric diagnoses. Through the course activities, the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medically and psychologically unstable populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

NUR 33001 - Nursing Peer Mentors

Credit Hours: 2.00. Peer mentorship role to assist students entering the nursing profession to develop an understanding of the foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements, and responsibilities within the profession. To help students acclimate to college and begin to build a sense of campus community and community within the Purdue School of Nursing. Important attributes of a peer mentor are the desire to develop and help others, an openness to spending time with diverse individuals who may not share a common background, values, or goals, and a willingness to share failures and personal

experiences to provide valuable opportunities for learning. A peer mentor should have a growth mindset and learning attitude, skill in developing others through active listening, asking open-ended questions, self-reflection, and providing feedback, and the ability to commit time and energy to the mentoring relationship. Permission of department required.

Learning Outcomes: 1. Actively create supportive, intentional relationships with mentees based on mutual trust, respect, and accountability that create a safe space for mentees to work towards personal learning goals. 2. Provide objective guidance and feedback to mentees based on personal experiences navigating the University and School of Nursing environment. 3. Facilitate reflective thinking by asking thought-provoking questions that seek deeper meaning and help the mentee become more self-aware of strength and growth opportunities. 4. Serve as a role model for personal growth and learning by employing practices of goal setting, seeking feedback, and reflection for one's own development during the mentoring relationship. Credits: 2.00

NUR 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in nursing. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

NUR 39699 - Professional Practice Internship

Credit Hours: 0.00. Program coordinated by Nursing with cooperation of participating employers and the Office of Professional Practice. Students will submit summary reports and company evaluations related to the experience. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional nursing context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Incorporate knowledge of the nursing profession and practice, basic nursing

principles, and principles and practice of ethical responsibilities in professional work. Credits: 0.00

NUR 39801 - International Special Topics

Credit Hours: 1.00 to 6.00. Course taken during an international experience that is recognized by the University. Permission of department required.

Learning Outcomes: 1. Course outcomes will vary depending upon specific study abroad experience in which the student participates. Credits: 1.00 to 6.00

NUR 39900 - Special Topics

Credit Hours: 0.00 to 3.00. Hours, credit, and subject matter to be arranged by faculty.

Credits: 0.00 to 3.00

NUR 41001 - Issues In Professional Nursing

Credit Hours: 2.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues and key trends surrounding social determinants of health policy and economics, regulatory agencies, political action, cultural diversity, practice competency, nursing informatics and ethics are used as a framework. Permission of department required.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Evaluate historical components and current nursing practice that impact healthcare systems. 3. Demonstrate understanding of the impact of local, state, national and global regulations on healthcare trends and healthcare policy. 4. Evaluate the impact that economic, political, cultural, and social concerns have on the role of professional nursing and the healthcare delivery system. 5. Articulate the value of pursuing practice excellence, life-long learning, engagement, self care, and resilience in professional nursing practice. 6. Utilize inquiry, analysis, information literacy, nursing informatics to address practice issues, ambiguity, and unpredictability in the healthcare systems. Credits: 2.00

NUR 41401 - Pediatric Nursing

Credit Hours: 5.00. Explores factors influencing the health and wellness of children and families. Students will apply principles, concepts and research from the health and human sciences to the care of children and families across the health-illness continuum. A structured clinical component focuses on clinical reasoning and evidence based practice. Students will provide family centered care to healthy, at risk and ill children across a variety of clinical settings.

Learning Outcomes: 1. Integrate family theories; growth and development; genomics; environmental and psychosocial factors in the care of children across the health-illness continuum. 2. Integrate nursing concepts into evidence based nursing practice for children and families across a variety of health care settings. 3. Apply knowledge of information technologies to improve health outcomes of children and families. 4. Evaluate environmental and psychosocial risk factors for children and families. 5. Adapt nursing care to families, recognizing their diverse needs, ethnicity, culture, and values. 6. Evaluate the collaborative role of the nurse with other health care disciplines in the provision of comprehensive nursing care for healthy, at risk, and ill children. 7. Demonstrate a spirit of inquiry, responsibility and accountability within legal, ethical, professional and organizational parameters. Credits: 5.00

NUR 41501 - Public Health Nursing

Credit Hours: 5.00. Utilize health promotion, maintenance, education and disease prevention in coordinating and providing population-focused care to individuals, families and aggregates in the community. A variety of clinical settings are used to offer students a broad, comprehensive perspective of public health nursing, a field that synthesizes content from nursing, social and public health sciences. Collaboration with the community and implementation of population-focused interventions foster critical thinking and independent decision making in the delivery of nursing care.

Learning Outcomes: 1. Synthesize concepts, theories, knowledge and practice from nursing, social and public health sciences. 2. Examine the structure, function, and influence of historical, political, social, environmental, cultural, and ethical factors to the health of individuals, families, and communities. 3. Collaborate with interdisciplinary healthcare and human service providers to address the health needs of individuals, families, and communities. 4. Utilize principles, concepts, models, theories and research to guide culturally sensitive nursing care and public health practice of individuals, families, and communities. 5. Explore the delivery of public health nursing services to diverse and vulnerable populations. 6. Formulate client teaching strategies that address the principles of disease prevention and health promotion to clients across the lifespan. 7. Evaluate interventions implemented using community and family resources to address mutually identified health needs of clients. 8. Use principles of caseload management, in the delivery of safe, quality public health nursing services that reflect legal, ethical, and professional standards. 9. Apply national health objectives in planning interventions to meet the individual, system, and community level needs of diverse populations. 10.Utilize health care technology to improve health outcomes of individuals, families, and communities. 11.Integrate the role of advocacy into the delivery of care to individuals, families, and communities. Credits: 5.00

NUR 41701 - Leadership In Nursing

Credit Hours: 3.00. Studies the components of nursing leadership and management functions with an emphasis on critical thinking, problem solving, communication, and team building within the context of experiential problem-based group projects. This course will provide specific practice and evaluation of strategic and financial planning, conflict management, delegation, and complex change. Competencies to be gained, at a novice level, include professional communication, sound ethical and legal judgments within personal and organizational frameworks, leadership skills in the management and evaluation of others, and an understanding of the drivers of healthcare change and finances.

Learning Outcomes: 1. Synthesize concepts of nursing leadership and management in relation to the role of the professional nurse, nurse leader, and manager in promoting safe and quality care. 2. Organize a quality improvement project by utilizing project management strategies, quality improvement principles, and evidence-based practices to promote system changes in healthcare delivery. 3. Utilize concepts of professional communication, delegation, and evaluation of healthcare team members with an awareness of ethical, professional, social, and legal issues implicit to nursing leadership and management. 4. Describes economic, policy, social, and organizational factors that influence the professional nurse and healthcare systems. 5. Evaluate the impact of professional and unprofessional behaviors on healthcare delivery and professional interactions and presentations through knowledge of nursing standards of excellence. Credits: 3.00

NUR 41901 - Professional Nursing: Evolution As A Clinician And Leader

Credit Hours: 3.00. Incorporate the use of critical thinking, clinical reasoning, and active learning in analyzing contemporary issues related to professional nursing practice and obtaining professional nursing licensure. Issues surrounding political action, socio-legal concerns, cultural diversity and ethics in nursing practice are used as a framework.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Articulate the value of pursuing practice excellence, life-long learning, and engagement in professional nursing practice including membership in professional organization, completion of

continuing education, and specialty certifications. 3. Integrate principles of evidence-based practice, ethical decision-making, inter-professional communication, and advocacy to answer complex questions related to the practice setting. 4. Evaluate the impact of local, state, national and global health policy on the healthcare system. 5. Differentiate the professional nurse's role in health policy development and implementation. 6. Apply effective study habits and test taking strategies to enhance performance on the NCLEX-RN exam. Credits: 3.00

NUR 42001 - Transition To Professional Nursing Practice

Credit Hours: 4.00. This course challenges students to use critical thinking and clinical reasoning to identify, prioritize and evaluate nursing interventions for clients with complex healthcare issues. Students interact with members of the healthcare team and clinical faculty to practice effective leadership, delegation and supervision of nursing students in clinical environments.

Learning Outcomes: 1. Apply sound clinical judgment, professional behavior, communication, collaboration and integration of best practice in clinical settings. Demonstrate/apply professional behavior, communication, collaboration and sound clinical judgment by integrating best practice in clinical settings. 2. Utilize the nursing process when caring for clients with complex healthcare needs. 3. Articulate the value of pursuing practice excellence, life-long learning, patient advocacy and engagement in professional nursing practice. 4. Demonstrate effective leadership, delegation and supervision when collaborating with members of the healthcare team. 5. Assume personal responsibility for professional growth. 6. Analyze system barriers that effect quality healthcare delivery in patients affected by complex conditions. Credits: 4.00

NUR 43001 - NCLEX Review

Credit Hours: 2.00. The NCLEX-Prep is a pre-graduation comprehensive review of nursing content implemented in the senior year. The course is utilized as supplemental to assist with overall content review. Students will use their ATI account to access the content and will be assigned an ATI educator. The course is used to assist students to prepare for the ATI Comprehensive Predictor (Program Exit Exam), and NCLEX (National Council Licensure Examination).

Learning Outcomes: 1. Demonstrate an increased understanding of nursing content related to NCLEX. 2. Develop a study base for post-graduate RN content review. 3. Improve test-taking strategies specifically for NCLEX. 4. Increase individual awareness of content deficits. 5. Recognize the need for continued preparation after graduation. Credits: 2.00

Department of Nutrition Science

About

Nutrition Science is a multidisciplinary science at the core of health, wellness, and quality of life. An education in Nutrition Science incorporates the human perspective to a foundation of strong basic sciences such as biochemistry, physiology, and statistics with experiential learning.

The department offers many opportunities for students to work and learn in a clinical research setting. With this kind of education and training, Purdue's Nutrition Science graduates are prepared to become the future leaders in nutrition and food science.

The department offers undergraduate study in the following areas:

- Dietetics
- Nutrition, Fitness, and Health
- Nutrition Science

The department also offers two undergraduate minors:

- Foods and Nutrition
- Nutrition

Nutrition Minor

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10600 - Introduction To The Profession Of Dietetics

Credit Hours: 1.00. Overview of the dietetics profession, including standards, ethics, educational and employment opportunities, and professional credentialing. Spring semester offered only through distance learning.

Learning Outcomes: 1. Describe the profession of dietetics and future trends. 2. Recognize the education preparation needed to pursue careers in dietetics including different education models of becoming an entry-level dietitian. 3. Demonstrate knowledge of the supervised practice experience application process. 4. Identify the credentialing of dietetic practitioners. 5. Recognize the major professional organizations in dietetics such as the Academy of Nutrition and Dietetics, state affiliates and district dietetic associations, and dietetic practice groups and the roles of each. 6. Demonstrate the ability to develop a professional development portfolio, resume, and cover letter. 7. Develop an understanding of professionalism related to dietetics including interviewing skills, professional etiquette, professional ethics, and professional practice standards. 8. Develop skills for planning a career in dietetics such as self-assessment, goal setting, networking, job search strategies, and timeline establishment. Credits: 1.00

NUTR 10700 - Introduction To Nutrition Science

Credit Hours: 1.00. An overview of professional opportunities for nutrition scientists. Introduces tools and resources available for becoming a nutrition scientist.

Learning Outcomes: 1. To identify and describe the current professional opportunities for nutrition scientists. 2. To comprehend the educational preparation necessary to pursue a career as a nutrition scientist. 3. To name and become knowledgeable about the functions of, and advantages of belonging to, major professional organizations in nutrition science

such as the American Society of Nutrition. 4. To apply modern information technology to the problem of discovering scientifically valid nutrition science information. Credits: 1.00

NUTR 12500 - Food Safety Certification And Career Development

Credit Hours: 1.00. Training in ServSafe food safety certification program.

Learning Outcomes: 1. Select appropriate food safety and sanitation practices according to ServSafe guidelines. 2. Assess professional development using resume and student portfolio. Credits: 1.00

NUTR 20200 - Principles Of Food Preparation And Nutrition

Credit Hours: 4.00. Chemical, physical, microbiological, and nutritional principles of food preparation. Functions and sources of nutrients, their relationship to a healthy lifestyle and incorporating the benefits into marketing of foodservice.

Credits: 4.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 24500 - Rookie Experience In Sports Nutrition

Credit Hours: 1.00. For students without prior experience within the specialty dietetics practice of sports nutrition, this course provides traditional and experience-based learning in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Basics of sports nutrition are taught and students must pass an exam to progress to NUTR 34500 , Continuing Experience In Sports Nutrition. Written application and interview process required prior to instructor approval. Permission of Instructor required.

Learning Outcomes: 1. Describe healthful and performance-enhancing nutrition habits of student-athletes through active participation in project groups. 2. Recognize well-established scientific concepts, controversies, experts and resources in the field of sports nutrition. 3. Demonstrate work-enhancing skills/qualities like initiative, leadership, creativity, communication, cooperation, commitment and enthusiasm. 4. Apply information-literacy skills to accomplish goals of project groups. Credits: 1.00

NUTR 29700 - Introduction To Honors Research

Credit Hours: **2.00.** Introduces students to the design and implementation of an honors research project.

Learning Outcomes: 1. Identify the requirements for graduation with honors from Nutrition Science. 2. Define specific goals for completion of their Honors Project. 3. Recognize the benefits of graduating with honors. 4. Discuss research currently being done in Nutrition Science. 5. Identify faculty interested in serving as mentors for students pursuing Honors Research Projects in Nutrition Science. 6. Locate and obtain research articles relevant to their research project. 7. Write appropriate citations for research articles. 8. Explain the scientific method and research ethics. Credits: 2.00

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the

information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 34000 - Field Experience In Nutrition, Fitness And Health

Credit Hours: 1.00 to 3.00. Field experience in NFH-related setting that provides an opportunity for the application of the classroom experience. For NFH majors only. The student secures his/her own field experience, which must be approved by the NFH program coordinator in order to receive academic

credit.

Credits: 1.00 to 3.00

NUTR 34500 - Continuing Experience In Sports Nutrition

Credit Hours: 1.00. Traditional and experience-based learning within the specialty dietetics practice of sports nutrition in a Division I Collegiate sports setting. Guest speakers will present on various aspects of the athletics work setting. Students must pass an exam given in NUTR 24500 , Rookie Experience In Sports Medicine, to enroll. Permission of Instructor required.

Learning Outcomes: 1. Describe healthful and performance-enhancing nutrition habits of student-athletes through active participation in project groups. 2. Recognize well-established scientific concepts, controversies, experts and resources in the field of sports nutrition. 3. Demonstrate work-enhancing skills/qualities like initiative, leadership, creativity, communication, cooperation, commitment and enthusiasm. 4. Apply information-literacy skills to accomplish goals of project groups. Credits: 1.00

NUTR 35000 - Dietetics Practicum In Quantity Food Production

Credit Hours: 1.00 to 3.00. Supervised on-the-job experience related to the food service management in health care facilities, schools, community programs, etc. Student is responsible for arrangement and approval of the experience through the supervising food service manager or dietitian and the course instructor. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge gained from coursework to actual work situations. 2. Develop skills related to management of food service. 3. Design and complete a project appropriate for a food service operation. Credits: 1.00 to 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 37500 - Foods And Nutrition Internship

Credit Hours: 1.00 to 4.00. Food science or nutrition professionally related work experience in industry, institutions, or business. Permission of instructor required.

Credits: 1.00 to 4.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 39100 - Independent Study

Credit Hours: 1.00 to 3.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Increase knowledge base and/or application in nutrition science.

Credits: 1.00 to 3.00

NUTR 39200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required.

Learning Outcomes: 1. Develop extensive knowledge base and/or application in nutrition science. Credits: 1.00 to 5.00

NUTR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for Honors College and Department of Nutrition Science Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 39800 - International Special Topics

Credit Hours: 1.00 to 3.00. Course taken during an international experience that is recognized by the University.

Credits: 1.00 to 3.00

NUTR 40000 - Executive In The Classroom

Credit Hours: 1.00. Lecture and discussion, featuring industrial and business executives in food-related areas. Emphasis is placed on careers in the food industry.

Credits: 1.00

NUTR 41100 - Dietetics Career Planning

Credit Hours: 1.00. This course will prepare students to successfully apply and interview for dietetics supervised practice experience, jobs and graduate programs.

Learning Outcomes: 1. Students will prepare resumes, personal statements, and sample applications. 2. Students will use available resources to develop skills in interviewing. 3. Students will identify the steps and deadlines for applying to graduate school and supervised practice programs. Credits: 1.00

NUTR 41500 - Practicum In Nutrition, Fitness, And Health

Credit Hours: 2.00. Application of nutrition and exercise knowledge and skills by performing assessments, interpreting data, designing and implementing programs, documenting progress, and counseling of an adult client.

Learning Outcomes: 1. Collect, analyze, and interpret nutrition and fitness assessment data. 2. Organize aspects of interaction with the client (educational materials, short- and long-term planning, etc.). 3. Use critical thinking and counseling skills to elicit pertinent client information, evaluate client feedback, and guide the client toward positive changes. 4. Accurately and concisely document interactions with client. 5. Creatively apply nutrition and fitness knowledge. 6. Communication effectively with the client. 7. Evaluate effectiveness of intervention; make necessary changes. 8. Develop critical thinking skills and professional judgment to recognize and manage the"" gray"" areas of one-on-one wellness counseling/coaching. 9. Utilize information technology and other methods of inquiry to accomplish all of the above. Credits: 2.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web

sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 42600 - Laboratory In Community Nutrition

Credit Hours: 3.00. Application of previous knowledge and communication skills in nutrition of community settings, such as school nutrition, health facilities, and federal or state nutrition programs.

Learning Outcomes: 1. Perform as a community nutritionist and complete the competencies as outlined in the Learning Outcomes for Supervised Practice Form. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 44200 - Foodservice Systems Management

Credit Hours: 3.00. Systems approach to foodservice management. Foodservice operations based on nutritional goals of the target market. Food sanitation and safety, management of human resources, and supervision. Emphasis on applications to health-care facilities.

Learning Outcomes: 1. Identify and describe the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 2. Apply management and business theories and principles to the development, marketing and delivery of programs or services. 3. Determine costs of services or operations, prepare a budget and interpret financial data. 4. Apply the principles of human resource management to different situations. 5. Apply safety principles related to food, personnel and consumers. Credits: 3.00

NUTR 44300 - Laboratory In Foodservice Systems Management

Credit Hours: 9.00. Application of knowledge relating to foodservice. Responsibilities may include communication skills and tasks equivalent to supervising foodservice operations.

Learning Outcomes: 1. Prepare you for an entry-level job in food service management, and to introduce you to the fundamentals of management required for the competent practice in other areas of dietetics. Credits: 9.00

NUTR 45300 - Food Chemistry

Credit Hours: 4.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Recognize and predict how chemical structures and reactions influence sensory and analytical properties of food. 3. Explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives, and evaluate the validity of health controversies related to these ingredients. 5. Design, execute, and explain (via oral and written reports) a food experiment using the scientific method. Credits: 4.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

NUTR 46100 - Laboratory In Medical Nutrition Therapy

Credit Hours: 10.00. Application of previous knowledge and communication skills of medical nutrition therapy in the hospital/patient care setting to ultimately include responsibilities equivalent to staff relief.

Learning Outcomes: 1. Perform as a clinical nutritionist and complete the competencies as outlined in the Learning Outcomes for Supervised Practice Form. Credits: 10.00

NUTR 46500 - Laboratory In Engagement

Credit Hours: 3.00. Culminating experiences in community nutrition, foodservice, medical nutrition therapy, public health, research and/or nutrition related business. Placements will be arranged based on individual student's preferred track in long-term care facilities, hospitals, public health or community agencies, and/or business and industry.

Learning Outcomes: 1. Perform at entry level as dietician and in placements arranged based on individual student's preferred track in long-term care facilities, hospitals, public health or community agencies, and/or business and industry. Credits: 3.00

NUTR 48000 - Medical Nutrition Therapy I

Credit Hours: 4.00. Nutrition assessment in humans and introduction to the nutrition care process. Application of the nutrition care process to various disease states.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical evidence-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered

Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition therapy. Credits: 4.00

NUTR 48100 - Medical Nutrition Therapy II

Credit Hours: 3.00. Application of the Nutrition Care Process in various disease states and conditions to prepare students for supervised practice programs.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition therapy. Credits: 3.00

NUTR 48800 - Topics In Nutrition, Fitness, And Health

Credit Hours: 3.00. This course critically evaluates the interrelationships between nutrition and exercise and their impact on physical performance and health. Concepts combining nutritional sciences and exercise physiology will be presented. Emerging science and controversies in the current literature will be discussed.

Learning Outcomes: 1. Value the integration of nutrition and exercise for human health promotion, especially related to dietary macronutrients and energy. 2. Discuss current controversial topics in nutrition and fitness and special topics. 3. Practice scientific literature searching, critical evaluation and interpretation of research, technical and scientific writing, and oral communication skills. Credits: 3.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 49100 - Independent Study

Credit Hours: 1.00 to 4.00. Independent scholarly activity undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Increase knowledge and/or application in nutrition science. Credits: 1.00 to 4.00

NUTR 49200 - Undergraduate Instruction In Nutrition

Credit Hours: 1.00 to 5.00. Problems dealing with various aspects of nutrition. Permission of instructor required.

Learning Outcomes: 1. Develop extensive knowledge base and/or application in nutrition science. Credits: 1.00 to 5.00

NUTR 49500 - Undergraduate Seminar In Foods And Nutrition

Credit Hours: 1.00. Instruction and application of concepts for effective oral presentations in the field of nutrition sciences.

Learning Outcomes: 1. To enhance your critical thinking skills. 2. To develop and enhance your oral communication skills. 3. To enhance your ability to make effective visuals for presentations. Credits: 1.00

NUTR 49600 - Evaluation Of Nutrition Science Research

Credit Hours: 3.00. Evaluation of nutrition science research as it relates to health and disease.

Learning Outcomes: 1. Distinguish between data and interpretation through the practice of reading, analyzing, critiquing, and discussing

nutrition science research articles. 2. Access and integrate the contribution of multiple research studies to an area of nutrition science rresearch and its impact on health and disease. 3. Explain, orally and in writing, the evaluation of nutrition science research. 4. Identify and assess the validity of sensational nutrition science research presented in media. Credits: 3.00

NUTR 49700 - Honors Research Project

Credit Hours: 1.00 to 3.00. The completion of the independent honors research project for Honors College and Department of Nutrition Science Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Learning Outcomes: 1. Demonstrate critical thinking skills in nutrition science. 2. Present and defend hypothesis-driven research project. Credits: 1.00 to 3.00

Department of Psychological Sciences

About

Psychology is the study of behavior and mental processes (thought) where the focus is on individuals. The word psychology comes from the Greek words "psyche" (mind) and "logos" (knowledge of). Psychology, as a recognized field of study, has only been around for a little over a hundred years, but people have had discussions of human behavior for centuries.

The Department of Psychological Sciences at Purdue is consistently among the top 50 psychology departments in the US (out of more than 300). The many professors you will have in class wear a number of different hats. They conduct and publish research that advances the field of psychology and train graduate students.

With a bachelor's degree in psychology, your career opportunities will be many and varied. You could obtain advanced training in Psychology or seek a career in affiliated fields such as clinical social work, social work, mental health counseling, marriage & family therapy, or school counseling. Another option is to enroll in a graduate program in such fields as law, medicine, or business. Your knowledge of psychology will be invaluable in all these areas. You may also choose to take a job immediately after graduation, in diverse settings such as a hospital, group home, government agency, business or industry, applying your skills in areas such as personnel selection, advertising, consumer-product research, or public opinion polling. Because you will learn about many aspects of psychology while at Purdue, you will be well-prepared for many career opportunities.

Areas of Psychology

- Mental health, various forms of mental illness, and other facets of Clinical Psychology
- Perception, attention, memory, and other facets of Cognitive Psychology
- Industrial / Organizational Psychology
- Arousal, brain functioning, and other facets of Behavioral Neuroscience
- Statistics, measurement of human characteristics, and other facets of Mathematical and Computational Cognitive Science
- Stereotyping, attitudes, relationships, social influence and other facets of Social Psychology

Graduate Information

For Graduate Information please see Psychological Sciences Graduate Program Information .

Brain and Behavioral Sciences, BS

Psychological Sciences, BS

Psychology Minor

PSY 10000 - Introduction To The Science And Fields Of Psychology (UCC: IL)

Credit Hours: 1.00. An introduction to psychology as a science and as a profession.

University Core Curriculum (UCC): (UCC: IL)
Credits: 1.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

PSY 12300 - Beyond Mental Health: The Science Of Well-Being (UCC: BSS)

Credit Hours: 3.00. This course seeks to provide a scientific and psychological account of well-being - its definition, determinants, and outcomes. We address questions such as: How do we go about measuring happiness? Can happiness enhance longevity and health? What interventions can promote happiness? What types of societies are happier? This course will engage and challenge students not only intellectually, but also experientially as we work on enhancing happiness in our lives and in the lives of others around us.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Outline the history of well-being research. 2. Identify key antecedents of well-being. 3. Explain and distinguish among different scientific theories of well-being. 4. Describe the positive outcomes of happiness for individuals and societies. 5. Discuss the scientific process of studying well-being. 6. Apply positive psychology techniques to their own their lives. 7. Identify and locate resources that promote mental health and well-being.
Credits: 3.00

PSY 20000 - Introduction To Cognitive Psychology

Credit Hours: 3.00. A survey of psychology as the science of mental life, covering theories and research in perception, reading, attention, consciousness, imagery, memory and its improvement, problem solving, creativity, decision-making, and artificial intelligence.

Learning Outcomes: 1. Describe basic aspects of visual perception and visual imagery. 2. Explain the role of attention in cognition. 3. Describe basic representations and processes of memory. 4. Understand high-level cognitive functions such as reasoning, problem solving, and language. 5. Understand how cognitive neuroscience can inform cognitive psychology.
Credits: 3.00

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

PSY 20300 - Introduction To Research Methods In Psychology

Credit Hours: 3.00. The use of scientific method in psychology. Lecture covers principles of collecting and interpreting data, using examples of research from many areas of psychology. In the laboratory portion, the student uses many different techniques from various areas of psychology. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand and produce research that adheres to the highest ethical standards. 2. Identify distinguishing features of good science, bad science and junk science. 3. Critically evaluate research findings. 4. Understand how study designs are used to answer research questions. 5. Present and interpret experimental data in an APA-style paper. Credits: 3.00

PSY 22200 - Introduction To Behavioral Neuroscience

Credit Hours: 3.00. An introduction to how the nervous system controls behavior. Topics include evolution and comparative psychobiology, the neuroscience of sensation and perception, the neuroscience of motivation, neuropsychology, and cognitive neuroscience.

Learning Outcomes: 1. Describe the basic structure and function of the brain including neuroanatomy and neural communication. 2. Explain how the central nervous system processes internal and external stimuli. 3. Explain how experience influences current and future behavior. 4. Discern normal from abnormal brain function and describe its influence on behavior. Credits: 3.00

PSY 23099 - Cooperative Education Seminar I

Credit Hours: 1.00 or 2.00. (ENGR 23099) This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Prerequisite: Student must have completed at least one Co-Op work term. May be repeated once after the second work term. Can be taken for two credits subsequent to completing two back-to-back work terms. Instructor permission required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand knowledge of the engineering profession. 3. Learn from the experiences of other participants and apply that knowledge to the situation. Credits: 1.00 or 2.00

PSY 23500 - Child Psychology

Credit Hours: 3.00. Not open to students with credit in PSY 36000. General principles of children's behavior and development, from conception to adolescence, including sensory and motor development, and basic psychological processes such as learning, motivation, and socialization.

Credits: 3.00

PSY 23900 - The Psychology Of Women

Credit Hours: 3.00. The purpose of the course is to provide an overview of the psychology of women. Topics include stereotyping, women and achievement, aggression and power, the psychological concept of androgyny, and attitudes toward feminism.

Credits: 3.00

PSY 24000 - Introduction To Social Psychology

Credit Hours: 3.00. Not open to students with credit in SOC 34000 . A broad survey in current knowledge about human social behavior. Topics covered include aggression, attraction and love, social influence, attitudes and attitude change, nonverbal communication, leadership, prejudice and discrimination, and application of social psychology to law, medicine, and other fields. CTL:ISH 1024 Social Psychology

Credits: 3.00

PSY 24400 - Introduction To Human Sexuality

Credit Hours: 3.00. This course will provide a broad survey of research on human sexuality from a psychosocial perspective. Topics covered include research methods, gender identity, sexual orientation, reproductive anatomy, typical and atypical sexual behavior, and sexual difficulties and their treatments. CTL:ISH 1022 Human Sexuality

Credits: 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training,

motivation, job satisfaction, emotions, work stress, and leadership.

Learning Outcomes: 1. Provide instruction and covers material to assist students in obtaining a broad perspective on the field of Psychological Sciences. Credits: 3.00

PSY 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PSY 29200 - Topics In Psychology

Credit Hours: 1.00 to 3.00. Various introductory-level topics in Psychology that may be offered on a semester-by-semester basis by Purdue Psychological Sciences faculty or by non-Purdue faculty/instructors as part of a student's study abroad program.

Learning Outcomes: 1. Provide breadth of coverage across the diverse field of Psychological Sciences. Credits: 1.00 to 3.00

PSY 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Credits: 0.00

PSY 30500 - Understanding And Analyzing Psychological Data

Credit Hours: 3.00. This course is an upper level undergraduate statistics course for students in psychology and related fields who are interested in conducting or understanding quantitative research. Students should have successfully completed an introductory statistics course (e.g., PSY 20100). The course will begin with an accelerated review of fundamentals concepts (e.g., data visualization, central limit theorem, probability) and then will focus primarily on regression.

Learning Outcomes: 1. Demonstrate advanced conceptual understanding of foundational statistical principles. 2. Demonstrate ability to correctly analyze data by hand and using SPSS. 3. Demonstrate skills in managing their own data. 4. Demonstrate the ability to comprehensively analyze and interpret the results of correlation, simple regression, multiple regression, and two-way interaction models. 5. Demonstrate proper interpretation. 6. Demonstrate the ability to accurately report results of statistical analyses in APA format. Credits: 3.00

PSY 30600 - Understanding And Analyzing Experiments

Credit Hours: 3.00. This course helps to prepare students for independent research. Students (1) develop an understanding of group-based statistical analyses, such as t-tests and ANOVA; (2) formulate and present a research idea based on statistical tools covered in class; and (3) get experience using statistical software to analyze data.

Learning Outcomes: 1. Determine which statistics to use, how to use them and how to interpret their findings using data for conventional experimental designs in psychological sciences. 2. Interpret current research in psychological sciences. 3. Give oral presentations based on research. 4. Develop and advance personal research interests. Credits: 3.00

PSY 31000 - Sensory And Perceptual Processes

Credit Hours: 3.00. A survey of the study of psychological experiences caused by stimulation to the senses. Topics include theory and research in seeing, hearing, touching, smelling, and tasting as experienced by humans and other animals.

Credits: 3.00

PSY 31100 - Human Memory

Credit Hours: 3.00. A survey of theories and research about how humans remember information and why they often forget. Topics include research on amnesia, forgetting, and sensory memory systems as well as on practical issues such as how to improve memory.

Learning Outcomes: 1. Explain how the science of human and memory enriches understanding of the human mind. 2. Describe what learning and memory are, how they work, and why they work that way. 3. Critically apply the science of learning and memory to evaluate ideas presented in popular media. Credits: 3.00

PSY 31400 - Introduction To Learning

Credit Hours: 3.00. This course attempts to make clear the theoretical and practical implications of learning principles and findings. Various theories of learning are examined and the implications of these theories, and the learning approach generally, for a variety of practical problems are emphasized.

Credits: 3.00

PSY 32400 - Introduction Cognitive Neuroscience

Credit Hours: 3.00. (SLHS 30100) Introduction to the neural bases of complex human mental abilities. Emphasis on integrating research from cognitive science, brain-scanning techniques, and the lesion technique. Topics include perception, attention, memory, language, motor control, planning/decision-making and consciousness.

Credits: 3.00

PSY 32700 - Psychology Of Helping

Credit Hours: 3.00. This course is designed to provide a broad but rigorous, undergraduate-level comprehensive overview of contemporary scientific research on prosocial processes from the perspective of personality and social psychology.

Learning Outcomes: 1. Demonstrate a comprehensive mastery of the mechanisms and processes associated with prosocial behavior. 2. Demonstrate an ability to think creatively about research on prosocial processes. 3. Demonstrate an understanding of how research on prosocial behavior is planned and conducted. 4. Demonstrate how prosocial processes are integrated with more general interpersonal processes and social relations. Credits: 3.00

PSY 33099 - Cooperative Education Seminar II

Credit Hours: 1.00 or 2.00. This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Permission of instructor required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand their knowledge of professions in Psychological Sciences. 3. Learn from the experiences of other participants so that they may apply their knowledge to their situation. Credits: 1.00 or 2.00

PSY 33500 - Stereotyping And Prejudice

Credit Hours: 3.00. This course examines the topics of stereotyping, prejudice, and discrimination from a social psychological perspective. Relying on empirical findings and relevant theoretical approaches, the course moves beyond lay opinions to explore the social psychological foundations and forms of stereotyping and prejudice, and to examine various strategies for reducing intergroup biases.

Credits: 3.00

PSY 33600 - Issues In Developmental Psychology

Credit Hours: 3.00. Survey of current issues in developmental psychology and methods for studying these problems. The topics selected for intensive examination reflect contemporary developmental research issues and may involve different-aged children or adults.

Credits: 3.00

PSY 33700 - Social Cognition

Credit Hours: 3.00. A survey of theory and research on the role of thought processes in social behavior (a combination of social and cognitive psychologies). Topics include causal attribution, person perception, stereotyping, impression formation, event memory, and social judgment.

Credits: 3.00

PSY 34200 - Introduction To Psychology Of Personality

Credit Hours: 3.00. This course integrates empirical studies (observational, correlational, experimental) with classical and current personality theories. Topics include the biological foundations of personality, self-esteem, extraversion, sex role orientation, authoritarianism, and personality disorders. Minimum competence is assumed in basic experimental design and correlations.

Learning Outcomes: 1. Define personality from a scientific psychological perspective. 2. Discuss the strengths and weaknesses of the methods and sources of data for personality researchers. 3. Describe biological and trait models of personality. 4. Discuss the relationship between personality, psychopathology, personality disorders and psychotherapy. 5. Describe how culture and environment interact with personality. Credits: 3.00

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology

Learning Outcomes: 1. Demonstrate an understanding of the historical, ethical, and cultural contexts of psychopathology. 2. Compare and contrast major historical and contemporary theoretical perspectives on psychopathology. 3. Demonstrate an understanding of the scientific bases of the etiology, assessment, classification, diagnosis, and treatment of psychopathology. Credits: 3.00

PSY 35200 - Introduction To Neuropsychology

Credit Hours: 3.00. This course is an examination of the effects of various types of brain damage on human behavior, the methods used to assess brain damage, and evaluation of research studies on human brain damage and behavior.

Learning Outcomes: 1. Describe effects of damage to different human brain areas on behavior. 2. Discuss what effects of brain damage teach us about brain function and organization. 3. Describe approaches used to study human brain damage. 4. Critically evaluate published research studies on human brain damage and behavior. Credits: 3.00

PSY 35400 - Close Relationships

Credit Hours: 3.00. This course introduces undergraduate college students to major topics in psychological research on intimate relationships. There are many types of close relationships. This primarily focuses on relationships that currently are, will be soon, or at one point were, romantic involvements. A goal is to educate students on current research findings concerning intimate relationships.

Learning Outcomes: 1. Navigate relevant research and demonstrate understanding and of relationship science. 2. Judge the accuracy of portrayals of relationships in the general media. 3. Describe the mechanics underlying close relationships. 4. Demonstrate the ability to read and understand published studies concerning close relationships. Credits: 3.00

PSY 36700 - Adult Development And Aging

Credit Hours: 3.00. Theory and research on adult development from young adulthood through the elderly years. Course covers biological, cognitive, personality, and social issues. Topics include vocational choice, marriage, parenthood, the empty nest, menopause, memory and aging, retirement, widowhood, longevity, and death and dying.

Credits: 3.00

PSY 37600 - Attention And Cognitive Control

Credit Hours: 3.00. This upper-level undergraduate course provides an overview of research and theory related to attention and cognitive control. The first half of the course focuses on selective attention to locations, objects, and features, as well as the role of attention in memory and skilled performance. The second half focuses on divided attention and cognitive control in multitasking situations, as well as aspects of adaptive, hierarchical, and inhibitory control. The goal of the course is to provide you with an understanding of major theoretical views, key experimental findings, and common research procedures related to attention and cognitive control.

Learning Outcomes: 1. Define selective

attention to locations, objects, and features. 2. Describe the relationship between eye movements and attention. 3. Identify the limits of attention. 4. Describe the role of attention in memory and skilled performance. 5. Discuss divided attention, dual-task, task switching performance, task interruption and mind wandering. 6. Identify aspects of adaptive and hierarchical control. Credits: 3.00

PSY 38000 - Behavior Change Methods

Credit Hours: 3.00. Application of behavioral learning principles to problems in living. Self-paced learning format covers design and evaluation of behavior modification programs, with practical and ethical issues. Relevant to work with children, adults, clinical patients, athletes, etc., in schools, institutions, and everyday situations.

Credits: 3.00

PSY 39000 - Research Experience In Psychology

Credit Hours: 1.00 to 3.00. Involvement in an ongoing research project in the Department of Psychological Sciences. Up to 6 credits may be taken for a letter grade. Additional credits after 6 must be taken as Pass/No Pass. Permission of instructor required.

Learning Outcomes: 1. Apply principles of research methodology within a lab setting, as appropriate for lab role. 2. Demonstrate ethical behavior in the conduct of psychological research. 3. Demonstrate professional communication skills through interactions with principal investigators, graduate students, lab personnel, and research participants. Credits: 1.00 to 3.00

PSY 39100 - Readings In Psychology

Credit Hours: 1.00 to 3.00. In-depth reading on a specific topic in psychology under the guidance of a faculty member, often in preparation for PSY 49800. Permission of instructor required.

Credits: 1.00 to 3.00

PSY 39200 - Special Topics In Psychology

Credit Hours: 1.00 to 3.00. Various topics that may change from semester to semester are presented by Psychological Sciences department faculty.

Credits: 1.00 to 3.00

PSY 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PSY 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PSY 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in psychological sciences. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to

identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and teamwork. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

PSY 39699 - Professional Practice Internship

Credit Hours: 0.00. To obtain professional practice with qualified employers within industry, government, or small business. Permission of department required.

Credits: 0.00

PSY 39800 - Independent Research In Psychology

Credit Hours: 3.00. Students will conduct an independent research project related to research that is ongoing in the lab. Students will discuss theories and ideas related to the project, and plan and execute a thesis. Duties may include data coding and entry; participating in the planning of the research and the development of research materials; executing the research with responsibility for all aspects of data collection. Students are expected to be involved in the research project for an average of nine hours per week. Permission of instructor required.

Learning Outcomes: 1. Learn about many aspects of conducting research, such as human or animal subject issues, experimental design, interpreting results, relating results to theory, etc. 2. Learn how psychological questions can be answered through research. Credits: 3.00

PSY 40100 - Language And The Brain

Credit Hours: 3.00. (SLHS 40100) This course is an overview of the neutral systems that underlie the core components of language, including speech perception and production, reading and writing, morphology, syntax, semantics, and discourse. During the past few decades, there has been an unprecedented increase in studies on these topics, due in large part to the widespread use of highly sensitive brain mapping techniques that enable researchers to identify relationships between particular brain areas and particular language functions. The findings that have been emerged from this recent explosion of research are exciting and important for several reasons. They provide fresh insights into the nature of the uniquely human capacity for language, and they have significant implications for understanding and treating language disorders that result from brain injury.

Learning Outcomes: 1. Understand the main methods for investigating the neural substrates of language. 2. Understand the classic and progressive aphasia syndromes. 3. Basic neural underpinnings of the core aspects of language. 4. Critically evaluate research on language. 5. Critically evaluate research on language and the brain. Credits: 3.00

PSY 40300 - Psycholinguistics

Credit Hours: 3.00. (PSY 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge.

Learning Outcomes: 1. Understand main theories and empirical findings about psychological and neural foundations of language knowledge. 2. Explain how experimental work is used to inform models of language processing. 3. Critically evaluate research data used to support such models. 4. Write evaluation of empirical work in a clear and concise manner. Credits: 3.00

PSY 40400 - Honors Research Seminar I

Credit Hours: 3.00. Part one of a research series aimed at providing a structured learning experience to help students develop the basic research skills needed in order to conduct psychological research. Students will be expected to develop a research plan to be completed in concert with PSY 40500. Permission of department required.

Credits: 3.00

PSY 40500 - Honors Research Seminar II

Credit Hours: 3.00. Part two of a research series aimed at providing a structured learning experience to help students develop the basic research skills needed in order to conduct psychological research. Students will be expected to develop a

research plan to be completed in concert with PSY 40400. Permission of department required.

Credits: 3.00

PSY 41800 - Understanding Autism

Credit Hours: 3.00. (HDFS 41800, SLHS 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history of ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associated with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society.

Learning Outcomes: 1. Describe and explain the behavioral characteristics used to diagnose ASD. 2. Describe and explain the strategies and symptoms used in the early identification of ASD. 3. Describe and explain the current theoretical perspectives about the causes of ASD and the increasing prevalence of the disorder. 4. Describe and explain the current scientific knowledge on the genetic and neurobiological underpinnings of ASD and how these are related to behavioral symptoms. 5. Describe and explain the range of available evidence-based and non-evidenced-based interventions for ASD. 6. Critically evaluate the empirical research findings as well as media reports related to ASD. Credits: 3.00

PSY 42100 - Alcohol Use And Disorders

Credit Hours: 3.00. The goal of this course is to provide students with a broad understanding of the biological bases of alcohol abuse and alcoholism. The course will cover neuroanatomical, neurochemical and biological systems that regulate the biological and behavioral response to alcohol. Coverage will also include discussions of the role of environment, age, gender, among other factors that influence the response to alcohol and propensity toward abuse and addiction. The course will also cover the neuroscience of treatment and relapse.

Learning Outcomes: 1. Acquire knowledge about alcohol's effects on the brain and behavior. 2. Demonstrate knowledge about the major theories of addiction. 3. Critically evaluate primary research about the neuroscience of alcohol. 4. Discuss and apply learned knowledge about the neuroscience of alcohol and theories of addiction to ""real-world"" situations. 5. Communicate proficient critical thinking skills about the neuroscience of alcohol through writing. Credits: 3.00

PSY 42200 - Genes and Behavior

Credit Hours: 3.00. An examination of genetic influences on behavior, including the mechanisms of genetic influence, methods of gene manipulation, and the role of genes in development and evolution. Genetic influences on mental illness, learning, memory, and intelligence are considered.

Credits: 3.00

PSY 42600 - Language Development

Credit Hours: 3.00. (SLHS 30900) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

Credits: 3.00

PSY 42800 - Drugs And Behavior

Credit Hours: 3.00. Discussion of the variety of drugs that affect the nervous system and behavior. Emphasis will be upon a discussion of the physiological and pharmacological bases for the use and misuse of drugs in our society.

Credits: 3.00

PSY 42900 - Hormones And Behavior

Credit Hours: 3.00. Discussion of the mechanisms and effects of endocrine hormones and brain peptides on sexual

differentiation, sexual behavior, learning, response to stress, maternal behavior, and weight regulation.

Credits: 3.00

PSY 43099 - Cooperative Education Seminar III

Credit Hours: 1.00 or 2.00. This seminar course is optional for Co-Op students when they are on-campus. In this course, students share their work experiences, receive feedback from the instructor and seminar participants, and continue their professional development. Permission of instructor required.

Learning Outcomes: 1. Develop oral and written presentation skills. 2. Expand their knowledge of professions in Psychological Sciences. 3. Learn from the experiences of other participants so that they may apply their knowledge to their situation. Credits: 1.00 or 2.00

PSY 43200 - Social Psychology In Film

Credit Hours: 3.00. This course examines theory and research in experimental social psychology and uses popular films to assist in provoking thought and analysis of the theory and research.

Learning Outcomes: 1. Correctly interpret research findings from experimental social psychology. 2. Apply these findings to various films. 3. Formulate written ideas about films that are grounded in social psychological theory. Credits: 3.00

PSY 43400 - Neurobiology Of Disease

Credit Hours: 3.00. This course explores the neurobiological basis of disorders of the nervous system and psychiatric disease. Students will learn various neurological disorders that affect behavior, the associated cellular and molecular mechanisms, and current treatment strategies.

Learning Outcomes: 1. Demonstrate how to search for scientific literature and compare/contrast peer-reviewed articles with news media. 2. Identify, discuss, examine, and critically evaluate the basic mechanisms and clinical features of diseases of the nervous system. 3. Describe research on the biology of various neurological and psychiatric disorders. 4. Discuss and critique research papers on ground breaking discoveries related to underlying mechanisms and treatments of various neurological and psychiatric disorders. 5. Generate analogies and craft models that represent human neurological and psychiatric diseases. Credits: 3.00

PSY 43600 - Foods And Behavior

Credit Hours: 3.00. This course examines aspects of the scientific study of eating and drinking; its effects on individual health and well-being; broader implications of psychology, culture and society on eating and drinking; the effects of food policy on food and beverage intake and well-being. Topics to be covered include physiological signals affecting hunger and satiety, social norms and influences regarding food intake, identifying sources of food and its constituents, disordered food intake, malnutrition, poverty and food, and the influence of food and agriculture industries on food choices and consumption.

Learning Outcomes: 1. Describe how the scientific method applies to questions related to ingestive behavior. 2. Discuss how constituents of food contribute to physical and emotional well-being. 3. Describe biological, social and cultural factors that influence food choice. 4. Critically evaluate how society and culture influence eating and drinking habits. Credits: 3.00

PSY 43700 - Behavioral And Neural Systems Of Learning And Memory

Credit Hours: 3.00. The purpose of this course is to integrate insights on learning and memory from behavioral and neuroscience perspectives based on animal and human research. How brain regions underlie different categories of learning will be covered. Discussions on how these types of learning contribute to clinical disorders, such as anxiety and addiction disorders.

Learning Outcomes: 1. Examine how brain regions underlie different categories of learning. 2. Discuss how types of learning contribute to clinical disorders. 3. Compare and contrast insights on learning and memory from

behavioral and neuroscience perspectives based on animal and human research. 4. Comprehend and discuss behavioral processes, brain substrates and clinical perspectives for each topic covered. Credits: 3.00

PSY 43800 - Introduction To Clinical Psychology

Credit Hours: 3.00. This course introduces students to the field of clinical psychology and will provide a broad overview of the roles and responsibilities that fall under the rubric of clinical psychology, with a particular emphasis on psychological assessment and intervention. Focus is on the professional responsibilities of a clinical psychologist (i.e., how clinical psychology is applied in practice), rather than the study of psychopathology per se.

Learning Outcomes: 1. Describe professional responsibilities of a clinical psychologist. 2. Discuss methods used by clinical psychologists to assess and diagnose disorders. 3. Describe specific types of interventions used to treat psychological disorders. 4. Discuss special concerns related to diagnosing and treating children and adolescents. Credits: 3.00

PSY 44300 - Aggression And Violence

Credit Hours: 3.00. An intensive examination of the nature of human aggression. Among the topics covered will be (1) theoretical perspectives concerning such behavior; (2) social conditions that encourage its performance; and (3) means for its prevention and control.

Credits: 3.00

PSY 46400 - Research Ethics In Psychological Sciences

Credit Hours: 3.00. Research Ethics broadly refers to the application of everyday values, such as fairness, honesty, and objectivity to scientific research. This course is designed to provide broad coverage of the ethical standards that research scientists must follow and allow exploration of various real-world ethical issues in the psychological sciences.

Credits: 3.00

PSY 47300 - Selection And Performance Appraisal In Organizations

Credit Hours: 3.00. Classic and current issues in employee selection and the appraisal of employee performance will be discussed. Topics addressed will include: Equal Employment Opportunity and unfair discrimination, developing effective selection and placement strategies, evaluating employee performance, and understanding the performance appraisal process.

Learning Outcomes: 1. Define and apply the major theories related to personnel selection and performance appraisal. 2. Describe recent research findings and apply those findings to issues related to personnel selection and performance appraisal. 3. Design and develop personnel selection and performance appraisal systems that are fair, valid, and legally appropriate. 4. Demonstrate the ability to evaluate personnel selection and performance appraisal systems with respect to their fairness, validity, and legality. 5. Perform a job analysis. Credits: 3.00

PSY 47500 - Work Motivation And Job Satisfaction

Credit Hours: 3.00. Psychological processes and current theories of work motivation and job satisfaction and their practical implications.

Credits: 3.00

PSY 48400 - The Psychology Of Consciousness

Credit Hours: 3.00. A survey of psychological experiments and theory in consciousness. An emphasis is placed on altered states of consciousness such as dreaming, hypnosis, drug-induced changes in consciousness, and meditation; and comparison with ordinary consciousness is made.

Credits: 3.00

PSY 49200 - Internship In Psychology

Credit Hours: 3.00. Experiential, supervised training in various areas of psychology-related fields including human factors, human resources, mental health-related organizations, research labs, and supervised living institutions. Usually taken in junior or senior year. Permission of instructor required.

Learning Outcomes: 1. Broaden experiences by exposure to professional settings related to psychological sciences. 2. Experience the importance and relevance of ideas learned in

course work. 3. Increase repertoire of skills and experiences related to job placement or further education after graduation. 4. Develop skill working in a group/team. Credits: 3.00

PSY 49800 - Senior Research

Credit Hours: 3.00. Student conducts and writes a report on an individual research project under the guidance of a faculty member. Permission of instructor required.

Learning Outcomes: 1. Demonstrate expertise with the processes and procedures of research in psychological sciences. 2. Design and conduct a research project related to psychological sciences. Credits: 3.00

Department of Public Health

About Public Health

The Department of Public Health prepares students who have a passion for helping others to use science-based approaches to make healthier communities. Our faculty, students and alumni work as educators, researchers, practitioners, and policy makers to tackle challenges affecting the health and well-being of a variety of populations. We engage in groundbreaking, interdisciplinary research with individuals, families, communities, and societies to address the social determinants of health and health inequities at local, national and global levels. Our focus is on disease prevention and health promotion, and we are committed to social justice and the belief that health is a human right.

We offer a Bachelor of Science (BS) degree in public health as well as a 4+1 Master of Public Health (MPH) degree. All undergraduate and graduate students can customize their course selections to match their particular interests in the field of public health and complete a practicum to gain real-world work experience in a public health setting. Graduates of Purdue University's Department of Public Health are well positioned to start in a variety of public health work settings or to continue to graduate school or professional programs.

The department is a member of the Association of Schools and Programs in Public Health (ASPPH), and the Master of Public Health graduate program is **accredited by the Council on Education for Public Health** (CEPH).

Join us to take your passion for helping others to the next level!

PUBH 10000 - Introduction To Public Health

Credit Hours: 1.00. This course serves as an introduction to the field of public health. Topics include identification of the principal determinants of health and how they affect individuals and populations, the role of government and public health professionals in health and healthcare, and critical and emerging issues in public health in the US and around the world.

Learning Outcomes: 1. Acquire a basic understanding of the field of Public Health. 2. Identify the principal determinants of health and disease. 3. Understand the government's role in matters pertaining to the health of the public. 4. Explain the role of public health in medical care and identify the principal problems in the US healthcare system. 5. Achieve a basic understanding of the two major analytical methods of public health: epidemiology and biostatistics. 6. Identify the principal environmental determinants of health. 7. Understand the health challenges that confront major vulnerable populations. 8. Have knowledge of major and widespread challenges to good health: smoking, obesity, chronic

disease, violence, and social and economic inequities. 9. Recognize critical and emerging issues in global health. 10. Describe future challenges in public health. Credits: 1.00

PUBH 10001 - Introduction To Public Health

Credit Hours: 3.00. This course serves as an introduction to the field of public health. Topics include identification of the principal determinants of health and how they affect individuals and populations, the role of government and public health professionals in health and healthcare, and critical and emerging issues in public health in the US and around the world.

Learning Outcomes: 1. Acquire a basic understanding of the field of Public Health. 2. Identify the principal determinants of health. 3. Explain the role of public health in society. 4. Understand the government's role in matters pertaining to the health of the public. 5. Understand the role of health disparities in public health. 6. Achieve a basic understanding of the major investigative tool in public health: Epidemiology. 7. Identify the principal environmental determinants of health. 8. Know major and widespread challenges to good health: smoking, obesity, chronic disease, violence, and social and economic inequities. 9. Recognize critical and emerging issues in global health, including the current pandemic. Credits: 3.00

PUBH 20200 - Health In The Time Of Pandemics: An Introduction (UCC: STS)

Credit Hours: 3.00. This course will introduce students to basic concepts about health and disease through examination of the sweeping effects of pandemics. In addition to reviewing the effects directly related to human health and healthcare systems, the course will provide an interdisciplinary overview of the social, political, and economic consequences of infectious disease outbreaks and the range of local, national, and global responses to address them. The course will be taught by faculty members representing the broad diversity of disciplines within the College of Health and Human Sciences (HHS), with additional specific contributions from faculty representing other disciplines outside HHS.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Outline the historical and epidemiologic context of epidemics and pandemics. 2. Identify ethical, environmental, political, social and economic impacts of pandemics across the human lifespan. 3. Analyze the public health and social responses to pandemics at the local, national, and global levels. 4. Describe examples of scientific and technological developments, including novel vaccines, diagnostic tests, telehealth and other service delivery innovations, and the costs, benefits, and ethical implications for individuals and global society. Credits: 3.00

PUBH 20500 - Basic Public Health Studies

Credit Hours: 3.00. Examination of basic scientific concepts as applied to the problems and issues in selected areas of human health behavior with particular attention to their influence on population and individual health. Restricted to students enrolled in major degree programs for which this course is a requirement.

Learning Outcomes: 1. Discuss the nature of public health promotion and disease prevention in the US. 2. List the leading causes of death and describe leading theories of health behavior. 3. Define the components of psychological health and describe the basic traits shared by psychologically healthy people. 4. Describe the nature of stress, the physiology of the stress response, and the relationship of stress to health/disease; identify the major sources of stress in contemporary society and discuss interventions for stress management. 5. Discuss categories of drugs, routes of administration and drug interactions. 6. Describe the relationship of alcohol, tobacco and caffeine to health and disease. 7. Describe the general concepts of nutrition, list and explain the recommendations made to the public by various health agencies to decrease risk of chronic disease. 8. Describe various theories of obesity, discuss concepts of weight

management, define/describe body image and the disordered eating continuum, define anorexia and bulimia nervosa, and list symptomatology and risk factors. 9. Discuss the relationship of physical activity and physical fitness to health and/or disease and provide rationale (based on evidence from exercise epidemiology) for the recommendations made to the public concerning activity/exercise participation. 10. Describe the anatomy and basic functions of the cardiovascular system and the prevalence/incidence of heart disease, identify risk factors and describe the features of atherogenesis and other diseases of the heart and vascular system. 11. Describe the prevalence and incidence of the various types of cancer and identify cancer risk factors. 12. Describe the prevalence and incidence of diabetes and list risk factors for diabetes. Credits: 3.00

PUBH 22000 - Sexuality And Health

Credit Hours: 3.00. Deals with various aspects of human sexuality and sexual behavior and their impact upon individual health. Health concerns related to sexual behavior.

Credits: 3.00

PUBH 22500 - Contemporary Women's Health

Credit Hours: 3.00. Examines behavioral, psychological, and sociocultural aspects of women's experience in healthcare systems. Includes the influence of factors such as age, social class, and ethnicity on women's roles as recipients and providers of health care.

Credits: 3.00

PUBH 23000 - Community, Culture And Social Justice From A Public Health Perspective

Credit Hours: 3.00. The course provides an introduction to the concepts of community, culture, and social justice. The interaction between community, cultural, ethical, social, economic, environmental, political and social justice dynamics that shape health will be explored.

Learning Outcomes: 1. Identify and understand the social determinants of health. 2. Describe how community, cultural, ethical, social, economical, environmental, political and social justice shape human health both locally and globally using a social determinants of health framework. 3. Learn about theories of justice related to the field of public health. 4. Understand community developmental theoretical frameworks dimensions associated with the social change, such as empowerment, community participation, and capacity building. 5. Identify roles and responsibilities of the public health educator, other practitioners, and community members as agents of change. 6. Compare and contrast the concepts of health inequities, health disparities and health inequalities. Credits: 3.00

PUBH 23500 - Stress And Human Health

Credit Hours: 3.00. Course is designed to provide an understanding of stress and stress management, including the physiology of the stress response, the relationship between stress and disease, potential sources of stress, and methods of intervening to prevent and/or relieve stress.

Credits: 3.00

PUBH 24000 - Global Health

Credit Hours: 2.00. This course introduces students to current challenges, debates, and efforts at solutions in global public health with a focus on low-and middle-income countries. It provides an interdisciplinary overview of topics that include measures of health and disease, health disparities, communicable and non-communicable diseases, women's health, maternal and child health, food systems and nutrition, health systems, and global cooperation. It also highlights the central role of data in achieving the global health agenda. Permission of department required.

Learning Outcomes: 1. Identify major issues and trends in global health and their drivers, with a focus on low and middle-income countries. 2. Characterize the determinants of health and risk factors for conditions of importance to global health. 3. Identify key issues in health disparities between and within countries. 4. Describe the role of data in

informing and driving decision-making and actions in global health. 5. Formulate evidence-based arguments for or against global health policies or interventions. Credits: 2.00

PUBH 25000 - Intercultural Development In Public Health And Human Sciences

Credit Hours: 3.00. There is a high demand for students to be prepared to work efficiently and effectively across different cultures. Whether working on sustainable and thriving communities and organizations, promoting healthy lifestyles, disease prevention, or developmental health and wellness, the need to develop cultural bridging skills is important for effectively helping individuals and their communities. The course teaches students how to develop a deeper appreciation and empathy for cultural values and traditions that are different from their own, learn how to cultivate a cultural worldview, become more aware of their own cultures, foster intercultural openness and curiosity, and how to communicate across cultures.

Learning Outcomes: 1. Identify important cultural dimensions between US and other cultures. 2. Describe mindfulness and demonstrate how it applies to both their student life on campus as well as their public health and human sciences careers. 3. Engage in mindfulness techniques for self-reflection. 4. Formulate various techniques to focus on present situations and choose the appropriate method for various healthcare situations. 5. Learn and practice how to regulate their emotions during stressful situations in public health and human sciences. 6. Construct specific techniques to question their predisposed judgments of familiar and new people, places and things. 7. Assess and interpret cultural situations in order to plan and interact with others from different cultures in healthcare and human services. 8. Reflect on their cultural interactions and identify and develop new ways to interact in future cultural interactions in health and human services (synthesis and application). Credits: 3.00

PUBH 29500 - Internship & Career Preparation

Credit Hours: 1.00. This course provides students with professional competencies in identification and development of professional resources that aid in a greater understanding and preparation for careers in public health. Upon completion of the course, students will be prepared to seek an internship and apply concepts learned to their professional development experiences.

Learning Outcomes: 1. Define and conceptualize individual areas of study as a professional discipline, including its purpose, goals, trends, professional expectations, types of settings, etc. 2. Identify procedures for internship preparation. 3. Demonstrate the ability to develop a professional cover letter and resume. Credits: 1.00

PUBH 30500 - Health Education In Elementary Schools

Credit Hours: 3.00. The problems of physical health, mental health, and safety of the school-aged child are considered, with emphasis on ways in which the elementary teacher meets his or her responsibilities and opportunities for promoting pupil health.

Learning Outcomes: 1. Define terms related to health, coordinated school health programs (CSHP), and comprehensive school health education (CSHE). (IPSB 19) 2. Describe the health status of, and health risk behaviors of, children and adolescents. (IPSB 2) 3. Describe factors related to the health status and health behaviors of children and adolescents. (IPSB 7) 4. obtain needs assessment data related to child health and learning and the health risk behaviors of adolescents. (IPSB 1, 2) 5. Describe the relationship between health risk behaviors and CSHE. (IPSB 19) 6. Describe CSHP and components of CSHP. (IPSB 8) 7. Describe interrelationships between the components of CSHP including CSHE. (IPSB 8) 8. Provide rationale for CSHP and CSHE. (IPSB 8) 9. Develop plans for promoting collaborative efforts among health and education agencies and organizations for CSHP

and CSHE. (IPSB 6) 10. Use technology to retrieve resources for CSHP and CSHE. (IPSB 16) 11. Describe the role elementary and middle school teachers in CSHP and CSHE. (IPSB 9) 12. Define terms and identify concepts related health education planning, needs assessment, skills, content, methods, and assessment. (IPSB 5, 6, 10, 11, 12, 13, 18) 13. Secure, describe, and demonstrate strategies for teaching and assessing health education content and skills. (IPSB 13, 18, 20) 14. Develop a scope and sequence for elementary health education. (IPSB 3) 15. Identify and demonstrate strategies for handling sensitive health issues. (IPSB 17) 16. Secure, describe, and demonstrate strategies for involving families in CSHE. (IPSB 15) 17. Secure, describe, and demonstrate strategies for integrating health education with at least one other academic area. (IPSB 14) 18. Develop a resource kit for planning, implementing, assessing, and evaluating instruction in CSHE (IPSB 16) Credits: 3.00

PUBH 32000 - Health Behavior And Health Promotion

Credit Hours: 3.00. Introduces health behavior theory and practice in the context of health promotion and education. Examines individual, interpersonal, and community approaches to explaining and predicting health behavior and emphasizes their application to interventions in health promotion and education.

Learning Outcomes: 1. Identify basic theories, concepts and models from a range of social and behavioral disciplines that are used in public health research and practice. 2. Apply different health behavior theories and models in the U.S. and internationally to important public health issues such as tobacco use, physical inactivity, poor diet, etc. 3. Identify the causes of social and behavioral factors that affect health of individuals and populations. 4. Describe the role of social and community factors in both the onset and solution of public health problems. 5. Specify multiple targets and levels of intervention for social and behavioral science programs and/or policies. 6. Understand theoretical constructs from an ecological perspective; Understand theories and models relevant at multiple levels of behavioral influence, including the individual, interpersonal, community, and organizational levels. Credits: 3.00

PUBH 32500 - Methods Of Health Promotion And Education

Credit Hours: 3.00. Methods and materials of health promotion and education; preparation and use of content and materials related to health concerns of target populations. A variety of strategies and media are covered with theoretical and practical applications.

Credits: 3.00

PUBH 36500 - Public Health Research Methods

Credit Hours: 3.00. The course is designed to help you (1) develop an understanding of the nature of research and the scientific method in public health, (2) acquire an appreciation for the different types of research conducted within public health, and (3) provide an overview of the ethical, conceptual, and logistical considerations involved in designing, conducting, and critically evaluating public health research in basic and applied settings.

Learning Outcomes: 1. Explain and discuss the public health research process. 2. Identify or develop sound public health research questions and hypotheses, and discuss appropriate methods for testing the hypotheses. 3. Demonstrate appropriate techniques regarding data collection in public health. 4. Interpret research findings and discuss their implications relative to public health. Credits: 3.00

PUBH 38000 - Public Health Policy

Credit Hours: 3.00. This course will provide the opportunity to examine and analyze the financing, organization and delivery of health care in the U.S. and how these core elements are shaped and influenced by health care policy and decision-making.

Learning Outcomes: 1. Describe the role of policy, law and government relations in health care and public health. 2. Explain how federal, state, and local health policy is made. 3. Identify and critique the difference between population health and individual health. 4. Explain the policy interests between the public good (public health) and individual rights. 5. Explain the organization of the health care system, including principles and examples of health insurance and health care finance. 6. Describe health care policy formulation and implementation. 7. Explain and apply health policy principles to the policy topics discussed in class. Credits: 3.00

PUBH 40000 - Human Diseases And Disorders

Credit Hours: 3.00. The major communicable and noncommunicable diseases and disorders that afflict modern man, with particular emphasis upon the etiology, epidemiology, and ecology of these diseases and disorders.

Learning Outcomes: 1. Describe risk factors and modes of transmission for infectious and chronic diseases and how these diseases affect both personal and population health. 2. List the leading causes of mortality and morbidity, and health disparities among local, regional, and global populations. 3. Discuss major local, national, and global health challenges. 4. Explain the influence that science and technology have on individual and population health. 5. Describe the multiple determinants of health. Credits: 3.00

PUBH 40500 - Principles Of Epidemiology

Credit Hours: 3.00. The study of the distribution of diseases in human populations and factors that influence these distributions.

Learning Outcomes: 1. Interpret results of statistical analyses found in public health studies. 2. Develop written and oral presentations based on statistical analyses for both public health professionals and educated lay audiences. 3. Identify key sources of data for epidemiological purposes. 4. Identify the principles and limitations of public health screening programs. 5. Describe a public health problem in terms of magnitude, person, place, and time. 6. Explain the importance of epidemiology for informing scientific, ethical, economic, and political discussions of health issues. 7. Comprehend basic, ethical, and legal principles pertaining to the collection, use, and dissemination of epidemiological data. 8. Apply the basic terminology and definitions of epidemiology. 9. Calculate basic epidemiology measures. 10. Communicate epidemiologic information to lay and professional audiences. 11. Draw appropriate inferences from epidemiologic data. 12. Evaluate the strengths and limitations of epidemiologic reports. Credits: 3.00

PUBH 48000 - Internship For Public Health

Credit Hours: 9.00. The internship experience is a valuable opportunity for students to apply the procedures, theories, skills, and techniques they have mastered in the classroom to a professional work experience in the field. Each student in the Public Health Major at Purdue University is required to perform a 400 hour internship experience that meets the expectations of the student, the internship/practicum site, and the University. The internship is to be a culminating experience representative of the degree program and clinical work that provides students the opportunity to acquire invaluable work experience in the field outside of the academic setting. Must have completed all other major requirements. Permission of instructor required.

Learning Outcomes: 1. Demonstrate knowledge, skills, and abilities to be applied through the practicum experience within the areas of a) Administration, b) Program Development, c) Supervising Programs, d) Agency Operations. 2. Demonstrate professional and ethical decision making skills, verbal and written communication skills, and an ability to work with various needs of diverse populations. 3. Demonstrate professional

relationships that present themselves as part of the organization with staff and clientele throughout their practicum experience. 4. Assess, plan, implement, and evaluate a research or facility enhancing major project within the practicum site. Credits: 9.00

PUBH 49000 - Special Topics In Public Health

Credit Hours: 0.00 to 6.00. Various public health topics that may change from semester to semester. Department persmission required.

Learning Outcomes: 1. Outcomes vary due to nature of variable course topics. Credits: 0.00 to 6.00

PUBH 49200 - Mentored Research In Public Health

Credit Hours: 3.00. Designed to provide a research learning activity for undergraduate students majoring in Public Health. Students will gain research and presentation experience under the guidance of a supervising public health faculty member. Permission of instructor required.

Learning Outcomes: 1. Explain and discuss the research process. 2. Identify or develop sound public health research questions and hypotheses, and discuss appropriate methods for testing the hypotheses. 3. Demonstrate appropriate techniques regarding data collection in public health. 4. Interpret research findings and discuss their implications relative to public health. Credits: 3.00

Department of Speech, Language, and Hearing Sciences

About Speech, Language, and Hearing Sciences

Speech, Language, and Hearing Sciences (SLHS) is a top-ranked program that offers an undergraduate major focused on the science of human communication, and disorders affecting our ability to communicate effectively. In SLHS you will learn about the mechanisms underlying our ability to hear sounds, understand language, speak efficiently, and swallow safely. You will gain foundational knowledge in the evaluation, treatment, and research driving the field of human communication and its disorders. Students use this knowledge to solve problems and impact communities across the state and country.
SLHS is housed in Lyles-Porter Hall and offers audiology clinics, speech, language, and swallowing clinics, and state-of-the-art research laboratories. The SLHS major provides students with the foundational tools for a variety of career opportunities in healthcare. Our courses fulfill requirements needed to enter graduate programs in speech-language pathology or audiology. The major also provides students the opportunity to pursue specialized research interests within the field of communication sciences and disorders.

For Graduate Information please see Department of Speech, Language, and Hearing Sciences (Graduate).

Speech, Language, and Hearing Sciences, BS

SLHS 11000 - Exploring The Science And Practice Of Speech, Language, And Hearing Sciences

Credit Hours: 1.00. The Speech, Language, and Hearing Sciences (SLHS) Learning Community will provide SLHS majors with an opportunity to connect with each other, with SLHS graduate students, and with SLHS faculty. Students will be exposed to a variety of different learning and career opportunities within the SLHS field. Participants will also enroll in SLHS 11500 (Introduction to Communication Sciences and Disorders).

Learning Outcomes: 1. Understand the role of speech-language pathologists and audiologists in the community. 2. Understand the breadth and scope of career opportunities in the major. 3. Understand how and why the sciences of speech, language, and hearing can improve human lives. Credits: 1.00

SLHS 11500 - Introduction To Communicative Disorders (UCC: STS)

Credit Hours: 3.00. Nature, systems, and causes of communicative disorders and the principal methods used for remediation.

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

SLHS 13000 - Perception, Action, And Cognition In The Speech, Language, And Hearing Sciences (UCC: IL)

Credit Hours: 3.00. This course provides a broad introduction to basic science topics that underlie research in the speech, language, and hearing sciences. Topics center around biological and psychological aspects of perception (especially hearing), action (especially speech production), and cognition (especially language). Topics are addressed in terms of developing an understanding of material drawn from popular media aimed at interested non-specialists, including long-form journalism, essays and editorials, documentaries, TEDtalks, popular films and TV shows, etc.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Provide an overview of fundamental biological and psychological aspects of perception, action, and cognition.

Credits: 3.00

SLHS 21500 - Exploring Audiology And Hearing Science (UCC: STS)

Credit Hours: 3.00. This course will introduce students to the discipline of hearing science and to the clinical profession of audiology, with a focus on the unique and exciting aspects of the auditory system. Students will be introduced to the acoustic properties of environmental and speech sounds in relation to hearing loss, the fundamental anatomical and physiological bases of hearing, normal development of hearing and auditory behaviors, history and scope of practice in Audiology, hearing disorders across the life span and assessment and intervention techniques used to manage hearing disorders in children and adults. Guest speakers will include hearing researchers from Purdue University who will talk about their specific research, audiologists from Purdue University and the community who will talk about clinical practice and individuals with hearing disorders who will speak about their personal stories.

University Core Curriculum (UCC): (UCC: STS)

Credits: 3.00

SLHS 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. (ENGL 22700) Credit will not also be awarded for both SLHS 22700 and LC 26100. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

SLHS 30100 - Introduction To Cognitive Neuroscience

Credit Hours: 3.00. (PSY 32400) Introduction to the neural bases of complex human mental abilities. Emphasis on integrating research from cognitive science, brain-scanning techniques, and the lesion technique. Topics include perception, attention, memory, language, motor control, planning/decision-making, and consciousness.

Credits: 3.00

SLHS 30200 - Hearing Science

Credit Hours: 3.00. An introduction to the scientific foundations of auditory sensation and perception. The course covers those aspects of acoustics most pertinent to understanding auditory processing of simple and complex sounds (e.g. speech and music), the anatomy and physiology of the peripheral and central auditory systems, and a range of auditory perceptual phenomena and their physiological correlates.

Learning Outcomes: 1. Define the physical parameters of sound waves and explain how waves propagate through a medium. 2. Characterize the effects of systems on signals in both the time and frequency domains. 3. Describe the transmissions of sound through the anatomical structures in the peripheral auditory system. 4. Describe the neural coding of simple and complex sounds. 5. Describe the fundamental aspects of auditory sensation and perception. 6. Describe the basic physiological correlates of auditory sensation and perception. Credits: 3.00

SLHS 30300 - Anatomy And Physiology Of The Speech Mechanism

Credit Hours: 3.00. This course provides an introduction to the anatomical and physiological bases of the speech mechanism with an emphasis on the neural, respiratory, laryngeal, and supralaryngeal subsystems.

Learning Outcomes: 1. Develop knowledge of the major subsystems underlying speech and language production. 2. Identify major anatomical structures associated with speech production. 3. Describe the physiology of speech production. Credits: 3.00

SLHS 30600 - Introduction To Phonetics

Credit Hours: 3.00. Credit will not be given for both SLHS 30600 and LING 31500. An introduction to articulatory phonetics, speech sounds in languages of the world, and principles and symbols of the International Phonetic Alphabet. Extensive practice in phonetic transcription.

Credits: 3.00

SLHS 30900 - Language Development (UCC: STS)

Credit Hours: 3.00. (PSY 42600) Specific nature, sequence, and pattern of oral language development from birth through adolescence. Numerous examples illustrating the nature of language acquisition and approaches to the study of children's language are presented. Linguistic and psychological explanations of the sequence of development are discussed.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

SLHS 31000 - Introduction To Audiology: Foundations, Assessment And Management

Credit Hours: 3.00. This course will cover the breadth of audiology practice beginning with foundational content on the acoustic properties of environmental and speech sounds in relation to hearing loss, the fundamental anatomical and physiological bases of hearing, typical development of hearing and auditory behaviors, and the history and scope of practice in Audiology. Clinical topics will include hearing disorders across the lifespan, as well as assessment and intervention techniques used to manage hearing disorders in children and adults. Threaded throughout the course will also be activities designed to develop personal intercultural competence to enhance students' ability to work with diverse patients in a clinical setting.

Learning Outcomes: 1. Explain the basic properties of sounds, and structure and functions of the parts of the ear. 2. Explain the importance of obtaining a thorough case history and be able to write a case history report. 3. Interpret audiograms to determine types of hearing loss and mark audiograms. 4. Explain different management options for hearing loss including device fitting and aural rehabilitation. 5. Describe why intercultural competence is important for clinicians (and everybody) in this diverse world and develop your personal intercultural competence. Credits: 3.00

SLHS 40100 - Language And The Brain

Credit Hours: 3.00. (PSY 40100) This course is an overview of the neutral systems that underlie the core components of language, including speech perception and production, reading and writing, morphology, syntax, semantics, and discourse. During the past few decades, there has been an unprecedented increase in studies on these topics, due in large part to the widespread use of highly sensitive brain mapping techniques that enable researchers to identify relationships between particular brain areas and particular language functions. The findings that have been emerged from this recent explosion of research are exciting and important for several reasons. They provide fresh insights into the nature of the uniquely human capacity for language, and they have significant implications for understanding and treating language disorders that result from brain injury.

Learning Outcomes: 1. Understand the main methods for investigating the neural substrates

of language. 2. Understand the classic and progressive aphasia syndromes. 3. Basic neural underpinnings of the core aspects of language. 4. Critically evaluate research on language. 5. Critically evaluate research on language and the brain. Credits: 3.00

SLHS 40200 - Introduction To Hearing Loss Treatment And Management

Credit Hours: 3.00. This course provides a broad introduction to audiological treatment and management of hearing loss and its associated challenges. Course topics include an overview of current technology options, including hearing aids, cochlear implants, assistive listening devices, and tinnitus treatment devices. This course emphasizes appropriate counseling techniques, communication strategies, and patient-centered treatment considerations.

Learning Outcomes: 1. List the protected rights for individuals with hearing loss under the Americans with Disabilities Act. 2. Describe the audiological and lifestyle factors that determine hearing-aid, cochlear-implant, and assistive listening device (ALD) candidacy. 3. Describe the available treatments for individuals with tinnitus. 4. Describe the various types of communication strategies used by individuals with hearing loss and their communication partners. 5. Describe various counseling approaches and their role in patient-driven treatment and management of hearing loss. Credits: 3.00

SLHS 40300 - Psycholinguistics

Credit Hours: 3.00. (SLHS 40300) This course aims to introduce students to the current, research-based understanding of how different aspects of language (such as word perception, language acquisition, or speech production) are represented in the mind. In addition, it will introduce some of the research methods employed by language scientists for gaining insight into such a representation. This course also aims to help students learn how to critically evaluate research data used to support various theories about psychological and neural foundations of language knowledge.

Learning Outcomes: 1. Understand main theories and empirical findings about psychological and neural foundations of language knowledge. 2. Explain how experimental work is used to inform models of language processing. 3. Critically evaluate research data used to support such models. 4. Write evaluation of empirical work in a clear and concise manner. Credits: 3.00

SLHS 40400 - End Of Life Care And Management

Credit Hours: 3.00. We will discuss end of life care and management, primarily from the perspective of speech-language pathologists and audiologists. We will read books, chapters, and articles to gain broad perspectives on end of life, death and dying, and advanced care planning. We will discuss alternative breathing and nutritional interventions, along with their advantages and disadvantages. We will consider methods of counseling patients and families at end of life. We will cover advanced care planning, health care proxies, advanced directives, palliative care (including hospice). Guest speakers with expertise in related areas will be engaged to provide students with a strong background in these topics.

Learning Outcomes: 1. Understand cultural and individual differences in approaches to end of life care and management. 2. Describe advanced care planning, health care proxies, advanced directives, and palliative care and resources available to support families with these needs. 3. Understand the role of allied health professionals (especially speech-language pathologists and audiologists) in serving patients and families facing end of life decisions. 4. Describe alternative breathing and nutritional interventions commonly used at end of life and the advantages and disadvantages of these interventions for patient care at end of life. Credits: 3.00

SLHS 40500 - Science Of Reading

Credit Hours: 2.00. This course offers an extensive review of the scientific evidence regarding how children learn to read and best practices in teaching reading to typically achieving and struggling readers. Emphasis is placed on informed assessment, the five elements of reading and how to provide an interdisciplinary approach to reading instruction that is explicit, systematic, and cumulative.

Learning Outcomes: 1. Describe the

developmental process of learning to read detailing the five elements of reading. 2. Assimilate knowledge of linguistic concepts required for the development of reading skills. 3. Identify appropriate tools used to assess literacy development in school-age children to determine strengths and weaknesses of children with reading difficulties. 4. Discuss performance on literacy tasks, outline intervention needs and possible supports. 5. Communicate results to stakeholders conveying the reading profile of children and their needs. Credits: 2.00

SLHS 40600 - Introduction To Neurodegenerative Disorders

Credit Hours: 3.00. This course is an upper-level elective course for undergraduates in the SLHS major and others who are interested in learning more about neurodegenerative disorders and the effect these disorders have on the cranial sensorimotor system. This course assumes a basic knowledge of the anatomical and physiological bases of the speech mechanism (SLHS 30300) with an emphasis on the neural, respiratory, laryngeal, supralaryngeal, and aerodigestive subsystems. Information presented in this course will build on that basic knowledge and will focus on the effect of neurodegeneration on each of these systems through lectures, article reviews, case-based discussions, and disease-specific group presentations.

Learning Outcomes: 1. Develop additional knowledge of the anatomy and physiology of the central and peripheral nervous system and the basic anatomy of the motor system. 2. Develop problem-solving skills to differentiate between a variety of neurodegenerative disorders. 3. Develop the skills needed to read and critique relevant publications in the field of neurodegeneration. 4. Develop the skills to discuss evaluation of cranial sensorimotor behaviors. 5. Discuss current treatment options for neurodegenerative disorders. Credits: 3.00

SLHS 40700 - Culturally And Linguistically Diverse Children With Communication Disorders

Credit Hours: 3.00. This course provides students with an overall understanding of typical speech and language development, and communication disorders, across cultural-linguistic groups and issues related to the assessment of and intervention with children from culturally and linguistically diverse populations.

Learning Outcomes: 1. Describe typical speech and language development across cultural-linguistic groups. 2. Develop skills for the formal and informal assessment of speech and language abilities of children speaking dialect(s), speaking more than one language, and/or speaking language(s) other than English. 3. Describe approaches to assessment and intervention when clinicians do and do not speak the child's language(s). 4. Begin to design intervention programs for infants and children who exhibit a range of communicative deficits, and who are from culturally and linguistically diverse populations. Credits: 3.00

SLHS 40800 - Introduction To Voice, Upper Airway, And Swallowing Disorders

Credit Hours: 3.00. This course is focused disorders of the larynx and the affect they have on speaking, breathing, and swallowing. This course assumes a basic knowledge of the anatomical and physiological bases of the speech mechanism (SLHS 30300) with an emphasis on the respiratory, laryngeal, and aerodigestive subsystems. Information presented in this course will build on that knowledge and will focus on the etiologies and characteristics of voice, upper airway, and swallowing impairments and the role of speech-language pathologist in assessing and treating these conditions.

Learning Outcomes: 1. Identify normal anatomy and physiology of the larynx and aerodigestive tract. 2. Describe etiologies and characteristics of disorders associated with the larynx and aerodigestive tract resulting in voice, upper airway, and swallowing impairments. 3. Analyze the clinical presentations of various voice, upper airway, and swallowing disorders. 4. Identify the role of the Speech-Language Pathologist with regards to these disorders. Credits: 3.00

SLHS 40900 - Introduction To The Neural Bases Of Speech And Hearing

Credit Hours: 3.00. An introduction to the neuroanatomy and neurophysiology of the sensory and motor systems involved in speech and hearing. Topics covered include general neuroscience principles, methods for studying the nervous system, and neural mechanisms underlying speech and hearing. The course also introduces disordered systems and contemporary speech and auditory neuroscience research topics.

Learning Outcomes: 1. Demonstrate basic knowledge of neuroscience including general neuroanatomy, neurophysiology, and cellular mechanisms. 2. Identify critical neural structures and neurophysiology involved in hearing and speaking. 3. Describe important neural mechanisms underlying auditory processing and speech production. 4. Develop basic understanding of the neuroscience methods, communication disorders, and ongoing research topics in speech, language, and hearing sciences. Credits: 3.00

SLHS 41000 - Evolution Of Language

Credit Hours: 3.00. This course provides an overview of what is known and what is hypothesized about the evolution of human language. Issues include how we can study evolution of language and speech, how human language compares to animal communication, what neural resources are needed for language use and what is known about how such resources developed in the human brain (perception, production, auditory and visual).

Learning Outcomes: 1. Be familiar with the basic approaches and controversies regarding how language evolved, and for what purpose. 2. Evaluate various hypotheses with respect to relevant data. 3. Become familiar with some new views on human language, including spoken language, sign language, and gesturing. 4. Develop critical thinking in the form of the ability to read and understand an argument for or against a particular theory of language evolution. Credits: 3.00

SLHS 41100 - Speech Vs Sign: Perception, Production, Structure

Credit Hours: 3.00. This course offers a 'compare and contrast' of signed languages and spoken languages, and in the process provides a review of what students have learned about language and speech in their other classes. Issues covered include the definition of 'language', understanding the interaction of cognition and language, neural resources necessary for use of language in speech and in signing, the relationship between gesture and sign languages, and perception and production in both modalities.

Learning Outcomes: 1. Identify and explain similarities and differences in the grammars of sign and spoken languages, from the structure inside single syllables and word formation to the level of sentences and discourse. 2. Articulate a broader definition of 'language'. For example, they will be able to explain the parts of signs that perform the same functions as consonants and vowels making up syllables, the different types of morphemes such as classifiers that are found in sign and spoken languages (even though not in English), the differences between hearing people's gestures and signs in a sign language, and the impact of visual vs. auditory modality on the perception and production of these languages. 3. Explain how claims about sign language structure are tested using standard procedures. 4. Describe how signal-level 'sign science' is done and how it compares to acoustic/articulatory level speech science. 5. Explain why simultaneous fluent speech and fluent ASL are not possible (physically, cognitively, linguistically). 6. Describe differences between auditory and visual systems with respect to light and sound, neural wiring, and spatial and temporal processing. 7. Explain how and why acquisition of speech and sign are similar and different at cognitive, neural, and linguistic levels, and provide examples for each comparison. 8. Apply this comparison to explain educational and clinical implications of the relative roles of sign

and spoken languages in the context of severe to profound deafness. Credits: 3.00

SLHS 41200 - Pediatric Audiology

Credit Hours: 3.00. This course will cover the breadth of pediatric audiology practice including the historical developments in pediatric audiology, as well as assessment, hearing disorders, and management of hard-of-hearing infants, toddlers, young children, and adolescents. Threaded throughout the course will also be activities designed to develop personal intercultural competence to enhance students' ability to work with diverse patients in a clinical setting.

Learning Outcomes: 1. Describe age-appropriate assessment procedures for infants, toddlers, and older children. 2. Describe family-centered counseling methods. 3. Describe the etiology and signs and symptoms of common hearing disorders in children. 4. Describe management options for hard-of-hearing children. 5. Describe why intercultural competence is important for clinicians (and everybody) in this diverse world and develop your personal intercultural competence. Credits: 3.00

SLHS 41800 - Understanding Autism

Credit Hours: 3.00. (HDFS 41800, PSY 41800) This course will explore the etiology, neuroscience, diagnosis, and treatment of autism spectrum disorder (ASD). Approached from a multi-disciplinary perspective this course brings together gene, brain, and behavioral sciences with the aim of developing a better understanding of autism. The course will begin with an overview of ASD as a complex behavioral phenotype. This will include discussion of the history ASD and the expansion of the diagnostic criteria associated with the disorder. This introduction will be followed by several classes in which we will examine some of the key domains of impairment in ASD: reciprocal social interaction, language and communication, and restricted and repetitive behaviors. We will also consider the deficits associate with, but not defining of ASD, and examine co-morbid conditions frequently present in individuals with ASD. We will then address the topics of brain architecture, neurochemistry, and genetics and gene expression, all of which we will attempt to relate back to the behavioral features of autism. We will end the course with a review of treatment practices and their efficacy and an examination of impact of ASD on the family and society.

Learning Outcomes: 1. Describe and explain the behavioral characteristics used to diagnose ASD. 2. Describe and explain the strategies and symptoms used in the early identification of ASD. 3. Describe and explain the current theoretical perspectives about the causes of ASD and the increasing prevalence of the disorder. 4. Describe and explain the current scientific knowledge on the genetic and neurobiological underpinnings of ASD and how these are related to behavioral symptoms. 5. Describe and explain the range of available evidence-based and non-evidenced-based interventions for ASD. 6. Critically evaluate the empirical research findings as well as media reports related to ASD. Credits: 3.00

SLHS 41900 - Topics In Audiology And Speech Pathology

Credit Hours: 1.00 to 3.00. Study of selected topics, varying from semester to semester. Course content will be drawn from areas for which there are no permanent courses.

Learning Outcomes: 1. Vary by course. This is an experiential course number, learning outcomes will be different for each course designed under this number. Credits: 1.00 to 3.00

SLHS 42000 - Introduction To Developmental Speech And Language Disorders

Credit Hours: 3.00. Students cannot receive credit for both AUS 42000 and AUS 42200. Introduction to disorders of speech and language in children. Characteristics of these disorders, methods of evaluation, and intervention procedures are discussed.

Credits: 3.00

SLHS 43000 - Speech-Language Disorders In Health Care Settings

Credit Hours: 3.00. Presents speech-language disorders across the lifespan, encountered in a variety of health care settings. Discusses the etiology, evaluation, and management of these disorders; addresses administrative structures, team approaches, and reimbursement issues in health care settings.

Learning Outcomes: 1. Understand the types of organic and neurogenic disorders of communication that are within the scope of

practice for a speech-language pathologist. 2. Understand the types of health-care settings where a speech-language pathologist may work. 3. Understand aspects of evaluating communication disorders that are organically and neurologically based. 4. Understand aspects of treating communication disorders that are organically and neurologically based. 5. Understand the roles of a speech-language pathologist and other personnel on a variety of client intervention teams. Credits: 3.00

SLHS 44400 - Introduction To Research In Communication Sciences And Disorders

Credit Hours: 3.00. An introduction to fundamental concepts of research in the basic and clinical disorder aspects of speech, language, and hearing processes. Among topics to be covered are research design/strategies, model and theory development, research ethics and data collection and interpretation. Permission of instructor required.

Credits: 3.00

SLHS 44900 - Introduction To Clinical Practice In Communication Disorders

Credit Hours: 3.00. A course designed to provide instruction in basic diagnostic procedures and therapeutic approaches to speech, language, and hearing disorders.

Learning Outcomes: 1. To expose students to clients who have a variety of speech, language, and/or hearing disabilities in order to develop an understanding of the nature of communication disorders across a wide age-span and diverse cultures 2. To familiarize students with clinical methods in Audiology and Speech-Language Pathology through video and live observations, lectures, discussions, and readings. 3. To assist students in developing a professional approach to inter-personal interactions and practices in the field of communication disorders 4. To help students gather and organize resources related to the assessment and treatment of individuals with communication disorders 5. To provide opportunities for students to complete and document 25 hours of observation in the field of communication disorders. Credits: 3.00

SLHS 46000 - Assessment Audiology And Aural Rehabilitation Across The Lifespan

Credit Hours: 4.00. This course will provide an introduction to disorders of the auditory system, the basic assessments that are used to diagnose disorders, and habilitation/rehabilitation. The laboratory provides practical instruction in the procedures discussed in class.

Learning Outcomes: 1. Describe and explain the basic battery of audiological tests. 2. Perform these tests. 3. Interpret the results of the test battery. 4. Describe and explain devices and strategies used for habilitation/rehabilitation. Credits: 4.00

SLHS 49000 - Directed Study Special Problems

Credit Hours: 1.00 to 6.00. Designed for student to work with individual instructors on special topics of interest. Permission of instructor required.

Credits: 1.00 to 6.00

SLHS 49800 - Undergraduate Research Experience

Credit Hours: 1.00 to 4.00. The course allows students an opportunity to obtain first-hand experience with research in speech, language, and hearing sciences. Permission of instructor required.

Credits: 1.00 to 4.00

Welcome to the John Martinson Honors College

Community of Scholars

Purdue University's John Martinson Honors College fosters collaborative learning, promotes individual research and community engagement, and prepares students for a global world. We encourage you to participate actively in this community, both inside and out of the classroom.

Mission

Our mission is to create and foster well-rounded, well-educated global leaders. We work to create student leaders on campus who impact society from their very first semester. The four pillars, our primary tenets, come together to help us accomplish this mission. They are: leadership development, undergraduate research, community and global experiences, and interdisciplinary academics.

Leadership Development

- Opportunities and Experiences - Numerous opportunities and experiences exist for students to develop leadership skills crucial for academic and professional success.
- Student Organizations - Our student-driven organizations provide opportunities to make a difference in the Honors College, the campus, surrounding communities, and beyond.
- Interdisciplinary Teamwork - Living and learning in an interdisciplinary environment fosters increased involvement and helps develop problem-solving skills.
- Student Mentorship - Peer mentors help in facilitating the first-year course and lead groups of students working on projects.

Undergraduate Research

- Undergraduate Research - Undergraduate research is a built-in component of honors learning, broadening each student's understanding of global issues.
- World-class Faculty - Honors students have the opportunity to work with the top instructors on campus, most of whom are award-winning professors.
- Scholarly Project - The scholarly project involves students in the creation of new knowledge.
- Interdisciplinary Breadth - Interdisciplinary seminars help students understand the many complexities and issues crossing disciplines.

Community and Global Experiences

- Global Experience - Students engage with visiting scholars and international classmates from across the world, creating intercultural bonds of friendship.
- Collaboration - Hailing from diverse geographical and educational backgrounds, honors students practice the collaborative skills and approaches for addressing issues in the global economy.
- Faculty Engagement - Our faculty is engaged with the students both inside and outside the classroom.
- Honors Activities - Honors College activities provide ways to forge friendships within the community as well as to develop a culture of giving and engagement.

Interdisciplinary Academics

- Interdisciplinary Thinking - Honors courses are comprised of students from all disciplines from across the university, allowing for open dialogue and collaboration.
- Lateral Learning - Through discussion-based honors courses, students learn from one another daily.
- National and International Scholarships Office (NISO) - The professionals at NISO mentor students through the application process for prestigious scholarships.
- Global Learning - Students are exposed to a variety of global travel opportunities that lead to academic and personal growth.

Contact Information

To learn more, schedule a campus visit, or meet with a current Honors College student, please contact the John Martinson Honors College main office at 765-494-2929.

HONR 12000 - Introduction To Research

Credit Hours: 3.00. In this course you will take an idea and blow it up. You will "blow it up" to better understand its elements, and its connections to various ways of creating knowledge. Then you will take the resultant pieces and use them to construct a research plan that's inclusive of at least two forms of inquiry.

Learning Outcomes: 1. Create a research proposal from some idea, observation, or problem that interests you, so that you can implement the plan as you launch your undergraduate academic journey. Credits: 3.00

HONR 19900 - Interdisciplinary Honors - Introductory Seminar

Credit Hours: 1.00 to 6.00. These introductory topic seminars are designed to open intellectual horizons and allow opportunities for learning by inquiry in a collaborative environment. Courses are limited to 20 participants or less, may be team-taught, and emphasize close interaction between the professor(s) and the students.

Learning Outcomes: 1. Sharpen critical thinking skills and interdisciplinary understanding. 2. Learn project-based inquiry, research thinking, and collaborative skills. Credits: 1.00 to 6.00

HONR 19901 - Honors First Yr Experience I

Credit Hours: 1.00. All JMHC students take this 1 credit course each semester (fall and spring) of their first year. This "Honors First Year Experience" is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. In fall, students explore interdisciplinary topics in small seminars with dedicated faculty and work in groups with JMHC student mentors in "world readiness" labs.

Learning Outcomes: 1. Identify and analyze complex and global issues/events/perspectives. 2. Identify approaches to interdisciplinary scholarship. 3. Evaluate and summarize literature from multiple disciplines. 4. Practice strategies for inclusive and equitable engagement across differences through in-class discussions and group activities. 5. Recognize the mission of the JMHC - what the college stands for, what it offers to students, and what students can offer the JMHC community. 6. Develop inclusive and equitable collaborative and teamwork skills. Credits: 1.00

HONR 19902 - Honors First Yr Experience II

Credit Hours: 1.00. All JMHC students take this course each semester (fall and spring) of their first year. This course is designed to introduce students to college-level honors education. Learning outcomes include how to be flexible thinkers, inclusive collaborators, and ethical leaders. This course is the second half of the required course sequence taken by all students entering the Honors College. Restricted to Honors College students.

Learning Outcomes: 1. Identify and analyze complex and global issues/events/perspectives. 2. Identify approaches to interdisciplinary scholarship. 3. Evaluate and summarize literature from multiple disciplines. 4. Practice strategies for inclusive and equitable engagement across differences through in-class discussions and group activities. 5. Recognize the mission of the JMHC - what the college stands for, what it offers to students, and what students can offer the JMHC community. 6. Develop inclusive and equitable collaborative and teamwork skills. Credits: 1.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to

express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

HONR 22000 - Community Of Inquiry

Credit Hours: 2.00. This course is for new members of the Honors College community, who entered as continuing Purdue students or transferred to Purdue. It, being your first or one of your first courses in the Honors College, is designed to help you hone some of the fundamental learning outcomes of an honors education: interdisciplinary thinking, critical thinking, problem-solving, research thinking, collaboration, and global awareness. You will also engage with the pillars of the Honors College and develop community within the Honors College. To accomplish these objectives, the course is simultaneously project-based and experiential. You will work in multi-disciplinary teams on applied research that emphasizes critical and multi-dimensional thinking about real-world problems. Through project-based learning, you will move your skills beyond identifying and understanding a problem to identifying and formulating solutions to that problem. The problem addressed in the course is local or global in scope and has social, economic, political, and/or environmental implications for our local and/or global community as well as begs a multi-disciplinary, innovative solution. Continuing in the vein of experiential learning and of building your honors ethos, you will attend events (some as a class, others individually) and participate in programs in the Honors College and across campus that embody the Honors College's pillars: Community and Global Engagement, Leadership, Research, and Interdisciplinary Academics. You will curate a schedule of events that take place during the semester and reflect on these experiences. Permission of department required.

Learning Outcomes: 1. Develop interdisciplinary thinking, critical thinking, problem solving, research thinking, collaboration, and global awareness. Credits: 2.00

HONR 22100 - Exploring Place (UCC: BSS)

Credit Hours: 3.00. "Exploring Place" is an examination of the cultural, social and historical dynamics that influence communities and relationships of a site. Blending independent study and distance learning, in this experiential learning course, the student and the instructor work together to design an individualized, in-depth study of the place in which the student is located. This study will be attentive to the social, cultural, political, economic, and other forces that have shaped this place historically and today, while also focusing on community life and the relationships between residents, institutions, organizations, and others. Exploring Place offers students the opportunity to better understand the people and places around them, expand their worldviews, and increase their self-awareness as they engage within these spaces and understand their place in them.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Create a plan of study that will serve as a guide for all of your activities in this course. 2. Identify and distinguish among different worldviews that shape how individuals or groups behave or perceive the world. 3. Identify and develop another intercultural competency for which you would like to accomplish personal growth. 4. Synthesize pertinent scholarly literature in order to establish a theoretical framework for understanding selected topic. 5. Collect and analyze primary data in order to describe and explain relationships among groups and culture of a place. Credits: 3.00

HONR 22200 - Solutions Lab Global

Credit Hours: 2.00. In this course, students from Purdue University (West Lafayette, Indiana) and at universities abroad will collaborate virtually in interdisciplinary teams to identify solutions to a major global challenge. Each semester, the theme of the global challenge changes. At the start of the course, students at both universities will meet together as a class to learn about the topic from a range of disciplinary perspectives through guest lectures, assigned readings, and class discussions. Students will then be divided into interdisciplinary teams with members from both universities and provided a prompt related to the semester's theme. Teams will spend several weeks of the course focused on researching, developing, and packaging their solutions, before presenting them publicly at the end of the term. In addition to increasing

knowledge of the topic and improving teamwork skills, students in this course will advance in intercultural knowledge, skills, and attitudes through their international collaborative experience.

Learning Outcomes: 1. Increase basic knowledge of global pandemics and their effects on societies. 2. Gain new perspectives on the social implications of design emerging from multiple academic disciplines. 3. Analyze global issues and challenges, as well as potential solutions, from multiple cultural perspectives and the positions of multiple stakeholders around the world. 4. Advance research and teamwork skills through the completion of a group project and presentation addressing real-world problems. 5. Practice intercultural communication skills and other intercultural competencies through in-class activities and discussions, and through group work completed in international, cross-cultural teams. 6. Develop deeper intercultural self-awareness through reflective thinking and journaling. Credits: 2.00

HONR 29500 - Interdisciplinary Honors - Independent Experience

Credit Hours: 1.00 to 3.00. Individual experiential projects undertaken with faculty supervision. Permission of instructor required.

Credits: 1.00 to 3.00

HONR 29900 - Interdisciplinary Honors - Experiential Learning

Credit Hours: 1.00 to 6.00. These interdisciplinary topics seminars are designed to offer experiential learning on campus, in the community, and around the world. Courses are limited to 20 participants or fewer, may be team-taught, and emphasize close interaction between the professor(s) and the students. Students will participate in active learning exercises that may include study away and study abroad, workshops, research and creative skill building, community collaboration, and/or service learning. Seminar topics will vary from semester to semester.

Credits: 1.00 to 6.00

HONR 29901 - Interdisciplinary Honors - Honors Mentors

Credit Hours: 2.00. This hands-on course provides leadership training to the continuing Honors College students selected to work as mentors for the required, first-year honors course. Students work closely with a faculty instructor. Restricted to Honors College students. Department permission required.

Learning Outcomes: 1. Demonstrate self-understanding and continuous learning. 2. Demonstrate communication skills. 3. Demonstrate systems thinking, planning, and solving. 4. Demonstrate teamwork and collaboration. 5. Demonstrate ethics and personal responsibility. Credits: 2.00

HONR 31000 - Space-Time!

Credit Hours: 3.00. In Space-time!, we will explore how our relationship to space and time has changed over human history. We will focus primarily on the last two centuries and how interconnected changes in science, technology, and culture altered our sense of the scope, age, and nature of the reality around us. The ideas around space and time offer us an occasion to see how arts, philosophy, sciences, and our own experiences shape the way we see the world. Students, too, will explore the cross-influences of arts, philosophy, and sciences, as they write their own creative works, engage complex ideas from new perspectives, and expand their imaginations.

Learning Outcomes: 1. Develop an appreciation for how the progression of science is intertwined with culture and how certain creative genres -- like science fiction -- explore, interrogate, and even progress scientific ideas. 2. Develop skills for exploring new ideas, engaging multiple perspectives, and synthesizing diverse ideas to create more a complex or nuanced understanding of the world around them. 3. Develop skills for raising novel questions, exploring multiple perspectives, and synthesizing divergent ideas. Credits: 3.00

HONR 31100 - Replicants

Credit Hours: 3.00. From ancient mythology to Blade Runner 2049, the creation of artificial bodies has captured the human imagination. This course asks: how do the materials we use to re-create the human body affect the way that we construct our humanity? We will examine the different materials people have used to replicate the body throughout history. The course is organized thematically by materials such as wood, wax, silicone, and digital media. This course emphasizes hands-on learning; we will cast wax masks, sculpt clay figurines, and create automata, among other experiential activities. The types

of replicants we will study in this course range from voodoo dolls to Real Dolls, death masks to Deep Fakes, and statues to cyborgs. For the final project, you will choose a case study of a replicant to write about in an exploratory paper.

Learning Outcomes: 1. Understand core concepts of materiality theory, including the material turn and theories of the body, and compare how these concepts are used by multiple scholarly disciplines. 2. Apply these concepts to your own academic discipline and interests. 3. Evaluate and apply diverse cultural and historical practices of material use and reproduction of the human form across cultures and over time. 4. Have developed your own imaginative and complex perspective on the course material. 5. Have developed critical reading, analytical, and communication skills through engagement with scholarly writing, group discussion, small group work, leading discussion, and writing assignments. Credits: 3.00

HONR 31200 - Jazz

Credit Hours: 3.00. Jazz artists "speak to each other in the language of music." In Jazz, we will explore the nature of this artistic conversation with many of its cultural influences, geographical variations, and temporal iterations. Throughout our time together we will interrogate varying facets of the social impact such a conversation facilitates. Furthermore, we will explore the musical language of jazz with its power to make collective performance stronger. And we will investigate the ways in which this artists' talk became the "talk of the town" and country as a medium through which people could break from dominant cultures. We will make sense of and process our journey by creating our own jazz ensemble, featuring the layered textures of our lives as inspiration for the note and lyric.

Learning Outcomes: 1. Articulate jazz conceptually. 2. Create connections between jazz and a democratic community. 3. Represent jazz creatively. Credits: 3.00

HONR 31300 - Science, Technology, & Society (UCC: STS)

Credit Hours: 3.00. Science and technology are deeply intertwined with the distribution of costs and benefits in human society, underscoring the need for critical perspectives. This project-based course will examine the social and ethical implications of science and technology using interdisciplinary methodologies/approaches. Students will have the opportunity to address questions such as: How have particular scientific discoveries and technologies emerged or evolved? How have they shaped society, and how has society shaped science and technology? How have science and technology compounded social inequalities (race, class, gender), and how can they be changed to reduce inequalities? Topics that will be explored will vary each semester.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 2. Describe ethical implications of technological and scientific developments. 3. Explain how social factors have shaped the development and application of science. 4. Explain how social factors have shaped the development science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. Credits: 3.00

HONR 31400 - The Human Epoch (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the entangled relations between humanity and the environment from multiple social contexts and time periods. Throughout the class, students will read, analyze, and discuss interdisciplinary scholarship from the social and behavioral sciences. Classroom activities will take the form of discussion, projects and group assignments, and writing assignments, with an emphasis on peer-to-peer learning. Students will create a project aimed at a public audience that demonstrates knowledge about key course topics and communicates connections between social/behavioral knowledge and personal, civic, ethical, or global decisions and policies. As a result of taking this course, students will be able to understand and evaluate critical questions about humanity and its ecologies, recognize the importance of those questions for various audiences, and draw connections between course materials and their own perspectives about the world.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Demonstrate knowledge of major concepts, theoretical perspectives, empirical patterns, and/or historical contexts within a given social or

behavioral domain. 2. Identify the strengths and weaknesses of contending explanations or interpretations for social, behavioral, or historical phenomena. 3. Recognize the extent and impact of diversity among individuals, cultures, or societies in contemporary or historical contexts. 4. Identify examples of how social, behavioral, or historical knowledge informs and can shape personal, civic, ethical, or global decisions and responsibilities. Credits: 3.00

HONR 31500 - Across Differences (UCC: HUM)

Credit Hours: 3.00. To understand and combat systemic injustices, our students must be equipped to engage with the historical and present-day racial and ethnic "reckonings" that define the United States, and large parts of the globe. This course offers students an opportunity to focus on cultural landscapes/contexts, to learn how race and ethnicity permeate cultural texts, genres, and industries. The course trains students to recognize how race-and-ethnicity-based inequities intersect with issues of class, gender, and/or sexuality, and how these intersections articulate themselves in/through culture. Students will grapple with the colonial, national, transatlantic, trans-cultural, and diasporic underpinnings of culture. Topics that will be explored will vary each semester, but to attend to the diverse ways in which students learn and demonstrate their learning, all sections will use interdisciplinary materials like songs, films, video games, sporting events, poems, neighborhood maps, photographs, fine art pieces, oral histories, interviews, and newspapers, in addition to traditional/scholarly publications.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Recognize and describe humanistic, historical, or artistic works or problems and patterns of the human experience, especially those related to matters of race, ethnicity, and difference. 2. Apply disciplinary methodologies, epistemologies, and traditions of the humanities and the arts to better engage with historical and present-day debates about race and ethnicity. 3. Analyze and evaluate texts, works, objects, events, or ideas in their cultural, intellectual, or historical contexts to recognize how race and ethnicity-based inequities intersect with issues of class, gender, and/or sexuality. 4. Create, interpret, or reinterpret artistic and/or humanistic works through performance, analysis or criticism to grapple with how difference is inscribed onto cultural landscapes and contexts. 5. Analyze diverse narratives and evidence in order to explore the complexity of colonial, national, transatlantic, trans-cultural, and diasporic human experiences across space and time. Credits: 3.00

HONR 39500 - Interdisciplinary Honors - Independent Study

Credit Hours: 1.00 to 3.00. Individualized course of study undertaken with faculty supervision. Permission of instructor required.

Credits: 1.00 to 3.00

HONR 39900 - Interdisciplinary Honors - Special Topics Seminar

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of honors seminars that stress interdisciplinary understanding, intellectual flexibility, creative thought, and group discussion. Topics vary by semester. Open to students at all levels.

Credits: 1.00 to 6.00

HONR 46000 - Technological Justice (UCC: STS)

Credit Hours: 3.00. In this course, students will study interdisciplinary approaches to technology ethics for responding to today's pressing technological dilemmas in a range of contexts, from healthcare, mass incarceration, and airport security to social media, smart cities, and space travel. Students will grapple with how historical and present-day inequalities, institutional environments, decision-making cultures, and regulatory systems impact the technological design process and distribution of technology's risks and rewards in society. We will ask ourselves how relations of power inform the ways technologies are designed and experienced, as well as how power shapes dominant and insurgent approaches to achieving technological justice. The primary deliverable in this class is for you to conceive of and carry out your own "Technological Justice" Project, based on your interests, passions, and personal and/or professional goals.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain an interdisciplinary

understanding of critical interventions into tech ethics from both scholarly and popular culture perspectives. 2. Recognize and critically analyze how values, goals, assumptions, and ideas of social differences are embedded in technological designs and shape ethics discourse (with particularly attention to race, gender, class, and ability). 3. Analyze and reflect critically on the societal impacts of technologies in a variety of contexts. 4. Conceive, conduct, and present an original interdisciplinary research project that demonstrates a sophisticated understanding of the relationship between technology, social issues, and justice. Credits: 3.00

HONR 46100 - Well-Being

Credit Hours: 3.00. Copenhagen, Zurich, Helsinki, Stockholm, and Tokyo are the five most livable cities in the world according to MONOCLE's 2021 Quality of Life Index. They are the highest-ranking cities when using metrics to measure crime, emergency services' response time, transportation networks, cycling culture, food, drink, retail, and the number of independent bookshops. MONOCLE's Quality of Life survey is one among the many that exist to rank the world's best cities, but wealth is one theme that emerges from among the varying indices and their respective results. The metrics, indeed the participants responding to the metrics, represent populations of people with high levels of discretionary income. How might the metrics reflect different values if these indices include a different kind of participant, such as the urban poor?

Learning Outcomes: 1. Investigate indicators of community well-being related to quality of life with urban poor communities. Credits: 3.00

HONR 46200 - Protein Design With FoldIt

Credit Hours: 3.00. The protein folding problem is a grand challenge in biology. How does a protein's amino acid sequence dictate its three-dimensional structure? FoldIt is an online game in which players determine the most stable folded structure of hypothetical proteins that have been predicted by unique computer algorithms to perform specific functions in the cell. Students in this course will be introduced to the mechanics of the FoldIt software to fold computer-predicted proteins into their native structures as well as design novel proteins that can bind and deactivate the COVID-19 spike protein.

Learning Outcomes: 1. Demonstrate knowledge of the fundamental principles underlying protein folding and design. 2. Demonstrate knowledge of the protein structure prediction and design problems. 3. Design novel 3D protein structures using the FoldIt software. 4. Develop responsible and ethical research practices. 5. Read, summarize, and analyze scientific research articles. 6. Construct a literature review. 7. Create, present, and evaluate scientific research posters. 8. Develop strategies to translate research to the general public. 9. Critically reflect upon and articulate their learning and growth as a researcher. Credits: 3.00

HONR 46300 - Research Thinking Portfolio

Credit Hours: 2.00. This course establishes a new pathway for Honors completion through a critical engagement with the Undergraduate Research pillar of the college. This course will empower Honors students to leverage their research, scholarly, and creative experiences in curricular as well as co- and extra-curricular experiences toward completing the HC curriculum. Our course will combine workshops, hands-on laboratories, group discussion, and one-on-one meetings. The major assignment is a reflective portfolio, which will serve as a record of your past experiences and an opportunity to reflect on the ways in which your time as an Honors College student has shaped your research thinking and helped prepare you for life beyond the university. Successful completion of the course fulfills the scholarly project requirement of the HC curriculum.

Learning Outcomes: 1. Understand the place of research in institutions of higher education and society. 2. Identify a question, the answer to which makes a contribution to an existing body of knowledge or creative practice. 3. Read, analyze, and synthesize information from scholarly literature and/or traditions of creative practice. 4. Demonstrate knowledge of disciplinary and/or interdisciplinary skills, methods, and abilities appropriate for the research/creative question. 5. Recognize and respond to ethical responsibilities of their research projects. 6. Communicate their findings in both oral and/or written formats.

Credits: 2.00

HONR 46400 - Scholarly Project

Credit Hours: 3.00. This course fulfills the scholarly project requirement of the Honors College curriculum. Students will engage in original research projects that produce new knowledge.

Learning Outcomes: 1. Identify a question, the answer to which makes a contribution to an existing body of knowledge or creative practice. 2. Read, analyze, and synthesize information from scholarly literature and/or traditions of creative practice. 3. Demonstrate knowledge of disciplinary and/or interdisciplinary skills, methods, and abilities appropriate for their research/creative question. 4. Evaluate and interpret their findings. 5. Recognize and respond to ethical responsibilities of their research/creative projects. 6. Communicate their findings in both oral and/or written formats. Credits: 3.00

HONR 49500 - Honors Independent Research

Credit Hours: 1.00 to 6.00. Individualized research under faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Improve research skills. 2. Develop research thinking. 3. Create new knowledge. Credits: 1.00 to 6.00

HONR 49900 - Honors Research Project

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of faculty-led collaborative research projects. Topics will vary by semester. Permission of department required.

Credits: 1.00 to 6.00

HONR 59901 - Research Mentorship Development Program

Credit Hours: 3.00. The Research Mentorship Development Program is designed for Purdue based on a nationally recognized curriculum and prepares graduate students or postdocs to mentor undergraduates in research. Effective mentoring of undergraduate researchers requires specific skillsets and approaches. Implementation of these strategies can lead to a productive and mutually beneficial experience for both students and their mentors. The course is designed for graduate students who plan to work with new researchers in their labs or research groups and who plan to enter academia or pursue careers in which they will mentor others in scholarship or research. Graduate students or postdocs selected for the program are matched with honors students who are interested in research. Permission of department required.

Learning Outcomes: 1. Communicate more effectively with mentees. 2. Align mentor and mentee expectations. 3. Assess their mentee's understanding of core concepts and technical skills in the research field. 4. Foster their mentee's confidence and ability to conduct independent research. 5. Implement concrete strategies for addressing issues of diversity. 6. Articulate and constructively review their own approach to mentoring. 7. Cultivate research ethics with their mentees. 8. Promote professional development of their mentees. 9. Build a community of practice with other mentees. Credits: 3.00

College of Liberal Arts

Liberal Arts Photo

Overview

With over 40 different majors, as well as numerous minors and certificates, the College of Liberal Arts will help you develop the communication, collaborative, and analytical skills that will prepare you to achieve your personal and professional goals in our fast-changing world. Liberal Arts students work side-by-side with STEM students, mindful that complex challenges demand creative, collaborative, multi-faceted, innovative, and meaningful solutions. The College of Liberal Arts develops students who are independent, creative thinkers, and problem solvers who contribute to their communities as productive, engaged citizens working as a force for good in the world.
Think Broadly. Lead Boldly.

Admissions (website)

College of Liberal Arts Major Change (CODO) Requirements
Successful completion of all Teacher Education Program (TEP) Requirements, including a minimum 2.5 Teacher Education Overall GPA are required to progress beyond each TEP Milestone. All Professional Education courses, including Learner Specialty Concentration/Pathway courses, must be completed with no grade lower than a "C" and no "I" (Incompletes). Degree requirements must be fulfilled to qualify for TEP completion. A minimum passing score on all required licensure examinations and completion of licensure requirements are necessary to be eligible for an Indiana Instructional Educator License.
[[permalink=12524|new:{'title':1}]][[/permalink]]

- Summary of Teacher Education Milestones
- Licensure Information
- Technology Integration- Blended and Online Teaching (Ti-BOT)

Summary of Teacher Education Milestones

Admission to Teacher Education Program
Admission to the Teacher Education Program (TEP) is directly granted upon acceptance and enrollment at Purdue University, West Lafayette. The Teacher Education Program is aligned with national and state accreditation and licensure standards, regulations, and rules; university guidelines; and prescribed Plan(s) of Study (POS) as defined by Admission Year or as otherwise authorized by the Office of Teacher Education and Licensure (OTEL).

TEP Program Progression by Milestone (Milestones A-F)
Successful TEP progression and completion are achieved by attaining each TEP Milestone at or above Standard as outlined within the 2025-2026 Program Requirements and Milestones for each individual content area/major and as referenced and assigned within the 2025-2026 University Catalog, 2025-2026 Teacher Education Program Directory, the Brightspace course 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements, Plan(s) of Study (POS), and course syllabi.

Required Brightspace Course
Every incoming 2025-2026 Teacher Education (TE) student will be enrolled in the REQUIRED 2025-2026 Purdue University Undergraduate Teacher Education Program Requirements Brightspace course. This course serves as the official/primary manner for which the Office of Teacher Education and Licensure (OTEL) will communicate and monitor cohort-specific requirements, milestones, timelines, notifications, tutorials, actions, student engagement, etc. for each TE student. Course commitment is continuous beginning upon arrival to the university and concludes when Milestones A-F are attained.

Course Substitutions
Course substitutions must fulfill degree

requirements, associated Teacher Education Program (TEP) key and/or common assessments, and licensure standards/requirements. Prior approval by the Office of Teacher Education and Licensure is required for all course substitutions.

Milestone A: Methods Qualified

Milestone A - Teacher Education Program Progression Status

- Exceeds Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone A Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone A Criteria as defined by Content Area/Admission Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.
- Milestone A Decision Deferred to Milestone B: Reserved for transfer students. Additional time is necessary to acquire an adequate number of measurable Milestone outcomes.

Milestone A - Review Schedule

- Conducted - Close of Spring Semester 2026
- Decision/Notification - Early Fall Semester 2026

1. 2.50/4.00 Overall GPA (at time of Milestone A review)
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone A review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete three (3) Ti-BOT badges (at the time of Milestone A review).
7. No unresolved Professional Dispositions issues/concerns.
8. Adhere to the Criminal Background Check Policy.
9. Complete TEP Brightspace Assignments, including but not limited to attendance at the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
10. Attend the mandatory TEP Orientation hosted by the Office of Teacher Education and Licensure (OTEL).
11. Submit the Teacher Education Program Agreement (TEPA).
12. Identify via the Teacher Education Program Agreement (TEPA) one of four chosen Learner Specialty Pathways. Learner Specialty Concentration/Pathway requirements are specific to individual

content area/major.

Milestone B: Student Teaching/ Placement

Milestone B - Student Teaching Placement

- Exceeds Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone B Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone B Criteria as defined by Content Area/Admission Year. NOTE: A Professional Disposition/Student of Concern is submitted and prescribed, Intervention required. Schedule a meeting with Academic Advisor.
- Milestone B Decision Deferred to Milestone C: Reserved for transfer students. Additional time is necessary to acquire an adequate number of measurable Milestone outcomes.

Milestone B - Review Schedule

- Conducted - Close of Fall Semester 2027
- Decision/Notification - Early Spring Semester 2028

1. 2.50/4.00 Overall GPA (at time of Milestone B review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone B review).
5. **Successful progression in Foundation Courses and associated Foundation Portfolio Common Assessments.
6. ***Successfully complete five (5) total Ti-BOT badges (at the time of Milestone B review).
7. No unresolved Professional Dispositions issues/concerns.
8. Complete TEP Brightspace Assignments.
9. Attend the mandatory Student Teaching Clinical Acceptance Process (CAP) Workshop provided by the Office of Clinical Practice (OCP) AND submit your CAP Application as directed by OCP.

- Expanded Student Teaching practicums and full-time Student Teaching occur over two consecutive semesters.
- Verify from the CAP Application projected Student Teaching semester/year.

Milestone C: Student Teaching Authorization

Milestone C - Student Teaching Authorization

- Exceeds Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year and recognized on Dean's List.
- At Standard: Meets Milestone C Criteria as defined by Content Area/Admission Year.
- Below Standard: Does not Meet Milestone C Criteria as defined by Content Area/Admission Year.

Milestone C Criteria must be attained At

Standard before the Office of Teacher Education and Licensure (OTEL) will authorize enrollment reinstatement for Student Teaching.

Milestone C - Review Schedule

- Conducted - Close of Fall Semester 2028
- Decision/Notification - Early Spring Semester 2029

1. 2.50/4.00 Overall GPA (at time of Milestone C review).
2. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
3. Fulfill degree requirements as projected (2.00/4.00 Graduation GPA- see additional requirements in the Purdue University Catalog).
4. *Be in Good Standing with the University (at time of Milestone C review).
5. **Successful completion and target met on Foundations Portfolio (submission and target met on Common Lesson Plan in Semester 7).
6. ***Successfully complete ten (10) total Ti-BOT badges (at the time of Milestone C review).
7. Successfully complete all Professional Education (including Foundation and Methods), Learner Specialty Pathway, and degree courses prior to student teaching (Semester Eight).
8. Attempt all required content test(s) before the Student Teaching semester per the timeline below; Test Requirements (ets.org)

Content Test Attempts for Major

For Fall Student Teaching: Official Score Reports due to OTEL no later than July 1.

For Spring Student Teaching: Official Score Reports due to OTEL no later than December 1.

Content Test Attempts for Pathways/Concentrations (High Ability and English Language Learning)

For Fall Student Teaching: Test Registrations received in OTEL by May 15th confirming a test date scheduled no later than June 30th.

For Spring Student Teaching: Test Registrations received in OTEL by October 15th confirming a test date scheduled no later January 31st.
Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts; If completing a Learner Specialty Pathway that leads to licensure (High Ability or English Language Learners), the associated content exam must be attempted prior to the Student Teaching (Semester 8).

9. No unresolved Professional Dispositions issues/concerns.
10. Adhere to the Criminal Background Check Policy.

Milestone D: Teacher Education Program Completion
Milestone D - Teacher Education Program Completion

- Exceeds Standard: *Meets Milestone D Criteria as*

defined by Content Area/Admission Year and recognized on Dean's List.

- At Standard: *Meets Milestone D Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone D Criteria as defined by Content Area/Admission Year.*

Milestone D - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-C met.
2. 2.50/4.00 Overall GPA (at time of Milestone D review).
3. Professional Education (including Professional Education electives) and Learner Specialty Pathway course grades "C" or higher, no "I" (Incomplete), no "Pass/Fail".
4. Verify degree is conferred on Transcript/Academic Record.
5. *Be in Good Standing with the University (at time of Milestone D review).
6. No unresolved Professional Dispositions issues/concerns.
7. ****Successful completion and target met on all Common Assessments (submission and target met on CPAST and edTPA in Semester 8).

Milestone E: Licensure Eligible

Successful completion of the Purdue University Agricultural Education Program, Agricultural Education, BS, and the State of Indiana licensure requirements for an Indiana REPA 3 Initial Instructional License in Career and Technical Education (CTE): Agriculture (5-12) and *Blended and Online Teaching (5-12).

Milestone E - Licensure Eligible

- Exceeds Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone E Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone E Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone E - Review Schedule

- Conducted - Upon Degree Conferral - Close of Spring Semester 2029
- Decision/Notification - Early Summer 2029

1. Milestones A-D met.
2. Resolve any holds on academic records (if applicable).
3. Successfully complete the required pedagogy test; Test Requirements (ets.org). Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
4. Successfully complete all required content test(s) Code Purdue University (1631) as both the attending institution AND as a score recipient for ALL exam attempts.
5. For all Career and Technical Education (CTE) majors ONLY- Verify that the required number of clock hours has been completed and received by your advisor. Students must

complete 4,000 clock hours of successful employment in the appropriate CTE area, or 1,500 clock hours of supervised work in the appropriate CTE area under an approved Teacher Education Program or an equivalent combination.

Milestone F: Licensure Action(s)

Milestone F - Licensure Actions

- Exceeds Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year and recognized on Dean's List.*
- At Standard: *Meets Milestone F Criteria as defined by Content Area/Admission Year.*
- Below Standard: *Does not Meet Milestone F Criteria as defined by Content Area/Admission Year and the State of Indiana.*

Milestone F - Review Schedule

- Conducted - Upon Licensure Application - Summer 2029
- Decision/Notification - Upon Formal Action

1. Milestones A-E met.
2. Complete and upload with your Indiana License Application CPR/Heimlich Maneuver/AED certification or card (must include a hands-on, face-to-face skills demonstration).
3. Complete and upload with your Indiana License Application documentation of Suicide Prevention certification (training must be at least one hour).
4. Submit Indiana License Application online via Licensing Verification and Information System (LVIS) at https://license.doe.in.gov/.
5. Allow three weeks (given all licensure criteria are met) for Purdue University to certify and the Indiana Department of Education (IDOE) to grant the Indiana License.
6. After receipt of an Indiana License, apply for out-of-state licensure (if desired).

*For purposes of reports and communications to other institutions or agencies, and in the absence of any further qualifications of the term, a student shall be considered in Good Standing unless the student has been dismissed, suspended, or dropped from the University and not readmitted. A student is considered in Good Academic Standing if both a student's semester and cumulative GPA are above a 2.00/4.00.

**Foundation Courses linked with the Foundations Portfolio Common Assessments include EDCI 20002, EDCI 28500, EDCI 35000, EDPS 20001, EDPS 23500, EDPS 24800, EDPS 32700, EDPS 36201, EDPS 43010, and EDST 20010. These may be subject to change.

***The Blended and Online Teaching (5-12) License is required for students on Admission Year Fall 2024-Spring 2025. The Blended and Online Teaching (Ti-BOT) License requirements are embedded into coursework for all Teacher Education Undergraduate majors. Some exceptions apply.

****Common Assessments include Foundations Portfolio, Field Experience Dispositions, CPAST, edTPA, Common Lesson Plan, and Licensure. Common Assessments for Early Childhood Education and Special Needs align with the National Association for the Education of Young Children (NAEYC).

Beginning July 1, 2025 - According to the Indiana State Board of Education, students seeking an Initial Indiana License in a content area involving literacy instruction, including special education, must obtain a licensure addition in Early Literacy (P-5), as required under IC 20-28-5-19.7.

Licensure Information

The Office of Teacher Education and Licensure (OTEL) is the formal liaison with the Indiana Department of Education and serves as the official repository for Purdue West Lafayette Teacher Education Program Progression and Licensure actions. OTEL maintains and permanently retains a *Teacher Education Program and Licensure Credential Portfolio* for each current and former Purdue University Teacher Education Candidate/Student. OTEL provides reliable, career-long guidance on Indiana Teacher Education and Licensure Standards, Rules, and Procedures. Indiana Licensing Rules and Regulations are subject to change by the Indiana State Board of Education, Indiana Department of Education (IDOE), and/or the Indiana General Assembly.

Advising

Academic advisors work with students, faculty, staff, departments and administration to maintain and improve the academic experience in the College of Liberal Arts and Purdue University as a whole. As advisors, we are committed to supporting each student in developing and implementing an individualized plan for academic and career success.

Specifically, we are committed to...

- Emerging as a leader in Liberal Arts education and scholarship.
- Strengthening the Undergraduate Experience by fostering relationships to better mentor and support students during their time at Purdue.
- Staying knowledgeable about the courses, study abroad and events that will benefit students.
- Expanding our corporate relationships and actively helping students secure internships and jobs.
- Continuously innovating to offer meaningful and relevant educational options for Purdue undergraduates.

Click here for Purdue 101 - College of Liberal Arts - Purdue University.

College of Liberal Arts 3 Year Degree Programs

The College of Liberal Arts offers the opportunity for students to many of its majors in three years. Degree in 3 allows students to enter the work force or graduate school a year earlier than traditional plans of study while providing a cost-effective way to complete an undergraduate degree. Degree in 3 is a combination of cost-savings and the opportunity to accelerate your future and achieve your goals. The College of Liberal Arts offers the Degree in 3 year option in the following majors:

- Anthropology
- Asian Studies
- Classical Studies - Classical Languages Track , Classical Studies, BA (Literature & Culture Track), and Classical Studies, BA (Material Culture & History Track)
- Communication
- English - Creative Writing , Global Context , Literature , Professional Writing
- Film & Video, BA
- French
- German
- History
- Law and Society
- Linguistics
- Philosophy
- Political Science - Political Science: American

Politics Concentration, BA; Political Science: Comparative and International Politics Concentration, BA; Political Science: Environmental Politics and Policy Concentration, BA; Political Science: Law and Political Thought Concentration, BA; Political Science: National and International Security Concentration, BA; Political Science: Politics of Groups, Organizations, and Representation Concentration, BA; Political Science: Public Policy Concentration, BA
- Professional Writing
- Sociology, BA
- Spanish
- Studio Arts and Technology
- Theatre

College of Liberal Arts Degree+ Program

Degree+ offers students the opportunity to complete an undergraduate Liberal Arts Bachelor of Arts degree program in combination with another undergraduate degree program at Purdue University West Lafayette. Students who are actively pursuing a major in both the Liberal Arts and another college/school (College of Agriculture, College of Education, College of Engineering, College of Health and Human Sciences, Krannert School of Management, College of Pharmacy, Purdue Polytechnic Institute, College of Science, and College of Veterinary Medicine) will have the Liberal Arts core waived while maintaining progress toward completion of the outside degree program.
Why choose? Degree+ enables Purdue students to pursue multiple areas of academic interest in a manageable way. Feed both sides of your brain with Degree+.

College of Liberal Arts Administration

About the Program

The Purdue Liberal Arts community is one of continual learning. We push boundaries, create change, and are a force for good in the world.
Whether in the classroom or in the real world, we emerge as leaders and analytical thinkers. It's what we've been taught, it's how we think. Our innovation and creativity spark conversations and question the status quo. We like the challenge of solving problems and reimagining how things work. Our skills are sought after.
And whether we are aspiring journalists or lawyers, business leaders or community leaders, activists or actors, our analytical thinking and communication skills make us invaluable in our careers and our communities.
We are change agents. We are leaders. We are innovators. This is who we are.

Economics, BA

Cornerstone Certificate

Pre-Economics (Liberal Arts)

BAND 11000 - Marching Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Mandatory participation required in Marching Band Workshop one week prior to start of fall classes which conflicts with Boilermaker Gold Rush. Workshop covers similar orientation to Gold Rush. Do enroll in BAND 11000 during summer registration prior to the workshop and audition process.

Credits: 2.00

BAND 11100 - Symphony Orchestra

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11200 - American Music Review

Credit Hours: 2.00. Singers and pianists only. American Music Review is a jazz big band plus 4-5 singers open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11300 - Jazz Ensemble

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Permission of instructor required.

Credits: 2.00

BAND 11400 - Basic Jazz

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11500 - String Orchestra

Credit Hours: 2.00. The rehearsal, study, and performance of string orchestra music from the classical, romantic and contemporary areas of composition.

Credits: 2.00

BAND 11600 - Symphonic Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11700 - Concert Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11800 - Collegiate Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11900 - Varsity Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 12000 - Applied Music Studies

Credit Hours: 1.00. Private study on individual wind, string, and percussion instruments. Additional fees involved. Permission of instructor required.

Credits: 1.00

BAND 12100 - Symphony Orchestra

Credit Hours: 2.00. Symphony Orchestra.

Credits: 2.00

BAND 12200 - American Music Review

Credit Hours: 2.00. American Music Review.

Credits: 2.00

BAND 33000 - Summer Concert Bands

Credit Hours: 2.00. Continuation of BAND 32000.

Credits: 2.00

BAND 33100 - Summer Jazz Bands

Credit Hours: 2.00. Continuation of BAND 33000.

Credits: 2.00

BAND 34000 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 34100 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

BAND 35100 - Instrument Ensemble Colloquium

Credit Hours: 2.00. Instrument Ensemble Colloquium.

Credits: 2.00

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the

contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

GS 11900 - Introduction To Academic Programs At Purdue

Credit Hours: 1.00. To provide a comprehensive program describing each of the baccalaureate degree-granting schools at Purdue. The course is designed to assist students in the clarification of their degree objectives. Not open to students who have completed GS 115.

Credits: 1.00

GS 12000 - Summer Beginners Seminar I

Credit Hours: 1.00. Early Start students, as incoming freshmen, will learn the ins and outs of higher education - more specifically of Purdue University - and how to effectively manage their time and create successful personal habits. Whether it is learning the university course management system, understanding the bus routes, or navigating the world of financial aid, this seminar will prepare incoming students for success at Purdue's campus. Additionally, students will go through a series of lectures focused on creating successful habits, including, but not limited to: time management, study skills, cultural awareness, goal setting, and interpersonal communication.

Learning Outcomes: 1. Identify how to utilize extra- and co-curricular campus resources as related to personal and academic success. 2. Compare the unique nuances of the culture of a

collegiate environment vs. high school environment. 3. Demonstrate effective communication skills with faculty, staff and peers. 4. Select strategies to aid in increasing their comfort as they navigate the transition between the cultures of a collegiate environment vs. high school environment. Credits: 1.00

GS 12001 - Summer Beginners Seminar II

Credit Hours: 1.00. This seminar course is designed for students to reflect on the hopes, assumptions, and questions they bring with them as they begin their college experience at Purdue University. The class will support student success by introducing students to campus resources, establishing connections with the campus community, expanding study skills learned during high school, and implementing appropriate time management strategies.

Learning Outcomes: 1. Create and strengthen connections with the Purdue University community. 2. Describe appropriate study skills and time management strategies related to academic success. 3. Outline areas of growth in relation to student development. 4. Identify appropriate campus resources to support timely graduation. Credits: 1.00

GS 17500 - Information Strategies

Credit Hours: 0.00 or 1.00. Designed to build and sharpen students' information-gathering skills. Guides students in developing systematic methods for finding, evaluating, and presenting information. Organization and use of electronic and print tools will be explained through discussion, hands-on exercises, and homework assignments.

Credits: 0.00 or 1.00

GS 19501 - Preparing For Your Undergraduate Research Experience

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are interested in conducting undergraduate research or creative endeavors. Purdue students who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose.

Learning Outcomes: 1. Identify professional and personal goals sought from an undergraduate research experience. 2. Learn research skills such as assessing literature credibility and compiling a review of the topic important to all fields. 3. Utilize online and in person resources and programs to assist in locating and applying to undergraduate research experiences. 4. Evaluate research programs/projects to determine how they fit within personal and professional goals. 5. Create and submit an application/proposal including a resume and personal statement for research programs/projects. Credits: 1.00

GS 19505 - Introduction Of Research Essentials - Getting Started

Credit Hours: 1.00. This course is for prospective Purdue undergraduate researchers who are within their first two years at Purdue who are interested in conducting undergraduate research or creative endeavors. New Purdue Boilermakers who have not already started an independent research project with a research mentor will learn valuable skills to market themselves to individuals and research programs to prepare for a project in the following semester. Throughout the course, students will develop components for a final application packet to submit to a research team or program they choose while focusing on the transition to college expectations regarding research-related topics. Must be a first-year or second-year student. Permission of instructor required.

Learning Outcomes: 1. Learn about the nature of research and how it can expand your undergraduate experience. 2. Develop a community of first-year and second-year Boilermakers interested in conducting research or creative endeavors. 3. Explore research opportunities available to undergraduate students by connecting with research faculty, professional staff, and active student researchers. 4. Learn research skills important to all disciplines such as accessing and assessing literature, recording research efforts, conducting ethical research, and communicating research. 5. Evaluate research

programs/projects to determine how they fit within personal and professional goals. 6. Create and submit an application/proposal including a resume and personal statement for research programs/projects. 7. Present your research interests and an oral presentation. Credits: 1.00

GS 19700 - Purdue Promise First-Year Experience Course

Credit Hours: 1.00. A combined lecture and experiential seminar course for new Purdue Opportunity Awards scholars. The course will focus on the transition issues for these first-year students. Permission of instructor required.

Learning Outcomes: 1. Be introduced to Purdue resources such as MyPurdue, Blackboard, and Purdue University policies. 2. Learn and discuss topics pertaining to becoming a college student/young professional, such as email communication habits, appropriate class demeanor, and how to work best with instructors and advisors. 3. Learn about the available resources at Purdue, such as the Division of Financial Aid, Office of the Dean of Students, Writing Lab, Center for Career Opportunities, Student Wellness Office, etc. via presentations from the respective offices to become more confident in self-efficacy and self-advocacy as college students. Credits: 1.00

GS 19900 - Strategies For A Successful First Year

Credit Hours: 3.00. This course focuses on student adjustment to university life and development skills. Content includes testing to determine skills, attitudes, and interests; group activities to foster student adjustment; and training in computer usage, time management, and University policies. Open to Horizons students only.

Credits: 3.00

GS 20000 - Preparing Tomorrow's Leaders: Purpose And Connection

Credit Hours: 1.00. A one-credit course designed to provide Purdue Promise students with skills and connections to be successful at Purdue and post graduation. This course will provide Purdue Promise students in their second year with a foundation in leadership and career development skills.

Learning Outcomes: 1. Research/write and implement an academic and career plan. 2. Learn about emotional intelligence; thus taking greater responsibility for their own behaviors and learning. 3. Be exposed to and encouraged to Purdue avenues of leadership with the university. 4. Learn about work and internship opportunities. 5. Refine job search skills (resume, cover letters) and register with CCO Express. 6. Continue to explore and make connections with campus multicultural and diversity programs. Credits: 1.00

GS 21000 - Leadership Development Seminar

Credit Hours: 1.00. A one-credit course designed to provide Orientation Programs students with skills and connections to be successful leaders at Purdue and beyond. This course will provide students a foundation in leadership skills. Students must be selected as a Team Supervisor for Orientation Programs, and have permission of instructor, to enter the course.

Learning Outcomes: 1. Explore and identify leadership styles and competencies of successful college students and student leaders. 2. Analyze personal values and leadership styles to understand a student's growth and behavior as a leader. 3. Develop and enhance life skills, self-awareness, and personal strengths to become productive individuals. 4. Recognize backgrounds and cultures different from their own and identify techniques for interaction. 5. Enhance preparation for the role as a Team Supervisor for Boiler Gold Rush. Credits: 1.00

GS 22000 - Summer Session Special Topics

Credit Hours: 1.00 to 6.00. This course is designated for a wide range of topics that stress interdisciplinary understanding, creative thought, and group discussion. Topics vary by semester. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 6.00

GS 29000 - Study Skills Seminar

Credit Hours: 2.00 or 3.00. Designed to help students improve their college grades by learning to study more efficiently and effectively. Deals with improving study habits, such as time scheduling, attitudes, and specific study skills, such as note-taking, listening, test-taking, memory techniques, and reading skills.

Learning Outcomes: 1. Develop self-regulation skills around learning strategies. 2. Develop critical and creative skills. 3. Learn to apply strategies to other courses. Credits: 2.00 or 3.00

GS 29001 - Academics Success Skills

Credit Hours: 1.00. Designed to help students improve their college grades by learning to study more effectively.

Learning Outcomes: 1. Develop self-regulation skills around learning strategies. 2. Develop study habits and specific study skills. 3. Learn to apply strategies to other courses. Credits: 1.00

GS 29501 - Understanding Your Undergraduate Research Experience I

Credit Hours: 1.00. This course is for Purdue undergraduates who are part of an active research project and/or creative endeavor. Students will hone skills necessary for reflecting on and completing these experiences. During this course, students will utilize their research experience to apply skills including but not limited to: managing time with a research project, communicating research findings, using Purdue Libraries' resources, and providing constructive feedback to peer researchers. Students will deliver elevator pitches on their own research projects and critique pitches from their peers.

Learning Outcomes: 1. Communicate research to various audiences with an oral research elevator pitch and a written research abstract. 2. Provide constructive feedback, interact with peers, and incorporate feedback in your work. 3. Define skills and attributes you have developed and expanded as a result of your involvement in an undergraduate research experience. 4. Develop and expand your network of peer researchers within and across disciplines. 5. Reflect on and apply transferable skills necessary to be a successful undergraduate researcher. Credits: 1.00

GS 39501 - Understanding Your Undergraduate Research Experience II

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build upon the previous course and focus on research data collection, analysis, and communication for current Purdue undergraduate researchers. During this course, students will learn and discuss various forms of data and collection practices. Students will develop their own academic poster to present their research project's data and implications.

Learning Outcomes: 1. Learn about quantitative and qualitative research methods and discuss how to utilize both in a research project. 2. Create and present an academic poster applying data visualization best practices. 3. Reflect on and apply transferable skills of an undergraduate researcher for future success. Credits: 1.00

GS 39505 - Research Peer Mentoring Training

Credit Hours: 1.00. This course is for current or past Purdue undergraduate researchers who want to learn how to serve as peer mentors to undergraduate researchers early in their careers. This course will train students on how to create mutually beneficial and productive mentorships. This course will provide research-based best practices for mentoring newer student researchers while developing as a cohort of new research mentors. This course is especially useful for those students who enjoy supporting peer researchers or plan to continue into more formal mentorship roles as a senior undergraduate researcher, graduate student, or research supervisor in academia or industry. Permission of instructor required.

Learning Outcomes: 1. Explore multiple strategies for effective mentoring with case studies, discussions, and readings. 2. Learn how to transition from a researcher to a peer mentor. 3. Create a mentoring philosophy statement and present your philosophy with peers. 4. Develop preparatory steps for effective mentorship dissolution. Credits: 1.00

GS 40400 - Horizons Advanced Career Preparation

Credit Hours: 1.00. Horizons Advanced Career Preparation is designed to assist students in beginning their transition from college to the workforce or graduate school. The emphasis of the course is placed on self-exploration, career search skills, graduate school preparation, professional conduct, and financial planning.

Learning Outcomes: 1. Understand self-authorship through evaluation of strengths and talents. 2 Navigate a process of personal exploration focused on future career objectives. 3. Develop and refine resume or curriculum vitae. 4. Enhance skills as they relate to ongoing job search or graduate school preparation. 5. Educate navigating a professional setting. 6. Develop financial literacy as it relates to budgeting, loans, and savings. Credits: 1.00

GS 40500 - Advancing Tomorrow's Leaders: Preparing For Employment And Life After College

Credit Hours: 1.00. A one-credit course designed to prepare Purdue Promise students for the next chapter of their professional journey through the reflection of past experiences and the acquisition of new knowledge, expectations, and skills necessary to be successful citizens and employees post-graduation. This course is only for students in the Purdue Promise program. Permission of instructor required.

Learning Outcomes: 1. Identify expectations of post-graduation life. 2. Be informed of benefits, insurance, paycheck, and tax information. 3. Learn how to navigate their new positions and organizations-cultures, co-workers, supervisors, and workplace challenges. 4. Learn how to maintain marketability in the job market. 5. Learn the necessary life skills of living in a new town, with transitions, new financial obligations, and new responsibilities. 6. Reflect upon their college experience and how it has prepared them for their transition out of college. Credits: 1.00

GS 41000 - Advancing Tomorrow's Scholars: Graduate And Professional School Preparation

Credit Hours: 1.00. A one-credit course designed to prepare Purdue Promise students for a smooth transition into graduate or professional school. This course will inform Purdue Promise students of the necessary preparation, required paperwork, and skills needed to be successful in post-baccalaureate education. This course is only for students participating in the Purdue Promise program. Permission of instructor required.

Learning Outcomes: 1. Be informed of graduate school timelines, checklists, and necessary steps to apply. 2. Learn how to select a good graduate program for themselves. 3. Write a personal statement. 4. Learn ways to finance graduate school prior to starting and once in graduate school. 5. Learn the necessary life skills of living in a new town, with new transitions, and new responsibilities. 6. Reflect upon their college experience and how it has prepared them for their transition out of college. Credits: 1.00

GS 49000 - Directed Reading In General Studies

Credit Hours: 1.00 to 4.00. Reading to be done under the direction of the instructor in the particular field of specialization. Permission of instructor required.

Credits: 1.00 to 4.00

GS 49501 - Beyond Undergraduate Research

Credit Hours: 1.00. This course is for current Purdue undergraduate researchers to build on the previous courses (GS 29501, 39501) and focus on continuing their education in graduate or professional school. During this course, students will learn and discuss the various phases of identifying, selecting, applying to and funding graduate or professional school programs. Students will also gain a deeper comprehension of the qualities and skills that make research mentors effective while developing skills they will need to be successful mentees and peer mentors. Students will conduct research to identify potential programs of interest and develop a statement of purpose.

Learning Outcomes: 1. Categorize graduate or professional school qualities that fit skills and meet professional needs. 2. Identify qualities and skills necessary to act effectively as a

research mentor and as a research mentee to a future graduate/professional advisor. 3. Create a statement of purpose to include in graduate/professional school applications. 4. Reflect on and apply transferable skills of an undergraduate researcher for future success. Credits: 1.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 11000 - Language And Cultural Exchange I: Self In Context (UCC: HUM)

Credit Hours: 3.00. The course takes a social science-based approach to investigating the American university by examining contemporary college life, the history of the American academy, social and environmental issues on campus, and opportunities for engagement with the wider community. Students will improve their speaking, listening, reading, writing skills in English so that they can actively participate in social and academic communication.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Speak English more fluently. 2. Read English more fluently. 3. Communicate in English with increased clarity (writing effective academic sentences and paragraphs; speaking on familiar topics). 4.

Develop and apply a process for cross-cultural comparison and reflection. Credits: 3.00

SCLA 11100 - Language And Cultural Exchange II: Texts And Contexts

Credit Hours: 3.00. Students will continue to develop the foundational language skills and knowledge that they need to succeed in their other classes at Purdue and to prepare for further academic and professional opportunities. Students will also deepen their understanding of American culture and improve their ability to think about cultural differences in positive ways. In a sense, this class will be a bridge to help you transition to other language-intensive courses at Purdue where you need to read, write, and speak frequently and/or work in groups (such as business, engineering, literature, public speaking, and social sciences).

Learning Outcomes: 1. Speak and read English more fluently. 2. Present academic topics to an audience with increased clarity and within time constraints (write effective, short academic essays; present information orally to an academic audience). 3. Understand reasons and practices for using outside sources in an American academic context. Credits: 3.00

SCLA 11500 - Introduction To Career Decisions

Credit Hours: 1.00. This course is designed to guide the student through self-exploration and an investigation of the world of work. The class format will be short lectures followed by class discussions and activities. Not open to students who have completed GS 11900.

Credits: 1.00

SCLA 19100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required.

Learning Outcomes: 1. Learning outcomes vary due to nature of course. Credits: 1.00 to 3.00

SCLA 20000 - Cornerstones In Constitutional Law (UCC: BSS)

Credit Hours: 3.00. In this interdisciplinary course, students read case law to understand legal reasoning and constitutional doctrines and identify major constitutional conflicts. It explores how the forces of technology, economics, politics, environmental change, scientific development, and medicine transform constitutional law.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify the key principles and doctrines of U.S. constitutional law through engaging with case law in written and oral communication. 2. Effectively apply these key constitutional principles and doctrines through written and oral communication to issues related to each of the five Cornerstone tracks through assessments targeting modules in each track. 3. Assess and consider constitutional arguments and counterarguments and demonstrate the ability to develop and articulate arguments from different positions through detailed case briefs and oral arguments. 4. Analyze how constitutional law decisions affect the development of political, social, economic, technological and medical institutions. Credits: 3.00

SCLA 29100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 3.00

SCLA 30000 - Liberal Arts Influentials

Credit Hours: 1.00. As a lecture/discussion course, Liberal Arts Influentials features speakers from a diverse range of Liberal Arts majors and introduces students to the myriad career opportunities available to Liberal Arts graduates. Speakers represent careers in the arts, media, industry, politics and more. Students are encouraged to initiate dialogue with working professionals. Only students enrolled in the College of Liberal Arts may register for GS 30000: LA Influentials.

Learning Outcomes: 1. Identify how the liberal arts influence and contribute to society, globalization, and world issues and how the liberal arts prepare students for meaningful and satisfying career. 2. Develop a better understanding of how these influences and

contributions can be applied to their professional and personal development. 3. Network with key Liberal Arts alumni. Credits: 1.00

SCLA 31500 - Internship Development Strategies

Credit Hours: 1.00. This course offers sophomore and junior students the opportunity to gain key skills to prepare for a professional internship. Topics range from "Why intern" to conducting searches, to resumé writing and interview techniques to establishing a professional identity.

Credits: 1.00

SCLA 32000 - Theories And Methods Of Mentoring Academic Writers Across The Disciplines

Credit Hours: 3.00. A practicum to teach undergraduates the theories and methods of mentoring academic writers across the disciplines in the one-to-one setting of a writing lab.

Learning Outcomes: 1. Describe and apply theoretical concepts and specific tutoring strategies to meet student needs. 2. Identify best practices for teaching writing and mentoring rhetorical awareness in writing lab interactions and develop their own unique, robust toolbox of strategies. 3. Demonstrate awareness of genre and different expectations for writing across the disciplines, cultivating the ability to adapt, riff, and improvise according to the rich dynamics of a consultation. 4. Identify and analyze affective, behavioral, and cognitive dimensions of writing and learning and their role in writing consultation. 5. Develop a professional identification with writing center studies and demonstrate knowledge of the field through application of its shared language and theories. 6. Practice metacognition by reflecting on their composing processes and relating their experiences in the classroom and at the OWL to the larger context of writing center studies. 7. Propose an inquiry that enters into a scholarly conversation within contemporary writing center studies research and assess its potential impact for consulting practices at the OWL. 8. Use the insights gained within the course to support the Purdue campus community. Credits: 3.00

SCLA 39000 - Special Credit For Study Abroad In Liberal Arts

Credit Hours: 1.00 to 4.00. This course number is for assignment of credits in studies in Liberal Arts earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

SCLA 39100 - Special Topics In Liberal Arts

Credit Hours: 1.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum. Permission from instructor required.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 1.00 to 3.00

SCLA 41500 - Senior Job Search Seminar

Credit Hours: 2.00. This course is designed to get LA seniors actively started on their job search. Highly intensive assignments, in-class activities, presentations and projects are designed to better prepare students for all aspects of the job search process.

Credits: 2.00

SCLA 49000 - Directed Reading

Credit Hours: 1.00 to 3.00. Designed for a student to work with an instructor on a topic of special interest.

Credits: 1.00 to 3.00

SCLA 49100 - Special Topics In Liberal Arts

Credit Hours: 0.00 to 3.00. Special topics, varying from semester to semester. Course content will be drawn from areas not dealt within the regular curriculum.

Credits: 0.00 to 3.00

SCLA 49105 - Liberal Arts Undergraduate Research Experience

Credit Hours: 0.00. This course is for students in the Dammon Dean's Scholars program or the Margo Katherine Wilke Undergraduate Research program. This course is required each

semester a student participates in either program. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of research activity. Credits: 0.00

SCLA 49500 - Special Credit For Study Abroad In Liberal Arts

Credit Hours: 1.00 to 4.00. This course number is for assignment of credits in studies in Liberal Arts earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

Department of Anthropology

About Anthropology

Anthropology considers humankind from a holistic perspective that aims for an understanding of how culture, biology, history and language intersect. *Students have the option to enroll in one of seven new 12-unit Concentrations in several specialty areas within the Anthropology major, including* Anthropology of Health , Applied Anthropology , Archaeological Sciences , Bioarchaeology and Forensic Anthropology , Biological Anthropology , Cultural Anthropology , and Ecological and Environmental Anthropology . Our faculty ably cover a range of substantive, methodological and theoretical areas in courses that provide students with a solid grounding in anthropological perspectives.

Undergraduates have an opportunity for hands-on experience and training in archaeological and bioanthropological methods. Students enjoy participating in the student club P.A.S.T. (Purdue Anthropology Society). Also offered are internship and field work experience.

Our honors program provides a capstone experience for students. The year-long program enables students to focus on a particular empirical issue in an anthropological sub-discipline and to write an honors thesis based on that research.

Please visit the Department of Anthropology for more information.

For Graduate Information please see Anthropology Graduate Program Information .

Anthropology Minor

Anthropology, BA

Anthropology Honors, BA

Anthropology, BS

Science and Technology Studies Certificate

ANTH 10000 - Being Human: Introduction To Anthropology (UCC: BSS)

Credit Hours: 3.00. Introduces anthropology's holistic approach to human nature and behavior. This course uses the tools of cultural, biological, archaeological, and linguistic anthropology to follow the human journey of uniformity and diversity through time and across space.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Describe the basic concepts and applications of anthropology, including biological, cultural, archaeological, and linguistic anthropology. 2. Recognize the

deep social and biological histories that have shaped contemporary life. 3. Examine processes of ongoing biological and social change that influence the environment, social organization, language, and other aspects of the world they experience. Credits: 3.00

ANTH 20100 - Introduction To Archaeology And World Prehistory (UCC: BSS)

Credit Hours: 3.00. Introduction to the ideas and practices of archaeology that are used in the contemporary study of human prehistory. Emphasis is placed on the social and technological changes that accompanied major turning points in the human past, including the earliest stone tools, the development of farming, through the advent of writing and monumental architecture among ancient states.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Recognize the principles of archaeology and how we study the ancient past. 2. Describe and analyze archaeological phenomenon using archaeological terms. 3. Relate dates, places, and significance of major cultural and technical transformations in prehistory. 4. Evaluate how archaeology is represented in popular media. Credits: 3.00

ANTH 20300 - Biological Bases Of Human Social Behavior (UCC: BSS)

Credit Hours: 3.00. This course is an introduction to human social behavior from the perspective of biological anthropology, with special emphasis on human evolution and non-human primates. Topics include aggression, communication, learning, maturation, sexuality, and the evolution of social systems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Demonstrate understanding of core concepts and theories of human evolutionary biology and ecology. 2. Describe key components of human life course evolution and hunter-gatherer lifestyles. 3. Analyze the evolutionary mechanisms underlying behavioral variation across primates. 4. Assess cross-cultural variation in food acquisition, mating, parenting, and social systems. Credits: 3.00

ANTH 20400 - Human Origins (UCC: SCI)

Credit Hours: 3.00. Surveys our evolutionary journey, from fossil primates to modern humans, through a review of evolutionary theory and genetics, the fossil evidence for current theories in human evolution with insight from modern non-human primates, and the influence of environmental stressors on modern human biological variation.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Define and explain the mechanisms of evolution and genetic inheritance. 2. Identify the characteristics of non-human primates and describe their behavior, ecology, and evolutionary relationships to humans. 3. Describe primate and human evolution as seen in the fossil record. 4. Explain how evolutionary processes have led to contemporary human variation and behavior. Credits: 3.00

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

ANTH 21200 - Culture, Food And Health

Credit Hours: 3.00. This course is designed to provide an introduction to the field of Nutritional Anthropology in which we will examine issues related to diet, health and illness from holistic anthropological perspectives.

Learning Outcomes: 1. Develop an understanding of the theoretical basis of nutritional anthropology. 2. Recognize core methods of nutritional anthropology. 3. Describe evolutionary and cross-cultural approaches to the study of food and nutrition. 4. Analyze the intersection of biology and culture in regard to eating practices. 5. Evaluate information on food and nutrition that is shared in the popular media. Credits: 3.00

ANTH 21500 - Introduction To Forensic Anthropology

Credit Hours: 3.00. Introduction to forensic anthropology, the science that utilizes methods from skeletal biology and archaeology as tools in human identification in a medico-legal context. This course introduces students to methods used to recover and positively identify human remains, and to evaluate trauma and taphonomy in medico-legal situations. Topics include an overview of historical and current developments in the field. Students will develop a comprehensive understanding of the sequential order of applied work from the search for forensic scenes through the recovery of remains, and skeletal analysis in the laboratory.

Learning Outcomes: 1. Understand the legal context in which anthropologists work in both state and federal courts by the standards of the US medico-legal system. 2. Explain the statistical approaches to forensic anthropological problems by analysis of problem sets. 3. Gain general knowledge about the methods of the biological profile (age, sex, ancestry, stature and pathology) to improve competency and understand the errors associated with each method by review and evaluation of relevant literature. 4. Explain the biological basis of the components of the biological profile by advancing reasonable conclusions. 5. Critically examine the use of the terms race and ancestry in forensic contexts by group discussion. Credits: 3.00

ANTH 23000 - Gender Across Cultures (UCC: BSS)

Credit Hours: 3.00. Explores gender and sexuality from a cross-cultural perspective. Draws on case studies to explore the complexities of women's and men's lives. Examines gender hierarchies, gender in a globalized world, and the cultural construction of sexuality and gender.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain how culture influences the social constructions of sex, gender, and sexuality. 2. Recognize the diversity of genders and sexualities globally and over time. 3. Demonstrate understanding of how gender intersects with other social processes and institutions. 4. Identify the role of power structures, violence, and inequity in constructing and maintaining gender conventions. Credits: 3.00

ANTH 23500 - The Great Apes

Credit Hours: 3.00. Students will learn the behavior and conservation of our closest relatives and how early ape studies changed our understanding of what it meant to be human.

Topics include gender in science, ethics of research and cross-cultural understandings.

Learning Outcomes: 1. Identify the geographic distribution as well as the anatomical and behavioral traits that characterize great ape species. 2. Explain the major achievements of and challenges to great ape research in the wild and captivity. 3. Demonstrate an understanding of why and how anthropologists use great apes to model human evolution. 4. Describe the ethical issues of conducting research on our closest living relatives and conserving them in the wild. Credits: 3.00

ANTH 24000 - Medicine, Science, And Culture

Credit Hours: 3.00. This course explores the intersections of medicine, science, and culture as powerful shapers of our lives and the world today. Anthropology broadly studies the human experience to help explain how our bodies, biologies, and beliefs inform what "medicine," "health," "illness," and "healing" come to mean in diverse and cross-cultural contexts. The course will cover foundations in medical anthropology by exploring a range of topics and applications.

Learning Outcomes: 1. Describe what medical anthropology is and what medical anthropologists do. 2. Analyze the dynamic intersections of medicine, science, and culture. 3. Explain what medical anthropology contributes to understanding the multiple dimensions of health, illness, and healing. 4. Apply anthropological frameworks to real-world examples. Credits: 3.00

ANTH 25400 - Archaeological Hoaxes, Myths And Frauds

Credit Hours: 3.00. This course examines why the ancient past inspires so many theories about aliens, dark conspiracies, lost civilizations, and apocalyptic predictions. Topics include the popularity of pseudoscientific theories in American culture and the historical contexts in which common pseudoscientific ideas have emerged; why they persist in the face of archaeological evidence; and the role of pseudo-archaeology in the growing antagonism toward scientific expertise. Through an understanding of datasets and methods archaeologists use to evaluate claims about the past, the course goes beyond debunking ancient aliens and Atlantis to develop important critical thinking skills to evaluate evidence and recognize pseudo-scientific arguments in the media.

Learning Outcomes: 1. Evaluate the difference between a scientific and a pseudoscientific claim about the human past. 2. Explain the techniques and scientific methods archaeologists use for evaluating hypotheses or claims about the past. 3. Examine the role and popularity of pseudoscientific theories in American culture and the historical contexts in which popular pseudoscientific ideas have emerged. 4. Articulate how seemingly harmless fringe theories are entangled with larger narratives of cultural memory and erasure among past societies and their descendants. Credits: 3.00

ANTH 25600 - Archaeology Of Beer

Credit Hours: 3.00. Alcoholic beverages are an important aspect of foodways, the cultural practices and values surrounding food and drink. This course provides an overview of the ancient origins of beer and other alcoholic beverages globally, and examines the cultural context and social role of these innovations through a combination of archaeology, material culture studies, historical texts, and ethnography. In addition to examining archaeological case studies of the production and consumption of beer and other alcoholic beverages, topics to be covered include: evolution of brewing and fermenting technology, biology and chemistry of brewing and fermentation, residue and materials analysis, origins of agriculture, emergence of social complexity, sexual division of labor, social identity (gender, class, ethnicity), and recent trends in production and consumption.

Learning Outcomes: 1. Identify the role of Anthropology in understanding the production and consumption of alcohol in cultures past and present. 2. Evaluate several different theoretical and methodological approaches within the field of Archaeology. 3. Assess and debate the role that the innovation of alcohol might have played in the origins of agriculture and social complexity in different times and places in the past. 4. Analyze and explain innovations in brewing technology over time. 5. Describe and explain the way in which identity is shaped by the production and consumption of beer. These

learning outcomes will be achieved by reading, evaluating, and summarizing course material (lectures, readings, and films) at regular intervals throughout the course and by engaging in regular group discussions. 6. Outcomes will be assessed by examining student performance on quizzes, exams, and article summaries, as well as participation in class discussion. Credits: 3.00

ANTH 28200 - Introduction To LGBTQ Studies

Credit Hours: 3.00. (WGSS 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding if the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

ANTH 30600 - Quantitative Methods For Anthropological Research

Credit Hours: 3.00. This course provides an introduction to the broad statistical methods used throughout the 4-fields of Anthropology. It covers elementary probability theory, basic concepts of statistical inference and study design. The course will motivate statistical methods through data analysis and visualization. It is designed for students who intend to focus in an anthropological discipline. It would also benefit a variety of students interested in 1) quantitative science literacy and planning for graduate work, 2) joining the workforce and becoming part of the educated citizenry. There are no prerequisites from the Statistics or Mathematics Departments.

Learning Outcomes: 1. Acquire the ability to explain anthropological data collection methods, their limitations and effect on inference. 2. Summarize data numerically and visually and perform data analysis using statistical software. 3. Describe the unified nature of statistical inference. 4. Learn applications of analytical methods for single variables or for relationships between two variables to describe natural phenomena and make data-based decisions. 5. Analyze numerical response variables using a single or multiple explanatory variables to investigate relationships between variables. 6. Interpret results correctly, effectively, and in context without relying on statistical jargon. 7. Gain skills to assess data-based claims and evaluate data-based decisions. Credits: 3.00

ANTH 30700 - The Development Of Contemporary Anthropological Theory

Credit Hours: 3.00. Explores the history of anthropological theories pertaining to the understanding of commonality and variation in human biology, behavior, society, and cultures as they have developed over the approximately two centuries since anthropology was founded as a separate discipline. Considers those social, cultural, and historical factors that have influenced the history of anthropological ideas. Permission of instructor required.

Learning Outcomes: 1. Explain the role of theory for knowledge production. 2. Demonstrate understanding of major anthropological theories, including the assumptions behind and methods associated with them. 3. Apply theoretical perspectives within anthropology to analyze contemporary issues. 4. Demonstrate professionalization in research, analysis, peer review, and presentation skills. Credits: 3.00

ANTH 30800 - Critical Data Studies

Credit Hours: 3.00. Critical Data Studies (CDS), is an interdisciplinary field that addresses the ethical, legal, socio-cultural, epistemological and political aspects of data science, big data and digital infrastructure. This course focuses on current topics in critical data studies scholarship. Particular emphasis will be given to democratic and participatory approaches to algorithm design and responsible data management, curation and dissemination. Students will develop tools and methods to help scholars think critically and identify issues of concern to Local Communities. This is a research and

writing intensive course.

Learning Outcomes: 1. Engage in current debates surrounding data science, big data and digital infrastructure from an anthropological perspective. 2. Acquire anthropological tools and methods to analyze societal impact of emergent technologies. 3. Learn to demonstrate collaboration, public engagement and scholarly communication skills. 4. Apply anthropological frameworks to novel research problems. Credits: 3.00

ANTH 31000 - Mortuary Practices Across Cultures

Credit Hours: 3.00. Explores how death is treated or has been treated in diverse world cultures and time periods. Death is viewed as an expression of social behavior and as an expression of symbolic meaning.

Credits: 3.00

ANTH 31200 - The Archaeology Of Ancient Egypt And The Near East

Credit Hours: 3.00. Selected topics on the archaeology of ancient Near Eastern cultures in Mesopotamia, the circum-Mediterranean area, Egypt, and the Nile Valley, emphasizing an anthropological interpretation of the political, social, religious, and economic systems that contributed to their development.

Learning Outcomes: 1. Summarize the rise and development of civilization in the Near East and North Africa from 10,000 years ago to 331 BC. 2. Distinguish the emergence and strategies of governance between these neighboring regions. 3. Recognize the historical and cultural context that gave rise to the Great Pyramids, cuneiform writing, and other significant achievements in the region. 4. Interpret the Near East and North Africa within Western historical narratives and popular imaginings. Credits: 3.00

ANTH 31300 - Archaeology Of North America

Credit Hours: 3.00. Archaeological overview of North America emphasizing Indigenous cultures prior to the arrival of Europeans, but including Contact and Post-Contact communities of the Historic Period. Topics will include the peopling of the Americas, culture and environment, social complexity, and Cultural Resource Management.

Learning Outcomes: 1. Describe the general historical outline for North America's past. 2. Summarize the diversity of peoples and cultures that existed in North America. 3. Explain how North American archaeologists gather information and interpret the past. 4. Recognize how contemporary archaeologists engage with other stakeholders in North America's past. Credits: 3.00

ANTH 32700 - Environment And Culture

Credit Hours: 3.00. This course provides a general overview to the field of environmental anthropology, and surveys key methods, and theories that anthropologists use to interpret human-environment interactions. Topics include culture ecology, agroecology, ethnobiology, political ecology, and environmental justice.

Learning Outcomes: 1. Identify and explain the key theories in environmental anthropology. 2. Identify several cross-cultural examples of human-environment interactions. 3. Distinguish between anthropological approaches and other disciplines that study the environment. 4. Apply the theories and methods learned in this course to real world environmental issues. 5. Demonstrate professional skills in research, analysis, presentation and peer review. Credits: 3.00

ANTH 33500 - Primate Behavior

Credit Hours: 3.00. This course is an introduction to the primate order and primate studies. The emphasis is on field studies. Ecological influences on social organization and behavior, learning, play, and communication will be considered as adaptations within an evolutionary framework.

Learning Outcomes: 1. Understand the diversity of anatomical and behavioral traits in primates, and how that diversity is taxonomically organized. 2. Describe the science of primatology, critically evaluate scientific research on primates, and contextualize primatology within Anthropology and closely related fields. 3. Communicate an

understanding of the relationships among primates and their ecosystems as well as the ecological, evolutionary, and social forces that shape their lives. 4. Appreciate the complexities of the work of preserving and managing primate populations. Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 33700 - Human Diet: Origins And Evolution

Credit Hours: 3.00. This course will survey humans evolving relationship with food over the last few million years; from our Plio-pleistocene origins (foraging) through the origins of agriculture to modern industrial food production.

Learning Outcomes: 1. Explain "the human diet," its evolution, and its range of variation. 2. Summarize the role that dietary studies have played in the development of anthropological and biological theory. 3. Identify primate dietary adaptations and explain how these adaptive traits inform human evolution studies. 4. Describe major dietary issues faced by humans today. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

ANTH 34100 - Culture And Personality

Credit Hours: 3.00. A cross-cultural survey stressing different basic personality types and the processes by which adult personality is acquired. Case studies of selected non-Western cultures will be used to provide comparative perspective.

Learning Outcomes: 1. Explain in words and diagrams the dialectical relations among culture, personality, and cognition. 2. Distinguish and relate childhood and adult processes of enculturation and socialization. 3. Appraise how, why, and to what extent every individual and every society is unique, comparable to some others, and similar to all others. Credits: 3.00

ANTH 34600 - Pregnancy, Birth, And Babies

Credit Hours: 3.00. This course examines human universal patterns and cross-cultural variation in pregnancy, birth, and infant care practices, using evolutionary and biocultural perspectives. Students will connect course themes to current events and controversies, such as medical models of birth, public breastfeeding, and parent-infant co-sleeping.

Learning Outcomes: 1. Identify evolutionarily novel aspects of the human reproductive pattern. 2. Compare birthing, infant feeding, and infant care practices across human societies using a biocultural framework. 3. Evaluate contemporary medical controversies surrounding pregnancy, birth, and babies critically. Credits: 3.00

ANTH 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American speech communities and the culture at large.

Credits: 3.00

ANTH 37300 - Anthropology Of Religion

Credit Hours: 3.00. Anthropological theories of the origin, development, and functions of religion, ritual, and myth. Data drawn from western and non-western societies, with special emphasis on the relationship of religion to social structure, cultural patterns, and social change.

Learning Outcomes: 1. Explain anthropological approaches to the study of religious belief systems. 2. Investigate religious and cultural differences using anthropological skills. 3. Describe a diversity of faiths and worldviews. 4. Summarize the key ways that humans of the past and present have sought to make sense of the mysteries of life and the sacred. Credits: 3.00

ANTH 37700 - Anthropology Of Hunter-Gatherer Societies

Credit Hours: 3.00. Selective global survey of societies whose mode of subsistence is/was based on the collection of wild food resources. Topics to be covered include: the development and current state of theory, ecology, social organization, land use, demography, subsistence rights, and worldview.

Learning Outcomes: 1. Explain the forager lifestyle and the range of variation that researchers continue to discover. 2. Summarize the role that hunter-gatherer studies have played in the development of anthropological and biological inquiry and theory. 3. Recognize why the hunter-gatherer lifestyle has persisted as a human adaptation for as long as it has and how knowledge derived from its study can help scientists understand humanity. 4. Describe major issues faced by foragers and their descendants today. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

ANTH 38000 - Using Anthropology In The World

Credit Hours: 3.00. The use of anthropology in practical contexts. What anthropological practice is, how it originated, how it can be applied in non- academic and interdisciplinary contexts and careers. The main contemporary issues surrounding anthropological practice, including training, ethics, relevance, and rigor. For majors and non-majors.

Learning Outcomes: 1. Describe applied anthropology and how the field has evolved over time. 2. Analyze the major issues, controversies, and opportunities of applied anthropology. 3. Identify key methods and skills that applied anthropologists use in their careers. 4. Explain how anthropology can be applied in non-academic and interdisciplinary settings. 5. Demonstrate how to prepare for a career in anthropological practice, and/or use anthropology in their future career. Credits: 3.00

ANTH 38400 - Designing For People: Anthropological Approaches

Credit Hours: 3.00. This course is about designing for people. You will use anthropological knowledge and skills to better understand human and technology interactions. With students from other fields, you will learn how to apply an anthropological perspective to human centered design and design with the needs of a specific user group in mind.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

ANTH 38500 - Community Engagement In Anthropology

Credit Hours: 3.00. This course offers hands-on service learning experience with local community organizations involved with minority and immigrant populations. Part of the semester will include class meetings to explore issues and experiences of immigrant and ethnic groups in the U.S.

Learning Outcomes: 1. Explain the ethical, historical, and theoretical approaches and challenges of conducting community-engaged anthropological research. 2. Design community-engaged research projects involving ethical approaches to partnerships, methods, and data analysis. 3. Apply course concepts to real-life situations by conducting community-engaged research with a community partner. 4. Summarize final research findings to a community partner. Credits: 3.00

ANTH 39000 - Individual Research In Anthropology

Credit Hours: 1.00 to 3.00. Individual research or reading in an area of anthropology under the guidance of an anthropology faculty member. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

ANTH 39200 - Selected Topics In Anthropology

Credit Hours: 1.00 to 3.00. Various topics in anthropology that may change from semester to semester are presented by anthropology faculty members.

Credits: 1.00 to 3.00

ANTH 39300 - Interdisciplinary Approaches To Environmental And Sustainability Studies

Credit Hours: 3.00. (ENGL 39300) This course is the lynchpin of the undergraduate Certificate in Environmental and Sustainability Studies. It will present a series of case studies, core concepts, and problem questions that integrate the following three academic approaches: 1) Human Dimensions and Environment/Sustainability, 2) Engineering and Environment/Sustainability, and 3) Environmental/Sustainability Sciences.

Learning Outcomes: 1. Identify, describe, and relate the diverse causes (social, cultural, political, ethical, economic, historical, scientific, and engineered) and consequences of pressing environmental and sustainability challenges, such as climate change, resource scarcity, biodiversity, population growth. 2. Distinguish, paraphrase, and translate different disciplinary perspectives on these key environmental and sustainability challenges. 3. Familiarize themselves with the efficacies, and learn to push the boundaries, of different disciplinary approaches by comparing and contrasting solutions to environmental issues. 4. Combine different disciplinary approaches by synthesizing reorganizing, and reformulating diverse viewpoints. 5. Demonstrate ability to communicate across disciplines on environmental and sustainability problems. Credits: 3.00

ANTH 40500 - Ethnographic Methods

Credit Hours: 3.00. This course introduces students to the basic methods of ethnographic research: the collection, analysis, and presentation of data derived from the systematic, direct observation of human behavior and interviewing of key informants. Students are required to complete a field project.

Learning Outcomes: 1. Identify and synthesize key theoretical and methodological approaches to ethnographic field work in the following broad domains: 1) research ethics, 2) data collection (field notes, participant observation, interviewing, visual and digital methods), 3) data management, and 4) communication of research results. 2. Demonstrate scientific and scholarly literacy through critical discussion, production of scholarly reports, and public dissemination of research efforts. 3. Develop qualitative competence and problem solving skills in an active learning environment through practical data collection and processing exercises. Credits: 3.00

ANTH 41001 - Senior Capstone In Anthropology

Credit Hours: 3.00. Culminating experience required for all anthropology majors. Course synthesizes four-field anthropology coursework and training, and discusses academic/career options that benefit from anthropological training. Major element of the course will include synthesis paper and presentation, senior portfolio, and professional development.

Learning Outcomes: 1. Reflect on their development as an anthropologist and articulate their degree's value in pursuit of their professional interests and goals. 2. Articulate a synthetic anthropological research question, and write a well-thought out and properly cited research paper using their accumulated research skills. 3. Think critically about the role of anthropology in addressing the Grand Challenge facing society in the 21st Century. Credits: 3.00

ANTH 41400 - Introduction To Language And Culture

Credit Hours: 3.00. An exploration into the nature of human communication, particularly the structures, functions, and substance of human language. Focus is on the interpenetration of language, culture and cognition, on the evolution of language and speech, and on their uses in everyday life.

Learning Outcomes: 1. Explain the separate biological origins and functions for human language and speech/sign (languaging). 2. Distinguish communication, language, and languaging, as these relate to individual cognition and to collective culture and society. 3. Differentiate language and languaging, and written forms for each. 4. Discuss how language and languaging reciprocally shape both cognition and culture. Credits: 3.00

ANTH 41800 - Field Methods In Cultural Anthropology

Credit Hours: 1.00 to 9.00. Introduces basic field methods in Cultural Anthropology. Topics may include ethnographic or other interviewing techniques and methods of inquiry into any of the broad topics covered by Cultural Anthropology. Permission of department required.

Learning Outcomes: 1. Understanding the use of anthropological methods such as participant observation, ethnographic analysis and general interviewing techniques. Credits: 1.00 to 9.00

ANTH 42500 - Archaeological Method And Theory

Credit Hours: 3.00. Introduction to the theory and methods of contemporary American archaeology. Basic field and laboratory methods are placed in the context of theoretical viewpoints and problems. Major theoretical issues in the field are explored, showing the integration of American archaeology with anthropology.

Learning Outcomes: 1. Summarize the history of archaeology and theoretical frameworks used in interpreting the past. 2. Discuss field and laboratory techniques that archaeologists use to analyze material remains from the archaeological record and reconstruct past human behavior. 3. Describe prehistoric cultural practices including diet and subsistence, migrations, social and political organization. 4. Identify the contributions of archaeology to today's society through various professions inside and outside academic settings. Credits: 3.00

ANTH 42800 - Field Methods In Archaeology

Credit Hours: 1.00 to 9.00. Introduces basic field and laboratory methods in contemporary archaeology: methods of site survey, mapping, and excavation through the excavation of archaeological sites; the basics of archaeological data analysis and classification, and the computer-based analysis of archaeological data. Permission of instructor required.

Learning Outcomes: 1. Describe, document, and record archaeological data and their spatial relationships in the field. 2. Apply basic archaeological field methods, including excavation, mapping, and data recording. 3. Practice database management, including sorting and labeling artifacts and samples, and maintaining a catalog of data. Credits: 1.00 to 9.00

ANTH 43600 - Human Evolution

Credit Hours: 3.00. This class examines the fossil evidence for

human evolution and theories proposed to explain the development that led from the origin of primates to modern humans. This course will include lectures, exercises with fossil casts, presentation, and discussions.

Learning Outcomes: 1. Explain the analytical and research methods used in hominin paleobiology. 2. Identify important research questions within human paleobiology as well as theoretical approaches and methods used to evaluate them. 3. Describe the relevant fossil evidence to investigate the evolution of the primate lineage. 4. Demonstrate understanding of evolutionary processes, particularly those that shaped the biocultural evolution of modern humans. 5. Evaluate interpretations of the hominin fossil record and appraise the strengths and weaknesses of current debates in human evolution. Credits: 3.00

ANTH 43800 - Field Methods In Biological Anthropology

Credit Hours: 1.00 to 9.00. Introduces basic laboratory methods in Biological Anthropology. Topics may include analysis of human or primate nutritional and biological markers or laboratory methods in the analysis of human skeletal populations. Permission of department required.

Learning Outcomes: 1. Understanding the use of anthropological methods such as anthropometric measurements, primate behavioral observations and/or general interviewing techniques. 2. Students will gain an appreciation for ethical issues in biological anthropological research. Credits: 1.00 to 9.00

ANTH 48200 - Sexual Diversity In Global Perspectives

Credit Hours: 3.00. This course focuses on anthropological and interdisciplinary research in the study of sexuality with particular attention to lesbian, gay, bisexual and transgender identities. It explores historical, theoretical and ethnographic work on sexualities and genders in the US and globally.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

ANTH 49700 - Senior Honors Seminar

Credit Hours: 3.00. A critical examination of some major works in anthropology and sociology, both classical and modern, and of some current theoretical and substantive issues in these disciplines. Open only to students in the departmental honors program.

Credits: 3.00

ANTH 49800 - Senior Honors Paper

Credit Hours: 3.00. Requires a substantial paper on a topic approved by the instructor. The student is expected to work closely with the instructor on the paper's content and style. A presentation of the results of the work is made at the end of the semester. Open only to students in the departmental honors program.

Credits: 3.00

Brian Lamb School of Communication

About the Brian Lamb School of Communication Program

Many Purdue undergraduates experience the communication program, as each year more than 4,000 students across campus take a presentational speaking course from the Brian Lamb School of Communication (BLSC). Students who choose to major in communication within the Lamb School may focus their studies in one of eight areas of concentration:

- Business Communication
- Communication of Science and Technology
- General Communication
- Health Communication
- Interpersonal Communication
- Media and Mass Communication
- Political and Civic Communication

• Public Relations and Strategic Communication

The Lamb School has dedicated, full-time advisors who help students with course planning and career development and student organizations that provide opportunities for professional and scholarly growth. Graduates find careers in fields ranging from public relations to management, from law to ministry, and in areas such as sports and health.

Both inside and outside the classroom, Lamb School students build experiences to prepare them for careers. Our students produce live news shows and video news magazines, create a lifestyle TV show that airs on a local network affiliate, operate a student-run PR agency, and work in teams with local nonprofits to get real-world experience in public relations.

The communication program offers many international opportunities. In addition to the many programs available through the university's study abroad office, Lamb School students can also study in many communication-specific programs. Semester exchanges can send students to Australia, Singapore, or Denmark, and summer programs in recent years have included Sydney, Australia; Stockholm, Sweden; and Siena, Italy.

In partnership with the Center for C-SPAN Scholarship and Engagement, the Lamb School offers "Boilers Go to DC" summer programs including class, internship, and fellowship options.

All Lamb School concentrations can be completed in three years. These course arrangements have the same number of total hours (120), and the same number of major hours (43), but those hours can be compressed into three years. Please visit Three Year Degree for more information.

Pre-Communication

COM 10000 - Introduction To Communication Studies

Credit Hours: 1.00. This semester-long course will introduce students to many opportunities offered by the Brian Lamb School of Communication. Permission of department required.

Learning Outcomes: 1. Engage with curriculum resources to create a plan of study that satisfies university, college and departmental requirements and complements their academic and professional goals. 2. Describe the field of communication to a person not engaged in the field. 3. Identify and use university, college and school resources applicable to their academic and professional goals. Credits: 1.00

COM 10200 - Introduction To Communication Theory

Credit Hours: 3.00. Overview of approaches treating communication as an individual, functional activity and as a social, structuring activity. Covers definitions and models of communication, core processes (interpretations, sending, receiving), structures (language, nonverbal behavior), and key contexts (personal, organizational, public).

Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)

Credits: 3.00

COM 20400 - Critical Perspectives On Communication (UCC: WC)

Credit Hours: 3.00. Introduction to critical thinking and writing about communication. Draws on humanistic and qualitative traditions to help students learn and apply critical approaches to understanding communication.

University Core Curriculum (UCC): (UCC: WC)

Credits: 3.00

COM 21000 - Addressing Public Issues

Credit Hours: 3.00. Survey of argumentation and persuasion theories addressing contemporary public issues. Readings and discussions on cultural norms, audience reasoning, civic discourse, and constructing appeals addressing policies and practices. Preparation of appeals for public campaigns and social movements.

Learning Outcomes: 1. Describe argumentation and persuasion theories as applied to contemporary public issues. 2. Identify cultural norms, values, and beliefs of diverse communities contribute to civic discourse and audience reasoning. 3. Construct written and oral appeals addressing public issues, policies, and practices. Credits: 3.00

COM 21200 - Approaches To The Study Of Interpersonal Communication (UCC: BSS)

Credit Hours: 3.00. A study of the basic characteristics of human communication and the theoretical and practical implications of these characteristics for various forms of oral communication. CTL:ICM 1101 Interpersonal Communication

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: Will update at a later date.

Credits: 3.00

COM 22400 - Communicating In The Global Workplace (UCC: BSS)

Credit Hours: 3.00. This introductory course explores communication issues that arise in the global workplace. The course develops an appreciation of the relationship among culture, communication, and ways of organizing and doing business.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Critically analyze communication issues arising in culturally diverse organizations in the global environment by utilizing conceptual and theoretical frameworks. 2. Develop intercultural competencies for better managing communication issues in the global workplace by developing practical strategies for contemporary organizations operating in multiple cultures. 3. Explain macro social trends that are impacting global organizations by illustrating current examples. Credits: 3.00

COM 25000 - Mass Communication And Society

Credit Hours: 3.00. A survey of the print, broadcast, and film media in their relationship and influence on society. Study topics include: mass communication theories, documentaries, commercialism, news media, media effects and control, feedback, educational broadcasting, and audience analysis. CTL:ICM 1102 Introduction To Mass Communication

Credits: 3.00

COM 25100 - Communication, Information, And Society (UCC: IL/STS)

Credit Hours: 3.00. This course provides an introduction to information and communication technologies, including media and computer-related technologies. Basic information and technical literacy skills are developed, while discussing fundamental concepts of mediated communication in 21st century contexts.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Discuss implications of new technologies for individuals, institutions, and society. 2. Exercise basic information literacy skills through hands-on exercises involving new technologies. 3. Analyze impact of media technologies on communication behavior. 4. Write and make presentations that include new media technologies. Credits: 3.00

COM 25200 - Writing For Mass Media

Credit Hours: 3.00. Labor intensive course teaches basics of newspaper writing, broadcast writing, news releases, and online journalism.

Credits: 3.00

COM 25300 - Introduction To Public Relations

Credit Hours: 3.00. An analysis of public relations theory and practice from their origins to the present. From a communication perspective, the course examines public relations environments, audiences, and message strategies.

Credits: 3.00

COM 25600 - Introduction To Advertising

Credit Hours: 3.00. An analysis of commercial persuasion from colonial times to the era of mass communication. The course examines the structure of advertising messages, how they are adapted to specific audiences, and the social settings in which they occur.

Credits: 3.00

COM 25700 - Public Relations Techniques

Credit Hours: 3.00. This class introduces students to a range of public relations techniques, with a focus on writing. From press releases to new media, this class offers practice and feedback on how to use common public relations tools.

Learning Outcomes: 1. Match appropriate PR techniques to a given situation. 2. Write a press release correct in form, content, grammar and spelling. 3. Compose a SWOT analysis for an actual organization. 4. Use at least two new media technologies to create PR messages. Credits: 3.00

COM 26099 - Professional Practice Parallel Co-Op Summer I

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are

undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 26100 - Introduction To Digital Video Production

Credit Hours: 3.00. Basic production principles and practices. Emphasis on preplanning and conceptualizing skills in addition to practical production techniques. Required for admission to all television production courses. Permission of department required.

Credits: 3.00

COM 27100 - Podcasting

Credit Hours: 3.00. This directed study is designed as an introduction to podcasting. Students in the course will learn about the structure and development of podcasting campaigns, then create their own weekly recording. Recording begins in the third week of classes, giving students 14 opportunities to develop their program.

Learning Outcomes: 1. Develop an idea for a podcast. 2. Write a treatment for a podcast. 3. Pitch the idea for a podcast to an audience. 4. Create a production outline. 5. Produce a budget for the work produced and identify potential funding sources for the project. 6. Execute an advertising campaign for a podcast. 7. Coordinate a schedule for a podcast recording. 8. Evaluate the finished production and the experience of creating that work. Credits: 3.00

COM 28500 - Introduction To Publication Design

Credit Hours: 3.00. Introduction to pre-press production of professional-quality publications. Emphasis on computer applications for publication layout, design and production. Topics include composition, readability, typography, graphic resolution, and color management systems.

Learning Outcomes: 1. Demonstrate knowledge of graphic composition and layout principles when designing publications. 2. Use industry-standard computer software accomplish basic and advanced pre- press publication design and production tasks. 3. Solve common design and production problems encountered in the communication workplace, including those related to readability, resolution, color and composition. 4. Use appropriate professional terminology when communicating with editors, designers, printers and other vendors on particular projects. 5. Seek bids that result in reliable cost estimates from printers and other vendors. 6. Consider ethical implications and professional communication responsibilities when making editorial and design decisions. Credits: 3.00

COM 29199 - Cooperative Experience I

Credit Hours: 0.00. Professional experience in communication. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry

principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

COM 29299 - Cooperative Experience II

Credit Hours: 0.00. Professional experience in communication. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

COM 30300 - Intercultural Communication

Credit Hours: 3.00. Study of the complex relationship between culture and communication in a variety of interpersonal, group, organizational, and computer-mediated settings. Application of theory and research to development of the knowledge, attitudes, and skills associated with intercultural communication competence.

Credits: 3.00

COM 30301 - Mentored Intercultural Communication Experience

Credit Hours: 1.00 to 3.00. This class is intended as a companion to a study abroad or international internship experience. Through a series of guided assignments that integrate experiential activities embedded in the host community with reflective writing that solicits feedback from both peers and an intercultural mentor, students will be challenged to develop intercultural competencies while living in a different culture.

Learning Outcomes: 1. Demonstrate awareness of their own cultural rules and biases by explicitly articulating in reflections and discussions how their experiences have shaped their attitudes and behaviors. 2. Exhibit understanding of cultural differences in verbal and nonverbal communication by successfully completing tasks with team members from other cultural and linguistic backgrounds. 3. Interpret experiences from more than one perspective by seeking out answers to questions about another culture, suspending judgement about another system of values and norms for behavior, and expressing empathy for another point of view. 4. Present effective arguments about their development of intercultural competencies during their study abroad by setting and assessing the achievement of intercultural learning goals and constructing a narrative that illustrates their new skills to prospective employers. Credits: 1.00 to 3.00

COM 30390 - Intercultural Dialogue Facilitator Training

Credit Hours: 1.00. This theoretical and practical training introduces students to intercultural peer dialogue methodology and effective facilitation techniques. Students will engage in scaffolded dialogue experiences first as participants and then as co-leaders, building skills through reflection and guidance from a mentor. Permission from the Instructor is required.

Learning Outcomes: 1. Articulate theories and models of effective intercultural dialogue. 2. Engage in dialogue to experience models of facilitation. 3. Identify developmental needs as an intercultural dialogue leader. 4. Practice co-leading dialogue with a mentor. 5. Reflect on facilitation experiences. Credits: 1.00

COM 30399 - Intercultural Dialogue Facilitation Practicum

Credit Hours: 1.00. In an internship model, students apply the training they received in the Intercultural Dialogue Facilitator Training course. The aim of this course is to provide students with opportunities to hone their leadership and communication skills by facilitating peer dialogues. Each student taking this course is paired with a mentor who provides feedback to students and guides their goal-setting and reflection. The course may be repeated with other dialogue topics and/or participants for additional credit.

Learning Outcomes: 1. Apply theories and models of effective intercultural dialogue in facilitation in order to support student groups and serve the larger campus community. 2.

Demonstrate communication skills (listening and observing, summarizing and distilling information, verbal and nonverbal expression) in leading intercultural dialogue. 3. Respond to contextual factors in dialogues to meet the needs of participants. 4. Engage in continuous learning by reflecting on facilitation experiences. 5. Identify areas for continued growth as a dialogue leader, and setting and accomplishing individualized goals for facilitation skill development. Credits: 1.00

COM 30400 - Quantitative Methods For Communication Research

Credit Hours: 3.00. Introduction to the development and application of quantitative research methods pertinent to communication problems. Fundamental concepts of problem identification, reliability and validity of both measurement and research design, and statistical analyses of data.

Credits: 3.00

COM 31100 - Copy Editing

Credit Hours: 3.00. Study of, and practice in, copyreading and headline writing. Laboratory practice includes copy editing on video-display terminals.

Credits: 3.00

COM 31200 - Rhetoric In The Western World

Credit Hours: 3.00. An explanation of major theoretical and philosophical concepts concerning rhetoric; the relationships between rhetoric and political, social, and personal decisions are explored. Ancient and modern authors will be read.

Credits: 3.00

COM 31400 - Advanced Presentational Speaking

Credit Hours: 3.00. Development of a marked degree of skill in the composition and delivery of various types of speeches including presentations in corporate board rooms, orientation meetings, banquet halls, public forms. Special emphasis on speeches related to the student's major vocational area.

Credits: 3.00

COM 31500 - Speech Communication Of Technical Information

Credit Hours: 3.00. The organization and presentation of information of a practical technical nature. Emphasis is placed upon the study, preparation, and use of audiovisual materials in such presentations.

Credits: 3.00

COM 31800 - Principles Of Persuasion

Credit Hours: 3.00. Persuasion and its effects, ranging from individual influences to societal impacts. Various perspectives and models of persuasion are examined, including classical and modern approaches. Both theoretical and pragmatic considerations are introduced.

Learning Outcomes: 1. List the major areas of study in the field of persuasion. 2. Analyze and critique persuasive techniques. 3. Apply theories of persuasion to explain everyday circumstances. Credits: 3.00

COM 32000 - Small Group Communication

Credit Hours: 3.00. A study of group thinking and problem-solving methods; participation in, and evaluation of, committee, and informal discussion groups. Focus on the roles, networks, and messages employed by small group communicators.

Credits: 3.00

COM 32400 - Introduction To Organizational Communication

Credit Hours: 3.00. An introduction to fundamental concepts and basic research related to communication behavior in organizational settings. Units cover message processing, leadership communication, communication climates, communication training, and communication audits. Students participate in an organizational simulation in some sections.

Learning Outcomes: 1. Use the vocabulary of concepts and theories related to organizational communication. 2. List historical, current, and future communication issues facing organizations. 3. Apply theoretical perspectives and concepts to organizational communication situations and settings. 4. Reflect on their own experience with organizations. Credits: 3.00

COM 32500 - Interviewing: Principles And Practice

Credit Hours: 3.00. Theory and practice of methods in selected interview settings: informational, employment, and persuasive. Emphasis on communication between two persons, questioning

techniques, and the logical and psychological bases of interpersonal persuasion.

Credits: 3.00

COM 32800 - Diversity At Work: A Rhetorical Approach

Credit Hours: 3.00. Introduces students to theories and experiences related to issues dealing with both diversity in the workplace and diversity at work to change or influence the world.

Credits: 3.00

COM 33000 - Theories Of Mass Communication

Credit Hours: 3.00. An examination of mass communication theories and theorists. Readings and discussion of McLuhan, Lippman, De Fleur, Lazarsfeld, Schramm, Stephenson, and other significant contributors.

Credits: 3.00

COM 33200 - Television Production

Credit Hours: 3.00. Basic principles of producing, writing, and directing for television. Treats program types and television criticism, and explores creative treatment of visual, artistic, and nonverbal elements of communication in television. Permission of department required.

Learning Outcomes: 1. Utilize the terminology used in studio production settings. 2. Conceptualize a studio production. 3. Script a studio production using correct industry format. 4. Develop critical viewing/listening skills and analytical abilities necessary to evaluate the content of video productions. 5. Demonstrate the proper operation of studio production equipment. 6. Work constructively as a member of a production team. 7. Produce a television studio program. 8. Direct a television studio program from a prewritten script. Credits: 3.00

COM 33600 - Advertising Media Strategy

Credit Hours: 3.00. Theory and practice of advertising as applied to advertising media strategy. Students build on a foundation of integrated marketing communication to develop digital advertising campaigns.

Learning Outcomes: 1. Explain how practitioners develop advertising campaigns. 2. Design and execute digital marketing plans. 3. Offer suggestions and feedback to classmates in a constructive manner. Credits: 3.00

COM 33701 - Producing Digital Advertising

Credit Hours: 3.00. This course is designed as an advanced level production course. Through lectures, discussions, critiques, screenings, and various exercises, you will gain experience designing video advertisements. You will develop and refine critical viewing/listening abilities to effectively analyze video content for aesthetic elements and overall message. Additionally, you will apply production techniques pertaining to producing, directing, shooting and editing in the creation of projects for real clients. The coursework consists of three major video projects, and a series of assignments organized under the corporate role that would be performing those tasks.

Learning Outcomes: 1. Work with a client in the development of a digital media advertisement. 2. Develop the concept for a digital media advertisement. 3. Pitch the idea for a digital media advertisement. 4. Write the script for a digital media advertisement. 5. Coordinate the production schedule for a digital media advertisement project. 6. Supervise videography for a digital media advertisement. 7. Complete post-production for a digital media advertisement. 8. Critique the final edit of a digital media advertisement. Credits: 3.00

COM 35100 - Mass Communication Ethics

Credit Hours: 3.00. A survey of various ethical approaches applied to situations confronting contemporary mass communicators, including misrepresentation in newsgathering, protection of sources, suppression of information, reporting of terror and violence, pressure from management and advertisers, and reporter bias.

Credits: 3.00

COM 35200 - Mass Communication Law

Credit Hours: 3.00. Study of Anglo-American traditions and trends as well as current American conditions of the laws of libel, privacy, fair comment and criticism, privilege, property rights, and copyright as such factors affect the print journalist and the broadcaster. Emphasis is on existing state and federal regulations and precedents.

Credits: 3.00

COM 35300 - Problems In Public Relations

Credit Hours: 3.00. Approaches to problems in public relations as they occur in industry, government, education, social agencies, and other institutions.

Learning Outcomes: 1. Develop an attitude of professionalism and tact. 2. Expand existing knowledge about theories in the practice of public relations. 3. Gain a greater understanding of the use of the tools of public relations practice. 4. Recognize types of public relations challenges and how to address them. 5. Work effectively and efficiently as a strong team member. 6. Write and edit well, and know how to improve at both. 7. Feel an increase in self-confidence and professionalism that will help with career advancement. Credits: 3.00

COM 35600 - Problems In Advertising

Credit Hours: 3.00. Approaches to problems in advertising as they involve the planning, creation, and evaluation of commercial messages.

Credits: 3.00

COM 36000 - Forensics Practicum

Credit Hours: 1.00. Forensics is the study and practice of evidence-based argumentation. This course cultivates skills associated with researching and constructing arguments - and then applies these skills to contemporary societal, national, and global issues with an eye turned toward generating practicable solutions. Students will be required to move beyond passively consuming information to critically appraising information related to broadly general as well as highly specific and technical topics. The course also emphasizes the development of advanced argumentation and communication skills, as well as the application and adaptation of these skills to diverse audiences. Permission of instructor required.

Learning Outcomes: 1. Explain technical aspects of argumentation and public speaking. 2. Locate, interpret, and explain arguments from texts in different disciplines. 3. Formulate original arguments and objections. 4. Speak in a public setting following best practices. Credits: 1.00

COM 36001 - Mock Trial Practicum

Credit Hours: 1.00. This course prepares students to represent Purdue University in American Mock Trial Association competitions by focusing on legal reasoning, argumentation, and advocacy. Mock Trial students will become familiar with the United States' legal system and conduct a trial over a fictional civil or criminal case. Students develop and deliver opening statements, introduce and examine testimonial, physical, and demonstrative evidence, examine and cross examine witnesses, and develop and deliver closing statements. Permission of instructor required.

Learning Outcomes: 1. Demonstrate knowledge of the underlying theory and content of specific laws through class discussions and exercises. 2. Locate, interpret, and explain information contained within the American Mock Trial Association's (AMTA's) annual case by reading assigned texts and participating in class discussion and exercises. 3. Formulate original arguments, objections, and replies within a legal setting by participating in class discussion and exercises, and through written assignments. 4. Deliver oral arguments, objections, and replies in accord with courtroom procedures by participating in mock trial exercises inside and outside of class. Credits: 1.00

COM 36099 - Professional Practice Parallel Co-Op Summer II

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the

employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 36100 - Multiplatform Journalism

Credit Hours: 3.00. This course is an introduction to video journalism, including critical examination of various styles of video journalism from news websites to local TV news to national/international television news programs. Students will produce video stories using video cameras and audio equipment to record interviews and natural sound, learn professional lighting techniques, find stories, interview for video, write scripts, review video journalism ethics, and related content.

Learning Outcomes: 1. Demonstrate a working knowledge of camera/audio recording and editing for video journalism stories. 2. Define and describe basic television/digital terms and concepts. 3. Gather, write and produce news content for television and digital platforms. 4. Demonstrate a working knowledge of journalism ethics and news-media literacy. Credits: 3.00

COM 36199 - Professional Practice Parallel Co-Op Semester I

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 36200 - Broadcast Performance

Credit Hours: 3.00. This course will immerse students in both the foundational concepts of broadcasting and nuanced performance techniques necessary to take the craft to the next level as on-camera/on-air presenters. Through hands-on, experiential learning, students will refine existing journalistic and creative skills (such as prior reporting, video production, hosting, anchoring, or online media experience) and also develop new talents and portfolio pieces.

Learning Outcomes: 1. Produce on-camera segments that tell stories via studio, field, and social media. 2. Apply technical and creative skills necessary to produce and air basic broadcast programming by completing assigned class projects. 3. Comprehend, define, and analyze essential studio and broadcasting concepts by writing scripts to use in class practicals. Credits: 3.00

COM 36299 - Professional Practice Parallel Co-Op Semester II

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid

positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the U.S. culture at large.

Learning Outcomes: 1. Distinguish descriptive from prescriptive linguistics. 2. Explain how the history of the slave trade affected the development of African American English. 3. Compare and contrast features of African American English with other varieties of English and other Creole languages. 4. Describe features of African American English using tools from the linguist's toolbox (syntax, phonology, semantics, dialectology). 5. Provide examples of important legal cases concerning the education of African American children. 6. Explain how African American culture has helped shape modern American English. 7. Identify language prejudice in popular media. Credits: 3.00

COM 37200 - Communication In Relationships

Credit Hours: 3.00. An examination of communication in personal relationships (including dating and marital relationships, friendships, and families) and professional relationships (including co-worker and supervisor-supervisee relationships and relationships in specific professions, such as doctor-patient and attorney-client).

Credits: 3.00

COM 37400 - Social Interaction Skills: Assessment And Development

Credit Hours: 3.00. An examination of several major communication skills and procedures for their development. Focus is on skill measurement, methods of enhancement, assessment of training programs, and personal skill development. Skills examined include those for conversing, managing conflict, providing support, and influencing.

Credits: 3.00

COM 37600 - Communication And Gender

Credit Hours: 3.00. Course is based on the assumption that studies of gender and communication are intertwined. Focus is on communication processes that create symbols of gender and how those processes recreate the meanings of gender in the lives of individuals and groups.

Credits: 3.00

COM 37800 - Introduction To Health Communication

Credit Hours: 3.00. This course will serve as an introduction to the many ways that communication shapes health and health practices. Course content includes: 1) current healthcare structure in the United States; 2) communication in the healthcare organization; 3) provider-patient communication; 4) patient-support provider communication; 5) models of health behavior change and campaigns; and 6) crisis communication and health.

Learning Outcomes: 1. Identify and apply theories relevant to health communication. 2. Identify how communication practices shape and affect health. 3. Provide a comparative analysis of issues of diversity in healthcare. 4. Tailor health communication materials to improve health literacy. 5. Design and implement health campaign. Credits: 3.00

COM 38100 - Gender And Feminist Studies In Communication

Credit Hours: 3.00. This course examines the ways in which

communication constructs and maintains our conceptions of gender. It explores different approaches to the study of gender and feminist issues in public, organizational, and mass communication.

Credits: 3.00

COM 38399 - Professional Practice Cooperative Education III

Credit Hours: 0.00. Co-Op is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. The program is coordinated by the Office of Professional Practice with cooperation of participating employers. Students submit a written summary report of their experience and evaluations of the company and their performance. Permission of instructor required.

Credits: 0.00

COM 39399 - Cooperative Experience III

Credit Hours: 0.00. Professional experience in communication. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

COM 39499 - Extensive Cooperative Experience IV

Credit Hours: 0.00. Professional experience in communication. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

COM 39599 - Extensive Cooperative Experience V

Credit Hours: 0.00. Professional experience in communication. Program coordinated by school with cooperation of participating employers. Students submit summary report and company evaluation. Professional Practice students only. Permission of department required.

Learning Outcomes: 1. Apply knowledge to identifying and solving problems in the professional context. 2. Advance skills related to professional preparation, critical thinking, problem solving, communication, and team work. 3. Increase understanding of the profession and practice, basic industry principles, and principles and practice of ethical responsibility in professional work. Credits: 0.00

COM 40700 - Social Media And News Organizations

Credit Hours: 3.00. An exploration of how traditional news providers use social media to disseminate information to mass audiences and correct practices using such technologies.

Learning Outcomes: 1. Produce professional journalistic stories using alternate formats. 2. Choose appropriate social media to adapt to different audiences for optimal news dissemination. 3. Create social media content by applying basic mobile audio and video editing skills. Credits: 3.00

COM 40800 - News Magazine Production

Credit Hours: 3.00. Students plan, write and produce a weekly video news magazine to be aired on Boiler TV.

Learning Outcomes: 1. Discover, conceptualize, shoot and edit stories appropriate for a news magazine. 2. Define and describe basic television terms and concepts and apply them in a production environment. 3. Evaluate the content, production elements and overall effectiveness of television news scripts.

4. Operate basic digital electronic newsgathering equipment provided for this course. 5. Write scripts, shoot and edit non-linear basic television news stories on digital equipment using Final Cut Pro. 6. Demonstrate a working knowledge of television production terms and procedures. 7. Submit usable video and sound bites to professional newscasts. 8. Create a professional-quality resume reel necessary for gaining employment as a TV journalist. Credits: 3.00

COM 40900 - Video Journalism

Credit Hours: 3.00. Students plan, write and produce a weekly news magazine to be aired on Boiler TV.

Learning Outcomes: 1. Discover, conceptualize, shoot and edit stories appropriate for a news magazine. 2. Define and describe basic television terms and concepts and apply them in a production environment. 3. Evaluate the content, production elements and overall effectiveness of television news scripts. 4. Operate basic digital electronic newsgathering equipment provided for this course. 5. Write scripts, shoot and edit non-linear basic television news stories on digital equipment using Final Cut Pro. 6. Demonstrate a working knowledge of television production terms and procedures. 7. Submit usable video and sound bites to professional newscasts. 8. Create a professional-quality resume reel necessary for gaining employment as a TV journalist. Credits: 3.00

COM 41100 - Communication And Social Networks

Credit Hours: 3.00. This course explores the growing area of networks. The class focuses on understanding how social structure influences our everyday life by examining the ways individuals, groups, and entities are tied together. Permission of instructor required.

Learning Outcomes: 1. Understand the foundation of social network theory and analysis. 2. Read work in the area of networks. 3. Learn how networks are related to the social phenomena of your own personal interest. 4. Gather basic understanding of gathering network data. Credits: 3.00

COM 41500 - Discussion Of Technical Problems

Credit Hours: 3.00. Principles of speech communication related to interpersonal and group discussions on technical topics and problems; practice in using these modes in situations typically encountered by technologists.

Credits: 3.00

COM 41600 - United States Politics And The Media

Credit Hours: 3.00. This course examines the roles and influences of the mass media on American politics generally and with particular emphasis on election campaigns and the evolving political culture of the U.S.

Learning Outcomes: 1. Understand how media influence perceptions of political issues and events. 2. Recognize the importance of media in the formation and maintenance of individual attitudes and public opinion. 3. Able to create and analyze political messages in the context of campaigns. 4. Understand gender, race, ethnicity, sexual orientation, and other forms of diversity in relation to mass and political communications. 5. Able to write correctly and clearly in forms and styles appropriate for communications professions and audiences. Credits: 3.00

COM 41900 - Judgment And Decision Making

Credit Hours: 3.00. This course is designed to foster an understanding, critique and analysis on issues related to judgment and decision processes. Permission of instructor required.

Learning Outcomes: 1. Encourage the application of theories of judgment and decision making to applied decision contexts. 2. Explore the interplay between communication and decision-making theories. 3. Acquire some practical, general skills for decision-making that

are useful in everyday life and work contexts. Credits: 3.00

COM 42300 - Leadership, Communication And Organizations

Credit Hours: 3.00. This course explores leadership from a communication perspective. It examines topics such as leadership styles, leading change, influencing others, emotional intelligence, burnout, and engagement. Permission of instructor required.

Learning Outcomes: 1. Able to assess leadership styles. 2. Examine the relationship between leaders and followers in organizations. 3. Critique the literature in the area of communication and leadership. Credits: 3.00

COM 43500 - Communication And Emerging Technologies

Credit Hours: 3.00. Both historical and contemporary perspectives of the reciprocal influence of new and changing technologies and the processes and practices of communication. The impact of print, telegraph, telephone, radio, and television will be surveyed, along with cable systems, direct broadcast satellites, and videotext.

Credits: 3.00

COM 44400 - Introduction To Communication And Social Entrepreneurship

Credit Hours: 3.00. This class introduces students to the roles that communication and innovation play in social entrepreneurship. It explores activities of entrepreneurs, ethics and skill development at the individual and organizational levels, and communication functions in not-for-profit and social venture space.

Learning Outcomes: 1. Identify the major components of communication and social change. 2. Describe the social economy. 3. Articulate how both social entrepreneurship and social innovation benefit society. 4. Describe the difference between nonprofit organizations (NPs), social action efforts, NGOs and social enterprises, as well as traditional entrepreneurship, social entrepreneurship, social intrapreneurship and social innovation. 5. Explain how social enterprises function in different sectors and regions, of various sizes, with vastly different missions. 6. Articulate the challenges social entrepreneurs face as they startup, develop, and communicate with various publics. 7. Identify the best approaches and communication tools that can be deployed to assist in ""getting out the message"" about NP goals and objectives. Credits: 3.00

COM 44700 - The Television Documentary

Credit Hours: 3.00. Study and application of principles of documentary television formats. Students will research an appropriate topic for documentary treatment and produce that program during the semester. Documentary formats examined include news, biographical, ethnographic, and documentary drama.

Credits: 3.00

COM 44900 - Media Management

Credit Hours: 3.00. An introduction to management for mass media outlets. The course will explore management styles and techniques in a variety of media situations, including radio, television, and internet-based business models. Topics such as business structure, advertising and promotion, programming, and leadership style will be included in the discussion. This class is designed as both a philosophical and practical model. Students will discover the theories and principles behind the structure of media businesses, as well as put those ideas into practice in real world situations. Students in the course will be responsible for the programming and promotion of the Brian Lamb School of Communication's channel space on Boiler TV. A mini internship experience is introduced in the second half of the semester, giving the student an opportunity to sample what these opportunities are like.

Learning Outcomes: 1. Define the roles of a media manager. 2. Program a media outlet's weekly schedule. 3. Promote a media outlet's programming to a target audience. 4. Produce a case study of an active media outlet. 5. Identify the characteristics of an effective media manager. 6. Work constructively as a member of a management team. 7. Create a long-range plan of operation for a media outlet. 8. Present findings from a media case study. 9. Conduct a programming and promotion meeting with a team. Credits: 3.00

COM 45100 - Feature Writing

Credit Hours: 3.00. Examination of magazine staff organization, market analysis, and editorial content. Study of, and practice in, the writing of a variety of nonfiction materials for magazines. Emphasis is on the adaptation of topics and presentations to editorial policies and reader groups.

Learning Outcomes: 1. Understand the stylistic, formatting and structural differences between a typical media article and a feature. 2. Research and produce long-form feature articles for newspapers/magazines, newsletters and other communication platforms. 3. Manage interviews for long-form features - what to seek from the interviewee and what to look for beyond. 4. Write different kinds of features: Informational, instructional and promotional. Credits: 3.00

COM 45600 - Advertising Writing

Credit Hours: 3.00. The theory and practice of copy writing in various advertising contexts.

Credits: 3.00

COM 46099 - Professional Practice Parallel Co-Op Summer III

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 46399 - Professional Practice Parallel Co-Op Semester III

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 46400 - American Political Communication

Credit Hours: 3.00. This course examines the content, processes, and effects of communication within the American political system. Designed for students to experience the breadth of the field of political communication, the course emphasizes relevant theories and practical skills.

Learning Outcomes: 1. Acquire an awareness and understanding of how and why institutions and agents in American politics communicate as well as use media. 2. Apply theoretical approaches to media effects, journalism,

political campaigns, and critical issues of race and gender to practical political communication situations. Credits: 3.00

COM 46499 - Professional Practice Parallel Co-Op Semester IV

Credit Hours: 0.00. Cooperative Education (Co-Op) is an academic program with oversight provided by assigned Faculty Coordinators who serve as the Instructor for participating students. Parallel Co-Op program participants are undergraduate students, who work part-time (more than 11 hours per week and less than 30 hours per week) in paid positions during the academic year terms (fall and spring semesters) for an employer with a local business or office. During the summer term, Parallel Co-Op students work in part-time or full-time positions at any location offered by the employer. A minimum of a one-year commitment is required for Parallel Co-Op students and employers. During the academic year, Parallel Co-Op students register for 6 to 11 credit hours of academic course load, and also for an appropriate 0-credit hour Parallel Co-Op course that carries half-time student status to recognize the academic impact of the experience. The combination of both academic courses and Parallel Co-Op course registrations provides students with full-time status. During the summer term, Parallel Co-Op students register for a zero-credit hour Parallel Co-Op Summer course that carries full-time student status. Permission of Instructor required.

Learning Outcomes: 1. After each work session, the instructor assesses learning outcomes via student evaluation of the work session, supervisor evaluation of the student's performance, and a work report written by the student summarizing their experience. Credits: 0.00

COM 47800 - Health Communication Campaigns

Credit Hours: 3.00. This course is an introduction to the processes and theories that are used to design both informational and persuasive health communication campaigns. The course will also introduce students to proper evaluation procedures to determine a campaign's efficacy. Students will be able to contribute to their portfolios by applying theory and primary research in the construction of a health communication campaign plan for a client.

Learning Outcomes: 1. Identify and perform the various stages of implementing a health communication campaign through course readings, discussions, and the creation of their final projects. 2. Apply formative research techniques and analyze relevant data in the creation of their final projects. 3. Identify the major theories and their essential components used in building health communication campaigns, and apply their components in course assignments. 4. Assess prior and current campaign efforts to understand their effectiveness and also recognize their limitations. Credits: 3.00

COM 47900 - Introduction To Risk Communication

Credit Hours: 3.00. This course introduces students to theories that show how people express, perceive, exchange, and deliberate information about risk as well as how this understanding can be used to improve risk communication practice. This course examines risk communication theory and practice from multiple perspectives including social, psychological, cultural, and communicative.

Learning Outcomes: 1. Describe how and why major approaches to risk communication have shifted over time. 2. Explain cognitive and affective processes involved in individuals' risk perception in domains of science, health, and environmental issues. 3. Analyze different communication models and theories applicable to risk communication. 4. Discuss alternative interpersonal communicative public participation practices for deliberating risk information. Credits: 3.00

COM 48900 - Research Experience In Communication

Credit Hours: 1.00 to 3.00. This course grants credit to students who participate in structured research projects within the Brian Lamb School of Communication. Permission of instructor required.

Learning Outcomes: 1. Students will gain understanding of how communication research is conducted. 2. Students will receive hands-on experience in areas such as data collection, data analysis, interpretive skills, or research writing. 3. Students considering graduate

studies will gain insight into whether or not they want to pursue such a direction. 4. Students will develop relationships with faculty members that might lead to mentoring, advice, and/or letters of recommendation. 5. Students will gain experience that might enhance their prospects for graduate studies. Credits: 1.00 to 3.00

COM 49000 - Internship In Communication

Credit Hours: 1.00 to 6.00. Experiential, supervised training in public relations, journalism, telecommunication, oral interpretation, speech education, organizational communication, or public communication. Usually given in junior or senior year. Usually gives two credits per internship experience. Permission of instructor required.

Learning Outcomes: 1. Demonstrate ability to apply concepts learned in the classroom to real-world working environments and to develop a realistic view of the workplace through internships. Credits: 1.00 to 6.00

COM 49100 - Special Topics In Communication

Credit Hours: 1.00 to 3.00. Intensive study of selected topics, varying from semester to semester, from the literature or practice of communication. Course content will be drawn from areas not dealt with in the regular curriculum and may include such topics as photojournalism, economic reporting, and campaign communication. Permission of instructor required.

Learning Outcomes: 1. Develop understanding of a specialized area of communication and its common applications. Credits: 1.00 to 3.00

COM 49101 - Boiler Communication

Credit Hours: 1.00. This course provides a practical, hands-on approach to public relations by working in student-led teams to produce comprehensive, strategic communication campaigns for actual clients. The course also includes many opportunities for professional development and portfolio building.

Learning Outcomes: 1. Experience a real public relations campaign. 2. Develop professionally to be able to start a public relations career. 3. Use creativity and critical thinking to help clients with public relations needs while engaging in social responsibility. Credits: 1.00

COM 49500 - Special Topics In Public Relations And Rhetorical Advocacy

Credit Hours: 3.00. In-depth study of a particular area of public relations and rhetorical advocacy. Students read, discuss, and write about contemporary applications of public relations, advertising and rhetoric. Possible offerings include Integrated Marketing Communication, Persuasion and Social Protest, Communication Campaigns.

Credits: 3.00

COM 49501 - Sports Media Relations

Credit Hours: 3.00. This course examines the role of public relations and mass media in sports communication. It provides an understanding of the operation of sports media and communication and how sports information departments perform their functions. Emphasis is on written communication from athletics communication perspective.

Learning Outcomes: 1. Develop a clear understanding of the day to day responsibilities of sports public relations professionals. 2. Develop attention-grabbing writing skills that reflect an understanding of news judgment. 3. Learn about press box and game-management operations at a sports event, including news conference set-up and execution, coordination of interview requests, quote-gathering, and information and statistics updates and distribution. 4. Create promotional, multimedia content at a sports event, including written features, press releases, social media, video and infographics. 5. Explore communication strategies used by sports media relations professionals in breaking-news situations. 6. Study the evolution of the relationship between media and sports organizations. 7. Learn about the scope of responsibilities of sports media relations professionals, including the coordination of managed news events and special events, the production of media guides, the execution of publicity campaigns, and crisis communications. 8. Understand the effects of evolving technology and social media on sports media relations. Credits: 3.00

COM 49502 - Travel Writing

Credit Hours: 3.00. Travel writing is writing about places, persons, and things in other places-also writing about how to travel, when to travel, and advice on traveling-all with the reader in mind. It's about relaying your travel experiences to others so that they may emulate them or at the very least not make the same mistakes you did. And it's writing about things in your own back yard that are exotic to everyone else-a local farmer's market, historic site, restaurant, museum. In this class, you will explore the various ways travel writers can excite and assist readers.

Learning Outcomes: 1. Gain experience in writing effectively. 2. Identify typical features of travel writing genres. 3. Use research and observation as building blocks for travel writing. 4. Produce a variety of articles within this genre. 5. Understand the "business" of travel writing. Credits: 3.00

COM 49503 - Public Relations For Social Change

Credit Hours: 3.00. The overarching goal of this course is for students to work cooperatively with a community partner to identify, define and address that organization's PR problems and opportunities from a long-term, in-house perspective, building on the work of previous students and incorporating social change theory from a relationship management perspective of PR. The applied work of this course will have the dual benefit of providing students the opportunity to gain contextualized, real-world experience at PR problem-solving and advancing the mission of a nonprofit organization that is important to the wellbeing of the Greater Lafayette community as a whole.

Learning Outcomes: 1. Construct and devise a strategic and mission-focused PR plan and critically evaluate its effects. 2. Explain and demonstrate how storytelling and community relations PR strategies can be used as tools for social change. 3. Describe how their own PR skillsets can be means for future civic engagement. 4. Develop an increased sense of efficacy when it comes to matters of civic engagement and PR practice. 5. Develop a broader view of how PR as a discipline can be applied within a community. Credits: 3.00

COM 49504 - Social Media For Social Good

Credit Hours: 3.00. Nonprofit organizations advance their missions through communication. This course is designed to introduce students to the use of social media by nonprofit organizations to create their brand and reach stakeholders. It will focus on best practices and critically assess local nonprofits return on social media investment.

Learning Outcomes: 1. Discuss the importance of social media to nonprofits for communicating, marketing, public relations, and fundraising. 2. Discuss the measurement of social media effectiveness in communicating messages and in fundraising. 3. Conduct a social media audit. 4. Develop a nonprofit social media strategy. Credits: 3.00

COM 49505 - Sports Communication

Credit Hours: 3.00. This class will help students learn to think critically about sports communication, but it will also help students learn to do sports communication. Through the use of sports books and movies, guest speakers, field trips, and case studies, students will learn not only about sports communication as a field of study and a profession, but also how they can be more thoughtful consumers of sports communication in its various forms.

Learning Outcomes: 1. Describe multiple ways that sports communication constructs and maintains culture. 2. Explain changes in sports communication related to race and gender. 3. List five key events in the last 100 years of sports communication. 4. List and analyze issues related to naming in sports. 5. Create a basic sports crisis communication plan. 6. Frame labor-management sports communication issues from both perspectives. Credits: 3.00

COM 49507 - Executive Communication

Credit Hours: 3.00. This course defines executive communication, offers a rationale for its importance, provides a catalog of deliverables (or tactics) involved in the practice, teaches students how to create those deliverables, and provides students with the tools to serve as strategic advisors to senior leaders. The ultimate goal of the course is to help students become more well-rounded and successful communication

professionals.

Learning Outcomes: 1. Describe the breadth, depth and nuance of executive communication. 2. Create various internal and external executive communication deliverables. 3. Conduct a SWOT (strengths, weaknesses, opportunities, threats) analysis of an executive's communication. 4. Define and execute the role of serving as a strategic communication advisor to an executive. 5. Learn from and connect with established communication professionals.

Credits: 3.00

COM 49600 - Special Topics In Corporate Communication

Credit Hours: 3.00. This course offers students the opportunity to explore in-depth, thorough readings, lectures and written assignments on current issue in corporate communication. Topics may include diversity in the workplace, organizational assessments, or spirituality in organizations. Permission of instructor required.

Credits: 3.00

COM 49700 - Special Topics In Mass Communication

Credit Hours: 3.00. Offers students the opportunity to explore in-depth, thorough readings, lectures and written assignments, a current topic or trend in Media, Technology and Society. Possible offerings include Media and Social Change, Online Communities, and Technology and International Communication.

Credits: 3.00

COM 49701 - Live Sports Broadcasting Summer

Credit Hours: 1.00. In this experiential Live Sports Broadcasting course in partnership with the Lafayette Aviators, students will have the opportunity to work in the studio at Loeb Stadium in Lafayette, operate cameras on the field, produce promotional material to be used before, during, and after games, and interview players for segments on The Purdue Channel. The class spans the home season of the Aviators. Students are expected to register for all 3 1-credit modules in a summer. Permission of instructor required.

Learning Outcomes: 1. Demonstrate live sports broadcasting techniques including: studio operation, camera operation, play-by-play and commentary. 2. Interview athletes and staff for broadcast. 3. Develop promotional videos for The Purdue Channel and/or the Aviators.

Credits: 1.00

COM 49702 - Video Games And Society

Credit Hours: 3.00. This course focuses on video games as a form of mass communication. Primarily, this focus entails understanding how video games communicate to mass audiences, using features distinctive to video games, and how that communication might impact game players (i.e., media psychology). There is a secondary focus on how game players communicate with each other. The course will primarily examine these issues from social scientific perspectives. Topics include the influence of society on game creation, the impact of games on players, gaming cultures, and game industries.

Learning Outcomes: 1. Identify and apply key communication concepts and theories that inform video game creation and consumption. 2. Compare video game features and creation processes. 3. Evaluate positive and negative effects of video games. 4. Describe the video game industry and surrounding culture. Credits: 3.00

Department of English

About the English Program

In April 2019 *College Magazine* ranked Purdue's English Department #1 school in the U.S for English majors. We offer students skills in critical thinking and creative problem-solving; the ability to conduct research; facility with language and written and oral communication; respect for diversity; and the capacity to explain complexities as succinctly as possible. You can choose from five B.A. programs: English (focused on literature), English Education, Creative Writing, English in a Global Context and Professional Writing.

Purdue has several student organizations for English students which include the Student Association, Haraka Writers, and the Professional Writers Club.

The Purdue Online Writing Lab (OWL) offers a vast library of resources ranging from style guides to instructional material to assist Purdue students. OWL also is an international resource, with a Web site that receives nearly 100 million hits a year from more than 125 different countries.

English: Global Context Concentration, BA

English: English Literature Concentration, BA

ENGL 10400 - English Composition I

Credit Hours: 3.00. Emphasis on the organization of the expository theme. Directed writings of themes based on personal experience, on the relationship between experience and language, and on the relationship between experience and ideas.

Credits: 3.00

ENGL 10500 - English Composition II

Credit Hours: 3.00. The second half of the basic composition sequence. Extensive practice in writing clear and effective prose. Instruction in logic, structure, and style.

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts

or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 19500 - Introducing English

Credit Hours: 1.00. This introductory seminar familiarizes students with the different majors in English as well as potential career opportunities, introduces them to departmental and College of Liberal Arts resources, and promotes community through participation in English Department activities. These include visits to the Writing Lab (English) and the Career Center (CLA); common read book discussions; & more.

Learning Outcomes: 1. Define the different majors and concentrations within English. 2. Identify important resources in the English Department and College of Liberal Arts. 3. Articulate key concepts related to the Department's annual common read. 4. Produce well-reasoned written essays about assigned the reading and activities. Credits: 1.00

ENGL 20102 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work.

Learning Outcomes: 1. Identify various concepts and methods in digital humanities. 2. Apply a variety of methods and tools to conduct digital humanities research. 3. Research the transformative potential of digital methods through critical inquiry. 4. Create a process for developing and completing a digital project. Credits: 3.00

ENGL 20200 - Engaging English (UCC: HUM)

Credit Hours: 3.00. This theme-based course introduces students to the field of English, and provides foundational liberal arts skills. It teaches, for instance, critical and creative thinking, reading, and writing using a variety of genres, texts, and media.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of English Studies. 2. Apply multiple critical approaches to define cultural complexities. 3. Apply knowledge of written and visual literacies for working with diverse media. 4. Explain and apply different methods of reading. 5. Explain and apply foundational skills of English Studies, such as close reading, written persuasion and argument through evidence. Credits: 3.00

ENGL 20300 - Introduction To Research For Professional Writers

Credit Hours: 3.00. Introduction to research sources and methods useful for professional writers, including electronic resources. Focus on collecting print and online information, interviewing, surveying, and conducting observations; and on evaluating, summarizing, analyzing, and reporting research.

Credits: 3.00

ENGL 20400 - Special Topics In Writing

Credit Hours: 3.00. A course in writing, with the special topic selected by the instructor.

Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 20700 - Introduction To Rhetoric & Argument

Credit Hours: 3.00. Introduces the art, science, and practical applications of rhetoric through ancient, contemporary, and transcultural concepts. Helps students gain a grounded understanding of rhetoric and its application in everyday life and professional contexts. This course will feature the application of persuasion in diverse fields and for diverse purposes. Students will learn to apply rhetorical principles to written, visual, and multimodal forms.

Learning Outcomes: 1. Articulate a comprehensive understanding of the evolution of rhetoric, from ancient to contemporary theorists. 2. Summarize the role of proofs in human communication and evaluate how rhetorical strategies can be used in persuasive messaging. 3. Develop and apply skills in identifying, analyzing, and employing rhetorical frameworks to enhance persuasive communication strategies. 4. Select rhetorical strategies appropriate for written, visual, and multimodal forms. Credits: 3.00

ENGL 21500 - Inventing Languages

Credit Hours: 3.00. "Invented languages" include linguistic systems created for fictional worlds, such as Dothraki (Game of Thrones), Na'vi (Avatar), Elvish (Lord of the Rings) and Klingon (Star Trek), as well as languages invented for international communication by real speakers, such as Esperanto. In this course, you will study these systems, learn the major properties of natural human languages, and construct your own rudimentary languages.

Learning Outcomes: 1. Understand the characteristics and goals of various invented languages from linguistic, cultural, and historical perspectives. 2. Show mastery of basic concepts of language structure and language typology. 3. Elucidate mastery of basic concepts of sociolinguistics, historical linguistics, and linguistic anthropology. 4. Explain how natural languages has influenced the development of invented languages. 5. Construct a rudimentary language system and create a back story, dictionary, grammar, and sample text. Credits: 3.00

ENGL 21700 - Figures Of Myth And Legend I: Monsters (UCC: HUM)

Credit Hours: 3.00. This course traces specific monster case studies across a variety of genres and media from the ancient to the modern period. It explores the way monsters define and police the boundaries of what it means to be human, and provide a common language for crystallizing specific social, ethnic, and national practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explain the relationship between monsters and nationalism/national identity. 2. Explain disability theory and the cultural coding of unusual bodies. 3. Produce written, verbal, and visual communication that demonstrates critical thinking, creative problem solving, empathy, and visual literacy. 4. Apply historical and global awareness. Credits: 3.00

ENGL 21800 - Figures Of Myth And Legends II: Heroes And Villains (UCC: HUM)

Credit Hours: 3.00. This class offers in-depth explorations of the larger-than-life leaders (on the side of good, and sometimes evil, too) who have become models for how we think of heroism, charisma, and what it means to seek and wield power over others. From the chivalric Knights of the Round Table to the frightening energy of the Viking comitatus bands, it will show that no models of mythic leadership come without their complications--or admirable qualities.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Compare legal and cultural ethical codes across different cultures. 2. Define models of leadership to understand different versions of heroism, villainy, manliness, and gender coding of behavior. 3. Demonstrate knowledge of how the past influences present social modes and mores. 4. Argue through textual evidence across a variety of media. Credits: 3.00

ENGL 21900 - Figures Of Myth And Legend III: Magic And Marvels (UCC: HUM)

Credit Hours: 3.00. This course surveys stories of elves, fairies, wizards, witches, etc., and explores the allure of all things marvelous, strange, and magical. It considers how language itself constitutes a kind of magic; examines magic as technology and vice versa, since, as Arthur C. Clarke famously declared: "Any sufficiently advanced technology is indistinguishable from magic"; and seeks to understand how people across history have used stories of magic to reinforce (mystify) or upend (defamiliarize) the status quo.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Compare a variety of imaginative texts from Anglophone and other cultures, and be able to analyze them critically. 2. Define how both magic and science are not fixed but rather variable and culturally specific. 3. Demonstrate knowledge of how stories code difference, and either reinforce (mystify) or upend (defamiliarize) the status quo. 4. Argue through textual evidence across a variety of media. Credits: 3.00

ENGL 22002 - Technology And Play

Credit Hours: 3.00. This course introduces students to games, as well as investigating innovations and controversies in the gaming industry. It will explore theories of play, how technological innovations and business practices in both digital and analog gaming (through board games, video games, tabletop games, and esports) mediate or structure the experience of play. It will also survey the rise of myriad gaming subcultures, including celebrity streamers and esports.

Learning Outcomes: 1. Identify important categories of games. 2. Demonstrate critical thinking skills of observation, explanation, and interpretation to assess sociological and cultural trends in the different spaces of gaming. 3. Produce original work using logic, creativity, and interpretive skills examining different games and industry practices. Credits: 3.00

ENGL 22300 - Literature And Technology (UCC: STS)

Credit Hours: 3.00. This class uses literature to explore how technological innovation both enables and constrains creativity. It also explores how technology has been represented in literature, and examines the relationship between literature and new media.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Define technology and its implications. 2. Employ multiple approaches to critical thinking well-suited to cultural complexities. 3. Demonstrate written, visual, and technological literacies while working with diverse media. 4. Demonstrate creativity through remediation (moving information from one medium to another) and iteration. 5. Explain the relationship between information and digital media production. 6. Explain and employ multiple critical approaches to narrative and storytelling. Credits: 3.00

ENGL 22400 - Literature, Money, And Markets

Credit Hours: 3.00. This course explores the interconnections among markets, business and its management, and literature. It examines representations of traditional markets (industry, finance, and global trade) as well as alternative markets (the market in bodies, the black market, and the digital marketplace economy). The course will present a wide-ranging survey of canonical texts, orienting the reader as to how classics from Chaucer to Dickens are engaged in the business of thinking about business. But it will also engage with alternative viewpoints and contemporary concerns about business practices, literature, and individual consciousness in the techno-digital age.

Learning Outcomes: 1. Define "market". 2. Apply historical knowledge to explain current business systems. 3. Explain literature's power to inform economic practices. 4. Apply traditional and visual literacy to produce market

analysis. Credits: 3.00

ENGL 22500 - Literature, Inequality, And Injustice (UCC: HUM)

Credit Hours: 3.00. This course introduces students to literature addressing inequality and social justice. Questions will include: What is social justice? How do literary works reproduce or resist dominant ideologies? How does literature provide tools to map social and economic formations? What role have literary works played in emancipatory and egalitarian political movements? Readings and comparison of these texts will help examine how literature maintains a variety of communities.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. State knowledge about diversity and inclusion (including, but not limited to, histories of race, gender, and class). 2. Produce effective written and verbal communication that demonstrates critical thinking, creative problem solving, and empathy. 3. Access and analyze information across a range of media. Credits: 3.00

ENGL 22600 - Narrative Medicine (UCC: STS)

Credit Hours: 3.00. "Narrative Medicine" encompasses stories about the interior lives of doctors and medical professionals, the complexities of medicine past and present, and health-care for patients and their families. Ultimately, this course emphasizes the essential role of rhetoric and storytelling in the face of medical crisis and uses stories about illness and disability to explore the human condition.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Explain medicine from a humanistic perspective. 2. Explain contemporary health issues. 3. Define storytelling as an intellectual and empathic discourse. 4. Analyze fictional and factual narratives (stories). Credits: 3.00

ENGL 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. CTL:IEL 1260 Introduction To Linguistics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 22800 - Language And Social Identity

Credit Hours: 3.00. This course introduces linguistic diversity, including regional, cultural, and stylistic variation within a single language, code-switching in bilingual communities, and colonial, immigrant, Creole, indigenous, and sign languages. It also explores the role of language in supporting various types of social identity (e.g., age, gender, social class, race, ethnicity) as well as power structures that enable discrimination against less powerful groups.

Learning Outcomes: 1. Distinguish empirically-grounded facts about linguistic diversity and language use from popular attitudes and opinions that are not based in facts. 2. Recognize the legitimacy and systematic structure of all language varieties. 3. Describe the phonetic, lexical, grammatical, and pragmatic features as found in the language of different groups, through close analysis of primary linguistic data. 4. Show how individuals use linguistic features to help construct their social identities, through the close examination of case studies. 5. Recognize forms of linguistic discrimination as depicted in the popular media and as enacted in the education system, the workplace, the judicial system, and daily life. Credits: 3.00

ENGL 22900 - Creole Languages And Cultures

Credit Hours: 3.00. This course introduces the concept of pidgin and creole languages across the world, with a focus on English-based pidgins and creoles. It addresses their geographical distribution and some of their cultural manifestations such as music, food and literature on both sides of the Atlantic. The course presents a general view of the historical events that led to the formation of creole languages and to the development of the African diaspora. We will consider different varieties of creole languages and (their) cultures including English-based creoles in West Africa such as Kru (Liberia and Sierra Leone), Nigerian Pidgin and Cameroonian Pidgin; in the Caribbean such as Jamaican, San Andreas, Nicaraguan and Limonense, contrasting them with the Spanish-based creole Palenquero; and the three most predominant creoles in the U.S. Louisiana Creole, Gullah and Hawaii Creole, to understand their characteristics and their history. We will explore the ways in which the languages

manifest in the music and literature of the contexts where they are spoken. Finally, we will consider the African diaspora as a fundamental thread that ties (English-based) creole languages and peoples together. In exploring these issues, the course will draw on a variety of theoretical concepts and traditions from sociolinguistics, creole studies and African American studies.

Learning Outcomes: 1. Identify the cultural and linguistic legitimacy and importance of creole languages in the world. 2. Describe general historical events that led to the development and origin of creole languages. 3. Distinguish general cultural and grammatical features in creole languages that differ from non-creole languages. 4. Show how individuals use creole languages in literature and music. 5. Identify attitudes towards creole languages, the language's relationship to the African diaspora, and its relationship to linguistic diversity in North America. Credits: 3.00

ENGL 23000 - Great Narrative Works (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of great narratives from Homer's Odyssey to the present, considering works from a variety of cultures and time periods in order to develop an understanding of their ideas, structures, styles, and cultural values.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ENGL 23100 - Introduction To Literature

Credit Hours: 3.00. Reading and discussion of great works of various types to develop an understanding of their ideas, structures, and styles. Includes poetry, drama, biography, essay, and prose fiction. CTL:IEL 1270 Appreciation Of Literature

Credits: 3.00

ENGL 23200 - Thematic Studies In Literature

Credit Hours: 3.00. Examination of a particular theme, such as the hero, death, or the city, and the techniques by which it is treated in various literary works, usually in more than one genre. Current offerings available from counselors.

Credits: 3.00

ENGL 23400 - Literature And The Environment (UCC: STS)

Credit Hours: 3.00. Literary study of nature writing; writing from the natural sciences; and canonical poetry, fiction, and essays through an ecological lens. Introduces students to ecocritical thought and environmental literary history.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and discursive conventions of literature about the environment. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 23700 - Introduction To Poetry (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of poetry from different periods aimed at enhancing the student's understanding of genre, form, and style; how poetry grows out of and speaks to its historical moment; and how poetry addresses pressing social issues.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate introductory knowledge of a range of genres, topics, and literary conventions of poetry. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 23800 - Introduction To Fiction (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of fiction from different periods aimed at enhancing the student's understanding of genre, form, and style; how fiction grows out of and speaks to its historical moment; and how fiction addresses pressing social issues.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate

introductory knowledge of a range of genres, topics, and literary conventions of fiction. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 24000 - British Literature Before 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the medieval to the Romantic period.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Romantic period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Romantic literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 24100 - British Literature After 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the Romantic period on.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the Romantic period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about literature from the Romantic period to the present based on appropriate use of textual evidence. Credits: 3.00

ENGL 24900 - Great British Books

Credit Hours: 3.00. Why are British books so compelling? This course examines the dynamic history of British literature and explores how canonical and contemporary texts shaped the cultural landscape of Britain, the British Empire, and the world.

Learning Outcomes: 1. Identify and make convincing arguments about major genres of British literature, including essays, journals, autobiographies, poetry, drama, and fiction. 2. Identify the diversity of peoples, interests, and ideologies within British literature and culture, and the texts that define them. 3. Define and analyze how literary texts both reflect and produce culture. 4. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

ENGL 25000 - Great American Books (UCC: HUM)

Credit Hours: 3.00. What makes great American books so compelling? This course examines the dynamic history of American literature and explores how canonical and contemporary books have shaped the cultural landscape of the U.S. and the world.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions related to great American books. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about American books based on appropriate use of textual evidence. Credits: 3.00

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 26200 - Greek And Roman Classics In Translation

Credit Hours: 3.00. Study of important works of Greek and Roman literature, their intrinsic literary values, and their influence on later European and American writing and thinking.

Credits: 3.00

ENGL 26400 - The Bible As Literature (UCC: HUM)

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of literary studies and the liberal arts, especially related to the Bible. 2. Employ critical approaches from basic building blocks to more advanced ones suited to cultural complexities. 3. Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

ENGL 26600 - World Literature: From The Beginnings To 1700 A.D. (UCC: HUM)

Credit Hours: 3.00. (CMPL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. CCN: IEL 1250 World Literature 1

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 26700 - World Literature: From 1700 A.D. To The Present (UCC: HUM)

Credit Hours: 3.00. (CMPL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. Typically offered Summer Fall Spring. CCN: IEL 1251 World Literature 2

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 27600 - Shakespeare On Film (UCC: HUM)

Credit Hours: 3.00. Considers the relation of the written text of five or six Shakespeare plays to multiple film versions from a wide variety of times and cultures, e.g., the United States, England, France, Italy, Japan, Denmark, India, and Russia. Typically offered Fall Spring Summer.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explore a selected set of Shakespeare's plays through a comparative analytical lens. 2. Compare and contrast various film versions of Shakespeare's plays in their respective contexts. 3. Respond to the films and written texts through reflective and critical writings and discussions. Credits: 3.00

ENGL 27900 - The American Short Story In Print And Film

Credit Hours: 3.00. Analysis of American short stories of the nineteenth and twentieth centuries, their filmed versions, their printed scenarios, and critical writings about the tales and their adaptations.

Credits: 3.00

ENGL 28000 - Games, Narrative, Culture

Credit Hours: 3.00. This is an introduction to the field of game studies, and to games as narrative and cultural media. We will look at the stories games tell; the way their narrative elements or plot devices intersect with the culture around the games and gaming itself; and how all these things come together to affect game design, meaning, and play.

Learning Outcomes: 1. Demonstrate knowledge of key concepts in both game studies and narrative theory in order to critique a game's systems and narrative elements. 2. Articulate how a game's narrative and the industry's workplace practices are situated in specific historical and cultural contexts. 3. Demonstrate critical thinking skills suited to cultural and historical complexities. 4. Articulate concise, coherent arguments about the effects of writing, narrative, and workplace practices and policies on the video game industry and a game's audience. Credits: 3.00

ENGL 28600 - The Movies (UCC: HUM)

Credit Hours: 3.00. Introduction to the movies from classic to contemporary films. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to classic and contemporary films. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about classic and contemporary films based on appropriate use of evidence. Credits: 3.00

ENGL 30100 - Ways Of Reading

Credit Hours: 3.00. Introduction to literary theory and practice. Close reading of and significant writing about selected literary texts informed by a variety of critical and/or theoretical perspectives.

Learning Outcomes: 1. Identify various theoretical approaches to literature, and then apply them to literary texts. 2. Define important literary terms, genres, and conventions within their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned arguments about literary texts based on appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 30600 - Introduction To Professional Writing

Credit Hours: 3.00. Development of skill in analyzing rhetorical situations in the workplace. Practice in planning, writing, evaluating, and revising a variety of documents typical of those used in the arts and industry.

Learning Outcomes: 1. Understand the basic rhetorical theories that underlie professional and technical writing. 2. Explore issues and challenges in professional writing in a variety of professional and technical contexts. 3. Produce critical writing on rhetorical issues in the field. 4. Solve workplace or organizational problems using writing. Credits: 3.00

ENGL 30900 - Digital Design And Production

Credit Hours: 3.00. The development of the ability to write and design documents using electronic publishing technologies.

Students will receive instruction in writing, graphics, and publishing software and will write, design, produce, and critique a number of publications.

Learning Outcomes: 1. Understand the foundational principles of document design and gain practical experience with contemporary design tools. 2. Build portfolio pieces that employ a design thinking approach, both in content and execution 3. Apply theories of document design to a variety of different genres directed to different audiences and rhetorical purposes. Credits: 3.00

ENGL 31600 - Craft Of Fiction From A Writer's Perspective

Credit Hours: 3.00. This course focuses on the craft of fiction with some consideration of its underlying principles from a writer's perspective. Topics of study may include works of fiction, statements of aesthetics and craft, and various fictional forms.

Learning Outcomes: 1. Analyze published fiction by applying terms of fiction craft. 2. Identify the effects of fiction forms by articulating their differences and/or similarities. 3. Analyze their own fiction by applying the terms of fiction craft. Credits: 3.00

ENGL 31700 - Craft Of Poetry From A Writer's Perspective

Credit Hours: 3.00. This course focuses on the craft of poetry with some consideration of its underlying principles from a writer's perspective. Topics of study may include works of poetry, statements of aesthetics and craft, and various poetic forms.

Learning Outcomes: 1. Analyze published poetry by applying terms of poetry craft. 2. Identify the effects of poetry forms by articulating their differences and/or similarities. 3. Analyze their own poetry by applying the terms of poetic craft. Credits: 3.00

ENGL 32001 - Rhetoric, Artificial Intelligence, And Technology

Credit Hours: 3.00. This course examines the relationships between rhetoric and generative artificial intelligence (AI) using classical and contemporary rhetorical theory. While exploring how AI can support writing, students will gain insights into the challenges posed by AI, including issues of ethics, freedom, privacy, and sustainability. Includes application of rhetorical principles to the design and critique of new technologies.

Learning Outcomes: 1. Use knowledge of rhetorical history and contemporary rhetorical theory to evaluate the emergence of generative artificial intelligence (AI). 2. Write and design workplace documents by engaging common elements of AI tools, such as prompts and training data. 3. Integrate AI tools with other writing tools to create persuasive and informative content in diverse media. 4. Develop ethical approaches to using AI in research, persuasion, and critique. Credits: 3.00

ENGL 32101 - Content Strategy & Rhetoric

Credit Hours: 3.00. This course explores common methods for intentionally auditing, developing, and managing content across multiple media. Students will consider how different audiences and purposes shape how content is structured and delivered in varying rhetorical contexts and diverse media. Emphasizes both analytical and technical elements of content strategy.

Learning Outcomes: 1. Create and implement content strategies aligned with organizational goals and tailored to specific audiences, contexts, and purposes. 2. Perform content audits and inventories using common approaches such as lifecycle development and user testing. 3. Articulate how specific needs influence the structure and delivery of content across multiple media. 4. Use tools such as content management systems to engage and inform relevant stakeholders and contributors. Credits: 3.00

ENGL 32200 - Word, Image, Media (UCC: HUM)

Credit Hours: 3.00. This course introduces students to the study of images, their relationship to language, and their functions in media. From decoding advertising messages to analyzing digital journalism, students will learn how images and their viewers make meaning in a variety of media contexts.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Analyze images using

multiple critical methods. 2. Explain how images and their viewers make meaning. 3. Explain what role images play (or have played) in our cultures. 4. Explain what it means to negotiate so many images in our daily lives. 5. Produce effective written, verbal, and visual communication that demonstrates critical thinking, creative problem solving, empathy, and visual literacy. 6. Access and analyze information. Credits: 3.00

ENGL 32700 - English Language I: History And Development

Credit Hours: 3.00. Introduction to the history of the English language, its sounds, inflections, words, and sentence structures. Cultural and historical events affecting this history, and the interplay between language and literature.

Credits: 3.00

ENGL 32800 - English Language II: Structure And Meaning

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on syntax and semantics, including parts of speech, sentence structure, and meaning. Implications of recent theory for the teaching of English. Credit will not be given for both ENGL 32800 and LING 32100 .

Credits: 3.00

ENGL 32900 - English Language III: Sound And Form

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on phonology and morphology. Implications of recent theory to the teaching of English.

Credits: 3.00

ENGL 33000 - Games And Diversity

Credit Hours: 3.00. This course looks critically at diversity in games, game development, and in the larger mainstream games community. Students will analyze and play games that related to women, minorities, members of the LGBTQ community, and/or those who lack access because of disability.

Learning Outcomes: 1. Analyze a game's narrative based on a specific frame of diversity (i.e. gender, ethnicity, sexuality, and/or disability). 2. Explain how video games relate to contemporary cultural issues. 3. Use evidence-based arguments to defend a position related to video games and diversity. Credits: 3.00

ENGL 33200 - Games And User Experience (UX)

Credit Hours: 3.00. This course connects gamers and their experiences with games by developing ways to harvest gaming experiences for the improvement of games. We aim to prepare you to better understand gaming experiences, use those understandings to improve games in development, and be able to think and write critically about those experiences.

Learning Outcomes: 1. Identify and address the variables affecting usability investigation. 2. Articulate and employ methods for collecting and processing usability/user experience information about games. 3. Practice evidence-based arguments on game development and improvements. Credits: 3.00

ENGL 34100 - Topics In Science, Literature, And Culture

Credit Hours: 3.00. This course focuses on issues in and representation of science and technology in various texts, including literature, film, science, and theory. May be repeated for credit only under a different topic.

Credits: 3.00

ENGL 34200 - Legal Fictions

Credit Hours: 3.00. This course explores legal conflicts through literature. It uses the narratives created by the cat-and-mouse of procedural dramas, emotionally charged trial scenes, and dramatic courtroom struggles, to introduce different schools of jurisprudence, and to critically examine the decisions made by those with social and legal governing power.

Learning Outcomes: 1. Explain the intersections of legal and literary practice. 2. Define different schools or theories of jurisprudence. 3. Explain and analyze legal and cultural complexities. 4. Construct sustained and persuasive arguments based on textual evidence. Credits: 3.00

ENGL 34300 - Labor And Literature

Credit Hours: 3.00. This course introduces its students to the transformative synergy between the labor of literature and labor within literature. In contrast to accepting the marketplace as a

societal monolith, the readings illustrate the role of labor in creation. This course will examine labor taken in its broadest sense, from the labor of self-fashioning to the labor of industries; the labor of life and the labor of destruction and the implications of the laboring body from market creation to market collapse. Diverse readings range from traditional literary staples to modern representations of the labor market.

Learning Outcomes: 1. Explain who is allowed to participate in, and who is excluded from financial, economic, and other markets, and why. 2. Explain both individual and institutional roles in the labor market. 3. Define diverse worldviews of what constitutes labor. 4. Write reasoned arguments about labor and its connections to literature. Credits: 3.00

ENGL 34400 - Environmental Ethics, Policy, And Sustainability

Credit Hours: 3.00. Environmental Ethics, Policy and Sustainability is an interdisciplinary course designed to open new pathways into ethical and eco-critical inquiry in the Anthropocene age. The course analyzes disciplinary differences in approaching the ethical, the human, and environmental problems such as sustainability, development, biodiversity, global security, and climate change. Students will explore what it means to be ethical in and through an interrogation of our contemporary conceptions of what it means to be human. These interrogations in turn will prompt us to reconsider human creations such as knowledge, culture, and technology, which will push us to genuinely think how humans as a species situate their creations within the realm of what they call Nature. Students will be introduced to the history of environmental studies in the discipline, to the rise of what is now known as "postcolonial ecocriticism" to theoretical inquiry into modern technology, and to other recent developments in the fields of environmental studies.

Learning Outcomes: 1. Learn, describe, and relate key developments in environmental ethics. 2. Distinguish and translate different perspectives concerning ethical challenges. 3. Comprehend the efficacies of environmental positions, and learn to push the boundaries of different disciplinary approaches to environmental dilemmas. 4. Evaluate the limitations of positions and the complex frameworks surrounding ethical problems in order to offer more imaginative and resilient solutions. Credits: 3.00

ENGL 34500 - Games And World Building

Credit Hours: 3.00. Every game designer and gamer knows that there is more to narrative than just words on a page and more to worldbuilding than images on a screen. This course looks at the ways that narrative worlds get built-in games. We will begin by looking at the narrative elements in analog games that have been the foundation of many digital games and move on to look at the elements in digital games that come together to form the worlds.

Learning Outcomes: 1. Comprehend theoretical texts about game design and world building and demonstrate this by discussing them in class and with written assignments. 2. Analyze digital and analog games for specific world building techniques and strategies and demonstrate this via class discussion and written assignments. 3. Synthesize what they have learned about world building from theoretical texts and gameplay and demonstrate this by applying it to a final project in which they design their own game worlds. Credits: 3.00

ENGL 35000 - American Literature Before 1865 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from European colonization to the U.S. Civil War. CTL:IEL 1210 American Literature I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Civil War period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35100 - American Literature After 1865 (UCC: HUM)

Credit Hours: 3.00. A survey of American literature from the Civil War to the present. CTL:IEL 1211 American Literature II

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the post-Civil War period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

ENGL 35900 - Black Women Writers

Credit Hours: 3.00. (AAS 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ENGL 36000 - Gender And Literature (UCC: HUM)

Credit Hours: 3.00. An introduction to feminist approaches to the study of literature, including poetry, drama, fiction, and/or autobiography. Examines how gender intersects with race, ethnicity, sexual orientation, and class in shaping authorship, reading, and representation.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ENGL 36500 - Literature And Imperialism (UCC: HUM)

Credit Hours: 3.00. A study through cultural and theoretical works of the impact of imperialism on the ruling nations.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism/colonialism. 2. Develop a foundational knowledge of the historical contexts of and theoretical approaches to literary texts: gain an introductory knowledge of postcolonial literary theory. 3. Improve close reading and textual analysis skills. 4. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual

analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 36700 - Mystery And Detective Fiction (UCC: HUM)

Credit Hours: 3.00. An introduction to the detective genre, examining its origins, its characteristics, and its intersections with empiricism, forensic science, race, class, gender, sex, and empire.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Be familiar with the generic conventions of, and theoretical approaches to, the detective genre. 2. Use detective fiction to improve students' historical, cultural, and global awareness. 3. Practice analyzing, interpreting, and synthesizing information within and across texts and other media. 4. Practice successful academic writing, including a debatable thesis, as well as appropriately-selected and presented evidence. Credits: 3.00

ENGL 37300 - Science Fiction And Fantasy (UCC: HUM)

Credit Hours: 3.00. Representative works of science fiction and fantasy examined in relation to both mainstream and popular literature. Emphasis is on technique, theme, and form.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ENGL 37401 - Studies In British Literary History

Credit Hours: 3.00. This class focuses on one of several important British literary-historical periods, ranging from medieval English to modern British literature. In it, students will examine individual authors and texts while also gaining a wider understanding of their historical context. Students will also engage with a variety of genres and practice numerous critical approaches to literature.

Learning Outcomes: 1. Identify and construct arguments about genres of, and theoretical approaches to, historical literature. 2. Explain the diversity of peoples, interests, and ideologies with specific British literacy-historical periods. 3. Show how literary artifacts are both agents and reflections of culture. 4. Construct written arguments that demonstrate historical, cultural, and global awareness. 5. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

ENGL 37700 - Modern And Contemporary Poetry

Credit Hours: 3.00. A study of poetry in English from the twentieth century to the present.

Learning Outcomes: 1. Identify the form and analyze the significances of modern and contemporary poems. 2. Discuss modern and contemporary poems in relation to their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned and written arguments about modern and contemporary poems. Credits: 3.00

ENGL 37800 - Studies In American Literary History

Credit Hours: 3.00. This class focuses on one of several important American literary-historical periods: colonial, nineteenth-, or twentieth- and twenty-first-century literature. In it, students examine individual authors and texts while also gaining a wider understanding of their historical context. Students also will engage with a variety of genres and practice numerous critical approaches to literature.

Learning Outcomes: 1. Identify and construct arguments about genres of, and theoretical approaches to, historical literature. 2. Explain the diversity of peoples, interests, and ideologies with specific American literary-historical periods. 3. Show how literary artifacts are both agents and reflections of culture. 4. Construct written arguments that demonstrate historical, cultural, and global awareness. 5. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

ENGL 37900 - The Short Story

Credit Hours: 3.00. A study of the development and features of the short story genre.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and literary conventions related to the short story genre. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about short stories based on appropriate use of textual evidence. Credits: 3.00

ENGL 38000 - Issues In Rhetoric And Public Life (UCC: IL/WC)

Credit Hours: 3.00. Study of how language and media create belief and change. Examines ancient and contemporary rhetorical theory as it applies to public discourse, media, and technology.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate knowledge of a range rhetorical techniques and practices in the public realm, past and/or present. 2. Discuss those techniques and practices in relation to their diverse historical, cultural, and technological contexts. 3. Produce well-reasoned written arguments about the rhetorical techniques and practices they study using appropriate forms of research and evidence. Credits: 3.00

ENGL 38100 - The British Novel (UCC: HUM)

Credit Hours: 3.00. Survey of British novels ranging from the eighteenth- to the twenty-first centuries.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of topics and literary conventions related to the British novel. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about British novels based on appropriate use of textual evidence. Credits: 3.00

ENGL 38200 - The American Novel (UCC: HUM)

Credit Hours: 3.00. A survey of American novels ranging from the eighteenth century to the twenty-first-centuries.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of topics and literary conventions related to the American novel. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about American novels based on appropriate use of textual evidence. Credits: 3.00

ENGL 38600 - History Of Film To 1950

Credit Hours: 3.00. This survey crosses the divide between the silent film era and the "talkies" to explore narrative, experimental, and documentary styles of feature films from the 1890s to 1950.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to film from its origins through the mid-twentieth century. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-1950 films based on appropriate use of evidence. Credits: 3.00

ENGL 38700 - History Of Film Since 1950

Credit Hours: 3.00. A survey of narrative, experimental, and documentary styles of feature films from the mid-twentieth century to the present.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to films from the mid-twentieth century. 2. Identify and articulate connections among these topics and conventions as they relate to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about

post-1950 films based on appropriate use of evidence. Credits: 3.00

ENGL 38900 - Literature For Children (UCC: HUM)

Credit Hours: 3.00. This course surveys eighteenth, nineteenth-century, and early-twentieth-century literature for children, including the so-called "golden age" of children's myth, fairy tales, and fantasy, as well as domestic fiction for girls and adventure books for boys.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Know important genres of children's literature as well as their historical, cultural, and aesthetic contexts. 2. Know important theoretic approaches to the study of children's literature as well as debates about the ethics of writing for children. 3. Empathize through considering perspectives on childhood from authors whose life experiences are different from students' own. 4. Write clearly and produce elements of academic writing, including a thesis, as well as appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

ENGL 39000 - Practicum In Tutoring Writing

Credit Hours: 1.00 to 3.00. A practicum to teach undergraduates to teach writing in the one-to-one setting of a writing lab.

Credits: 1.00 to 3.00

ENGL 39100 - Composition For English Teachers

Credit Hours: 3.00. Exploration of the theory, research, and pedagogy of teaching writing at the secondary level. Topics include the development of writing assignments and related activities, the study of writing process models, and the evaluation of student work in a variety of genres.

Learning Outcomes: 1. Design lesson plans for secondary writing instruction. 2. Incorporate writing-process strategies into assignments and activities. 3. Develop prompts for student writing in a variety of genres. 4. Map instructional activities to formal state or national curricular standards. 5. Reflect on differentiating lessons for diverse learners. Credits: 3.00

ENGL 39200 - Young Adult Literature

Credit Hours: 3.00. This course examines the construct of Young Adult Literature as a genre crafted specifically for adolescents. Using both classic and contemporary novels, as well as relevant theoretical and research texts, this course explores how YA literature is defined, what it offers to adolescent readers, and how it is situated in the literary landscape.

Learning Outcomes: 1. Read, respond to, and analyze selected works of Young Adult literature in order to think critically about various concepts and issues connected to the genre. 2. Explore, analyze, and critique the extent to which selected Young Adult literature affects and reflects teenage life. Credits: 3.00

ENGL 39300 - Interdisciplinary Approaches To Environmental And Sustainability Studies

Credit Hours: 3.00. (ANTH 39300) This course is the lynchpin of the undergraduate Certificate in Environmental and Sustainability Studies. It will present a series of case studies, core concepts, and problem questions that integrate the following three academic approaches: 1) Human Dimensions and Environment/Sustainability, 2) Engineering and Environment/Sustainability, and 3) Environmental/Sustainability Sciences.

Learning Outcomes: 1. Identify, describe, and relate the diverse causes (social, cultural, political, ethical, economic, historical, scientific, and engineered) and consequences of pressing environmental and sustainability challenges, such as climate change, resource scarcity, biodiversity, population growth. 2. Distinguish, paraphrase, and translate different disciplinary perspectives on these key environmental and sustainability challenges. 3. Familiarize themselves with the efficacies, and learn to push the boundaries, of different disciplinary approaches by comparing and contrasting solutions to environmental issues. 4. Combine different disciplinary approaches by synthesizing reorganizing, and reformulating

diverse viewpoints. 5. Demonstrate ability to communicate across disciplines on environmental and sustainability problems. Credits: 3.00

ENGL 39600 - Studies In Literature And Language

Credit Hours: 1.00 to 3.00. A course in the study of a special topic directed by an instructor in whose particular field of specialization the content of the course falls.

Learning Outcomes: 1. Students will think critically about course content. 2. Students will read and write reflectively and critically about course content. 3. Students will engage in course discussions, either online or face-to-face, which encourage critical thought and personal engagement. Credits: 1.00 to 3.00

ENGL 39900 - Beyond English

Credit Hours: 3.00. This class is designed for third- and fourth-year English majors. It will help students translate the worth of English and the humanities to the world beyond the university, providing them with tools to articulate their achievements and prepare for their professional and adult lives.

Learning Outcomes: 1. Be familiar with economic, scientific, and humanistic arguments for the value of English and the humanities. 2. Practice speaking clearly, writing persuasively, and collaborating effectively. 3. Enhance career preparation and professionalization. Credits: 3.00

ENGL 40600 - Review Writing

Credit Hours: 3.00. Intensive practice in the writing of book, film, and theatre criticism, as well as reviews of musical programs and art exhibits. Readings in critics to serve as possible models. Audience analysis of newspapers and periodicals that would be potential markets.

Credits: 3.00

ENGL 40700 - Intermediate Poetry Writing

Credit Hours: 3.00. Study and practice of methods of composing poetry, with primary emphasis on the student's own work. Workshop criticism and discussion of published writing.

Learning Outcomes: 1. Write and revise poems by using effective imagery, line breaks, stanzas, compression, and linguistic playfulness; 2. Produce a portfolio of poems by revising according to suggestions received in workshop and in individual conferences with the instructor. 3. Be cognizant of the range of the genre by reading and discussing key works of modern and contemporary poetry. Credits: 3.00

ENGL 40800 - Creative Writing Capstone

Credit Hours: 3.00. This course will focus on the writing and revision of the capstone thesis in Creative Writing, consisting of a substantial portfolio of either fiction or poetry with an introductory essay. Workshop, discussion of published writing, and individual conferences will form the center of the course with readings, lecture, and discussion of various literary topics. Permission of instructor required.

Learning Outcomes: 1. Master specific topic on either poetry or fiction writing by giving a formal in-class presentation. 2. Master either poetry or fiction writing by producing a portfolio of their own creative work. 3. Understand their aesthetic by producing a formal essay which analyzes their creative writing. Credits: 3.00

ENGL 40900 - Intermediate Fiction Writing

Credit Hours: 3.00. Study and practice of methods of composing fiction, with a primary emphasis on the student's own work. Workshop criticism and discussion of published fiction.

Learning Outcomes: 1. Write and revise fiction by using effective character development, plot and scene. 2. Produce a polished fiction by revising according to suggestions received in workshop. 3. Be cognizant of the range of the genre by reading and discussing key works of modern and contemporary fiction. Credits: 3.00

ENGL 41100 - Studies In Major Authors

Credit Hours: 3.00. A study of the literary, critical, or cinematic works of one or two influential authors or directors. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions of the works of a particular author. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41200 - Studies In Genre

Credit Hours: 3.00. A study of literary or cinematic works that share distinctive formal features. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate detailed knowledge of a single literary genre. 2. Discuss that genre in relation to its diverse historical, cultural, and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41300 - Studies In Literature And History

Credit Hours: 3.00. A study of literature or film produced during a well-defined historical period from the view of its social, political, religious, and economic contexts. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions of a particular period in history. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41400 - Studies In Literature And Culture

Credit Hours: 3.00. A study of literature or film from the perspective of the cultural norms and values it expresses, celebrates, and challenges. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of the relationship between literary texts and their culture. 2. Discuss those relationships in light of texts' diverse historical and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to

specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 42201 - Writing For The Health And Human Sciences

Credit Hours: 3.00. This course applies rhetorical principles to the writing of health, hospitality, nutrition and other related fields. It will prepare students to write in diverse modalities for technical, professional and lay audiences.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Employ theories and approaches of medical and science writing to adapt to the rapidly changing industries of healthcare and public health. 4. Compose effective healthcare and public health documents with an awareness of the accessibility and usability needs of patients, providers and caregivers. 5. Communicate complex healthcare and public health information while writing both individually and in teams. Credits: 3.00

ENGL 42400 - Writing For High Technology Industries

Credit Hours: 3.00. Applies principles of effective professional writing to the planning, production, and evaluation of computer user manuals and other writing tasks.

Learning Outcomes: 1. Communicate technical knowledge through writing. 2. Think and write about writing in high technology workplaces. 3. Write concisely, precisely, and with economy of language. 4. Become familiar with the best practices and procedures for documenting advanced technologies. 5. Become familiar with adapting technical language and requirements for a non-specialist audience. 6. Become familiar with composing and delivering policies or new procedures to colleagues or co-workers. 7. Become familiar with practical strategies for improving your resume, conduct, and online presence. Credits: 3.00

ENGL 43201 - Editing And Publishing

Credit Hours: 3.00. Editing and Publishing is a professional writing workshop that teaches students how to proofread, copyedit, substantive edit, and global edit documents. Students will learn how to navigate the publishing industry and work with authors on print, electronic, online, and multimedia documents.

Learning Outcomes: 1. Understand how the publishing industry operates, especially from an editor's perspective. 2. Apply the four levels of edit (global editing, substantive editing, copyediting, and proofreading) in an editorial project. 3. Work collaboratively with authors to produce clearly written and persuasive documents. 4. Edit document design and graphics in a document. 5. Interact with

publishers to bring a text from manuscript form into a published manuscript. Credits: 3.00

ENGL 43300 - Writing Proposals And Grants

Credit Hours: 3.00. Writing Proposals and Grants is a professional writing workshop that teaches students to write workplace proposals and grants in for-profit and not-for-profit companies and organizations. Students will also learn how to write business plans, a specialized form of proposal.

Learning Outcomes: 1. Analyze rhetorical situations to determine needs of readers and contexts. 2. Generate new ideas for businesses, products, and services. 3. Organize proposals and grants using various proposal genres. 4. Write in a plain and persuasive style that is appropriate to readers. 5. Design documents in ways that make information accessible. 6. Edit and revise proposals and grants. 7. Work with authors, customers, and funding agencies to sharpen the message of a proposal or grant. Credits: 3.00

ENGL 43400 - Science And Medical Writing

Credit Hours: 3.00. Science and Medical Writing is a professional writing workshop that teaches students how to write in medical and scientific fields. Students will learn the genres and conventions that are used by medical writers and science writers, as well as editors in these fields.

Learning Outcomes: 1. Analyze rhetorical situations to determine needs of readers and contexts. 2. Identify the appropriate genre for a writing project. 3. Edit and proofread scientific and medical documents. 4. Design documents that pertain specifically to medical and scientific texts. 5. Create and effectively use tables, charts, and graphics common in the sciences and medicine. 6. Develop skills for working with authors and publishers in scientific and medical fields. Credits: 3.00

ENGL 43900 - Topics In Disability Studies

Credit Hours: 3.00. Explores cultural, social, and political meanings and effects of disability in relation to literature and/or rhetoric. Specific topics will vary.

Learning Outcomes: 1. Discuss the strengths and weaknesses of different models for understanding disability. 2. Understand ways normalcy is socially constructed. 3. Identify cultural practices that exclude disabled people. 4. Compare and contrast disability with other identity categories such as race, gender, and sexuality. 5. Discuss ways in which culture defines disability as impairing one's subjectivity and even humanity. 6. Analyze literary representations of disabled characters. 7. Examine the role of disability in literary works more broadly. Credits: 3.00

ENGL 44200 - Shakespeare

Credit Hours: 3.00. Shakespeare's dramatic craftsmanship, poetry, humor, characterization, psychology, and modern pertinence illustrated in representative tragedies, comedies, and history plays.

Credits: 3.00

ENGL 44300 - Craft Seminar

Credit Hours: 3.00. Study of fiction, poetry, creative nonfiction, storytelling, and/or hybrid form theory and techniques, both in published texts and student manuscripts. Students produce multiple texts and drafts. Workshop criticism. Can be taken up to three times for credit.

Learning Outcomes: 1. Develop a greater understanding of the form and theory of fiction, poetry, creative nonfiction, storytelling, and/or hybrid texts. 2. Read published creative texts, including very recent texts, in order to understand the conventions of and current practices within the field. 3. Read, discuss, and offer feedback on other students' drafts. 4. Draft and revise multiple pieces to produce high-quality, polished work suitable for submission to creative publications. Credits: 3.00

ENGL 46000 - Studies In Women's Literature

Credit Hours: 3.00. A study of literary works by women according to a specific theme, historical period, genre, or culture, e.g., Nineteenth-Century Women Novelists, Madness in Women's Writing, Caribbean Women Writers. May be repeated

only with different topic.

Credits: 3.00

ENGL 46200 - The Bible As Literature: The Old Testament

Credit Hours: 3.00. A study of the Old Testament - Pentateuch, Prophets, and other books such as Psalms, Proverbs, Job, and Ecclesiastes - with emphasis on its unique literary characteristics.

Credits: 3.00

ENGL 46300 - The Bible As Literature: The New Testament

Credit Hours: 3.00. A study of the New Testament, with emphasis on its unique literary characteristics.

Credits: 3.00

ENGL 47000 - Advanced Topics In Rhetorical Studies

Credit Hours: 3.00. Study of rhetorical theories and practices past and present. Includes readings in primary texts in the history and theory of rhetoric. May be repeated for credit with a different topic.

Learning Outcomes: 1. Demonstrate advanced understanding of rhetorical concepts, theories, and practices. 2. Analyze and assess rhetorical situations from which arguments are generated; evaluate arguments and their public, institutional, or organizational success; produce arguments in a variety of genres and forms. 3. Demonstrate understanding of how and why rhetoric accomplishes its work from a variety of perspectives across the humanities and sciences. Credits: 3.00

ENGL 48800 - Internship In Professional Writing

Credit Hours: 3.00 to 6.00. This course provides on-the-job experience in various kinds of professional writing, combined with a seminar in applied rhetoric. Students work in selected internship settings, participate in seminar discussions of their work, and read selections appropriate to their internship. Permission of instructor required.

Credits: 3.00 to 6.00

ENGL 49000 - Worksite Internship Practicum

Credit Hours: 1.00 to 3.00. Course facilitates the transition between an English undergraduate degree and the workplace or professional life. The course has two components: a professor-guided component and a practicum component in a chosen area. Permission of instructor required.

Credits: 1.00 to 3.00

ENGL 49200 - Literature In The Secondary Schools

Credit Hours: 3.00. Exploration of the theory, research and pedagogy supporting the teaching of literature at the secondary level. Topics include text selection, instructional strategies, adolescent literacy, student engagement and the use of alternative texts.

Credits: 3.00

ENGL 49400 - Research Practicum For Undergraduates

Credit Hours: 2.00 or 3.00. This course introduces students to research techniques and trains them to participate in a research laboratory or a professor-sponsored research project. Permission of instructor required.

Credits: 2.00 or 3.00

Department of History

About the History Program

Purdue's approach to the study of history is equally varied among politics, society, culture, gender, race, war, diplomacy, science, and technology. The Department of History is deeply involved in educating students to think critically, with courses that teach not only what happened in the past but also how the past informs the present. History majors acquire skills in critical thinking and communication.

Historians inform modern discussions about the future of science and technology, medicine and public health, politics, society, culture, gender, race, war, and diplomacy. We do this in part by preparing students for graduate studies and careers in law, public policy, government, education, business, and many other fields. In our courses students acquire skills-how to research, read critically, write effectively, communicate verbally-and a sense of judgment that serve them well at Purdue University and prepare them for careers in a wide range of fields and occupations.

Within the history program, you also have opportunities to take honors courses, study abroad, do internships and research projects, and learn from our award-winning faculty. We invite you to come learn more!

HIST 10001 - Issues In African-American History

Credit Hours: 3.00. Study and analysis of selected historical issues and problems of general import. Topics will vary from semester to semester but will usually be broad subjects that cut across fields, regions, and periods. May be repeated with different topics for a maximum of 9 credit hours.

Credits: 3.00

HIST 10300 - Introduction To The Medieval World (UCC: HUM)

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 12300 - History At Work

Credit Hours: 1.00. Students will learn how history majors' distinctive skills and expertise can help them achieve success in many different careers. Participants will explore the value of historical thinking in daily life, including causality, contingency, and contextualization, and will refine practical reading, thinking, and communication skills crucial to career success. Permission of department required.

Learning Outcomes: 1. Summarize the arguments of a historical journal article (secondary source) and apply their understanding of how historical research is produced and evaluated to an analysis of that source's significance to the discipline. 2.

Identify professional opportunities such as jobs, internships, and calls for conferences, prizes, and article proposals. 3. Create CVs/resumes and cover letters/personal statements that highlight their skills and accomplishments, and that are tailored to the professional opportunities for which they are applying. 4. Investigate different career paths available to history majors, and assess their own strengths and interests in relation to those career options. 5. Discuss and advocate for the importance of historical thinking in the workplace and in daily life. Credits: 1.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 20100 - Special Topics In History

Credit Hours: 3.00. This variable title course deals with broad historical topics that transcend and telescope traditional analytical, chronological, and geographical boundaries. Content will vary with the instructors teaching the class.

Credits: 3.00

HIST 21000 - The Making Of Modern Africa (UCC: HUM)

Credit Hours: 3.00. This course provides students with a comprehensive introduction to modern African history from 1800 to the present. Using a variety of films, novels and scholarly resources, we will examine the major historical forces that have shaped African lives over the last two centuries. Emphasis will be placed on African experiences of slavery, colonialism, liberation struggles, and post-independence national building. Students will also learn to analyze contemporary African issues within a larger historical context.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand modern African history and the state of Africa today. 2. Learn how to interpret historical texts from a number of different epistemic positions (i.e. paying attention to race, class, gender, sexuality, nation and other axes of ""difference""). 3. Expect to develop stronger writing skills, as well as to improve on critical thinking and oral articulation. Credits: 3.00

HIST 21100 - The Global Field: World Soccer And Global History (UCC: HUM)

Credit Hours: 3.00. This is an introductory course to the history of soccer, on and off of the pitch. It studies the history of the game itself as well as the international economic, political, social, and cultural trends that shaped it.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand a major global phenomenon and its relationship with nations and societies around the world. 2. Learn how to look critically at the same problem (soccer) from the perspective of more than one discipline. 3. Develop communication, writing skills and critical thinking. Credits: 3.00

HIST 22100 - History Behind The Headlines

Credit Hours: 3.00. This course introduces undergraduate students to the study of history and provides an overview of the various ways history is communicated outside the academy in narrative nonfiction, journalism, museum exhibitions, policy documents, political speeches, advertising, podcasts, television, film, and social media.

Learning Outcomes: 1. Identify and assess the ways in which history is presented to the public. 2. Produce a compelling historical argument based on a thorough assessment of primary and secondary sources. 3. Design a history communication project for public and non-expert

audiences. Credits: 3.00

HIST 22800 - English History To 1688

Credit Hours: 3.00. This course is designed to survey the growth and development of English society from its beginning through the seventeenth century. Emphasis is put upon those institutions and events that influenced the establishments of the English legal system.

Credits: 3.00

HIST 22900 - English History Since 1688

Credit Hours: 3.00. A continuation of HIST 22800 . Emphasis is placed upon Great Britain as a world and imperial power. Attention is given particularly to the industrial revolution, the growth and achievements of democratic institutions, and the role Britain has played in Western civilization in recent times.

Credits: 3.00

HIST 23005 - Hitler's Europe

Credit Hours: 3.00. This course will examine the rise, seizure, and consolidation of power by the Nazi Party and will trace the development of Adolf Hitler from a provincial Austrian to dictator of Nazi Germany.

Learning Outcomes: 1. Explain how and why Adolf Hitler and the Nazis seized and exercised power, and the consequences for Germany and Europe. 2. Distinguish between secondary and primary sources and critically read both types of sources; synthesize information and arguments from both types of sources. 3. Evaluate biography as a historical genre; engage in independent historical interpretation with the use of primary and secondary sources. 4. Compose analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. Credits: 3.00

HIST 23800 - History Of Russia From Medieval Times To 1861 (UCC: HUM)

Credit Hours: 3.00. This course explores the main characteristics of early Russian society, culture and politics. Topics include: the Kievan principalities, Orthodox Christianity, the Mongols, the rise of Moscow, the Petrine reforms, peasant and national rebellions, revolutionary movements, and the Tsarist empire to the Crimean War.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the major geographical features of the Russian homeland, the Baltics, Belarus, Ukraine, the Caucuses, Central Asia, the Volga-Urais, Siberia, and the Far East. 2. Trace and describe the main historical characteristics of Russian culture, social structure, and political life from the earliest origins under the Viking conquests to the emancipation of the serfs in 1861. 3. Analyze what the Russians both gave and took from the hundreds of Caucuses, Siberian, Central Asian, and European peoples, whom they gathered into the all-Russian state. 4. Understand the sources of Russia's triumphs and tragedies through the empire's consolidation of autocracy and serfdom. 5. Create a game-style simulation on the topic Russia's Circular Frontier and the Rise of Muscovy. Credits: 3.00

HIST 23900 - History Of Russia From 1861 To The Present (UCC: HUM)

Credit Hours: 3.00. This course surveys the paths of the Russian empire through economic modernization, social transformation, and World War I; the revolutionary regimes of Bolshevism, Leninism, and Stalinism; World War II and the Cold War; the collapse of the USSR; and the new Eurasian states.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the major geographical features of the Russian land empire from its European borders, through the Caucasus and Central Asian frontiers, to the steppes and forests of Asia. 2. Trace and describe the main historical characteristics of Russian culture, social structure, and political life from the Great Reforms of the late empire (1861) to the present regime. 3. Analyze why, twice in recent times (1917 and 1991), the state collapsed under the weight of its own contradictions, driven in part by the pace of European and American modernization. 4. Understand how Russian history is a metaphor

for global history, a study of the crises posed by the world revolution of western values. 5. Create a game-style simulation of the topic The Genesis and Structure of the Stalinist State. Credits: 3.00

HIST 24000 - East Asia And Its Historic Tradition (UCC: HUM)

Credit Hours: 3.00. Survey of the great historic traditions of China, Japan, and Korea from earliest times to approximately 1600, with special attention to state formation, society, intellectual, philosophical, and religious developments, and the visual, musical, and literary arts.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24100 - East Asia In The Modern World (UCC: HUM)

Credit Hours: 3.00. The response of China, Japan, and Korea to the coming of the West in modern times, with special stress on the effect of Western ideas and machines. Approximately 1600 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24300 - South Asian History And Civilizations (UCC: HUM)

Credit Hours: 3.00. Survey history of India, Pakistan, and Bangladesh, from the origins of South Asian civilization to the present. Topics include ancient India, the Mughal Empire, the colonial experience, the independence movement, and conflict and popular culture.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 24600 - Modern Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course explores the political, social, and cultural factors that have contributed to the formation of the modern Middle East. Course includes short stories and a selection of documentary films from the region.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 25000 - United States Relations With The Middle East And North Africa (UCC: HUM)

Credit Hours: 3.00. This course examines US relations with the Middle East and North Africa since World War II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gained a deeper understanding of the patterns and processes shaping US relations with the Middle East and North Africa. 2. Thought historically and critically about approaches to the study of US relations with the Middle East and North Africa. 3. Used primary source evidence to analyze fundamental issues in US relations with the Middle East and North Africa. 4. Sharpened critical reading, thinking, writing, and discussion skills in order to defend an independent argument. Credits: 3.00

HIST 27100 - Introduction To Colonial Latin American History (1492-1810) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate a grasp of the historical forces that in many ways laid the foundation for present-day Latin America. 2. Express understanding of how these major political, social, economic, and cultural issues unfolded in different ways in Latin America, with respect to region, time, and culture. Credits: 3.00

HIST 27200 - Introduction To Modern Latin American History (1810 To The Present) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the study of the major economic, political, social, and cultural processes that shaped modern Latin American nations since independence. No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a broad understanding of the modern history of Latin America. 2. Become familiar with the major economic, political, social, and cultural

processes that shaped the nations of the continent. Credits: 3.00

HIST 27800 - Money, Trade, And Power: The History Of Capitalism

Credit Hours: 3.00. This course examines the origins of capitalist institutions and their changes over time, including banks, joint-stock companies, and modern corporations -- all viewed with respect to their impact on industrialization, colonial expansion, business cycles, and the emergence of a global economy.

Learning Outcomes: 1. Explain the history of capitalism based on a combination of readings, course lectures, and course discussions. 2. Develop compelling historical arguments and demonstrate your understanding of the course material through examinations. 3. Write clear and concise analytical papers based on templates and feedback supplied by the professor. Credits: 3.00

HIST 28000 - Science And Society In Western Civilization I (UCC: HUM/STS)

Credit Hours: 3.00. A survey of the main lines in the development of science and society in Western civilization from earliest times to Newton's discovery of gravitation. Beginning with prehistory and Egyptian and Mesopotamian civilizations, the course treats in more detail the Greeks and Romans. The course then considers science during the Middle Ages, examining the transmissions of ancient science and its incorporation into the body of Christian doctrines. The course concludes with the new efforts of physicians and astronomers to free their studies from the influence of the Church and antiquity, and the new accommodations between science and society during the Scientific Revolution.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 28100 - Science And Society In Western Civilization II (UCC: HUM/STS)

Credit Hours: 3.00. This course considers Western science and society from the time of Newton to the present. Beginning with Copernicus to Newton, topics next include biological classification, modern chemistry, and the onset of the industrial revolution. For the nineteenth century the course stresses the maturation of biology. Darwinian evolution, the dynamic synthesis and electromagnetic studies, and the second industrial revolution. In the twentieth century, the course covers modern physics, the life sciences, the understanding of the universe, and the interaction between pure and applied science. The course concludes with some of the modern social and political problems which science caused by its success.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 28200 - Science And Society In The Twentieth Century World (UCC: HUM/STS)

Credit Hours: 3.00. An introductory survey emphasizing cultural contexts, relationships with other institutions, and the lives of major figures. Covering selected major achievements as well as the problems these generate. Neither science nor engineering background is required.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society during the Twentieth Century. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society during the Twentieth Century. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contributions of different social groups in science and society during the Twentieth Century. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science during the Twentieth Century. Credits: 3.00

HIST 28400 - The Computer Age From Babbage To The Blockchain

Credit Hours: 3.00. In this course we will explore the history of computing-from the pre-electronic days through the computer's ascent in the twentieth century to the various electronic computing and communications technologies that surround us today. This course will investigate why there was a desire to create computing machines in the first place, the economic and political arrangements that brought computers into existence, the debates over what computers could (and should) be used for, the development of the IT profession, and the gradual shift from computers being room-sized specialty machines to everyday objects that people carry around in their pockets.

Learning Outcomes: 1. Identify social, economic, political, and historic factors that have shaped the development and application of computer technology. 2. Describe the history of computing and its relevance for the world today. 3. Locate primary source materials, critically analyze those sources by considering their context and the reasons for their creation. 4. Examine work produced by, and arguments made by, historians. 5. Discuss the role that computers play in everyday life with an expansive view of the wide breadth of computerized systems that surround us. Credits: 3.00

HIST 30000 - Eve Of Destruction: Global Crises And World Organization In The 20th Century (UCC: HUM)

Credit Hours: 3.00. Using a variety of case studies, this course considers 20th-century turning points -- often violent and disastrous ones -- in an emerging global conversation about urgent world problems and their possible solutions.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 30105 - Big History: Time And Scale

Credit Hours: 3.00. This course explores Big History, a new form of world / global history. Like all forms of world history, Big History transcends the limitations of nation-centered perspectives. Drawing on the history of science and environmental history, Big History considers the many forces (physical, biological, environmental, social, and political) that drive change across time.

Learning Outcomes: 1. Examine, interpret, and explain trends in Big History / World History at multiple scales. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to Big History. 3. Identify and explain the major themes of Big History. 4. Write about the role of Big History and social implications of science. Credits: 3.00

HIST 30200 - Historical Topics

Credit Hours: 3.00. This variable-title course deals with broad historical topics that transcend and collapse traditional analytical, chronological, and geographic boundaries. Content will vary with faculty member teaching the class.

Learning Outcomes: 1. Students will acquire a perspective on and basic understanding of the course content. 2. Students will engage in integrative learning as they examine the course content that transcends and collapses traditional analytical, chronological, and geographic boundaries. 3. Students will develop their creative and critical thinking skills. 4. Students will strengthen their information literacy and improve their writing skills. Credits: 3.00

HIST 30305 - Food In Modern America (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the kitchen as an architectural space, a place of labor and food production, and an arena for technological innovation in modern American history. Cooking and eating reflect cultural sentiments about modernity, progress, ethnicity, and family, and the politics of how society nourishes bodies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Think historically and critically about the cultural consequences of technologies related to eating and food preparation. 2. Think historically and critically about approaches to the study of national identify and culture expressed through food. 3. Appreciate the circumstances and history of kitchen design in relation to raced and gendered identities, home space, and food preparation. 4. Understand and recognize how assumptions about food production during the late 19th and 20th centuries in the United States reflected notions about labor, modernity, and progress. 5. Understand the difference between secondary and primary sources. Students will analyze and interpret primary documents related to kitchens, cooking, and food preparation. They also will understand the competing and conflicting nature of historical interpretation. 6. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 30400 - America In The 1960s (UCC: HUM)

Credit Hours: 3.00. Surveys the turbulent history of the 1960s America. Topics include: the Kennedy, Johnson, and Nixon presidencies; postwar liberalism and conservatism; insurgent political and social movements; the counterculture; the sexual revolution; rock 'n roll; and the Vietnam War.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 30505 - The United States In The World 1898-Present (UCC: HUM)

Credit Hours: 3.00. This course explores the central issues and themes of American foreign relations during the twentieth century with a primary focus on the expansion of American political military, economic, and cultural power.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand how and why the United States transformed from a relatively minor regional power in the nineteenth century into the global power we recognize today. 2. Understand innovative ways in which historians are expanding our understanding of Americans' role in the world. 3. Understand the often competing and conflicting nature of historical interpretation and encourage assessment of various forms of primary source evidence to form conclusions about the United States' place and experience in the world. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques

of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

HIST 30701 - History Of Artificial Intelligence: Minds And Machines

Credit Hours: 3.00. This course examines the long history of efforts in automating human cognition. Historically, the attempts to automate human cognitive functions - from the mere reckoning of numbers to complex decision-making have been entangled with heated debates about what counts as good, proper, and desirable thinking; whose thinking machines should emulate; and whether the thinking of some humans is inferior to that of machines. In this course, we will examine how the invention of calculating machines - analogue and then digital - has developed in tandem with philosophical and scientific theories of human thinking and intelligence. In their turn, the latter developed as a response to changing social, political, and economic currents.

Learning Outcomes: 1. Critique the epistemological foundations and ethical implications of past and present approaches to the automation of human cognition. 2. Use primary sources to make arguments about the role of social, political, economic, and cultural currents that have historically provided the impulses for research and development in the automation of human cognition. 3. Assess historical scholarly arguments about social, economic, and political power asymmetries surrounding artificial intelligences. 4. Create websites to use text, imagery, and video content and effectively communicate how social factors have historically shaped the development of artificial intelligence. Credits: 3.00

HIST 30705 - History Of Data: How Data Became Big

Credit Hours: 3.00. This course offers a long history of Big Data. The first module focuses on how states collected data from the 16th to 19th centuries. Here we will focus on mortality bills, census, statistics, and accounting tables. In the second model, we will pay special attention to data collection and privacy in the 20th century. In the third module, students will explore how previous developments in data collection were applied to the new developments in analog and digital computing. The final weeks of the course will focus on present-day artificial intelligence, big data, their technical limitations, and the ways they often amplify, exploit, and contribute to a wide array of social problems.

Learning Outcomes: 1. Understand a variety of historical contexts that have shaped how we use, collect, and analyze data in the 21st century. 2. Assess historical arguments about the place of data in the growth of state bureaucracies, colonialism, eugenics, national security, warfare, and scientific research made in scholarly secondary sources. 3. Use primary sources to make arguments about the historical contingency of the ways practitioners have been using data to solve state problems. 4. Develop critical thinking about data-empowered algorithms and envision a human-centered and ethical way of creating and implementing data technologies. Credits: 3.00

HIST 30801 - American Eugenics

Credit Hours: 3.00. This course explores the pre-history and history of American eugenics, as well as its afterlives. It analyzes how Americans have used scientific ideas to grapple with questions of heredity and human worth from the Early Republic to the present. We will explore the social and political uses of phrenology, physiognomy, and eugenics, and consider how those scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering.

Learning Outcomes: 1. Read and discuss primary sources. 2. Interpret how scientific knowledge has been applied in human lives and society from the 18th century to the present. 3. Analyze major themes in the history of

eugenics. 4. Investigate how and why specific ideas about human value and genetic worth arise in specific historical contexts. 5. Critique the extent to which scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering. Credits: 3.00

HIST 30805 - History Of Life Sciences

Credit Hours: 3.00. This course will examine the development of life sciences from 1750 to the present, introducing students to critical problems related to biology and society through the study of primary and secondary sources. The "life sciences" include all the sciences that deal with life as an organic entity. A prominent theme in this historical treatment is the impact of social and political ideas on the life sciences. Topics will include theories of life, the origin of life, taxonomy and classification, theories of development, natural selection, genetics, eugenics, science and religion, the evolutionary synthesis, biodiversity, ecology and environmentalism, sociobiology, the discovery of DNA, cognition and the brain, and gender in science. Students will develop crucial skills in the interpretation of primary and secondary sources, research, analysis, and presentation.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical material. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 30902 - History Of Biotechnology

Credit Hours: 3.00. This class examines historical intersections between engineering and biology in the Western world. The course begins by considering several possible meanings of "biotechnology." It examines how and why different biotechnologies from the life sciences, biology, and medicine have arisen in specific historical contexts, changed over time, and affected society from the late 19th century to the present. We will study vaccines and beer-making in the 19th century, cell culture, birth control pills, and DNA sequencing in the 20th century, and 21st-century genome editing and synthetic biology, for example. Overall, this course argues that biotechnologies have always forced human beings to consider whether living and non-living entities are made up of the same fundamental "stuff," the implications of manipulating living things, and the nature of life itself.

Learning Outcomes: 1. Identify and describe examples of biotechnologies. 2. Describe the role of biotechnology in history and its relevance for society today. 3. Explain major themes in the history of biotechnology, such as how biotechnologies have changed through time and impacted society by way of their interactions with (for example) ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class. 4. Investigate the history and social impacts of a biotechnology of their choosing that has not been discussed in depth in this class. 5. Explain how and why this biotechnology arose in a specific historical context, changed over time, and impacted (or impacts) society (using historical methods). Credits: 3.00

HIST 30905 - History Of Environmental Science

Credit Hours: 3.00. This course introduces students to various approaches to environmental science through time. It considers critical problems related to the environment and society. The "environmental sciences" include all the sciences that deal with the Earth's physical and organic environments.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical materials. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 31000 - Historical Geography

Credit Hours: 3.00. Survey of historical geography.

Learning Outcomes: 1. Analyze geographical sources for historical information, and historical sources for geographical information. 2.

Explain how historical processes act across space. 3. Synthesize temporal and spatial information into original conclusions about history. Credits: 3.00

HIST 31005 - The Civil War And Reconstruction, 1850 To 1877 (UCC: HUM)

Credit Hours: 3.00. A survey of the American Civil War and Reconstruction, covering the intense sectional conflict of the 1850s; the military, social, economic, and political aspects of the war; and the political and economic reconstruction that followed.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify and explain the causes, fighting, and outcomes of the American Civil War and Reconstruction. 2. Understand, analyze, and evaluate different interpretations of the war. Credits: 3.00

HIST 31205 - The Arab-Israeli Conflict

Credit Hours: 3.00. This class traces the emergence of political fault lines in Ottoman Palestine, the immigration of European Jews in the Interwar Era and after World War II, the divisive policies of the British Mandate, the establishment of a Jewish state and the subsequent wars between Israel and surrounding Arab countries. In the end, students study religion as one part of a complex struggle for control over regional resources.

Learning Outcomes: 1. Increase understandings of the political, economic and cultural forces that acted as a catalyst for the Arab-Israeli conflict and continue to underpin and stir them. 2. Reflect on the symbols (monuments, songs, literature, film, language) of Israeli and Palestinian nationalism in order to understand culture productions within conflict. 3. Assess narratives of the Arab-Israeli conflict in film, memoir and other documents in order to develop the skills necessary to read and argue about the past, particularly in a conflict in which historical interpretation itself can be skewed due to political aims. 4. Improve written and oral communication skills while improving analytical skills pertaining to complex issues. 5. Increase global fluency, or student knowledge about diverse cultures. Credits: 3.00

HIST 31305 - Medical Devices And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of material cultures of health care in the United States. The class will analyze how technological innovation has become central to medicine over the last two centuries and how we are coping with the consequences, both intended and unintended, of our reliance upon such medical devices. We will look at identities associated with medical devices, the ways in which disease is constructed, how technologies contribute to the naming of maladies, and implications for emergent bioengineering and biotechnologies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to medicine. 2. Understand and recognize how assumptions about health influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 31405 - Science, Technology, Engineering And Mathematics (STEM) And Gender (UCC: HUM/STS)

Credit Hours: 3.00. Scientific and technological innovation has been a cornerstone of American identity. How science and technology matters to gender, and gender matters to science and technology, will be explored through studying amateur and professional scientists and engineers, industrialization, education, sexual division of labor, and home and work spaces in twentieth-century America. Examining technological, scientific, and engineering innovation through the lens of gender reveals changing relationships between men and women in modern America.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to gender. 2. Understand and recognize how assumptions about gender may influence the practice of science and

development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 31505 - American Beauty (UCC: HUM)

Credit Hours: 3.00. This course explores twentieth-century gender history in the United States through the concept of beauty. Ideals about beauty intersect with politics, economics, technological developments, medical innovations, and nation building. A critical examination of beauty as seen through advertising, pageants, and material culture, yields insight about modern womanhood, everyday life, and identify formation in the twentieth-century United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Appreciate the ways that beauty has been pursued by individuals, health practitioners, corporations, and media cultures since 1900. 2. Understand and recognize how assumptions about gender have influenced the way that beauty is constructed and experienced at different places and times. 3. Think historically and critically about the culture consequences of technologies related to beauty. 4. Think historically and critically about approaches to the study of beauty in modern American history. 5. Understand the difference between secondary and primary sources. 6. Analyze and interpret primary documents related to beauty cultures. 7. Understand the competing and conflicting nature of historical interpretation. 8. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 31700 - A History Of The Christian Church And The Expansion Of Christianity I

Credit Hours: 3.00. A history of the emergence of Christianity, the development of the Christian church, and the impact of Christian thought and institutions upon western Europe prior to the Reformation.

Credits: 3.00

HIST 31905 - Christianity In The Global Age

Credit Hours: 3.00. This course examines the social, cultural, economic, legal, and religious dynamics of global Christianity in its emerging centers of Latin America, Asia, and Africa during the 20th and 21st centuries.

Learning Outcomes: 1. Understand key issues in the global Christianity in 20th and 21st centuries. 2. Distinguish between secondary and primary sources, and be able to critically read both types of sources. 3. Synthesize information and arguments from both types of sources. 4. Engage in independent historical analysis with the use of primary and secondary sources. 5. Write analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. 6. Research a contemporary topic using a variety of international sources and write a report analyzing the issue in the context of longer historical developments. Credits: 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture.

Learning Outcomes: 1. Assess the mechanisms that made the Spanish imperial system successful and, likewise, appraise its inherit weaknesses. 2. Distinguish the different stages in the development of the Spanish empire. 3. Judge the extent of the Spanish empire's impact on international politics and regional histories. 4. Evaluate the substantial cultural output of the period. Credits: 3.00

HIST 32300 - German History (UCC: HUM)

Credit Hours: 3.00. A survey of German history from the earliest times until the present. After a brief description of the

medieval empire, we will turn to the Germany of Bismarck and Hitler and its successor states. A recurring theme will be the struggle between forces of liberalism and democracy and those of authoritarianism and militarism.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 32400 - Modern France (UCC: HUM)

Credit Hours: 3.00. A survey of modern France since 1789, including political, social, industrial, and institutional development. Emphasis is also placed upon the colonial and international aspects of French history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 32501 - Twentieth Century Europe Through Autobiography

Credit Hours: 3.00. Merits and limitations of autobiographies as sources for 20th-century European history.

Credits: 3.00

HIST 32900 - History Of Women In Modern Europe (UCC: HUM)

Credit Hours: 3.00. This course examines women's experiences and constructions of femininity in Europe from 1789 to the present, including women in revolutions, state intervention in the family, changing ideas of sexuality, women's movements, women in socialism and fascism, and women in war.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Students will understand the history of women in modern Europe from 1789 to the present by analyzing women's experiences and the social and cultural constructions of femininity as well as the different contexts of class, ethnicity, and nationality in the history of European women. 2. They will think historically and critically about women's participation in revolutions; state interventions in the family; working lives of women; ideals and practices of sexuality; the middle-class model of domesticity and women's responses to it; the role of women and femininity in imperialism; women in socialism, under fascism, and in the transition from communism to capitalism; women's experiences of two world wars; and the rise of feminist movements and contemporary feminisms in Europe. 3. Students will understand the difference between secondary and primary sources. They will read and interpret primary source materials, including fiction, autobiography, and other historical documents including those written by women. 4. Students will develop their critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33205 - The Nuclear Age (UCC: HUM/STS)

Credit Hours: 3.00. Once seen as a revolutionary and exceptional, nuclear technologies have become central to many aspects of life in the U.S. This course uses the history of nuclear technologies to trace how American society has grappled with technological change.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Write a persuasive essay evaluating nuclear energy as a source of power, using primary and secondary historical sources to support your claims. 2. Create a compelling argument about how societies cope with technological change, using the history of nuclear technologies as a central example. 3. Summarize the importance of nuclear technologies in US history, drawing on primary and secondary historical sources introduced in the course. Credits: 3.00

HIST 33505 - Nationalism And Socialism In East Central Europe

Credit Hours: 3.00. This course examines how the peoples of East Central Europe engaged and coped with the most influential ideologies of the 20th century; with special attention to the weaknesses of the interwar and postwar regimes, strategies of modernization, survival, and dissent.

Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities which have shaped modern east central European society, culture, and politics. 2. Think historically and critically about approaches to the study of East Central European history, including the outcomes of

ideological experimentation, and perspectives on how this region fits into a broader global context. 3. Use primary source evidence to analyze fundamental problems in modern East Central European history in individual writing and group work. 4. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

HIST 33605 - Global LGBTQ History

Credit Hours: 3.00. This course will examine sexual and gender diversity during the last two centuries of accelerating global interconnectivity. Although the US-derived framework of LGBTQ+ identities has become increasingly popular, people around the world have and continue to understand themselves in a multitude of ways that extend beyond this current acronym. This course will discuss the rich complexity of sexual cultures across the world as well as how they connect through global processes, such as colonialism, warfare, and migration, that have defined the nineteenth and twentieth centuries.

Learning Outcomes: 1. Identify ways different societies under examination have understood gender and sexual diversity in the past. 2. Differentiate lines of scholarly analysis in the field of LGBTQ+ history. 3. Apply queer theory to primary source analysis. 4. Develop original research projects based in/relating to existing scholarship. 5. Connect contemporary concerns to historical study. 6. Develop research projects for a public audience. Credits: 3.00

HIST 33700 - Europe Since 1945

Credit Hours: 3.00. This course traces the history of Europe, west and east, from 1945 to the present. Once viewed as a success story, culminating in the collapse of eastern European communism, developments after 1990 - such as the breakup of Yugoslavia, the European debt crisis, and the War in Ukraine - call this simplistic narrative into question. This course will consider Cold War division, decolonization, and political protest alongside democratization and economic recovery.

Learning Outcomes: 1. Explain broad themes in postwar European history, including the Cold War as geopolitical process and a historical framework, the role of decolonization in shaping European politics, the impact of social movements, and the distinctions and overlaps between different economic systems. 2. Read historical scholarship for arguments, evidence, and contributions to the field and assess their effectiveness in these areas. 3. Craft a persuasive argument supported by primary and secondary source evidence that makes an intervention into the historical literature on a chosen topic. 4. Interpret a diverse range of historical sources and assess their utility in understanding the past, paying attention to form, perspective, and limitations. 5. Present historical research clearly and accessibly to different audiences using a variety of media formats. Credits: 3.00

HIST 33805 - History Of Human Rights (UCC: HUM)

Credit Hours: 3.00. This course explores human rights' genealogy and uneven historical development from Atlantic Revolutionary articulations through the late 20th Century and experience of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain a deeper understanding of the patterns and processes, ruptures and continuities in the human rights history narrative, which have shaped today's world, its politics, ideas, and ambitions. 2. Explore how human rights connects us to other people, places and times. 3. Analyze fundamental problems in human rights in history in individual writing and in group work and be engaged in an environment of open inquiry to exchange ideas and interpretations of human rights concepts. 4. Be better prepared to negotiate the variable applications of human rights concepts in today's globalized world. Credits: 3.00

HIST 33900 - Traditional China

Credit Hours: 3.00. Chinese civilization from its origins to the end of the Ming Dynasty. Attention is divided equally between political and cultural history, giving emphasis to the

development of traditional institutions in Chinese society as well as to art, literature, religion, and philosophy.

Credits: 3.00

HIST 34000 - Modern China (UCC: HUM)

Credit Hours: 3.00. Chinese history from the Qing Dynasty (1644) to the present, with emphasis on the period since 1800. Attention given to internal developments and China's response to Western thought and material accomplishments. Nationalism and communism in the twentieth century are examined.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34300 - Traditional Japan (UCC: HUM)

Credit Hours: 3.00. The course considers Japanese civilization from its origins to the establishment of the Tokugawa Shogun (1603). Divided between political and cultural history, it will emphasize the development of traditional institutions in Japanese society, religion, philosophy, art, and literature.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34400 - History Of Modern Japan (UCC: HUM)

Credit Hours: 3.00. A survey of Japanese history from the nineteenth century to the present, including Japan's response to Western expansionism, the formation of the modern state, political parties, industrialization, the Pacific War, the American Occupation, the postwar "economic miracle," and Japan today.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 34505 - Arabs in American Eyes

Credit Hours: 3.00. This course explores Arab-American relations over the past 300 years, using American writings on the Middle East and North Africa as a prism for viewing evolving conceptions of national identity and global power in the United States.

Learning Outcomes: 1. This course will improve students' ability to communicate their ideas in a small classroom setting. 2. The assigned course materials will encourage them to think more broadly in terms of primary sources, for students will be required to analyze classic works of literature, films and art. 3. Their writing skills will improve, because students will be required to synthesize and analyze assigned course materials in thematic essay questions designed to improve their ability to define a thesis statement and also to defend it. Credits: 3.00

HIST 34705 - History Of Religion In America

Credit Hours: 3.00. This course examines the history of religion in the United States from the colonial period to the present. It traces the evolution of religious life in America and religion's influence on American politics, society, and culture.

Learning Outcomes: 1. Summarize and compare American religious movements and analyze their significance in American history and society. 2. Distinguish between secondary and primary sources and critically read both types of sources; synthesize information and arguments from both types of sources. 3. Engage in independent historical interpretation with the use of primary and secondary sources; research an historical religious figure, movement or event, and evaluate its influence on American religious history. 4. Compose analytical essays in fluid English prose with thesis statements, clear organization, and appeals to concrete evidence. Credits: 3.00

HIST 34901 - The First World War (UCC: HUM)

Credit Hours: 3.00. This course is designed to explore the origins, course, meaning, and lasting legacy of World War I.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Students are expected to understand the origins, course, and results of World War I. 2. Students are expected to understand the consequences that the war had on today's world. Credits: 3.00

HIST 35100 - The Second World War (UCC: HUM)

Credit Hours: 3.00. A study of the diplomacy, economic mobilization, and military operations of World War II, 1939-1945.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 35205 - Death, Disease And Medicine In Twentieth Century American History (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of disease, dying, and medicine in the United States in the 20th century.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify and explain the relationship between science and culture and interdisciplinarity. 2. Analyze texts and cultural artifacts about medicine. 3. Identify medical practice and how it is informed by context and culture. Credits: 3.00

HIST 35305 - Sports In America

Credit Hours: 3.00. Today sports virtually dominate American culture. From fantasy leagues and 24-hour a day news shows to business decisions and off-the-field troubles to the games themselves, sports entertain Americans at the same time as they define American culture and social norms. This course will look at the growth of the sport industry in the 20th Century. It will examine the lives and importance of Babe Ruth, Joe Louis, Jackie Robinson, Muhammad Ali, and other athletes, as well as the economic, social, and medical impact of the games we watch.

Learning Outcomes: 1. Comprehend the role that sports has played in American society. 2. Analyze the centrality of race in sports and in America more broadly. 3. Apply their course knowledge to a range of professions in one of the largest industries in America; namely, in television and other media, marketing, management, etc. 4. Hone their active writing skills for effective professional application. Credits: 3.00

HIST 35500 - History Of American Military Affairs (UCC: HUM)

Credit Hours: 3.00. Surveys American military policy from the colonial militia to the atomic age. Covers major wars and limited wars. The course also investigates the peacetime military functions, i.e., the Navy's role in diplomacy and the Army's involvement in Indian affairs.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 35900 - Gender In East Asian History (UCC: HUM)

Credit Hours: 3.00. Examination of the construction of tradition and modernity in East Asia through the lens of gender. Topics include the influence of "Confucian" ethics; gender and imperialism, nationalism and revolution; and social change in the aftermath of war and decolonization.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society in pre-modern East Asia. 2. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 3. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 4. Investigate the diversity of human experience in pre-modern East Asia, explain how social factors such as ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, have shaped the development or application of science and technology, including tools and strategies by which societies promote, constrain, or otherwise

influence scientific and technical innovation. 5. Identify and explain the major themes of the history of science, technology, and environment, write about the role of science in society, and describe ethical implications of technological and scientific developments. Credits: 3.00

HIST 36305 - The History Of Medicine And Public Health (UCC: HUM/STS)

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Understand how and why public health has evolved over the course of the past two centuries. 2. Identify and analyze how scientific beliefs and social anxieties contribute to policies and practices of medicine and health. 3. Develop critical thinking skill to assess the impact of public health reforms on everyday life. Credits: 3.00

HIST 36405 - Patient Voices In The History Of Medicine

Credit Hours: 3.00. This course examines the history of medicine in the United States from the early twentieth century to the present by starting with patient voices, which provide a glimpse into the experience of illness. Using patient reflections as the primary lens through which to examine the history of medicine, topics covered include historical changes and historical decision making related to the diagnostic process, therapeutic interventions, access to care, and medical institutions. The course also examines how assumptions about gender, race, and class have shaped differential health outcomes such as mortality rates, time to diagnosis, and determination of treatment approach and efficacy.

Learning Outcomes: 1. Identify in written and oral communication key features of the U.S. medical system by examining how patient experiences have changed over time and in different contexts. 2. Analyze how assumptions about race, gender, and class can affect the experience of illness, access to care, and health outcomes. 3. Engage with primary sources such as journal entries, memoirs, newspaper articles, artwork, and audiovisual material to identify patient perspectives and place them in historical context, and to illustrate how social, cultural, political, and economic factors have shaped the practice of medicine. 4. Reflect on the ethical issues that have arisen in medicine using patient voices as a lens to examine the impact of technology on the illness experience. 5. Examine patient experiences to make an argument about the history of medical practice, such as the diagnostic process or therapeutic approaches, using historical methods. Credits: 3.00

HIST 37005 - Queens And Empresses In Early Modern Europe

Credit Hours: 3.00. This course explores the lives and legacies of queens and empresses in early modern Europe within the wider context of gender, political authority, culture, and monarchy. Students will be introduced to new scholarly approaches to the study of female rulership.

Learning Outcomes: 1. Compare the legal, cultural, and symbolic aspects of queenly authority across monarchies and centuries applying the relevant vocabulary and conceptual frameworks. 2. Evaluate the political intervention of various individual queens and empresses taking into account the many variables that shaped their rule. 3. Distinguish the ways in which queens and empresses shaped national histories as well as European international politics and culture. Credits: 3.00

HIST 37100 - Society, Culture, And Rock And Roll (UCC: HUM)

Credit Hours: 3.00. Surveys American society and culture through the prism of rock and roll music. Looks at politics, gender, race, and class in the postwar era to examine and explain the social, economic, and technological forces that shaped rock and roll.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37200 - History Of The American West

Credit Hours: 3.00. This course explores the history of the trans-Mississippi and Pacific west from the early 17th century to the late 19th century. The diverse experiences of the inhabitants and the environmental transformations are the central themes of the course.

Learning Outcomes: 1. Understand the environmental and human history of the American west. 2. Be aware of the complicated and overlapping experiences of the inhabitants of the west including, but not limited to, the diverse indigenous population and the myriad groups of settlers from Asia, South and Central America, Europe, and the US. 3. Gain a new appreciation of how diverse populations interacted with multiple environments of the American west and the ongoing impact of that legacy on our modern times. 4. Build upon and improve skills as critical thinkers and readers. 5. Enhance skills in oral communication and analytical writing. Credits: 3.00

HIST 37500 - Women In America Since 1870 (UCC: HUM)

Credit Hours: 3.00. A survey of the history of women in the United States from 1870 to the present.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37600 - History Of Indiana

Credit Hours: 3.00. Economic, political, and social history of Indiana from the state's earliest beginnings as a part of the old Northwest Territory to the present.

Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37901 - The Corporation In East Asia, 1600-Present

Credit Hours: 3.00. This course explores the rise of major corporations in modern East Asia, including China, Japan, Korea, Taiwan, and Vietnam, from 1600 to the present. Students will develop skills in contextualizing primary sources and scholarly works to form their own insights into the interactions between corporations, society, and the state. This course provides invaluable insights into the intersections of economic power, political authority, and social change in the modern era.

Learning Outcomes: 1. Examine case studies of major East Asian corporations, to understand their role in shaping regional economies and global markets. 2. Analyze the historical trajectory of corporations, their socio-economic impact and political ramifications in East Asia, from 1600 to the present. 3. Evaluate the complex relationships between corporations, society, and state in East Asia critically, considering factors such as industrialization, colonialism, and globalization. 4. Develop advanced skills in source evaluation, analytical thinking, and academic writing through choosing appropriate primary sources and scholarly literature. Credits: 3.00

HIST 37902 - The Silk Road And Pre-Modern Commerce

Credit Hours: 3.00. This course introduces the history of the Silk Road - a complex network of trade routes that connected China with the rest of Eurasia over land and sea - and its role in fostering cultural and material exchanges between the peoples it connected. It will revisit key moments of the Silk Road in pre-modern history to understand how Eurasia was connected through vast networks of traders and caravans, and will situate temporally and geographically the main states, actors, objects, religions, and ideas that have populated the roads, oasis towns, and steppe territories constituting the Silk Road.

Learning Outcomes: 1. Demonstrate a basic understanding of historical contexts, major concepts, and theoretical perspectives in the history of pre-modern Silk Road trading routes across time and place. 2. Identify diverse

historical groups, cultures, and commercial interests on Silk Road networks. 3. Compare and contrast the strengths and weaknesses of contending scholarly interpretations of the conflicts and connections along the Silk Road. 4. Develop advanced skills through source evaluation, analytical thinking, and academic writing through choosing appropriate primary sources and scholarly literature. 5. Evaluate how historical knowledge informs and can shape global decisions and responsibilities in today's world. Credits: 3.00

HIST 38001 - History Of United States Agriculture (UCC: HUM/STS)

Credit Hours: 3.00. This course surveys the main development in North American agricultural history, emphasizing the continental United States. Topics include early American agriculture, the plantation system, land policy, scientific and technological change, agrarian politics, water rights, migrant labor, and agricultural policy.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain a broad understanding of the major economic, social, political, scientific and technological development in the history of American agriculture. 2. Analyze the causes, consequences, and significance of the major events and issues that have influenced the agricultural history of the United States. Credits: 3.00

HIST 38105 - American Indians And Film

Credit Hours: 3.00. This course investigates ways that Hollywood filmmakers influenced public perceptions of Native American history and culture through feature films. Students explore issues of race, gender, class, ethnicity, ideology, and nature, as well as the work of indigenous filmmakers.

Learning Outcomes: 1. Recognize aesthetic and narrative practices in modern film through discussion and written analysis. 2. Recognize and understand the genesis and impact of stereotypes of Native Americans perpetuated through film in classroom discussions and written assignments. 3. Articulate key trends in American filmmaking and the evolving representations of Native Americans through in-class presentations. 4. Investigate and critically analyze films produced by non-Native and Native filmmakers in a research essay. Credits: 3.00

HIST 38200 - American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Survey of the fundamental principles of American constitutionalism and dominant trends in judicial interpretation, from the creation of the Constitution to the period of the New Deal.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38300 - Recent American Constitutional History (UCC: HUM)

Credit Hours: 3.00. Intensive study of constitutional questions and Supreme Court answers from the period of the Warren Court to present. Particularly emphasized are the areas of segregation, civil rights, and civil liberties and guarantees for personal rights.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38505 - Media, Politics And Popular Culture (UCC: HUM)

Credit Hours: 3.00. This class examines the relationship of media, politics, and popular culture over the course of the twentieth century in American history. Students trace how new media shaped political institutions and practices and afforded opportunities for political change.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the historical

development in American political, cultural, economic, and social structures by examining primary and secondary sources. 2. Analyze primary and secondary sources to explain how and why these historical developments happened. 3. Pursue original primary research about a specific topic in American history and synthesize primary and secondary materials to advance on original arguments about the roots, shape, and implications of a historical moment. 4. Interrogate modern media myths with an analysis of primary sources that will allow students to go beyond popular narratives of history and understand a more complicated historical reality. 5. Recognize the historical roots of contemporary political debates. 6. Understand the relationship between politics and popular culture in ways that will allow students to navigate the contours of the mass media, entertainment, and the American political process more effectively. Credits: 3.00

HIST 38605 - Land Of The Indians: Native Americans In Indiana

Credit Hours: 3.00. This course offers a survey of Native American and Indigenous history and culture in the historic region encompassing the modern state of Indiana. The course opens in the pre-Columbian era and is organized chronologically to the present day.

Learning Outcomes: 1. Read, analyze, and synthesize archeological data and research through written analyses and discussions. 2. Read, analyze, and synthesize primary historical documents and research through written analyses and discussions. 3. Demonstrate increased knowledge and cultural awareness of the significance of Native Americans in Indiana's history through examination and written analyses. 4. Critique both scholarly and popular accounts of the history of indigenous people in the region and state and express those ideas through oral presentations and classroom discussion. Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 39400 - Environmental History Of The United States (UCC: HUM)

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming historical arguments. It is a writing-intensive course and counts as one of the major requirements.

Learning Outcomes: 1. History majors will learn historical skills such as primary source research and analysis and how to form historical arguments. 2. Acquire analytical skills sufficient to distinguish between primary and secondary sources, to analyze arguments and interpretations, and to recognize interpretive conflicts. 3. Engage in integrative learning. 4. Develop the ability to recognize, analyze and incorporate primary source material into scholarly investigations and analyses. 5. Improve their information literacy and enhance their creative thinking. 6. Strengthen skills in critical thinking and oral communication. 7. Improve their writing skills. Credits: 3.00

HIST 39600 - African American History To 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

HIST 39800 - African American History Since 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history from 1877 that focus on Black Americans' struggle to overcome social, economic, and political oppression and to win basic civil and human rights while making valuable contributions to American society.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

HIST 40000 - Great Books And The Search For Meaning

Credit Hours: 3.00. This intellectual-history course discusses the meanings of the Great Books within their particular historical contexts and the universal quest for self-understanding, focusing on good and evil; mystery and reason; the nature of power; and what it means to be human.

Learning Outcomes: 1. Read and think critically about a wide variety of texts that are significant in the history of civilization. 2. Write and speak with intelligence and eloquence. 3. Gain a greater understanding of history, of their humanity, and of social and political relationships. 4. Become culturally literate, better able to understand the varied cultural models of their world, and better prepared to meet the needs of global citizenship. Credits: 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World.

Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

HIST 40600 - Rebels And Romantics: Europe 1815-1870

Credit Hours: 3.00. Examines the dramatic social, cultural, and political developments in Europe following the defeat of Napoleon through various rebellious and romantic personalities, as well as figures who supported conservative or reformist solutions to the upheavals of industrialization, revolution, and nationalism.

Credits: 3.00

HIST 40700 - Road To World War I: Europe 1870-1919

Credit Hours: 3.00. Studies the increase in Europe's wealth and power through conquest, industrialization, and nation-state rivalries, along with the social stress and cultural anxiety that culminated in World War I; examines the war from the perspectives of both combatants and civilians.

Credits: 3.00

HIST 40800 - Dictatorship And Democracy: Europe 1919-1945

Credit Hours: 3.00. This course examines the fleeting triumph of democracy across Europe. Followed by the rise of fascism, communism, and Nazism. Emphasis will be placed on broad economic, social, and cultural transformations as well as individual choices to resist or conform.

Credits: 3.00

HIST 41005 - History Of The American Presidency (UCC: HUM)

Credit Hours: 3.00. Using a historical perspective, examines the shifting role of the presidency in the American imagination and the cultural, social, and economic changes that have wrought political developments in public functions and expectations of the modern presidency.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the historical development in American political, cultural, economic, and social structures by examining primary and secondary sources. 2. Analyze primary and secondary sources to explain how and why these historical developments happened. 3. Pursue original primary research about a specific topic in American history and synthesize primary and secondary materials to advance an original argument about the roots, shape, and implications of a historical moment. 4. Interrogate the role of the modern American presidency in American political life with an analysis of primary sources that will allow students to go beyond popular biographies of presidents and understand a more complicated historical reality of the debate about the responsibilities and nature of the office. 5. Recognize the historical roots of contemporary political debates about the presidency and the constitutional authority of the institution. 6. Understand the modern American presidency in ways that will allow students to better navigate the American political process more effectively. Credits: 3.00

HIST 41300 - Modern European Imperialism: Repression And Resistance

Credit Hours: 3.00. This course examines the expansion, transformation and collapse of 19th and 20th-century European empires, focusing on colonial encounters and relationships. Students should come to the course familiar with major developments, events and themes in modern European and/or global history.

Learning Outcomes: 1. Contextualize and compare important events and moments in the history of European imperialism and decolonization. 2. Analyze and evaluate how historians interpret the past, and examine how this past continues to shape the present. 3. Analyze an array of historical sources and types of evidence, historical narratives, first-person accounts and commentaries, scholarly interpretations, visual imagery and fictional portrayals, as well as the setting in which these sources were produced. 4. Craft original arguments supported by historical and textual evidence in class discussions and weekly writing assignments. Credits: 3.00

HIST 41505 - Gender And Politics In Early Modern Europe

Credit Hours: 3.00. This course explores the role of gender (its discourse as well as its practice) in the emergence, consolidation, and centralization of European political systems from the Renaissance to the French Revolution, such as princely courts, republics and monarchies.

Learning Outcomes: 1. Appraise the role of men, women, and gender discourse in the evolution of the main political systems of early modern Europe from the fifteenth to the eighteenth centuries. 2. Evaluate the mechanisms and power structures that included or excluded early modern women and men in the political process. 3. Apply the conceptual framework of gender and politics to a specific case study in 10-12-page analytical paper. Credits: 3.00

HIST 42100 - Honors Historical Methods

Credit Hours: 3.00. Designed as a prequel to Honors Thesis; this course introduces the Honors students to various advanced interpretative approaches to history and methods of historical research. Students also choose their topic for their Honors Thesis and begin research.

Credits: 3.00

HIST 42200 - Honors Thesis In Historical Research

Credit Hours: 3.00. Designed as a sequel to HIST 42100 (Honors Historical Methods); this course is intended as the culminating academic experience for students in the Department of History Honors Program. It will require the completion of an undergraduate thesis in history. Permission of instructor required.

Credits: 3.00

HIST 42300 - Advanced Topics In Modern Germany

Credit Hours: 3.00. This course offers a reading-intensive study of a specific period or theme in modern German history. Semester-long topics might include Imperial Germany; Weimar Germany; Divided Germany (1945-1990); or thematic studies on culture, religion, or military affairs.

Learning Outcomes: 1. Convey an understanding of the course material. 2. Designed to improve students' ability to communicate their ideas in a small classroom setting. 3. Enhance students' ability to analyze historical monographs critically. 4. Teach students to synthesize a semester's worth of reading in thematic essay questions. Credits: 3.00

HIST 43900 - Communist China

Credit Hours: 3.00. The evolution of the Communist movement (1921-1949) and the development of the Communist government (since 1949) in China. Attention is given to political, economic, social, and cultural changes.

Credits: 3.00

HIST 44100 - Africa In The Twentieth Century

Credit Hours: 3.00. A problem-oriented course in the modern history of Africa from 1880 to 1975. It analyzes origins of African nationalism, European colonialism, racial conflict, and war leading to the independence revolution of the 1960s and 1970s.

Credits: 3.00

HIST 45000 - The English Landscape:Integrating History, Horticulture & Landscape Architect

Credit Hours: 3.00. Intensive four weeks in residence in Corsham, UK with visits to significant sites to examine the intersections between human culture and the natural environment that results in the developed landscape. Permission of instructor required.

Credits: 3.00

HIST 46000 - American Colonial History

Credit Hours: 3.00. An investigation of the foundation of the American colonies, their place in the British imperial structure, and the eventual conflict of imperial exigencies with colonial self-interest and national feeling.

Credits: 3.00

HIST 46100 - The Revolutionary Era, 1763 To 1800

Credit Hours: 3.00. An analysis of the origins, nature, and consequences of the American Revolution; of the achievements and difficulties of the new nation under the Articles of Confederation; of the drafting and adoption of the Constitution; and of the initial political, economic, and social progress of the United States under the Federalists.

Credits: 3.00

HIST 46700 - The Emergence Of Modern America

Credit Hours: 3.00. Examines the changes in American society between 1877 and 1932. The course covers such issues as the rise of industry, the growth of consumerism, the shift to a multi-ethnic society, imperialism, Populism, Progressivism, World War I, and the 1920s.

Credits: 3.00

HIST 46800 - Recent American History

Credit Hours: 3.00. Examines the issues that shaped American society, politics, foreign policy, and culture from 1932 to the present. Covers the Great Depression, World War II, the Cold War, and the Vietnam War as well as the social, cultural, and economic impact of those events.

Credits: 3.00

HIST 46900 - Black Civil Rights Movement

Credit Hours: 3.00. This course will examine the origins, dynamics, and consequences of the modern black civil rights movement by exploring how struggles for racial equality and full citizenship worked to dismantle entrenched systems of segregation, repression, and discrimination within American society and culture.

Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

HIST 47300 - History Of The South

Credit Hours: 3.00. Geographic, economic, cultural, social, and political aspects of the South. The significance of such figures as Jefferson, Jackson, Calhoun, Jefferson Davis, and Woodrow Wilson. The emphasis is on the evolution of the intellectual climate.

Credits: 3.00

HIST 47600 - The Civil War In Myth And Memory

Credit Hours: 3.00. This seminar will explore how the Civil War has been celebrated and/or remembered from 1865-present.

Credits: 3.00

HIST 47700 - Native American Women's History

Credit Hours: 3.00. This course studies the history of indigenous women in North America from pre-contact to the present era, examining their roles through the experience of colonization and decolonization underscoring issues of sovereignty, identity, activism, kinship, public images, and stereotypes.

Credits: 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses.

Learning Outcomes: 1. Gain knowledge of some of the major debates in the history of insanity. 2. Be able to identify a research question, conduct primary source research, and form a thesis. 3. Use a variety of databases to assemble a range of primary sources. 4. Learn to interrogate and compare primary sources for viewpoint and implicit value system. 5. Gain knowledge of some of the major theoretical approaches and frameworks used for studying the history of insanity. 6. Be able to discuss ideas and research in formal writing and in seminar discussion. Credits: 3.00

HIST 48500 - Topics In American Political History

Credit Hours: 3.00. This course deals with broad thematic and chronologically defined topics in American political history from the Revolutionary Era to the late twentieth century. Content will vary with the faculty member teaching the class.

Credits: 3.00

HIST 48800 - History Of Sexual Regulation In The United States

Credit Hours: 3.00. This course will illuminate broad themes in the historical regulation of sexual violence, consensual sex, and homosexuality. Student will understand and analyze how cultural, social, religious, and moral ideologies have influenced conceptions of deviant and normative sexuality in the United States.

Learning Outcomes: 1. Students will be able to articulate verbally and in writing what they have learned about the nineteenth and twentieth century history of sexual regulation. 2. Students will be able to identify and analyze the cultural and religious values which informed sexual regulation. 3. Students will develop a deeper

understanding of how regulations and reform worked by conducting primary source research and synthesizing it into written arguments. Credits: 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 49900 - History Internship

Credit Hours: 1.00 to 3.00. This course allows students to earn credit for internships. Examples of qualified internships would include work with museums, historical societies, and various units of government. Credit and course requirements arranged with the instructor. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 3.00

School of Interdisciplinary Studies

About the Interdisciplinary Studies Program

The School of Interdisciplinary Studies (SIS) incorporates the various interdisciplinary programs in the College of Liberal Arts ranging from area studies, ethnic studies, to comparative studies. While each of our programs share the value of interdisciplinarity, our approaches range from multidisciplinary-in which people from different disciplines collaborate, interdisciplinary-in which knowledge and methods from different disciplines are integrated, to transdisciplinary-in which a new unity of intellectual frameworks are created beyond the originating disciplines. Despite this variation in approach, our programs all recognize the need and value of interdisciplinary approaches to integrate and synthesize knowledge to provide a fuller understanding of a topic. The School of Interdisciplinary Studies is a community of faculty and students enjoying an environment of rigorous and innovative intellectual inquiry.
The School of Interdisciplinary Studies (SIS) consists the following interdisciplinary programs: African American Studies, American Studies, Asian American Studies, Comparative Literature, Critical Disability Studies, Film & Video Studies, Global Studies, Jewish Studies, Latin American & Latino Studies, Linguistics, Native American and Indigenous Studies, Peace Studies, Religious Studies, and Women, Gender & Sexuality Studies.

AAS 27100 - Introduction To African American Studies (UCC: HUM)

Credit Hours: 3.00. Introduction to the philosophical and methodological principles underlying Afro-American studies. Dimensions of the black experience, including history, education, politics, psychology, economics, religion, social organization, and art, will be covered, and the requisite academic tools and sources will be examined.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

AAS 27700 - African American Popular Culture

Credit Hours: 3.00. This course focuses on the production of popular culture through African-based and non African-based traditions among African Americans in the United States. Pop culture forms covered include film, theatre, visual arts, literature, dance, sports, music and religious traditions.

Credits: 3.00

AAS 35900 - Black Women Writers

Credit Hours: 3.00. (ENGL 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

AAS 37000 - Black Women Rising

Credit Hours: 3.00. This course examines the rise of black women and their impact on economic, social, and cultural issues.

Credits: 3.00

AAS 37100 - The African American Experience

Credit Hours: 3.00. Focus on specific topics of the personal experiences of blacks, in Africa and the diaspora, including black identity, black culture, and the relationships between blacks and society.

Credits: 3.00

AAS 37300 - Issues In African American Studies

Credit Hours: 3.00. Focuses on a specific topic that relates to selected issues in the life, history, and culture of peoples of African ancestry.

Credits: 3.00

AAS 37500 - The Black Family

Credit Hours: 3.00. This course considers and examines the black family as a social institution, focusing on both recent research as well as more descriptive accounts of issues concerning the black family.

Credits: 3.00

AAS 37600 - The Black Male

Credit Hours: 3.00. This course examines critically the factors contributing to the deteriorating status of African American males and the positive ways of coping with that experience. Includes an overview of research perspectives defining current knowledge on the subject.

Credits: 3.00

AAS 39200 - Caribbean History And Culture

Credit Hours: 3.00. This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

AAS 47300 - Blacks In Hollywood Film

Credit Hours: 3.00. A history of the representation of blacks in mainstream film throughout the twentieth century.

Credits: 3.00

AAS 47400 - Research Methods In African American Studies

Credit Hours: 3.00. This course covers research techniques used by researchers to observe and to interpret scholarly investigation on race, class and gender from an African-American perspective.

Credits: 3.00

AAS 49000 - Directed Readings In African American Studies

Credit Hours: 3.00. This course allows students to create an independent course of study with an instructor on a topic relevant to the African, African American, or African Diasporic experience.

Credits: 3.00

AAS 49100 - Special Topics In African American Studies

Credit Hours: 1.00 to 4.00. Special Topics in African American Studies addresses special topics or projects under the direction of the instructor in the field of African American or African Diasporic Studies. The course may vary from 1-4 credit hours. It may be taught as a lecture or as a lecture with a lab.

Credits: 1.00 to 4.00

AMST 10100 - America And The World (UCC: WC)

Credit Hours: 3.00. This course examines the evolution of American culture as the United States transitioned from a relatively isolated country at the end of the 19th century to an active shaper of a global community by the 21st century. We will examine ways in which American Culture shaped and was shaped by international relationships that transcend nation states. We will explore reactions to, and the results of, the spread of American culture both inside and outside the United States. By studying traditional cultural forms like art, music, design, literature, film, and technology the course will build a foundation from which to understand the configuration of American culture. Yet the course will also emphasize American culture expression, that in the forms of television, advertising, sport, cartoons, social media, video games, fashion, food, drugs, and automobiles, have transcended the geographical boundaries of the United States to engage in global interplays of material cultural exchange.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Identify the major themes and issues prompted by the term American Culture. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest American identities. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Recognize important issues that occur among peoples in an increasingly interconnected and interdependent world. 5. Develop the skills to analyze aspects of American culture using interdisciplinary source materials, research methodologies, and intellectual approaches. 6. Reach independent conclusions based on that analysis, and communicate them effectively verbally and in writing. Credits: 3.00

AMST 20100 - Interpreting America (UCC: HUM)

Credit Hours: 3.00. Introduction to the interdisciplinary study of American culture, history, and society in its national and global contexts.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the major themes and issues prompted by the term

American. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest American identities. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Develop the skills to analyze aspects of American culture using interdisciplinary source materials, research methodologies, and intellectual approaches. 5. Reach independent conclusions based on that analysis, and communicate them effectively verbally and in writing. Credits: 3.00

AMST 21000 - Sport In American Culture (UCC: BSS)

Credit Hours: 3.00. This course engages critical questions regarding sport and its role in American culture. It examines the ways sport serves as a key site for the study of larger social issues and social problems, including how race, gender, social class and other social locations are simultaneously reproduced and challenged in and through sport. The course also explores the relationships between sport and other major social institutions, such as the economy, education, politics, and media.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand sport as a social construction. Understand sport as a contested activity. 2. Identify and explain the relationships of sport to other institutions in society, including politics, education, economy, and the media. 3. Explain the role of sport in central social issues, including race/racism, gender/sexism, class, homophobia, and violence. 4. Apply academic theories and concepts to the study of sport. Credits: 3.00

AMST 22000 - Technology And Play (UCC: HUM)

Credit Hours: 3.00. This course introduces students to games, as well as investigating innovations and controversies in the gaming industry. It will explore theories of play, how technological innovations and business practices in both digital and analog gaming (through board games, video games, tabletop games, and esports) mediate or structure the experience of play. It will also survey the rise of myriad gaming subcultures, including celebrity streamers and esports.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important categories of games. 2. Demonstrate critical thinking skills of observation, explanation, and interpretation to assess sociological and cultural trends in the different spaces of gaming. 3. Produce original work using logic, creativity, and interpretive skills examining different games and industry practices. Credits: 3.00

AMST 25000 - An Introduction To American Protest Movements: What Are They? What Can They Do? How Can We Make One? (UCC: HUM)

Credit Hours: 3.00. In this course, we will study the reasons people in the United States have historically decided to create social movements, tactics and strategies they use to make and sustain those movements, obstacles to their success, and ways of judging their victories. The course will draw on scholarship on social movements from various fields, especially the field of American Studies. Because social movements are created by ordinary people, we will use a variety of sources they leave behind: speeches, testimonials, pamphlets, historical accounts, autobiographies, manifestos. We will also explore scholarship on social movements to try to understand how best to record and analyze the work social movements do. The course seeks to provide students an understanding of the role of protest movements in American history. Permission of instructor required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge across a range of chronological, cultural and geographic areas. 2. Show an understanding the ways protest movements shape American culture. 3. Describe how different aspects or types of human endeavor and experience may be connected. 4. Identify the roots of contemporary issues and challenges, with attention to social values and the role of identity in the human experience. 5. Apply a critical perspective to evaluating arguments, including the quality of sources, the validity of the interpretations of those sources, and the soundness of the argument's use of evidence to support that interpretation. 6. Formulate and support an argument in a well-focused, logically

organized piece of writing. Credits: 3.00

AMST 30100 - Perspectives On America

Credit Hours: 3.00. Advanced interdisciplinary study of American culture, history, and society in their national and global contexts.

Credits: 3.00

AMST 31000 - Invention, Innovation, And Design (UCC: HUM/STS)

Credit Hours: 3.00. This course focuses on the various ways that invention, innovation, and design shape the modern world. We will investigate the forms, uses, and meanings of a diverse set of objects, networks, and systems that influence the ways we live. We will explore these ideas through the concepts of consumption, waste, and "smart" to gain a deeper understanding of how material infrastructures influence human existence. This project-based course will use readings, discussions, and critical reflections to inform a series of hands-on projects to understand our roles as designers, creators, and users of science, technology, and material culture. Permission of instructor required.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify the major themes and issues prompted by the terms invention, innovation, and design. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest meaning through designed objects. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Develop the skills to analyze invention, innovation and design through the use of interdisciplinary source materials, research methodologies, and intellectual approaches. 5. Reach independent conclusions based on research-based analysis and communicate them effectively verbally, in writing, and through project-based assignments. Credits: 3.00

AMST 32000 - Understanding The National Football League

Credit Hours: 3.00. This course counters the cultural myth that sports are "simply a form of entertainment" or "an escape from reality" and takes seriously the notion that sports matter as a social, cultural, and political force. Students will use academically informed inquiry and investigation to examine broader cultural dynamics through a critical examination of the National Football League. Course topics include how the NFL shapes social identities including race, gender, sexuality, and American identity, the connection between football and militarism, the relationship between the NFL and commercialism, the role the NFL plays in the triad of men's violence, among other topics.

Learning Outcomes: 1. At the end of this course you will be able to summarize the evidence and conceptual arguments that the NFL is a cultural institution by which we can understand American society by exploring key topics covered in course in class activities, film response papers, and exams. 2. At the end of the course you will be able to explain how the National Football League matters as a social, political, and cultural force. 3. At the end of the course, you will be able to respond, from a critically informed academic perspective, to common sense beliefs that the NFL is simply "entertainment" or an "escape from reality." Credits: 3.00

AMST 32500 - Sports, Technology, And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines how science, technology, engineering, and data analysis reshape sports. Traditionally, sports have been understood as competitions between humans. However, recent technoscientific developments have altered this arrangement and have changed the ways sports are played. We have reached a place where heated competitions not only take place on the fields of play, but also within scientific and engineering laboratories. The fundamental question this project-based course will address is: how will new and emerging scientific knowledge and technological innovations transform sports? We will explore topics ranging from football, baseball, basketball, and soccer, to e-sports, fantasy sports, and sports analytics.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify the major themes and issues prompted by the terms sports, technology, and innovation. 2. Assess the multiple processes by which people express, institutionalize, celebrate, and contest meaning through the play and consumption of

sports. 3. Appreciate the cultural diversity of the American experience, especially in terms of class, ethnicity, gender, and race. 4. Develop the skills to analyze sporting invention, innovation, design, and culture through the use of interdisciplinary source materials, research methodologies, and intellectual approaches. 5. Reach independent conclusions based on research-based analysis and communicate them effectively verbally, in writing, and through project-based assignments. Credits: 3.00

AMST 33000 - American Car Culture

Credit Hours: 3.00. The automobile has become one of the most influential technologies of the 20th century, and continues to impact American life in the 21st. This course will examine the immense social, political, technological, and environmental impacts of the car on American culture; and take an interdisciplinary approach to the understanding the automobile industry, its production systems, its marketing strategies, and the way automobiles reflect the changing landscapes of consumer tastes and values over time.

Learning Outcomes: 1. Identify the various technological innovations that contributed to mass production of the automobile. 2. Understand how automotive design shaped American society. 3. Recognize the cultural effects of widespread automobile use in the United States. Credits: 3.00

AMST 49000 - Senior Capstone In American Studies

Credit Hours: 6.00. Interdisciplinary senior capstone project in American Studies. Permission of department required.

Learning Outcomes: 1. Conceptualizing a research project from two or more disciplinary perspectives, conducting original research designed to reveal key aspects of American culture past or contemporary, and presenting interdisciplinary research findings in verbal, visual, or an approved creative form. Credits: 6.00

ASAM 24000 - Introduction To Asian American Studies (UCC: HUM)

Credit Hours: 3.00. A general introduction to Asian American history and culture, with a focus on the diverse and multifaceted experiences of peoples of Asian descent in America and their contributions to U.S. culture and society.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ASAM 34000 - Contemporary Issues In Asian American Studies

Credit Hours: 3.00. Overviews various issues in contemporary Asian American Studies through theoretical and literary readings combined with examinations of popular media. Topics examine the multiple intersections of race, ethnicity, class, gender, and sexuality.

Credits: 3.00

ASAM 34200 - Special Topics In Asian American Studies

Credit Hours: 3.00. This course will focus on specific issues and themes in Asian American Studies.

Learning Outcomes: 1. Explore specific topics in Asian American Studies. 2. Acquire knowledge and critical skills pertinent to the examination of Asian American issues, texts and other cultural materials. Credits: 3.00

ASAM 49000 - Special Topics In Asian American Studies

Credit Hours: 3.00. Various topics in Asian American studies, changing from semester to semester as presented by different instructors.

Learning Outcomes: 1. Vary due to the variable nature of the course. Credits: 3.00

CDIS 23900 - Introduction To Disability Studies

Credit Hours: 3.00. Introduces students to the principles of and debates within disability studies. Topics explored include ideas of normalcy; the social model of disability; history of eugenics and its current manifestations; relations between disability and other identity categories; issues of social and physical access; cultural representations of disabled people.

Learning Outcomes: 1. Identify different models of understanding disability. 2. Understand the

ways normalcy is socially constructed. 3. Distinguish between impairment and disability. 4. Offer informed opinions on current eugenic practices. 5. Compare and contrast disability to other identity categories such as race, gender, and sexuality. 6. Identify exclusionary practices that marginalize disabled people. Credits: 3.00

CDIS 29000 - Special Topics In Critical Disability Studies

Credit Hours: 3.00. Various topics in critical disability studies, changing from semester to semester as presented by different instructors.

Learning Outcomes: 1. Vary due to variable nature of course. Credits: 3.00

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors.

Learning Outcomes: 1. Develop critical thinking. 2. Develop cultural competence. 3. Understand communication across cultures. 4. Develop ethical decision making. Credits: 3.00

GSLA 30100 - Theories Of Global Studies (UCC: HUM)

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Gain an understanding of key theoretical approaches to the question of globalization and its role in the discipline of Global Studies. 2. Learn how to evaluate competing and opposing analytical frameworks. 3. Apply a theoretical framework to a concrete problem or case. Credits: 3.00

GSLA 39100 - Special Topics In Global Studies

Credit Hours: 3.00. This variable title course deals with topics that explore a range of experiences and analytical perspectives clustered around the contemporary global experience. The course will vary in subject matter but focus on the challenges and rewards of a globalized world as articulated through topics such as cross-border histories, music, gender, racial formations, film, and economic development. Content will vary with the instructors teaching the course.

Learning Outcomes: 1. Understand, by definition but also by analytical variation, the range of lived experiences and critical perspectives that encompass the contemporary global experience. 2. Recognize the cultural, economic, and political characteristics that define contemporary globalization. 3. Think and write analytically about contemporary globalization through topics such as national or regional histories, music, gender and/or racial formations, film, literature, politics, and economics. Credits: 3.00

GSLA 48000 - Senior Interdisciplinary Capstone Project In Global Studies I

Credit Hours: 3.00. The senior capstone course for Global Studies majors is designed to give students the chance to define and complete a research project of personal interest, and to integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001. The capstone courses are offered to students in their senior year to be completed the final two semesters of their major. Students will assemble a committee of two or more faculty members willing to direct their work. The Director of Global Studies will be an ex-officio member of the committee. Students will incorporate their prior coursework (including foreign language training), study abroad, and/or internships into their final project. The capstone may be, but is not limited to, a senior honors project, a multimedia project, service learning, or directed research. Timeline for a successful capstone project: Spring of Sophomore year: After three semesters of coursework, the student will start defining an area of interest or passion that will form the basis of their capstone research.

Junior Year: The student will select courses in their interest area. They will also start speaking to faculty members in the field in order to assemble their committee. Spring of Junior Year: Students will finalize their faculty committee to direct their research. Fall of Senior Year: Research Semester, as directed by the committee. GSLA 48000. Spring of Senior Year: Complete project. GSLA 48001.

Learning Outcomes: 1. Demonstrate an awareness of Global issues through academic inquiry and extracurricular engagement. 2. Critically apply multi-perspective research frameworks to a concrete problem or case. 3. Recognize historic roots of Global inequality. 4. Develop intercultural competence and demonstrate empathy for difference. Credits: 3.00

GSLA 48001 - Senior Interdisciplinary Capstone Project In Global Studies II

Credit Hours: 3.00. The senior capstone is a year-long course for which Global Studies majors enroll in consecutive semesters. Its primary goal is for students to define and complete a research project of personal, academic, and/or professional interest, as they integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001 in order to complete the Global Studies major.

Learning Outcomes: 1. Varies per student project/ capstone. Credits: 3.00

IDIS 20100 - Introduction To Digital Humanities

Credit Hours: 3.00. This is an interdisciplinary foundational course that combines theory and practice to teach students in and about digitally mediated culture. Accordingly, this course fosters a critical understanding of the digital and its implication for the development of a technologically driven society. Students will be introduced to digital inquiry and critical practice and explore the ways that the digital transforms knowledge acquisition and production across the humanities, social sciences and sciences. Students will engage in readings and activities that help them form substantive perspectives on the digital formulations and practice through digital technologies and tools. Students will also experiment with digital methods and tools by building a digital project. This course places an emphasis on engaged learning through online and in-class discussion, digital activities, and collaborative work.

Learning Outcomes: 1. Identify various concepts and methods in digital humanities. 2. Apply a variety of methods and tools to conduct digital humanities research. 3. Research the transformative potential of digital methods through critical inquiry. 4. Create a process for developing and completing a digital project. Credits: 3.00

IDIS 29000 - Interdisciplinary Topics

Credit Hours: 0.00 to 6.00. Course topics and patterns will vary.

Credits: 0.00 to 6.00

IDIS 49000 - Directed Reading In Interdisciplinary Studies

Credit Hours: 1.00 to 3.00. Reading under the direction of the instructor in a particular field of study. Permission of instructor required.

Credits: 1.00 to 3.00

IDIS 49100 - Special Topics In Interdisciplinary Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization.

Learning Outcomes: 1. Formulate significant research questions and conduct research relevant to those questions. 2. Consider a topic from multiple perspectives. 3. Demonstrate critical thinking and problem-solving abilities. 4. Demonstrate effective communication skills. Credits: 1.00 to 4.00

JWST 33000 - Introduction To Jewish Studies (UCC: HUM)

Credit Hours: 3.00. An interdisciplinary course touching on the full range of Jewish experience from antiquity to the present. Several members of the Jewish Studies faculty and guest lecturers participate, representing such fields as anthropology, history, language, literature, philosophy, politics, religion, and sociology.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

LALS 25000 - Introduction To Latin American And Latino Studies

Credit Hours: 3.00. Interdisciplinary and integrative presentation and examination of the historical, political,

economic, and cultural processes of Latin America, from independence to the present followed by an analysis of scholarly works that include theoretical models, methodological strategies, and analytical approaches to learning about US Latinos. Special emphasis is placed on the immigrant experience and its role in the incorporation of Latinos into the US society.

Credits: 3.00

LALS 26000 - U S Latino Culture

Credit Hours: 3.00. This course uses an interdisciplinary approach to study Latino culture in the United States through art, film, literature, music and theater.

Credits: 3.00

LALS 30100 - Latin American Literary And Cultural Studies

Credit Hours: 3.00. Focuses on Latin American literatures and cultural products, such as film, music, and/or art. As a variable-topics course, individual sections may variously focus on South and/or Central America, Mexico, the Caribbean, U.S. Latina/o populations, or any combination of the above. Individual sections may also examine major cultural and historical movements, and/or canonical and emerging authors and artists. May be repeated for credit.

Credits: 3.00

LALS 30300 - Latin American Languages And Linguistics

Credit Hours: 3.00. Focuses on the languages and linguistic practices of Latin American and/or U.S. Latina/o populations, also including the Caribbean. As a variable-topics course, individual sections may variously focus on the nature and structure of specific languages, as well as the study of their dialects, semantics, and histories; the history, structure, uses, and educational concerns of Latin American indigenous, Caribbean Creole and/or U.S. Latina/o speech communities; or any combination of the above. May be repeated for credit.

Credits: 3.00

LALS 34700 - Latin American Politics

Credit Hours: 3.00. Focuses on major aspects of Latin American and/or U.S. Latina/o politics and development. As a variable-topics course, individual sections may variously focus on U.S. foreign policy toward countries in Latin America, the U.S.'s historical role in the politics of the Western hemisphere, the impact of the military on political development, the dynamics of Latin American industrialization, Latin America's changing international role, Latinas/os's political participation in the United States, or any combination of the above. Individual sections may also Latin American political thought from the colonial period through the present day.

Credits: 3.00

LALS 35500 - Political Economy Of Latin America

Credit Hours: 3.00. Examines the salient issues of the 21st century in the political economy of Latin America. The first part introduces students to the historical evolution of the region's economy and its socio-economic and political determinants. Then it focuses on topical inquiry, analyzing key policy areas, frameworks and choices at the core of the current political economy of the region's countries: fiscal and industrial policies, monetary and financial policies and policies on trade, migration and inequality, energy and the environment.

Credits: 3.00

LALS 40100 - Special Topics In Latin American/Latino Studies

Credit Hours: 3.00. Investigation of a special topic in Latin American or US Latina/o studies. The topic will vary from semester to semester.

Credits: 3.00

LALS 40200 - Directed Reading In Latin American/Latino Studies

Credit Hours: 1.00 to 6.00. Directs the reading of students with special interests in Latin American or U.S. Latina/o studies. Guides students in profitable reading in subjects of their own choice. Individual conferences; no class meetings. Permission of instructor required.

Credits: 1.00 to 6.00

LING 20100 - Introduction To Linguistics (UCC: BSS)

Credit Hours: 3.00. Basic concepts of linguistics and methods of analysis of language; overview of linguistics and the role of language in society. Introduction to phonology, morphology, syntax, and semantics, and to problem-solving techniques, with material drawn from a variety of languages.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

LING 31100 - Fundamentals Of Phonology And Morphology

Credit Hours: 3.00. Basic concepts and tools of phonological and morphological analysis viewed through the material of American English. Current theoretical approaches to phonology and morphology, including word-formation processes and

applications.

Credits: 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600.

Credits: 3.00

LING 32100 - Foundations Of Syntax And Semantics

Credit Hours: 3.00. Introduction to syntactic and semantic analysis based on American English and its dialects. Underlying structure and its relation to meaning. Analysis of parts of speech, constituent phrases, sentence structure, representations, ambiguity, and applications of current theory. Credit will not be given for both LING 32100 and ENGL 32800 .

Credits: 3.00

LING 36800 - Sociolinguistic Study Of African American English

Credit Hours: 3.00. A study of the history, structure, uses, and educational concerns of African American English in African American speech communities and the United States culture at large.

Credits: 3.00

LING 39800 - Special Topics In Linguistics I

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 47000 - TENL Practicum

Credit Hours: 3.00. As the final course of the TENL program, the Practicum builds on participants' knowledge and skills of teaching multilingual learners by revisiting previous learning in the TENL program. This course requires participants to demonstrate mastery and application of concepts covered in previous courses (e.g., oral language progression, literacy development, test construction, domains/subsystems of language, language teaching methodologies, etc.) and assesses what participants currently know and believe about English language instruction, literacy acquisition, and approaches to professional development. Experiential learning or fieldwork in a classroom setting is required. In order to qualify for TENL certification, students must obtain a grade of C or higher in all TENL courses.

Credits: 3.00

LING 49000 - Directed Reading In Linguistics

Credit Hours: 1.00 to 4.00. Independent study and reading on a topic in linguistics directed by a faculty member. Permission of instructor required.

Credits: 1.00 to 4.00

LING 49800 - Special Topics In Linguistics II

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 49900 - Research In Linguistics

Credit Hours: 1.00 to 3.00. Undergraduate research into a designated topic in linguistics. Permission of instructor required.

Credits: 1.00 to 3.00

MARS 22000 - Introduction To Medieval And Renaissance Studies

Credit Hours: 3.00. An introduction to the interdisciplinary study of the Middle Ages and Renaissance.

Credits: 3.00

REL 20000 - Introduction To The Study Of Religion (UCC: HUM)

Credit Hours: 3.00. This course will introduce students to the academic study of religion through an exploration of various methodologies available for a critical, reflective investigation of the study of religion.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

REL 20100 - Interpretation Of The New Testament

Credit Hours: 3.00. An investigation of the religious content of the Christian Scriptures in light of the historical, social, and intellectual contexts out of which they emerged. Other canons and extra-canonical interpretations of the New Testament will also be investigated.

Credits: 3.00

REL 20200 - Interpretation Of The Old Testament

Credit Hours: 3.00. An investigation of the religious content of documents Christians call the "Old Testament" in light of the historical, social, and intellectual contexts out of which they arose. The student will be introduced to problems and methods in their interpretation.

Credits: 3.00

REL 20300 - Theology Of Paul

Credit Hours: 3.00. A critical examination of the Pauline and Deutero-Pauline epistles, the book of Acts, and other first century texts associated with Paul of Tarsus. Students will be introduced to problems and methods in the interpretation of ancient texts.

Credits: 3.00

REL 20400 - Introduction To Christian Theology

Credit Hours: 3.00. This course is an introductory survey of the goals and aims of theology in the Christian tradition. Focus is on the content of Christian theology, its methodological presuppositions and principles of development.

Credits: 3.00

REL 23000 - Religions Of The East (UCC: HUM)

Credit Hours: 3.00. (PHIL 33000) A study of the history, teaching, and present institutions of the religions of India, Southeast Asia, China, and Japan. This will include Hinduism, Jainism, Sikhism, Buddhism, Confucianism, Taoism, Shintoism, and Zoroastrianism.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

REL 23100 - Religions Of The West (UCC: HUM)

Credit Hours: 3.00. (PHIL 33100) A comparative study of the origins, institutions, and theologies of the three major Western religions, Judaism, Christianity, and Islam.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

REL 24000 - Engaging Religious Diversity (UCC: HUM)

Credit Hours: 3.00. The course offers students case-based explorations of local and global religious diversity in various cultural contexts. Religious diversity in secular spaces and the significance of religion for shaping community identities will be examined from multiple disciplinary perspectives. Students will analyze religious representations and influences in the public sphere by studying examples from different genres and media. Additionally, this course offers students opportunities to improve their religious literacy and gain real-world experience through experiential learning projects.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify religious values and practices from multiple traditions. 2. Explain the importance of engaging religious diversity in various contexts. 3. Analyze interactions between religion and civic participation. 4. Evaluate the role of religion in shaping identities. 5. Assess public representations of religion. Credits: 3.00

REL 25000 - A History Of The Christian Afterlife

Credit Hours: 3.00. An exploration of the ways Christians have envisioned the afterlife, including New Testament descriptions. Apocryphal notions, Patristic conceptions, mystical and 19th century descriptions of heaven as sexual union, and 20th century understandings of the afterlife as a "process of education".

Credits: 3.00

REL 26400 - The Bible As Literature (UCC: HUM)

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of Interdisciplinary Studies and Liberal Arts, especially related to the Bible. 2. Employ critical approaches from basic building blocks to more advanced ones suited to cultural complexities. 3. Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written

persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

REL 31700 - Ancient Judaism And Early Christianity

Credit Hours: 3.00. This course is a study of the emergence of Judaism and the rise of Christianity out of roots in the history of ancient Israel. This will include noticing the effects of Greek culture, evidence of anti-Semitism and admiration of the Jews, conversion in a setting of religious pluralism, and the development of Jewish and Christian self-definition in this climate.

Credits: 3.00

REL 31800 - The Bible And Its Early Interpreters

Credit Hours: 3.00. This course will start with observation of the development of early themes in later parts of the Hebrew Bible and proceed to the on-going influence of these themes in Jewish literature outside the Hebrew canon (apocrypha, pseudepigrapha, targums, midrash, Josephus, Philo, and other Hellenistic Jewish authors), as well as in pagan literature of this era and in early Christian literature, particularly the New Testament.

Credits: 3.00

REL 35100 - Christian Mysticism

Credit Hours: 3.00. A critical, historical examination of the development of Christian mystical thought, beginning with its earliest intimations in the Hebrew Scriptures, the thought of Plato and Aristotle and continuing through Patristic, Medieval, Renaissance, Reformation, Counter-Reformation and Modern periods to the present.

Credits: 3.00

REL 45000 - Christian Ethics

Credit Hours: 3.00. The course explores the historical development of Christian moral theology, from pre-Christian times to the present. It includes a study of Biblical moral conceptions, patristic, medieval, Enlightenment, modern, and contemporary understandings of Christian ethics.

Credits: 3.00

REL 45100 - Christology

Credit Hours: 3.00. The course examines the historical development of Christological doctrine in the Christian faith from the age of the New Testament to the late 20th/early 21st century, paying special attention to the New Testament and conciliar formulations.

Credits: 3.00

REL 45200 - Systematic Theology

Credit Hours: 3.00. An introduction to the nature, tasks, and methods of what Christians have called "systematic theology", historically conceived through an exploration of the writings of figures such as Augustine, Aquinas, Melancthon, John Calvin, Barth, and Paul Tillich.

Credits: 3.00

REL 49100 - Special Topics In Religious Studies

Credit Hours: 3.00. Investigation of a special topic in Religious Studies. The topic will vary from semester to semester.

Learning Outcomes: 1. Vary due to nature of course. Credits: 3.00

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction (UCC: BSS/HUM)

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics.

University Core Curriculum (UCC): (UCC: BSS/HUM) Credits: 3.00

WGSS 28100 - Variable Topics In Women's, Gender, And Sexuality Studies

Credit Hours: 1.00 to 4.00. This course examines in-depth particular topics from the introductory course in Women's Studies. It addresses gender issues for both men and women. Possible topics include gender and popular culture, women's bodies, body image, and health, masculinities, queering gender and gender transgression.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and

identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts. 4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

WGSS 38100 - Women Of Color In The United States

Credit Hours: 3.00. Explores the diversity of racial and ethnic groups in the United States with a particular emphasis on the histories, experiences, and cultural contributions of women of color. Provides a broad introduction to the intersections of gender, race and ethnicity.

Credits: 3.00

WGSS 38200 - Love, Sex And Sexuality

Credit Hours: 3.00. Explores intimate relationships and marriage practices in Western and non-Western societies from a historical and comparative perspective. Examines the changes in love and marriage in Greco-Roman societies, medieval and modern Europe, China, India and the Muslim world, among others.

Credits: 3.00

WGSS 38300 - Women, Work, And Labor

Credit Hours: 3.00. Examines race, class and gender issues as they affect working women in America. Covering women's work from domestic labor to informal economies to factories, topics include women's participation in trade unions, wage inequalities, family leave policies and sexual harassment.

Learning Outcomes: 1. Have acquired a broad comprehension of the work, including economic activity often not recognized as "work", that women typically have performed or is typically associated with women, world-wide and since the onset of industrialization. 2. Be capable of evaluating current global economic and cultural systems that impact what kinds of labor contemporary women perform, the conditions under which they work, and the nature of the gendered systems of labor that prevail in the U.S. and elsewhere. 3. Gain appreciation for the significance of women's unpaid or underpaid care-work, relational work, affective labor, and the "reproductive" labor underpinning global capitalism and industrialism. 4. Place their own personal lives and contexts within an analytical framework informed by feminist, Marxist, and intersectional perspectives on work and labor. Credits: 3.00

WGSS 39000 - Variable Topics In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Variable topics under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

WGSS 48000 - Feminist Theory

Credit Hours: 3.00. Intensive study of a variety of contemporary and international feminist theories from an interdisciplinary perspective. Provides an overview of major trends, critical approaches, and diverse viewpoints in the field of feminist theory.

Credits: 3.00

WGSS 48200 - Interdisciplinary Studies In Sexuality

Credit Hours: 3.00. This course offers an interdisciplinary introduction to recent work in lesbian and gay studies in various fields, including literature, history, film, cultural theory, medicine, law, and studies of sexuality.

Learning Outcomes: 1. Develop an in-depth understanding of the cultural and historical processes that shape sexual identities and practices in different cultural contexts globally. 2. Assess the impact of political, cultural, and global ideologies on systems of gender and sexuality. 3. Think critically about sexual and gender representations in the US and globally. 4. Develop an advanced understanding of queer and feminist theories of sexuality. Credits: 3.00

WGSS 48300 - Feminisms In Global Perspective

Credit Hours: 3.00. Explores feminist struggles through the writings of First and Third World feminist scholars. Focuses on feminist projects within and against colonial, nationalist, religious and global contexts. Includes Third World feminist critiques of Western feminisms.

Credits: 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have

impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

WGSS 49200 - Practicum In Women's, Gender, and Sexuality Studies

Credit Hours: 2.00 to 4.00. This course is designed to integrate knowledge derived from women's studies scholarship with practical experience. Students will define their own projects in consultation with women's studies faculty. Periodic conferences and written reports required. Permission of instructor required.

Credits: 2.00 to 4.00

WGSS 49900 - Independent Study In Women's, Gender And Sexuality Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of the instructor in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Understand the basic principles of feminist critical race, queer, class, transgender, and crip theories and methods. 2. Operationalize intersectional transnational analysis using the basic principles of social location, privilege, and oppression. 3. Cultivate critical consciousness and reflexive thinking that enable interventions that foster equity and social justice. 4. Acquire knowledge of and skills in anti-oppression activism. 5. Understand the regulatory functions of social institutions and identify strategies for transforming them to maximize their liberatory potential and minimize oppression. 6. Execute justice-oriented critiques of historical developments and current perspectives associated with feminist, anti-racist, queer, class, and literary and film studies. 7. Analyze how cultural values about identity and social location such as gender, sexuality, race, ethnicity, class, caste, nationality, immigrant status, ability, religious affiliation, structure societies locally and globally to create inequity and privilege. Credits: 1.00 to 4.00

School of Languages and Cultures

Overview

About the Languages and Cultures Program

Our School offers undergraduate courses in language, literature, linguistics, culture, civilization, and film. We provide instruction in the target languages as well as some courses in English, in face to face, online, and blended formats, and instruction for heritage speakers of Chinese and Spanish. Language clubs and honorary societies, guest lectures, international film series, coffee and tea conversation hours, and theater performances help enhance our students' knowledge and experience of other languages and cultures.

SLC faculty members cover a richly diverse range of research areas and have received international acclaim for their scholarship, as well as many prestigious teaching awards for their performance in the classroom. The following notable scholarly publications are edited by faculty and staff in the department: Proceedings of the Japanese Literary Studies (PAJLS), *Purdue Studies in Romance Literatures* (PSRL); and *Global Business Languages*.

One of SLC's strengths lies in its offerings of classes in

languages for specialized purposes. These classes equip students with the practical communication skills they will need for using the target language while studying or traveling abroad, participating in internships, or preparing for globally oriented career paths. Such classes include business and scientific language classes at various levels and languages, as well as Medical Spanish and Spanish for the Professions. Certificates of achievement in languages for specialized purposes are in development and will give students tangible documentation of their practical language coursework; for an example, click here to view the one already available in German.
The Center for Technology-Enhanced Language Learning and Instruction (TELL Center) supports technology-oriented research and development applicable to foreign language instruction. The Center is committed to disseminating and sharing research results and developed products through a variety of channels for the betterment of the field of foreign language education. The Center has developed an online speaking practice/assessment/research platform, Speak Everywhere. It has been fully commercialized by e-Language Learning LLC and is available world-wide. For inquiries, use the Inquiry/Support link of the product website."
Study abroad is an important part of a language education, and our faculty and staff work in close collaboration with the Office of Programs for Study Abroad to find our students the best university programs in other countries.

World Food Cultures Certificate

ARAB 10100 - Standard Arabic Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to Modern Standard Arabic: the writing and sound systems, and systematic presentation of basic grammatical structures. Reading, writing, and vocabulary building are emphasized throughout. The course also includes an introduction to Arab culture. No previous knowledge of Arabic required. Permission of department required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify, recognize, and produce correctly Arabic sounds and letters in aural and written texts. 2. Demonstrate familiarity with the Arabic syntactic structures. 3. Produce practical written information including completed forms, directions, and instructions on familiar topics. 4. Demonstrate conversational skills including discussing school, family, and occupations; telling time; discussing schedules and dates; and expressing likes and dislikes. 5. Formulate questions and distinguish functional phrases for talking about themselves and their families. 6. Identify language comprehension by reading, reporting on, and or writing about short passages and translating basic sentences. Credits: 3.00

ARAB 10200 - Standard Arabic Level II (UCC: HUM)

Credit Hours: 3.00. Further study of Modern Standard Arabic. Continued presentation of the basic structures of Arabic grammar and expansion of vocabulary. Reading and writing will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify language comprehension by reading, reporting on, and or writing about long segments of Arabic text and speech. 2. Use simple grammatical and syntactic structures in daily communication. 3. Compose simple sentences and short paragraphs. 4. Demonstrate language comprehension by discussing familiar topics with peers. Credits: 3.00

ARAB 11100 - Elementary Standard Arabic Conversation I

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Group discussions in Standard Arabic on practical topics.

Credits: 1.00

ARAB 11200 - Elementary Standard Arabic Conversation II

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in Standard Arabic on practical topics. May be taken concurrently with ARAB 10200.

Credits: 1.00

ARAB 12100 - Qur'anic Arabic Level I

Credit Hours: 3.00. Introduces students with knowledge of the Arabic alphabet and elementary Arabic word structure to the basic elements of Qur'anic Arabic and provides them with foundational knowledge of classical Arabic lexicon and grammar. Students will gain insights into the organizational structure of different words and short phrases as they explore the nature of Qur'anic Arabic, its diction, morphology and vocabulary that are crucial for understanding the text. In this course, students will also expand their vocabulary as they work through exercises focusing on identifying the importance of rendering sounds for correct reading, recitation and morphology of different words through sample excerpts from short chapters of the Qur'an. Students can take this course for language credit to meet course requirements in all fields that require a language. Permission of instructor required.

Learning Outcomes: 1. Recognize basic features of Qur'anic language. 2. Analyze short excerpts. 3. Identify key Qur'anic vocabulary and its meaning. 4. Distinguish important features of word order in relation to meaning. 5. Apply learned language rules to short excerpts. Credits: 3.00

ARAB 12200 - Qur'anic Arabic Level II

Credit Hours: 3.00. Continues students' development and mastery of Qur'anic Arabic and expands the foundational knowledge of classical Arabic lexicon and grammar gained in ARAB 121. Students will gain insights into the morphology and

syntax of the Arabic of the Qur'an and explore Qur'anic Arabic, its diction, morphology and vocabulary that are crucial for understanding the meaning of the text. In this course, students will also expand their vocabulary as they work through exercises focusing on identifying the importance of rendering sounds for correct reading, recitation and morphology of different words through sample excerpts from short chapters of the Qur'an. Students can take this course for language credit to meet course requirements in all fields that require a language.

Learning Outcomes: 1. Understand a range of lexical items of the Qur'anic vocabulary within context. 2. Analyze basic concepts and principles of Qur'anic grammar, morphology and syntax. 3. Apply key Qur'anic vocabulary and identify its meaning. 4. Distinguish important features of word order in relation to meaning. 5. Recognize basic phonological concepts relative to Qur'anic vocabulary. Credits: 3.00

ARAB 20100 - Standard Arabic Level III (UCC: HUM)

Credit Hours: 3.00. This course is designed to allow students to use the grammar and vocabulary acquired in the first two semesters in dealing with specific social situations. Continued improvement of conversational, reading, and writing abilities and expansion of vocabulary.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ARAB 20200 - Standard Arabic Level IV (UCC: HUM)

Credit Hours: 3.00. Increased mastery of the four language skills, with emphasis on reading and translation using materials from literary classical and modern Arabic. The course includes a study of some parts of the Koran.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ARAB 21100 - Elementary Standard Arabic Conversation II

Credit Hours: 1.00. Continuation of ARAB 11200. May be taken concurrently with ARAB 20100.

Credits: 1.00

ARAB 21200 - Elementary Standard Arabic Conversation IV

Credit Hours: 1.00. Continuation of ARAB 21100. May be taken concurrently with ARAB 20200.

Credits: 1.00

ARAB 22400 - Arabic Level IV: Business Arabic

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed toward use of Arabic for business purposes, including language needed for business negotiations, financial situations, travel, and memo writing. Aspects of cultural and social appropriateness needed in business situations in the Arab world.

Learning Outcomes: 1. Improve skills of speaking, writing, reading and listening in Arabic, with emphasis on business situations. 2. Understand the cultural appropriateness and cultural conventions that characterize Arabic business situations. 3. Know how to write basic business letters, memos, notices, and short reports in Arabic. 4. Have skills that facilitate both business visits and pleasure travel to Arabic-speaking countries, such as making hotel reservations, using various types of transportation, dealing with customs, and filing official forms and other documents. 5. Have an expanded vocabulary including specific terminology used in trade, finance, banking, accounting, and business transactions. Credits: 3.00

ARAB 23000 - Arabic Literature In Translation

Credit Hours: 3.00. Survey of Arabic literature, from the classical to the postmodern period. Emphasis on connections between literary works and contemporary life. Conducted in English; no knowledge of Arabic required.

Credits: 3.00

ARAB 23900 - Arab Women Writers (UCC: HUM)

Credit Hours: 3.00. Survey of Arab women writers from North Africa, the Middle East, and Arab communities in the Western world. Emphasis on issues of sexuality, marriage, work, travel and immigration. Conducted in English; no knowledge of Arabic required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

ARAB 28000 - Arabic Culture (UCC: HUM)

Credit Hours: 3.00. A historical and literary survey of defining characteristics of Arabic culture from pre-Islamic times to the modern period.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ARAB 28100 - Introduction To Islamic Civilization And Culture

Credit Hours: 3.00. This course is a survey of broad currents in the cultures, thought and civilization of the Muslim world. It emphasizes religious, intellectual and cultural trends, social and political structures and contemporary issues of Muslim societies within the current global cultural world. Taught in English.

Learning Outcomes: 1. Gained understanding of the basic teachings of Islam, sources of Islamic civilization and culture, its historical development and major aspects of Islamic thought and art through today. 2. Make connections and understand the interplay among religion, politics, culture and other forms of artistic expression. 3. Provide students with tools to undertake further research about the cultures of Islam and examine the impact Islam makes in lives of communities and contemporary problems facing Muslims in a globalized cultural world. Credits: 3.00

ARAB 30100 - Standard Arabic Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Arabic speaking, listening, reading, and writing abilities, using materials dealing primarily with the everyday life and civilization of Arabic-speaking countries, from various sources (newspapers, poetry, chapters from the Qu'ran). Conducted primarily in Arabic.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ARAB 30200 - Standard Arabic Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading and composition skills in Standard Arabic, using materials dealing with ideas and events that have shaped the Arabic-speaking culture. Conducted primarily in Arabic.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ARAB 33000 - The Middle East On Film

Credit Hours: 3.00. This course offers an introduction to films produced in the Middle East and on Middle Eastern Cultures. In this class, we will view films from the Arab world, including North Africa, and the large Middle Eastern region. Parallel to film screening, students will read critical and analytical material that provide background as well as commentary and analysis of cultural and historical contexts on content of films and their making. The course will examine a series of topics such as identity politics, religious affiliation, gender, immigration, belonging, homeland and exile. We will also situate the films within the aesthetic traditions of production and reception and analyze how they provide critical perspectives and insights in central issues in the cultures of Middle Eastern cultures. The overarching goal of the class is to provide students with a solid understanding of the function of cinema and films in representation of the evolution and transformation of the cultures and societies of the region and the issues central to how communal and individual identities in the Middle Eastern region are shaped. The class will also equip the students with skills to analyze meaning making and the role of technical aspects such as cinematography, body language, script, setting and acting in the creation of characters. All films will be screened with English subtitles.

Learning Outcomes: 1. Assess formal and technical elements of Middle Eastern film cultures. 2. Analyze how social and cultural themes are represented in visual means and through the screen. 3. Identify and explain the important aspects of film making in the film industries of the region. 4. Construct critical responses to how cinematic work uses aesthetics to mediate culture. 5. Evaluate the role of films in articulating major shifts and movements in the cultures of the region. Credits: 3.00

ARAB 33400 - North African Literature And Culture

Credit Hours: 3.00. A view of the culture and society of the Maghreb (Morocco, Algeria, Tunisia, and Libya). Emphasis on issues of race, politics, religion, and gender through literature and other forms of artistic expression, including film and music. Conducted in English; no knowledge of Arabic required.

Learning Outcomes: 1. Increase ability to think

critically about other cultures and societies and appreciate cultural differences. 2. Investigate key cultural, social and political issues that have shaped cultures and societies in North Africa. 3. Develop understanding of contemporary questions such as nationalism, politics, religion and ethnicity in the region as represented through materials (literary and/or visual) from/about North Africa. 4. Develop and improve analytical skills (both oral and written) and enhance their abilities to comprehend, interpret, and analyze texts. 5. Expand familiarity and knowledge about core societal and cultural issues of this region and connect to contemporary events in the various countries and communities in North Africa. Credits: 3.00

ARAB 49000 - Special Topics In Arabic

Credit Hours: 1.00 to 4.00. Study of a selected topic in Arabic literature or culture. The topic will be announced in advance. Conducted in English; readings in English. Permission of instructor required.

Learning Outcomes: 1. Vary due to the nature of the course. Credits: 1.00 to 4.00

ASL 10100 - American Sign Language I (UCC: HUM)

Credit Hours: 3.00. A basic introduction to American Sign Language. This course introduces students to the tools for mastering the grammar at a basic expressive and receptive level. Introduction to cultural and historical aspects of ASL and the deaf community.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ASL 10200 - American Sign Language II (UCC: HUM)

Credit Hours: 3.00. A continuation of ASL 10100. Further study of the language with more emphasis on receptive and expressive conversational skills. Includes readings of research studies relevant to lectures.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Understand and manage more complex interactions involving expanded ASL lexical signs, grammatical rules, and sentence structure (syntax). 2. Demonstrate an expanded conversational and narrative skill in ASL using both concrete and abstract concepts. 3. Exhibit the ability to use appropriate ASL grammatical features and functions of the language used in dialogues and story-telling that includes non-manual grammatical signals, and prosodic features of intensity and characterizations. 4. Demonstrate an understanding of and respect for Deaf people and ASL by engaging appropriate conversation strategies used in the Deaf Community and applying their ASL skills within and beyond the school settings. Credits: 3.00

ASL 20100 - American Sign Language III (UCC: HUM)

Credit Hours: 3.00. A more advanced study of American Sign Language. Further development of receptive and expressive skills using more advanced material. Continued emphasis on cultural and historical aspects in relation to the evolution of the language and language usage.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ASL 20200 - American Sign Language IV (UCC: HUM)

Credit Hours: 3.00. A continuation of ASL 20100. Includes some introduction to linguistic structure, especially classifiers, temporal sequencing and aspect, and conversational regulators.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ASL 28000 - American Deaf Community: Language, Culture, And Society

Credit Hours: 3.00. The linguistic, cultural, and societal context of the deaf community in America. Both historical and contemporary aspects of deaf identity will be included, with an emphasis on the central role that ASL plays in the lives of deaf individuals.

Credits: 3.00

ASL 30100 - American Sign Language V

Credit Hours: 3.00. This course is a continuation of ASL 20200 (5th in sequence of courses in ASL). Features of Level 5 are expanded student discourse, advanced ASL structure and vocabulary, roleshift variations, formal storytelling, text analysis and formal/informal presentations.

Learning Outcomes: 1. Students will learn and demonstrate advanced grammatical uses of ASL in conversations and in storytelling. 2. Students will develop increasingly complex receptive and expressive skills in ASL discourse: how sign movements can be modified to change meaning; how and when facial expressions occur; and how body, head, and eye movements are used in phrasing and agreement. 3. Students will demonstrate fluent and appropriate communication skills with competent/native users of ASL by maintaining a high degree of grammatical accuracy. 4. Students will demonstrate increased understanding and appreciation of noted ASL artists performing handshape stories, cheers, songs, poetry, storytelling, and legends. 5. Students will be able to compare, contrast, and exchange opinions on current issues in the field of Deaf and ASL studies. Credits: 3.00

ASL 30200 - American Sign Language Advanced-Level VI

Credit Hours: 3.00. This course is a sequential course in the advanced study of American Sign Language (ASL) with emphasis on basic concepts of language based ASL. This is an application of language usage in ASL in which students will gain an advanced understanding and mastery of ASL grammar. Includes instruction in semantic and grammatical accuracy and appropriate discourse strategies in a variety of communication contexts. Students utilize advanced receptive and expressive skills.

Learning Outcomes: 1. Identify the appropriate use of ASL semantics and conceptual signs. 2. Apply intermediate-to-advanced ASL grammatical features to informal and formal styles. 3. Compose narratives and presentations in ASL. 4. Discuss, debate, and exchange information and perspectives of ASL and Deaf culture. Credits: 3.00

ASL 36100 - The Structure Of American Sign Language I: Phonology And Morphology

Credit Hours: 3.00. Linguistic study of ASL, including the following: phonological features of individual signs (hand shape, orientation, location, movement) and how those features shift when placed in a stream of signs; morphological features of signs, including compounding and lexicalization of fingerspelled words; grammar, focusing on typical word orders found in ASL sentences; meaning of signs and how those meanings have shifted over time (as well as how those meanings shift for particular dialects); and typical pragmatic features of conversation in ASL. Knowledge of ASL is required.

Learning Outcomes: 1. Demonstrate increased vocabulary and grammatical structures necessary to interact with deaf people accurately in ASL. 2. Develop an understanding of the principles of ASL linguistic structure through study of ASL grammar. 3. Articulate the differences between ASL and English grammars. 4. Demonstrate appropriate structure and pragmatics when interacting with deaf and hard of hearing people. 5. Develop an intercultural awareness of the differences between deaf and hearing communities and will learn to adjust their behavior accordingly. Credits: 3.00

ASL 36200 - The Structure Of American Sign Language II: Syntax, Semantics And Language Use

Credit Hours: 3.00. This course introduces students who already have prior knowledge of linguistics (e.g., phonetics, phonology, and morphology) to three areas of study in linguistics: Syntax, Semantics, and language use. Linguistic study of ASL, including the following: Syntax includes units on basic sentence types, lexical categories, word order, time and aspect, verbs, and the function of the spaces. Semantics includes the meanings of individual signs and sentences. Language in Use includes Black ASL, Variation and Historical Change. Bilingualism and language acquisition will be also covered. ASL Discourse has the ways that signed conversations among deaf people differ from speaking conversation of hearing people, why these differences exist, and why they are culturally important. Knowledge of ASL is required.

Learning Outcomes: 1. Compare and differentiate the basic characteristics of signed and spoken languages by text reading. 2.

Identify and describe the structure and use of American Sign Language with attention to sociolinguistic rule concerning ASL in the Deaf community by observing the film resources. 3. Apply linguistic knowledge by comparing, identifying parts and relationships of all languages, spoken and signed. 4. Develop an intercultural awareness of the differences between deaf and hearing communities and will learn to adjust their behavior accordingly. Credits: 3.00

ASL 39000 - Undergraduate Research In American Sign Language

Credit Hours: 3.00. This course is designed to allow for the investigation of topics related to the linguistic structure of ASL, populations of ASL language learners, sub-populations of the Deaf Community at the undergraduate level. Permission of instructor required.

Credits: 3.00

CHNS 10100 - Chinese Level I (UCC: HUM)

Credit Hours: 4.00. A comprehensive course in elementary Mandarin, designed to develop basic proficiency in listening, speaking, reading, and writing. Systematic coverage of syntactical patterns. After oral foundation work, 20 characters are introduced each lesson in unsimplified and simplified forms.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand sentence-length utterances which consist of recombinations of learned elements in a limited number of content areas, particularly if strongly supported by the situational context. 2. Make short statement and ask simple questions, primarily by relying on memorized utterances but occasionally by expanding these through simple recommendations of those elements. 3. Identify a limited number of character components and high-frequency characters in areas of immediate need. 4. Read for instructional and directional purposes, standardized messages, such as some prices in stores, time/date on schedules, etc. 5. Write simple fixed expressions and limited memorized material and some recombination thereof. Credits: 4.00

CHNS 10200 - Chinese Level II (UCC: HUM)

Credit Hours: 4.00. A continuation of the study of elementary Mandarin. Students will complete study of basic syntactical patterns. Character recognition will be built to 500.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Understand sentence-length utterances which consist of recombinations of learned elements in a limited number of content areas, particularly if strongly supported by the situational context. 2. Ask and answer questions, initiate and respond to simple statements and maintain face-to-face conversation. 3. Read, for basic survival and social needs, simple connected specially prepared material and can puzzle out pieces of some authentic material as it reflects similarity to specially prepared material and/or high-frequency oral vocabulary and structure. 4. Read for instructional and directional purposes, standardized messages, such as some prices in stores, time/date on schedules, etc. 5. Meet limited practical writing needs. Credits: 4.00

CHNS 20100 - Chinese Level III (UCC: HUM)

Credit Hours: 4.00. A course in intermediate Mandarin, with integrated spoken and written tracks emphasizing the cultural contexts of usage. Mastery of more advanced syntactic patterns, with enriched vocabulary. Character recognition built to 800. Introduction to Chinese dictionaries.

University Core Curriculum (UCC): (UCC: HUM) Credits: 4.00

CHNS 20200 - Chinese Level IV (UCC: HUM)

Credit Hours: 4.00. A continuation of the study of intermediate Mandarin. Development of enhanced oral narrative skills and listening comprehension skills through audio-visual supplements. Short exercises in expository composition. Character recognition built to 1,100-plus. Introduction to Chinese newspaper.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 4.00

CHNS 24100 - Introduction To The Study Of Chinese Literature (UCC: HUM)

Credit Hours: 3.00. Class reading and discussion of selected Chinese poetry, prose, and drama; introduction to the methods of literary criticism, applied to the reading of Chinese literary discourse. Texts, discussion, and written assignments primarily in Chinese. Permission of instructor required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

CHNS 28000 - Topics In Chinese Civilization And Culture (UCC: HUM)

Credit Hours: 3.00. Selected topics on Chinese civilization and culture including history and geography, Confucianism, contemporary China, education, family, international cultural and economic cooperation. Course materials also cover most current issues on and in Chinese-speaking communities. Lectures in English.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

CHNS 28100 - Introduction To Chinese Food Culture

Credit Hours: 3.00. Selected topics on Chinese food history, production, preparation, festivals, as well as food in literature, film, business and folk beliefs. Discussion will also include civilization and food as cultural diplomacy. Lectures in English.

Learning Outcomes: 1. Knowledge of evolution of Chinese food history. 2. Learn main concepts of Chinese cooking and gastronomy. 3. Acquire appreciation of the important food-related works in Chinese literature. 4. Learn current trend of food culture in China. 5. Acquire appreciation and understand cultural and historical aspects on major Chinese teas, wines, and snacks in association with their respective geographic features; folk beliefs on medicinal usages of Chinese teas and wines; and the etiquette regarding tea art, wine drinking, drinker's wager game, and snack serving. Credits: 3.00

CHNS 28500 - Chinese Calligraphy

Credit Hours: 1.00. Principles and techniques of writing Chinese characters. The aesthetics of Chinese calligraphy, its function as an art form, and its role in Chinese culture. Emphasis on training and practice in calligraphic writing. Conducted in English.

Credits: 1.00

CHNS 30100 - Chinese Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of Chinese speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization from a variety of sources, e.g., newspapers, magazines, television, recent literature, etc.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

CHNS 30200 - Chinese Level VI (UCC: HUM)

Credit Hours: 3.00. Continued development of Chinese speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization from a variety of sources with stronger emphasis on authentic texts, e.g., newspapers, magazines, television, recent literature, etc.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

CHNS 31300 - Reading And Writing Practice

Credit Hours: 3.00. Concentration on further development of reading and writing abilities for students with conversational proficiency, using materials primarily from modern social and cultural studies, including annotated literary texts. Conducted in Chinese.

Credits: 3.00

CHNS 33000 - Introduction To Chinese Cinema (UCC: HUM)

Credit Hours: 3.00. This course surveys the development of the Chinese cinema from its beginning to the present. Films from the mainland as well as Taiwan and Hong Kong will be examined in-depth for their aesthetic quality and techniques, and equally important, against their socio-historical, political, economic and cultural contexts. The class is conducted in English. Films are all in Chinese with English subtitles.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Become familiar with the cinema syntax. 2. Understand the development of Chinese cinema in a global context. 3. Understand modern Chinese society and culture through cinema. 4. Develop a critical

mind over the political, social and cultural issues presented in cinema. Credits: 3.00

CHNS 34100 - Chinese Literature I: Traditional Chinese Literature

Credit Hours: 3.00. Reading and discussion of selected classical Chinese texts from major writers and genres. Introduction to methods of literary criticism as applied to Chinese literature. Texts, discussion, and written assignments are largely in Chinese.

Credits: 3.00

CHNS 34200 - Chinese Literature II: Modern Chinese Literature

Credit Hours: 3.00. Study of selected poetry, drama, and fiction from the twentieth century. Students will read and discuss major authors and texts and will write critical essays on literary topics. Texts, discussion, and written assignments are largely in Chinese.

Credits: 3.00

CHNS 39900 - Special Study Abroad Credit In Chinese

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in Chinese earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

CHNS 40100 - Chinese Level VII (UCC: HUM)

Credit Hours: 3.00. Continued development of Mandarin Chinese speaking, listening, reading, and writing skills. Emphasis will be upon modern, everyday language and culture (with some introduction to traditional culture) using various sources such as textbooks, newspapers, and literary works.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

CHNS 40200 - Chinese Level VIII (UCC: HUM)

Credit Hours: 3.00. Further development of Mandarin Chinese speaking, listening, reading, and writing skills. Materials will include advanced textbooks and original texts such as newspapers and literary works.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

CHNS 49000 - Special Topics In Chinese Language

Credit Hours: 1.00 to 3.00. Topics vary. Permission of instructor required.

Credits: 1.00 to 3.00

CLCS 18100 - Classical World Civilizations (UCC: BSS)

Credit Hours: 3.00. Course introduces students to "Classical" civilizations on three continents (Europe, Africa, and Asia) demonstrably interconnected by an ancient world system. Course focuses on essential themes of past civilization: religion, philosophy, surviving texts, gender relations, urbanism, technology, social and political formations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

CLCS 22000 - Topics In Classical Literature

Credit Hours: 3.00. Selected topics in Greek and Roman literature. All readings in English translation.

Learning Outcomes: 1. Gain a detailed historical understanding of the development of a specific genre or topic within ancient Greek and Roman literature. 2. Ability to appreciate and intelligently discuss major themes in ancient Greek and Roman literature through close reading of representative texts. 3. Ability to identify specific examples of the influence of the ancient Greek and Roman literature on the literature of the later western world. Credits: 3.00

CLCS 23010 - Survey Of Greek Literature In Translation (UCC: HUM)

Credit Hours: 3.00. Introduction to Ancient Greek literature from homer to Plato. All readings in English.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Have broader and more detailed grasp of the history of ancient Greek literature, including the development of specific genres (epic, lyric, choral, tragedy, comedy, historical and philosophical prose); 2. Be able to appreciate the place and role of literature within

the shifting historical, political and social contexts of the ancient Greek world; and 3. Be equipped to trace the influences of ancient Greek literature on the literatures of the later western world. Credits: 3.00

CLCS 23100 - Survey Of Latin Literature (UCC: HUM)

Credit Hours: 3.00. Highlights of literature written in Ancient Rome at times of political, social, and intellectual turbulence. Reading (all in English) includes Vergil's Aeneid, as well as selections from other influential Latin texts.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Have broader and more detailed grasp of the history of ancient Latin literature, including the development of specific genres (epic, lyric, choral, tragedy, comedy, historical and philosophical prose); 2. Be able to appreciate the place and role of literature within the shifting historical, political and social contexts of the ancient Roman world; and 3. Be equipped to trace the influences of Latin literature on the literatures of the later western world. Credits: 3.00

CLCS 23200 - Classical Roots Of English Words (UCC: HUM)

Credit Hours: 3.00. This is an introduction to English etymology with emphasis on building vocabulary. Students will learn English derivatives from both classical Greek and Latin. All texts to be read in English.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

CLCS 23300 - Comparative Mythology (UCC: HUM)

Credit Hours: 3.00. Comparative study of the myths of major ancient cultures, with emphasis on shared typological features.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Have a detailed grasp of principal characters, narratives, and themes in the myths of a number of representative ancient world cultures (Mesopotamian, Egyptian, Celtic, Aztec, Mayan, East Asian, African); 2. Be able to appreciate the many functions of myths within ancient societies, namely to explain natural events, support religious practices, and underwrite social and political power; and 3. Be able to identify recurrent patterns and themes in the myths of historically disparate ancient and modern cultures. Credits: 3.00

CLCS 23400 - Medical And Scientific Terminology From Greek And Latin Roots

Credit Hours: 3.00. Ninety to ninety-five percent of scientific technical vocabulary and medical terminology come from Latin and Greek roots and affixes. This course will enable students in scientific and medical disciplines to develop a foundational core of Greek and Latin roots and affixes from which they will be able to decipher and easily commit to memory the core terminology in the various sciences and medicine.

Learning Outcomes: 1. Know the foundational core of Greek and Latin roots and affixes from which medical and scientific terminology has been derived. 2. Decipher complex and specialized scientific and medical terms based on the knowledge of their Greek and Latin roots. 3. Decipher unfamiliar terminology in their fields by learning how the roots combine dynamically to form words as scientific and medical innovation requires an ever-increasing need for new terms. 4. Enable students to absorb information in their fields more easily by demystifying the complexities of their specialized vocabularies used in their disciplines. Credits: 3.00

CLCS 23500 - Introduction To Classical Mythology (UCC: HUM)

Credit Hours: 3.00. Study of the myths of western antiquity, as represented in ancient Greek and Latin texts and images.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Have a detailed grasp of the principal characters, narratives, and themes of Greek mythology; 2. Be able to appreciate the many functions of myths within ancient Greek society, namely to explain natural events, support religious practices, and underwrite

social and political power; and 3. Be able to identify modern myths and appreciate the role they continue to play within all societies. Credits: 3.00

CLCS 23600 - Ancient World Onscreen

Credit Hours: 3.00. How film represents ancient Mediterranean civilizations and retells ancient myths; how cinematic renderings of ancient history shape views of the past and how these are affected by contemporary sensibilities. No knowledge of Greek or Latin required.

Learning Outcomes: 1. Have a detailed historical grasp of the ways in which the ancient Greek and Roman worlds have found expression in modern cinema; 2. Be able to appreciate how ancient texts fare when translated into the radically different artistic medium of film; and 3. Be able to discuss intelligently what forces influence how we choose to see and represent the ancient western world. Credits: 3.00

CLCS 23700 - Gender And Sexuality In Greek And Roman Antiquity (UCC: HUM)

Credit Hours: 3.00. How identities based on gender, sexual behavior and sexual desire, and socio-economic status are established in ancient Greece and Rome. Exploration of why these ancient views of gender and sexuality remain of continuing importance in the 21st century. All readings in English.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Learn core information about ancient Greek and/or Roman cultures. 2. Learn to analyze gender identities and conventions surrounding sexuality in various communities with different socio-political structures. 3. Develop methods for historically sensitive investigation of materials (literary and/or visual) from ancient cultures. 4. Systematically improve analytical skills as writers, readers, and speakers. Credits: 3.00

CLCS 23800 - The Tragic Vision (UCC: HUM)

Credit Hours: 3.00. Greek and Roman tragedy from their beginnings until today. Readings in English from representative authors such as Aeschylus, Sophocles, Euripides, and Seneca; later receptions of ancient tragedy in drama and other media. Course may include performance, theories of comedy and tragedy, or recent and current expressions of the tragic in film and other media.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Understand a detailed historical development of ancient Greek tragic through close reading of representative samples of the genre. 2. Appreciate and intelligently discuss major themes in Greek tragedy as they relate to both ancient and modern views of what is "tragic". 3. Identify specific examples of the influence of ancient Greek tragedy on the drama of the later western world. Credits: 3.00

CLCS 23900 - The Comic Vision (UCC: HUM)

Credit Hours: 3.00. This course investigates Greek and Roman comedy from their beginnings until today. The course will feature readings in English from representative authors such as Aristophanes, Menander, Plautus, and Terence, as well as later receptions of ancient comedy in drama and other media. This course may include performance, theories of comedy and tragedy, theories of humor, or recent and current expressions of the comic in film and other media.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Have a detailed historical understanding of the development and evolution of ancient Greek and Roman comedy. 2. Be able to appreciate and intelligently discuss major themes in Greek and Roman comedy as they relate to both ancient and modern views of what is "comic" or humorous. 3. Be able to identify specific examples of the influence of ancient Greek and Roman comedy on the drama of the later western world. Credits: 3.00

CLCS 28000 - Topics In Classical Civilization

Credit Hours: 3.00. Selected topics in Ancient Civilization.

Learning Outcomes: 1. Students will have a broader and more detailed grasp of issues that relate to the social, economic, and political institutions that structured ancient communities

throughout Asia Minor and the Mediterranean basin. This will allow them to appreciate the confluences of factors and forces that contribute to the formation of cultures and civilizations in the ancient world. Credits: 3.00

CLCS 33700 - The Ancient Epic

Credit Hours: 3.00. Study of the epic in four ancient cultures, with emphasis on its structure, nature, and social functions. Readings may include Gilgamesh, Iliad, Odyssey, Aeneid, Beowulf, Tain, Mahabharata, and others.

Learning Outcomes: 1. Gain an enhanced understanding of the nature and development of the genre of epic through close reading of representative samples of the genre from different ancient cultures. 2. Ability to appreciate and intelligently discuss major themes in epic as they relate to both ancient and modern views of the heroic. 3. Ability to identify specific examples of the influence of ancient epic on the literature of the later western world. Credits: 3.00

CLCS 38000 - Alexander The Great And Hellenistic World (UCC: HUM)

Credit Hours: 3.00. Course examines the career of Alexander the Great and the rise of Macedonia in the Hellenistic Era. Topics include the emergence of Macedonia under Philip II; the achievements of Alexander the Great; and the wars of succession following his demise.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

CLCS 38100 - Julius Caesar: Statesman, Soldier, Citizen

Credit Hours: 3.00. Course Examines the career of Julius Caesar by focusing on events from Caesar's birth (100 BCE) through his assassination in 44 BCE. Course places Caesar's complex personality within the context of political, military, economic, social, and cultural upheaval during the Late Roman Republic.

Credits: 3.00

CLCS 38300 - The Roman Empire

Credit Hours: 3.00. Course examines developments from the Augustan Settlement to the end of the Roman Empire (27 BCE - 476 CE), along with aspects of religious, social, sexual and material culture throughout the Mediterranean at that time.

Credits: 3.00

CLCS 38400 - Ancient Western Medicine

Credit Hours: 3.00. Historical and cultural study of Western medicine, from Mesopotamian origins to the late Roman Empire, based on written texts and archaeological evidence. Addresses the development of rational medical frameworks against the background traditional beliefs about illness as a sign of demonic possession, and charts the growth of the medical profession from individual avocation to institutional practice.

Learning Outcomes: 1. Summarize the key forces affecting the development of Western medicine from its origins to late antiquity in the form of an extended essay or paper. 2. Create a compelling, original argument that relates habits of rational thinking about the human body in antiquity to the conceptual frameworks used to diagnose its behaviors. 3. Respond critically to a representative medical text from antiquity in a capstone research project. Credits: 3.00

CLCS 38500 - Science, Medicine And Magic In The Ancient West (UCC: HUM)

Credit Hours: 3.00. Study of the development of the idea of rationality in the West through examination of the evolution of Greek and Roman sciences, with emphasis on medicine and astronomy.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a detailed historical understanding of the development of ancient Greek and Roman science, especially medicine and astronomy, against the background of traditional beliefs in magic. 2. Ability to appreciate and intelligently discuss major issues in ancient science as they relate to both ancient and modern views of what is "rational" and "scientific". 3. Ability to identify specific examples of the influence of ancient science on later western scientific theory and practice.
Credits: 3.00

CLCS 38600 - Ancient Greek Religion

Credit Hours: 3.00. Study of the religious beliefs and practices of ancient Greece, based on written, artistic, and archaeological evidence of their forms and functions.

Learning Outcomes: 1. Have a broader and more detailed grasp of belief systems and religious behaviors of the ancient Greek world from the Mycenaean to the Hellenistic period. 2. Be better able to assess the representation of religious experience in other religious traditions with greater historical perspective and methodological sophistication. 3. Be able to express themselves on issues of religion more clearly and with more understanding, both orally and in writing. Credits: 3.00

CLCS 38700 - Roman Religion

Credit Hours: 3.00. Study of the religious beliefs and practices of ancient Rome, based on written, artistic, and archaeological evidence of their forms and functions.

Learning Outcomes: 1. Have a broader and more detailed grasp of belief systems and religious behaviors of the Roman world from the earliest sources to the third century CE. 2. Be better able to assess the representation of religious experience in other religious traditions with greater historical perspective and methodological sophistication. 3. Be able to express themselves on issues of religion more clearly and with more understanding, both orally and in writing. Credits: 3.00

CLCS 48000 - Potters And Society In Antiquity

Credit Hours: 3.00. Course covers the range of eastern Mediterranean ceramics encountered in Rough Cilicia Archaeological Survey Project from the Bronze Age to the Later Roman Empire. Course also explores strategies employed by archaeologists and historians to exploit ceramics as research materials.

Credits: 3.00

CLCS 48100 - Culture And Society In The Age Of Pericles

Credit Hours: 3.00. Course explores interrelationships between the emergence of Greek democracy and the cultural, political, social, and economic rise of Athens in the fifth century BCE. More broadly, course surveys history of the Greek world from the Late Bronze Age to 362 BCE.

Credits: 3.00

CLCS 48300 - Republican Rome

Credit Hours: 3.00. Course examines the military, political, economic, and social developments that enabled the Roman people to expand from an Italian city-state to a trans-Mediterranean empire, and the consequences that initiated the decline and transition in their republican form of government.

Credits: 3.00

CLCS 49900 - Special Topics In Classics

Credit Hours: 1.00 to 4.00. Special Topics in Classics. Permission of instructor required.

Credits: 1.00 to 4.00

CMPL 23000 - Crossing Borders: Introduction To Comparative Literature

Credit Hours: 3.00. (LC 23000) Foundations for comparison of works in different languages, thematic (philosophical, sociological, psychological), and structural (genre, composition, use of linguistic devises); parallel interrelation of theme and structure in works of different literatures. The importance of literary norms and systems of genres. Examination of crosscurrents in different literatures during successive periods of development.

Learning Outcomes: 1. Provide familiarity with the original languages that lie behind English translations of world literature. 2. Relate a particular culture to the larger patterns of world literature to gain an appreciative of cultural diversity and global awareness of class, ethnicity, gender, and race. 3. Provide practical experience in oral communication through class presentations and reports and projects. 4. Provide practical experience in oral communication through class presentations and reports and projects. 5. Provide appropriate level practice in information literacy related to

the study of comparative literature, including researching source materials, research methodologies, and intellectual approaches. Credits: 3.00

CMPL 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (LC 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

CMPL 26600 - World Literature: From The Beginnings To 1700 A D (UCC: HUM)

Credit Hours: 3.00. (ENGL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

CMPL 26700 - World Literature: From 1700 A D To The Present (UCC: HUM)

Credit Hours: 3.00. (ENGL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

CMPL 33000 - International Cinema

Credit Hours: 3.00. This course is designed to develop students' seeing, reading, speaking, writing, and critical thinking skills, and especially to improve visual competency, awareness of visual culture, and knowledge of selected international cinema. All films will be shown with English subtitles.

Learning Outcomes: 1. Explain and assess different ways of seeing as an introduction to understanding visual theory. 2. Demonstrate understanding of the concepts and techniques of cinematography, processing, and reading images and film. 3. Recognize, select, and justify choices for seeing and interpreting the visual. 4. Identify and analyze culturally-conditioned references. Credits: 3.00

CMPL 49000 - Special Topics In Comparative Literature

Credit Hours: 3.00. Topics vary from section to section.

Learning Outcomes: 1. Vary due to nature of the course. Credits: 3.00

FR 10100 - French Level I (UCC: HUM)

Credit Hours: 3.00. A beginning French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. Permission of department

required. CTL:IWL 1901 French Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain and produce biographical information about themselves and others in the French language. 2. Identify necessary information by asking questions about people and things in the French language. 3. Solve a simple survival situation such as ordering food and beverages in the French language. 4. Compose with language by combining learned elements in the French language. Credits: 3.00

FR 10200 - French Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 10100 . CTL:IWL 1902 French Level II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 10500 - Accelerated Basic French (UCC: HUM)

Credit Hours: 3.00. This is an accelerated beginning-level course designed to develop language proficiency in French. The course will help students progress toward competence in speaking, listening, reading, and writing, as well as toward knowledge of French and Francophone cultures. The course focuses on active language use. Students will interact meaningfully with classmates and develop communicative strategies. Course will be taught in French. Permission of Department required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of French language in specific contexts by reading French texts. 2. Identify appropriate use of French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French sentences by focusing on a set of grammatical rules and standards in the language. 4. Produce sentences in spoken French in the form of dialogues and presentations. Credits: 3.00

FR 11200 - Elementary French Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice to enhance communicative competence. Small group discussions in French on practical topics.

Learning Outcomes: 1. Develop elementary listening skills and improve oral French proficiency. 2. Acquire elementary vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in French. Credits: 1.00

FR 20100 - French Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1903 French Level III

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 20200 - French Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 20100 . CTL:IWL 1904 French Level IV

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 20500 - Accelerated Intermediate French (UCC: HUM)

Credit Hours: 3.00. This course is an accelerated intermediate-level course designed to develop language proficiency in French. The course will help students progress toward competence in speaking, listening, reading and writing, as well as toward knowledge of French and Francophone cultures. The course focuses on active language use. Students will interact meaningfully with classmates and develop communicative strategies. Course will be taught in French.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of French language in specific contexts by reading French texts. 2. Identify appropriate use of French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French sentences by focusing on a set of grammatical rules and standards in the language. 4. Produce sentences in spoken French in the form of

dialogues and presentations. Credits: 3.00

FR 21200 - Intermediate French Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in French on practical topics. Not open to students enrolled in or having credit for FR 30100 or above.

Learning Outcomes: 1. Develop intermediate listening skills and improve oral French proficiency. 2. Acquire intermediate vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in French. Credits: 1.00

FR 22400 - Professional French I

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills will be developed toward use of French for business purposes. Course materials cover daily business dealings as well as national and international trade.

Learning Outcomes: 1. Discuss the main aspects of the French professional world (hierarchy, professional versus personal relationships, etc.). 2. Accomplish simple administrative tasks in French such as give/answer a phone call, make an appointment. 3. Behave appropriately in a French professional context. Credits: 3.00

FR 23000 - French Literature In Translation

Credit Hours: 3.00. Reading and analysis of selected French writers and their works, with particular emphasis on the social, political, and intellectual climate of their times. The course content will change from semester to semester. Knowledge of French not required.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French.

Credits: 3.00

FR 28000 - Second-Year French: Special Topics

Credit Hours: 3.00. Selected topics on the civilization, culture, and literature of France. Lectures and readings primarily in English, but knowledge of French at the first-year level necessary.

Credits: 3.00

FR 30100 - French Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Analyze French language in specific contexts by reading French texts. 2. Analyze French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French texts by focusing on a set of grammatical rules and standards in the language. 4. Produce extended discourse in spoken French in the form of dialogues and presentations. 5. Compare and contrast French culture with other cultures through interaction with French oral and written texts. Credits: 3.00

FR 30200 - French Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

FR 31200 - Advanced French Conversation

Credit Hours: 1.00. One credit hour advanced French conversation focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative

competence. Discussions in French on various topics. Course may be taken concurrently with FR 30100, 30200, 40100 or 40200.

Learning Outcomes: 1. Develop advanced listening skills and improve oral French proficiency. 2. Acquire advanced vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss assigned materials in French.

Credits: 1.00

FR 32300 - French For Engineering

Credit Hours: 3.00. This course is an intermediate/advanced French course emphasizing vocabulary and structures necessary for communication within the context of the working world. In this course, students will further develop their speaking, listening, reading, and writing abilities through the study of specialized vocabulary from the engineering and technology sciences. Conducted in French.

Learning Outcomes: 1. Understand, explain, and apply a broad range of vocabulary related to engineering and technology. 2. Read, understand, and analyze specific engineering and technical topics in French. 3. Describe particular engineering problems in simple terms.

Credits: 3.00

FR 32400 - Professional French II

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills at an intermediate level will be developed toward the use of French for business purposes. Course materials cover daily business dealing as well as national and international trade.

Learning Outcomes: 1. Discuss specific aspects of the French professional world, such as the role of the French government in the economy. 2. Accomplish administrative tasks in French (write a professional letter, reports, etc.). 3. Behave appropriately in a French professional context. Credits: 3.00

FR 33000 - French Cinema (UCC: HUM)

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. Credit Hours: 3.00. Reading of selected poetry, prose, and theatre of France from the Middle Ages through the Enlightenment in historical and cultural context. Readings, discussion, and papers in French.

Credits: 3.00

FR 34200 - French Literature II: The 19th And 20th Centuries

Credit Hours: 3.00. Reading of selected French poetry, novels, theatre, and short fiction of the 19th and 20th centuries in historical and cultural context. Readings, discussion, and papers in French.

Credits: 3.00

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 39400 - Special Topics In French Literature

Credit Hours: 3.00. Studies a particular aspect in French literature (e.g., theme, device, character type, motif, place) by reading a varied selection of works of different genres, styles and/or periods. Readings, discussion, and papers in French.

Credits: 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

FR 39900 - Special Study Abroad Credit In French

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in French earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

FR 40100 - French Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of French speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 40200 - French Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in French. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FR 41200 - Advanced French Conversation II

Credit Hours: 1.00. This course is designed to help students build advanced listening skills and oral proficiency in French through classroom discussions. Students will be expected to actively participate in classroom discussions, prepare for class, and utilize the target language only. No textbook is needed.

Learning Outcomes: 1. Build French speaking and comprehension skills through classroom discussions. 2. Explain and assess relevant texts and audio materials in the target language. 3. Formulate ideas based on texts and audio materials as expressed in written and oral French. Credits: 1.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Discuss the main aspects of the French professional world, notably the role of the French government. 2. Present professional interests verbally and in writing (such as conduct and have a job interview, compose resume and write a cover letter to answer a specific job offer). 3. Accomplish simple administrative tasks in French (write a professional letter, give/answer a phone call, make an appointment, etc.). 4. Behave appropriately in a French professional context. Credits: 3.00

FR 44300 - Introduction To Francophone Literature

Credit Hours: 3.00. The study of the most representative Francophone poets, playwrights, and novelists from various countries, such as Leopold Senghor, Aime Cesaire, Jacques Romain, Gabrielle Roy, Michel Tremblay, Mohamed Dib.

Credits: 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

FR 49100 - Special Topics In French

Credit Hours: 1.00 to 4.00. This course will be offered as a guided reading or independent study course on a topic of mutual interest in French or Francophone literature, culture, film, or linguistics, to the student and faculty. Permission of instructor required.

Learning Outcomes: 1. Learning objectives will vary due to the nature of the course. Credits: 1.00 to 4.00

GER 10100 - German Level I (UCC: HUM)

Credit Hours: 3.00. A beginning course in German reserved exclusively for students who have had less than two years of German at the ninth-grade level or above. Students with two years or more of previous German study may not take this course for credit. Permission of department required. CTL:IWL

1920 German Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos of spoken German. 4. Compose German sentences by focusing on the set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

GER 10200 - German Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 10100 . CTL:IWL 1921 German Level II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 10500 - Accelerated Basic German (UCC: HUM)

Credit Hours: 4.00. This course is a first-year course in German, which covers two semesters in one. The course is appropriate for students who would like to accelerate the process of learning German, including GEARE students, graduate students, and others. The course will be conducted primarily in German and will use all modes of communication: interpersonal, presentational, and interpretive. The course book facilitates learning in context through the use of an integrated video program. The students are trained in the audio-visual interpretive mode of communication that is essential to carry out daily activities in Germany, and to be able to read and react to a variety of German texts.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading a variety of German texts and by listening to audio recordings of spoken German. 2. Identify German cultural aspects by watching videos in spoken German language integrated in the book. 3. Compose German sentences by focusing on a set of grammatical rules and standards in the language. 4. Produce sentences in spoken German in the form of dialogues and presentations and respond appropriately to questions and statements related to everyday life. Credits: 4.00

GER 11200 - Elementary German Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in conversation to enhance communicative competence. Small group discussions in German on various topics.

Learning Outcomes: 1. Develop listening skills and improve oral German proficiency. 2. Acquire new vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen to and discuss relevant texts in the target language. Credits: 1.00

GER 20100 - German Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate German course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts, and listening to audio recordings, and watching videos of spoken German. 2. Compose German sentences by focusing on a set of grammatical rules and standards in the language. 3. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

GER 20200 - German Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 20100 . CTL:IWL 1923 German Level IV

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 20500 - Accelerated Intermediate German (UCC: HUM)

Credit Hours: 4.00. An accelerated intermediate level course in German designed to achieve second year language proficiency

in German. The course is appropriate for students who would like to accelerate the process of learning German.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading a variety of German texts. 2. Identify German cultural aspects by watching videos in spoken German language integrated in the book. 3. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 4. Compose grammatically correct German sentences by observing the norms and standards of the language. 5. Produce sentences in spoken German in the form of dialogues and presentations and respond appropriately to questions and statements related to everyday life. Credits: 4.00

GER 21200 - Intermediate German Conversation

Credit Hours: 1.00. Development of oral skills for self-expression. Guided practice in German conversation to enhance communicative competence. Small group discussions in German on various topics. Not open to students enrolled in or having credit for GER 30100 or above.

Learning Outcomes: 1. Develop intermediate listening skills and improve oral German proficiency. 2. Acquire new vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen, and discuss relevant intermediate texts in the target language. Credits: 1.00

GER 22300 - German Level IV: Science And Engineering

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills, directed toward use of German in science and technology. Work on grammar as needed. Use of materials from recent publications in science and technology. Introduction to general and technical vocabulary. Conducted primarily in German. Credit will not be given for both GER 20200 and 22300.

Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts about science, engineering, and business. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings about science, engineering, and business in spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos about science, engineering, and business in spoken German. 4. Compose German sentences about science, engineering, and business by focusing on a set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations that deal with science, engineering, and business. Credits: 3.00

GER 22400 - German Level IV: Business German

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed toward use of German for business purposes. Work on grammar as needed. Course materials cover daily business dealings as well as national and international trade, living conditions, environmental and social problems.

Credits: 3.00

GER 23000 - German Literature In Translation (UCC: HUM)

Credit Hours: 3.00. Reading and analysis of selected German writers and their works, with particular emphasis on the social, political, and intellectual climate of the times. The course content will change from semester to semester. Knowledge of German not required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German.

Credit Hours: 3.00. Reading and discussion of selected texts in German with the dual context of literary movements and historical developments between the 18th and 21st centuries.

Credits: 3.00

GER 39900 - Special Study Abroad Credit In German

Credit Hours: 1.00 to 4.00. This course number is for assignment after the fact of credits in German earned while enrolled at a foreign university on a Study Abroad program which cannot be appropriately accommodated under an established Purdue course number. It is not for use for courses offered at or conducted by Purdue.

Credits: 1.00 to 4.00

GER 40100 - German Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of German speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Germany. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 40200 - German Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in German. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Compose essays in German after reading authentic German articles and books. 2. Discuss current events in German based on print and media sources from German-speaking countries. 3. Formulate arguments during debate in German through group discussion. 4. State their opinions in German on recordings, television shows, and texts. 5. Describe information in German from graphs, charts, diagrams, and pictures. Credits: 3.00

GER 42400 - Business German

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Learn and practice vocabulary and cultural knowledge that is applicable to business situations in German-speaking countries. 2. Compare business practices in German-speaking countries with those in the United States, and will be able to discuss the similarities and differences in German. Credits: 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with

special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 49800 - Advanced Topics In German

Credit Hours: 3.00. Special topics on literature, linguistics and culture of contemporary German-speaking countries. Conducted in German.

Credits: 3.00

GREK 10100 - Ancient Greek Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to the grammar of Attic Greek of the Classical period, and first forays into the reading of connected prose. Emphasis on accidence, syntax, and vocabulary building.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain foundational Ancient Greek grammar and demonstrate familiarity with core vocabulary. 2. Bring together their knowledge of Ancient Greek grammar and vocabulary, creating clear English translations by analyzing basic texts adapted from Ancient Greek literature. 3. Apply this knowledge of grammar and vocabulary to writing simple sentences in Ancient Greek, and translating from English to Ancient Greek. Credits: 3.00

GREK 10200 - Ancient Greek Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of the study of Attic Greek grammar and reading of connected prose of the Classical period.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Learn basics of reading and translating ancient Greek, completing their introduction to core vocabulary, grammar, and syntax. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending their vocabulary through etymological connections. Credits: 3.00

GREK 10500 - Accelerated Introductory Ancient Greek

Credit Hours: 4.00. This course is an accelerated beginning-level course designed to develop language proficiency in Ancient Greek. The course will help students progress toward competence in reading and writing, as well as toward knowledge of Ancient Greek culture. The course focuses on developing deep understanding of Greek syntax and morphology and building strategies for fluent and accurate reading of ancient texts. Primary language of instruction is English.

Learning Outcomes: 1. Differentiate the syntactic structures used in Ancient Greek sentences and longer texts based on the study of model sentences. 2. Compose sentences in Ancient Greek by focusing on a set of grammatical rules and standards in the language. 3. Recite Ancient Greek aloud with accuracy and fluency and demonstrate their ability in in-class text readings and recordings. 4. Infer the meaning of unknown vocabulary in context by reading stories. 5. Identify and analyze grammatical forms in the Greek contexts in which they are used. 6. Generate smooth-flowing and elegant English translations of the Greek, attending to inherent differences in style and structure. Credits: 4.00

GREK 20100 - Ancient Greek Level III (UCC: HUM)

Credit Hours: 3.00. Intermediate reading course in New Testament Greek, designed to strengthen students' grasp of grammar and syntax, broaden vocabulary, and develop skills in reading and translation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Learn how to apply foundational knowledge of ancient Greek grammar and syntax to readings in the New Testament. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending vocabulary through etymological connections. Credits: 3.00

GREK 20200 - Ancient Greek Level IV (UCC: HUM)

Credit Hours: 3.00. Upper intermediate reading course in ancient Greek, designed to consolidate students' knowledge of grammar and syntax, broaden vocabulary, and develop precision and confidence in reading and translation.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Reinforce and extend skills as readers and translators by studying archaic, classical or post-classical Greek literature. 2. Improve understanding of English through increased sensitivity to grammatical structures and stylistic choices and by extending vocabulary through etymological connections. Credits: 3.00

GREK 34300 - Greek Oratory

Credit Hours: 3.00. A study of ancient Greek (Attic) orators from textual, historical, and social perspectives.

Credits: 3.00

GREK 34400 - Greek Epic

Credit Hours: 3.00. Readings and discussion of the Greek epic, including selected passages from Homer and Hesiod.

Credits: 3.00

GREK 35300 - Greek Tragedy

Credit Hours: 3.00. Reading and discussion of selected Greek tragedies of the 5th century BCE.

Credits: 3.00

GREK 35400 - Greek Comedy

Credit Hours: 3.00. Readings and discussion of selected Greek comedies of the 4th and 5th centuries BCE.

Credits: 3.00

GREK 44600 - Greek Historians

Credit Hours: 3.00. A study of the writings of the classical historians in the original Greek.

Credits: 3.00

GREK 49000 - Directed Reading In Classical Greek

Credit Hours: 1.00 to 3.00. Directs the reading of students with special interests. Guides students in profitable reading in subjects of their own choice. Permission of instructor required.

Credits: 1.00 to 3.00

HEBR 10100 - Modern Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. Introduction to Modern Hebrew: the writing and sound systems, and systematic presentation of basic structures. All language skills - reading, writing, speaking, and comprehension - are emphasized. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 10200 - Modern Hebrew II (UCC: HUM)

Credit Hours: 3.00. Continuation and extension of the first semester. The course aims to develop fluency in reading, comprehension, and spoken language. Knowledge of grammar and vocabulary is expanded.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 12100 - Biblical Hebrew Level I (UCC: HUM)

Credit Hours: 3.00. The first semester of biblical Hebrew will present the basic elements of the language, including alphabet, vocabulary, and grammar. No previous knowledge of Hebrew required.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 12200 - Biblical Hebrew Level II (UCC: HUM)

Credit Hours: 3.00. The second semester of biblical Hebrew will continue the study of reading, vocabulary and grammar, based on selections from the Hebrew Bible.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HEBR 20100 - Modern Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking,

and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading both in the modern language.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 20200 - Modern Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. Extensive practice in reading, speaking, and writing Hebrew, based on a variety of subjects from daily life and literature. Continued study of grammar and reading in the modern language.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 22100 - Biblical Hebrew Level III (UCC: HUM)

Credit Hours: 3.00. The third semester of biblical Hebrew focuses on reading and translation of extended passages form the Pentateuch and the use of textual criticism.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 22200 - Biblical Hebrew Level IV (UCC: HUM)

Credit Hours: 3.00. The fourth semester of biblical Hebrew exposes the student to both narrative and poetic sections of the Bible.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HEBR 28400 - Ancient Near Eastern History And Culture
