University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking

about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

16-22 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult

conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive,

explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related careers. Credits: 1.00

15-17 Credits

Fall 2nd Year

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in

markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

13-16 Credits

Spring 2nd Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the

determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work. University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

Major Requirements (29 credits)

Required Major Courses (26 credits)

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson,

Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic

costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an

audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related careers. Credits: 1.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

Cultural Competency (3 credits)

Economics Concentration: Mathematical Economics (29-31 credits)

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three

dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 34100 - Foundations Of Analysis

Credit Hours: 3.00. An introductory course in rigorous analysis, covering real numbers, sequences, series, continuous functions, differentiation, and Riemann integration. MA 30100 is helpful but not required.

Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 36200 - Topics In Vector Calculus

Credit Hours: 3.00. Multivariate calculus; partial differentiation; implicit function theorems and transformations; line and surface integrals; vector fields; theorems of Gauss, Green, and Stokes. Credit granted for only one of MA 36200 and MA 51000 .

Credits: 3.00

MA 36600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 4.00. An introduction to ordinary differential equations with emphasis on problem solving and applications. The one-hour computer lab will give students an opportunity for hands-on experience with both the theory and applications of the subject.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the statement of the theorem of existence and uniqueness of solutions of first order differential equations and standard methods of solving linear, and some special non-linear, differential equations of first order. 2. Interpret solutions qualitatively. 3. Learn how to construct mathematical models. 4. Learn the standard methods of solving linear homogenous differential equations of constant coefficients of arbitrary order. 5. Learn methods to solve nonhomogeneous differential equations of constant coefficients of arbitrary order. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how they apply to systems of linear differential equations. 9. Learn how to analyze systems of nonlinear differential equations (optional). 10. Learn Laplace transforms and their applications to differential

equations (optional). Credits: 4.00

ECON 45100 - Game Theory

Credit Hours: 3.00. In the course, economic, political, and social interactions are represented as games, in which strategies and resulting outcomes can be analyzed. The analysis of these interactions is then used to demonstrate how one can make optimal decisions under uncertainty. This course uses Calculus.

Learning Outcomes: 1. Model strategic interactions as a game. 2. Describe behavior in games using strategies. 3. Calculate the Nash equilibrium of a game. 4. Predict behavior in different games. 5. Explain the role of uncertainty in strategic interactions. Credits: 3.00

Other Departmental Requirements (17-29 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research

and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of

differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting

materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Electives (31-45 credits)

Optional Concentrations for Daniels School of Business

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of

functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data

displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at

least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

16-22 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-

audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)
Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications.
Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the

historical, and the contemporary. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related careers. Credits: 1.00

15-17 Credits

Fall 2nd Year

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits:

5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

14-18 Credits

Spring 2nd Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a

variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis,

Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

Required Major Courses (26 credits)

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business

documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in

labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using

AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related careers. Credits: 1.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific

business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

Cultural Competency (3 credits)

Economics Concentration: Quantitative Economics & Data Analytics (24 credits)

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 42110 - Marketing Analytics

Credit Hours: 3.00. This course covers essential decision models and strategic metrics that form the cornerstone of marketing analytics. Using the insight gained in the course, students can predict the outcome of marketing plans to boost return on marketing investment (ROMI). The course emphasizes hands-on learning so students can immediately apply the econometric tools and techniques on a variety of marketing applications. A number of relevant topics are discussed, such as market sizing, forecasting and positioning, promotion budget allocation, and profit maximization. The final piece of this course is guiding the students on how best to craft data-driven presentations to key stakeholders through the use of an experiential learning project provided by an external client.

Learning Outcomes: 1. Enhance the student's knowledge on Advanced Modeling Techniques, such as how and when to apply Logistic Regression, Logit, Multinomial Logit, Ordinal Logit, and Tobit. 2. Showcase situations across a variety of marketing topics (pricing, sales, advertising, new product development, etc.) where analytical methods can bring greater insight to the marketing practitioner. 3. Apply the above information to a real-world consulting project and deliver not only managerial insights, but also a data-driven presentation. Credits: 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests.

Learning Outcomes: 1. Generate a valid predictive analytics solution by following a structured process. 2. Demonstrate practical understanding of frequently used predictive analytics techniques. 3. Demonstrate a working knowledge of RStudio and SAS Enterprise Miner to build an access predictive models. 4. Demonstrate project poster and presentation of

a predictive analytics solution to a business problem. Credits: 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks.

Learning Outcomes: 1. Demonstrate working knowledge of relationship databases, SQL queries, and efficient sampling. 2. Demonstrate working knowledge of RStudio to perform EDA, visualization, and data mining techniques. 3. Demonstrate working knowledge of data visualization and exploration using Tableau. 4. Demonstrate practical understanding of popular unsupervised and supervised learning methods. Credits: 3.00

MGMT 47900 - Data Visualization

Credit Hours: 2.00 or 3.00. This course is an introduction to the techniques and algorithms for creating effective data visualization. Visualizations are graphical depictions of data that can improve comprehension, communication, and decision making. This course emphasizes application in business settings where visual representation methods that are covered in this course will improve our understanding of complex data and models. We focus in particular on pattern identification, difference and trends in data sets across categories, space, and time. In addition to participating in in-class discussions, students will have sufficient hands-on experience with the tools and techniques covered in this course. Students will be expected to complete several short programming and data analysis assignments. Students will also have an opportunity to work as groups on a final project. Permission of department required.

Learning Outcomes: 1. Understand the key techniques and theory used in visualization, including data models and graphical perception. 2. Apply perception and cognition principles in visualization. 3. Become familiar with a large number of data visualization tools. 4. Transform large database for visual displays using various representation techniques. 5. Critique various visualization representation and interaction techniques. 6. Read and discuss research papers from the visualization literatures. Credits: 2.00 or 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

ECON 37300 - Computational Economics

Credit Hours: 3.00. The main goal of this course is to introduce economics students to the computation, programming, and data analysis in Python. In the first part of the course, we will cover basic programming techniques and the use of popular Python packages for data analysis. In the second part of the course, we will consider more advanced programming techniques including numerical methods, dynamic programming, and simulation-based methods. Throughout the course we will consider a number applications related to microeconomics, macroeconomics, and econometrics covered in the Economics program curriculum.

Learning Outcomes: 1. Have a working knowledge of programming techniques in Python. 2. Use scientific computing packages to analyze economic data. 3. Possess an understanding of numerical methods used to solve economic models. 4. Use visualization tools to communicate computational results. Credits: 3.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a

strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

ECON 46300 - Advanced Data Analysis And Machine Learning

Credit Hours: 3.00. This is an advanced applied econometrics course that introduces students to a variety of techniques and methods for the empirical study of economic data. This course focuses on the practical aspects of economic data analysis, including data organization (such as merging and appending datasets) and the implementation of econometric models. This course will cover multivaraite linear regression, non-linear least squares, models for binary and categorical outcomes, model selection using machine learning, and panel data models. As part of the course, students will learn to conduct empirical analysis of economic data using Stata, a statistical software package.

Learning Outcomes: 1. Explore and organize economic data. 2. Apply a variety of econometric techniques including: multivariate linear regression, non-linear least squares, models for binary outcomes (including logit and probit models), and models for panel data (including linear random effects and fixed effects models). 3. Understand the fundamentals of machine learning and use machine learning for model selection. 4. Interpret and critique the results from econometric estimations. Credits: 3.00

Other Departmental Requirements (17-29 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)

Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: Will update at a later date.

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts;

critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of

functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative

literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Electives (38-50 credits)

Optional Concentrations for School of Business

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie

statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative

literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

ECON 26000 - Data Visualization And Inference

1. Describe and analyze statistical data in an economics context.
2. Build probability models of continuous and discrete random variables to analyze economic and business situations.
3. Estimate the value of an unknown population parameter and assess the reliability of the estimate using confidence intervals as well as hypothesis testing.
4. Identify the advantages as well as the limitations of statistics in the process of making real-world business and economic decisions.
5. Use STATA to compute probability models and interpret the results of the statistical analysis to draw conclusions from economic and business data.

Learning Outcomes: 1. Develop a working knowledge of data production and interpretation in an economics context. 2. Illustrate the fundamental interconnectedness of economics and data. 3. Introduce the basic concepts in statistics needed for further study of econometrics. Credits: 3.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

16-22 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential

elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative

literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

ECON 10500 - Exploring Careers In Business Economics And Consulting

Credit Hours: 1.00. Careers in economics are far more diverse than you might expect. This course introduces students to a wide range of career opportunities within the field of economics, while also emphasizing its value for those pursuing other majors. Through interactive sessions featuring guest speakers and alumni networking opportunities, students will explore various career paths and identify the skills and experiences necessary for a successful career in economics. Each session delves into essential themes, including critical skills for business economics and consulting, insights into economics-related career opportunities, and real-world advice from industry professionals.

Learning Outcomes: 1. Distinguish the wide range of career opportunities within economics and related fields, recognizing the profession's versatility and applicability to various industries. 2. Identify the key skills and competencies essential for success in business economics, consulting, and other economics-related career paths. 3. Recognize how economics principles apply to different roles and industries, including consulting, business strategy, and policy-making. 4. Engage effectively with alumni and professionals, leveraging networking opportunities to gain insights into real-world applications of economics and potential career trajectories. 5. Formulate a personalized strategy to build their academic and professional experiences, preparing for a successful transition into economics-related careers. Credits: 1.00

15-17 Credits

Fall 2nd Year

ECON 34000 - Intermediate Microeconomic Theory

Credit Hours: 3.00. This course provides students with the techniques needed to model and analyze the behavior of

individual economic agents. It introduces a variety of techniques that will allow students to solve business problems and make informed personal economic decisions. The course covers topics from consumer behavior and demand, decisions under uncertainty, production and cost, factor demand, market structure, pricing strategies, and strategic behavior. This is an upper-division economics course required for all economics majors and it serves as a foundation for higher level elective courses in economics.

Learning Outcomes: 1. Analyze the means by which individuals and firms make rational choices when demanding and supplying goods and services. 2. Describe the equilibrium outcomes of individuals and firms interacting in markets. 3. Evaluate market outcomes in terms of economic efficiency. 4. Practice analytical and quantitative reasoning skills. 5. Identify and describe the management and pricing strategies of competitive, monopolistic, monopsonistic, and oligopolistic firms. Credits: 3.00

ECON 37300 - Computational Economics

Credit Hours: 3.00. The main goal of this course is to introduce economics students to the computation, programming, and data analysis in Python. In the first part of the course, we will cover basic programming techniques and the use of popular Python packages for data analysis. In the second part of the course, we will consider more advanced programming techniques including numerical methods, dynamic programming, and simulation-based methods. Throughout the course we will consider a number applications related to microeconomics, macroeconomics, and econometrics covered in the Economics program curriculum.

Learning Outcomes: 1. Have a working knowledge of programming techniques in Python. 2. Use scientific computing packages to analyze economic data. 3. Possess an understanding of numerical methods used to solve economic models. 4. Use visualization tools to communicate computational results. Credits: 3.00

13-16 Credits

Spring 2nd Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical

techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 35200 - Intermediate Macroeconomics

Credit Hours: 3.00. This course offers a rigorous introduction to macroeconomic theory and empirics with real-world applications. We examine longstanding stylized facts about long-run economic growth, short-run economic fluctuations (booms and recessions), and the aggregate effects of government policy. We study determinants of equilibrium in labor, consumption, investment, and money markets as well as the role of fiscal and monetary policies in closed and open economies.

Learning Outcomes: 1. Provide students with a framework for analyzing different macroeconomic questions related to the determination of income, consumption, employment, inflation, interest rates, and exchange rates. 2. Develop analytical skills to understand and apply macroeconomic concepts and theories to real world phenomena and policies. Credits: 3.00

ECON 46300 - Advanced Data Analysis And Machine Learning

Credit Hours: 3.00. This is an advanced applied econometrics course that introduces students to a variety of techniques and methods for the empirical study of economic data. This course focuses on the practical aspects of economic data analysis, including data organization (such as merging and appending datasets) and the implementation of econometric models. This course will cover multivaraite linear regression, non-linear least squares, models for binary and categorical outcomes, model selection using machine learning, and panel data models. As part of the course, students will learn to conduct empirical analysis of economic data using Stata, a statistical software package.

Learning Outcomes: 1. Explore and organize economic data. 2. Apply a variety of econometric techniques including: multivariate linear regression, non-linear least squares, models for binary outcomes (including logit and probit models), and models for panel data (including linear random effects and fixed effects models). 3. Understand the fundamentals of machine learning and use machine learning for model selection. 4. Interpret and critique the results from econometric estimations. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify

best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. About the Program

Degree Requirements

Departmental/Program Major Courses (55 credits)

Required Major Courses (55 credits)

ECET 17700 - Data Acquisition And Systems Control

Credit Hours: 3.00. Fundamental electrical parameters and measurement techniques are introduced. These are then applied to implementing power interfaces, actuators and sensors. Modules that provide signal conditioning, data conversion, filtering and controllers are evaluated. A full, closed loop control system is built and evaluated.

Learning Outcomes: 1. Make laboratory measurements using digital multi-meters, oscilloscopes, and a microcomputer. 2. Implement and evaluate the performance of each of the following elements at the module level while calculating key circuit parameters: Switching and linear power interfaces; Light, sound, motion, and temperature actuators and sensors; Amplifiers, signal conversion, and filters. On/off, linear, and computer controllers. 3. Evaluate the static and the dynamic performance of a closed loop system constructed of the elements from items 1 and 2 above. Credits: 3.00

ECET 17900 - Introduction To Digital Systems

Credit Hours: 3.00. This course introduces computing systems and defines the major classes of computing devices. Sequential and concurrent operations, along with logic and control structures, are covered. Knowledge of fundamental computing principles is discovered. Common software tools are used to create, test, and debug systems. Systems are constructed from standard blocks with a focus on subsystem operation and performance, troubleshooting/debugging and testing. Common

applications of embedded systems are introduced.

Learning Outcomes: 1. Develop and utilize algorithms and flowcharts to create microcontroller applications to solve a given problem. 2. Apply the fundamental control structures and logic operations to control program flow within microcontroller applications. 3. Demonstrate the ability to convert numbers between number systems (bases) and compute arithmetic operations within microcontroller applications. 4. Utilize the primary tools used to create, test, and debug computing system hardware and software components. 5. Construct electronic hardware systems to solve a given microcontroller problem. Credits: 3.00

ECET 22700 - DC And Pulse Electronics

Credit Hours: 3.00. Capacitors, inductors, oscillators, rectifiers, bipolar and MOSFET power switches, switching power supplies, half-and full-H bridges, switching audio power amplifiers, and linear regulators are studied. Computer-aided analysis of circuits is utilized.

Learning Outcomes: 1. Explain the characteristics of capacitors, inductors, rectifier diodes, Zener diodes, IC regulators, bipolar junction transistors (BJTs), field effect transistors (MOSFETS), and general purpose operational amplifiers. 2. Apply the principles of circuit analysis to the following: switching and linear power supplies, op-amp based amplifiers, BJT and MOSFET switches, Class D amplifier, wave shape generators, RC and RL circuits. 3. Simulate circuits and compare actual data to simulated data. 4. Construct electronic circuit according to a given schematic. 5. Measure electrical parameters, using digital multimeters, signal generators, and oscilloscopes. 6. Interpret laboratory experiment data. Credits: 3.00

ECET 22900 - Concurrent Digital Systems

Credit Hours: 3.00. This course establishes a foundation for concurrent digital systems. Common methods of describing digital circuit operation are studied along with the techniques for translation between any two methods. Basic building blocks of digital systems are defined and applied. Analysis techniques for combinational and sequential logic circuits or subsystems are covered. Computer-based development tools, programmable logic devices, and technical reference sources are used to build, test, and evaluate digital systems.

Learning Outcomes: 1. Translate between any two forms of logic circuit descriptions: English, Boolean equation, Truth Table, Logic Diagram, Timing Diagram, Hardware Description language. 2. Anticipate the output of functional blocks given the current inputs or a recent event. 3. Validate the operation of any logic circuit using the simulator, Function generator, oscilloscope or DVM. Credits: 3.00

ECET 27000 - Electronics Prototype Development And Construction

Credit Hours: 3.00. This course introduces project planning and basic concepts in electronic design automation (EDA). The student develops a portion of an electronic system by utilization of EDA, design for testing, design for manufacturability (DFM), and component selection techniques. New construction methods and testing techniques are introduced.

Learning Outcomes: 1. Design an electronic device or system to accomplish a given task. 2. Demonstrate appropriate electronic assembly techniques. 3. Develop and execute appropriate testing techniques on electronic devices and systems. 4. Apply appropriate software applications to develop a prototype. 5. Apply graphical communication techniques to convey technical information. 6. Apply principles of design for manufacturability and design for testing to a project. 7. Employ teaming methods on a project. Credits: 3.00

ECET 27400 - Wireless Communications

Credit Hours: 3.00. The theory and techniques of wirelessly sending information (voice, music, data) from one location to another is studies from a systems point of view. This includes a signal analysis, modulation techniques, transmitters, receivers, low noise amplifiers, and filters in the RF frequency spectrum. In addition, special topics of current interest are introduced. This course incorporated a student-based communication design and analysis laboratory.

Learning Outcomes: 1. Perform power calculations, such as dB, dBm, dBuV. 2. Describe, identify and apply Fourier concepts communication signals and systems, such as wave shapes, signal mixing, carrier waves. 3. Evaluate, describe and calculate the effects of noise on communication circuits and systems. 4. Demonstrate the concepts and applications of amplitude, frequency, and phase modulation techniques. 5. Describe and compare the operation of various receiver and transmitter blocks and systems. 6. Describe and apply the concepts of EMC, EMI and RFI to RF components, circuits and systems. 7. Describe and apply the fundamentals of cellular communication, such as frequency reuse, spread spectrum techniques and network technologies. 8. Describe and apply the fundamentals of digital communications, such as coding, bandwidth and modulation techniques. 9. Demonstrate use of RF laboratory equipment including the spectrum analyzer and RF generator. Credits: 3.00

ECET 27700 - AC And Power Electronics

Credit Hours: 3.00. AC Circuits including the j operator, phasors, reactance and impedance are studies. Circuit laws, network theorems, and the application of circuit analysis techniques to amplifiers used in power electronics, including power MOS devices, thyristors, and other appropriate applications. Computer-aided analysis of circuits is used.

Learning Outcomes: 1. Calculate phasor and time domain representation of a sine wave. 2. Analyze series, parallel and series-parallel passive and active AC circuits. 3. Analyze multi-loop, multi-source AC circuits using advanced techniques. 4. Analyze and design given series and parallel resonance circuits. 5. Compute the average voltage, rms voltage and power produced by a wide variety of waveshapes using integral definitions. 6. Describe the linear performance of MOS devices. 7. Analyze and design linear power amplifiers using op amps and MOS devices. 8. Apply thyristors, snubbing, thyristor triggers and proportional interfaces. 9. Evaluate the performance of a variety of AC circuits, using appropriate standard laboratory measurement procedures and simulations. Credits: 3.00

ECET 27900 - Embedded Digital Systems

Credit Hours: 3.00. A course emphasizing the advanced applications of embedded digital systems. Topics include embedded system architecture, use of advanced programmable counter/timer arrays, analog interfaces, serial communication, and interrupts.

Learning Outcomes: 1. Solve problems by the application of C programs emphasizing I/O and peripherals. 2. Demonstrate knowledge and skill in the application of parallel ports, counter-timers, programmable counter arrays, serial ports and interrupts. 3. Demonstrate a conceptual understanding of embedded microcontroller system hardware system design. 4. Demonstrate the use of software development tools such as an editor, an assembler, a C compiler, a linker and locator, an object-to-hex converter, etc. 5. Demonstrate fluency in the language of advanced microprocessors. Credits: 3.00

ECET 38001 - Global Professional Issues In Engineering Technology

Credit Hours: 3.00. This course addresses professional ethics, legal issues, professional development, technology transfer, and corporate culture as they relate to EET graduates and our global society. Information relating to personal job and career choices, resumes, and interviews are included.

Learning Outcomes: 1. Demonstrate awareness in areas of intercultural knowledge and effectiveness. 2. Demonstrate awareness in areas of ethical reasoning. 3. Demonstrate awareness in areas of global citizenship and social awareness. 4. Identify applications of professional and ethical responsibilities including respect for diversity. 5. Demonstrate the ability to engage in self-directed continuing

professional development. 6. Demonstrate knowledge of the impact of engineering technology solutions in a societal and global context. Credits: 3.00

ECET 37600 - Electrical Energy Systems

Credit Hours: 3.00. This course is an introduction to a wide range of electrical energy systems technologies. Topics include fundamentals of energy conversion, which includes large- and small-scale generation, energy storage, and end-use. Processes include coal, nuclear, solar, wind, hydro, and biomass and their application in central and distributed power systems. The power grid, micro-grids, and smart grid technologies are also explored. The goal is to introduce students to the breadth of technology in the rapidly growing and changing field of energy systems.

Learning Outcomes: 1. Demonstrate the process cycles, theory of operation, and roles of significant equipment for various energy conversion, energy storage, and power distribution technologies. 2. Characterize and calculate power, efficiency, environmental, and economic quantities related to various energy conversion, energy storage, and power distribution technologies. 3. Discuss problems and trending solutions related to power and energy systems such as technological limitations, environmental impacts, and economic limitations both locally and worldwide. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

Other Departmental/Program Course Requirements (62 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical

acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

CNIT 10500 - Introduction To C Programming

Credit Hours: 3.00. This course is an introduction to computer programming using the "C" language. The emphasis is on structured programming principles, and understanding the basic concepts that apply to engineering problems. Among topics covered in this course are: problem solving using top down design, using flowcharts to explain the program logic, selection structure, repetition structure, bitwise operations, arrays, pointers, strings, passing arguments, and sequential files.

Learning Outcomes: 1. Practice and apply basic programming concepts in weekly labs and assignments. 2. Construct programming solutions using different coding structures in C. 3. Illustrate the ability to design and build user defined functions in C. 4. Practice the use of one-dimensional Arrays, Struct, and Files in C programing. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make

efficient use of limited resources of the computer. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution,

work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the

important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media.
Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II
University Core Curriculum (UCC): (UCC: SCI)
Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.
University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.
University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.
Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing.
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.
University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance

test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial

advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Additional Information

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CNIT 10500 - Introduction To C Programming

Credit Hours: 3.00. This course is an introduction to computer programming using the "C" language. The emphasis is on structured programming principles, and understanding the basic concepts that apply to engineering problems. Among topics covered in this course are: problem solving using top down design, using flowcharts to explain the program logic, selection structure, repetition structure, bitwise operations, arrays,

pointers, strings, passing arguments, and sequential files.

Learning Outcomes: 1. Practice and apply basic programming concepts in weekly labs and assignments. 2. Construct programming solutions using different coding structures in C. 3. Illustrate the ability to design and build user defined functions in C. 4. Practice the use of one-dimensional Arrays, Struct, and Files in C programing. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of

electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

16 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ECET 17700 - Data Acquisition And Systems Control

Credit Hours: 3.00. Fundamental electrical parameters and measurement techniques are introduced. These are then applied to implementing power interfaces, actuators and sensors. Modules that provide signal conditioning, data conversion, filtering and controllers are evaluated. A full, closed loop control system is built and evaluated.

Learning Outcomes: 1. Make laboratory measurements using digital multi-meters, oscilloscopes, and a microcomputer. 2. Implement and evaluate the performance of each of the following elements at the module level while calculating key circuit parameters: Switching and linear power interfaces; Light, sound, motion, and temperature actuators and sensors; Amplifiers, signal conversion, and filters. On/off, linear, and computer controllers. 3. Evaluate the static and the dynamic performance of a closed loop system constructed of the elements from items 1 and 2 above. Credits: 3.00

ECET 17900 - Introduction To Digital Systems

Credit Hours: 3.00. This course introduces computing systems and defines the major classes of computing devices. Sequential and concurrent operations, along with logic and control structures, are covered. Knowledge of fundamental computing principles is discovered. Common software tools are used to create, test, and debug systems. Systems are constructed from standard blocks with a focus on subsystem operation and performance, troubleshooting/debugging and testing. Common applications of embedded systems are introduced.

Learning Outcomes: 1. Develop and utilize algorithms and flowcharts to create microcontroller applications to solve a given problem. 2. Apply the fundamental control structures and logic operations to control program flow within microcontroller applications. 3. Demonstrate the ability to convert numbers between number systems (bases) and compute arithmetic operations within microcontroller applications. 4. Utilize the primary tools used to create, test, and debug computing system hardware and software components. 5. Construct electronic hardware systems to solve a given microcontroller problem. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple

iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the

foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

16 Credits

Fall 2nd Year

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages

business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECET 22700 - DC And Pulse Electronics

Credit Hours: 3.00. Capacitors, inductors, oscillators, rectifiers, bipolar and MOSFET power switches, switching power supplies, half-and full-H bridges, switching audio power amplifiers, and linear regulators are studied. Computer-aided analysis of circuits is utilized.

Learning Outcomes: 1. Explain the characteristics of capacitors, inductors, rectifier diodes, Zener diodes, IC regulators, bipolar junction transistors (BJTs), field effect transistors (MOSFETS), and general purpose operational amplifiers. 2. Apply the principles of circuit analysis to the following: switching and linear power supplies, op-amp based amplifiers, BJT and MOSFET switches, Class D amplifier, wave shape generators, RC and RL circuits. 3. Simulate circuits and compare actual data to simulated data. 4. Construct electronic circuit according to a given schematic. 5. Measure electrical parameters, using digital multimeters, signal generators, and oscilloscopes. 6. Interpret laboratory experiment data. Credits: 3.00

ECET 22900 - Concurrent Digital Systems

Credit Hours: 3.00. This course establishes a foundation for concurrent digital systems. Common methods of describing digital circuit operation are studied along with the techniques for translation between any two methods. Basic building blocks of digital systems are defined and applied. Analysis techniques for combinational and sequential logic circuits or subsystems are covered. Computer-based development tools, programmable logic devices, and technical reference sources are used to build, test, and evaluate digital systems.

Learning Outcomes: 1. Translate between any two forms of logic circuit descriptions: English, Boolean equation, Truth Table, Logic Diagram, Timing Diagram, Hardware Description language. 2. Anticipate the output of functional blocks given the current inputs or a recent event. 3. Validate the operation of any logic circuit using the simulator, Function generator, oscilloscope or DVM. Credits: 3.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

16 Credits

Spring 2nd Year

ECET 27000 - Electronics Prototype Development And Construction

Credit Hours: 3.00. This course introduces project planning and basic concepts in electronic design automation (EDA). The student develops a portion of an electronic system by utilization of EDA, design for testing, design for manufacturability (DFM), and component selection techniques. New construction methods and testing techniques are introduced.

Learning Outcomes: 1. Design an electronic device or system to accomplish a given task. 2. Demonstrate appropriate electronic assembly techniques. 3. Develop and execute appropriate testing techniques on electronic devices and systems. 4. Apply appropriate software applications to develop a prototype. 5. Apply graphical communication techniques to convey technical information. 6. Apply principles of design for manufacturability and design for testing to a project. 7. Employ teaming methods on a project. Credits: 3.00

ECET 27400 - Wireless Communications

Credit Hours: 3.00. The theory and techniques of wirelessly sending information (voice, music, data) from one location to another is studies from a systems point of view. This includes a signal analysis, modulation techniques, transmitters, receivers, low noise amplifiers, and filters in the RF frequency spectrum. In addition, special topics of current interest are introduced. This course incorporated a student-based communication design and analysis laboratory.

Learning Outcomes: 1. Perform power calculations, such as dB, dBm, dBuV. 2. Describe, identify and apply Fourier concepts communication signals and systems, such as wave shapes, signal mixing, carrier waves. 3. Evaluate, describe and calculate the effects of noise on communication circuits and systems. 4. Demonstrate the concepts and applications of amplitude, frequency, and phase modulation techniques. 5. Describe and compare the operation of various receiver and transmitter blocks and systems. 6. Describe and apply the concepts of EMC, EMI and RFI to RF components, circuits and systems. 7. Describe and apply the fundamentals of cellular communication, such as frequency reuse, spread spectrum techniques and network technologies. 8. Describe and apply the fundamentals of digital communications, such as coding, bandwidth and modulation techniques. 9. Demonstrate use of RF laboratory equipment including the spectrum analyzer and RF generator. Credits: 3.00

ECET 27700 - AC And Power Electronics

Credit Hours: 3.00. AC Circuits including the j operator, phasors, reactance and impedance are studies. Circuit laws, network theorems, and the application of circuit analysis

techniques to amplifiers used in power electronics, including power MOS devices, thyristors, and other appropriate applications. Computer-aided analysis of circuits is used.

Learning Outcomes: 1. Calculate phasor and time domain representation of a sine wave. 2. Analyze series, parallel and series-parallel passive and active AC circuits. 3. Analyze multi-loop, multi-source AC circuits using advanced techniques. 4. Analyze and design given series and parallel resonance circuits. 5. Compute the average voltage, rms voltage and power produced by a wide variety of waveshapes using integral definitions. 6. Describe the linear performance of MOS devices. 7. Analyze and design linear power amplifiers using op amps and MOS devices. 8. Apply thyristors, snubbing, thyristor triggers and proportional interfaces. 9. Evaluate the performance of a variety of AC circuits, using appropriate standard laboratory measurement procedures and simulations.
Credits: 3.00

15 Credits

Fall 3rd Year

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing.
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.
Credits: 3.00

ECET 37600 - Electrical Energy Systems

Credit Hours: 3.00. This course is an introduction to a wide range of electrical energy systems technologies. Topics include fundamentals of energy conversion, which includes large- and small-scale generation, energy storage, and end-use. Processes include coal, nuclear, solar, wind, hydro, and biomass and their application in central and distributed power systems. The power grid, micro-grids, and smart grid technologies are also explored. The goal is to introduce students to the breadth of technology in the rapidly growing and changing field of energy systems.

Learning Outcomes: 1. Demonstrate the process cycles, theory of operation, and roles of significant equipment for various energy conversion, energy storage, and power distribution technologies. 2. Characterize and calculate power, efficiency, environmental, and

economic quantities related to various energy conversion, energy storage, and power distribution technologies. 3. Discuss problems and trending solutions related to power and energy systems such as technological limitations, environmental impacts, and economic limitations both locally and worldwide. Credits: 3.00

15 Credits

Spring 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

ECET 27900 - Embedded Digital Systems

Credit Hours: 3.00. A course emphasizing the advanced applications of embedded digital systems. Topics include embedded system architecture, use of advanced programmable counter/timer arrays, analog interfaces, serial communication, and interrupts.

Learning Outcomes: 1. Solve problems by the application of C programs emphasizing I/O and peripherals. 2. Demonstrate knowledge and skill in the application of parallel ports, counter-timers, programmable counter arrays, serial ports and interrupts. 3. Demonstrate a conceptual understanding of embedded microcontroller system hardware system design. 4. Demonstrate the use of software development tools such as an editor, an assembler, a C compiler, a linker and locator, an object-to-hex converter, etc. 5. Demonstrate fluency in the language of advanced microprocessors. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these

objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Fall 4th Year

15 Credits

Spring 4th Year

12 Credits

Electrical Engineering, BSEE

About the Program

Degree Requirements

Required Major Courses (52 credits minimum)

Electrical Engineering Core Requirements (27 credits)

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference

equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 30200 - Probabilistic Methods In Electrical And Computer Engineering

Credit Hours: 3.00. An introductory treatment including probability of events, discrete and continuous random variables, multiple random variables, sums of random variables and long-term averages, and elementary random processes. Applications involving uniform, Gaussian, exponential, geometric and related random variables. Introduction to parameter estimation and hypothesis testing. Discussion of wide-sense stationary random processes, including correlation functions, spectral densities and the response of linear time invariant systems. Course examples are drawn from signal processing, wireless communications, system reliability, and data science.

Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic

measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

ECE 30411 - Electromagnetics I

Credit Hours: 3.00. This course is a continued study of vector calculus, electrostatics, magnetostatics, and Maxwell's Equations. It serves as an introduction to electromagnetic waves and transmission lines, which is continued in ECE 30412.

Learning Outcomes: 1. Work with electrostatic fields and find electric and potential fields from charge distributions including the presence of dielectric materials. 2. Work with magnetostatic fields and find magnetic fields from current distributions including the presence of magnetic materials. 3. Work with time varying fields including wave propagation. 4. Work with transmission lines in the time and frequency domains. Credits: 3.00

ECE 20875 - Python For Data Science

Credit Hours: 3.00. This course will introduce Python programming to students through data science problems. Students will learn Python concepts as well as introductory data science topics, and will use their knowledge of Python (and prior programming experience) to implement data analyses.

Learning Outcomes: 1. Understand of regular expressions [1, 2]. 2. Use Python to write data analyses [1, 2, 6]. 3. Explain when data analyses are appropriate [1, 2, 3, 6]. 4. Explain the results of data analyses [2, 3, 5]. 5. Incorporate classes in their Python programs [1, 2, 6]. 6. Incorporate associative arrays in their programs [1, 2, 6]. Credits: 3.00

ECE 20008 - Electrical Engineering Fundamentals II Lab

Credit Hours: 1.00. This is a course in electronic measurement, circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments including discrete semiconductor measurement, transistor amplifiers, motor control, and operational amplifier internals. The experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20002 Electrical Engineering Fundamentals II; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in other courses.

Learning Outcomes: 1. Ability to competently select, use, and automate electronic measurement instruments. 2. Design, wire, and troubleshoot electronic circuits. 3. Ability to simulate electronic circuits. 4. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 5. Demonstrate knowledge of laboratory safety precautions. 6. Maintain laboratory notes and create professional experiment reports. Credits: 1.00

Required Seminars (3 credits)

ECE 29401 - Electrical And Computer Engineering Sophomore Seminar

Credit Hours: 1.00. An introduction to the School of Electrical and Computer Engineering, the program's objectives, and outcomes, BSEE and BSCmpE degree requirements, professional writing and multicultural and professional development.

Learning Outcomes: 1. Knowledge of the ECE educational objectives and required outcomes.

2. Knowledge of the BSEE and/or BSCmpE degree requirements. 3. Ability to prepare a satisfactory plan-of-study. 4. Ability to write effectively in the English language. 5. Appreciation for ethical, professional and academic conduct. Credits: 1.00

ECE 39401 - Professional Communications And Diversity

Credit Hours: 1.00. This course provides ECE students with practice in relevant aspects of communication. Topics include: successfully seeking employment, working effectively in teams, delivering engaging presentations, and leveraging the advantages and challenges of diversity and inclusion.

Learning Outcomes: 1. Ability to function effectively on a team whose members create a collaborative and inclusive environment, plan tasks, and meet objectives. 2. Communicate effectively with a range of audiences. 3. Develop and explain solutions to engineering problems, taking public health and cultural factors into consideration. Credits: 1.00

ECE 49401 - Professional Communication Capstone

Credit Hours: 1.00. This course provides ECE students an opportunity to refine their professional communication skills before launching into the workplace or graduate school. Topics include: ethics in ECE, workplace communication (written and verbal), and plans for professional growth.

Learning Outcomes: 1. Communicate effectively with a range of audiences. 2. Function effectively on a team whose members together create a collaborative and inclusive environment, plan tasks, and meet objectives. 3. Ability to make informed judgments based ethical and professional responsibilities in engineering situations, giving consideration to global, economic, environmental, and/or societal contexts. Credits: 1.00

Advanced Electrical Engineering Selectives - Choose Three (9-12 credits)

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 32100 - Electromechanical Motion Devices

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications are presented.

Learning Outcomes: 1. Analyze/design electromagnetic circuits/devices. 2. Understand the concepts and principles of electromagnetic energy conversion. 3. Understand the concept of time-varying transformations in the analysis of time-varying systems. 4. Analyze dc machines. 5. Understand converters for dc drives. 6. Analyze brushless dc machines. 7. Analyze induction machines. Credits: 3.00

ECE 38200 - Feedback System Analysis And Design

Credit Hours: 3.00. In this course, classical concepts of feedback system analysis and associated compensation techniques are presented. In particular, the root locus, Bode diagram, and Nyquist criterion are used as determinants of stability.

Credits: 3.00

ECE 43800 - Digital Signal Processing With Applications

Credit Hours: 4.00. The course is presented in five units. Foundations: the review of continuous-time and discrete-time signals and spectral analysis; design of finite impulse response and infinite impulse response digital filters; processing of random signals. Speech processing; vocal tract models and characteristics of the speech waveform; short-time spectral analysis and synthesis; linear predictive coding. Image processing: two-dimensional signals, systems and spectral analysis; image enhancement; image coding; and image reconstruction. The laboratory experiments are closely coordinated with each unit. Throughout the course, the integration of digital signal processing concepts in a design environment is emphasized.

Credits: 4.00

ECE 44000 - Transmission Of Information

Credit Hours: 4.00. Analysis and design of analog and digital communication systems. Emphasis on engineering applications of theory to communication system design. The laboratory introduces the use of advanced engineering workstations in the design and testing of communication systems.

Learning Outcomes: 1. Recognize and analyze in the time and frequency domain the performance of amplitude and frequency modulated analog communications systems in the presence of noise. 2. Understand the importance, computation, and measurement using modern test equipment of standard performance measures of analog systems, which include bandwidth and signal to noise ratio. 3. Recognize and analyze in the time and frequency domains the performance of various digital modulation formats, including ASK, QAM, PSK, and FSK in the presence of noise. 4. Understand the importance, computation, and measurement using modern test equipment of standard performance measures of digital systems which include bandwidth and hit error probability. 5. Understand the basics of information theory and error control codes including the effect of error control codes on the bandwidth and bit error probability of digital systems. Credits: 4.00

ECE 53800 - Digital Signal Processing I

Credit Hours: 3.00. Theory and algorithms for processing of deterministic and stochastic signals. Topics include discrete signals, systems, and transforms, linear filtering, fast Fourier transform, nonlinear filtering, spectrum estimation, linear prediction, adaptive filtering, and array signal processing.

Learning Outcomes: 1. Understand the autocorrelation and covariance methods of estimating the correlation matrix. 2. Know the Discrete Time Fourier Transform (DTFT) and its relationship to the Discrete Fourier Transform (DFT). 3. Comprehend of parametric methods of spectrum estimation, including autoregressive modeling, minimum variance, linear prediction, and eigendecomposition-based methods. 4. Understand nonparametric methods of spectrum estimation, including the periodogram and the correlogram. 5. Understand of linear filters, including the Wiener filter, as applied stochastic to signals. 6. Introduce to adaptive filters, including the method of steepest descent and the least-mean-square (LMS) algorithms. Credits: 3.00

ECE 50653 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. The modern smartphone is enabled by a billion-plus nano-transistors, each having an active region that is barely a few hundred atoms long. Interestingly the same amazing technology has also led to a deeper understanding of the nature of current flow on an atomic scale. The aim of this course is to make the fundamentals of nanoelectronics accessible to anyone in any branch of science or engineering, assuming very little background beyond linear algebra and differential equations, although we will be discussing advanced concepts in non-equilibrium statistical mechanics that should be of interest even to specialists. We first introduce a new perspective connecting the quantized conductance of short ballistic conductors to the familiar Ohm's law of long diffusive conductors, along with a brief description of the modern nano-transistor. We then address fundamental conceptual issues related to the meaning of resistance on an atomic scale, the interconversion of electricity and heat, the second law of thermodynamics and the fuel value of information. Finally we introduce the concepts of quantum transport as applied to modern nanoscale electronic devices.

Learning Outcomes: 1. Perform semi-classical analysis of charge flow in nanoelectronic devices. 2. Perform semi-classical analysis of the interconversion of heat and electricity in nanoelectronic devices. 3. Perform quantum analysis of nanoelectronic devices. Credits: 3.00

ECE 51012 - Electromechanics

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of dc, induction, brushless dc, and stepper motors used in control applications are presented. Prerequisite by Topic: Basic circuit analysis; Elementary electromagnetics; Elementary mechanics.

Learning Outcomes: 1. Acquire knowledge of

magnetics and magnetic materials as it relates to electromechanical devices. 2. Understand the energy conversion process including field energy, co-energy, force and torque production. 3. Be familiar with the use in reference frame theory in the analysis of rotational electromechanical devices. 4. Understand the operation of rotating electric machines including stepper motors, permanent magnet ac machine, and induction machines. 5. Understand the acceptable and unacceptable practice with regard to taking exams, working on homework, working on the project, and the implications of unacceptable practices. Credits: 3.00

ECE 36200 - Microprocessor Systems And Interfacing

Credit Hours: 4.00. An introduction to basic computer organization, microprocessor instruction sets, assembly language programming, and microcontroller peripherals.

Learning Outcomes: 1. Show ability to program a microcontroller to perform various tasks. 2. Show an ability to interface a microcontroller to various devices. 3. Show an ability to effectively utilize microcontroller peripheral. 4. Show an ability to design and implement a microcontroller-based embedded system. Credits: 4.00

ECE 30412 - Electromagnetics II

Credit Hours: 3.00. Electromagnetics II builds on Electromagnetics I (ECE 31100) and emphasizes time-varying electromagnetic fields. Both fundamental understanding and an appreciation for applications that span all technologies related to electrical and computer engineering are emphasized. The topics covered include: Maxwell's equations, plane waves, transmission lines, waveguides and cavities, and antennas and radiation. Applications addressed relate to photonics, communications, and imaging and sensing. More generally, illustrations cover the basic principles on which devices and systems used every day operate.

Learning Outcomes: 1. Understand time-varying fields and Maxwell's equations. 2. Understand plane electromagnetic waves. 3. Understand the theory and application of transmission lines. 4. Understand waveguides and cavity resonators. 5. Understand antennas and radiating systems. Credits: 3.00

ECE 31032 - Power Systems Engineering

Credit Hours: 3.00. Introduction to the economic operation of power systems, three-phase circuit analysis, modeling of transformers and transmission lines, steady-state network analysis using a power flow, analysis during faults and state estimation.

Learning Outcomes: 1. Understand the function of the main components in a power system, and the basis of their circuit models. 2. Build a system representation from components' circuit models and to apply solution techniques to certain operational needs. Credits: 3.00

Electrical Engineering Electives (6-9 credits)

Senior Design Requirement - Choose One Option (4 credits)

Option 1:

ECE 49022 - Electrical Engineering Senior Design Projects

Credit Hours: 4.00. Lecture sessions provide the student with background information on the design and management of projects. Formal lectures cover, for example, design for manufacturability, design for quality, test and evaluation, reliability and ethics, patents and copyrights, plus case studies. During the laboratory sessions, the students work in teams on challenging open-ended electrical engineering project that draws on previous coursework. Projects routinely involve standard design facets (such as consideration of alternative solutions, feasibility considerations, and detailed system descriptions) and include a number of realistic constraints (such as cost, safety, reliability, and aesthetics). Lectures require use of the I-Clicker system.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a system, component, or process to meet desired needs. 2. Understand the engineering design process. 3. Function on an interdisciplinary team. 4. Acquire an awareness of professional

and ethical responsibility. 5. Develop effective communication skills, both oral and written. Credits: 4.00

Option 2:

ECE 47700 - Digital Systems Senior Project

Credit Hours: 4.00. A structured approach to the development and integration of embedded microcontroller hardware and software that provides senior-level students with significant design experience applying microcontrollers to a wide range of embedded systems (e.g., instrumentation, process control, telecommunications, and intelligent devices). The primary objective is to provide practical experience developing integrated hardware and software for embedded microcontroller systems in an environment that models one which students will most likely encounter in industry. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a microcontroller-based digital system. 2. Understand the engineering design process. 3. Function on a multidisciplinary team. 4. Be aware of professional and ethical responsibility. 5. Communicate effectively, in both oral and written form. Credits: 4.00

Option 3:

EPCS 41200 - Senior Design Participation In EPICS

Credit Hours: 2.00. Continuation of EPICS courses. Seniors using EPCS 41200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 41200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 41100 and EPCS 41200 students. Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the first year, sophomores and juniors. May not be taken concurrently with EPCS 41100 .

Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsiblity. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 2.00

Option 4:

VIP 47922 - Senior Design Participation In Vertically Integrated Projects (VIP) II

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering

design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 2.00

VIP 47921 - Senior Design Participation In Vertically Integrated Projects (VIP) I

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 2.00

Other Department Requirements (72-78 credits)

General Engineering Requirement (3-6 credits)

C Programming (0-3 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

Engineering Breadth Selective - Choose One (3 credits)

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more

curious and persistent learners through self-directed team projects. Credits: 4.00

CHE 20500 - Chemical Engineering Calculations

Credit Hours: 4.00. Quantitative applications of steady-state mass and energy balances to solve problems involving multi-component systems and multi-unit chemical processes. Single-component and multi-component phase equilibria, single-reaction and multiple-reaction stoichiometry, coupled mass and energy balances, chemical processes involving bypass and recycle streams.

Learning Outcomes: 1. Estimate physical properties of real chemical systems. 2. Evaluate introductory single-component and multi-component phase equilibria and incorporate these concepts into solutions of mass and energy balance problems. 3. Solve steady state and transient mass and energy balance problems for both reacting and non-reacting systems with or without recycle using analytical and computational methods. 4. Work professionally and ethically in teams to solve new mass and energy balance problems. 5. Identify contemporary chemical engineering problems, including their societal, environmental, and global impacts. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4.

Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs.

Credits: 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.

Credits: 3.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

Mathematics Requirement - Choose One Option (10-11 credits)

Option 1 (10 credits)

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three

dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

Option 2 (11 credits)

CS 31400 - Numerical Methods

Credit Hours: 3.00. Iterative methods for solving nonlinear equations; direct and iterative methods for solving linear systems; approximations of functions, derivatives, and integrals; error analysis.

Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and

minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 30300 - Differential Equations And Partial Differential Equations For Engineering And The Sciences

Credit Hours: 3.00. This is a methods course for juniors in any branch of engineering and science, designed to follow MA 26200 or MA 26600. Materials to be covered are: linear systems of ordinary differential equations, nonlinear systems, Fourier series, separation of variables for partial differential equations, and Sturm-Liouville theory.

Learning Outcomes: 1. Learn the theory of systems of first order linear differential equations and methods for solving them. 2. Learn qualitative theory of systems of nonlinear differential equations. 3. Learn the Laplace transform method for solving differential equations. 4. Learn about Fourier series and Sturm-Liouville theory and how to use them to solve separable partial differential equations. Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

MA 38500 - Introduction To Logic

Credit Hours: 3.00. Propositional calculus and predicate calculus with applications to mathematical proofs, valid arguments, switching theory, and formal languages.

Credits: 3.00

MA 42500 - Elements Of Complex Analysis

Credit Hours: 3.00. Complex numbers and complex-valued functions; differentiation of complex functions; power series, uniform convergence; integration, contour integrals; elementary conformal mapping.

Learning Outcomes: 1. Apply complex number theory and understand algebraic and geometric

representations. 2. Solve complex equations and analyze limits, continuity, and differentiability. 3. Use Cauchy-Riemann equations to identify analytic functions. 4. Evaluate integrals using Cauchy's integral theorem and formula. 5. Apply the residue theorem for evaluating integrals in engineering and science problems. 6. Use Taylor and Laurent series to expand complex functions. 7. Solve boundary value problems in fluid dynamics, electrostatics, and potential theory. 8. Apply complex analysis techniques to engineering and science applications. Credits: 3.00

MA 51000 - Vector Calculus

Credit Hours: 3.00. Calculus of functions of several variables and of vector fields in orthogonal coordinate systems. Optimization problems, implicit function theorem, Green's theorem, Stokes' theorem, divergence theorems. Applications to engineering and the physical sciences. Not open to students with credit in MA 36200 or MA 41000.

Credits: 3.00

Science Requirement (4-8 credits)

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of

the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena

in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 31000 - Intermediate Mechanics

Credit Hours: 4.00. For students familiar with calculus. Elements of vector algebra; statics of particles and rigid bodies; theory of couples; principle of virtual work; kinematics; dynamics of particles and rigid bodies; work, power, and energy.

Learning Outcomes: 1. To Understand order in Nature as contained in the Laws of Physics. The student exhibits the knowledge of and the ability to apply the core physics subject of Classical Mechanics. Credits: 4.00

PHYS 32200 - Intermediate Optics

Credit Hours: 3.00. Wave optics and properties of light, including reflection, refraction interference. Fraunhofer and Fresnel diffraction dispersion, polarization, double refraction, introduction to lasers and holography.

Credits: 3.00

PHYS 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 4.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to

collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

ECE General Education Course Requirement (17-18 credits)

Electives (0-8 credits)

Optional Concentrations:

Supplemental Lists

GPA Requirements

Purdue in Indianapolis Students will be required to take the courses listed in First Year Engineering

Sample Electrical Engineering Plan of Study

Fall 2nd Year

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple

integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ECE 29401 - Electrical And Computer Engineering Sophomore Seminar

Credit Hours: 1.00. An introduction to the School of Electrical and Computer Engineering, the program's objectives, and outcomes, BSEE and BSCmpE degree requirements, professional writing and multicultural and professional development.

Learning Outcomes: 1. Knowledge of the ECE educational objectives and required outcomes. 2. Knowledge of the BSEE and/or BSCmpE degree requirements. 3. Ability to prepare a satisfactory plan-of-study. 4. Ability to write effectively in the English language. 5. Appreciation for ethical, professional and academic conduct. Credits: 1.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course

that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

ECE 20875 - Python For Data Science

Credit Hours: 3.00. This course will introduce Python programming to students through data science problems. Students will learn Python concepts as well as introductory data science topics, and will use their knowledge of Python (and prior programming experience) to implement data analyses.

Learning Outcomes: 1. Understand of regular expressions [1, 2]. 2. Use Python to write data analyses [1, 2, 6]. 3. Explain when data analyses are appropriate [1, 2, 3, 6]. 4. Explain the results of data analyses [2, 3, 5]. 5. Incorporate classes in their Python programs [1, 2, 6]. 6. Incorporate associative arrays in their programs [1, 2, 6]. Credits: 3.00

16 Credits

Spring 2nd Year

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits

behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20008 - Electrical Engineering Fundamentals II Lab

Credit Hours: 1.00. This is a course in electronic measurement, circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments including discrete semiconductor measurement, transistor amplifiers, motor control, and operational amplifier internals. The experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20002 Electrical Engineering Fundamentals II; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in other courses.

Learning Outcomes: 1. Ability to competently select, use, and automate electronic measurement instruments. 2. Design, wire, and troubleshoot electronic circuits. 3. Ability to simulate electronic circuits. 4. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 5. Demonstrate knowledge of laboratory safety precautions. 6. Maintain laboratory notes and create professional experiment reports. Credits: 1.00

17 Credits

Fall 3rd Year

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 39401 - Professional Communications And Diversity

Credit Hours: 1.00. This course provides ECE students with practice in relevant aspects of communication. Topics include: successfully seeking employment, working effectively in teams, delivering engaging presentations, and leveraging the advantages and challenges of diversity and inclusion.

Learning Outcomes: 1. Ability to function

effectively on a team whose members create a collaborative and inclusive environment, plan tasks, and meet objectives. 2. Communicate effectively with a range of audiences. 3. Develop and explain solutions to engineering problems, taking public health and cultural factors into consideration. Credits: 1.00

15 Credits

Spring 3rd Year

ECE 30200 - Probabilistic Methods In Electrical And Computer Engineering

Credit Hours: 3.00. An introductory treatment including probability of events, discrete and continuous random variables, multiple random variables, sums of random variables and long-term averages, and elementary random processes. Applications involving uniform, Gaussian, exponential, geometric and related random variables. Introduction to parameter estimation and hypothesis testing. Discussion of wide-sense stationary random processes, including correlation functions, spectral densities and the response of linear time invariant systems. Course examples are drawn from signal processing, wireless communications, system reliability, and data science.

Credits: 3.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

ECE 30411 - Electromagnetics I

Credit Hours: 3.00. This course is a continued study of vector calculus, electrostatics, magnetostatics, and Maxwell's Equations. It serves as an introduction to electromagnetic waves and transmission lines, which is continued in ECE 30412.

Learning Outcomes: 1. Work with electrostatic fields and find electric and potential fields from charge distributions including the presence of dielectric materials. 2. Work with magnetostatic fields and find magnetic fields from current distributions including the presence of magnetic materials. 3. Work with time varying fields including wave propagation. 4. Work with transmission lines in the time and frequency domains. Credits: 3.00

15 Credits

Fall 4th Year

ECE 49022 - Electrical Engineering Senior Design Projects

Credit Hours: 4.00. Lecture sessions provide the student with background information on the design and management of projects. Formal lectures cover, for example, design for manufacturability, design for quality, test and evaluation, reliability and ethics, patents and copyrights, plus case studies. During the laboratory sessions, the students work in teams on challenging open-ended electrical engineering project that draws on previous coursework. Projects routinely involve standard design facets (such as consideration of alternative solutions, feasibility considerations, and detailed system descriptions) and include a number of realistic constraints (such as cost, safety, reliability, and aesthetics). Lectures require use of the I-Clicker system.

Learning Outcomes: 1. Apply knowledge obtained in earlier coursework and to obtain new knowledge necessary to design and test a system, component, or process to meet desired needs. 2. Understand the engineering design process. 3. Function on an interdisciplinary team. 4. Acquire an awareness of professional and ethical responsibility. 5. Develop effective

communication skills, both oral and written. Credits: 4.00

16 Credits

Spring 4th Year

ECE 49401 - Professional Communication Capstone

Credit Hours: 1.00. This course provides ECE students an opportunity to refine their professional communication skills before launching into the workplace or graduate school. Topics include: ethics in ECE, workplace communication (written and verbal), and plans for professional growth.

Learning Outcomes: 1. Communicate effectively with a range of audiences. 2. Function effectively on a team whose members together create a collaborative and inclusive environment, plan tasks, and meet objectives. 3. Ability to make informed judgments based ethical and professional responsibilities in engineering situations, giving consideration to global, economic, environmental, and/or societal contexts. Credits: 1.00

15 Credits

Elementary Education, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (81-83 credits)

Major Courses (50-52 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6.

Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 49600 - Student Teaching In The Elementary School (UCC: OC)

Credit Hours: 6.00 to 16.00. Full-time elementary classroom teaching experiences and a student teaching seminar under the mentorship of the classroom teacher and a University supervisor.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each child's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each child's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment

results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities.

Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 30101 - Inquiry Into Teaching And Learning In K-2

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the K-2 classroom. Admission to Teacher Education required. Cannot be taken concurrently with EDCI 30002.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach, assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6. Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 30102 - Inquiry Into Teaching And Learning In 3-6

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the 3-6 classroom. Admission to Teacher Education is required. Cannot be taken concurrently with EDCI 30101.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6. Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the

field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36102 - Teaching Social Studies In 3-6

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practices strategies for teaching social studies to children in the 3-6 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how 3-6 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the 3-6 grades.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the 3-6 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the 3-6 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the 3-6 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 21510 - Language & Literacy Foundations For Teachers

Credit Hours: 1.00. The goal of the course is to provide background information in language and literacy necessary for success in literacy methods courses. The course will address basic linguistics and phonetic patterns of English, as well as the structures of literature and literary terms.

Learning Outcomes: 1. Compare and contrast levels of language structure: phoneme, morpheme, root, affix, phrase, sentence. 2. Differentiate graphic from phonological elements of language (e.g., grapheme vs phoneme). 3. Compare and contrast vocabulary terms (e.g. synonym, homonym, homograph). 4. Define and articulate written elements (e.g. digraphs, consonant clusters, long/short vowels). 5. Identify morpho-syntactic structures and phonological patters in written and spoken language. 6. Compare and contrast literary genres (e.g. narrative, non-narrative, fiction, nonfiction). 7. Distinguish the organizational structures of fictional genres from those of nonfictional genres. 8. Identify literary terms in context (e.g. alliteration, character traits, plot, stanza). Credits: 1.00

EDCI 49601 - Elementary Education Expanded Student Teaching

Credit Hours: 1.00 to 8.00. This course is the initial residency experience that precedes a full semester of student teaching. The seminar and field experience focus on induction into the broader elementary school context and building mentoring relationships as both a mentee and mentor. Students will develop their identity as a professional educator who advocates for the profession, themselves, and their students. Includes a field experience. Admission to Teacher Education required.

Learning Outcomes: 1. Integrate their learning from Foundations and Methods courses into their teaching experiences in the classroom. 2. Design and deliver instruction that meets learner needs, continually assess student learning, and use assessment to drive instruction. 3. Develop their skills and professional identity as an educator through self-reflection, analysis of student learning, and analysis of feedback. 4. Use observation, academic and personal engagement, and assessment data to develop an understanding of their students as learners at the individual and group level. Credits: 1.00 to 8.00

EDCI 36402 - Teaching Mathematics In Grades 3-6

Credit Hours: 2.00. Focuses on teaching mathematics in the elementary school grades 3-6. Students learn what it means to teach mathematics interactionally using children's ideas, beliefs, and experiences as primary resources. Mathematical reasoning, problem solving, communication, and connections are foci.

Learning Outcomes: 1. Develop, apply, analyze, and evaluate strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Know and analyze methods of assessing and responding to the needs of mathematics learners labeled in schools. 3. Analyze and apply student's mathematical conceptual understanding and procedural knowledge to the development of problem-solving based mathematics lessons. 4. Create and analyze instructional activities drawing from student's conceptual understanding and procedural knowledge as primary resources. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are

committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDCI 36502 - Teaching Science Through Design In Grades 3-6

Credit Hours: 2.00. The aim of this course is to prepare students to teach science, engineering, and computational thinking with grade 3-6 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade 3 through 6 learners. At least 9 credits of science content courses are required.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 2.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school

district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Additional Methods Courses (9 credits)

AD 20100 - Art For Elementary School Teachers

Credit Hours: 3.00. Art theory and experiences, curriculum theory, and materials preparatory for instruction of elementary school children. No undergraduate students may be enrolled in this course until they have been admitted to teacher education and a copy of this acceptance is on file.

Learning Outcomes: 1. Apply visual arts methods to develop appropriate lessons to construct students' knowledge. 2. Utilize two- and three-dimensional media commonly used by elementary students to teach art production and encourage the expression of ideas. 3. Assess elementary students' artistic development levels and design activities to meet their artistic needs in the classroom. 4. Apply elements of art, principles of design, interpretation skills, and judgment conclusions to evaluate and respond to works of art and to foster that ability in their elementary students. Credits: 3.00

MUS 32400 - Teaching Music In The Elementary School

Credit Hours: 3.00. Develops basic musicianship through singing, playing instruments, reading and writing music, listening and moving to music. Surveys music teaching methods and materials. Includes lesson planning, experiences in teaching, and observation of children in music classes.

Learning Outcomes: 1. Advocate for the importance of music's inclusion (or exclusion, if desired) in the elementary classroom. 2. Develop curricula that appropriately advances the musical abilities, appreciation, and understanding of children. 3. Perform by singing and playing instruments both alone and in a group. 4. Synthesize appropriate terms to describe musical performance and recording. 5. Connect music to a variety of societal, cultural, and historical contexts. Credits: 3.00

EDCI 22222 - Integrated Health And Physical Education For Elementary Teachers

Credit Hours: 3.00. This course provides elementary education majors with a comprehensive understanding of the critical role health and physical education play in the overall development of young learners. Students will explore how physical activity and health education contribute to cognitive, social, emotional, and physical growth. The course emphasizes the importance of integrating movement and health topics such as personal safety, nutrition, and emotional health into the elementary classroom to enhance academic performance, promote wellness, and develop lifelong healthy habits. Through a blend of theory, practical strategies, and hands-on activities, students will learn to design inclusive, developmentally appropriate physical education lessons and comprehensive school health education (CSHE) plans that cater to diverse learners. By the end of the course, students will be equipped to create engaging, safe, and supportive environments that foster both physical well-being and academic success.

Learning Outcomes: 1. Understand health-related fitness concepts and principles related to physical activity and wellness. 2. Promote physical, emotional, and social well-being in elementary students. 3. Understand and teach proper nutrition, including the relationship between healthy eating, physical activity, and overall wellness. 4. Promote mental and emotional health by teaching coping strategies, stress management, and emotional regulation. 5. Teach personal safety and injury prevention, including strategies for safe play, accident prevention, and emergency response. 6. Integrate physical activity into daily classroom activities, promoting active learning and encouraging students to develop positive attitudes toward physical activity. 7. Develop inclusive and developmentally appropriate physical education lessons, ensuring students of all abilities can participate in and benefit from physical education. Credits: 3.00

Required Reading Concentration (13 credits)

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDCI 36303 - Literacy Teaching And Assessment In K-6

Credit Hours: 2.00 to 3.00. This course is an undergraduate, elementary education course designed to provide preservice teachers with classroom and practicum experiences focused on literacy instruction for children experiencing difficulty learning to read and write. Students learn to administer and analyze individual assessments to determine the strengths and needs of a struggling reader/writer and set intervention goals based on these results. Application of appropriate research-based reading instructional strategies for developing (structured literacy instruction) phonological awareness, phonics, comprehension, vocabulary, and fluency is the focus of weekly literacy teaching in local elementary schools.

Learning Outcomes: 1. Demonstrate the importance of providing instruction to meet the needs of all children through their teaching. 2. Implement a framework for assessment and instruction that allows the teacher to evaluate and adjust for an optimal match between the reader/writer, the text and the literacy context. 3. Translate assessment findings into a plan for instructional support that is realistic in view of the child's needs and the available resources. 4. Use assessment as an ongoing guide to instructional decisions. 5. Become skillful in observing, planning, implementing, and evaluating literacy lessons. 6. Demonstrate knowledge of materials, procedures, and strategies for individual and group literacy instruction. 7. Examine a range of assessment and evaluation tools and strategies. 8. Report to others their assessments of students' literacy learning. 9. Work as a team with peers and school personnel. Credits: 2.00 to 3.00

EDCI 32501 - Teaching Literacy In K-2

Credit Hours: 2.00. Students will study how children's oral language develops, how children learn to read and write in primary grade settings, and the teacher's role in this process. Students will learn how phonemic awareness, phonics, fluency, vocabulary and comprehension influence children's literacy development. Students will learn how to select appropriate instructional materials; employ teaching strategies to meet the cognitive and affective literacy needs of all children, and collect, interpret, and use data from various types of assessments to inform literacy teaching and learning processes.

Learning Outcomes: 1. Develop a sound background in theory and research about children's language and literacy development and learning. 2. Learn how literacy learning, teaching, and assessment in phonemic awareness, phonics, fluency, vocabulary, comprehension and writing can be effectively and systematically integrated and diversified to meet individual or group needs. 3. Design and implement developmentally appropriate instruction for primary grade students. Credits: 2.00

EDCI 32602 - Teaching Literacy In 3-6

Credit Hours: 2.00. Students will build on material learned in

EDCI 32501. They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children, and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Demonstrate an understanding of theoretical and evidence-based foundations that guide reading, writing processes, and instruction. 2. Design developmentally appropriate instruction that addresses the needs of all learners. 3. Teach developmentally appropriate lessons/units in the school setting. 4. Assess student learning by designing/using/adjusting formative and summative assessments for your group of students, and pre-assessments. 5. Reflect and analyze your own teaching. Credits: 2.00

EDCI 31103 - Integrating Media In The K-6 Classroom

Credit Hours: 3.00. This course prepares teacher candidates to select, evaluate, and integrate children's literature and media in K-6 classrooms. Focusing on high-quality, diverse texts and media, candidates will learn to choose materials that are developmentally appropriate and reflect the diversity of the world in which we live. Emphasis will be placed on the critical role literature and media play in fostering vocabulary development, enhancing critical thinking skills, and supporting literacy development across subjects. The course will focus on how K-6 students learn to use comprehension strategies independently and efficiently as they progress through elementary school fostering both their academic growth and their ability to engage with diverse texts.

Learning Outcomes: 1. Integrate literature and media into content area lessons to enhance vocabulary (including academic language skills), critical thinking, and comprehension. 2. Select and evaluate three trade books to read aloud during a math, a social studies, and a science lesson. 3. Identify instructional strategies supported by the Science of Reading that teach k-6 students' academic language skills, vocabulary knowledge, and reading and listening comprehension. Credits: 3.00

Required Learner Pathway Specialty Concentration (9 credits)

Optional Concentration

Other Departmental/Program Course Requirements (36-37 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3.

Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

BIOL 20500 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Unifying concepts of biology taught with materials appropriate for future elementary school teachers. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 20600 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Continuation of BIOL 20500. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation.

4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Differentiate between various polygons based on number of sides and measures of angles. 2. Find the sum of the measures of the interior angles of a polygon. 3. Draw nets for polyhedra. 4. Differentiate between various types of polyhedra including all regular polyhedra. 5. Determine number of lines of symmetry for a plane figure and orders of rotational symmetry. 6. Determine number of planes of symmetry for a solid figure as well as axes of rotational symmetry. 7. Recognize and draw shapes that tessellate the plane and solid figures that tessellate space. 8. Determine dimensions of similar planar figures. 9. Determine surface area and volume of similar solid figures. 10. Construct perpendicular bisectors and parallel lines using a compass and straightedge. 11. Recognize and draw rigid motions of shapes including translations, reflections and rotations. 12. Determine area of plane figures and surface area and volume of solid figures. 13. Use the Pythagorean Theorem to determine diagonals of solid figures. Credits: 3.00

ECON 21900 - Economics For Future Elementary Teachers

Credit Hours: 3.00. A principles of economics course designed for future elementary and social studies teachers. The purpose of this course is to: 1) introduce the future teacher to basic economic concepts required by the Indiana Academic Standards for Social Studies, K-6, 2) learn methods for teaching these concepts in the K-6 curriculum, and 3) develop a catalog of curriculum materials appropriate for teaching economics in grades K-6. No credit for management students.

Learning Outcomes: 1. Identify and understand the basic concepts and principles of economics in order to teach at the elementary school level. 2. Develop an `Economic Way of Thinking? that can be utilized to make more efficient choices as consumers, and as voters. 3. Identify supplementary materials (DVDs, online and app-based resources, simulations, curriculum materials, etc.) that can be used in K-6 teaching or as a supplement in K-6 classrooms. 4. Apply this 'Economic Way of Thinking' in the analysis existing curriculum in K-6 economics, and of everyday current events. 5. Utilize the basic concepts and principles of economics to design and develop new K-6 curriculum. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different

audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and qualitative) methods. Credits: 3.00

PHYS 23000 - Physical Science For Elementary Education (UCC: SCI)

Credit Hours: 3.00. The course is aimed at facilitating future elementary teachers to learn physical science that will prepare them to teach these concepts to future elementary students grades K-6. The course will be focused on learning physical science by doing science i.e. developing understanding by collaborative activities and discussion in the laboratory and lecture and communicating your ideas to others. The course will have one 50-minute lecture and two 110-minute laboratory meetings each week. The course content is consistent with the CAEP (Council for the Accreditation of Educator Preparation) K-6 Elementary Teacher Preparation Standards (Standard 2: Understanding and Applying Content and Curricular Knowledge for Teaching in *Physical Science* and *Engineering Design*) and the NGSS (Next Generation Science Standards) Disciplinary Core Ideas (DCIs) for the Physical Sciences (*Physical Sciences* PS1, PS2, PS3, and PS4) as well as many of the Science and Engineering Practices (SEPs). The course will be divided into four units: 1) Matter and Interactions, 2) Motion and Stability, 3) Energy, and 4) Waves and their applications. All of these units will be delivered through the paradigm of solving engineering design problems. Engineering design involves many different practices: problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and apply physical science concepts (matter and interactions, motion and stability, energy, waves and their applications) at a level deeper than but necessary to teach elementary school. 2. Understand and apply the engineering design process, including problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions. Credits: 3.00

EAPS 31201 - Earth Systems Science For Elementary Teachers (UCC: SCI)

Credit Hours: 3.00. An Earth Systems Science perspective draws upon the wealth of Earth systems science research in both content and pedagogy. This approach has served as a guiding framework for how students learn, engage in, and develop deep understandings of the interconnections among Earth's many different systems of geosphere, hydrosphere, atmosphere, and biosphere and the important role that human civilization plays in affecting Earth's other systems. This course takes an Earth Systems Science approach - an emerging transdisciplinary endeavor - to build students' understanding of the structure and functioning of the Earth as a complex, adaptive system.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. View the Earth as a component of an interconnected system. 2. Investigate the accretion of the solar system and Earth and their respective histories. 3. Scale and model the solar system. 4. Model tectonic plates and different plate boundaries. 5. Analyze atmospheric conditions and make short-term weather predictions. 6. Recognize and evaluate Earth's resources. 7. Create a plan to address multiple interrelated challenges. 8. Evaluate the natural environment for anthropomorphic affects. 9. Develop critical thinking and problem-solving skills. 10. Apply guided-inquiry methods to learning. Credits: 3.00

Electives (0-3 credits)

EDPS 10101 - Learning In Context-An Introduction To The Learning Sciences

Credit Hours: 3.00. This introductory course is designed to acquaint first year Learning Science students with the core concepts, principles, and research findings of the learning sciences as they apply to a wide range of formal and informal educational contexts. The course provides students with

opportunities to interact with and learn about the scholarship of College of Education faculty who conduct research within the framework of the learning sciences. Students will learn about faculty projects that exemplify key features of the Learning Sciences such as attention to the complexity of learning environments, the study of social and cultural as well as individual dimensions of learning, and the cross-disciplinary nature of the field.

Learning Outcomes: 1. Identify the features of education as a design discipline. 2. Identify core principles, questions, and challenges, that define educational research and practice from a Learning Sciences perspective. 3. Identify the varied sources of cross-disciplinary knowledge that contribute to the design and study of effective learning environments. Credits: 3.00

EDCI 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

Learning Outcomes: 1. Find research literature. 2. Read and critique educational research. 3. Deepen knowledge of at least one research area in education. 4. Design, conduct, analyze, and write a research project. Credits: 3.00

EDPS 53400 - Introduction To Educational Research II: Measurement Consideration

Credit Hours: 3.00. This course is designed to provide an overview of introductory quantitative data analysis methods in education. The course in specially designed to enhance students' quantitative reasoning and skills through discussions of issues in educational data and authentic data analysis experiences of a variety of education data. The topics to be covered in this course include data collection and description, sampling distributions, methods of quantitative data analysis often used in education research. Permission of instructor required.

Learning Outcomes: 1. Describe key concepts and principles of educational measurement. 2. Conduct comprehensive analyses of the characteristics of different assessments (including their advantages and limitations). Credits: 3.00

EDCI 53900 - Introduction To K-12 Integrated Science, Technology, Engineering And Mathematics (STEM) Education

Credit Hours: 3.00. This course will provide students with a conceptual understanding of integrated K-12 Science, Technology, Engineering and Mathematics (STEM) education and the nature of the disciplines of STEM. Students will explore implications for the teaching and learning of integrated STEM in a K-12 context through an evaluation of integrated approaches to STEM, national teaching standards and current research.

Learning Outcomes: 1. Explore the nature of the disciplines of STEM and their roles in a K-12 integrated STEM context. 2. Identify current

approaches to integrated STEM education. 3. Explore issues related to diversity and equity in STEM education. 4. Define and describe how reform-based teaching and learning relates to nature of the disciplines of STEM. 5. Summarize the current research on teaching and learning through integrated STEM approaches. 6. Develop STEM integration activities for K-12 settings. 7. Develop an action research proposal to study a problem of interest in teaching or learning in K-12 STEM settings. Credits: 3.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

GPA Requirements

Teacher Licensure Information

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 32400 - Teaching Music In The Elementary School

Credit Hours: 3.00. Develops basic musicianship through singing, playing instruments, reading and writing music, listening and moving to music. Surveys music teaching methods and materials. Includes lesson planning, experiences in teaching, and observation of children in music classes.

Learning Outcomes: 1. Advocate for the importance of music's inclusion (or exclusion, if desired) in the elementary classroom. 2.

Develop curricula that appropriately advances the musical abilities, appreciation, and understanding of children. 3. Perform by singing and playing instruments both alone and in a group. 4. Synthesize appropriate terms to describe musical performance and recording. 5. Connect music to a variety of societal, cultural, and historical contexts. Credits: 3.00

BIOL 20500 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Unifying concepts of biology taught with materials appropriate for future elementary school teachers. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6.

Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

16-17 Credits

Spring 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

BIOL 20600 - Biology For Elementary School Teachers (UCC: SCI)

Credit Hours: 3.00. Continuation of BIOL 20500. Does not satisfy requirements for College of Science Majors. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility

rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

EDCI 21510 - Language & Literacy Foundations For Teachers

Credit Hours: 1.00. The goal of the course is to provide background information in language and literacy necessary for success in literacy methods courses. The course will address basic linguistics and phonetic patterns of English, as well as the structures of literature and literary terms.

Learning Outcomes: 1. Compare and contrast levels of language structure: phoneme, morpheme, root, affix, phrase, sentence. 2. Differentiate graphic from phonological elements of language (e.g., grapheme vs phoneme). 3. Compare and contrast vocabulary terms (e.g. synonym, homonym, homograph). 4. Define and articulate written elements (e.g. digraphs, consonant clusters, long/short vowels). 5. Identify morpho-syntactic structures and phonological patters in written and spoken language. 6. Compare and contrast literary genres (e.g. narrative, non-narrative, fiction, nonfiction). 7. Distinguish the organizational structures of fictional genres from those of nonfictional genres. 8. Identify literary terms in context (e.g. alliteration, character traits, plot, stanza). Credits: 1.00

EDCI 22222 - Integrated Health And Physical Education For Elementary Teachers

Credit Hours: 3.00. This course provides elementary education majors with a comprehensive understanding of the critical role health and physical education play in the overall development of young learners. Students will explore how physical activity and health education contribute to cognitive, social, emotional, and physical growth. The course emphasizes the importance of integrating movement and health topics such as personal safety, nutrition, and emotional health into the elementary classroom to enhance academic performance, promote wellness, and develop lifelong healthy habits. Through a blend of theory, practical strategies, and hands-on activities, students will learn to design inclusive, developmentally appropriate physical education lessons and comprehensive school health education (CSHE) plans that cater to diverse learners. By the end of the course, students will be equipped to create engaging, safe, and supportive environments that foster both physical well-being and academic success.

Learning Outcomes: 1. Understand health-related fitness concepts and principles related to physical activity and wellness. 2. Promote physical, emotional, and social well-being in elementary students. 3. Understand and teach proper nutrition, including the relationship between healthy eating, physical activity, and overall wellness. 4. Promote mental and emotional health by teaching coping strategies, stress management, and emotional regulation. 5. Teach personal safety and injury prevention, including strategies for safe play, accident prevention, and emergency response. 6. Integrate physical activity into daily classroom activities, promoting active learning and encouraging students to develop positive attitudes toward physical activity. 7. Develop inclusive and developmentally appropriate physical education lessons, ensuring students of all abilities can participate in and benefit from physical education. Credits: 3.00

18 Credits

Fall 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of

principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

AD 20100 - Art For Elementary School Teachers

Credit Hours: 3.00. Art theory and experiences, curriculum theory, and materials preparatory for instruction of elementary school children. No undergraduate students may be enrolled in this course until they have been admitted to teacher education and a copy of this acceptance is on file.

Learning Outcomes: 1. Apply visual arts methods to develop appropriate lessons to construct students' knowledge. 2. Utilize two- and three-dimensional media commonly used by elementary students to teach art production and encourage the expression of ideas. 3. Assess elementary students' artistic development levels and design activities to meet their artistic needs in the classroom. 4. Apply elements of art, principles of design, interpretation skills, and judgment conclusions to evaluate and respond to works of art and to foster that ability in their elementary students. Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and qualitative) methods. Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

PHYS 23000 - Physical Science For Elementary Education (UCC: SCI)

Credit Hours: 3.00. The course is aimed at facilitating future elementary teachers to learn physical science that will prepare them to teach these concepts to future elementary students grades K-6. The course will be focused on learning physical science by doing science i.e. developing understanding by collaborative activities and discussion in the laboratory and lecture and communicating your ideas to others. The course will have one 50-minute lecture and two 110-minute laboratory meetings each week. The course content is consistent with the CAEP (Council for the Accreditation of Educator Preparation) K-6 Elementary Teacher Preparation Standards (Standard 2: Understanding and Applying Content and Curricular Knowledge for Teaching in *Physical Science* and *Engineering Design*) and the NGSS (Next Generation Science Standards) Disciplinary Core Ideas (DCIs) for the Physical Sciences (*Physical*

Sciences PS1, PS2, PS3, and PS4) as well as many of the Science and Engineering Practices (SEPs). The course will be divided into four units: 1) Matter and Interactions, 2) Motion and Stability, 3) Energy, and 4) Waves and their applications. All of these units will be delivered through the paradigm of solving engineering design problems. Engineering design involves many different practices: problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and apply physical science concepts (matter and interactions, motion and stability, energy, waves and their applications) at a level deeper than but necessary to teach elementary school. 2. Understand and apply the engineering design process, including problem definition, model development and use, investigation, analysis and interpretation of data, application of mathematics and computational thinking, and determination of solutions. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

16 Credits

Spring 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

MA 13900 - Mathematics For Elementary Teachers III

Credit Hours: 3.00. Geometric, measurement and spatial reasoning in one, two and three dimensions as the basis for elementary school geometry. Metric and non-metric geometry, transformation geometry. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. Differentiate between various polygons based on number of sides and measures of angles. 2. Find the sum of the measures of the interior angles of a polygon. 3.

Draw nets for polyhedra. 4. Differentiate between various types of polyhedra including all regular polyhedra. 5. Determine number of lines of symmetry for a plane figure and orders of rotational symmetry. 6. Determine number of planes of symmetry for a solid figure as well as axes of rotational symmetry. 7. Recognize and draw shapes that tessellate the plane and solid figures that tessellate space. 8. Determine dimensions of similar planar figures. 9. Determine surface area and volume of similar solid figures. 10. Construct perpendicular bisectors and parallel lines using a compass and straightedge. 11. Recognize and draw rigid motions of shapes including translations, reflections and rotations. 12. Determine area of plane figures and surface area and volume of solid figures. 13. Use the Pythagorean Theorem to determine diagonals of solid figures. Credits: 3.00

ECON 21900 - Economics For Future Elementary Teachers

Credit Hours: 3.00. A principles of economics course designed for future elementary and social studies teachers. The purpose of this course is to: 1) introduce the future teacher to basic economic concepts required by the Indiana Academic Standards for Social Studies, K-6, 2) learn methods for teaching these concepts in the K-6 curriculum, and 3) develop a catalog of curriculum materials appropriate for teaching economics in grades K-6. No credit for management students.

Learning Outcomes: 1. Identify and understand the basic concepts and principles of economics in order to teach at the elementary school level. 2. Develop an `Economic Way of Thinking? that can be utilized to make more efficient choices as consumers, and as voters. 3. Identify supplementary materials (DVDs, online and app-based resources, simulations, curriculum materials, etc.) that can be used in K-6 teaching or as a supplement in K-6 classrooms. 4. Apply this 'Economic Way of Thinking' in the analysis existing curriculum in K-6 economics, and of everyday current events. 5. Utilize the basic concepts and principles of economics to design and develop new K-6 curriculum. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement

system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EAPS 31201 - Earth Systems Science For Elementary Teachers (UCC: SCI)

Credit Hours: 3.00. An Earth Systems Science perspective draws upon the wealth of Earth systems science research in both content and pedagogy. This approach has served as a guiding framework for how students learn, engage in, and develop deep understandings of the interconnections among Earth's many different systems of geosphere, hydrosphere, atmosphere, and biosphere and the important role that human civilization plays in affecting Earth's other systems. This course takes an Earth Systems Science approach - an emerging transdisciplinary endeavor - to build students' understanding of the structure and functioning of the Earth as a complex, adaptive system.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. View the Earth as a component of an interconnected system. 2. Investigate the accretion of the solar system and Earth and their respective histories. 3. Scale and model the solar system. 4. Model tectonic plates and different plate boundaries. 5. Analyze atmospheric conditions and make short-term weather predictions. 6. Recognize and evaluate Earth's resources. 7. Create a plan to address multiple interrelated challenges. 8. Evaluate the natural environment for anthropomorphic affects. 9. Develop critical thinking and problem-solving skills. 10. Apply guided-inquiry methods to learning. Credits: 3.00

EDCI 32501 - Teaching Literacy In K-2

Credit Hours: 2.00. Students will study how children's oral language develops, how children learn to read and write in primary grade settings, and the teacher's role in this process. Students will learn how phonemic awareness, phonics, fluency, vocabulary and comprehension influence children's literacy development. Students will learn how to select appropriate instructional materials; employ teaching strategies to meet the cognitive and affective literacy needs of all children, and collect, interpret, and use data from various types of assessments to inform literacy teaching and learning processes.

Learning Outcomes: 1. Develop a sound background in theory and research about children's language and literacy development and learning. 2. Learn how literacy learning, teaching, and assessment in phonemic awareness, phonics, fluency, vocabulary, comprehension and writing can be effectively and systematically integrated and diversified to meet individual or group needs. 3. Design and implement developmentally appropriate instruction for primary grade students. Credits: 2.00

16 Credits

Fall 3rd Year

EDCI 30101 - Inquiry Into Teaching And Learning In K-2

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the K-2 classroom. Admission to Teacher Education required. Cannot be taken concurrently with EDCI 30002.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach, assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6. Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 36101 - Teaching Social Studies In K-2

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practice strategies for teaching social studies to children in the K-2 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how K-2 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the K-2 grades. Admission to Teacher Education is required.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the K-2 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the K-2 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the K-2 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36303 - Literacy Teaching And Assessment In K-6

Credit Hours: 2.00 to 3.00. This course is an undergraduate, elementary education course designed to provide preservice teachers with classroom and practicum experiences focused on literacy instruction for children experiencing difficulty learning to read and write. Students learn to administer and analyze individual assessments to determine the strengths and needs of a struggling reader/writer and set intervention goals based on these results. Application of appropriate research-based reading instructional strategies for developing (structured literacy instruction) phonological awareness, phonics, comprehension, vocabulary, and fluency is the focus of weekly literacy teaching in local elementary schools.

Learning Outcomes: 1. Demonstrate the importance of providing instruction to meet the needs of all children through their teaching. 2. Implement a framework for assessment and instruction that allows the teacher to evaluate and adjust for an optimal match between the reader/writer, the text and the literacy context. 3. Translate assessment findings into a plan for instructional support that is realistic in view of the child's needs and the available resources. 4. Use assessment as an ongoing guide to instructional decisions. 5. Become skillful in observing, planning, implementing, and evaluating literacy lessons. 6. Demonstrate knowledge of materials, procedures, and strategies for individual and group literacy instruction. 7. Examine a range of assessment and evaluation tools and strategies. 8. Report to others their assessments of students' literacy learning. 9. Work as a team with peers and school personnel. Credits: 2.00 to 3.00

EDCI 36401 - Teaching Mathematics In K-2

Credit Hours: 2.00. This course focuses on teaching mathematics in the elementary school, grades K-2, and encouraging children as mathematical problem posers. Students learn what it means to teach math interactionally using

children's ideas, beliefs, and experiences as primary resources. Eliciting and interpreting children's mathematical thinking as well as mathematical reasoning, problem solving, communication, and connections are foci. Admission to Teacher Education required.

Learning Outcomes: 1. Gain skill in assessing, evaluating, and responding to the diverse needs of K-2 learners in mathematics. 2. Identify, practice, and reflect on strategies of teaching mathematics to support K-2 students conceptual and procedural knowledge. 3. Analyze mathematics books and tasks for language demands, conceptual and procedural knowledge, and cross-curricular connections. 4. Reflect on the role of K-2 teachers and children's funds of knowledge in relation to their learning of mathematics. Credits: 2.00

EDCI 36501 - Teaching Science Through Design In Grades K-2

Credit Hours: 2.00. The aim of this lab-based course is to prepare students to teach science, engineering, and computational thinking with grade K-2 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade K through 2 learners. At least 9 credits of science content required.

Learning Outcomes: 1. List and contrast current models of science teaching and learning. 2. Demonstrate competence in the use of various learner-centered pedagogical strategies for culturally and linguistically diverse students. 3. Develop collaborative, inquiry based, cross-cultural, learner centered unit plans. 4. Demonstrate competence in assessing student learning and in developing plans of action to meet students' needs. 5. Implement pro-active strategies to establish a safe classroom environment in which all students are encouraged to participate and express their views. 6. Demonstrate competence in the use of instructional technologies to enhance student learning. 7. Demonstrate competence in integrating science, technology, engineering practices and mathematics (STEM) across the curriculum to address culturally and socially relevant issues. 8. Demonstrate competence in developing unit plans that engage children in the use of the engineering design process to address culturally and socially relevant issues. 9. Demonstrate competence in developing activities that promote children's computational thinking. 10. Explain how his/her personal philosophy of teaching and learning contrasts with the College of Education mission: "We are committed to social justice and education of all the children of all the people - especially in the area of P=12 STEM education." 11. Participate actively in discussing regarding curriculum development and implementation designed to address the needs of culturally diverse learners. Credits: 2.00

EDCI 31103 - Integrating Media In The K-6 Classroom

Credit Hours: 3.00. This course prepares teacher candidates to select, evaluate, and integrate children's literature and media in K-6 classrooms. Focusing on high-quality, diverse texts and media, candidates will learn to choose materials that are developmentally appropriate and reflect the diversity of the world in which we live. Emphasis will be placed on the critical role literature and media play in fostering vocabulary development, enhancing critical thinking skills, and supporting literacy development across subjects. The course will focus on how K-6 students learn to use comprehension strategies independently and efficiently as they progress through elementary school fostering both their academic growth and their ability to engage with diverse texts.

Learning Outcomes: 1. Integrate literature and media into content area lessons to enhance vocabulary (including academic language skills), critical thinking, and comprehension. 2. Select and evaluate three trade books to read aloud during a math, a social studies, and a science lesson. 3. Identify instructional strategies supported by the Science of Reading

that teach k-6 students' academic language skills, vocabulary knowledge, and reading and listening comprehension. Credits: 3.00

16 Credits

Spring 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30102 - Inquiry Into Teaching And Learning In 3-6

Credit Hours: 1.00. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently through cycles of inquiry. In particular, this seminar is intended to be an inquiry space for questions and topics related to teaching using pedagogies of care in the 3-6 classroom. Admission to Teacher Education is required. Cannot be taken concurrently with EDCI 30101.

Learning Outcomes: 1. Engage with teachers and students in connected, educative, and personally rewarding field experiences. 2. Engage in practical experiences with opportunities to observe, plan, teach assess, and receive feedback. 3. Gain understanding of the professional responsibilities of a teacher. 4. Explore the role of collaboration among colleagues in a school. 5. Draw connections and distinctions among disciplinary practices. 6. Be active participants in an ongoing, supportive lesson inquiry group. 7. Evaluate the outcomes of their teaching practice and constructively respond to feedback. 8. Receive mentoring and engage in peer mentoring. 9. Examine collaboratively and critically, educational needs within the field placement. Credits: 1.00

EDCI 36102 - Teaching Social Studies In 3-6

Credit Hours: 2.00. This course provides students with an overview of the field of social studies, of selected issues in the field, and of best practices strategies for teaching social studies to children in the 3-6 classroom. Students will work to identify the most important social studies knowledge, skills and dispositions; investigate how 3-6 children learn social studies most effectively. Students will then use their new understandings to implement lessons, analyzing the effectiveness of their instruction for children in the 3-6 grades.

Learning Outcomes: 1. Develop compelling questions in order to guide inquiry in the 3-6 social studies classroom. 2. Apply social studies disciplinary concepts and tools in developing curriculum and implementing effective teaching strategies for the 3-6 children. 3. Use evidence to guide instruction and to evaluate the effectiveness of their instructional practice. 4. Identify critical issues in teaching social studies to the 3-6 learner and pose evidence-based solutions. Credits: 2.00

EDCI 36402 - Teaching Mathematics In Grades 3-6

Credit Hours: 2.00. Focuses on teaching mathematics in the elementary school grades 3-6. Students learn what it means to teach mathematics interactionally using children's ideas, beliefs, and experiences as primary resources. Mathematical reasoning, problem solving, communication, and connections are foci.

Learning Outcomes: 1. Develop, apply, analyze, and evaluate strategies of teaching mathematics and their relationships to your beliefs and knowledge about how children learn mathematics. 2. Know and analyze methods of assessing and responding to the needs of mathematics learners labeled in schools. 3. Analyze and apply student's mathematical conceptual understanding and procedural knowledge to the development of problem-solving based mathematics lessons. 4. Create and analyze instructional activities drawing from student's conceptual understanding and procedural knowledge as primary resources. Credits: 2.00

EDCI 36502 - Teaching Science Through Design In Grades 3-6

Credit Hours: 2.00. The aim of this course is to prepare students to teach science, engineering, and computational thinking with grade 3-6 learners by building on existing pedagogical and subject matter knowledge in science. Students will engage in science and engineering learning experiences; identify and analyze children's ideas and background experiences; and examine instructional strategies for leveraging students' sense making. Using this knowledge, students will plan for and implement standards-based lessons, reflecting on the strengths and areas of improvement of their instruction for grade 3 through 6 learners. At least 9 credits of science content courses are required.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 2.00

EDCI 32602 - Teaching Literacy In 3-6

Credit Hours: 2.00. Students will build on material learned in EDCI 32501. They will concentrate on increasing student's literacy skills with a focus on fluency, phonics, strategic reading, vocabulary, literary analysis, content area reading, the writing process, and building comprehension skills. They will learn to select appropriate materials, employ strategies to meet the cognitive and affective literacy needs of all children, and create integrate, and use data from various forms of assessment to inform the teaching and learning process.

Learning Outcomes: 1. Demonstrate an understanding of theoretical and evidence-based foundations that guide reading, writing processes, and instruction. 2. Design developmentally appropriate instruction that addresses the needs of all learners. 3. Teach developmentally appropriate lessons/units in the school setting. 4. Assess student learning by designing/using/adjusting formative and summative assessments for your group of students, and pre-assessments. 5. Reflect and analyze your own teaching. Credits: 2.00

13 Credits

Fall 4th Year

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning

environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDCI 49601 - Elementary Education Expanded Student Teaching

Credit Hours: 1.00 to 8.00. This course is the initial residency experience that precedes a full semester of student teaching. The seminar and field experience focus on induction into the broader elementary school context and building mentoring relationships as both a mentee and mentor. Students will develop their identity as a professional educator who advocates for the profession, themselves, and their students. Includes a field experience. Admission to Teacher Education required.

Learning Outcomes: 1. Integrate their learning from Foundations and Methods courses into their teaching experiences in the classroom. 2. Design and deliver instruction that meets learner needs, continually assess student learning, and use assessment to drive instruction. 3. Develop their skills and professional identity as an educator through self-reflection, analysis of student learning, and analysis of feedback. 4. Use observation, academic and personal engagement, and assessment data to develop an understanding of their students as learners at the individual and group level. Credits: 1.00 to 8.00

12-13 Credits

Spring 4th Year

EDCI 49600 - Student Teaching In The Elementary School (UCC: OC)

Credit Hours: 6.00 to 16.00. Full-time elementary classroom teaching experiences and a student teaching seminar under the mentorship of the classroom teacher and a University supervisor.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each child's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each child's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Energy Engineering Technology, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (52 credits)

Required Major Courses (52 credits)

ECET 17700 - Data Acquisition And Systems Control

Credit Hours: 3.00. Fundamental electrical parameters and measurement techniques are introduced. These are then applied to implementing power interfaces, actuators and sensors. Modules that provide signal conditioning, data conversion, filtering and controllers are evaluated. A full, closed loop control system is built and evaluated.

Learning Outcomes: 1. Make laboratory measurements using digital multi-meters, oscilloscopes, and a microcomputer. 2. Implement and evaluate the performance of each of the following elements at the module level while calculating key circuit parameters: Switching and linear power interfaces; Light, sound, motion, and temperature actuators and sensors; Amplifiers, signal conversion, and filters. On/off, linear, and computer controllers. 3. Evaluate the static and the dynamic performance of a closed loop system constructed of the elements from items 1 and 2 above. Credits: 3.00

ECET 17900 - Introduction To Digital Systems

Credit Hours: 3.00. This course introduces computing systems and defines the major classes of computing devices. Sequential and concurrent operations, along with logic and control structures, are covered. Knowledge of fundamental computing principles is discovered. Common software tools are used to create, test, and debug systems. Systems are constructed from standard blocks with a focus on subsystem operation and performance, troubleshooting/debugging and testing. Common applications of embedded systems are introduced.

Learning Outcomes: 1. Develop and utilize algorithms and flowcharts to create microcontroller applications to solve a given problem. 2. Apply the fundamental control structures and logic operations to control program flow within microcontroller applications. 3. Demonstrate the ability to convert numbers between number systems (bases) and compute arithmetic operations within microcontroller applications. 4. Utilize the primary tools used to create, test, and debug computing system hardware and software components. 5. Construct electronic hardware systems to solve a given microcontroller problem. Credits: 3.00

ECET 22700 - DC And Pulse Electronics

Credit Hours: 3.00. Capacitors, inductors, oscillators, rectifiers, bipolar and MOSFET power switches, switching power supplies, half-and full-H bridges, switching audio power amplifiers, and linear regulators are studied. Computer-aided analysis of circuits is utilized.

Learning Outcomes: 1. Explain the characteristics of capacitors, inductors, rectifier diodes, Zener diodes, IC regulators, bipolar junction transistors (BJTs), field effect transistors (MOSFETS), and general purpose operational amplifiers. 2. Apply the principles of circuit analysis to the following: switching and linear power supplies, op-amp based amplifiers, BJT and MOSFET switches, Class D amplifier, wave shape generators, RC and RL circuits. 3. Simulate circuits and compare actual data to simulated data. 4. Construct electronic circuit according to a given schematic. 5. Measure electrical parameters, using digital multimeters, signal generators, and oscilloscopes. 6. Interpret laboratory experiment data. Credits: 3.00

ECET 22900 - Concurrent Digital Systems

Credit Hours: 3.00. This course establishes a foundation for concurrent digital systems. Common methods of describing digital circuit operation are studied along with the techniques for translation between any two methods. Basic building blocks of digital systems are defined and applied. Analysis techniques for combinational and sequential logic circuits or subsystems are covered. Computer-based development tools, programmable logic devices, and technical reference sources are used to build, test, and evaluate digital systems.

Learning Outcomes: 1. Translate between any two forms of logic circuit descriptions: English, Boolean equation, Truth Table, Logic Diagram, Timing Diagram, Hardware Description language. 2. Anticipate the output of functional blocks given the current inputs or a recent event. 3. Validate the operation of any logic circuit using the simulator, Function generator,

oscilloscope or DVM. Credits: 3.00

ECET 27000 - Electronics Prototype Development And Construction

Credit Hours: 3.00. This course introduces project planning and basic concepts in electronic design automation (EDA). The student develops a portion of an electronic system by utilization of EDA, design for testing, design for manufacturability (DFM), and component selection techniques. New construction methods and testing techniques are introduced.

Learning Outcomes: 1. Design an electronic device or system to accomplish a given task. 2. Demonstrate appropriate electronic assembly techniques. 3. Develop and execute appropriate testing techniques on electronic devices and systems. 4. Apply appropriate software applications to develop a prototype. 5. Apply graphical communication techniques to convey technical information. 6. Apply principles of design for manufacturability and design for testing to a project. 7. Employ teaming methods on a project. Credits: 3.00

ECET 27400 - Wireless Communications

Credit Hours: 3.00. The theory and techniques of wirelessly sending information (voice, music, data) from one location to another is studies from a systems point of view. This includes a signal analysis, modulation techniques, transmitters, receivers, low noise amplifiers, and filters in the RF frequency spectrum. In addition, special topics of current interest are introduced. This course incorporated a student-based communication design and analysis laboratory.

Learning Outcomes: 1. Perform power calculations, such as dB, dBm, dBuV. 2. Describe, identify and apply Fourier concepts communication signals and systems, such as wave shapes, signal mixing, carrier waves. 3. Evaluate, describe and calculate the effects of noise on communication circuits and systems. 4. Demonstrate the concepts and applications of amplitude, frequency, and phase modulation techniques. 5. Describe and compare the operation of various receiver and transmitter blocks and systems. 6. Describe and apply the concepts of EMC, EMI and RFI to RF components, circuits and systems. 7. Describe and apply the fundamentals of cellular communication, such as frequency reuse, spread spectrum techniques and network technologies. 8. Describe and apply the fundamentals of digital communications, such as coding, bandwidth and modulation techniques. 9. Demonstrate use of RF laboratory equipment including the spectrum analyzer and RF generator. Credits: 3.00

ECET 27700 - AC And Power Electronics

Credit Hours: 3.00. AC Circuits including the j operator, phasors, reactance and impedance are studies. Circuit laws, network theorems, and the application of circuit analysis techniques to amplifiers used in power electronics, including power MOS devices, thyristors, and other appropriate applications. Computer-aided analysis of circuits is used.

Learning Outcomes: 1. Calculate phasor and time domain representation of a sine wave. 2. Analyze series, parallel and series-parallel passive and active AC circuits. 3. Analyze multi-loop, multi-source AC circuits using advanced techniques. 4. Analyze and design given series and parallel resonance circuits. 5. Compute the average voltage, rms voltage and power produced by a wide variety of waveshapes using integral definitions. 6. Describe the linear performance of MOS devices. 7. Analyze and design linear power amplifiers using op amps and MOS devices. 8. Apply thyristors, snubbing, thyristor triggers and proportional interfaces. 9. Evaluate the performance of a variety of AC circuits, using appropriate standard laboratory measurement procedures and simulations. Credits: 3.00

ECET 27900 - Embedded Digital Systems

Credit Hours: 3.00. A course emphasizing the advanced applications of embedded digital systems. Topics include embedded system architecture, use of advanced programmable counter/timer arrays, analog interfaces, serial communication, and interrupts.

Learning Outcomes: 1. Solve problems by the

application of C programs emphasizing I/O and peripherals. 2. Demonstrate knowledge and skill in the application of parallel ports, counter-timers, programmable counter arrays, serial ports and interrupts. 3. Demonstrate a conceptual understanding of embedded microcontroller system hardware system design. 4. Demonstrate the use of software development tools such as an editor, an assembler, a C compiler, a linker and locator, an object-to-hex converter, etc. 5. Demonstrate fluency in the language of advanced microprocessors. Credits: 3.00

ECET 33300 - Power Electronics In Energy Systems

Credit Hours: 3.00. A study of fundamentals and applications of switch-mode DC-DC and DC-AC power electronic converters. The emphasis is given to hardware development aspects. Students will learn how to safely work with high power and high voltage circuits.

Learning Outcomes: 1. Describe how power electronics enable energy efficiency in various applications such as energy conservation, renewable energy, and transportation. 2. Design and build switch mode DC-DC and DC-AC converters using commercially available components. 3. Develop closed loop control circuits for DC-DC converters using voltage mode and peak-current mode methods. 4. Simulate power electronic circuits. Credits: 3.00

ECET 37300 - Applied Electronic Drives

Credit Hours: 3.00. This course covers operational principles and application development consideration of all subsystems that make up electric drives: electric machines, power-electric based converters, mechanical system requirements, feedback controller design, and the interaction of drives with the utility grid. State of the art drive development tools are introduced through hands-on activities.

Learning Outcomes: 1. Describe the structure of electronic drive systems and their role in various applications such as flexible production systems, energy conservation, renewable energy, and transportation, making electric drives an enabling technology. 2. Understand the basic principles of power electronics in drives using switch-mode converters and pulse width modulation to synthesize the voltages in dc and ac motor drives. 3. Understand the operation of DC, AC, and brushless DC motors. 4. Construct and test traditional and electronic drive circuit for above motors. 5. Analyze various signals present in electric drive to evaluate drive performance. 6. Learn speed control of the above machines. Credits: 3.00

ECET 43600 - Electrical Power Transmissions, Distribution, And Smart Control

Credit Hours: 3.00. A course on the simple modeling and simulation of the power grid systems, power flow analysis, and advanced meter infrastructure (AMI). The fundamentals learned in this course will be useful in the study of the effects of distributed energy resources and storage in Smart Grid environment.

Learning Outcomes: 1. Explain the role of components of electrical power transmission and distribution network. 2. Identify characteristics of DC and AC transmission lines and cable systems. 3. Identify the characteristics of various power system loads and power quality issues. 4. Calculate and simulate power flow in a power systems network. 5. Explain how to stabilize power systems. 6. Apply Advanced Meter Infrastructure (AMI) as it is used in Smart Grid applications. Credits: 3.00

ECET 37600 - Electrical Energy Systems

Credit Hours: 3.00. This course is an introduction to a wide range of electrical energy systems technologies. Topics include fundamentals of energy conversion, which includes large- and small-scale generation, energy storage, and end-use. Processes include coal, nuclear, solar, wind, hydro, and biomass and their application in central and distributed power systems. The power grid, micro-grids, and smart grid technologies are also explored. The goal is to introduce students to the breadth of technology in the rapidly growing and changing field of energy systems.

Learning Outcomes: 1. Demonstrate the process cycles, theory of operation, and roles of

significant equipment for various energy conversion, energy storage, and power distribution technologies. 2. Characterize and calculate power, efficiency, environmental, and economic quantities related to various energy conversion, energy storage, and power distribution technologies. 3. Discuss problems and trending solutions related to power and energy systems such as technological limitations, environmental impacts, and economic limitations both locally and worldwide. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

Other Departmental/Program Course Requirements (64-70 credits)

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform

necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and

biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate

rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CNIT 10500 - Introduction To C Programming

Credit Hours: 3.00. This course is an introduction to computer programming using the "C" language. The emphasis is on structured programming principles, and understanding the basic concepts that apply to engineering problems. Among topics covered in this course are: problem solving using top down design, using flowcharts to explain the program logic, selection structure, repetition structure, bitwise operations, arrays, pointers, strings, passing arguments, and sequential files.

Learning Outcomes: 1. Practice and apply basic programming concepts in weekly labs and assignments. 2. Construct programming solutions using different coding structures in C. 3. Illustrate the ability to design and build user defined functions in C. 4. Practice the use of one-dimensional Arrays, Struct, and Files in C programing. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem

of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of

differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

MET 22000 - Heat And Power

Credit Hours: 3.00. Heat/Power is an introduction to the principles of thermodynamics and heat transfer. Basic thermodynamic processes are used to evaluate the performance of energy-based systems such as internal combustion engines, power plants, and refrigeration equipment.

Learning Outcomes: 1. Determine properties of gases, steam, and refrigerants. 2. Analyze fixed mass and steady flow control volume systems and devices. 3. Apply fundamental concepts of the 2nd Law of Thermodynamics to heat-work energy conversion and thermal efficiency. Credits: 3.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the

ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of

human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and

concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MET 53000 - Facilities Engineering Technology

Credit Hours: 3.00. A study of the application of the engineering sciences and technology to the solution of problems associated with mechanical and electrical systems in buildings. Emphasizes commercial and industrial facilities. Identifying energy conservation measures for both mechanical and electrical systems and evaluating their economic impact are an important focus of the course.

Learning Outcomes: 1. Explain building energy trends and related policy. 2. Explain the organizations and personnel supporting the built environment. 3. Use building automation systems to monitor and control building operation. 4. Quantify energy use in building systems. 5. Use accepted professional practice for technical computations and writing. 6. Calculate the economic impact of energy and resource conservation measures for buildings. 7. Compute the impact of solar energy use for a building. 8. Apply strategies for maintaining Indoor Air Quality in buildings. 9. Evaluate the performance of mechanical or electrical systems in buildings. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective

sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6.

Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CNIT 10500 - Introduction To C Programming

Credit Hours: 3.00. This course is an introduction to computer programming using the "C" language. The emphasis is on structured programming principles, and understanding the basic concepts that apply to engineering problems. Among topics covered in this course are: problem solving using top down design, using flowcharts to explain the program logic, selection structure, repetition structure, bitwise operations, arrays, pointers, strings, passing arguments, and sequential files.

Learning Outcomes: 1. Practice and apply basic programming concepts in weekly labs and assignments. 2. Construct programming solutions using different coding structures in C. 3. Illustrate the ability to design and build user defined functions in C. 4. Practice the use of one-dimensional Arrays, Struct, and Files in C programing. Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to

compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical

situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

16-19 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ECET 17700 - Data Acquisition And Systems Control

Credit Hours: 3.00. Fundamental electrical parameters and measurement techniques are introduced. These are then applied to implementing power interfaces, actuators and sensors. Modules that provide signal conditioning, data conversion, filtering and controllers are evaluated. A full, closed loop control system is built and evaluated.

Learning Outcomes: 1. Make laboratory measurements using digital multi-meters, oscilloscopes, and a microcomputer. 2. Implement and evaluate the performance of each of the following elements at the module level while calculating key circuit parameters: Switching and linear power interfaces; Light, sound, motion, and temperature actuators and sensors; Amplifiers, signal conversion, and filters. On/off, linear, and computer controllers. 3. Evaluate the static and the dynamic performance of a closed loop system constructed of the elements from items 1 and 2 above. Credits: 3.00

ECET 17900 - Introduction To Digital Systems

Credit Hours: 3.00. This course introduces computing systems and defines the major classes of computing devices. Sequential and concurrent operations, along with logic and control structures, are covered. Knowledge of fundamental computing

principles is discovered. Common software tools are used to create, test, and debug systems. Systems are constructed from standard blocks with a focus on subsystem operation and performance, troubleshooting/debugging and testing. Common applications of embedded systems are introduced.

Learning Outcomes: 1. Develop and utilize algorithms and flowcharts to create microcontroller applications to solve a given problem. 2. Apply the fundamental control structures and logic operations to control program flow within microcontroller applications. 3. Demonstrate the ability to convert numbers between number systems (bases) and compute arithmetic operations within microcontroller applications. 4. Utilize the primary tools used to create, test, and debug computing system hardware and software components. 5. Construct electronic hardware systems to solve a given microcontroller problem. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some

exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

16-18 Credits

Fall 2nd Year

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as

modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

ECET 22700 - DC And Pulse Electronics

Credit Hours: 3.00. Capacitors, inductors, oscillators, rectifiers, bipolar and MOSFET power switches, switching power supplies, half-and full-H bridges, switching audio power amplifiers, and linear regulators are studied. Computer-aided analysis of circuits is utilized.

Learning Outcomes: 1. Explain the characteristics of capacitors, inductors, rectifier diodes, Zener diodes, IC regulators, bipolar junction transistors (BJTs), field effect transistors (MOSFETS), and general purpose operational amplifiers. 2. Apply the principles of circuit analysis to the following: switching and linear power supplies, op-amp based amplifiers, BJT and MOSFET switches, Class D amplifier, wave shape generators, RC and RL circuits. 3. Simulate circuits and compare actual data to simulated data. 4. Construct electronic circuit according to a given schematic. 5. Measure electrical parameters, using digital multimeters, signal generators, and oscilloscopes. 6. Interpret laboratory experiment data. Credits: 3.00

ECET 22900 - Concurrent Digital Systems

Credit Hours: 3.00. This course establishes a foundation for concurrent digital systems. Common methods of describing digital circuit operation are studied along with the techniques for translation between any two methods. Basic building blocks of digital systems are defined and applied. Analysis techniques for combinational and sequential logic circuits or subsystems are covered. Computer-based development tools, programmable logic devices, and technical reference sources are used to build, test, and evaluate digital systems.

Learning Outcomes: 1. Translate between any two forms of logic circuit descriptions: English, Boolean equation, Truth Table, Logic Diagram, Timing Diagram, Hardware Description language. 2. Anticipate the output of functional blocks given the current inputs or a recent event. 3. Validate the operation of any logic circuit using the simulator, Function generator, oscilloscope or DVM. Credits: 3.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic

behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

15-16 Credits

Spring 2nd Year

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of

global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ECET 27000 - Electronics Prototype Development And Construction

Credit Hours: 3.00. This course introduces project planning and basic concepts in electronic design automation (EDA). The student develops a portion of an electronic system by utilization of EDA, design for testing, design for manufacturability (DFM), and component selection techniques. New construction methods and testing techniques are introduced.

Learning Outcomes: 1. Design an electronic device or system to accomplish a given task. 2. Demonstrate appropriate electronic assembly techniques. 3. Develop and execute appropriate testing techniques on electronic devices and systems. 4. Apply appropriate software applications to develop a prototype. 5. Apply graphical communication techniques to convey technical information. 6. Apply principles of design for manufacturability and design for testing to a project. 7. Employ teaming methods on a project. Credits: 3.00

ECET 27700 - AC And Power Electronics

Credit Hours: 3.00. AC Circuits including the j operator, phasors, reactance and impedance are studies. Circuit laws, network theorems, and the application of circuit analysis techniques to amplifiers used in power electronics, including power MOS devices, thyristors, and other appropriate applications. Computer-aided analysis of circuits is used.

Learning Outcomes: 1. Calculate phasor and time domain representation of a sine wave. 2. Analyze series, parallel and series-parallel passive and active AC circuits. 3. Analyze multi-loop, multi-source AC circuits using advanced techniques. 4. Analyze and design given series and parallel resonance circuits. 5. Compute the average voltage, rms voltage and power produced by a wide variety of waveshapes using integral definitions. 6. Describe the linear performance of MOS devices. 7. Analyze and design linear power amplifiers using op amps and MOS devices. 8. Apply thyristors, snubbing, thyristor triggers and proportional interfaces. 9. Evaluate the performance of a variety of AC circuits, using appropriate standard laboratory measurement procedures and simulations. Credits: 3.00

ECET 27900 - Embedded Digital Systems

Credit Hours: 3.00. A course emphasizing the advanced applications of embedded digital systems. Topics include embedded system architecture, use of advanced programmable counter/timer arrays, analog interfaces, serial communication, and interrupts.

Learning Outcomes: 1. Solve problems by the application of C programs emphasizing I/O and peripherals. 2. Demonstrate knowledge and skill in the application of parallel ports, counter-timers, programmable counter arrays, serial ports and interrupts. 3. Demonstrate a conceptual understanding of embedded microcontroller system hardware system design. 4. Demonstrate the use of software development tools such as an editor, an assembler, a C compiler, a linker and locator, an object-to-hex converter, etc. 5. Demonstrate fluency in the language of advanced microprocessors. Credits: 3.00

15 Credits

Fall 3rd Year

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions

and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing.
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.
University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.
Credits: 3.00

ECET 37600 - Electrical Energy Systems

Credit Hours: 3.00. This course is an introduction to a wide range of electrical energy systems technologies. Topics include fundamentals of energy conversion, which includes large- and small-scale generation, energy storage, and end-use. Processes include coal, nuclear, solar, wind, hydro, and biomass and their application in central and distributed power systems. The power grid, micro-grids, and smart grid technologies are also explored. The goal is to introduce students to the breadth of technology in the rapidly growing and changing field of energy systems.
Learning Outcomes: 1. Demonstrate the process cycles, theory of operation, and roles of significant equipment for various energy conversion, energy storage, and power distribution technologies. 2. Characterize and calculate power, efficiency, environmental, and economic quantities related to various energy conversion, energy storage, and power distribution technologies. 3. Discuss problems and trending solutions related to power and energy systems such as technological limitations, environmental impacts, and economic limitations both locally and worldwide.
Credits: 3.00

15 Credits

Spring 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.
Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.
Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming

solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

ECET 27400 - Wireless Communications

Credit Hours: 3.00. The theory and techniques of wirelessly sending information (voice, music, data) from one location to another is studies from a systems point of view. This includes a signal analysis, modulation techniques, transmitters, receivers, low noise amplifiers, and filters in the RF frequency spectrum. In addition, special topics of current interest are introduced. This course incorporated a student-based communication design and analysis laboratory.

Learning Outcomes: 1. Perform power calculations, such as dB, dBm, dBuV. 2. Describe, identify and apply Fourier concepts communication signals and systems, such as wave shapes, signal mixing, carrier waves. 3. Evaluate, describe and calculate the effects of noise on communication circuits and systems. 4. Demonstrate the concepts and applications of amplitude, frequency, and phase modulation techniques. 5. Describe and compare the operation of various receiver and transmitter blocks and systems. 6. Describe and apply the concepts of EMC, EMI and RFI to RF components, circuits and systems. 7. Describe and apply the fundamentals of cellular communication, such as frequency reuse, spread spectrum techniques and network technologies. 8. Describe and apply the fundamentals of digital communications, such as coding, bandwidth and modulation techniques. 9. Demonstrate use of RF laboratory equipment including the spectrum analyzer and RF generator. Credits: 3.00

ECET 37300 - Applied Electronic Drives

Credit Hours: 3.00. This course covers operational principles and application development consideration of all subsystems that make up electric drives: electric machines, power-electric based converters, mechanical system requirements, feedback controller design, and the interaction of drives with the utility grid. State of the art drive development tools are introduced through hands-on activities.

Learning Outcomes: 1. Describe the structure of electronic drive systems and their role in various applications such as flexible production systems, energy conservation, renewable energy, and transportation, making electric drives an enabling technology. 2. Understand the basic principles of power electronics in drives using switch-mode converters and pulse width modulation to synthesize the voltages in dc and ac motor drives. 3. Understand the operation of DC, AC, and brushless DC motors. 4. Construct and test traditional and electronic drive circuit for above motors. 5. Analyze various signals present in electric drive to evaluate drive performance. 6. Learn speed control of the above machines. Credits: 3.00

MET 22000 - Heat And Power

Credit Hours: 3.00. Heat/Power is an introduction to the principles of thermodynamics and heat transfer. Basic thermodynamic processes are used to evaluate the performance of energy-based systems such as internal combustion engines, power plants, and refrigeration equipment.

Learning Outcomes: 1. Determine properties of gases, steam, and refrigerants. 2. Analyze fixed mass and steady flow control volume systems and devices. 3. Apply fundamental concepts of the 2nd Law of Thermodynamics to heat-work energy conversion and thermal efficiency. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth

analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

15 Credits

Fall 4th Year

ECET 33300 - Power Electronics In Energy Systems

Credit Hours: 3.00. A study of fundamentals and applications of switch-mode DC-DC and DC-AC power electronic converters. The emphasis is given to hardware development aspects. Students will learn how to safely work with high power and high voltage circuits.

Learning Outcomes: 1. Describe how power electronics enable energy efficiency in various applications such as energy conservation, renewable energy, and transportation. 2. Design and build switch mode DC-DC and DC-AC converters using commercially available components. 3. Develop closed loop control circuits for DC-DC converters using voltage mode and peak-current mode methods. 4. Simulate power electronic circuits. Credits: 3.00

15 Credits

Spring 4th Year

AGEC 25000 - Economic Geography Of World Food And Resources (UCC: BSS)

Credit Hours: 3.00. A study of the important issues and economic decisions about worldwide resource use for food and fiber production as influenced by geography, climate, history, social institutions, national self-interest, and the environment.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop

original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes

of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

ECET 43600 - Electrical Power Transmissions, Distribution, And Smart Control

Credit Hours: 3.00. A course on the simple modeling and simulation of the power grid systems, power flow analysis, and advanced meter infrastructure (AMI). The fundamentals learned in this course will be useful in the study of the effects of distributed energy resources and storage in Smart Grid environment.

Learning Outcomes: 1. Explain the role of components of electrical power transmission and distribution network. 2. Identify characteristics of DC and AC transmission lines and cable systems. 3. Identify the characteristics of various power system loads and power quality issues. 4. Calculate and simulate power flow in a power systems network. 5. Explain how to stabilize power systems. 6. Apply Advanced Meter Infrastructure (AMI) as it is used in Smart Grid applications. Credits: 3.00

MET 53000 - Facilities Engineering Technology

Credit Hours: 3.00. A study of the application of the engineering sciences and technology to the solution of problems associated with mechanical and electrical systems in buildings. Emphasizes commercial and industrial facilities. Identifying energy conservation measures for both mechanical and electrical systems and evaluating their economic impact are an important focus of the course.

Learning Outcomes: 1. Explain building energy trends and related policy. 2. Explain the organizations and personnel supporting the built environment. 3. Use building automation systems to monitor and control building operation. 4. Quantify energy use in building systems. 5. Use accepted professional practice for technical computations and writing. 6. Calculate the economic impact of energy and resource conservation measures for buildings. 7. Compute the impact of solar energy use for a building. 8. Apply strategies for maintaining Indoor Air Quality in buildings. 9. Evaluate the performance of mechanical or electrical systems in buildings. Credits: 3.00

12 Credits

Engineering Technology Education, BS

About the Program

Degree Requirements

Major Required Courses (45 credits)

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

TLI 16100 - Prototyping In Engineering/Technology Education

Credit Hours: 3.00. Design, make, and innovate! This course provides basic instruction on the proper and safe use of tools and equipment used to prototype innovative ideas. This includes 3D printers, laser cutters/engravers, fabrication tools/equipment, CNC mills/routers, and microcontrollers/microcomputers.

Learning Outcomes: 1. Demonstrate the technical competencies to properly and safely operate common prototyping equipment and tools. 2. Apply knowledge of materials properties to select the appropriate materials for a desired prototype. 3. Create operations process flow charts for planning product development. 4. Test prototypes in real situations to gather data related to their performance. Credits: 3.00

TLI 26200 - Foundations Of Integrated STEM Education

Credit Hours: 3.00. This course provides students with a conceptual understanding of an integrated approach to teaching Science, Technology, Engineering, and Mathematics (STEM). Integrated STEM pedagogies include project/problem-based (PBL), design-based, and inquiry-based approaches to teaching. Students engage in a co-teaching model to deliver STEM instruction and observe local K-12 classrooms.

Learning Outcomes: "1. Identify foundational learning theories that blend an integrated approach to teaching. 2. Identify common practices for scientists, technologists, engineers, and mathematicians and similarities

with other STEM careers. 3. Describe the key tenants of PBL, design-based, and scientific inquiry-based approaches to teaching content. 4. Create integrated STEM lessons that address two STEM subjects and state/national standards. Credits: 3.00

TLI 26500 - Teaching The TE Of STEM

Credit Hours: 3.00. A course for teacher education majors that provides rationale and techniques for integrating engineering and technological literacy into the K-12 mathematics and science curriculum. Experiences focus on the engineering design process, mechanisms, robotics, strength of materials, electrical circuits, and electronics.

Learning Outcomes: 1. Describe the national importance of the integrative nature of the K-12 STEM curriculum. 2. Describe how technology and engineering can be integrated into K-12 mathematics and science. 3. Demonstrate hands-on learning activities appropriate to integrate technology and engineering into the K-12 STEM curriculum. Credits: 3.00

TLI 36100 - Engineering And Technology Education Instructional Planning And Evaluation

Credit Hours: 3.00. This course addresses selecting content, writing instructional objectives, planning lessons, preparing a unit of study, and evaluating student progress. Emphasis is placed on evaluating instruction and student achievement to include developing valid, reliable testing instruments as they relate to measuring student achievement in the cognitive, affective, and psychomotor domains.

Learning Outcomes: 1. Demonstrate instructional planning skills related to the delivery of engineering/technology education to both middle-level and high school students. 2. Prepare lesson plans, a unit of study, and evaluation instruments. 3. Appraise instructional material effectiveness and propose revisions for improvement. 4. Prepare appropriate assessment instruments that align with identified learning objectives. Credits: 3.00

TLI 36700 - Teaching Design And Innovation I

Credit Hours: 3.00. This course focuses on the development of appropriate engineering design knowledge and skill required to effectively teach middle and high school engineering/technology education courses by infusing engineering design into the curriculum. Students will use 3-D solid modeling software, rapid prototyping, and other design technologies as they engage in the engineering design process through an open-ended engineering design challenge.

Learning Outcomes: 1. Display the ability to teach students to develop skills for living in a knowledge-based, technological society using design-based pedagogical approaches. 2. Use the engineering design process to solve open-ended, ill-defined problems. 3. Demonstrate the ability to teach basic engineering design techniques. Credits: 3.00

TLI 46000 - Teaching Design And Innovation II

Credit Hours: 3.00. This course expands the engineering design process, incorporating rapid prototyping and other fabrication technologies to create a specified solution. The course emphasizes process flow chart planning and logistics of engineering/technology education laboratory management. Prototypes will be tested in real situations and data gathered on performance. Designs will be revised to reflect a deeper understanding of manufacturing and use, being sensitive to structure, function, and behavior from a systems-level perspective. Intellectual property, marketing, and infrastructure will be discussed.

Learning Outcomes: 1. Describe the complexity of implementing design solutions. 2. Select appropriate fabrication technologies. 3. Operationalize performance criteria into measurable variables. 4. Gather data to make rational decisions, which are transparent and justifiable. 5. Optimize design solutions and perform iteratively in the design process. Credits: 3.00

TLI 46100 - Engineering/Technology Teacher Lab Planning

Credit Hours: 3.00. This course provides future engineering/technology education teachers with information on designing, organizing, and managing engineering/technology education facilities. An in-depth study of specific laboratory requirements related to safety is covered. Management skills related to students, equipment, and supplies are addressed. Students design an engineering/technology education laboratory.

Learning Outcomes: 1. Develop techniques for

planning and organizing laboratory tools, supplies, and equipment for efficient and educationally sound laboratory operation. 2. Explain the importance of safety in engineering/technology education facilities and prescribed methods of rendering facilities safe for student activities. 3. Describe government requirements and mandates related to the engineering/technology education laboratory. 4. Develop a system for inventory, purchase, and maintenance of equipment and supplies for an instructional facility. 5. Design an engineering/technology education laboratory. Credits: 3.00

TLI 46200 - Methods Of Teaching Engineering/Technology Education

Credit Hours: 3.00. Students identify a variety of instructional techniques appropriate for teaching engineering/technology education. Students will present lessons and develop evaluation instruments to determine student achievement. Methodological insights and understanding for teaching technical subject matter is stressed.

Learning Outcomes: 1. Demonstrate skills in delivering instruction using various teaching methods. 2. Demonstrate different techniques for addressing cognitive, affective, and psychomotor domains of learning. 3. Design and prepare teacher-made lesson materials. 4. Demonstrate skills in delivering instruction using various teaching methods. Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

Professional Education Requirements (38 credits)

Foundational Courses

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational

philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDCI 28500 - Multiculturalism And Education (UCC: BSS)

Credit Hours: 2.00 to 3.00. This course integrates an understanding of multiculturalism with principles of democratic education. Historical, sociological, cultural, political, philosophical, and pedagogical foundations of multiculturalism are explored and related to issues of pedagogy in a pluralistic society.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop awareness of issues and concerns related to multicultural education. 2. Develop knowledge of how multiculturalism impacts teachers, schools, classrooms, and society. 3. Develop skills of critical thinking and reflection that will enable educators to contribute to meeting the needs of students in a multicultural and global world. Credits: 2.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports

for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 24000 - Children With Gifts, Creativity, And Talents

Credit Hours: 1.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted children youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). Cannot be taken concurrently with EDPS 24800.

Learning Outcomes: 1. Understand who gifted, creative and talented children are and how their talent development needs can be met in the school setting. 2. Recognize the diversity that exists within the gifted, creative, and talented population. 3. Understand the history, philosophical traditions, and paradigms of practice in gifted education. 4. Develop awareness of specific strategies for supporting gifted, creative and talented students within the school context. 5. Develop awareness of key professional resources in the field of gifted education and talent development. 6. Develop a personal identity as a practitioner of gifted education. Credits: 1.00

EDPS 24800 - Differentiating Curriculum And Instruction

Credit Hours: 1.00. This course provides a solid foundation and set of principles for differentiating curriculum and instruction in any classroom at any grade level. Students will explore a variety of evidence-based strategies, tools, and curriculum models that effectively meet the diverse needs of all learners. Through readings, online classroom meetings and discussions, case studies, differentiated instruction examples, direct application and reflection, students will deepen their understanding and need to differentiate. With an overarching goal of increasing achievement and developing student talents, this course includes the following major components: creating positive learning environments that support a) high-quality curriculum; b) diagnostic, formative and summative assessments to inform instructional decision-making; and c) flexible grouping addressing student differences in readiness, interest, and learning profile (including learning preference, intelligence preference, gender, culture, language preference, locale, and opportunities to learn) and appreciating how these differences influence the ways in which students learn. Understanding that process of differentiation involves modifying content, process, product, learning environment, and/or affect incorporating higher-order thinking skills, creative problem solving, project-based learning, authentic/respectful tasks, collaborative learning, and other evidence-based strategies to promote student achievement and talent development understanding how differentiation of curriculum and instruction fits within specific educational interventions and models, such as scaffolding, flexible grouping, Response to Intervention (Rtl), and Multi-Tiered System of Support(MTSS). Effective teachers do more than teach content; they teach unique individuals who enter classrooms with various levels of expertise, skills, abilities, social-emotional needs, and learning expectations. Effective teachers differentiate curriculum by personalizing content based on the particular needs and interests of their students. Effective teachers differentiate instruction by applying various grouping strategies, technology applications and thinking skills. The goal of every effective teacher is that every child learns something new every day. Cannot be taken concurrently with EDPS 24000.

Learning Outcomes: 1. Describe and implement the concept of differentiation as a response to the needs, interests and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. 2. Demonstrate proficiency in assessing students readiness, interests, and learning profiles and in creating differentiated lessons that utilize instructional strategies and technologies to engage special populations of students in learning. 3. Develop, implement, and evaluate various differentiated instructional plans designed to maximize learning and demonstrate proficiency in analyzing and evaluating differentiated lessons taught by other teachers. 4. Evaluate and reflect upon your course experience and plan for your future use of knowledge and skills gained in this course. Credits: 1.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors

with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4.

Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. (EDCI 20002) This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works well with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity,

and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Capstone (12 credits)

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

K-12 Integrated STEM Optional Concentration

Other Departmental Requirements (25 credits)

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.
University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I
University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

Electives (12 Credits)

Supplemental List

GPA Requirements

Teacher Licensure Information

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.
University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to

teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

TLI 26200 - Foundations Of Integrated STEM Education

Credit Hours: 3.00. This course provides students with a conceptual understanding of an integrated approach to teaching Science, Technology, Engineering, and Mathematics (STEM). Integrated STEM pedagogies include project/problem-based (PBL), design-based, and inquiry-based approaches to teaching. Students engage in a co-teaching model to deliver STEM instruction and observe local K-12 classrooms.

Learning Outcomes: "1. Identify foundational learning theories that blend an integrated approach to teaching. 2. Identify common practices for scientists, technologists, engineers, and mathematicians and similarities with other STEM careers. 3. Describe the key tenants of PBL, design-based, and scientific inquiry-based approaches to teaching content. 4. Create integrated STEM lessons that address two STEM subjects and state/national standards. Credits: 3.00

15 Credits

Spring 1st Year

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

TLI 16100 - Prototyping In Engineering/Technology Education

Credit Hours: 3.00. Design, make, and innovate! This course provides basic instruction on the proper and safe use of tools and equipment used to prototype innovative ideas. This includes 3D printers, laser cutters/engravers, fabrication tools/equipment, CNC mills/routers, and microcontrollers/microcomputers.

Learning Outcomes: 1. Demonstrate the technical competencies to properly and safely operate common prototyping equipment and tools. 2. Apply knowledge of materials properties to select the appropriate materials for a desired prototype. 3. Create operations process flow charts

for planning product development. 4. Test prototypes in real situations to gather data related to their performance. Credits: 3.00

EDCI 28500 - Multiculturalism And Education (UCC: BSS)

Credit Hours: 2.00 to 3.00. This course integrates an understanding of multiculturalism with principles of democratic education. Historical, sociological, cultural, political, philosophical, and pedagogical foundations of multiculturalism are explored and related to issues of pedagogy in a pluralistic society.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop awareness of issues and concerns related to multicultural education. 2. Develop knowledge of how multiculturalism impacts teachers, schools, classrooms, and society. 3. Develop skills of critical thinking and reflection that will enable educators to contribute to meeting the needs of students in a multicultural and global world. Credits: 2.00 to 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and

current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 24000 - Children With Gifts, Creativity, And Talents

Credit Hours: 1.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted children youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). Cannot be taken concurrently with EDPS 24800.

Learning Outcomes: 1. Understand who gifted, creative and talented children are and how their talent development needs can be met in the school setting. 2. Recognize the diversity that exists within the gifted, creative, and talented population. 3. Understand the history, philosophical traditions, and paradigms of practice in gifted education. 4. Develop awareness of specific strategies for supporting gifted, creative and talented students within the school context. 5. Develop awareness of key professional resources in the field of gifted education and talent development. 6. Develop a personal identity as a practitioner of gifted education. Credits: 1.00

EDPS 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20002 - Special Populations Seminar: English Language Learners And Students With Gifts And Talents

Credit Hours: 1.00. (EDCI 20002) This seminar is focused on special populations of learners for teacher education majors with an emphasis on students who are English learners and students with gifts, talents, and creativity. Students will engage

in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms with ELLs and students with gifts, creativity, and talents. This seminar is intended to be taken concurrently with EDPS 24000 and EDCI 37001.

Learning Outcomes: 1. Identify connections between educational theory to educational practice as related to ELLs and students with GCT. 2. Demonstrate active listening and constructive peer feedback during seminar sessions and in the field. 3. Engage in mentoring activities related to teaching and learning in a community of peers and professionals. 4. Reflect on their own learning, gaining insight into themselves and their interactions with the classroom as teachers of ELLs and students with GCTs. 5. Complete a minimum of 30 hours in a school-based clinical experience including classroom observations, tutoring, assisting teachers, small and large group instruction and practicing the duties of a teacher who works well with ELLs and students with GCTs. 6. Demonstrate the professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding

of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

TLI 26500 - Teaching The TE Of STEM

Credit Hours: 3.00. A course for teacher education majors that provides rationale and techniques for integrating engineering and technological literacy into the K-12 mathematics and science curriculum. Experiences focus on the engineering design process, mechanisms, robotics, strength of materials, electrical circuits, and electronics.

Learning Outcomes: 1. Describe the national importance of the integrative nature of the K-12 STEM curriculum. 2. Describe how technology and engineering can be integrated into K-12 mathematics and science. 3. Demonstrate hands-on learning activities appropriate to integrate technology and engineering into the K-12 STEM curriculum. Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with

disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 24800 - Differentiating Curriculum And Instruction

Credit Hours: 1.00. This course provides a solid foundation and set of principles for differentiating curriculum and instruction in any classroom at any grade level. Students will explore a variety of evidence-based strategies, tools, and curriculum models that effectively meet the diverse needs of all learners. Through readings, online classroom meetings and discussions, case studies, differentiated instruction examples, direct application and reflection, students will deepen their understanding and need to differentiate. With an overarching goal of increasing achievement and developing student talents, this course includes the following major components: creating positive learning environments that support a) high-quality curriculum; b) diagnostic, formative and summative assessments to inform instructional decision-making; and c) flexible grouping addressing student differences in readiness, interest, and learning profile (including learning preference, intelligence preference, gender, culture, language preference, locale, and opportunities to learn) and appreciating how these differences influence the ways in which students learn. Understanding that process of differentiation involves modifying content, process, product, learning environment, and/or affect incorporating higher-order thinking skills, creative problem solving, project-based learning, authentic/respectful tasks, collaborative learning, and other evidence-based strategies to promote student achievement and talent development understanding how differentiation of curriculum and instruction fits within specific educational interventions and models, such as scaffolding, flexible grouping, Response to Intervention (Rtl), and Multi-Tiered System of Support(MTSS). Effective teachers do more than teach content; they teach unique individuals who enter classrooms with various levels of expertise, skills, abilities, social-emotional needs, and learning expectations. Effective teachers differentiate curriculum by personalizing content based on the particular needs and interests of their students. Effective teachers differentiate instruction by applying various grouping strategies, technology applications and thinking skills. The goal of every effective teacher is that every child learns something new every day. Cannot be taken concurrently with EDPS 24000. Learning Outcomes: 1. Describe and implement the concept of differentiation as a response to the needs, interests and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. 2. Demonstrate proficiency in assessing students readiness, interests, and learning profiles and in creating differentiated lessons that utilize instructional strategies and technologies to engage special populations of students in learning. 3. Develop, implement, and evaluate various differentiated instructional plans designed to maximize learning and demonstrate proficiency in analyzing and evaluating differentiated lessons taught by other teachers. 4. Evaluate and reflect upon your course experience and plan for your future use of knowledge and skills gained in this course. Credits: 1.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to

practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

16 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the

ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

TLI 36700 - Teaching Design And Innovation I

Credit Hours: 3.00. This course focuses on the development of appropriate engineering design knowledge and skill required to effectively teach middle and high school engineering/technology education courses by infusing engineering design into the curriculum. Students will use 3-D solid modeling software, rapid prototyping, and other design technologies as they engage in the engineering design process through an open-ended engineering design challenge.

Learning Outcomes: 1. Display the ability to teach students to develop skills for living in a knowledge-based, technological society using design-based pedagogical approaches. 2. Use the engineering design process to solve open-ended, ill-defined problems. 3. Demonstrate the ability to teach basic engineering design techniques. Credits: 3.00

17 Credits

Spring 3rd Year

TLI 36100 - Engineering And Technology Education Instructional Planning And Evaluation

Credit Hours: 3.00. This course addresses selecting content, writing instructional objectives, planning lessons, preparing a unit of study, and evaluating student progress. Emphasis is placed on evaluating instruction and student achievement to include developing valid, reliable testing instruments as they relate to measuring student achievement in the cognitive, affective, and psychomotor domains.

Learning Outcomes: 1. Demonstrate instructional planning skills related to the delivery of engineering/technology education to both middle-level and high school students. 2. Prepare lesson plans, a unit of study, and evaluation instruments. 3. Appraise instructional material effectiveness and propose revisions for improvement. 4. Prepare appropriate assessment instruments that align with identified learning objectives. Credits: 3.00

TLI 46000 - Teaching Design And Innovation II

Credit Hours: 3.00. This course expands the engineering design process, incorporating rapid prototyping and other fabrication technologies to create a specified solution. The course emphasizes process flow chart planning and logistics of engineering/technology education laboratory management. Prototypes will be tested in real situations and data gathered on performance. Designs will be revised to reflect a deeper understanding of manufacturing and use, being sensitive to structure, function, and behavior from a systems-level perspective. Intellectual property, marketing, and infrastructure will be discussed.

Learning Outcomes: 1. Describe the complexity of implementing design solutions. 2. Select appropriate fabrication technologies. 3. Operationalize performance criteria into measurable variables. 4. Gather data to make rational decisions, which are transparent and justifiable. 5. Optimize design solutions and perform iteratively in the design process. Credits: 3.00

15 Credits

Fall 4th Year

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and

use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

TLI 46100 - Engineering/Technology Teacher Lab Planning

Credit Hours: 3.00. This course provides future engineering/technology education teachers with information on designing, organizing, and managing engineering/technology education facilities. An in-depth study of specific laboratory requirements related to safety is covered. Management skills related to students, equipment, and supplies are addressed. Students design an engineering/technology education laboratory.

Learning Outcomes: 1. Develop techniques for planning and organizing laboratory tools, supplies, and equipment for efficient and educationally sound laboratory operation. 2. Explain the importance of safety in engineering/technology education facilities and prescribed methods of rendering facilities safe for student activities. 3. Describe government requirements and mandates related to the engineering/technology education laboratory. 4. Develop a system for inventory, purchase, and maintenance of equipment and supplies for an instructional facility. 5. Design an engineering/technology education laboratory. Credits: 3.00

TLI 46200 - Methods Of Teaching Engineering/Technology Education

Credit Hours: 3.00. Students identify a variety of instructional techniques appropriate for teaching engineering/technology education. Students will present lessons and develop evaluation instruments to determine student achievement. Methodological insights and understanding for teaching technical subject matter is stressed.

Learning Outcomes: 1. Demonstrate skills in delivering instruction using various teaching methods. 2. Demonstrate different techniques for addressing cognitive, affective, and psychomotor domains of learning. 3. Design and prepare teacher-made lesson materials. 4. Demonstrate skills in delivering instruction using various teaching methods. Credits: 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

15 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Engineering Technology, BS (Statewide)

About the Program

Degree Requirements

Departmental/Program Major Courses (49-50 credits)

MET 11100 - Applied Statics

Credit Hours: 3.00. Force systems, resultants and equilibrium, trusses, frames, beams, and shear and moments in beams are studied.

Learning Outcomes: 1. Determine the resultant of several vectors. 2. Draw complete free-body diagrams. 3. Apply the equations of equilibrium to free-body diagrams. 4. Calculate the axial loads in truss members and the pin reactions for various mechanisms and frames. 5. Locate the centroid of a composite geometric quantity. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 21100 - Applied Strength Of Materials

Credit Hours: 4.00. The principles of strength, stiffness, and stability are introduced and applied primarily to mechanical components.

Learning Outcomes: 1. Find internal shear and internal bending moment within a structure due to the external loading. 2. Undertsand basic mechanical properties of materials and cross-sectional/area properties of structures and apply them. 3. Identify and calculate the stress present due to internal loads. 4. Identify potential maximum stress locations and calculate the principle stresses and the maximum shear stress. 5. Calculate deflection in statically determinate structures. Credits: 4.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use

appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution recommendations. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

ENGT 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

Concentration Requirement (37 credits)

Other Departmental/Program Course Requirements (34-36 credits)

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward

graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in

the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MET 11100 - Applied Statics

Credit Hours: 3.00. Force systems, resultants and equilibrium, trusses, frames, beams, and shear and moments in beams are studied.

Learning Outcomes: 1. Determine the resultant of several vectors. 2. Draw complete free-body

diagrams. 3. Apply the equations of equilibrium to free-body diagrams. 4. Calculate the axial loads in truss members and the pin reactions for various mechanisms and frames. 5. Locate the centroid of a composite geometric quantity. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

15 Credits

Fall 2nd Year

MET 21100 - Applied Strength Of Materials

Credit Hours: 4.00. The principles of strength, stiffness, and stability are introduced and applied primarily to mechanical components.

Learning Outcomes: 1. Find internal shear and internal bending moment within a structure due to the external loading. 2. Undertsand basic mechanical properties of materials and cross-sectional/area properties of structures and apply them. 3. Identify and calculate the stress present due to internal loads. 4. Identify potential maximum stress locations and calculate the principle stresses and the maximum shear stress. 5. Calculate deflection in statically determinate structures. Credits: 4.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply

chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

14 Credits

Spring 2nd Year

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

English Education, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (87 credits)

English Content Courses (30 credits)

Required Courses (15 credits)

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. CTL:IEL 1260 Introduction To Linguistics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 30100 - Ways Of Reading

Credit Hours: 3.00. Introduction to literary theory and practice. Close reading of and significant writing about selected literary texts informed by a variety of critical and/or theoretical perspectives.

Learning Outcomes: 1. Identify various theoretical approaches to literature, and then apply them to literary texts. 2. Define important literary terms, genres, and conventions within their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned arguments about literary texts based on appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 39200 - Young Adult Literature

Credit Hours: 3.00. This course examines the construct of Young Adult Literature as a genre crafted specifically for adolescents. Using both classic and contemporary novels, as well as relevant theoretical and research texts, this course explores how YA literature is defined, what it offers to adolescent readers, and how it is situated in the literary landscape.

Learning Outcomes: 1. Read, respond to, and

analyze selected works of Young Adult literature in order to think critically about various concepts and issues connected to the genre. 2. Explore, analyze, and critique the extent to which selected Young Adult literature affects and reflects teenage life. Credits: 3.00

Multiethnic Studies (3 credits)

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

ENGL 35900 - Black Women Writers

Credit Hours: 3.00. (AAS 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule. Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

Literary Traditions (6 credits)

List A

ENGL 23000 - Great Narrative Works (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of great narratives from Homer's Odyssey to the present, considering works from a variety of cultures and time periods in order to develop an understanding of their ideas, structures, styles, and cultural values.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 24000 - British Literature Before 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the medieval to the Romantic period.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Romantic period. 2.

Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Romantic literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 24100 - British Literature After 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the Romantic period on.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the Romantic period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about literature from the Romantic period to the present based on appropriate use of textual evidence. Credits: 3.00

ENGL 26400 - The Bible As Literature (UCC: HUM)

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of literary studies and the liberal arts, especially related to the Bible. 2. Employ critical approaches from basic building blocks to more advanced ones suited to cultural complexities. 3. Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

ENGL 26600 - World Literature: From The Beginnings To 1700 A.D. (UCC: HUM)

Credit Hours: 3.00. (CMPL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. CCN: IEL 1250 World Literature 1

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 26700 - World Literature: From 1700 A.D. To The Present (UCC: HUM)

Credit Hours: 3.00. (CMPL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. Typically offered Summer Fall Spring. CCN: IEL 1251 World Literature 2

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 27600 - Shakespeare On Film (UCC: HUM)

Credit Hours: 3.00. Considers the relation of the written text of five or six Shakespeare plays to multiple film versions from a wide variety of times and cultures, e.g., the United States, England, France, Italy, Japan, Denmark, India, and Russia. Typically offered Fall Spring Summer.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explore a selected set of Shakespeare's plays through a comparative analytical lens. 2. Compare and contrast various

film versions of Shakespeare's plays in their respective contexts. 3. Respond to the films and written texts through reflective and critical writings and discussions. Credits: 3.00

ENGL 35000 - American Literature Before 1865 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from European colonization to the U.S. Civil War. CTL:IEL 1210 American Literature I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Civil War period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35100 - American Literature After 1865 (UCC: HUM)

Credit Hours: 3.00. A survey of American literature from the Civil War to the present. CTL:IEL 1211 American Literature II

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the post-Civil War period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

List B

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 44200 - Shakespeare

Credit Hours: 3.00. Shakespeare's dramatic craftsmanship, poetry, humor, characterization, psychology, and modern pertinence illustrated in representative tragedies, comedies, and history plays.

Credits: 3.00

ENGL 24900 - Great British Books

Credit Hours: 3.00. Why are British books so compelling? This course examines the dynamic history of British literature and explores how canonical and contemporary texts shaped the cultural landscape of Britain, the British Empire, and the world. Learning Outcomes: 1. Identify and make convincing arguments about major genres of British literature, including essays, journals, autobiographies, poetry, drama, and fiction. 2. Identify the diversity of peoples, interests, and ideologies within British literature and culture, and the texts that define them. 3. Define and analyze how literary texts both reflect and produce culture. 4. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

Language and Writing Selectives (6 credits)

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.) University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 32700 - English Language I: History And Development

Credit Hours: 3.00. Introduction to the history of the English language, its sounds, inflections, words, and sentence structures. Cultural and historical events affecting this history, and the interplay between language and literature. Credits: 3.00

ENGL 32800 - English Language II: Structure And Meaning

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on syntax and semantics, including parts of speech, sentence structure, and meaning. Implications of recent theory for the teaching of English. Credit will not be given for both ENGL 32800 and LING 32100 . Credits: 3.00

ENGL 39000 - Practicum In Tutoring Writing

Credit Hours: 1.00 to 3.00. A practicum to teach undergraduates to teach writing in the one-to-one setting of a writing lab. Credits: 1.00 to 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels. Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as

usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 47000 - Advanced Topics In Rhetorical Studies

Credit Hours: 3.00. Study of rhetorical theories and practices past and present. Includes readings in primary texts in the history and theory of rhetoric. May be repeated for credit with a different topic.

Learning Outcomes: 1. Demonstrate advanced understanding of rhetorical concepts, theories, and practices. 2. Analyze and assess rhetorical situations from which arguments are generated; evaluate arguments and their public, institutional, or organizational success; produce arguments in a variety of genres and forms. 3. Demonstrate understanding of how and why rhetoric accomplishes its work from a variety of perspectives across the humanities and sciences. Credits: 3.00

ENGL 58900 - Directed Writing

Credit Hours: 1.00 to 3.00. Writing (creative, popularly technical, biographical, historical, philosophical) on subjects of the student's choice. Individual conferences only; no class meetings. Permission of instructor required.

Credits: 1.00 to 3.00

ENGL 22800 - Language And Social Identity

Credit Hours: 3.00. This course introduces linguistic diversity, including regional, cultural, and stylistic variation within a single language, code-switching in bilingual communities, and colonial, immigrant, Creole, indigenous, and sign languages. It also explores the role of language in supporting various types of social identity (e.g., age, gender, social class, race, ethnicity) as well as power structures that enable discrimination against less powerful groups.

Learning Outcomes: 1. Distinguish empirically-grounded facts about linguistic diversity and language use from popular attitudes and opinions that are not based in facts. 2. Recognize the legitimacy and systematic structure of all language varieties. 3. Describe the phonetic, lexical, grammatical, and pragmatic features as found in the language of different groups, through close analysis of primary linguistic data. 4. Show how individuals use linguistic features to help construct their social identities, through the close examination of case studies. 5. Recognize forms of linguistic discrimination as depicted in the popular media and as enacted in the education system, the workplace, the judicial system, and daily life. Credits: 3.00

Major Professional Education Courses (57 credits)

Foundational Courses (22 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social,

and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand

how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives

have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

English Methods Courses (26 credits)

EDCI 42200 - The Teaching Of English In Secondary Schools

Credit Hours: 3.00. Explores a wide variety of instructional practices suitable for teaching middle and high school English including language, literature, and writing - addressing specific pedagogical issues such as teaching diverse learners and developing cohesive units of instruction.

Learning Outcomes: 1. Explore different philosophical and instructional applications for secondary English teaching. 2. Examine diverse issues affecting teaching and learning in the secondary English classrooms. 3. Develop the reflective and critical thinking skills necessary for secondary English teachers. 4. Increase pedagogical competency in diverse aspects of teaching and learning, including classroom instruction, student interaction, and teacher development. Credits: 3.00

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the

development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

ENGL 39100 - Composition For English Teachers

Credit Hours: 3.00. Exploration of the theory, research, and pedagogy of teaching writing at the secondary level. Topics include the development of writing assignments and related activities, the study of writing process models, and the evaluation of student work in a variety of genres.

Learning Outcomes: 1. Design lesson plans for secondary writing instruction. 2. Incorporate writing-process strategies into assignments and activities. 3. Develop prompts for student writing in a variety of genres. 4. Map instructional activities to formal state or national curricular standards. 5. Reflect on differentiating lessons for diverse learners. Credits: 3.00

ENGL 49200 - Literature In The Secondary Schools

Credit Hours: 3.00. Exploration of the theory, research and pedagogy supporting the teaching of literature at the secondary level. Topics include text selection, instructional strategies, adolescent literacy, student engagement and the use of alternative texts.

Credits: 3.00

EDCI 38100 - Teaching For Social Justice: Culturally And Linguistically Diverse Learners

Credit Hours: 3.00. This course builds on the content of EDCI 28500 (Multicultural Education) with specific attention to issues of social justice related to literacy and linguistic diversity. Within this framework, students will learn strategies for teaching English language learners, deconstruct deficit perspectives of dialectical differences, and consider approaches to classroom management. Additionally, a field experience component with an ELL teacher will be included in the course.

Learning Outcomes: 1. Engage with the following concepts via reading, analysis/critique, and consideration of how they might apply in future classrooms: culturally relevant pedagogy and culturally sustaining pedagogy, code switching and code meshing, restorative justice. 2. Learn pedagogical strategies for working with ELLs in secondary English classrooms. 3. Understand the school-to-prison pipeline phenomenon and develop classroom management principles accordingly. 4. Participate in a field experience that requires interaction with culturally and linguistically diverse students in a local ELL classroom. Credits: 3.00

Required Learner Pathway Concentration (9 credits)

Other Departmental/Program Course Requirements (18-19 credits)

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course

includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical

and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

15-16 Credits

Spring 1st Year

ENGL 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. CTL:IEL 1260 Introduction To Linguistics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

ENGL 39100 - Composition For English Teachers

Credit Hours: 3.00. Exploration of the theory, research, and pedagogy of teaching writing at the secondary level. Topics include the development of writing assignments and related activities, the study of writing process models, and the evaluation of student work in a variety of genres.

Learning Outcomes: 1. Design lesson plans for secondary writing instruction. 2. Incorporate writing-process strategies into assignments and activities. 3. Develop prompts for student writing in a variety of genres. 4. Map instructional activities to formal state or national curricular standards. 5. Reflect on differentiating lessons for diverse learners. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3.

Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

17 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 49200 - Literature In The Secondary Schools

Credit Hours: 3.00. Exploration of the theory, research and pedagogy supporting the teaching of literature at the secondary level. Topics include text selection, instructional strategies, adolescent literacy, student engagement and the use of alternative texts.

Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies

of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

16 Credits

Fall 3rd Year

ENGL 30100 - Ways Of Reading

Credit Hours: 3.00. Introduction to literary theory and practice. Close reading of and significant writing about selected literary texts informed by a variety of critical and/or theoretical perspectives.

Learning Outcomes: 1. Identify various theoretical approaches to literature, and then apply them to literary texts. 2. Define important literary terms, genres, and conventions within their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned arguments about literary texts based on appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

EDCI 38100 - Teaching For Social Justice: Culturally And Linguistically Diverse Learners

Credit Hours: 3.00. This course builds on the content of EDCI 28500 (Multicultural Education) with specific attention to issues of social justice related to literacy and linguistic diversity. Within this framework, students will learn strategies for teaching English language learners, deconstruct deficit perspectives of dialectical differences, and consider approaches to classroom management. Additionally, a field experience component with an ELL teacher will be included in the course.

Learning Outcomes: 1. Engage with the following concepts via reading, analysis/critique, and consideration of how they might apply in future classrooms: culturally relevant pedagogy and culturally sustaining pedagogy, code switching and code meshing, restorative justice. 2. Learn pedagogical strategies for working with ELLs in secondary English classrooms. 3. Understand the school-to-prison pipeline phenomenon and develop classroom management principles accordingly. 4. Participate in a field experience that requires interaction with culturally and linguistically diverse students in a local ELL classroom. Credits: 3.00

17-18 Credits

Spring 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the

instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 39200 - Young Adult Literature

Credit Hours: 3.00. This course examines the construct of Young Adult Literature as a genre crafted specifically for adolescents. Using both classic and contemporary novels, as well as relevant theoretical and research texts, this course explores how YA literature is defined, what it offers to adolescent readers, and how it is situated in the literary landscape.

Learning Outcomes: 1. Read, respond to, and analyze selected works of Young Adult literature in order to think critically about various concepts and issues connected to the genre. 2. Explore, analyze, and critique the extent to which selected Young Adult literature affects and reflects teenage life. Credits: 3.00

15 Credits

Fall 4th Year

EDCI 42200 - The Teaching Of English In Secondary Schools

Credit Hours: 3.00. Explores a wide variety of instructional practices suitable for teaching middle and high school English including language, literature, and writing - addressing specific pedagogical issues such as teaching diverse learners and developing cohesive units of instruction.

Learning Outcomes: 1. Explore different philosophical and instructional applications for secondary English teaching. 2. Examine diverse issues affecting teaching and learning in the secondary English classrooms. 3. Develop the reflective and critical thinking skills necessary for secondary English teachers. 4. Increase pedagogical competency in diverse aspects of teaching and learning, including classroom

instruction, student interaction, and teacher development. Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

12 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

English: English Literature Concentration, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

Area A - Gateway Course (3 credits)

ENGL 20200 - Engaging English (UCC: HUM)

Credit Hours: 3.00. This theme-based course introduces students to the field of English, and provides foundational liberal arts skills. It teaches, for instance, critical and creative thinking, reading, and writing using a variety of genres, texts, and media.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of English Studies. 2. Apply multiple critical approaches to define cultural complexities. 3. Apply knowledge of written and visual literacies for working with diverse media. 4. Explain and apply different methods of reading. 5. Explain and apply foundational skills of English Studies, such as close reading, written persuasion and argument through evidence. Credits: 3.00

English Literature Concentration (30 credits)

Area B - Required Concentration Courses (6 credits)

ENGL 30100 - Ways Of Reading

Credit Hours: 3.00. Introduction to literary theory and practice. Close reading of and significant writing about selected literary texts informed by a variety of critical and/or theoretical perspectives.

Learning Outcomes: 1. Identify various theoretical approaches to literature, and then apply them to literary texts. 2. Define important literary terms, genres, and conventions within their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned arguments about literary texts based on appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

ENGL 39900 - Beyond English

Credit Hours: 3.00. This class is designed for third- and fourth-year English majors. It will help students translate the worth of English and the humanities to the world beyond the university, providing them with tools to articulate their achievements and prepare for their professional and adult lives.

Learning Outcomes: 1. Be familiar with economic, scientific, and humanistic arguments for the value of English and the humanities. 2. Practice speaking clearly, writing persuasively, and collaborating effectively. 3. Enhance career preparation and professionalization. Credits: 3.00

Area C - The Literary Canon (12 credits)

Surveys of Western Literature (6 credits)

ENGL 24000 - British Literature Before 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the medieval to the Romantic period.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Romantic period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Romantic literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 24100 - British Literature After 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the Romantic period on.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the Romantic period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural,

and aesthetic contexts. 3. Produce well-reasoned written arguments about literature from the Romantic period to the present based on appropriate use of textual evidence. Credits: 3.00

ENGL 35000 - American Literature Before 1865 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from European colonization to the U.S. Civil War. CTL:IEL 1210 American Literature I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Civil War period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35100 - American Literature After 1865 (UCC: HUM)

Credit Hours: 3.00. A survey of American literature from the Civil War to the present. CTL:IEL 1211 American Literature II

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the post-Civil War period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

Western Canon (3 credits)

ENGL 44200 - Shakespeare

Credit Hours: 3.00. Shakespeare's dramatic craftsmanship, poetry, humor, characterization, psychology, and modern pertinence illustrated in representative tragedies, comedies, and history plays.

Credits: 3.00

ENGL 37401 - Studies In British Literary History

Credit Hours: 3.00. This class focuses on one of several important British literary-historical periods, ranging from medieval English to modern British literature. In it, students will examine individual authors and texts while also gaining a wider understanding of their historical context. Students will also engage with a variety of genres and practice numerous critical approaches to literature.

Learning Outcomes: 1. Identify and construct arguments about genres of, and theoretical approaches to, historical literature. 2. Explain the diversity of peoples, interests, and ideologies with specific British literacy-historical periods. 3. Show how literary artifacts are both agents and reflections of culture. 4. Construct written arguments that demonstrate historical, cultural, and global awareness. 5. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

ENGL 37800 - Studies In American Literary History

Credit Hours: 3.00. This class focuses on one of several important American literary-historical periods: colonial, nineteenth-, or twentieth- and twenty-first-century literature. In it, students examine individual authors and texts while also gaining a wider understanding of their historical context. Students also will engage with a variety of genres and practice numerous critical approaches to literature.

Learning Outcomes: 1. Identify and construct arguments about genres of, and theoretical approaches to, historical literature. 2. Explain the diversity of peoples, interests, and ideologies with specific American literary-historical periods. 3. Show how literary artifacts are both agents and reflections of culture. 4. Construct written arguments that demonstrate historical, cultural, and global awareness. 5. Produce successful academic writing, including a debatable thesis, and appropriately presented evidence. Credits: 3.00

Other Literary Traditions (3 credits)

ENGL 23200 - Thematic Studies In Literature

Credit Hours: 3.00. Examination of a particular theme, such as the hero, death, or the city, and the techniques by which it is treated in various literary works, usually in more than one genre. Current offerings available from counselors.

Credits: 3.00

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

ENGL 35900 - Black Women Writers

Credit Hours: 3.00. (AAS 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ENGL 36000 - Gender And Literature (UCC: HUM)

Credit Hours: 3.00. An introduction to feminist approaches to the study of literature, including poetry, drama, fiction, and/or autobiography. Examines how gender intersects with race, ethnicity, sexual orientation, and class in shaping authorship, reading, and representation.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

Area D - Senior Capstone Seminar (3 credits)

ENGL 41100 - Studies In Major Authors

Credit Hours: 3.00. A study of the literary, critical, or cinematic works of one or two influential authors or directors. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions of the works of a particular author. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce a

substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41200 - Studies In Genre

Credit Hours: 3.00. A study of literary or cinematic works that share distinctive formal features. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate detailed knowledge of a single literary genre. 2. Discuss that genre in relation to its diverse historical, cultural, and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41300 - Studies In Literature And History

Credit Hours: 3.00. A study of literature or film produced during a well-defined historical period from the view of its social, political, religious, and economic contexts. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions of a particular period in history. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

ENGL 41400 - Studies In Literature And Culture

Credit Hours: 3.00. A study of literature or film from the perspective of the cultural norms and values it expresses, celebrates, and challenges. A project-based capstone seminar containing a significant research component. May be repeated for credit only with a different topic.

Learning Outcomes: 1. Demonstrate knowledge of the relationship between literary texts and their culture. 2. Discuss those relationships in light of texts' diverse historical and aesthetic contexts. 3. Produce a substantial work or project: a research essay; a digital humanities project; a scholarly edition; or a comparable service learning project. Credits: 3.00

Area E - English Selectives (9 credits)

Elective (14-51 Credits)

Grade Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

ENGL 20200 - Engaging English (UCC: HUM)

Credit Hours: 3.00. This theme-based course introduces students to the field of English, and provides foundational liberal arts skills. It teaches, for instance, critical and creative thinking, reading, and writing using a variety of genres, texts, and media.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explain the methods, objects of study, and applications of English Studies. 2. Apply multiple critical approaches to define cultural complexities. 3. Apply knowledge of written and visual literacies for working with diverse media. 4. Explain and apply different methods of reading. 5. Explain and apply foundational skills of English Studies, such as close reading, written persuasion and argument through evidence. Credits: 3.00

15-16 Credits

Spring 1st Year

15 Credits

Fall 2nd Year

ENGL 30100 - Ways Of Reading

Credit Hours: 3.00. Introduction to literary theory and practice. Close reading of and significant writing about selected literary texts informed by a variety of critical and/or theoretical perspectives.

Learning Outcomes: 1. Identify various theoretical approaches to literature, and then apply them to literary texts. 2. Define important literary terms, genres, and conventions within their historical, cultural, and aesthetic contexts. 3. Produce well-reasoned arguments about literary texts based on appropriately selected, evaluated, and presented textual evidence. Credits: 3.00

15 Credits

Spring 2nd Year

15 Credits

Fall 3rd Year

ENGL 39900 - Beyond English

Credit Hours: 3.00. This class is designed for third- and fourth-year English majors. It will help students translate the worth of English and the humanities to the world beyond the university, providing them with tools to articulate their achievements and prepare for their professional and adult lives.

Learning Outcomes: 1. Be familiar with economic, scientific, and humanistic arguments for the value of English and the humanities. 2. Practice speaking clearly, writing persuasively, and collaborating effectively. 3. Enhance career preparation and professionalization. Credits: 3.00

English: Global Context Concentration, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (30 credits)

Area A - Gateway Course (3 credits)

ENGL 20200 - Engaging English (UCC: HUM)

Credit Hours: 3.00. This theme-based course introduces students to the field of English, and provides foundational liberal arts skills. It teaches, for instance, critical and creative thinking,

reading, and writing using a variety of genres, texts, and media.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of English Studies. 2. Apply multiple critical approaches to define cultural complexities. 3. Apply knowledge of written and visual literacies for working with diverse media. 4. Explain and apply different methods of reading. 5. Explain and apply foundational skills of English Studies, such as close reading, written persuasion and argument through evidence. Credits: 3.00

Global Context Concentration (27 credits)

Area B - Multiethnic Studies (3 credits)

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

ENGL 35900 - Black Women Writers

Credit Hours: 3.00. (AAS 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.

Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

Area C - Introduction to Linguistics (3 credits)

ENGL 22700 - Elements Of Linguistics (UCC: BSS)

Credit Hours: 3.00. A summary of what is known about human language, its structure, its universality, and its diversity; language in its social setting; language in relation to other aspects of human inquiry and knowledge. CTL:IEL 1260 Introduction To Linguistics

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

Area D - English Language (12 credits)

Language Structure (3 credits)

ENGL 32800 - English Language II: Structure And Meaning

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on syntax and semantics, including parts of speech, sentence structure, and meaning. Implications of recent theory for the teaching of English. Credit will not be given for both ENGL 32800 and LING 32100 .

Credits: 3.00

Phonetics and Phonology (3 credits)

ENGL 32900 - English Language III: Sound And Form

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on phonology and morphology. Implications of recent theory to the teaching of English.

Credits: 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600.

Credits: 3.00

Additional Courses (6 credits)

ENGL 32900 - English Language III: Sound And Form

Credit Hours: 3.00. The structure of American English and its dialects, with emphasis on phonology and morphology. Implications of recent theory to the teaching of English.

Credits: 3.00

LING 39800 - Special Topics In Linguistics I

Credit Hours: 3.00. Investigation of a special topic in linguistics. The topic will vary from semester to semester. Permission of instructor required.

Credits: 3.00

LING 31500 - Elements Of Phonetics

Credit Hours: 3.00. Introduction to articulatory phonetics. Mechanisms of production of speech sounds. Sounds of languages of the world, ear training for discriminating speech sounds, and practice in broad and narrow phonetic transcription. Introduction to the International Phonetic Alphabet (IPA). Credit will not be given for both LING 31500 and SLHS 30600.

Credits: 3.00

EDCI 52600 - Language Study For Educators

Credit Hours: 3.00. (ENGL 52900) Covers foundational knowledge in language and linguistics for teachers and educational researchers. Topics include structure and functions of language, language acquisition and development, language diversity, classroom discourse, language and media, and literacy-language arts curriculum. A foundation for work in Literacy and Language Education.

Learning Outcomes: 1. Understand the concepts and theories of how second (and more) languages are acquired and processed through an examination of current research into second language acquisition. 2. Examine this research to develop a greater understanding of the issues and challenges faced by students as they learn English as a New Language, and how teachers can develop practice which address these needs. Credits: 3.00

EDCI 53000 - English Language Development

Credit Hours: 3.00. Focuses on theoretical and practical knowledge for teachers about how second languages are learned, and on the educational and philosophical basis for second language teaching and learning. Links English language development to teaching and learning strategies and is designed for undergraduate and graduate students in education and practicing teachers.

Learning Outcomes: 1. Develop increased understanding of the English language development process by English language learners (ELLSs). 2. Describe the importance of the changing demographics in the U.S. and Indiana as they relate to ELLs. 3. Explore the literacy development of ELLs in broader sociocultural contexts. 4. Describe the importance of explicit teaching and the oral and

written language development for ELLs. 5. Develop understanding of the nature and role of culture in language development and academic achievement, considering the development of literacy and biliteracy by ELLS. 6. Explore how individual differences affect English language development. 7. Gain experience in identifying the learning challenges of ELLs and assessing ELLs' learning in P-12 classrooms. 8. Collaborate with colleagues in activities and assignments and in planning to build partnerships with ELLs' families. 9. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of ELLs. 10. Discuss the role of the teacher in the English language development of ELLs. Credits: 3.00

EDCI 55900 - Academic Language And Content Area Learning

Credit Hours: 3.00. (ENGL 59900) Course focuses on theoretical and practical knowledge for teachers about how second languages are learned, and on the educational and philosophical basis for second language teaching and learning. The course links English language development to teaching and learning strategies and is designed for undergraduate and graduate students in education and practicing teachers.

Learning Outcomes: 1. Develop an understanding of the linguistic challenges of academic language in the content areas of science, language arts, mathematics, and the social studies for ELLs. 2. Gain experience in determining academic tasks that require advanced levels of reading and writing. 3. Learn about the development of academic literacy as ELLs move from elementary into secondary and post secondary education. Credits: 3.00

ENGL 56500 - Sociolinguistics

Credit Hours: 3.00. (ANTH 56500, COM 56500, LC 56500, LING 56500) An introduction to language in its social context, focusing on uses and users of language. Topics include social class, ethnic group, gender, language attitudes, and bilingualism.

Credits: 3.00

LC 57500 - Theories Of Foreign Language Acquisition

Credit Hours: 3.00. An advanced course designed to provide an overview of major theoretical issues in foreign language acquisition research. Provides a broad historical introduction to theories of acquisition that underlie these different perspectives. This course also provides an understanding of skills assessment and selection of instructional materials. Permission of instructor required.

Credits: 3.00

EDCI 55700 - Assessment Of Culturally And Linguistically Diverse Students

Credit Hours: 3.00. Critical review of research and practice in language proficiency and content-area assessment of culturally and linguistically diverse students in K-12 education, and the sociocultural dimensions of standardized testing, academic achievement, and accountability. Critical analysis of standardized language proficiency and literacy tests. Development of authentic alternative language, literacy and content-area assessments. Prerequisites: Background in K-12 education.

Learning Outcomes: 1. Describe and critically analyze historical foundations, current research issues, national and state policies, and current practices in the testing and assessment of culturally and linguistically diverse students. 2. Critically analyze the results of standardized language proficiency and academic achievement tests and their use in accountability programs. 3. Design, utilize, and critically analyze the results of alternative authentic language and content-area assessments. 4. Describe the impact of linguistic and cultural factors on the assessment process of linguistically diverse students. Credits: 3.00

ENGL 22800 - Language And Social Identity

Credit Hours: 3.00. This course introduces linguistic diversity, including regional, cultural, and stylistic variation within a single language, code-switching in bilingual communities, and colonial, immigrant, Creole, indigenous, and sign languages. It also explores the role of language in supporting various types of social identity (e.g., age, gender, social class, race, ethnicity) as well as power structures that enable discrimination against less powerful groups.

Learning Outcomes: 1. Distinguish empirically-grounded facts about linguistic diversity and language use from popular attitudes and opinions that are not based in facts. 2. Recognize the legitimacy and systematic structure of all language varieties. 3. Describe the phonetic, lexical, grammatical, and pragmatic features as found in the language of different groups, through close analysis of primary linguistic data. 4. Show how individuals use linguistic features to help construct their social identities, through the close examination of case studies. 5. Recognize forms of linguistic discrimination as depicted in the popular media and as enacted in the education system, the workplace, the judicial system, and daily life. Credits: 3.00

ENGL 21500 - Inventing Languages

Credit Hours: 3.00. "Invented languages" include linguistic systems created for fictional worlds, such as Dothraki (Game of Thrones), Na'vi (Avatar), Elvish (Lord of the Rings) and Klingon (Star Trek), as well as languages invented for international communication by real speakers, such as Esperanto. In this course, you will study these systems, learn the major properties of natural human languages, and construct your own rudimentary languages.

Learning Outcomes: 1. Understand the characteristics and goals of various invented languages from linguistic, cultural, and historical perspectives. 2. Show mastery of basic concepts of language structure and language typology. 3. Elucidate mastery of basic concepts of sociolinguistics, historical linguistics, and linguistic anthropology. 4. Explain how natural languages has influenced the development of invented languages. 5. Construct a rudimentary language system and create a back story, dictionary, grammar, and sample text. Credits: 3.00

EDCI 51900 - Teaching English Language Learners

Credit Hours: 3.00. This course focuses on current issues and techniques in ESL instruction and assessment for students at the beginning or intermediate stages of English language acquisition Pre-K-12. Emphasis is on the design of materials and instruction that foster English language development in the content areas of the curriculum (i.e., Specially Designed Academic Instruction in English or SDAIE). Some familiarity with elementary and/or secondary teaching methods is assumed.

Learning Outcomes: 1. Design materials and instruction that foster English language development in the ENL classroom environment as well as in content areas of the curriculum. Credits: 3.00

Area E - Second Language Acquisition and Teaching (6 credits)

Required TESL Sequence (6 credits)

ENGL 51600 - Teaching English As A Second Language: Theoretical Foundations

Credit Hours: 3.00. Survey of theories of learning and teaching English as a second/foreign/international language. Focus is on current theories and their implications for practice.

Learning Outcomes: 1. Demonstrate an understanding of current theories of second-language learning and teaching and their implications. Credits: 3.00

ENGL 51800 - Teaching English As A Second Language: Principles And Practices

Credit Hours: 3.00. Studies of issues and principles in ESL/EFL program development. Emphasis is on practical application of theory in a variety of English learning and teaching contexts in the U.S. and abroad.

Credits: 3.00

Area F - Capstone Seminar (3 credits)

ENGL 49000 - Worksite Internship Practicum

Credit Hours: 1.00 to 3.00. Course facilitates the transition between an English undergraduate degree and the workplace or professional life. The course has two components: a professor-guided component and a practicum component in a chosen area. Permission of instructor required.

Credits: 1.00 to 3.00

Elective (17-54 Credits)

Environmental and Ecological Engineering, BSEEE

About the Program

Degree Requirements

Departmental/Program Major Courses (52 credits)

Required Major Courses (25 credits)

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic

dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify

information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 39000 - Environmental And Ecological Engineering Professional Practice Seminar

Credit Hours: 1.00. Seminar lectures and discussions to introduce students to aspects of professional practice within Environmental and Ecological Engineering. Topics include career planning and placement skills, professional responsibility and ethics, functioning as a professional, and other current important topics in the profession. Students will interact with several practicing Environmental and Ecological Engineers.

Learning Outcomes: 1. Develop professional skills that will allow them to enter into the professional Environmental and Ecological Engineering field. 2. Gain an understanding of major professional issues. 3. Begin development of a personal approach to ethical professionalism. 4. Gain experience in professional communication. 5. Gain knowledge of the range of opportunities available in the profession. Credits: 1.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations.

Learning Outcomes: 1. Apply the First and Second Laws of thermodynamics to closed and open systems. 2. Understand, identify, and quantify the environmental impacts of closed and open systems, based on mass and energy transfer. 3. Analyze full-scale systems, and compare actual and theoretical operation. 4. Understand the structure and reactivity of environmentally relevant organic compounds. 5. Calculate concentrations of different components in equilibrium and non-equilibrium environmental systems. Credits: 3.00

EEE 29001 - Introduction To Environmental & Ecological Engineering Seminar

Credit Hours: 2.00. Guest presenters, peer panelists, and small group discussions introduce students to the knowledge, skills, and abilities needed in order to exhibit the highest levels of professionalism & stewardship expected of an Environmental and Ecological Engineering graduate. Topics include planning a course of study; internship, research, study abroad opportunities; career planning and placement skills; professional responsibility and ethics; and functioning as a professional.

Learning Outcomes: 1. Communicate professionally in both formal and informal settings. 2. Create career documents (e.g., resumes, cover letters, LinkedIn Profiles) that demonstrate professionalism and critical thinking. 3. Understand how their actions and/or inactions are perceived in professional settings. 4. Identify and justify their curricular path at Purdue University. 5. Identify a variety of curricular, extra-curricular, and professional opportunities that will best support the achievement of their career goals. Credits: 2.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are

assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

EEE 48100 - Reflective Practitioner

Description: Credit Hours: 1.00. Reflective practice is a term coined by Donald Schon in The Reflective Practitioner (1983). Reflective practice is the capacity to reflect on action to engage in a process of continuous learning. Reflective practice can be an important tool in practice-based professional learning settings where people learn from their own professional experiences, rather than from formal learning or knowledge transfer. It may be the most important source of personal professional development and improvement. It is also an important way to bring together theory and practice. A person who reflects throughout their practice is not just looking back on past actions and events, but is taking a conscious look at emotions, experiences, actions, and responses, and using that information to add to their existing knowledge base and reach a higher level of understanding. Critical reflection as part of experiential education generates, deepens, and documents learning. As a result of this course, you will be able to articulate the value of your experiential education opportunities toward marketing yourself for potential job opportunities and develop the skills needed to become a reflective practitioner for promotional growth in your future career. Permission of department required.

Learning Outcomes: 1. Reflect on experiential education experiences; Identify knowledge and skills gained from experiences; Identify connections between experiences and disciplinary knowledge. 2. Apply theories and concepts to practical sustainability problems; Identify ways in which individual actions within experiences contributed to improving sustainability; Identify ways to individually contribute to improving sustainability in future professional practice. 3. Synthesize experiential education experiences into a career development plan; Articulate strengths and weaknesses observed within experiences; Develop a self-improvement plan for future professional practice; Identify a potential career path; Synthesize knowledge and skills gained into high-quality LinkedIn page and Strengths Statement. Credits: 1.00

EEE 36001 - Water Quality And Treatment Laboratory

Credit Hours: 3.00. Laboratory procedures are described and performed that examine chemical, physical, and biological properties and constituent concentrations of natural waters. In addition, water treatment process experiments are performed to show how constituent concentrations can be altered during water treatment processes. Procedures include the analytical determination of several chemical and biological constituents in water by titrimetric, colorimetric, or chromatographic methods, whereas treatment processes include reactor design, pH adjustment, ion exchange, lime softening, coagulation, and disinfection.

Learning Outcomes: 1. Apply physical, chemical, and biological principles to each experimental procedure or measurement technique. 2. Conduct laboratory experiments, making quantitative measurements to assess water quality and water treatment process performance. 3. Organize, report, and

graphically display experimental data in common software packages. 4. Analyze and evaluate experimental data on its quality and significance (i.e., usefulness). 5. Identify issues (i.e., problems) with data collection and data uses. Credits: 3.00

EEE 36002 - Environmental Sustainability For Industry, Laboratory

Credit Hours: 3.00. This lab course provides an opportunity for students to gain hands-on experience with the physical and analytical tools of industrial sustainability. These include experimental methods for product testing and air quality measurement; design and planning of experiments; statistical interpretation of experimental data; design and environmental assessment of building energy use, combustion systems, and electrical circuits; and life-cycle management of electronic equipment and other household products. Students are encouraged to complete their statistics requirement.

Learning Outcomes: 1. Develop a hypothesis and design experiments to test the hypothesis. 2. Conduct/interpret statistical analysis of experimental results. 3. Describe power and energy demand in multiple contexts including electricity, combustion, and heat transfer. 4. Propose energy efficiency solutions and evaluate their economic and environmental consequences. 5. Design and measure the material and environmental impacts of a product's life cycle, including production, waste handling, and end-of-life scenarios. 6. Produce technical reports that clearly communicate methods, results, and conclusions for a professional audience. Credits: 3.00

EEE 48001 - Environmental And Ecological Engineering Senior Design I

Credit Hours: 1.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Have an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 1.00

EEE 48002 - Environmental And Ecological Engineering Senior Design II

Credit Hours: 2.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Gain an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 2.00

EEE Selectives (21 credits)

Technical Electives (6 credits)

Other Departmental/Program Requirements (75-93 credits)

Engineering Requirements for First Year (29-39 credits)

Other Course Requirements (28-36 credits)

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5.

Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing

biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses

and predictions, develop an experimental design. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3.

Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

BIOL 11200 - Fundamentals Of Biology (UCC: SCI)

Credit Hours: 2.00. This course is designed primarily to provide an introduction to the principles of biology. BIOL 11200, 11300 is a two-semester principles of biology sequence that introduces students to the major concepts of the discipline, with emphasis on the experimental and logical basis of the information presented. BIOL 11200/11300 includes lectures on diversity and evolution, and on the development, structure, and function of organisms, cell structure, cell function, ecology, genetics, biochemistry, and molecular biology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental

engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

EEE General Education Requirement (18 credits)

Elective (0-1 credit)

Supplemental Lists

GPA Requirements

Course Requirements and Notes

Non-Course/Non-Credit Requirements

Pass/No Pass Policy

Transfer Credit Policy

Sample Environmental and Ecological Engineering Plan of Study

Fall 2nd Year

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3.

Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

EEE 29001 - Introduction To Environmental & Ecological Engineering Seminar

Credit Hours: 2.00. Guest presenters, peer panelists, and small group discussions introduce students to the knowledge, skills, and abilities needed in order to exhibit the highest levels of professionalism & stewardship expected of an Environmental and Ecological Engineering graduate. Topics include planning a course of study; internship, research, study abroad opportunities; career planning and placement skills; professional responsibility and ethics; and functioning as a professional.

Learning Outcomes: 1. Communicate professionally in both formal and informal settings. 2. Create career documents (e.g., resumes, cover letters, LinkedIn Profiles) that demonstrate professionalism and critical thinking. 3. Understand how their actions and/or inactions are perceived in professional settings. 4. Identify and justify their curricular path at Purdue University. 5. Identify a variety of curricular, extra-curricular, and professional opportunities that will best support the achievement of their career goals. Credits: 2.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering

design proposal. Credits: 3.00

18 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of

differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

MA 35100 - Elementary Linear Algebra (UCC: QR)

Credit Hours: 3.00. Systems of linear equations, finite dimensional vector spaces, matrices, determinants, eigenvalues and eigenvector applications to analytical geometry. Not open to students with credit in MA 26500.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Solve systems of linear equations using concepts such as vector spaces, linear dependence, and Gaussian elimination. 2. Understand and test for linear independence, calculate the dimension of vector spaces, and apply the rank-nullity theorem in various contexts. 3. Define and apply linear transformations, including matrix multiplication, inverses, LU factorization, and coordinate transformations. 4. Compute and understand determinants, including their use in calculating matrix inverses and practical applications such as volume calculations. 5. Analyze and compute eigenvectors and eigenvalues, and apply diagonalization techniques. Credits: 3.00

EEE 38000 - Environmental Chemodynamics

Credit Hours: 3.00. Introduction to chemical thermodynamics and general equilibrium processes in environmental and ecological engineering systems. Introduction to the first and second laws of thermodynamics; properties of pure substances; ideal and real gases; thermodynamic cycles and processes; heat transfer and combustion; and chemical equilibrium in aquatic solutions, including equilibria between phases and reaction equilibria. Emphasis is on understanding and conceptualizing important processes, and competency in thermodynamic calculations.

Learning Outcomes: 1. Apply the First and Second Laws of thermodynamics to closed and open systems. 2. Understand, identify, and quantify the environmental impacts of closed and open systems, based on mass and energy transfer. 3. Analyze full-scale systems, and compare actual and theoretical operation. 4. Understand the structure and reactivity of environmentally relevant organic compounds. 5. Calculate concentrations of different components in equilibrium and non-equilibrium environmental systems. Credits: 3.00

16 Credits

Fall 3rd Year

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone.

Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify

information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community

ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11200 - Fundamentals Of Biology (UCC: SCI)

Credit Hours: 2.00. This course is designed primarily to provide an introduction to the principles of biology. BIOL 11200, 11300 is a two-semester principles of biology sequence that introduces students to the major concepts of the discipline, with emphasis on the experimental and logical basis of the information presented. BIOL 11200/11300 includes lectures on diversity and evolution, and on the development, structure, and function of organisms, cell structure, cell function, ecology, genetics, biochemistry, and molecular biology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

EEE 36001 - Water Quality And Treatment Laboratory

Credit Hours: 3.00. Laboratory procedures are described and performed that examine chemical, physical, and biological properties and constituent concentrations of natural waters. In addition, water treatment process experiments are performed to show how constituent concentrations can be altered during water treatment processes. Procedures include the analytical determination of several chemical and biological constituents in water by titrimetric, colorimetric, or chromatographic methods, whereas treatment processes include reactor design, pH adjustment, ion exchange, lime softening, coagulation, and disinfection.

Learning Outcomes: 1. Apply physical, chemical, and biological principles to each experimental procedure or measurement technique. 2. Conduct laboratory experiments, making quantitative measurements to assess water quality and water treatment process performance. 3. Organize, report, and graphically display experimental data in common software packages. 4. Analyze and evaluate experimental data on its quality and significance (i.e., usefulness). 5. Identify issues (i.e., problems) with data collection and data uses. Credits: 3.00

EEE 36002 - Environmental Sustainability For Industry, Laboratory

Credit Hours: 3.00. This lab course provides an opportunity for students to gain hands-on experience with the physical and analytical tools of industrial sustainability. These include experimental methods for product testing and air quality measurement; design and planning of experiments; statistical interpretation of experimental data; design and environmental assessment of building energy use, combustion systems, and electrical circuits; and life-cycle management of electronic equipment and other household products. Students are encouraged to complete their statistics requirement.

Learning Outcomes: 1. Develop a hypothesis and design experiments to test the hypothesis. 2. Conduct/interpret statistical analysis of experimental results. 3. Describe power and energy demand in multiple contexts including electricity, combustion, and heat transfer. 4. Propose energy efficiency solutions and evaluate their economic and environmental

consequences. 5. Design and measure the material and environmental impacts of a product's life cycle, including production, waste handling, and end-of-life scenarios. 6. Produce technical reports that clearly communicate methods, results, and conclusions for a professional audience. Credits: 3.00

18 Credits

Spring 3rd Year

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

EEE 39000 - Environmental And Ecological Engineering Professional Practice Seminar

Credit Hours: 1.00. Seminar lectures and discussions to introduce students to aspects of professional practice within Environmental and Ecological Engineering. Topics include career planning and placement skills, professional responsibility and ethics, functioning as a professional, and other current important topics in the profession. Students will interact with several practicing Environmental and Ecological Engineers.

Learning Outcomes: 1. Develop professional skills that will allow them to enter into the professional Environmental and Ecological Engineering field. 2. Gain an understanding of major professional issues. 3. Begin development of a personal approach to ethical professionalism. 4. Gain experience in professional communication. 5. Gain knowledge of the range of opportunities available in the profession. Credits: 1.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical

and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5.

Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

15 Credits

Fall 4th Year

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

EEE 48100 - Reflective Practitioner

Description: Credit Hours: 1.00. Reflective practice is a term coined by Donald Schon in The Reflective Practitioner (1983). Reflective practice is the capacity to reflect on action to engage in a process of continuous learning. Reflective practice can be an important tool in practice-based professional learning settings where people learn from their own professional experiences, rather than from formal learning or knowledge transfer. It may be the most important source of personal professional development and improvement. It is also an important way to bring together theory and practice. A person who reflects throughout their practice is not just looking back on past actions and events, but is taking a conscious look at emotions, experiences, actions, and responses, and using that information to add to their existing knowledge base and reach a higher level of understanding. Critical reflection as part of experiential education generates, deepens, and documents learning. As a result of this course, you will be able to articulate the value of your experiential education opportunities toward marketing yourself for potential job opportunities and develop the skills needed to become a reflective practitioner for promotional growth in your future career. Permission of department required.

Learning Outcomes: 1. Reflect on experiential education experiences; Identify knowledge and skills gained from experiences; Identify connections between experiences and disciplinary knowledge. 2. Apply theories and concepts to practical sustainability problems; Identify ways in which individual actions within experiences contributed to improving sustainability; Identify ways to individually contribute to improving sustainability in future

professional practice. 3. Synthesize experiential education experiences into a career development plan; Articulate strengths and weaknesses observed within experiences; Develop a self-improvement plan for future professional practice; Identify a potential career path; Synthesize knowledge and skills gained into high-quality LinkedIn page and Strengths Statement. Credits: 1.00

EEE 48001 - Environmental And Ecological Engineering Senior Design I

Credit Hours: 1.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems. Permission of department required.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Have an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 1.00

14 Credits

Spring 4th Year

EEE 48002 - Environmental And Ecological Engineering Senior Design II

Credit Hours: 2.00. Senior-level environmental and ecological engineering design projects. Projects will integrate knowledge and skills earlier in the degree program and stress the application of the design process to interdisciplinary environmental and/or ecological engineering systems.

Learning Outcomes: 1. Have an ability to apply material and concepts from previous EEE coursework to an innovative design project. 2. Have an understanding of the complete design process and an ability to perform the process. 3. Identify and acquire new knowledge as a part of the problem-solving/design process. 4. Have an ability to function on multidisciplinary teams. 5. Communicate professional design and design decisions effectively. 6. Gain an awareness of professional ethics and responsibility of engineers. 7. Gain an appreciation of the role of engineering and of EEE in social contexts. Credits: 2.00

Environmental and Natural Resources Engineering, BSAGE

About the Program

Degree Requirements

Departmental/Program Major Courses (25 credits)

Required Major Courses (25 credits)

ABE 20500 - Computations For Engineering Systems

Credit Hours: 3.00. Development of engineering problem solving and design skills. Use of Excel, MATLAB, and Mathcad for problem solving, data analysis, numerical modeling, and statistics. Introduction to elementary statics, dynamics, materials, thermodynamics, fluid mechanics, and energy topics.

Learning Outcomes: 1. Apply and interpret descriptive statistical tests to describe variability in data. 2. Identify structure and specific elements of good experimental design. 3. Select and apply appropriate statistical tests to quantify

relationships and differences in data. 4. Interpret results of statistical analyses and communicate findings to technical and non-technical audiences. Credits: 3.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

ABE 29000 - Sophomore Seminar (UCC: STS)

Credit Hours: 1.00. Current agricultural and biological engineering issues will be discussed by students, staff, and guest speakers. Career planning, employment opportunities, professionalism, ethics, and improvement of communication skills will be emphasized.

University Core Curriculum (UCC): (UCC: STS) Credits: 1.00

ABE 30500 - Physical Properties Of Biological Materials

Credit Hours: 3.00. Physical properties of agricultural crops and food products and their relationship to harvesting, storage, and processing. Physical properties covered include: density, shape, moisture content, water potential, water activity, friction and flow or particulate solids, terminal velocity, thermal properties, interaction with electromagnetic radiation, and viscoelastic behavior of solids.

Credits: 3.00

ABE 31400 - Design Of Electronic Systems

Credit Hours: 3.00. Fundamental aspects of circuits, microprocessors, transducers, sensors, instrumentation, and data acquisition are presented, with particular emphasis on electronic systems used in agricultural, biological, and food applications. Laboratory exercises used to apply the course material to constructing and testing circuits, microprocessor controlled systems, and the data collection and monitoring of systems.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design and conduct experiments, as well as to analyze and interpret data. 3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. An ability to identify, formulate, and solve engineering problems. 5. A recognition of the need for, and an ability to engage in life-long learning. 6. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

ABE 32500 - Soil And Water Resource Engineering

Credit Hours: 4.00. Interrelationships of the plant-water-air-soil system; hydrologic processes; protection of surface and ground water quality; GIS targeting of soil and water protection measures; and design of subsurface and overland drainage systems, irrigation systems, and soil erosion control practices.

Learning Outcomes: 1. Understand the agricultural and biological engineering profession and practice. 2. Able to understand and apply knowledge of mathematics, science, and engineering. 3. Understand and able to, identify, formulate, model and solve problems for engineering systems. 4. Able to design a system, component or process to meet desired

goal subject to constraints. Credits: 4.00

ABE 48400 - Project Planning And Management

Credit Hours: 1.00. Review of topics relevant to project planning and execution in industry, including technical communication, budgeting, team management, intellectual property rights, contracts and timelines. Students will select a Capstone project and assemble a project proposal within a team environment.

Credits: 1.00

ABE 48600 - Agricultural Engineering Design

Credit Hours: 3.00. Students implement, test, refine, present, and deliver the capstone project solution proposed in ABE 48400. Team based projects are completed during the semester and documented with a written report, poster presentation, and oral presentations. Projects encompass a broad range of topics within agricultural engineering such as the design of environmental systems, machinery, precision agriculture and robotics, and student design competitions.

Learning Outcomes: 1. Design an environmental and natural resources system or a machine system. 2. Write a comprehensive design report and/or project reports for various target audiences. 3. Model/prototype and test projects in multidisciplinary teams with consultation available to students from government and industry engineers and marketing personnel. 4. Enhance communication skills by presenting project progress and final reports (written and oral) in a formal setting. 5. Experience engineering or project management practice with professionalism and ethical responsibility. Credits: 3.00

ABE 49000 - Professional Practice In Agricultural And Biological Engineering

Credit Hours: 1.00. Career areas in agricultural engineering; job opportunities and graduate study; professional attitudes and ethics; contracts and specifications; patents.

Credits: 1.00

ABE 42500 - Water Quality Engineering

Credit Hours: 3.00. This course provides in-depth perspectives on water quality in source and environmental water systems (lakes, rivers, groundwaters, and coastal waters) including sources and causes of water quality impairments and design of workable and cost-effective management solutions. The course integrates hydrology, chemistry, biology, and ecology as foundations of water quality management and incorporates operation mechanisms of management practices in designing solutions for pollution control. Students will have opportunities to engage with lectures, water quality measurements and data analysis, computer modeling, case studies, design, and discussion sessions.

Learning Outcomes: 1. Identify causes and sources of water quality impairments. 2. Explain the health, ecological, and societal consequences of impaired waters. 3. Collect in-field water quality measurements. 4. Analyze water samples and associated data. 5. Design watershed-based solutions for pollutant control and water quality protection. Credits: 3.00

ABE 42600 - Ecological Restoration Engineering

Credit Hours: 3.00. This course focuses on ecologically-based design principles to restore degraded ecosystems, specifically wetlands, stream/floodplains, and prairies. Students will identify and synthesize design elements, natural and anthropogenic stresses, and management considerations to develop resilient restoration designs. Laboratory experience provides open-ended projects, data collection, and field trips to reinforce the design process.

Learning Outcomes: 1. Identify and synthesize design elements, natural and anthropogenic stresses, and management considerations for restored streams, floodplains & riparian zones, wetlands, and prairies. 2. Apply governing principles of ecological engineering, including biological, chemical, and physical conditions to develop resilient restoration designs. 3. Characterize and give examples of ecological concepts, such as water and elemental cycling, vegetation succession, food web dynamics, and ecological disturbance and how they apply to monitoring restoration success. 4. Read and extract key findings from readings. 5. Communicate effectively in written and oral format to a wide audience. Credits: 3.00

Other Departmental/Program Requirements (101-111 credits)

Other Departmental Courses (72 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.

Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

CE 38300 - Geotechnical Engineering I

Credit Hours: 3.00. Introduction to the nature and origin of soils and rocks; engineering significance of geologic landforms and soil deposits; identification and engineering classification of soils; engineering behavior and properties of soils; permeability, compressibility, shearing resistance; soil compaction.

Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

Electives (0-2 credits)

Supplemental List

GPA Requirements

Transfer Credit Policy

Sample 3-Year Plan

Fall 2nd Year

ABE 20500 - Computations For Engineering Systems

Credit Hours: 3.00. Development of engineering problem solving and design skills. Use of Excel, MATLAB, and Mathcad for problem solving, data analysis, numerical modeling, and statistics. Introduction to elementary statics, dynamics, materials, thermodynamics, fluid mechanics, and energy topics.

Learning Outcomes: 1. Apply and interpret descriptive statistical tests to describe variability in data. 2. Identify structure and specific elements of good experimental design. 3. Select and apply appropriate statistical tests to quantify relationships and differences in data. 4. Interpret results of statistical analyses and

communicate findings to technical and non-technical audiences. Credits: 3.00

ABE 29000 - Sophomore Seminar (UCC: STS)

Credit Hours: 1.00. Current agricultural and biological engineering issues will be discussed by students, staff, and guest speakers. Career planning, employment opportunities, professionalism, ethics, and improvement of communication skills will be emphasized.

University Core Curriculum (UCC): (UCC: STS) Credits: 1.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop

observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

18 Credits

Spring 2nd Year

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in

a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

17 Credits

Fall 3rd Year

ABE 30500 - Physical Properties Of Biological Materials

Credit Hours: 3.00. Physical properties of agricultural crops and food products and their relationship to harvesting, storage, and processing. Physical properties covered include: density, shape, moisture content, water potential, water activity, friction and flow or particulate solids, terminal velocity, thermal properties, interaction with electromagnetic radiation, and viscoelastic behavior of solids.

Credits: 3.00

ABE 32500 - Soil And Water Resource Engineering

Credit Hours: 4.00. Interrelationships of the plant-water-air-soil system; hydrologic processes; protection of surface and ground water quality; GIS targeting of soil and water protection measures; and design of subsurface and overland drainage systems, irrigation systems, and soil erosion control practices.

Learning Outcomes: 1. Understand the agricultural and biological engineering profession and practice. 2. Able to understand and apply knowledge of mathematics, science, and engineering. 3. Understand and able to, identify, formulate, model and solve problems for engineering systems. 4. Able to design a system, component or process to meet desired goal subject to constraints. Credits: 4.00

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

17 Credits

Spring 3rd Year

ABE 31400 - Design Of Electronic Systems

Credit Hours: 3.00. Fundamental aspects of circuits, microprocessors, transducers, sensors, instrumentation, and data acquisition are presented, with particular emphasis on electronic systems used in agricultural, biological, and food applications. Laboratory exercises used to apply the course material to constructing and testing circuits, microprocessor controlled systems, and the data collection and monitoring of systems.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design and conduct experiments, as well as to analyze and interpret data. 3. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. An ability to identify, formulate, and solve engineering problems. 5. A recognition of the need for, and an ability to engage in life-long learning. 6. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CE 38300 - Geotechnical Engineering I

Credit Hours: 3.00. Introduction to the nature and origin of soils and rocks; engineering significance of geologic landforms and soil deposits; identification and engineering classification of soils; engineering behavior and properties of soils; permeability, compressibility, shearing resistance; soil compaction.

Credits: 3.00

ABE 42500 - Water Quality Engineering

Credit Hours: 3.00. This course provides in-depth perspectives on water quality in source and environmental water systems (lakes, rivers, groundwaters, and coastal waters) including sources and causes of water quality impairments and design of workable and cost-effective management solutions. The course integrates hydrology, chemistry, biology, and ecology as foundations of water quality management and incorporates operation mechanisms of management practices in designing solutions for pollution control. Students will have opportunities to engage with lectures, water quality measurements and data analysis, computer modeling, case studies, design, and discussion sessions.

Learning Outcomes: 1. Identify causes and sources of water quality impairments. 2. Explain the health, ecological, and societal consequences of impaired waters. 3. Collect in-field water quality measurements. 4. Analyze water samples and associated data. 5. Design watershed-based solutions for pollutant control and water quality protection. Credits: 3.00

ABE 42600 - Ecological Restoration Engineering

Credit Hours: 3.00. This course focuses on ecologically-based design principles to restore degraded ecosystems, specifically wetlands, stream/floodplains, and prairies. Students will identify and synthesize design elements, natural and anthropogenic stresses, and management considerations to develop resilient restoration designs. Laboratory experience provides open-ended projects, data collection, and field trips to reinforce the design process.

Learning Outcomes: 1. Identify and synthesize design elements, natural and anthropogenic stresses, and management considerations for restored streams, floodplains & riparian zones, wetlands, and prairies. 2. Apply governing principles of ecological engineering, including biological, chemical, and physical conditions to develop resilient restoration designs. 3. Characterize and give examples of ecological concepts, such as water and elemental cycling, vegetation succession, food web dynamics, and ecological disturbance and how they apply to monitoring restoration success. 4. Read and extract key findings from readings. 5. Communicate effectively in written and oral format to a wide audience. Credits: 3.00

16 Credits

Fall 4th Year

ABE 48400 - Project Planning And Management

Credit Hours: 1.00. Review of topics relevant to project planning and execution in industry, including technical communication, budgeting, team management, intellectual property rights, contracts and timelines. Students will select a Capstone project and assemble a project proposal within a team environment.

Credits: 1.00

ABE 49000 - Professional Practice In Agricultural And Biological Engineering

Credit Hours: 1.00. Career areas in agricultural engineering; job opportunities and graduate study; professional attitudes and ethics; contracts and specifications; patents.

Credits: 1.00

17 Credits

Spring 4th Year

ABE 48600 - Agricultural Engineering Design

Credit Hours: 3.00. Students implement, test, refine, present, and deliver the capstone project solution proposed in ABE 48400. Team based projects are completed during the semester and documented with a written report, poster presentation, and oral presentations. Projects encompass a broad range of topics within agricultural engineering such as the design of environmental systems, machinery, precision agriculture and robotics, and student design competitions.

Learning Outcomes: 1. Design an environmental and natural resources system or a machine system. 2. Write a comprehensive design report and/or project reports for various target audiences. 3. Model/prototype and test projects in multidisciplinary teams with consultation available to students from government and industry engineers and marketing personnel. 4. Enhance communication skills by presenting project progress and final reports (written and oral) in a formal setting. 5. Experience engineering or project management practice with professionalism and ethical responsibility.

Credits: 3.00

14-15 Credits

Environmental Geoscience, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (53-54 credits)

Required Major Courses (53-54 credits)

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak

with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 36000 - Environmental And Ecological Engineering Laboratory

Credit Hours: 1.00 to 3.00. An introduction to laboratory methods of analysis of Environmental and Ecological Engineering systems. Topics will change from semester to semester and will be announced in advance. The list of possible topics includes experimental design, treatment of data, the analytical determination of chemical and biological constituents in water, soil, and air; analysis of environmental and ecological engineering processes; analysis of life-cycle characteristics and impacts of consumer products and commodities; methods of prevention and remediation of manufacturing waste streams.

Learning Outcomes: 1. Ability to acquire experimental data and evaluate experimental error and variability. 2. Understanding of data reduction, analysis and presentation. 3. Ability to produce professional technical communication of experimental conclusions. 4. Ability to summarize results of quantitative analysis to propose management strategies for environmental problems. Credits: 1.00 to 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource

policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 32100 - Analytical Chemistry I

Credit Hours: 4.00. Quantitative measurements on complex chemical systems that show matrix effects or require isolation of a component prior to its determination; general approaches to quantitative problems at the trace level; critical comparisons of competitive procedures with emphasis on principles of separation processes, including chromatography; recognition and evaluation of possible sources of error; approaches for optimizing conditions so as to minimize time and/or effort required to attain prescribed levels of accuracy and precision. Required of students majoring in chemistry.

Credits: 4.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

EAPS 13700 - Freshman Seminar In Earth, Atmospheric, And Planetary Sciences

Credit Hours: 1.00. Seminar presented by guests in different fields of the Earth and Atmospheric Sciences to expose students to the range of topics included in the department and in possible career paths.

Learning Outcomes: 1. Demonstrate the ability to form high performing teams. 2. Demonstrate the ability to locate and use academic success resources. 3. Demonstrate understanding of time management and study skills. 4. Demonstrate knowledge in the utilization of Purdue degree planning tools. 5. Demonstrate understanding of the academic requirements and career paths in the EAPS program. Credits: 1.00

EAPS 22500 - Science Of The Atmosphere (UCC: SCI)

Credit Hours: 3.00. This course provides a quantitative introduction to how to use the laws of physics to understand the behavior of the Earth's atmosphere. Emphasizes key processes that govern the climate system and the weather phenomena that arise within it. Topics covered may include the Earth's energy balance, heat transfer, the greenhouse effect, atmospheric convection, precipitation, the general circulation, the Coriolis effect, atmospheric chemistry, weather systems, weather forecasting, and climate change.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Solve simple quantitative problems by manipulating equations, plugging in numbers, and checking units. 2. Visualize how our atmosphere varies in space and time by interpreting graphs and maps of atmospheric data as a function of latitude, longitude, and/or height/pressure. 3. Use key physical laws to explain (mathematically and in words)...Physical properties (composition, density, temperature, pressure, specific humidity, relative humidity) of our atmosphere; How energy transfer between the Sun, Earth, and outer space affect the properties of our atmosphere; How horizontal variability in air properties gives rise to circulations, such as the jet stream. Credits: 3.00

EAPS 24300 - Mineralogy

Credit Hours: 4.00. Elements of crystallography, physical and chemical properties of rock-forming minerals, and minerals of economic importance. Origin and occurrence of minerals. Prior

course work in dynamic earth or physical geology is required.

Learning Outcomes: 1. Know the major element geochemistry of common rock forming minerals that occur in earth, the terrestrial planets, and in meteorites. 2. Understand that minerals form the geochemical reservoirs from which rock materials are derived. 3. Have competence in the rules of crystallography, be able to determine symmetry elements in 1-, 2-, and 3-demensions, and understand how to index different parts of crystals using common notations. 4. Identify rock forming minerals and selected accessory and ore minerals in hand sample. 5. Learn the theory and methods of optical mineralogy, spectroscopy, X-ray diffraction, and electron microbeam analysis. 6. Learn the thermodynamics phase equilibria in rock and mineral systems, and the basic petrology of igneous, metamorphic and sedimentary rocks. Credits: 4.00

EAPS 38500 - Principles Of Engineering Geology

Credit Hours: 3.00. Application of geology to evaluation of design and construction problems relating to dams, highways, tunnels, and reservoirs; review of construction material sources and their utilization. A field investigation is required. Prior course work in mineralogy, petrology or geology for engineers is required.

Credits: 3.00

EAPS 41900 - Internship In Environmental Geosciences

Credit Hours: 1.00 to 6.00. This course provides students with an opportunity to gain practical work experience in environmental geoscience. The student works with a faculty advisor to set up an internship consisting of the equivalent of at least six weeks of full-time employment with a government agency, business, or consulting company. Internships typically involve field, laboratory, and office work. A portion of the internship may be part-time work during a regular semester, but at least three consecutive weeks must be full-time work. One credit hour per week of unpaid internship. Six week internship. Prior course work in upper level EAPS courses is required. Permission of department required.

Credits: 1.00 to 6.00

EAPS 49700 - Earth And Atmospheric Sciences Undergraduate Readings And Research

Credit Hours: 1.00 to 6.00. Supervised reading and/or research in various fields. Permission of instructor required.

Credits: 1.00 to 6.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

EAPS 59100 - Advanced Topics In Earth And Atmospheric Sciences

Credit Hours: 0.00 to 18.00. Specialized study offered on an individual basis or through specially arranged courses. Permission of instructor required.

Credits: 0.00 to 18.00

EAPS 20000 - Water World: Processes And Challenges In Global Hydrology (UCC: STS)

Credit Hours: 3.00. Introduction to the Hydrological Sciences designed for undergraduate students. Course uses an Earth-systems approach to emphasize the interconnections and feedback between the hydrosphere, geosphere, biosphere, and atmosphere. Course topics will include: global water-balance, techniques for measuring components of the water-balance, hydrological uncertainties, groundwater, surface-water, vadose

zone, forest and watershed hydrology, global change hydrology, human and climate impacts on water resource, and water on the worlds.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Create, analyze, and evaluate water-balances. 2. Define and recognize the importance of the groundwater, surface-water, and vadose zone water systems, and explain interactions and interconnections between these three systems. 3. Evaluate human and climate impacts on water resources and explain how hydrological processes impact biodiversity and ecological functioning. 4. Create conceptual models for how these systems may change with growing human populations, land development and deforestation, and climate change. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 31500 - Biogeochemistry

Credit Hours: 3.00. The course examines the main element cycles of Earth: carbon, oxygen/hydrogen, nitrogen, sulfur, phosphorous, and trace metals, and how they are interconnected from terrestrial, aquatic/ocean, and atmospheric perspectives. General chemistry concepts such as equilibrium, free energy, electrochemistry are used to understand the energetics of the cycles. Connection between the cycles and environmental problems, such as climate change and air pollution will be emphasized.

Learning Outcomes: 1. Construct a mental model of the Earth system and the flow of elements among different parts of the system. 2. Examine modern problems caused by human perturbation of the main biogeochemical cycles. 3. Perform basic research tasks and present scientific findings. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

EAPS 47700 - Earth And Planetary GIS

Credit Hours: 3.00. In this course, students will learn to display and analyze Earth and planetary data using geographic information systems (GIS). Students will learn how to find and work with data from various sources, including satellites and spacecraft missions. Using a variety of spatial data, students will make maps and visualizations of data, perform analyses using a range of toolboxes, and implement workflows in geoprocessing.

Learning Outcomes: 1. Communicate applications of GIS in the real world. 2. Locate geospatially relevant datasets in online repositories. 3. Organize and manage files (and their appropriate formats) used within GIS software. 4. Identify limitations and gaps in remote sensing datasets. 5. Design and implement a workflow to analyze remote sensing data. 6. Create maps and figures that visualize products within a geospatial analysis workflow. 7. Describe a goal (i.e., hypothesis being tested) that geospatial analysis can address, as well as the data inputs, steps in the workflow, and outcome (i.e., results) of the analysis in the form of a webpost that can be shared with employers and other GIS users.

Credits: 3.00

CHM 22404 - Quantitative Analysis

Credit Hours: 3.00. Introduction to approaches analytical chemists use to analyze the composition of matter, including statistics, calibration, and understanding chemical equilibrium (acid/base, complexation, solubility, polyprotic acid treatment, acid/base/redox/precipitation titrations); general approaches to analysis at the trace level; recognition and evaluation of possible sources of error and how error propagates; introduction to how light interacts with matter (and how analytical chemists can take advantage of this).

Learning Outcomes: 1. Understand the fundamentals and figures of merit of different analytical techniques. 2. Learn how to properly select an analytical technique for accurate quantitative determination. 3. Perform accurate quantitative measurements. 4. Use Excel or Google Sheets or Python for data analysis and plotting. 5. Analyze the results and determine the experimental uncertainty. 6. Report the experimental data properly. 7. Perform statistical analysis. Credits: 3.00

Other Departmental/Program Course Requirements (42-68 credits)

College of Science Additional Requirements

Computing (2-4 credits)

ECE 49500 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 4.00. Topics vary. Permission of department required.

Credits: 1.00 to 4.00

ENGR 14200 - Honors Creativity And Innovation In Engineering Design II

Credit Hours: 3.50. This course continues building on the foundation developed in ENGR 14100 . Students take a more in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students extend and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g., C, Excel®, LabView®, MATLAB®, and Python).

Learning Outcomes: 1. Describe, in greater depth, the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Apply engineering fundamentals and basic engineering science concepts to create feasible engineering solutions that are justifiable. 3. Use a problem identification process to create written engineering criteria to satisfy a problem. 4. Use an engineering formulation and solving process to translate an engineering scenario into a mathematical model. 5. Explain how an engineering problem solving process relates to a design process. 6. Design a process to communicate technical information orally and

visually and demonstrate skills for cross-cultural communication. 7. Further development of strategies to facilitate generating creative ideas for complex design challenges. 8. Apply an engineering problem solving and design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 9. Implement complex algorithmic solutions to engineering problems/designs using the most appropriate computer tool (C , Excel, LABVIEW, MATLAB, and Python) and be able to explain your rationale for your choice. 10. Apply a systems approach in solving engineering problems and in undertaking design projects. 11. Synthesize your knowledge of effective and ethical membership on a technical team (i.e., teaming skills) to appropriately behavior. 12 Exhibit a work ethic appropriate for the engineering profession. Credits: 3.50

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

ENGR 16200 - Honors Introduction To Innovation And The Physical Science Of Engineering Design II (UCC: IL/SCI)

Credit Hours: 4.00. Students will take an in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students continue to explore more complicated models of physical systems, especially internal energy, entropy, models of gases and fluids, and statistical thermodynamics. The students will extend the concepts learned in ENGR 16100 and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g. MATLAB and Python). In addition, students will learn how to use hypothesis testing to make informed, quantitative decisions. Finally, they will build systems that incorporate feedback control in an effort to identify and characterize physical material systems.

*(Both ENGR 16100 AND ENGR 16200 are required to meet the IL or SCI requirement)

University Core Curriculum (UCC): (UCC: IL/SCI) Learning Outcomes: 1. Utilize knowledge of the engineering education process, courses, and options, and engineering job functions and roles to prepare a final course of study for academic and career success (3). 2. Develop a unified approach to microscopic and macroscopic behavior of gases and fluids, especially the use of statistics and quantized atomic levels to motivate basic thermodynamic theories (10). 3. Apply the unified approach to material interactions to a broad array of applications including asteroids, black holes, nuclear fission and fusion, quantization in atoms and molecules, and heat capacity (7). 4. Model natural phenomena using computer simulations (7). 5. Integrate engineering ethics, including social, safety, and sustainability issues into engineering thinking and engineering problem solving to ensure that the broader impacts of engineering work are consistently evaluated and accounted for (3). 6. Display proficiency in the applications of engineering content knowledge including statistics, statics, mechanics of materials, the universal accounting equation, electrical theory, and design of experiments (8). 7. Employ academic and career success strategies including managing your personal learning approach, using time management techniques, and seeking opportunities for self-improvement to thoughtfully pursue course activities and the course as a whole (2). 8. Plan and implement systematic design processes using formal project management and design tools such as work breakdown structures and House of Quality to design innovative products and systems (2). 9. Investigate and decompose systems in order to design and construct mathematical or computer models that can be employed to better understand or control the systems (6). 10. Analyze and translate problems into algorithms composed of logical constructs and be able to create programming-language-independent system charts and flow diagrams embodying those algorithms (5). 11. Demonstrate professional communications skills in the areas of technical writing, presentations, and interpersonal communication, to produce engineering reports, convey engineering findings and evidence in writing, verbally, and graphically to readers or audiences, and to work with other members of the class (3). 12. Work alongside individuals with diverse backgrounds in teams, learn interdependently in the team environment, give and demand accountability, and accomplish engineering tasks, while recognizing teaming as an open-ended problem that needs to be actively managed and reflected upon (3). 13. Investigate engineering problems to reach evidence-based conclusions, drawing upon one or more sources of information and data interpretation skills including interpolation, regression, curve fitting, statistics, and data cleaning (3). 14. Apply fundamental engineering skills and knowledge relating to units, dimensions, estimation, spatial reasoning, graphical representation, significant digits, and the problem presentation method to engineering challenges (2). Credits: 4.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Discover data science

and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (8-10 credits)

CHM 12500 - Introduction To Chemistry I (UCC: SCI)

Credit Hours: 5.00. Principles of chemistry including stoichiometry; atomic structure and chemical bonding; properties of gases, liquids, and solids; thermochemistry; descriptive inorganic chemistry. Recommended for entering students intending to major in chemistry. One year of high school chemistry or one semester of college chemistry required.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate competency of chemistry concepts through solving of numerical-based chemistry problems. 2. Demonstrate a mastery of concepts, theories, and ideas of chemistry topics specific to this

course. 3. Connect chemistry topics in this course to real-world problems and solutions that you and others experience. 4. Meet laboratory learning objectives. Credits: 5.00

CHM 12600 - Introduction To Chemistry II (UCC: SCI)

Credit Hours: 5.00. A continuation of CHM 12500 . Properties of solutions; chemical equilibrium calculations; elementary thermodynamics; oxidation-reduction reactions and electrochemical cells; rates of reaction; qualitative analysis; descriptive chemistry.

University Core Curriculum (UCC): (UCC: SCI) Credits: 5.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the

experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze

experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Mathematics (8-10 credits)

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus -

Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical

methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

EAPS 31000 - Introductory Statistics For Geosciences

Credit Hours: 3.00. Introductory course in statistics and quantitative reasoning for students in geosciences. Topics covered include probability distributions of discrete and continuous random variables, simulation, confidence intervals and hypothesis tests for one and two samples, inference for regression and correlation.

Learning Outcomes: 1. Understand basic concepts of probability and statistics, and gain a solid basis for practical application of statistical methods in geosciences. 2. Obtain hands-on experience in resampling methods to handle data without having to rely on strong assumptions common in classical statistics but rarely met in geosciences. 3. Use statistical software to analyze data and interpret results. Credits: 3.00

Required Pre-Requisite Course (4 credits)

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students

not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

Electives (0-25 credits)

Supplemental List

Grade Requirements

GPA Requirements

Course Requirements and Notes

Sample 4-Year Plan

Fall 1st Year

CHM 12500 - Introduction To Chemistry I (UCC: SCI)

Credit Hours: 5.00. Principles of chemistry including stoichiometry; atomic structure and chemical bonding; properties of gases, liquids, and solids; thermochemistry; descriptive inorganic chemistry. Recommended for entering students intending to major in chemistry. One year of high school chemistry or one semester of college chemistry required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate competency of chemistry concepts through solving of numerical-based chemistry problems. 2. Demonstrate a mastery of concepts, theories, and ideas of chemistry topics specific to this course. 3. Connect chemistry topics in this course to real-world problems and solutions that you and others experience. 4. Meet laboratory learning objectives. Credits: 5.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on

groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

EAPS 13700 - Freshman Seminar In Earth, Atmospheric, And Planetary Sciences

Credit Hours: 1.00. Seminar presented by guests in different fields of the Earth and Atmospheric Sciences to expose students to the range of topics included in the department and in possible career paths.

Learning Outcomes: 1. Demonstrate the ability to form high performing teams. 2. Demonstrate the ability to locate and use academic success resources. 3. Demonstrate understanding of time management and study skills. 4. Demonstrate knowledge in the utilization of Purdue degree planning tools. 5. Demonstrate understanding of the academic requirements and career paths in the EAPS program. Credits: 1.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum

theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

15-17 Credits

Spring 1st Year

CHM 12600 - Introduction To Chemistry II (UCC: SCI)

Credit Hours: 5.00. A continuation of CHM 12500 . Properties of solutions; chemical equilibrium calculations; elementary thermodynamics; oxidation-reduction reactions and electrochemical cells; rates of reaction; qualitative analysis; descriptive chemistry.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 5.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics.
Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions,

thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

14-18 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test

hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

EAPS 22500 - Science Of The Atmosphere (UCC: SCI)

Credit Hours: 3.00. This course provides a quantitative introduction to how to use the laws of physics to understand the behavior of the Earth's atmosphere. Emphasizes key processes that govern the climate system and the weather phenomena that arise within it. Topics covered may include the Earth's energy balance, heat transfer, the greenhouse effect, atmospheric convection, precipitation, the general circulation, the Coriolis effect, atmospheric chemistry, weather systems, weather forecasting, and climate change.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Solve simple quantitative problems by manipulating equations, plugging in numbers, and checking units. 2. Visualize how our atmosphere varies in space and time by interpreting graphs and maps of atmospheric data as a function of latitude, longitude, and/or height/pressure. 3. Use key physical laws to explain (mathematically and in words)...Physical properties (composition, density, temperature, pressure, specific humidity, relative humidity) of our atmosphere; How energy transfer between the Sun, Earth, and outer space affect the properties of our atmosphere; How horizontal variability in air properties gives rise to circulations, such as the jet stream. Credits: 3.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined

reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

16-17 Credits

Spring 2nd Year

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT

30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

EAPS 20000 - Water World: Processes And Challenges In Global Hydrology (UCC: STS)

Credit Hours: 3.00. Introduction to the Hydrological Sciences designed for undergraduate students. Course uses an Earth-systems approach to emphasize the interconnections and feedback between the hydrosphere, geosphere, biosphere, and atmosphere. Course topics will include: global water-balance, techniques for measuring components of the water-balance, hydrological uncertainties, groundwater, surface-water, vadose zone, forest and watershed hydrology, global change hydrology, human and climate impacts on water resource, and water on the worlds.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Create, analyze, and evaluate water-balances. 2. Define and recognize the importance of the groundwater, surface-water, and vadose zone water systems, and explain interactions and interconnections between these three systems. 3. Evaluate human and climate impacts on water resources and explain how hydrological processes impact biodiversity and ecological functioning. 4. Create conceptual models for how these systems may change with growing human populations, land development and deforestation, and climate change. Credits: 3.00

EAPS 31000 - Introductory Statistics For Geosciences

Credit Hours: 3.00. Introductory course in statistics and quantitative reasoning for students in geosciences. Topics covered include probability distributions of discrete and continuous random variables, simulation, confidence intervals and hypothesis tests for one and two samples, inference for regression and correlation.

Learning Outcomes: 1. Understand basic concepts of probability and statistics, and gain a solid basis for practical application of statistical methods in geosciences. 2. Obtain hands-on experience in resampling methods to handle data without having to rely on strong assumptions common in classical statistics but

rarely met in geosciences. 3. Use statistical software to analyze data and interpret results. Credits: 3.00

CHM 22404 - Quantitative Analysis

Credit Hours: 3.00. Introduction to approaches analytical chemists use to analyze the composition of matter, including statistics, calibration, and understanding chemical equilibrium (acid/base, complexation, solubility, polyprotic acid treatment, acid/base/redox/precipitation titrations); general approaches to analysis at the trace level; recognition and evaluation of possible sources of error and how error propagates; introduction to how light interacts with matter (and how analytical chemists can take advantage of this).

Learning Outcomes: 1. Understand the fundamentals and figures of merit of different analytical techniques. 2. Learn how to properly select an analytical technique for accurate quantitative determination. 3. Perform accurate quantitative measurements. 4. Use Excel or Google Sheets or Python for data analysis and plotting. 5. Analyze the results and determine the experimental uncertainty. 6. Report the experimental data properly. 7. Perform statistical analysis. Credits: 3.00

15-16 Credits

Fall 3rd Year

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

EEE 36000 - Environmental And Ecological Engineering Laboratory

Credit Hours: 1.00 to 3.00. An introduction to laboratory methods of analysis of Environmental and Ecological Engineering systems. Topics will change from semester to semester and will be announced in advance. The list of possible topics includes experimental design, treatment of data, the analytical determination of chemical and biological constituents in water, soil, and air; analysis of environmental and ecological engineering processes; analysis of life-cycle characteristics and impacts of consumer products and commodities; methods of prevention and remediation of manufacturing waste streams.

Learning Outcomes: 1. Ability to acquire experimental data and evaluate experimental error and variability. 2. Understanding of data reduction, analysis and presentation. 3. Ability

to produce professional technical communication of experimental conclusions. 4. Ability to summarize results of quantitative analysis to propose management strategies for environmental problems. Credits: 1.00 to 3.00

EAPS 24300 - Mineralogy

Credit Hours: 4.00. Elements of crystallography, physical and chemical properties of rock-forming minerals, and minerals of economic importance. Origin and occurrence of minerals. Prior course work in dynamic earth or physical geology is required.

Learning Outcomes: 1. Know the major element geochemistry of common rock forming minerals that occur in earth, the terrestrial planets, and in meteorites. 2. Understand that minerals form the geochemical reservoirs from which rock materials are derived. 3. Have competence in the rules of crystallography, be able to determine symmetry elements in 1-, 2-, and 3-demensions, and understand how to index different parts of crystals using common notations. 4. Identify rock forming minerals and selected accessory and ore minerals in hand sample. 5. Learn the theory and methods of optical mineralogy, spectroscopy, X-ray diffraction, and electron microbeam analysis. 6. Learn the thermodynamics phase equilibria in rock and mineral systems, and the basic petrology of igneous, metamorphic and sedimentary rocks. Credits: 4.00

EAPS 38500 - Principles Of Engineering Geology

Credit Hours: 3.00. Application of geology to evaluation of design and construction problems relating to dams, highways, tunnels, and reservoirs; review of construction material sources and their utilization. A field investigation is required. Prior course work in mineralogy, petrology or geology for engineers is required.

Credits: 3.00

EAPS 31500 - Biogeochemistry

Credit Hours: 3.00. The course examines the main element cycles of Earth: carbon, oxygen/hydrogen, nitrogen, sulfur, phosphorous, and trace metals, and how they are interconnected from terrestrial, aquatic/ocean, and atmospheric perspectives. General chemistry concepts such as equilibrium, free energy, electrochemistry are used to understand the energetics of the cycles. Connection between the cycles and environmental problems, such as climate change and air pollution will be emphasized.

Learning Outcomes: 1. Construct a mental model of the Earth system and the flow of elements among different parts of the system. 2. Examine modern problems caused by human perturbation of the main biogeochemical cycles. 3. Perform basic research tasks and present scientific findings. Credits: 3.00

13 Credits

Spring 3rd Year

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points

of view. Credits: 3.00

13-14 Credits

Fall 4th Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

12-15 Credits

Spring 4th Year

EAPS 41900 - Internship In Environmental Geosciences

Credit Hours: 1.00 to 6.00. This course provides students with an opportunity to gain practical work experience in environmental geoscience. The student works with a faculty advisor to set up an internship consisting of the equivalent of at least six weeks of full-time employment with a government agency, business, or consulting company. Internships typically involve field, laboratory, and office work. A portion of the internship may be part-time work during a regular semester, but at least three consecutive weeks must be full-time work. One credit hour per week of unpaid internship. Six week internship. Prior course work in upper level EAPS courses is required. Permission of department required.

Credits: 1.00 to 6.00

EAPS 49700 - Earth And Atmospheric Sciences Undergraduate Readings And Research

Credit Hours: 1.00 to 6.00. Supervised reading and/or research in various fields. Permission of instructor required.

Credits: 1.00 to 6.00

13-16 Credits

Family and Consumer Sciences Education, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (109 credits)

Required Major Courses (109 credits)

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2.

Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B.

Learning Outcomes: 1. Understand the primary components of child guidance at different developmental stages. 2. Plan and implement developmentally appropriate methods of child guidance and discipline. 3. Understand the influential theoretical perspectives of child guidance/discipline. 4. Modify expectations and guidance strategies appropriately for children with diverse abilities, family demographic characteristics, and cultural backgrounds. 5. Promote and create environments and lessons that prevent challenging behaviors. 6. Demonstrate desirable modeling of behavior. 7. Increase understanding and skills surrounding effective communication with children and parents about child guidance. 8. Gain critical knowledge of the importance of understanding diverse family and community characteristics and how they influence child behavior. 9. Increase understanding and skills for engaging with families, other educators,
and practitioners on child guidance. 10. Demonstrate growth in professionalism as early childhood educators. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment.

Learning Outcomes: 1. Critically evaluate popular conceptions of adolescence and adolescents. 2. Compare and contrast theoretical perspectives on normative development during adolescence. 3. Identify the diversity in the developmental pathways during adolescence. 4. Acquire a framework for assessing the connections between interpersonal development and the larger social context. Credits: 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals,

couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents.

Learning Outcomes: 1. Construct a basic knowledge of human sexuality as it pertains to family relations in the personal and professional settings. 2. Compare and describe social, cultural, historical, and technological trends and the interrelationships between these trends and their impact on sexuality, family relations, and personal values and attitudes. 3. Differentiate and examine the many different aspects of sexuality including biological, developmental, medical, cultural, historical, and interpersonal. 4. Demonstrate knowledge that helps to develop a better understanding of students' own feelings and attitudes related to sexuality and how those attitudes and feelings influence their beliefs about individuals, couples, and families. Credits: 3.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss

substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

AD 12500 - Introduction To Interior Design (UCC: HUM)

Credit Hours: 3.00. Introductory survey of interior spaces and their impact upon the physical, social, psychological, and aesthetic needs of people. Critical evaluation of concepts in the interior design profession and related fields will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Apply concept that well-designed environments are products of a design process that encompasses both functionality and aesthetics. 2. Describe how interior environments can influence human behavior. 3. Relate the sociological, psychological, physiological, and economic aspects to the design of interiors. 4. Identify and use professional terminology in the field of interior design. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate

effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

EDCI 20700 - Construction And Textile Lab Management

Credit Hours: 3.00. A lecture/lab course which provides clothing construction and textile science content to be applied in the secondary family and consumer sciences classroom.

Learning Outcomes: 1. Demonstrate clothing construction concepts. 2. Apply basic textile science to fabric and clothing selection. 3. Manage a clothing and/or textile lab within a secondary family and consumer sciences classroom. Credits: 3.00

AD 28000 - Human Behavior And Designed Environment

Credit Hours: 3.00. This foundation course examines issues pertaining to the environment's effects on human behavior and how humans' physiological, informational, and social needs impact the design of interior spaces. Specific topics explored include: personal and social use of space, proxemics, ergonomics, anthropometrics, cultural factors and universal design.

Learning Outcomes: 1. Describe and discuss the bio-social, psychological, and cultural characteristics of human beings and how this influences specific design attributes of the built environment. 2. Recognize, recall, and interpret basic concepts within the domain of Environment and Behavior Studies (EBS) to explain the effects environmental aspects have on which groups of people, under what sets of conditions, and why. 3. Demonstrate learning, through written and oral communication, how people both shape and are shaped by the characteristics of space, form, light, color, objects, materials, and other details which make up the designed environment. 4. Employ a process for integrating mechanisms of these two-way interactions between people and environments into the framework of design. 5. Illustrate understanding and appreciation of

philosophical contexts and dynamic interrelationships of culturally diverse people and their connection with the environment. Credits: 3.00

PUBH 23000 - Community, Culture And Social Justice From A Public Health Perspective

Credit Hours: 3.00. The course provides an introduction to the concepts of community, culture, and social justice. The interaction between community, cultural, ethical, social, economic, environmental, political and social justice dynamics that shape health will be explored.

Learning Outcomes: 1. Identify and understand the social determinants of health. 2. Describe how community, cultural, ethical, social, economical, environmental, political and social justice shape human health both locally and globally using a social determinants of health framework. 3. Learn about theories of justice related to the field of public health. 4. Understand community developmental theoretical frameworks dimensions associated with the social change, such as empowerment, community participation, and capacity building. 5. Identify roles and responsibilities of the public health educator, other practitioners, and community members as agents of change. 6. Compare and contrast the concepts of health inequities, health disparities and health inequalities. Credits: 3.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

Required Major Courses (109 credits)

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B.

Learning Outcomes: 1. Understand the primary components of child guidance at different developmental stages. 2. Plan and implement developmentally appropriate methods of child guidance and discipline. 3. Understand the influential theoretical perspectives of child guidance/discipline. 4. Modify expectations and guidance strategies appropriately for children with diverse abilities, family demographic characteristics, and cultural backgrounds. 5. Promote and create environments and lessons that prevent challenging behaviors. 6. Demonstrate desirable modeling of behavior. 7. Increase understanding and skills surrounding effective communication with children and parents about child guidance. 8. Gain critical knowledge of the importance of understanding diverse family and community characteristics and how they influence child behavior. 9. Increase understanding and skills for engaging with families, other educators, and practitioners on child guidance. 10.

Demonstrate growth in professionalism as early childhood educators. Credits: 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment.

Learning Outcomes: 1. Critically evaluate popular conceptions of adolescence and adolescents. 2. Compare and contrast theoretical perspectives on normative development during adolescence. 3. Identify the diversity in the developmental pathways during adolescence. 4. Acquire a framework for assessing the connections between interpersonal development and the larger social context. Credits: 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals, couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents.

Learning Outcomes: 1. Construct a basic knowledge of human sexuality as it pertains to family relations in the personal and professional settings. 2. Compare and describe social, cultural, historical, and technological trends and the interrelationships between these trends and their impact on sexuality, family relations, and personal values and attitudes. 3. Differentiate and examine the many different aspects of sexuality including biological, developmental, medical, cultural, historical, and interpersonal. 4. Demonstrate knowledge that helps to develop a better understanding of students' own feelings and attitudes related to sexuality and how those attitudes and feelings influence their beliefs about individuals, couples, and families. Credits: 3.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your

experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe

special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

AD 12500 - Introduction To Interior Design (UCC: HUM)

Credit Hours: 3.00. Introductory survey of interior spaces and their impact upon the physical, social, psychological, and aesthetic needs of people. Critical evaluation of concepts in the interior design profession and related fields will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Apply concept that well-designed environments are products of a design process that encompasses both functionality and aesthetics. 2. Describe how interior environments can influence human behavior. 3. Relate the sociological, psychological, physiological, and economic aspects to the design of interiors. 4. Identify and use professional terminology in the field of interior design. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits

and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

EDCI 20700 - Construction And Textile Lab Management

Credit Hours: 3.00. A lecture/lab course which provides clothing construction and textile science content to be applied in the secondary family and consumer sciences classroom.

Learning Outcomes: 1. Demonstrate clothing construction concepts. 2. Apply basic textile science to fabric and clothing selection. 3. Manage a clothing and/or textile lab within a secondary family and consumer sciences classroom. Credits: 3.00

AD 28000 - Human Behavior And Designed Environment

Credit Hours: 3.00. This foundation course examines issues pertaining to the environment's effects on human behavior and how humans' physiological, informational, and social needs impact the design of interior spaces. Specific topics explored include: personal and social use of space, proxemics, ergonomics, anthropometrics, cultural factors and universal design.

Learning Outcomes: 1. Describe and discuss the bio-social, psychological, and cultural characteristics of human beings and how this influences specific design attributes of the built environment. 2. Recognize, recall, and interpret basic concepts within the domain of Environment and Behavior Studies (EBS) to explain the effects environmental aspects have on which groups of people, under what sets of conditions, and why. 3. Demonstrate learning, through written and oral communication, how people both shape and are shaped by the characteristics of space, form, light, color, objects, materials, and other details which make up the designed environment. 4. Employ a process for integrating mechanisms of these two-way interactions between people and environments into the framework of design. 5. Illustrate understanding and appreciation of philosophical contexts and dynamic interrelationships of culturally diverse people and their connection with the environment. Credits: 3.00

PUBH 23000 - Community, Culture And Social Justice From A Public Health Perspective

Credit Hours: 3.00. The course provides an introduction to the concepts of community, culture, and social justice. The interaction between community, cultural, ethical, social, economic, environmental, political and social justice dynamics that shape health will be explored.

Learning Outcomes: 1. Identify and understand the social determinants of health. 2. Describe how community, cultural, ethical, social, economical, environmental, political and social justice shape human health both locally and globally using a social determinants of health framework. 3. Learn about theories of justice related to the field of public health. 4. Understand community developmental theoretical frameworks dimensions associated with the social change, such as empowerment, community participation, and capacity building. 5. Identify roles and responsibilities of the public health educator, other practitioners, and community members as agents of change. 6. Compare and contrast the concepts of health inequities, health disparities and health inequalities. Credits: 3.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated

with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

Professional Education Requirements

Foundational Courses

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of

the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8.

Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of

learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Family & Consumer Sciences Education

EDCI 25000 - Professional Development In Family And Consumer Sciences Education

Credit Hours: 0.00 to 2.00. This course focuses on students' professional development as family and consumer sciences educators. Characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; the Purdue Family and Consumer Sciences Education program; and expectations for Indiana FCS teacher-licensure are emphasized. Includes participation in professional organizations and meetings.

Learning Outcomes: 1. Formulate and implement plans for building and documenting one's professional identity, competence, and career development as a family and consumer sciences educator. 2. Examine characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; coursework and field-based experiences in the Purdue Family and Consumer Sciences Education (FCSE) program; and licensure requirements and standards for teachers of family and consumer sciences. Credits: 0.00 to 2.00

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

EDCI 35600 - Career Education In Family And Consumer Sciences

Credit Hours: 3.00. Examination of middle and high school career education accomplished through family and consumer sciences, including (1) life and career exploration and planning; (2) analysis of career paths and opportunities in family and consumer sciences; and (3) career preparation through laboratory and cooperative education programs. Historical and contemporary foundations for career education in family and consumer sciences is also are addressed. Includes observations and interactions with students and teachers in career-education programs and participation in professional meetings.

Learning Outcomes: 1. Examine purposes, curriculum, and implementation strategies for career education accomplished through family and consumer sciences, including FCS careers, FCS supporting content, and FCS life and career foundations. 2. Examine the structure

and delivery of career and technical education in the United States and Indiana, state and federal laws and regulations pertaining to career and technical education, and important events and developments in the history of career and technical education and family and consumer sciences education. 3. Engage in ethical professional practice professional development, and outreach in family and consumer sciences education, including advocacy and working with local advisory committees. 4. Analyze instructional strategies and procedures for career education in family and consumer sciences, including integration of career and technical student organizations, particularly the Family, Career and Community Leaders of America (FCCLA) and coordination of students' work-based learning experiences through in-school laboratories and community-based placements. Credits: 3.00

EDCI 36000 - Curriculum And Instruction In Family And Consumer Sciences: Middle School

Credit Hours: 3.00. Instructional program development for family and consumer sciences. Developmental needs and issues of early adolescents; study of adolescent literacy; and curriculum integration of language arts, math, and other content areas are emphasized. Development of a comprehensive unit of instruction that incorporates standard-based curriculum, assessment, and instruction for family and consumer sciences is a major component of the course. Includes observations and interactions with family and consumer sciences teachers and students and participation in professional meetings.

Learning Outcomes: 1. Utilize middle school philosophy/perspectives, state-level resources, and community assets to guide curriculum development in Family & Consumer Sciences that is challenging, exploratory, integrative, and diverse, and which fosters learning that is active, purposeful, and democratic. (FCS TEd 7) 2. Integrate professional knowledge/behaviors supportive of middle-level education learner development (physical, cognitive, socio-emotional, psychological) into FCS curricula/practices, attentive to the health, wellness, and social-emotional competence of learners. (FCS TEd 8) 3. Employ professional and other resources to develop a "literary" classroom environment that reflects all students. (FCS TEd 11) 4. Identify and collect resources, references, and other materials that support the identity, intellect, skill, and criticality development of students across FCS content. (FCS-Ted) 5. Create student-centered learning experiences in blended and online settings using UDL principles that are culturally responsive (TIBOT competency 3; FCS-Ted 7, 8, 11) 6. Review and critique FCS curriculum materials and practices for alignment with best practices for inclusion, access, equity, and diversity. (FCS-TEd 7, 8) 7. Relate family and consumer sciences programs to broader educational program goals and to community assets and needs. 8. Integrate foundational FCS perspectives (historical lens, Body of Knowledge, Critical Science approach) into professional schema. (FCS-TEd 12) 9. Develop and reflect on personal/professional characteristics that shape optimal middle school/FCS educator practice. (FCS-TEd 12) Credits: 3.00

EDCI 44400 - Methods For Teaching Family And Consumer Sciences

Credit Hours: 4.00. The culminating on-campus teacher-education course for the Purdue University Family and Consumer Sciences program. The course builds and consolidates teacher-candidates' knowledge and skills for teaching family and consumer sciences. Emphasis placed on standards-based instructional planning and materials; instructional strategies, including laboratories, assessment of student learning, and classroom management. Course includes field experiences. Program content requirements should be completed previous to or concurrent with this course.

Learning Outcomes: 1. Establish a comprehensive knowledge base of standards in a range of family and consumer sciences content areas, with a corresponding knowledge

base for integrating standards in other areas such as financial literacy, technology, English Language Arts, and mathematics. 2. Design and implement standards-based curriculum, teaching/learning strategies, and assessment of student learning to meet the needs of diverse learners. 3. Apply knowledge of student behavior, organizational skills, and classroom and laboratory management skills to create a safe, supportive, and productive learning environment. 4. Enable student learning of family and consumer sciences concepts and skills through instructional strategies and laboratory experiences that build student capacities for self-directed learning, critical-thinking, problem-solving, decision-making, leadership, and managent. Credits: 4.00

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

Learner Specialty Pathway Optional Concentration

Foundational Courses

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze

different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with

disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501. Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural. University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Other Departmental/Program Course Requirements (16-19 credits)

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform

research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 12000 - Introduction To Public Policy And Public Administration (UCC: BSS)

Credit Hours: 3.00. An introduction to the fields of public policy and public administration. Processes of policy formation and administration are examined. Different approaches to evaluating and improving public policies are discussed.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

EAPS 12000 - Introduction To Geography (UCC: STS)

Credit Hours: 3.00. Introduction to the major themes of modern geography, designed to enhance your spatial thinking skills, geographic literacy, and to help you understand the relevance of geographic concepts and how they relate to our changing world. This course will expand your awareness of global issues and provide you with tools to understand how the world around you changes at local, regional, and global scales.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Interpret geographic data and identify and understand spatial relationships linking humans and the environment. 2. Use geographic tools introduced in the course (e.g. Google Earth, MapMaster). 3. Understand how and why people organize themselves and move as a function of economic, social, historical and cultural forces. 4. Understand how weather and climate are linked to natural and human induced climate change, and links between the atmosphere and biosphere through water and nutrient cycles. 5. Understand how processes within and on the Earth are reflected in the landscape and how erosions, transport and deposition re-shape landscapes. 6. Understand the resource concept and be able to make connections between distribution of resources and balancing competing interests. Credits: 3.00

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions,

and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

ENTR 20000 - Introduction To Entrepreneurship And Innovation

Credit Hours: 3.00. This course introduces students to the process of turning ideas, inventions, and innovations into new business ventures. It covers foundational entrepreneurial concepts and practices, as well as the leadership, teamwork, and communication skills required of individuals who choose to become entrepreneurs or to act entrepreneurially in established organizations. It serves as the first required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Explain how innovation and entrepreneurship drive economic growth. 2. Use creativity and ideation techniques to identify market opportunities. 3. Evaluate the feasibility of new venture opportunities using secondary market research. 4. Interpret financial statements, profit and loss, and breakeven analysis. 5. Identify sources of funding for new ventures. 6. Understand how to prepare a proper legal and ethical foundation for a new venture. 7. Describe the role of intellectual property protection in the venture development process. 8. Define the roles of diverse individuals on an entrepreneurial team. 9. Prepare and deliver persuasive business presentations. Credits: 3.00

MA 15555 - Quantitative Reasoning (UCC: QR)

Credit Hours: 3.00. This course will cover important mathematical ideas, including proportion, weighted averages, linear models, exponential models, basic probability and statistics, and some algebra, by using concrete real-world problems. It will not be a prerequisite for any other mathematics course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn proportion and how to apply it to unit conversions, percentage, sales tax and discounts, and inflation. 2. Learn weighted averages and how they apply to the consumer price index and other examples. 3. Learn paradoxes involving weighted averages. 4. Learn linear models and how they apply to electricity bills, income taxes, and climate change. 5. Learn exponential growth and how it applies to compound interest and other financial issues. 6. Learn basic probability theory and how it applies to insurance and games of chance. 7. Learn how algebra is related to the other things learned. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

SYS 30000 - It's A Complex World - Addressing Global Challenges (UCC: STS)

Credit Hours: 3.00. The main goal of this course is to address grand challenges that are of global concern - such as environmental sustainability and energy use, natural and human disasters, and political and economic development - using the ideas and tools of complex adaptive systems. The course exploits the broad expertise of the four faculty members by treating these challenges from diverse disciplinary perspectives, from the biological and physical sciences, to the social sciences, to engineering. By way of a set of case studies, students will analyze the features of these challenges which make them complex, and seek to explain and find solutions to the problems that arise in each case. Their treatment of the cases will be informed by published research and computer simulation. Students will actively participate in discussions regarding these global challenges, and contribute to the progress of the class using oral and written presentations. The course will culminate with a final project completed by teams composed of students from different disciplines.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe global challenges using engineering, biological, physical, and social scientific perspectives, including attention to the interdependence of the different perspectives. 2. Explain the fundamental concepts of 'complex adaptive systems, ' including applications to different global challenges. 3. Develop basic proficiency in applying computer modeling to represent the behavior of complex systems, with applications to the global challenges. 4. Apply the concepts and tools of complexity research to develop a group-based proposal of comprehensive policies/solutions/strategies in a new and unresolved problem area. Credits: 3.00

HIST 30305 - Food In Modern America (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the kitchen as an architectural space, a place of labor and food production, and an arena for technological innovation in modern American history. Cooking and eating reflect cultural sentiments about modernity, progress, ethnicity, and family, and the politics of how society nourishes bodies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Think historically and critically about the cultural consequences of technologies related to eating and food preparation. 2. Think historically and critically about approaches to the study of national identify and culture expressed through food. 3. Appreciate the circumstances and history of kitchen design in relation to raced and gendered identities, home space, and food preparation. 4. Understand and recognize how assumptions about food production during the late 19th and 20th centuries in the United States

reflected notions about labor, modernity, and progress. 5. Understand the difference between secondary and primary sources. Students will analyze and interpret primary documents related to kitchens, cooking, and food preparation. They also will understand the competing and conflicting nature of historical interpretation. 6. Sharpen critical reading, thinking, writing, and discussion skills. Credits: 3.00

EDCI 22200 - Knowing The World Through Mathematics (UCC: QR)

Credit Hours: 3.00. In this course, *Knowing the World Through Mathematics*, students will connect their situated experiences to larger trends in equity and social justice around the globe through mathematical investigations embedded in the context of the United Nations 2030 Agenda (United Nations, 2015). Students in this course will make use of mathematics and global policy documents to critically interpret, model, and represent world phenomena. Students will collaboratively analyze quantitative information gathered through trustworthy, globally representative data sets and individual survey and questionnaire items to investigate local experiences in relation to students' area(s) of interest. Students will learn about and utilize the GAISE Framework for Statistical Problem Solving (Franklin, et al., 2005) and the Four Dimensions of Equity in Mathematics Education (Gutiérrez, 2012) to ground their discussions and deliverables for *Knowing the World Through Mathematics*.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use a critical mathematics perspective to interpret world patterns, situations, and events. 2. Create mathematical models of world phenomena. 3. Use multiple mathematical representations to present global issues. 4. Identify and implement appropriate mathematical strategies to investigate world phenomena. 5. Express mathematical arguments related to world phenomena. 6. Use mathematics to explore global policy documents. 7. Explore world phenomena through quantitative (and qualitative) methods. Credits: 3.00

GPA Requirements

Teacher Licensure Information

Non-course / Non-credit Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 25000 - Professional Development In Family And Consumer Sciences Education

Credit Hours: 0.00 to 2.00. This course focuses on students' professional development as family and consumer sciences educators. Characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; the Purdue Family and Consumer Sciences Education program; and expectations for Indiana FCS teacher-licensure are emphasized. Includes participation in professional organizations and meetings.

Learning Outcomes: 1. Formulate and implement plans for building and documenting one's professional identity, competence, and career development as a family and consumer sciences educator. 2. Examine characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; coursework and field-based experiences in the Purdue Family and Consumer Sciences Education (FCSE) program; and licensure requirements and standards for teachers of family and consumer sciences. Credits: 0.00 to 2.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

AD 12500 - Introduction To Interior Design (UCC: HUM)

Credit Hours: 3.00. Introductory survey of interior spaces and their impact upon the physical, social, psychological, and aesthetic needs of people. Critical evaluation of concepts in the interior design profession and related fields will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Apply concept that well-designed environments are products of a design process that encompasses both functionality and aesthetics. 2. Describe how interior environments can influence human behavior. 3. Relate the sociological, psychological, physiological, and economic aspects to the design of interiors. 4. Identify and use professional terminology in the field of interior design. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve

problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

16 Credits

Spring 1st Year

EDCI 25000 - Professional Development In Family And Consumer Sciences Education

Credit Hours: 0.00 to 2.00. This course focuses on students' professional development as family and consumer sciences educators. Characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; the Purdue Family and Consumer Sciences Education program; and expectations for Indiana FCS teacher-licensure are emphasized. Includes participation in professional organizations and meetings.

Learning Outcomes: 1. Formulate and implement plans for building and documenting one's professional identity, competence, and career development as a family and consumer sciences educator. 2. Examine characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; coursework and field-based experiences in the Purdue Family and Consumer Sciences Education (FCSE) program; and licensure requirements and standards for teachers of family and consumer sciences. Credits: 0.00 to 2.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify key physical,

cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

AD 28000 - Human Behavior And Designed Environment

Credit Hours: 3.00. This foundation course examines issues pertaining to the environment's effects on human behavior and how humans' physiological, informational, and social needs impact the design of interior spaces. Specific topics explored include: personal and social use of space, proxemics, ergonomics, anthropometrics, cultural factors and universal design.

Learning Outcomes: 1. Describe and discuss the bio-social, psychological, and cultural characteristics of human beings and how this influences specific design attributes of the built environment. 2. Recognize, recall, and interpret basic concepts within the domain of Environment and Behavior Studies (EBS) to explain the effects environmental aspects have on which groups of people, under what sets of conditions, and why. 3. Demonstrate learning, through written and oral communication, how people both shape and are shaped by the characteristics of space, form, light, color, objects, materials, and other details which make up the designed environment. 4. Employ a process for integrating mechanisms of these two-way interactions between people and environments into the framework of design. 5. Illustrate understanding and appreciation of philosophical contexts and dynamic interrelationships of culturally diverse people and their connection with the environment. Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and

identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

17 Credits

Fall 2nd Year

EDCI 35600 - Career Education In Family And Consumer Sciences

Credit Hours: 3.00. Examination of middle and high school career education accomplished through family and consumer sciences, including (1) life and career exploration and planning; (2) analysis of career paths and opportunities in family and consumer sciences; and (3) career preparation through laboratory and cooperative education programs. Historical and contemporary foundations for career education in family and consumer sciences is also are addressed. Includes observations and interactions with students and teachers in career-education programs and participation in professional meetings.

Learning Outcomes: 1. Examine purposes, curriculum, and implementation strategies for career education accomplished through family and consumer sciences, including FCS careers, FCS supporting content, and FCS life and career foundations. 2. Examine the structure and delivery of career and technical education in the United States and Indiana, state and federal laws and regulations pertaining to career and technical education, and important events and developments in the history of career and technical education and family and consumer sciences education. 3. Engage in ethical professional practice professional development, and outreach in family and consumer sciences education, including advocacy and working with local advisory committees. 4. Analyze instructional strategies and procedures for career education in family and consumer sciences, including integration of career and technical student organizations, particularly the Family, Career and Community Leaders of America (FCCLA) and coordination of students' work-based learning experiences through in-school laboratories and community-based placements. Credits: 3.00

POL 12000 - Introduction To Public Policy And Public Administration (UCC: BSS)

Credit Hours: 3.00. An introduction to the fields of public policy and public administration. Processes of policy formation and administration are examined. Different approaches to evaluating and improving public policies are discussed.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to

assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 20700 - Construction And Textile Lab Management

Credit Hours: 3.00. A lecture/lab course which provides clothing construction and textile science content to be applied in the secondary family and consumer sciences classroom.

Learning Outcomes: 1. Demonstrate clothing construction concepts. 2. Apply basic textile science to fabric and clothing selection. 3. Manage a clothing and/or textile lab within a secondary family and consumer sciences classroom. Credits: 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

16 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual

differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

HDFS 31100 - Child Development

Credit Hours: 3.00. This course addresses the study of development from infancy through childhood. It includes processes of physical, cognitive, language, social, and emotional development. Processes are discussed within the framework of historical and contemporary theories and current research. In addition, it covers topics related to methodologies used in the study of infant and child development. Finally, the conditions of children in different parts of the world are considered.

Learning Outcomes: 1. Define the concept of development and describe the differences between normative and individual development. 2. Identify the pioneers of the study of development and their contributions to the study of child development. 3. Describe the importance of developmental theories and the methodologies used to study child development. 4. Describe the most important theories of child development. 5. Describe important milestones of prenatal development. 6. Describe the motor, perceptual, cognitive, and socio-emotional developmental milestones during infancy, toddlerhood, and childhood. 7. Describe major contextual challenges to psychological development faced by the majority of children in the world. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

17-18 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the

ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

HDFS 33000 - Sexuality And Family Life

Credit Hours: 3.00. Provides the student with a basic knowledge of human sexuality as it pertains to individuals, couples and families. The course is designed to be helpful to students who will become family life educators as well as to be helpful to students as individuals, spouses, and parents.

Learning Outcomes: 1. Construct a basic knowledge of human sexuality as it pertains to family relations in the personal and professional settings. 2. Compare and describe social, cultural, historical, and technological trends and the interrelationships between these trends and their impact on sexuality, family relations, and personal values and attitudes. 3. Differentiate and examine the many different aspects of sexuality including biological, developmental, medical, cultural, historical, and interpersonal. 4. Demonstrate knowledge that helps to develop a better understanding of students' own feelings and attitudes related to sexuality and how those attitudes and feelings influence their beliefs about individuals, couples, and families. Credits: 3.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential

learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

ENTR 20000 - Introduction To Entrepreneurship And Innovation

Credit Hours: 3.00. This course introduces students to the process of turning ideas, inventions, and innovations into new business ventures. It covers foundational entrepreneurial concepts and practices, as well as the leadership, teamwork, and communication skills required of individuals who choose to become entrepreneurs or to act entrepreneurially in established organizations. It serves as the first required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Explain how innovation and entrepreneurship drive economic growth. 2. Use creativity and ideation techniques to identify market opportunities. 3. Evaluate the feasibility of new venture opportunities using secondary market research. 4. Interpret financial statements, profit and loss, and breakeven analysis. 5. Identify sources of funding for new ventures. 6. Understand how to prepare a proper legal and ethical foundation for a new venture. 7. Describe the role of intellectual property protection in the venture development process. 8. Define the roles of diverse individuals on an entrepreneurial team. 9. Prepare and deliver persuasive business presentations. Credits: 3.00

15 Credits

Spring 3rd Year

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

EDCI 36000 - Curriculum And Instruction In Family And Consumer Sciences: Middle School

Credit Hours: 3.00. Instructional program development for family and consumer sciences. Developmental needs and issues of early adolescents; study of adolescent literacy; and curriculum integration of language arts, math, and other content areas are emphasized. Development of a comprehensive unit of instruction that incorporates standard-based curriculum, assessment, and instruction for family and consumer sciences is a major component of the course. Includes observations and interactions with family and consumer sciences teachers and students and participation in professional meetings.

Learning Outcomes: 1. Utilize middle school philosophy/perspectives, state-level resources, and community assets to guide curriculum development in Family & Consumer Sciences that is challenging, exploratory, integrative, and diverse, and which fosters learning that is active, purposeful, and democratic. (FCS TEd 7) 2. Integrate professional knowledge/behaviors supportive of middle-level education learner development (physical, cognitive, socio-emotional, psychological) into FCS curricula/practices, attentive to the health, wellness, and social-emotional competence of learners. (FCS TEd 8) 3. Employ professional and other resources to develop a "literary" classroom environment that reflects all

students. (FCS TEd 11) 4. Identify and collect resources, references, and other materials that support the identity, intellect, skill, and criticality development of students across FCS content. (FCS-Ted) 5. Create student-centered learning experiences in blended and online settings using UDL principles that are culturally responsive (TIBOT competency 3; FCS-Ted 7, 8, 11) 6. Review and critique FCS curriculum materials and practices for alignment with best practices for inclusion, access, equity, and diversity. (FCS-TEd 7, 8) 7. Relate family and consumer sciences programs to broader educational program goals and to community assets and needs. 8. Integrate foundational FCS perspectives (historical lens, Body of Knowledge, Critical Science approach) into professional schema. (FCS-TEd 12) 9. Develop and reflect on personal/professional characteristics that shape optimal middle school/FCS educator practice. (FCS-TEd 12) Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 31000 - Guidance In Early Childhood

Credit Hours: 3.00. This course presents a developmental, child-centered approach to the guidance and discipline of young children, including children with disabilities. Influential theories, relevant research, and effective guidance methods for the early childhood teachers and other professionals working with young children and families, including families from different cultural and economic backgrounds, are discussed. Admitted to Gate B.

Learning Outcomes: 1. Understand the primary components of child guidance at different developmental stages. 2. Plan and implement developmentally appropriate methods of child guidance and discipline. 3. Understand the influential theoretical perspectives of child guidance/discipline. 4. Modify expectations and guidance strategies appropriately for children with diverse abilities, family demographic characteristics, and cultural backgrounds. 5. Promote and create environments and lessons that prevent challenging behaviors. 6. Demonstrate desirable modeling of behavior. 7. Increase understanding and skills surrounding effective communication with children and parents about child guidance. 8. Gain critical knowledge of the importance of understanding diverse family and community characteristics and how they influence child behavior. 9. Increase understanding and skills for engaging with families, other educators, and practitioners on child guidance. 10. Demonstrate growth in professionalism as early childhood educators. Credits: 3.00

HDFS 31300 - Adolescent Development

Credit Hours: 3.00. An overview of the normative developmental changes that occur during adolescence, with specific attention to individual and relational adjustment.

Learning Outcomes: 1. Critically evaluate popular conceptions of adolescence and adolescents. 2. Compare and contrast theoretical perspectives on normative development during adolescence. 3. Identify the diversity in the developmental pathways during adolescence. 4. Acquire a framework for

assessing the connections between interpersonal development and the larger social context. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

18 Credits

18 Credits

Fall 4th Year

EDCI 44400 - Methods For Teaching Family And Consumer Sciences

Credit Hours: 4.00. The culminating on-campus teacher-education course for the Purdue University Family and Consumer Sciences program. The course builds and consolidates teacher-candidates' knowledge and skills for teaching family and consumer sciences. Emphasis placed on standards-based instructional planning and materials; instructional strategies, including laboratories, assessment of student learning, and classroom management. Course includes field experiences. Program content requirements should be completed previous to or concurrent with this course.

Learning Outcomes: 1. Establish a comprehensive knowledge base of standards in a range of family and consumer sciences content areas, with a corresponding knowledge base for integrating standards in other areas such as financial literacy, technology, English Language Arts, and mathematics. 2. Design and implement standards-based curriculum, teaching/learning strategies, and assessment of student learning to meet the needs of diverse learners. 3. Apply knowledge of student behavior, organizational skills, and classroom and laboratory management skills to create a safe, supportive, and productive learning environment. 4. Enable student learning of family and consumer sciences concepts and skills through instructional strategies and laboratory experiences that build student capacities for self-directed learning, critical-thinking, problem-solving, decision-making, leadership, and managent. Credits: 4.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community

setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

PUBH 23000 - Community, Culture And Social Justice From A Public Health Perspective

Credit Hours: 3.00. The course provides an introduction to the concepts of community, culture, and social justice. The interaction between community, cultural, ethical, social, economic, environmental, political and social justice dynamics that shape health will be explored.

Learning Outcomes: 1. Identify and understand the social determinants of health. 2. Describe how community, cultural, ethical, social, economical, environmental, political and social justice shape human health both locally and globally using a social determinants of health framework. 3. Learn about theories of justice related to the field of public health. 4. Understand community developmental theoretical frameworks dimensions associated with the social change, such as empowerment, community participation, and capacity building. 5. Identify roles and responsibilities of the public health educator, other practitioners, and community members as agents of change. 6. Compare and contrast the concepts of health inequities, health disparities and health inequalities. Credits: 3.00

14-16 Credits

14-16 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

12 Credits

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 25000 - Professional Development In Family And Consumer Sciences Education

Credit Hours: 0.00 to 2.00. This course focuses on students' professional development as family and consumer sciences educators. Characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; the Purdue Family and Consumer Sciences Education program; and expectations for Indiana FCS teacher-licensure are emphasized. Includes participation in professional organizations and meetings.

Learning Outcomes: 1. Formulate and implement plans for building and documenting one's professional identity, competence, and career development as a family and consumer sciences educator. 2. Examine characteristics and relationships among middle and high school family and consumer sciences standards, resources, and learning experiences; coursework and field-based experiences in the

Purdue Family and Consumer Sciences Education (FCSE) program; and licensure requirements and standards for teachers of family and consumer sciences. Credits: 0.00 to 2.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

AD 12500 - Introduction To Interior Design (UCC: HUM)

Credit Hours: 3.00. Introductory survey of interior spaces and their impact upon the physical, social, psychological, and aesthetic needs of people. Critical evaluation of concepts in the interior design profession and related fields will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Apply concept that well-designed environments are products of a design process that encompasses both functionality and aesthetics. 2. Describe how interior environments can influence human behavior. 3. Relate the sociological, psychological, physiological, and economic aspects to the design of interiors. 4. Identify and use professional terminology in the field of interior design. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CSR 10300 - Introduction To Personal Finance

Credit Hours: 3.00. This course will provide knowledge and skills for young adults to be active, informed, and rational managers of their financial life. The course will particularly address the following 4 areas of personal finance. Managing money: Why it's useful to plan ones financial affairs, budgeting, being an informed manager of ones money and consumer of financial products. Financing large items using savings and credit: Know how credit works, how to use it wisely, and how to avoid over indebtedness. Learn savings strategies to maximize the growth of your money. Using financial markets: What are the different ways to invest, and how to make them work for you and your objectives (such as retirement). Managing risk: How to use financial tools (such as insurance) to protect yourself against risk. The course will emphasize age-relevant knowledge and practical advice, with the objective to help students make better financial decisions and adopt better financial behaviors for the long term.

Learning Outcomes: 1. Estimate their budget, according to basic general principles of accounting, and use it to improve their financial situation by matching expenses to income and smartly planning for the long-term. 2. Decide whether to use savings and/or credit to finance large purchases, which implies being able to save in the most appropriate and rewarding way, and distinguishing between the benefits and drawback of various sources and types of loans. 3. Invest in financial markets wisely using appropriate financial instruments, based on their personal situation at any point in time (including planning for retirement). 4. Identify and implement the best financial products to protect themselves against risk (e.g. different types of insurance). 5. Make financial decisions in an informed and carefully thought-out manner, including reaching out to appropriate resources and advice when necessary. Credits: 3.00

Degree Requirements

Departmental/Program Major Courses (61 credits)

Required Major Courses (29 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a

rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGEC 22000 - Economics Of Agricultural Markets

Credit Hours: 3.00. This class provides an overview of U.S. and international agricultural markets, and develops a framework for analyzing those markets. Concepts include determination of agricultural prices, spatial dimensions of agricultural markets, and trade; temporal dimensions of agricultural markets, and futures and options markets; and public policy in agricultural markets.

Credits: 3.00

AGEC 29800 - Careers In Agribusiness

Credit Hours: 1.00. This course is designed to give an overview of the career possibilities available to students with a degree from the Department of Agricultural Economics at Purdue University. The goal of the course is to help students think about their future, engender excitement about the diversity of career prospects that will be available to them, and help provide real-world context for the material that will be learned in other Agribusiness and Agricultural Economics courses. Students will learn from individuals working all along the farm and food value chain from agricultural input supply to farming to transportation and storage to food processing to food retailing, in firms ranging from start-ups to multinational corporations. Additionally, students will learn from individuals working in affiliated careers from government, law, education and non-governmental organizations, etc. as well as from some who are no longer working in food and agriculture.

Learning Outcomes: 1. Identify different career paths available to individuals with a degree from the Department of Agricultural Economics. 2. Understand which career paths are interesting to you and potentially a good fit for you. 3. Determine the steps needed to get an internship/job and launch a successful career. Credits: 1.00

AGEC 31000 - Farm Organization

Credit Hours: 3.00. Economic factors controlling success in farming; types of farming; business records and analysis; adjustment in organization to meet changing economic conditions; organization and management of successful farms.

Credits: 3.00

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6.

Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

AGEC 41100 - Farm Management

Credit Hours: 4.00. Principles of farm organization and management, farmer interviews, and the application of computerized farm decision-making methods.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 4.00

AGEC 42400 - Financial Management Of Agricultural Business

Credit Hours: 3.00. A study of the major types of financial decisions made by agriculturally related firms, including investment in inventory, receivables and cash, property, plant, and equipment; sources and types of short-term, intermediate, and long-term capital; legal patterns of the business organization, emphasis on implementation involving agribusiness case problems.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 45100 - Applied Econometrics

Credit Hours: 3.00. Application of strategies to economic problems. Simple and multiple regression, dummy variables, logit analysis, time series, and forecasting.

Learning Outcomes: 1. Learn how to estimate and interpret linear regression models. 2. Learn how to test hypotheses based on regression coefficients. 3. Learn how to develop forecasts abased on regression models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH

1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

AGEC 20201 - Introduction To Data Analytics For Agricultural Business

Credit Hours: 3.00. Overview of data analytics in agricultural business. Students are exposed to an overview of software tools with a primary focus on Excel, introduction to relational databases, and data visualization. Focus is in using financial, accounting, and economic data to make management decisions. Laptop required.

Learning Outcomes: 1. Create and format a basic Excel worksheet. 2. Apply formulas and functions to calculate and analyze data. 3. Create charts and insert sparklines to represent data visually. 4. Manage and analyze large sets of data. 5. Analyze data by creating subtotals, PivotTables, and PivotCharts. 6. Use decision-making tools such as Range Names, Data Tables, and Goal Seek. 7. Manipulate data using date, logical, statistical, and financial functions. 8. Employ statistical functions to analyze data for decision making. 9. Demonstrate data management and error control within workbooks containing links and 3-D formulas. 10. Import, format, and manipulate data from external sources. 11. Manipulate data using text, database, and lookup functions. 12. Demonstrate how to design templates, insert comments, create macros, and use VBA. 13. Read an ERD Diagram. 14. Learn elements of Structured Query Language including the ability to create tables, retrieve, update, and delete data. 15. Understand usage of primary and foreign keys. 16. Create a relational database. 17. Understand different data types. 18. Create and format visualizations. 19. Create visualizations for nominal, ordinal, interval, and ratio scale data. 20. Create map visualizations. Credits: 3.00

Major Selectives (18 credits)

AGEC Department Selectives (14 credits)

Other Departmental /Program Course Requirements (43-44 credits)

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11200 - Introduction To Agricultural Economics Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Agricultural Economics. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and

regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Electives (15-16 credits)

Sample 4-Year Plan

Fall 1st Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics,

the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11200 - Introduction To Agricultural Economics Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Agricultural Economics. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational

decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

16-17 Credits

Spring 1st Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

AGEC 20201 - Introduction To Data Analytics For Agricultural Business

Credit Hours: 3.00. Overview of data analytics in agricultural business. Students are exposed to an overview of software tools with a primary focus on Excel, introduction to relational databases, and data visualization. Focus is in using financial, accounting, and economic data to make management decisions. Laptop required.

Learning Outcomes: 1. Create and format a basic Excel worksheet. 2. Apply formulas and functions to calculate and analyze data. 3. Create charts and insert sparklines to represent

data visually. 4. Manage and analyze large sets of data. 5. Analyze data by creating subtotals, PivotTables, and PivotCharts. 6. Employ statistical functions to analyze data for decision making. 9. Demonstrate data management and error control within workbooks containing links and 3-D formulas. 10. Import, format, and manipulate data from external sources. 11. Manipulate data using text, database, and lookup functions. 12. Demonstrate how to design templates, insert comments, create macros, and use VBA. 13. Read an ERD Diagram. 14. Learn elements of Structured Query Language including the ability to create tables, retrieve, update, and delete data. 15. Understand usage of primary and foreign keys. 16. Create a relational database. 17. Understand different data types. 18. Create and format visualizations. 19. Create visualizations for nominal, ordinal, interval, and ratio scale data. 20. Create map visualizations.
Credits: 3.00

15 Credits

Fall 2nd Year

AGEC 22000 - Economics Of Agricultural Markets

Credit Hours: 3.00. This class provides an overview of U.S. and international agricultural markets, and develops a framework for analyzing those markets. Concepts include determination of agricultural prices, spatial dimensions of agricultural markets, and trade; temporal dimensions of agricultural markets, and futures and options markets; and public policy in agricultural markets.

Credits: 3.00

AGEC 29800 - Careers In Agribusiness

Credit Hours: 1.00. This course is designed to give an overview of the career possibilities available to students with a degree from the Department of Agricultural Economics at Purdue University. The goal of the course is to help students think about their future, engender excitement about the diversity of career prospects that will be available to them, and help provide real-world context for the material that will be learned in other Agribusiness and Agricultural Economics courses. Students will learn from individuals working all along the farm and food value chain from agricultural input supply to farming to transportation and storage to food processing to food retailing, in firms ranging from start-ups to multinational corporations. Additionally, students will learn from individuals working in affiliated careers from government, law, education and non-governmental organizations, etc. as well as from some who are no longer working in food and agriculture.

Learning Outcomes: 1. Identify different career paths available to individuals with a degree from the Department of Agricultural Economics. 2. Understand which career paths are interesting to you and potentially a good fit for you. 3. Determine the steps needed to get an internship/job and launch a successful career.
Credits: 1.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression

procedures, and understand correlation. Credits: 3.00

15 Credits

Spring 2nd Year

AGEC 31000 - Farm Organization

Credit Hours: 3.00. Economic factors controlling success in farming; types of farming; business records and analysis; adjustment in organization to meet changing economic conditions; organization and management of successful farms.

Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

16 Credits

Fall 3rd Year

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 35200 - Quantitative Techniques For Firm Decision Making

Credit Hours: 3.00. Introduction to mathematical programming and computing as an aid to agricultural decision making by firms, linear programming, game theory and strategy, simulation, the waiting-line problem, the equipment replacement decision, and multiproduct scheduling methods.

Learning Outcomes: 1. Manipulate and use

spreadsheets. 2. Formulate linear programming problems. 3. Solve linear programming problems in Excel. 4. Interpret results obtained from linear programming models. 5. Present and explain linear programming results. 6. Understand graphically the concept of optimality in a linear program. 7. Understand the properties of optimal linear programming solutions. 8. Recognize and demonstrate instances where linear programming and simulation modeling might be valuable. Credits: 3.00

AGEC 45100 - Applied Econometrics

Credit Hours: 3.00. Application of strategies to economic problems. Simple and multiple regression, dummy variables, logit analysis, time series, and forecasting.

Learning Outcomes: 1. Learn how to estimate and interpret linear regression models. 2. Learn how to test hypotheses based on regression coefficients. 3. Learn how to develop forecasts abased on regression models. Credits: 3.00

15 Credits

Spring 3rd Year

15 Credits

Fall 4th Year

AGEC 41100 - Farm Management

Credit Hours: 4.00. Principles of farm organization and management, farmer interviews, and the application of computerized farm decision-making methods.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 4.00

AGEC 42400 - Financial Management Of Agricultural Business

Credit Hours: 3.00. A study of the major types of financial decisions made by agriculturally related firms, including investment in inventory, receivables and cash, property, plant, and equipment; sources and types of short-term, intermediate, and long-term capital; legal patterns of the business organization, emphasis on implementation involving agribusiness case problems.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

16 Credits

Spring 4th Year

11-12 Credits

Fermentation Science, BS

The field of Fermentation Science integrates scientific disciplines, such as microbiology and biochemistry, with process

engineering to discover ways to use microbes as biotechnological factories to produce goods of societal value, from foods to biofuels to pharmaceuticals. A fermentation scientist possesses the skills necessary to engineer microbes to convert diverse feedstocks into value-added products, design and operate fermentation processes, and recover and refine the synthesized products. Graduates apply scientific knowledge and economic principles to biotechnology and fermentation operation, research, development, and marketing or pursue graduate studies in biotechnology, applied microbiology, or biological engineering.

Degree Requirements

Departmental/Program Major Courses (33 credits)

Required Major Courses (33 credits)

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

FS 29800 - Sophomore Seminar

Credit Hours: 1.00. Current food science issues will be discussed by students, staff, and guest speakers. Career planning and improvement of communication skills will be emphasized.

Learning Outcomes: 1. Construct a professional resume that includes educational background and experience. 2. Construct a professional cover letter in reference to a job posting. 3. Demonstrate the ability to professionally answer interview questions in an interview setting. 4. Demonstrate the ability to present information with PowerPoint software. 5. Identify your Myers Briggs personality profile. 6. Explore some current issues in the food industry. 7. Plan your coursework for each semester through graduation. Credits: 1.00

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.

Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3. Identify the conditions under which important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 36100 - Food Plant Sanitation

Credit Hours: 1.00. Relation of food-plant sanitation to good manufacturing practices and regulations affecting sanitation; organization of a food-plant sanitation program; sanitary building and equipment construction; selection of cleaning, sanitizing, and pesticidal compounds; water, air, and waste treatment; food storage and transportation.

Credits: 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 36300 - Food Microbiology Laboratory

Credit Hours: 2.00. Classic and molecular methods for enumerating, isolating, and identifying spoilage, fermentative, and pathogenic food microorganisms in food systems.

Learning Outcomes: 1. Perform proper aseptic technique. 2. Sample foods for microbial analyses. 3. Test food products for common microorganism. 4. Interpret data obtained from microbiological analysis. 4. Understand basic molecular techniques used to identify foodborne pathogens. Credits: 2.00

FS 44400 - Statistical Process Control

Credit Hours: 1.00. Basic concepts and techniques of solving quality problems and assuring the quality of production processes; emphasis is on quality improvement programs, problem-solving tools, control charts for variables and attributes, process capability analysis, and sampling methods. Course meets during weeks 6-10.

Credits: 1.00

FS 48200 - Food Science Senior Seminar

Credit Hours: 1.00. Oral and written reports on selected food science topics.

Credits: 1.00

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 43900 - Laboratory In General Microbiology

Credit Hours: 2.00. Includes enrichment cultures to isolate microorganisms, studies of cell composition, measurements of cell growth, and examination of enzyme regulation.

Credits: 2.00

FS 16300 - Introduction To Fermentation Sciences

Credit Hours: 3.00. This course will provide an overview of the use of microorganisms in the food, pharmaceutical and chemical industries. The course will introduce fundamental concepts associated to the microbiological transformation of various substrates to produce desirable products such as foods, beverages, pharmaceuticals or chemical compounds. As an introductory course, the scientific principles of fermentation processes will be gradually introduced through the analysis of familiar fermented food products, such as bread, cheese, beer, wine, cocoa, coffee, etc. Once the fundamental concepts are learned, examples of advanced fermentation technology for production of pharmaceutical products and fine chemicals will be presented.

Learning Outcomes: 1. Explain the role of microorganisms in the transformation of various substrates into desirable products. 2. Identify the type of microorganism (bacteria, yeast or mold) involved in the production of various fermented foods and beverages. 3. Explain the impact of environmental processing conditions (T, pH, aw, O2) on microbial growth. 4. Recognize the similarities across a wide variety of products made through fermentation. Credits: 3.00

FS 37200 - Fermentation Microbiology

Credit Hours: 3.00. This course explores the principles underlying the design of microbes for their use in biotechnological applications. This project-based course will teach students fundamental molecular biology techniques, important parameters for strain selection and genetic engineering, and reactor design and operation in bioprocessing. Additionally, this course will cover today's diverse bioengineering goals and tools and the role of microbial biotechnology in society.

Learning Outcomes: 1. Articulate the concept of microbial cell factories and the relationship of microorganisms to food and industrial fermentations. 2. Identify genetic and environmental approaches to control the products, rate, and yield of bioconversion. 3. Understand microbial metabolic pathways and how they are engineered. 4. Design genetic strategies to engineer microbes. 5. Read primary literature relevant to fermentation biotechnology. Credits: 3.00

FS 37300 - Fermentation Microbiology Laboratory

Credit Hours: 1.00. The course provides a laboratory-based experiential learning experience with the learning of fundamental aspects of genetic, physiological and substrate manipulation to achieve product formation in industrial microbes.

Learning Outcomes: 1. Understand the genetic manipulation and physiological factors involved in successful fermentation approaches. 2. Apply various methods of monitoring growth of various bioreactor formats. 3. Manipulate and correlate growth with yield of organisms and products. 4. Identify the basic problems which cause fermentation processes to fail and understand the reasons for failure. 5. Create and troubleshoot a simple fermentation process. Credits: 1.00

FS 40100 - Fermentation Processing

Credit Hours: 2.00. The Integration of fermentation core concepts; the application of bioprocess engineering principles to biological systems; topics covering enzyme kinetics, fermentation, downstream processing, and integrated bioprocesses important to industries.

Learning Outcomes: 1. Understand applications and solve problems relating to the use of enzymes for industrial bioprocessing. 2. Apply engineering principles to address issues in fermentation processes. 3. Analyze and identify limiting factors in a bioprocess. 4. Explain and solve problems relating to mass and energy balances in biological reactors. 5. Explain how fermentation processing is used in various fields. Credits: 2.00

FS 40200 - Fermentation Processing Laboratory

Credit Hours: 1.00. The essential concepts of industrial bioprocessing with a focus on the physiology of fermentation; a series of laboratory experiments that follow value-adding processes from conception to completion.

Learning Outcomes: 1. Learn laboratory techniques, to design and conduct experiments,

and to analyze and interpret data. 2. Design appropriate bioreactor models based upon bioproducts and other process criteria. 3. Conduct fermentation experiments with process optimization and scale-up. 4. Model the growth of microorganisms in batch, fed-batch, and continuous flow processes. 5. Gain an overview of the fermentation industry. Credits: 1.00

FS 48300 - Fermentation Capstone

Credit Hours: 3.00. The development of value-added fermentation processes requires a complex blend of technoeconomic and market awareness, resource gathering, strain selection and engineering, reactor optimization and operation, product recovery, and project management skills. Keeping these diverse aspects in balance while managing project timelines is essential to a successful fermentation process - that is, one that is both technically and economically successful. This course is organized to develop your knowledge of the diverse inputs into design of microbial fermentation and your ability to apply concepts learned in prior fermentation classes to the design of a fermentation process, integrating microbiology, chemistry, and processing with basic marketing and business concepts. Students will be organized into project teams for the semester and challenged to design, market, develop, prototype, and scale up a new fermentation. Classes will include guest lectures from experts in the fermentation industry and academia. Project teams will be organized and project leaders selected to manage communication between individual groups and the instructors. Final product concepts will be presented to faculty and peers for evaluation.

Learning Outcomes: 1. Apply and practically integrate fundamental aspect of fermentation microbiology, chemistry, and processing in the design and development of a new value-added process. 2. Understand and navigate the challenges associated with scaling up a benchtop fermentation process. 3. Apply knowledge of factors impacting fermentation design, productivity, yield, and stability to optimize economic value of a process. 4. Generate an ""elevator speech"" to spur project investment. 5. Manage projects in group contexts. 6. Apply statistical principles in experimental design and assessment of experimental data as it relates to process control and product assessment. 7. Discuss current topics in fermentation science competently. Credits: 3.00

Other Departmental /Program Course Requirements (80-81 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11800 - Introduction To Food Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Food Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health,

industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell

function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as

well as key metabolic control mechanisms. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

CHM 32100 - Analytical Chemistry I

Credit Hours: 4.00. Quantitative measurements on complex chemical systems that show matrix effects or require isolation of a component prior to its determination; general approaches to quantitative problems at the trace level; critical comparisons of competitive procedures with emphasis on principles of separation processes, including chromatography; recognition and evaluation of possible sources of error; approaches for optimizing conditions so as to minimize time and/or effort required to attain prescribed levels of accuracy and precision. Required of students majoring in chemistry.

Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to

be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ABE 22600 - Biotechnology Laboratory I (UCC: STS)

Credit Hours: 2.00. Focuses on nucleic acid manipulation. Modules include, making a eukaryotic library, identifying clones, sub-cloning into a bacterial expression vector and verification of the clone's identity by restriction analysis and DNA sequencing. Basic laboratory techniques (solution making, buffer preparation, good safety techniques), sterile technique and compliance procedures.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Perform techniques currently used in cell, molecular, and microbiology, while understanding the rationale behind the specific approaches. 2. Explain the experimental basis of techniques used, indicating the significance of the work, presenting, calculating, and discussing the data, and drawing conclusions. 3. Given a specific biological question, the student will be able to determine appropriate applications of specific cell, molecular, and microbiological techniques. 4. Gain experience in dissecting and extracting pertinent information from scientific journal articles. Credits: 2.00

ABE 32700 - Biotechnology Laboratory II

Credit Hours: 2.00. The course is a Course Undergraduate Research Experience (CURE), more specifically, a part of the Howard Hughes Medical Institute's (HHMI) (http://www.hhmi.org/grants/sea/) Science Education Alliance and is an authentic research experience. Students engage in hands-on discovery as scientists with the ultimate objective of contributing new mycobacteriophage genomes to the scientific literature and public databases (www.phagesdb.org and the Purdue institution page can be found here: https://phagesdb.org/institutions/PURD/).

Learning Outcomes: 1. Analyze the genetic code of a unique phage in order to determine potential genes. 2. Discover the genomic organization of their unique phage. 3. Use algorithms to define potential genes, assign putative functions to them, and determine the order in which they appear in the genome. 4. Read and discuss scientific literature related to their research project. 5. Share the information gathered with others in the scientific community. Credits: 2.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of

chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (6-7 credits)

Additional Requirements

Program Requirements

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11800 - Introduction To Food Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Food Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of

macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of

functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15 Credits

Spring 1st Year

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Use techniques of

integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

FS 16300 - Introduction To Fermentation Sciences

Credit Hours: 3.00. This course will provide an overview of the use of microorganisms in the food, pharmaceutical and chemical industries. The course will introduce fundamental concepts associated to the microbiological transformation of various substrates to produce desirable products such as foods, beverages, pharmaceuticals or chemical compounds. As an introductory course, the scientific principles of fermentation processes will be gradually introduced through the analysis of familiar fermented food products, such as bread, cheese, beer, wine, cocoa, coffee, etc. Once the fundamental concepts are learned, examples of advanced fermentation technology for production of pharmaceutical products and fine chemicals will be presented.

Learning Outcomes: 1. Explain the role of microorganisms in the transformation of various substrates into desirable products. 2. Identify the type of microorganism (bacteria, yeast or mold) involved in the production of various fermented foods and beverages. 3. Explain the impact of environmental processing conditions (T, pH, aw, O2) on microbial growth. 4. Recognize the similarities across a wide variety of products made through fermentation. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques

including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16 Credits

Fall 2nd Year

FS 29800 - Sophomore Seminar

Credit Hours: 1.00. Current food science issues will be discussed by students, staff, and guest speakers. Career planning and improvement of communication skills will be emphasized.

Learning Outcomes: 1. Construct a professional resume that includes educational background and experience. 2. Construct a professional cover letter in reference to a job posting. 3. Demonstrate the ability to professionally answer interview questions in an interview setting. 4. Demonstrate the ability to present information with PowerPoint software. 5. Identify your Myers Briggs personality profile. 6. Explore some current issues in the food industry. 7. Plan your coursework for each semester through graduation. Credits: 1.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students

who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ABE 22600 - Biotechnology Laboratory I (UCC: STS)

Credit Hours: 2.00. Focuses on nucleic acid manipulation. Modules include, making a eukaryotic library, identifying clones, sub-cloning into a bacterial expression vector and verification of the clone's identity by restriction analysis and DNA sequencing. Basic laboratory techniques (solution making, buffer preparation, good safety techniques), sterile technique and compliance procedures.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Perform techniques currently used in cell, molecular, and microbiology, while understanding the rationale behind the specific approaches. 2. Explain the experimental basis of techniques used, indicating the significance of the work, presenting, calculating, and discussing the data, and drawing conclusions. 3. Given a specific biological question, the student will be able to determine appropriate applications of specific cell, molecular, and microbiological techniques. 4. Gain experience in dissecting and extracting pertinent information from scientific journal articles. Credits: 2.00

14 Credits

Spring 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.

Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and

quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

16-17 Credits

Fall 3rd Year

FS 36100 - Food Plant Sanitation

Credit Hours: 1.00. Relation of food-plant sanitation to good manufacturing practices and regulations affecting sanitation; organization of a food-plant sanitation program; sanitary building and equipment construction; selection of cleaning, sanitizing, and pesticidal compounds; water, air, and waste treatment; food storage and transportation.

Credits: 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 36300 - Food Microbiology Laboratory

Credit Hours: 2.00. Classic and molecular methods for enumerating, isolating, and identifying spoilage, fermentative, and pathogenic food microorganisms in food systems.

Learning Outcomes: 1. Perform proper aseptic technique. 2. Sample foods for microbial analyses. 3. Test food products for common microorganism. 4. Interpret data obtained from microbiological analysis. 4. Understand basic molecular techniques used to identify foodborne pathogens. Credits: 2.00

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 43900 - Laboratory In General Microbiology

Credit Hours: 2.00. Includes enrichment cultures to isolate microorganisms, studies of cell composition, measurements of cell growth, and examination of enzyme regulation.

Credits: 2.00

15 Credits

Spring 3rd Year

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills;

reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

FS 37200 - Fermentation Microbiology

Credit Hours: 3.00. This course explores the principles underlying the design of microbes for their use in biotechnological applications. This project-based course will teach students fundamental molecular biology techniques, important parameters for strain selection and genetic engineering, and reactor design and operation in bioprocessing. Additionally, this course will cover today's diverse bioengineering goals and tools and the role of microbial biotechnology in society.

Learning Outcomes: 1. Articulate the concept of microbial cell factories and the relationship of microorganisms to food and industrial fermentations. 2. Identify genetic and environmental approaches to control the products, rate, and yield of bioconversion. 3. Understand microbial metabolic pathways and how they are engineered. 4. Design genetic strategies to engineer microbes. 5. Read primary literature relevant to fermentation biotechnology. Credits: 3.00

FS 37300 - Fermentation Microbiology Laboratory

Credit Hours: 1.00. The course provides a laboratory-based experiential learning experience with the learning of fundamental aspects of genetic, physiological and substrate manipulation to achieve product formation in industrial microbes.

Learning Outcomes: 1. Understand the genetic manipulation and physiological factors involved in successful fermentation approaches. 2. Apply various methods of monitoring growth of various bioreactor formats. 3. Manipulate and correlate growth with yield of organisms and products. 4. Identify the basic problems which cause fermentation processes to fail and understand the reasons for failure. 5. Create and troubleshoot a simple fermentation process. Credits: 1.00

ABE 32700 - Biotechnology Laboratory II

Credit Hours: 2.00. The course is a Course Undergraduate Research Experience (CURE), more specifically, a part of the Howard Hughes Medical Institute's (HHMI) (http://www.hhmi.org/grants/sea/) Science Education Alliance and is an authentic research experience. Students engage in hands-on discovery as scientists with the ultimate objective of contributing new mycobacteriophage genomes to the scientific literature and public databases (www.phagesdb.org and the Purdue institution page can be found here: https://phagesdb.org/institutions/PURD/).

Learning Outcomes: 1. Analyze the genetic code of a unique phage in order to determine potential genes. 2. Discover the genomic organization of their unique phage. 3. Use algorithms to define potential genes, assign putative functions to them, and determine the order in which they appear in the genome. 4. Read and discuss scientific literature related to their research project. 5. Share the information gathered with others in the scientific community. Credits: 2.00

14 Credits

Fall 4th Year

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.

Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3.

Identify the conditions under which important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 44400 - Statistical Process Control

Credit Hours: 1.00. Basic concepts and techniques of solving quality problems and assuring the quality of production processes; emphasis is on quality improvement programs, problem-solving tools, control charts for variables and attributes, process capability analysis, and sampling methods. Course meets during weeks 6-10.

Credits: 1.00

FS 48200 - Food Science Senior Seminar

Credit Hours: 1.00. Oral and written reports on selected food science topics.

Credits: 1.00

CHM 32100 - Analytical Chemistry I

Credit Hours: 4.00. Quantitative measurements on complex chemical systems that show matrix effects or require isolation of a component prior to its determination; general approaches to quantitative problems at the trace level; critical comparisons of competitive procedures with emphasis on principles of separation processes, including chromatography; recognition and evaluation of possible sources of error; approaches for optimizing conditions so as to minimize time and/or effort required to attain prescribed levels of accuracy and precision. Required of students majoring in chemistry.

Credits: 4.00

FS 40100 - Fermentation Processing

Credit Hours: 2.00. The Integration of fermentation core concepts; the application of bioprocess engineering principles to biological systems; topics covering enzyme kinetics, fermentation, downstream processing, and integrated bioprocesses important to industries.

Learning Outcomes: 1. Understand applications and solve problems relating to the use of enzymes for industrial bioprocessing. 2. Apply engineering principles to address issues in fermentation processes. 3. Analyze and identify limiting factors in a bioprocess. 4. Explain and solve problems relating to mass and energy balances in biological reactors. 5. Explain how fermentation processing is used in various fields. Credits: 2.00

FS 40200 - Fermentation Processing Laboratory

Credit Hours: 1.00. The essential concepts of industrial bioprocessing with a focus on the physiology of fermentation; a series of laboratory experiments that follow value-adding processes from conception to completion.

Learning Outcomes: 1. Learn laboratory techniques, to design and conduct experiments, and to analyze and interpret data. 2. Design appropriate bioreactor models based upon bioproducts and other process criteria. 3. Conduct fermentation experiments with process optimization and scale-up. 4. Model the growth of microorganisms in batch, fed-batch, and continuous flow processes. 5. Gain an overview of the fermentation industry. Credits: 1.00

15 Credits

Spring 4th Year

FS 48300 - Fermentation Capstone

Credit Hours: 3.00. The development of value-added fermentation processes requires a complex blend of technoeconomic and market awareness, resource gathering, strain selection and engineering, reactor optimization and

operation, product recovery, and project management skills. Keeping these diverse aspects in balance while managing project timelines is essential to a successful fermentation process - that is, one that is both technically and economically successful. This course is organized to develop your knowledge of the diverse inputs into design of microbial fermentation and your ability to apply concepts learned in prior fermentation classes to the design of a fermentation process, integrating microbiology, chemistry, and processing with basic marketing and business concepts. Students will be organized into project teams for the semester and challenged to design, market, develop, prototype, and scale up a new fermentation. Classes will include guest lectures from experts in the fermentation industry and academia. Project teams will be organized and project leaders selected to manage communication between individual groups and the instructors. Final product concepts will be presented to faculty and peers for evaluation.

Learning Outcomes: 1. Apply and practically integrate fundamental aspect of fermentation microbiology, chemistry, and processing in the design and development of a new value-added process. 2. Understand and navigate the challenges associated with scaling up a benchtop fermentation process. 3. Apply knowledge of factors impacting fermentation design, productivity, yield, and stability to optimize economic value of a process. 4. Generate an ""elevator speech"" to spur project investment. 5. Manage projects in group contexts. 6. Apply statistical principles in experimental design and assessment of experimental data as it relates to process control and product assessment. 7. Discuss current topics in fermentation science competently. Credits: 3.00

14-15 Credits

Notes

Film & Video, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (36 credits)

A. Foundation Course (3 credits)

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions.

Learning Outcomes: 1. Summarize the cinema production process. 2. Apply visual storytelling concepts and techniques to the cinema production process. 3. Plan and create productions, making use of the cinema process. 4. Identify a variety of professional and career opportunities. Credits: 3.00

B. Film & Video Production (9-21 credits)

Directing

FLM 44200 - Directing The Narrative Short Film

Credit Hours: 3.00. Students will gain knowledge of all phases of film production in the course of completing multiple short films. This class will emulate standard film industry practices and guidelines.

Learning Outcomes: 1. Summarize the overall film production process. 2. Create examples of each stage of the production process. 3. Construct multiple complete films, in the roles of Director and/or Assistant Director, using professional and industry standard techniques based upon the production process. 4. Evaluate completed films for content and technique. Credits: 3.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

THTR 23300 - Acting II

Credit Hours: 3.00. Continued development of the basic acting tools of objectives, actions, justification, and personalization; continued vocal and physical work; introduction of script and character analysis; and the introduction of audition techniques. The course will use material from contemporary dramatic literature in the rehearsal process. Prerequisite: THTR 133. Instructor permission required for non-majors.

Learning Outcomes: 1. Practice and incorporate relaxation, physical, vocal, and sense memory exercises into a daily warm-up. 2. See, connect, and respond to a partner within improvised scenarios. 3. Read plays with insight and imagine the experience of the characters in the given circumstance of a play. 4. Analyze and break scenes down into beats, with each beat having a clear action and objective. 5. Analyze, rehearse and publicly perform an open scene, and a contemporary monologue and scene. Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation. 2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

FLM 49900 - Capstone In Film/Video/Media Production

Credit Hours: 2.00 or 4.00. The Capstone in Film/Video/Media Production is intended to be the culminating experience of the Film/Video Studies or Film/Video and Theatre Production major. Each student Students will create a project of their own design. Students will pitch their project ideas to the program director and/or faculty and should develop a project based around their future career goals. Example areas include narrative/fiction cinema, documentary/non-fiction filmmaking, television production, live event production, etc. Students will fulfill the role of Writer/Producer/Director for their project (and potentially Director of Photography, Editor, etc.). This creative work will culminate in a presentation to an audience. Permission of instructor required.

Learning Outcomes: 1. Develop a complete and significant project idea/vision/creative work. 2. Plan out the execution of the creative work. 3. Assemble a team with which to craft the developed vision. 4. Complete the work to a professional level of quality. 5. Present the work to an audience with a Q&A session. Credits: 2.00 or 4.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition

techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

FLM 29104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

Editing

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

FLM 37100 - Editing I

Credit Hours: 3.00. The course introduces students to the principles of film and video editing. Projects, discussions, demonstrations, and hands-on exercises expose students to the technical and artistic aspects of the editing process.

Learning Outcomes: 1. Summarize the basic concepts involved in the editing process. 2. Compare and contrast historical and modern approaches to film and video editing. 3. Develop proficiency with industry standard software. 4. Execute an example of the editing process under strict time constraints. Credits: 3.00

FLM 37200 - Editing II

Credit Hours: 3.00. This course instructs students in advanced principles of film and video editing and color grading. Projects, discussions, demonstrations, and hands-on exercises expose students to the technical and artistic aspects of the editing process.

Learning Outcomes: 1. Develop an increased understanding of the art, technique, and philosophies of the editing process 2. Examine the concepts involved in the color grading process and visual effects. 3. Demonstrate techniques for basic color grading and visual effects. 4. Develop further proficiency with industry standard software. Credits: 3.00

FLM 44200 - Directing The Narrative Short Film

Credit Hours: 3.00. Students will gain knowledge of all phases of film production in the course of completing multiple short films. This class will emulate standard film industry practices and guidelines.

Learning Outcomes: 1. Summarize the overall film production process. 2. Create examples of each stage of the production process. 3. Construct multiple complete films, in the roles of Director and/or Assistant Director, using professional and industry standard techniques based upon the production process. 4. Evaluate

completed films for content and technique. Credits: 3.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

THTR 25300 - Intro To Audio System Documentation

Credit Hours: 3.00. This course explores the creation and interpretation of production deliverables for theatrical audio systems. Through hands-on exercises and the study of industry-standard documentation, students will learn to draft, interpret, and apply audio system design drawings. Emphasis will be placed on creating clear and precise documentation that can be used by technicians, designers, and production teams in a theatrical environment.

Learning Outcomes: 1. Recognize standard symbols and notation used in audio system documentation. 2. Construct detailed signal flow diagrams, block diagrams, and rack layouts for theatrical sound systems. 3. Apply industry-standard software and techniques for creating professional AV system documentation. Credits: 3.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

FLM 44600 - Producing Non-Fiction Video

Credit Hours: 3.00. This advanced course builds on previous knowledge and exposes students to the role of an independent video producer. By working with real-world clients on real-world projects, students will gain valuable experience in guiding productions from start to finish. Additionally, students will learn basic fundamentals of entrepreneurship and business skills designed to begin to prepare students to form their own video production business.

Learning Outcomes: 1. Summarize an understanding of the art, technique, philosophies, and business of the video production. 2. Construct budgets and business plans. 3. Organize, plan, and create video productions simulating professional processes and techniques. 4. Develop and produce multiple unique projects by working closely with real-world clients. Credits: 3.00

FLM 29107 - Special Topics In Editing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49107 - Special Topics In Editing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

Cinematography

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and

demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

AD 11900 - Color Photography

Credit Hours: 3.00. Introductory course in creative use of color photographic processes and studio practices. Emphasis is on the acquisition of digital cameras, studio, and digital printing skills which enable students to successfully perceive and structure images reflecting color's formal, symbolic, and emotional impact.

Learning Outcomes: 1. Apply knowledge of capturing and processing color digital imagery. 2. Demonstrate learned skills in color correction and image enhancement using image-editing software. 3. Illustrate understanding of conceptual dialogue using photography and color, and compile a portfolio of images that reflect the understanding. Credits: 3.00

FLM 36100 - Cinematography

Credit Hours: 3.00. This intermediate course in Cinematography will further prepare the student to use the technology of the camera as a basis for the art and visual storytelling of motion pictures. The student will also receive the basic background needed for understanding the skills and processes of a single camera production environment.

Learning Outcomes: 1. Discuss production techniques in film and video using the vocabulary of the industry. 2. Explore the production process for single camera environments. 3. Demonstrate an understanding of basic shot types and execute examples of these shots. 4. Demonstrate an understanding of the technology of capturing the moving image. 5. Identify career options and job types within film and video production. Credits: 3.00

FLM 44600 - Producing Non-Fiction Video

Credit Hours: 3.00. This advanced course builds on previous knowledge and exposes students to the role of an independent video producer. By working with real-world clients on real-world projects, students will gain valuable experience in guiding productions from start to finish. Additionally, students will learn basic fundamentals of entrepreneurship and business skills designed to begin to prepare students to form their own video production business.

Learning Outcomes: 1. Summarize an understanding of the art, technique, philosophies, and business of the video production. 2. Construct budgets and business plans. 3. Organize, plan, and create video productions simulating professional processes and techniques. 4. Develop and produce multiple unique projects by working closely with real-world clients. Credits: 3.00

THTR 36200 - Light Design

Credit Hours: 3.00. A project course in utilizing the principles of design as they can convey an environment and its qualities to further dramatic action. Emphasis on the interrelationship among all aspects of production and how light becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

FLM 29106 - Special Topics In Cinematography

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49106 - Special Topics In Cinematography

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

Screenwriting

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 31600 - Craft Of Fiction From A Writer's Perspective

Credit Hours: 3.00. This course focuses on the craft of fiction with some consideration of its underlying principles from a writer's perspective. Topics of study may include works of fiction, statements of aesthetics and craft, and various fictional forms.

Learning Outcomes: 1. Analyze published fiction by applying terms of fiction craft. 2. Identify the effects of fiction forms by articulating their differences and/or similarities. 3. Analyze their own fiction by applying the terms of fiction craft. Credits: 3.00

FLM 35100 - Screenwriting

Credit Hours: 3.00. Students will gain a working knowledge of basic narrative elements and how these elements work to form a story. Writing and re-writing a three-act outline and an original screenplay will give you an understanding of script language and process.

Learning Outcomes: 1. Identify Aristotelian Three-Act Structure as applied to the screenplay. 2. Develop a specific technique of writing based on the course teachings. 4. Critique the work of self and others, including proper and professional screenplay formatting. 5. Determine methods to assess success or failure of writer's intent. Credits: 3.00

FLM 44200 - Directing The Narrative Short Film

Credit Hours: 3.00. Students will gain knowledge of all phases of film production in the course of completing multiple short films. This class will emulate standard film industry practices and guidelines.

Learning Outcomes: 1. Summarize the overall film production process. 2. Create examples of each stage of the production process. 3. Construct multiple complete films, in the roles of Director and/or Assistant Director, using professional and industry standard techniques based upon the production process. 4. Evaluate completed films for content and technique. Credits: 3.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

FLM 49900 - Capstone In Film/Video/Media Production

Credit Hours: 2.00 or 4.00. The Capstone in Film/Video/Media Production is intended to be the culminating experience of the Film/Video Studies or Film/Video and Theatre Production major. Each student Students will create a project of their own design. Students will pitch their project ideas to the program director and/or faculty and should develop a project based around their future career goals. Example areas include narrative/fiction cinema, documentary/non-fiction filmmaking, television production, live event production, etc. Students will fulfill the role of Writer/Producer/Director for their project (and potentially Director of Photography, Editor, etc.). This creative work will culminate in a presentation to an audience. Permission of instructor required.

Learning Outcomes: 1. Develop a complete and

significant project idea/vision/creative work. 2. Plan out the execution of the creative work. 3. Assemble a team with which to craft the developed vision. 4. Complete the work to a professional level of quality. 5. Present the work to an audience with a Q&A session. Credits: 2.00 or 4.00

THTR 27100 - Script Interpretation

Credit Hours: 3.00. This course introduces several approaches to the creative interpretation of a dramatic script, giving students experience in applying both analytical methods and sensory-intuitive lenses of interpretation.

Learning Outcomes: 1. Interpret your sensory-intuitive responses to a script. 2. Demonstrate an understanding of the world of the play. 3. Analyze key structural components of a script. 4. Communicate your interpretation through multiple means (written, oral, visual, etc.). Credits: 3.00

FLM 29105 - Special Topics In Screenwriting

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49105 - Special Topics In Screenwriting

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

Live Event Video Production

FLM 32100 - Live Production I: Theater/Music/Arts

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as narrative development.

Learning Outcomes: 1. Demonstrate an understanding of the technique and technology of live camera, live audio, and simple broadcast graphics. 2. Examine storytelling in a live multi-camera production. 3. Identify career options and job types within live production. Credits: 1.00 to 4.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

FLM 49900 - Capstone In Film/Video/Media Production

Credit Hours: 2.00 or 4.00. The Capstone in Film/Video/Media Production is intended to be the culminating experience of the Film/Video Studies or Film/Video and Theatre Production major. Each student Students will create a project of their own design. Students will pitch their project ideas to the program director and/or faculty and should develop a project based around their future career goals. Example areas include narrative/fiction cinema, documentary/non-fiction filmmaking, television production, live event production, etc. Students will fulfill the role of Writer/Producer/Director for their project (and potentially Director of Photography, Editor, etc.). This creative work will culminate in a presentation to an audience. Permission of instructor required.

Learning Outcomes: 1. Develop a complete and significant project idea/vision/creative work. 2. Plan out the execution of the creative work. 3. Assemble a team with which to craft the developed vision. 4. Complete the work to a professional level of quality. 5. Present the work to an audience with a Q&A session. Credits: 2.00 or 4.00

FLM 32200 - Live Production I: Fall/Winter Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live sports video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Fall/Winter sports include Cross Country, Soccer, Volleyball, Football, Swimming & Diving, Wrestling, Basketball, or Track & Field.

Learning Outcomes: 1. Demonstrate an understanding of the technique and technology of live camera, live audio, and simple broadcast graphics. 2. Examine storytelling in a live multi-camera production. 3. Identify career options and job types within live production. Credits: 1.00 to 4.00

FLM 32300 - Live Production I: Winter/Spring Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of live sports video production. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Winter/Spring sports include Swimming & Diving, Wrestling, Basketball, Baseball, Softball, Tennis, Golf, or Track & Field.

Learning Outcomes: 1. Demonstrate an understanding of the technique and technology of live camera, live audio, and simple broadcast graphics. 2. Examine storytelling in a live multi-camera production. 3. Identify career options and job types within live production. Credits: 1.00 to 4.00

FLM 49102 - Special Topics In Live Production

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 29102 - Special Topics In Live Production

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 42200 - Live Production II: Fall/Winter Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of Producing and Directing live sports video and television. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's Fall/Winter sports include Cross Country, Soccer, Volleyball, Football, Swimming & Diving, Wrestling, Basketball, or Track & Field. Permission of instructor required.

Learning Outcomes: 1. Identify career options and job types within live event production. 2. Operate the core components of a live video system, including a switcher, replay system, and advanced broadcast graphics. 3. Create examples of visual storytelling using live, multi-camera, production techniques. Credits: 1.00 to 4.00

FLM 42300 - Live Production II: Winter/Spring Sports

Credit Hours: 1.00 to 4.00. This experiential course furthers the students' understanding of Producing and Directing live sports video and television. Lecture combined with various production experiences increase the students' proficiency with professional technology and equipment as well as the art and storytelling of the craft. Potential Men's and Women's

Winter/Spring sports include Swimming & Diving, Wrestling, Basketball, Baseball, Softball, Tennis, Golf, or Track & Field. Permission of instructor required.

Learning Outcomes: 1. Identify career options and job types within live event production. 2. Operate the core components of a live video system, including a switcher, replay system, and advanced broadcast graphics. 3. Create examples of visual storytelling using live, multi-camera, production techniques. Credits: 1.00 to 4.00

Directing

FLM 44200 - Directing The Narrative Short Film

Credit Hours: 3.00. Students will gain knowledge of all phases of film production in the course of completing multiple short films. This class will emulate standard film industry practices and guidelines.

Learning Outcomes: 1. Summarize the overall film production process. 2. Create examples of each stage of the production process. 3. Construct multiple complete films, in the roles of Director and/or Assistant Director, using professional and industry standard techniques based upon the production process. 4. Evaluate completed films for content and technique. Credits: 3.00

FLM 41000 - Internship In Film/Video/Media Production

Credit Hours: 1.00 to 4.00. Internships in one of the professional areas of film, video or media production. Internships are supervised by appropriate faculty in a particular field of specialization. Permission of instructor required.

Learning Outcomes: 1. Vary due to nature of course. Credits: 1.00 to 4.00

THTR 16400 - Introduction To Theatre Organization And Management

Credit Hours: 2.00. A theoretical study of performing arts management and backstage operations from audition through performance. Techniques of scheduling, production management, stage management, technical direction, house management, safety issues, and emergency procedures.

Credits: 2.00

THTR 23300 - Acting II

Credit Hours: 3.00. Continued development of the basic acting tools of objectives, actions, justification, and personalization; continued vocal and physical work; introduction of script and character analysis; and the introduction of audition techniques. The course will use material from contemporary dramatic literature in the rehearsal process. Prerequisite: THTR 133. Instructor permission required for non-majors.

Learning Outcomes: 1. Practice and incorporate relaxation, physical, vocal, and sense memory exercises into a daily warm-up. 2. See, connect, and respond to a partner within improvised scenarios. 3. Read plays with insight and imagine the experience of the characters in the given circumstance of a play. 4. Analyze and break scenes down into beats, with each beat having a clear action and objective. 5. Analyze, rehearse and publicly perform an open scene, and a contemporary monologue and scene. Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation. 2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

FLM 49900 - Capstone In Film/Video/Media Production

Credit Hours: 2.00 or 4.00. The Capstone in Film/Video/Media Production is intended to be the culminating experience of the Film/Video Studies or Film/Video and Theatre Production major. Each student Students will create a project of their own design. Students will pitch their project ideas to the program director and/or faculty and should develop a project based around their future career goals. Example areas include narrative/fiction

cinema, documentary/non-fiction filmmaking, television production, live event production, etc. Students will fulfill the role of Writer/Producer/Director for their project (and potentially Director of Photography, Editor, etc.). This creative work will culminate in a presentation to an audience. Permission of instructor required.

Learning Outcomes: 1. Develop a complete and significant project idea/vision/creative work. 2. Plan out the execution of the creative work. 3. Assemble a team with which to craft the developed vision. 4. Complete the work to a professional level of quality. 5. Present the work to an audience with a Q&A session. Credits: 2.00 or 4.00

THTR 44000 - Directing: Page To Stage

Credit Hours: 3.00. This course focuses on theoretical and practical understanding of the essential principles and fundamentals of directing for the stage. Students will learn a proven directorial methodology and engage in essential research and written and practical presentations throughout. Permission of instructor required.

Learning Outcomes: 1. Identify, classify, and critique elements of drama and the requirements of production with depth and imagination. 2. Analyze plays for production. 3. Articulate aspects of student's own personal aesthetic orally, visually, and in writing. 4. Integrate skills in play analysis, intuitive contemplation, research, composition techniques, and various rehearsal strategies to stage dramatic texts. 5. Evaluate creative decisions and processes. Credits: 3.00

FLM 29104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49104 - Special Topics In Directing

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

C. Film & Video Studies (12-24 credits)

International Cinema

FR 33000 - French Cinema (UCC: HUM)

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. The French film in relation to world cinema. The relationship between the French cinema and French literature. Reading and analysis of scripts and historical and critical materials. Knowledge of French not required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 33000 - German Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of major German contributions to the cinema from the earliest period to the present. Emphasis on relevant aesthetic theories and on the schools of literature and painting that served as sources. Evaluation of the German film on the basis of social, artistic, and political criteria. Knowledge of German not required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify and describe the major movements and trends of German film history of the 20th and 21st centuries. 2. Analyze the cinematography of representative German films. 3. Interpret the explicit and implicit meanings of representative German films. Credits: 3.00

ITAL 33000 - The Italian Cinema (UCC: HUM)

Credit Hours: 3.00. The development and evolution of Italian cinema after World War II. The class will center on the viewing and discussion of films and will survey a broad spectrum of directors and styles. Knowledge of Italian not required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

ITAL 33300 - The Spirit Of Italian Comedy (UCC: HUM)

Credit Hours: 3.00. This course explores various types of Italian comedy, focusing on theater and cinema. Particular emphasis will be given to Renaissance theater, commedia dell'arte,

Goldoni, Pirnadello, Dario Fo, and to the new generation of Italian comedians. In English.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

JPNS 33000 - Japanese Cinema

Credit Hours: 3.00. A survey of the development of Japanese cinema after World War II. The class focuses on the viewing and discussion of the films and examines a variety of directors with different styles and thematic messages.

Credits: 3.00

LC 33300 - The Middle Ages On Film (UCC: HUM)

Credit Hours: 3.00. Introduction to the Middle Ages through films in various languages and genres from the beginning of film history to the present. Reading literary, historical, legal, and film theory texts in conjunction with the films, students critically analyze representations of the Middle Ages and the cultural context from which these emerge.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PTGS 33000 - Brazilian, Portuguese, And African Cinema

Credit Hours: 3.00. Screening and analysis of selected films from Portuguese-speaking countries: Brazil, Portugal, Angola, Mozambique, Cape Verde, Guinea-Bissau, S. Tome and Principe, with discussion of their cultural contexts (colonial/post-colonial societies; cross-Atlantic relationships; racial diversity; minority/majority issues). Knowledge of Portuguese not required.

Credits: 3.00

RUSS 33000 - Russian And East European Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of significant Russian and East European films. Evolution of the Russian and East European cinema, its place in world cinema, and its relation to cultural, political, and social trends. Cinematic adaptation of literary and theatrical works. Knowledge of Russian or East European languages not required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SPAN 33000 - Spanish And Latin American Cinema (UCC: HUM)

Credit Hours: 3.00. Screening and analysis of selected Spanish and Latin American films with readings and discussions relative to their historical, social, political, aesthetic, literary, and linguistic contexts. No knowledge of Spanish required.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

CHNS 33000 - Introduction To Chinese Cinema (UCC: HUM)

Credit Hours: 3.00. This course surveys the development of the Chinese cinema from its beginning to the present. Films from the mainland as well as Taiwan and Hong Kong will be examined in-depth for their aesthetic quality and techniques, and equally important, against their socio-historical, political, economic and cultural contexts. The class is conducted in English. Films are all in Chinese with English subtitles.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Become familiar with the cinema syntax. 2. Understand the development of Chinese cinema in a global context. 3. Understand modern Chinese society and culture through cinema. 4. Develop a critical mind over the political, social and cultural issues presented in cinema. Credits: 3.00

LC 33800 - Language Through Films

Credit Hours: 3.00. The course critically explores language(s) via the medium of cinema where language plays a key role in the film. It is intended to introduce students to the fundamental place language occupies within human experience, to advance knowledge of some of the features of the system of language, develop a sharper ear for language, a better understanding of its nature, and a livelier interest in all its manifestations. The course will be taught in English and films will be shown with subtitles.

Learning Outcomes: 1. Identify the main building blocks of language. 2. Examine the universal characteristics of the many languages humans speak. 3. Appraise the relationship between language, cognition, emotion and world view. 4. Re-evaluate their thinking regarding the acquisition of a second language. 5. Access the significant position language plays within societies and cultures. Credits: 3.00

ARAB 33000 - The Middle East On Film

Credit Hours: 3.00. This course offers an introduction to films produced in the Middle East and on Middle Eastern Cultures. In this class, we will view films from the Arab world, including North Africa, and the large Middle Eastern region. Parallel to film screening, students will read critical and analytical material that

provide background as well as commentary and analysis of cultural and historical contexts on content of films and their making. The course will examine a series of topics such as identity politics, religious affiliation, gender, immigration, belonging, homeland and exile. We will also situate the films within the aesthetic traditions of production and reception and analyze how they provide critical perspectives and insights in central issues in the cultures of Middle Eastern cultures. The overarching goal of the class is to provide students with a solid understanding of the function of cinema and films in representation of the evolution and transformation of the cultures and societies of the region and the issues central to how communal and individual identities in the Middle Eastern region are shaped. The class will also equip the students with skills to analyze meaning making and the role of technical aspects such as cinematography, body language, script, setting and acting in the creation of characters. All films will be screened with English subtitles.

Learning Outcomes: 1. Assess formal and technical elements of Middle Eastern film cultures. 2. Analyze how social and cultural themes are represented in visual means and through the screen. 3. Identify and explain the important aspects of film making in the film industries of the region. 4. Construct critical responses to how cinematic work uses aesthetics to mediate culture. 5. Evaluate the role of films in articulating major shifts and movements in the cultures of the region. Credits: 3.00

KOR 33000 - Introduction To Korean Cinema

Credit Hours: 3.00. This course examines Korean society and culture through cinematic representations. Through film, the course provides a broad understanding of the major social and political changes in Korean society, as well as a brief history of Korean cinema and the transformations in the structure of the Korean film industry. Students will learn to identify major directors such as Park Chan-wook, Lee Chang-dong, and Bong Joon-ho, films, and genres. All films will be screened with English subtitles.

Learning Outcomes: 1. Appreciate how film can be understood and used as a cultural and social form that can explain Korean society and culture. 2. Build an understanding of various cinematographic techniques. 3. Learn how to interpret a broad-based understanding of contemporary Korean culture and social issues. 4. Identify elements of genre in Korean cinema through facts and evidence related to Korean history, culture, and daily life through reading Korean media texts and watching films. 5. Develop and communicate their ideas orally and in writing. Credits: 3.00

FLM 29103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49103 - Special Topics In International Cinema

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

Cinema Studies

AAS 47300 - Blacks In Hollywood Film

Credit Hours: 3.00. A history of the representation of blacks in mainstream film throughout the twentieth century.

Credits: 3.00

ENGL 27600 - Shakespeare On Film (UCC: HUM)

Credit Hours: 3.00. Considers the relation of the written text of five or six Shakespeare plays to multiple film versions from a wide variety of times and cultures, e.g., the United States, England, France, Italy, Japan, Denmark, India, and Russia. Typically offered Fall Spring Summer.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explore a selected set of Shakespeare's plays through a comparative analytical lens. 2. Compare and contrast various film versions of Shakespeare's plays in their respective contexts. 3. Respond to the films and written texts through reflective and critical writings and discussions. Credits: 3.00

ENGL 28600 - The Movies (UCC: HUM)

Credit Hours: 3.00. Introduction to the movies from classic to contemporary films. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to classic and contemporary films. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about classic and contemporary films based on appropriate use of evidence. Credits: 3.00

ENGL 38600 - History Of Film To 1950

Credit Hours: 3.00. This survey crosses the divide between the silent film era and the "talkies" to explore narrative, experimental, and documentary styles of feature films from the 1890s to 1950.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to film from its origins through the mid-twentieth century. 2. Discuss those topics and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-1950 films based on appropriate use of evidence. Credits: 3.00

ENGL 38700 - History Of Film Since 1950

Credit Hours: 3.00. A survey of narrative, experimental, and documentary styles of feature films from the mid-twentieth century to the present.

Learning Outcomes: 1. Demonstrate knowledge of a range of topics and conventions related to films from the mid-twentieth century. 2. Identify and articulate connections among these topics and conventions as they relate to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-1950 films based on appropriate use of evidence. Credits: 3.00

ITAL 33500 - Italian-American Cinema

Credit Hours: 3.00. This course offers an overview of the major filmmakers associated with the representation of Italian Americans in the United States film world. Students will view and discuss major filmmakers and their films, and will write critical essays on film topics. Conducted in English.

Credits: 3.00

EAPS 10600 - Geosciences In The Cinema (UCC: STS)

Credit Hours: 3.00. This course is designed for science and non-science majors alike to learn about natural hazards based on the depictions of such hazards in movies. Topics include earthquakes, tsunamis, volcanoes, tornadoes, hurricanes, climate change, asteroid impacts, space exploration, and wildfires. The course focuses on the accuracy of the depiction of natural hazards in the movies, the underlying processes that control their formation and the dangers they represent, how they influence society, and how students can prepare for them and keep themselves safe.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand how scientists explore natural hazards, make observations, and develop theories. 2. Explain the processes that control natural hazards and where and when they are likely to occur. 3. Know the natural hazards inherent to a student's location and be able to plan how to keep themselves safe in the event of such an occurrence. 4. Critically assess the reasonableness of depictions of natural hazards in the media. Credits: 3.00

WGSS 48500 - Feminist Perspectives On Film

Credit Hours: 3.00. In this course, students investigate the gendered and intersectional meanings ascribed to or generated by popular cinematic and other mass-distributed visual texts, with particular attention to the way that visual media have impacted women's participation in public culture over the last century and a half. This course is highly conceptual, asking students to learn to recognize power relations hiding within visual entertainments and embedded within the experience of everyday life, with the goal of deepening their understanding and appreciation of the experience of spectatorship and visuality as a central element of modern American and contemporary global mass culture.

Learning Outcomes: 1. Appreciate the ideological work that entertainment and mass cultural texts such as popular films perform. 2. Analyze popular visual texts including film and video for the meanings and power relations they

invoke. 3. Apply feminist and queer theorizing of gender, gender identity, and sexuality to visual texts. 4. Assess the intersectional impact that popular film and cinema have had on women and sexual minorities. 5. Understand the ways that American popular film, particularly those produced in Hollywood for mass distribution, has shared American culture and global relationships since the inception of cinema in the late 19th century. Credits: 3.00

FLM 29108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 49108 - Special Topics In Cinema Studies

Credit Hours: 1.00 to 4.00. Special topics or projects under the direction of an instructor in a particular field of specialization.

Learning Outcomes: 1. Vary by topic. Credits: 1.00 to 4.00

FLM 24100 - Foundations Of Cinema Production

Credit Hours: 3.00. The course introduces students to the principles and practice of professional video production. Through lectures, viewing, discussions, and laboratory exercises, students will acquire the tools necessary to transform their concepts, or those of their clients, into successful video productions.

Learning Outcomes: 1. Summarize the cinema production process. 2. Apply visual storytelling concepts and techniques to the cinema production process. 3. Plan and create productions, making use of the cinema process. 4. Identify a variety of professional and career opportunities. Credits: 3.00

Degree Requirements

Department/Program Major Courses (78 credits)

Required Major Courses (54 credits)

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes

of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for

improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 35000 - Intermediate Accounting I

Credit Hours: 3.00. Financial reporting for interested external parties. Emphasis on asset valuation, income measurement, and preparation of financial statements, and on appreciation of discretion available to preparers.

Learning Outcomes: 1. Understand the objectives of financial reporting. 2. Explain and apply the basic principles of accounting. 3. Describe how to prepare and analyze an income statement, balance sheet, statement of cash flows and statement of retained earnings under generally acceptable accounting principles (GAAP). 4. Understand the tradeoffs involved in standard setting, the limitations of current accounting standards, and the effects that these tradeoffs and limitations have on the quality and content of financial statements. 5. Gain an appreciation of firms' ability and incentives to choose from a wide variety of alternative measurement bases and accounting procedures and the effects that those choices have on readers of firms' financial statements. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression

analysis. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development practices, including documentation.

Learning Outcomes: 1. Understand and apply basic technical knowledge to managerial problems. 2. Successfully write, test, and run computer programs designed to address managerial problems. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants (i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions

and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder

analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and

implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

MGMT 25300 - Finance Industry Exploration

Credit Hours: 2.00. Finance Industry Exploration will introduce students to various sectors of the financial services industry through lectures, guest lectures by financial market participants and regular reading of financial publications (Wall Street Journal, Financial Times, etc.). Students will understand potential career paths, how specific financial markets operate, career success factors, employment differentiation, industry vernacular and suggested future coursework. Topics covered may include (subject to speaker availability) - Investment Banking, Mergers and Acquisitions, Corporate Finance, Corporate Development, Public Finance, Commercial Banking, Sales and Trading, Wealth Management, Asset Management, Private Equity and Private Credit, Venture Capital, Investor Relations and FinTech.

Learning Outcomes: 1. Analyze and explain the commercial landscape of the finance industry, including key firms, influential personalities, and the challenges and opportunities each face. 2. Develop and evaluate a tailored career strategy by identifying one or two industry sectors, multiple companies, and specific roles of interest, and designing a curricular and extracurricular pathway to enhance competitiveness in the job market. 3. Identify and interpret the success factors of various industry sectors and evaluate how specific roles generate value for their company and clients. 4. Demonstrate the ability to discuss industry topics with professionals by using appropriate terminology and providing relevant historical and company-specific examples. Credits: 2.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

Major Selectives (21 credits)

Major Required Courses (9 credits)

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given

to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

Major Selectives: Choose Four (12 credits)

ECON 38000 - Money And Banking

Credit Hours: 3.00. The course analyzes the economics of money, monetary systems, investments, and financial intermediaries in modern industrial economies. Topics considered include the origin of money and the banking industry, financial asset markets, the role of central banks, and the effects of various monetary policies. The theory will be presented side by side with current economic and financial news, and the students will learn how to track financial and economic data via The Wall Street Journal.

Learning Outcomes: 1. Understand economic analysis, through developing the economic intuition necessary to organize concepts and facts, and draw conclusions through use of inductive and deductive logic. 2. Evaluate current developments and financial news, using economic analysis to think critically about how to interpret current events. 3. Use economic analysis to predict likely changes in the economy and financial system. Credits: 3.00

MGMT 41601 - Corporate Mergers And Acquisitions

Credit Hours: 3.00. The financial analysis of corporate acquisitions, mergers, and reorganizations including asset acquisitions, joint ventures, spin-offs, sell-offs, equity carve-outs, bankruptcy proceedings and reorganizations, and corporate governance. The course uses a combination of lectures, readings, and case analysis.

Learning Outcomes: 1. Understand the processes of valuation, negotiation, and financial outcomes of transactions involving mergers and acquisitions. Credits: 3.00

MGMT 41500 - International Financial Management

Credit Hours: 3.00. The course explores financial decision making in an international framework from the perspective of the management of a multinational corporation. Topics covered include the international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations.

Learning Outcomes: 1. Students will learn about financial decision making in an international framework from the perspective of the management of a multinational corporation through topics such as international financial markets, the measurement and management of exchange risk and political risk, and the financial aspects of the decision to set up cross-border operations. Credits: 3.00

MGMT 41200 - Financial Institutions And Markets

Credit Hours: 3.00. Introduction to financial markets and management of financial institutions. Emphasis on determinants of interest rates, and measurement and management of financial risk. Concentration on management of depository firms such as banks and savings and loans.

Learning Outcomes: 1. Students will be introduced to financial markets and management of financial institutions through learning about determinants of interest rates,

and measurement and management of financial risk, with particular attention on management of depository firms such as banks and savings and loans. Credits: 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities.

Learning Outcomes: 1. Examine management of fixed income securities. 2. Examine portfolios and risk management strategies. 3. Demonstrate use of simulation models for risk assessment. Credits: 3.00

MGMT 41350 - Venture Capital And Entrepreneurial Finance

Credit Hours: 3.00. This course includes descriptions of markets for start-up businesses, venture capital financial structures, valuation of start-ups, role of venture capital in economic development and business growth strategies.

Learning Outcomes: 1. Evaluate start-up ventures and understand the markets for early-stage businesses. 2. Value these companies using Discounted Cash Flow models, markets multipliers and other industry-specific valuation methods. Credits: 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.

Learning Outcomes: 1. Understand the basic features and pricing of commonly used derivative products. 2. Develop necessary analytical tools needed to make good managerial decisions using derivatives. Credits: 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Outline and design new financial derivatives. 3. Develop the VIX index using options data. Credits: 3.00

MGMT 41220 - FinTech

Credit Hours: 3.00. Dramatic development in technology is fundamentally transforming all aspects of financial intermediation including lending, payment services, investments and trading. The goal of the course is to introduce these new developments to students with the emphasis on underlying economic mechanisms. We will start with talking about fiat money but quickly delve into cryptocurrencies and their applications. We will talk about tokens, smart contracts, automated market making and how applications of these concepts are transforming financial services and financial inclusion. We will cover these topics by analyzing real companies and contrast them with traditional players in the financial system.

Learning Outcomes: 1. Understand fundamentals of blockchain and cryptocurrencies. 2. Understand tokenization, smart contracts, and automated market makers. 3. Evaluate implications of decentralized finance on banking, fund raising, financial markets and financial inclusion. 4. Develop skills to analyze various business models in the Fintech space. 5. Create a case study on a real Fintech company. Credits: 3.00

Cultural Competency Selective (3 credits)

Other Departmental Requirements (23-25 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of

polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections.

Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and

justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

Electives (7-19 credits)

Optional Concentrations for Finance, BS

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to

leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

MGMT 25300 - Finance Industry Exploration

Credit Hours: 2.00. Finance Industry Exploration will introduce students to various sectors of the financial services industry through lectures, guest lectures by financial market participants and regular reading of financial publications (Wall Street Journal, Financial Times, etc.). Students will understand potential career paths, how specific financial markets operate, career success factors, employment differentiation, industry vernacular and suggested future coursework. Topics covered may include (subject to speaker availability) - Investment Banking, Mergers and Acquisitions, Corporate Finance, Corporate Development, Public Finance, Commercial Banking, Sales and Trading, Wealth Management, Asset Management, Private Equity and Private Credit, Venture Capital, Investor Relations and FinTech.

Learning Outcomes: 1. Analyze and explain the commercial landscape of the finance industry, including key firms, influential personalities, and the challenges and opportunities each face. 2. Develop and evaluate a tailored career strategy by identifying one or two industry sectors, multiple companies, and specific roles of interest, and designing a curricular and extracurricular pathway to enhance competitiveness in the job market. 3. Identify and interpret the success factors of various industry sectors and evaluate how specific roles

generate value for their company and clients. 4. Demonstrate the ability to discuss industry topics with professionals by using appropriate terminology and providing relevant historical and company-specific examples. Credits: 2.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

16-19 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)

Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: Will update at a later date.

Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

15-18 Credits

Fall 2nd Year

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and

resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

15-18 Credits

Spring 2nd Year

MGMT 41300 - Corporate Finance

Credit Hours: 3.00. The course provides the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending, or investment banking setting. Topics include corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition, and mergers/acquisition.

Learning Outcomes: 1. Know the theoretical and problem-solving tools needed in entry-level financial analysis positions in a corporate, commercial lending or investment banking system through study of topics including corporate valuation, cash flow forecasting, project evaluation, capital structure, dividend policy, capital acquisition and mergers/acquisition. Credits: 3.00

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 35000 - Intermediate Accounting I

Credit Hours: 3.00. Financial reporting for interested external parties. Emphasis on asset valuation, income measurement, and preparation of financial statements, and on appreciation of discretion available to preparers.

Learning Outcomes: 1. Understand the objectives of financial reporting. 2. Explain and apply the basic principles of accounting. 3. Describe how to prepare and analyze an income statement, balance sheet, statement of cash flows and statement of retained earnings under generally acceptable accounting principles (GAAP). 4. Understand the tradeoffs involved in standard setting, the limitations of current accounting standards, and the effects that these tradeoffs and limitations have on the quality and content of financial statements. 5. Gain an appreciation of firms' ability and incentives to choose from a wide variety of alternative measurement bases and accounting procedures and the effects that those choices have on readers of firms' financial statements. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants (i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

15-18 Credits

Fall 3rd Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple

purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-

assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

15-16 Credits

Spring 3rd Year

ECON 36000 - Econometrics

Credit Hours: 3.00. This course examines the statistical techniques economists use to analyze data, estimate causal effects, make predictions, and test economic theory. It emphasizes estimating multiple regression models including models of firm output, product prices, and wages. Students learn to make statistical and practical inferences about the true causal relationships. The course covers the data analysis skills required for careers as a consultant, financial analyst, researcher, or economist in the private and public sectors. The skills practiced in the course include using statistical software to analyze data.

Learning Outcomes: 1. Model economic relationships in a regression framework. 2. Estimate economic models using the assigned statistical software. 3. Perform statistical and practical inference based on the results of empirical analysis. 4. Communicate empirical results clearly and concisely, in graphs, tables and writing. 5. Derive properties of estimators (unbiasedness, consistency, efficiency) and evaluate the characteristics of specific empirical models. Credits: 3.00

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 28800 - Programming For Business Applications

Credit Hours: 3.00. This course will cover the fundamentals of business rules and logic in a business application development context. Students will acquire these skills using computer programming. A modern programming language will be used to learn and reinforce logical concepts, including abstraction, process flow, variable assignment, and control structures, as well as proper programming and application development practices, including documentation.

Learning Outcomes: 1. Understand and apply basic technical knowledge to managerial

problems. 2. Successfully write, test, and run computer programs designed to address managerial problems. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

15 Credits

Fall 4th Year

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing

concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

15 Credits

Spring 4th Year

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

13-15 Credits

Financial Counseling and Planning, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (30 credits)

AGEC 42500 - Estate Planning And Property Transfer

Credit Hours: 3.00. The ownership and transfer of farm business property. Includes tax and other implications of life estates, trust arrangements, sale of property, and charitable contributions.

Credits: 3.00

AGEC 45600 - Federal Income Tax Law

Credit Hours: 3.00. Introduction to the federal income tax laws applicable to individuals and small business with emphasis on the farming business. The course includes management implications and the policy basis for the tax law system. Techniques and practice for the preparation of selected forms will be included. There will be limited exposure to taxation of partnerships, corporations, estates, and to federal gift and estate tax law.

Learning Outcomes: 1. Develop an understanding of the federal income tax law: for individuals and small businesses and for economic and financial decision making. 2. Gain an understanding of the management opportunities for the income tax law and how they can be applied by individuals, families, and small businesses. 3. Develop the ability to

analyze facts for tax law alternatives and to communicate tax planning alternatives. Credits: 3.00

CSR 10000 - Introduction To CSR

Credit Hours: 1.00. A workshop to familiarize students with the CSR department, department majors, advising resources, and major requirements. Special emphasis on basic freshman survival skills.

Credits: 1.00

CSR 20000 - Professional Development In Consumer Science

Credit Hours: 1.00. Professional Development in Consumer Sciences & Retailing is a required course that will provide the necessary techniques to manage job search skills and career development for both current and future professional needs. The covered topics will expose students to on-campus resources, opportunities to gain key networking skills, and establish their professional identity to better prepare students for the current job market.

Learning Outcomes: 1. Provide life-long job search skills. 2. Enable students to effectively navigate career fairs & networking events. 3. Educate students about Purdue's resources regarding career and academic development. 4. Develop student's professional documents. 5. Assist students in creating their personal professional brand. 6. Perpare students on the transition from college to the professional world. Credits: 1.00

CSR 30900 - Leadership Strategies

Credit Hours: 3.00. Provides knowledge of humanistic processes that contribute to development of effective leadership.

Learning Outcomes: 1. Identify leadership principles and skills for the 21st-century organization. 2. Understand and apply ethical leadership. 3. Connect theory to applied solutions. 4. Apply critical thinking to leadership principles through in-class discussion and written assignments. Credits: 3.00

CSR 34200 - Personal Finance

Credit Hours: 3.00. The class covers a comprehensive discussion of investments, consumer credit, insurance and retirement issues. The goal is to show how these components are interconnected in order to create a complete picture of financial health of an individual. CTL:IPO 1811 Personal Finance

Credits: 3.00

CSR 38600 - Risk Management

Credit Hours: 3.00. The course includes principles of insurance, analysis and evaluation of risk exposures, legal aspects of insurance, insurance needs and analysis, policy selection, and insurance company selection and due diligence. Types of insurance that are studied include: property and casualty, health, life, long-term care, disability and general business liability.

Credits: 3.00

CSR 48000 - Financial Counseling And Planning Internship

Credit Hours: 1.00. Supervised internship in the financial services industry. The experience will enable students to develop their professional interest and skills. Attendance at a pre-planning meeting required. Permission of department required.

Credits: 1.00

CSR 48100 - Ethics And Behaviors In Financial Planning

Credit Hours: 3.00. As research in behavioral finance makes increasingly clear, understanding the psychology of financial behaviors is a critical skill for financial planners. Simultaneously, understanding ethical challenges to financial planners' own behaviors, and complying with new and ever more complex regulations, is a key requirement of successful and relevant financial planning and advice-giving. The course will enable students to be better financial planners by reviewing rules of behaviors for financial planners, improving students' capacity to provide fiduciary advice, and enhance their ability to integrate psychological insights into customers' financial behavior throughout the financial planning process.

Learning Outcomes: 1. Identify ethical issues and compliance matters in the field of financial counseling and planning. 2. Evaluate client and planner attitudes, values, biases, behaviors, and their impact on the financial planning relationship. 3. Demonstrate understanding of The CFP Board's Code of Ethics and Professional Responsibility and Rules of Conduct; Disciplinary Rules and Procedures, and Financial Planning Practice Standards. 4.

Apply basic knowledge of behavioral finance and its impacts on clients' financial needs (including in times of crisis). Credits: 3.00

CSR 48400 - Consumer Investment And Savings Decisions

Credit Hours: 3.00. A survey of consumer investment alternatives, with emphasis on financial assets.

Learning Outcomes: 1. Analyze investment decisions and investment risk management through portfolio management, capital market equilibrium and asset pricing theories. Credits: 3.00

CSR 48500 - Case Studies In Financial Planning

Credit Hours: 3.00. Financial planning principles and practice. Course utilizes a case study approach toward financial planning for upper- and middle-income households. Business calculator required.

Learning Outcomes: 1. Demonstrate a comprehensive understanding of the content found within the Financial Planning curriculum and effectively apply and integrate this information in the formulation of a financial plan. 2. Effectively communicate the financial plan, both orally and in writing, including information based on research, peer, colleague or simulated client interaction and/or results emanating from synthesis of material. 3. Collect all necessary and relevant qualitative and quantitative information required to develop a financial plan. 4. Analyze personal financial situations, evaluating clients' objectives, needs, and values to develop an appropriate strategy within the financial plan. 5. Demonstrate logic and reasoning to identify the strengths and weaknesses of various approaches to a specific problem. 6. Evaluate the impact of economic, political, and regulatory issues with regard to the financial plan. 7. Apply the CFP Board Financial Planning Practice Standards to the financial planning process. Credits: 3.00

CSR 48600 - Retirement Planning And Employee Benefits

Credit Hours: 3.00. Analysis of employee benefit plans, retirement needs analysis, and types of retirement plans including employer-sponsored plans and participant-directed plans.

Learning Outcomes: 1. Evaluate a client's retirement income and savings need. 2. Explain important provisions of Social Security, The Affordable Care Act and Medicare. 3. Differentiate between individual Retirement Arrangements including those used by individuals and small businesses. 4. Know the rules relating to qualified retirement plans. 5. Conduct an in-depth analysis of qualified plans (e.g. defined benefit, profit sharing, 401(k) plans, stock bonus plans, and ESOPs). 6. Employ rules and strategies for appropriate retirement decumulation. 7. Understand deferred compensation plans, stock option plans, and planning for executive compensation. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a

variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

ENTR 46000 - Internship And Career Preparation Seminar

Credit Hours: 1.00. This course is a distance option course for the Certificate in Entrepreneurship and Innovation. It equips students with professional skills based on entrepreneurship competencies. Students develop resources to illustrate their skills, talents, abilities, and goals to increase career preparedness. They learn what it takes to successfully transfer academic skills to a workplace setting and develop an entrepreneurial mindset that sets them apart from other job seekers.

Learning Outcomes: 1. Improve self-awareness of professional skills development through assessments and reflection. 2. Create a professional brand through an improved LinkedIn profile, resume review, interviewing, and networking skills. 3. Showcase educational and professional skills in an e-portfolio or website. Credits: 1.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

Other Departmental/Program Course Requirements (67-74 credits)

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21200 - Approaches To The Study Of Interpersonal Communication (UCC: BSS)

Credit Hours: 3.00. A study of the basic characteristics of human communication and the theoretical and practical implications of these characteristics for various forms of oral communication. CTL:ICM 1101 Interpersonal Communication

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 32500 - Interviewing: Principles And Practice

Credit Hours: 3.00. Theory and practice of methods in selected interview settings: informational, employment, and persuasive. Emphasis on communication between two persons, questioning techniques, and the logical and psychological bases of interpersonal persuasion.

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record

financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the

curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50100 - Experimental Statistics I

Credit Hours: 3.00. Concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Normal distributions. Sampling distributions. Confidence intervals and tests of hypotheses for one and two samples. Inference for contingency tables, regression and correlation, and one-way analysis of variance. Use of the SAS statistical software. Intended primarily for students who have not had calculus. Not open to students in mathematical sciences or engineering. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: College Algebra.

Learning Outcomes: 1. Produce and identify basic statistical analyses. 2. Discuss statistical terminology (speak statistics). 3. Use SAS to run basic statistical analyses and interpret corresponding SAS output. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization.

4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 45600 - Legal Foundations For Business II

Credit Hours: 3.00. A study of commercial law as prescribed by the Uniform Commercial Code, including the law of sales, documents of title, negotiable instruments, and the law relating to security interests. Additional material is presented covering the legal aspects of real estate transactions and personal property transfer.

Learning Outcomes: 1. Have a good basic understanding of the structure of the U.S. legal system. 2. Be able to understand and apply basic legal terms and concepts in almost every area of the law. 3. Be able to recognize common legal and ethical issues which will arise in the course of doing business. 4. Demonstrate your knowledge in classroom discussion and through the four (4) exams given during the semester. 5. Have the ability to more effectively communicate with and assist counsel on legal matters in your future business career. Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn

about the marketing-decision making process. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and

proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

Electives (16-23 credits)

Supplemental Lists

Grade Requirements

GPA Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

CSR 10000 - Introduction To CSR

Credit Hours: 1.00. A workshop to familiarize students with the CSR department, department majors, advising resources, and major requirements. Special emphasis on basic freshman survival skills.

Credits: 1.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate

feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

16-19 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market

equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

14-16 Credits

Fall 2nd Year

CSR 34200 - Personal Finance

Credit Hours: 3.00. The class covers a comprehensive discussion of investments, consumer credit, insurance and retirement issues. The goal is to show how these components are interconnected in order to create a complete picture of financial health of an individual. CTL:IPO 1811 Personal Finance

Credits: 3.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and

transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

15-16 Credits

Spring 2nd Year

CSR 20000 - Professional Development In Consumer Science

Credit Hours: 1.00. Professional Development in Consumer Sciences & Retailing is a required course that will provide the necessary techniques to manage job search skills and career development for both current and future professional needs. The covered topics will expose students to on-campus resources, opportunities to gain key networking skills, and establish their professional identity to better prepare students for the current job market.

Learning Outcomes: 1. Provide life-long job search skills. 2. Enable students to effectively navigate career fairs & networking events. 3. Educate students about Purdue's resources regarding career and academic development. 4. Develop student's professional documents. 5. Assist students in creating their personal professional brand. 6. Perpare students on the transition from college to the professional world. Credits: 1.00

CSR 38600 - Risk Management

Credit Hours: 3.00. The course includes principles of insurance, analysis and evaluation of risk exposures, legal aspects of insurance, insurance needs and analysis, policy selection, and insurance company selection and due diligence. Types of insurance that are studied include: property and casualty, health, life, long-term care, disability and general business liability.

Credits: 3.00

COM 21200 - Approaches To The Study Of Interpersonal Communication (UCC: BSS)

Credit Hours: 3.00. A study of the basic characteristics of human communication and the theoretical and practical implications of these characteristics for various forms of oral communication. CTL:ICM 1101 Interpersonal Communication

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career.

Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

ENTR 46000 - Internship And Career Preparation Seminar

Credit Hours: 1.00. This course is a distance option course for the Certificate in Entrepreneurship and Innovation. It equips students with professional skills based on entrepreneurship competencies. Students develop resources to illustrate their skills, talents, abilities, and goals to increase career preparedness. They learn what it takes to successfully transfer academic skills to a workplace setting and develop an entrepreneurial mindset that sets them apart from other job seekers.

Learning Outcomes: 1. Improve self-awareness of professional skills development through assessments and reflection. 2. Create a professional brand through an improved LinkedIn profile, resume review, interviewing, and networking skills. 3. Showcase educational and professional skills in an e-portfolio or website. Credits: 1.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

13 Credits

Fall 3rd Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building

selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

AGEC 45600 - Federal Income Tax Law

Credit Hours: 3.00. Introduction to the federal income tax laws applicable to individuals and small business with emphasis on the farming business. The course includes management implications and the policy basis for the tax law system. Techniques and practice for the preparation of selected forms will be included. There will be limited exposure to taxation of partnerships, corporations, estates, and to federal gift and estate tax law.

Learning Outcomes: 1. Develop an understanding of the federal income tax law: for individuals and small businesses and for economic and financial decision making. 2. Gain an understanding of the management opportunities for the income tax law and how they can be applied by individuals, families, and small businesses. 3. Develop the ability to analyze facts for tax law alternatives and to communicate tax planning alternatives. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.

Credits: 3.00

STAT 50100 - Experimental Statistics I

Credit Hours: 3.00. Concepts and methods of applied statistics. Exploratory analysis of data. Sample design and experimental design. Normal distributions. Sampling distributions. Confidence intervals and tests of hypotheses for one and two samples. Inference for contingency tables, regression and correlation, and one-way analysis of variance. Use of the SAS statistical software. Intended primarily for students who have not had calculus. Not open to students in mathematical sciences or engineering. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: College Algebra.

Learning Outcomes: 1. Produce and identify basic statistical analyses. 2. Discuss statistical terminology (speak statistics). 3. Use SAS to run basic statistical analyses and interpret corresponding SAS output. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 32300 - Principles Of Marketing

Credit Hours: 3.00. This course aims to provide students with a broad understanding of marketing concepts that are useful to managers in a variety of applications including the marketing of consumer products, marketing of services, business-to-business marketing, and the marketing challenges that arise in not-for-profit organizations. Marketing involves identifying customer needs, then satisfying those needs by offering the right product and/or service at an acceptable price, making it available to customers through appropriate distribution channels, and promoting it in ways that motivate purchase as much as possible. The course serves as a foundation for marketing knowledge in general. No credit for students in the School of Management, except economics majors. Offered Fall Spring Summer.

Learning Outcomes: 1. Students will learn about the functional area of marketing through the managerial perspective. 2. Students will learn about the marketing-decision making process. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

15-16 Credits

Spring 3rd Year

AGEC 42500 - Estate Planning And Property Transfer

Credit Hours: 3.00. The ownership and transfer of farm business property. Includes tax and other implications of life estates, trust arrangements, sale of property, and charitable contributions.

Credits: 3.00

CSR 30900 - Leadership Strategies

Credit Hours: 3.00. Provides knowledge of humanistic processes that contribute to development of effective leadership.

Learning Outcomes: 1. Identify leadership principles and skills for the 21st-century organization. 2. Understand and apply ethical leadership. 3. Connect theory to applied solutions. 4. Apply critical thinking to leadership principles through in-class discussion and written assignments. Credits: 3.00

CSR 48100 - Ethics And Behaviors In Financial Planning

Credit Hours: 3.00. As research in behavioral finance makes increasingly clear, understanding the psychology of financial behaviors is a critical skill for financial planners. Simultaneously, understanding ethical challenges to financial planners' own behaviors, and complying with new and ever more complex regulations, is a key requirement of successful and relevant financial planning and advice-giving. The course will enable students to be better financial planners by reviewing rules of behaviors for financial planners, improving students' capacity to provide fiduciary advice, and enhance their ability to integrate psychological insights into customers' financial behavior throughout the financial planning process.

Learning Outcomes: 1. Identify ethical issues and compliance matters in the field of financial counseling and planning. 2. Evaluate client and planner attitudes, values, biases, behaviors, and their impact on the financial planning relationship. 3. Demonstrate understanding of The CFP Board's Code of Ethics and Professional Responsibility and Rules of Conduct; Disciplinary Rules and Procedures, and Financial Planning Practice Standards. 4. Apply basic knowledge of behavioral finance and its impacts on clients' financial needs (including in times of crisis). Credits: 3.00

COM 32500 - Interviewing: Principles And Practice

Credit Hours: 3.00. Theory and practice of methods in selected interview settings: informational, employment, and persuasive. Emphasis on communication between two persons, questioning techniques, and the logical and psychological bases of interpersonal persuasion.

Credits: 3.00

MGMT 45500 - Legal Background For Business I

Credit Hours: 3.00. The nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. Special emphasis on torts, contracts, and agency. No credit to students in the School of Management.

Learning Outcomes: 1. Learn about the nature and place of law in our society, national and international, social and moral bases of law enactment, regulation of business, legal liability, and enforcement procedures. 2. Learn about torts, contracts and agency. Credits: 3.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

15 Credits

Summer 3rd Year

CSR 48000 - Financial Counseling And Planning Internship

Credit Hours: 1.00. Supervised internship in the financial services industry. The experience will enable students to develop their professional interest and skills. Attendance at a pre-planning meeting required. Permission of department required.

Credits: 1.00

1 Credit

Fall 4th Year

CSR 48400 - Consumer Investment And Savings Decisions

Credit Hours: 3.00. A survey of consumer investment alternatives, with emphasis on financial assets.

Learning Outcomes: 1. Analyze investment decisions and investment risk management through portfolio management, capital market equilibrium and asset pricing theories. Credits: 3.00

CSR 48600 - Retirement Planning And Employee Benefits

Credit Hours: 3.00. Analysis of employee benefit plans, retirement needs analysis, and types of retirement plans including employer-sponsored plans and participant-directed plans.

Learning Outcomes: 1. Evaluate a client's retirement income and savings need. 2. Explain important provisions of Social Security, The Affordable Care Act and Medicare. 3. Differentiate between individual Retirement Arrangements including those used by individuals and small businesses. 4. Know the rules relating to qualified retirement plans. 5. Conduct an in-depth analysis of qualified plans (e.g. defined benefit, profit sharing, 401(k) plans, stock bonus plans, and ESOPs). 6. Employ rules and strategies for appropriate retirement decumulation. 7. Understand deferred compensation plans, stock option plans, and planning for executive compensation. Credits: 3.00

12-13 Credits

Spring 4th Year

CSR 48500 - Case Studies In Financial Planning

Credit Hours: 3.00. Financial planning principles and practice. Course utilizes a case study approach toward financial planning for upper- and middle-income households. Business calculator required.

Learning Outcomes: 1. Demonstrate a comprehensive understanding of the content found within the Financial Planning curriculum and effectively apply and integrate this information in the formulation of a financial plan. 2. Effectively communicate the financial plan, both orally and in writing, including information based on research, peer, colleague or simulated client interaction and/or results emanating from synthesis of material. 3. Collect all necessary and relevant qualitative and quantitative information required to develop a financial plan. 4. Analyze personal financial situations, evaluating clients' objectives, needs, and values to develop an appropriate strategy within the financial plan. 5. Demonstrate logic and reasoning to identify the strengths and weaknesses of various approaches to a specific problem. 6. Evaluate the impact of economic, political, and regulatory issues with regard to the financial plan. 7. Apply the CFP Board Financial Planning Practice Standards to the financial planning process. Credits: 3.00

MGMT 45600 - Legal Foundations For Business II

Credit Hours: 3.00. A study of commercial law as prescribed by the Uniform Commercial Code, including the law of sales, documents of title, negotiable instruments, and the law relating to security interests. Additional material is presented covering the legal aspects of real estate transactions and personal property transfer.

Learning Outcomes: 1. Have a good basic understanding of the structure of the U.S. legal system. 2. Be able to understand and apply basic legal terms and concepts in almost every area of the law. 3. Be able to recognize common legal and ethical issues which will arise in the course of doing business. 4. Demonstrate your knowledge in classroom discussion and through the four (4) exams given during the semester. 5. Have the ability to more effectively communicate with and assist counsel on legal matters in your future business career. Credits: 3.00

13-17 Credits

Program Learning Outcomes

Food Science, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (37 credits)

Required Major Courses (37 credits)

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

FS 24500 - Food Packaging

Credit Hours: 1.00. Elements of packaging science and technology applied to preservation, distribution, and marketing of food products; packaging materials; principles of diffusion and permeability; procedures for developing, evaluating, and testing food packages; packaging requirements for specific types of foods; other special topics of current interest.

Learning Outcomes: 1. Appreciate the important role that packaging plays in today's sophisticated food processing operations, its effect on final product quality and self-life, and its influence on distribution methods and marketing related decisions. 2. Understand the basic packaging materials and the technology to produce food packages. 3. Understand basic concepts of diffusion, permeation, and migration, especially as they relate to package properties, food quality, and product shelf-life. 4. Develop general guidelines for selecting appropriate packaging materials to fit the needs of specific food products. 5. Have a general appreciation of the methods used to test and evaluate packaging materials for specific properties and whole containers for integrity, suitability, and overall performance. 6. Intelligently discuss current food packaging related topics (i.e. package degradability/recyclability, tamper evident/proof packaging, modified atmosphere packaging, aseptic packaging, microwaveable packaging, etc.) Credits: 1.00

FS 29800 - Sophomore Seminar

Credit Hours: 1.00. Current food science issues will be discussed by students, staff, and guest speakers. Career planning and improvement of communication skills will be emphasized.

Learning Outcomes: 1. Construct a professional resume that includes educational background and experience. 2. Construct a professional cover letter in reference to a job posting. 3. Demonstrate the ability to professionally answer interview questions in an interview setting. 4. Demonstrate the ability to present information with PowerPoint software. 5. Identify your Myers Briggs personality profile. 6. Explore some current issues in the food industry. 7. Plan your coursework for each semester through graduation. Credits: 1.00

FS 34000 - Introduction To Food Law And Regulations

Credit Hours: 1.00. This course will cover basic knowledge and familiarity of the principal law and regulations governing raw and processed foods. Class meets during weeks 1-5.

Learning Outcomes: 1. To gain a basic knowledge and familiarity of the principal laws

and regulations governing raw and processed foods. 2. To develop an understanding of the law's core - adulteration and misbranding. 3. To learn basic food labeling and health claim regulations. 4. To obtain a working knowledge of US food law and promulgated regulations, current issues concerning food regulations, and how to obtain further information for specific regulatory problems. Credits: 1.00

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.

Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3. Identify the conditions under which important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 34200 - Food Processing I Laboratory

Credit Hours: 1.00. This laboratory course applies food engineering principles and thermal processing methods for production of safe and high-quality foods. The course will include applications of mathematics and physics principles in food processing operations, engineering problem-solving exercises and laboratory demonstrations. Engineering concepts such as heat transfer, fluid flow, mass and energy balances applied to various food systems will be a major portion of this laboratory.

Learning Outcomes: 1. Apply mathematical principles to food processing application. 2. Demonstrate an understanding of energy, heat transfer and fluid flow principles. 3. Apply engineering principles to thermal processing of foods. 4. Identify conditions under which microorganisms are commonly inactivated, killed, or made harmless in foods including pasteurization, sterilization, and aseptic processing. 5. Demonstrate use mass and energy balances for a food process. Credits: 1.00

FS 36100 - Food Plant Sanitation

Credit Hours: 1.00. Relation of food-plant sanitation to good manufacturing practices and regulations affecting sanitation; organization of a food-plant sanitation program; sanitary building and equipment construction; selection of cleaning, sanitizing, and pesticidal compounds; water, air, and waste treatment; food storage and transportation.

Credits: 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 36300 - Food Microbiology Laboratory

Credit Hours: 2.00. Classic and molecular methods for enumerating, isolating, and identifying spoilage, fermentative, and pathogenic food microorganisms in food systems.

Learning Outcomes: 1. Perform proper aseptic technique. 2. Sample foods for microbial analyses. 3. Test food products for common microorganism. 4. Interpret data obtained from microbiological analysis. 4. Understand basic molecular techniques used to identify foodborne pathogens. Credits: 2.00

FS 43500 - Sensory Science

Credit Hours: 1.00. Introduction to the fundamental concepts and practices of sensory analysis of food products. Technical aspects of planning and conducting human sensory panels on food products including analysis and interpretation of collected data. Course meets weeks 1-8.

Learning Outcomes: 1. Solve typical sensory problems occurring in the food industry. 2. Conduct sensory testes, analyze and interpret the results. 3. Write a report and executive summary of the findings. Credits: 1.00

FS 44200 - Food Processing II

Credit Hours: 2.00. Study of food processing and preservation methods based on the integrated knowledge of microbiology, chemistry, and food engineering; emphasis will be on temperature reduction, water activity, concentration, dehydration, irradiation, and extrusion.

Learning Outcomes: 1. Have sufficient knowledge of food chemistry to control reactions in foods. 2. Understand the major chemical reactions that limit shelf-life of foods. 3. Identify the conditions under which the important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Understand the principles involving food preservation via fermentation processes. 5. Be able to identify the conditions, including sanitation practices under which the important pathogens and spoilage microorganisms are commonly inactivated, killed, or made harmless in foods. 6. Explain the spoilage and deterioration mechanisms in foods and methods to control deterioration and spoilage. 7. Understand the principles that make a food product safe for consumption. 8. Be able to use mass and energy balances for a given food process. 9. Explain the unit operation required to produce a given food product. 10.Understand the principles and current practices of processing techniques and the effects of processing parameters on product quality. 11.Be able to apply and incorporate the principles of food science in practical, real-world situations. 12.Define a problem, identify causes and possible solutions, and make thoughtful recommendations. 13.Work effectively on a team project. Credits: 2.00

FS 44300 - Food Product Design (Capstone)

Credit Hours: 3.00. Teams develop a new product from concept through marketing. Final case study defense is presented to faculty and peers. Classes include guest lectures from the food industry.

Learning Outcomes: 1. Apply fundamental aspects of food chemistry, microbiology, food safety, nutrition, processing and packaging in the design and develop a new product from market concepts to practical prototype. 2. Apply knowledge food ingredient sourcing and functionality to the product development process. 3. Understand the basics of project management in the context of group projects. 4. Develop insight into bench top to pilot scale prototyping of food products. 5. Apply statistical principles through process control, experimental design and assessment of experimental data. 6. Have an appreciation for factors impacting product shelf-life and methods to control spoilage. 7. Intelligently discuss current topics in food science and trends that impact the food industry. Credits: 3.00

FS 44400 - Statistical Process Control

Credit Hours: 1.00. Basic concepts and techniques of solving quality problems and assuring the quality of production processes; emphasis is on quality improvement programs, problem-solving tools, control charts for variables and attributes, process capability analysis, and sampling methods. Course meets during weeks 6-10.

Credits: 1.00

FS 44700 - Food Processing II Laboratory

Credit Hours: 1.00. This lab is designed to build upon fundamental concepts associated with the preservation and processing of various food products. Concepts to be covered include water activity, dehydration (drum, spray and freeze drying), frying, high pressure, microwave and ohmic heating. The focus of this lab will be hands-on production of various food products and the demonstration of fundamental food processing unit operations and calculations related to each preservation method.

Learning Outcomes: 1. Perform experiments using appropriate food processing unit operations to create various food products. 2. Write a lab report that includes analysis and interpretation of the results. 3. Work on a project team to duplicate a commercial food product and present the finding of the project in an oral and written report. Credits: 1.00

FS 45300 - Food Chemistry

Credit Hours: 3.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Understand the importance of food chemistry and the relationship of food chemistry to other food science areas. 2. Understand the structures and functions of major food components, including water, proteins, carbohydrates, lipids, vitamins, and minerals. 3. Understand major reactions occurring with macronutrients (water, proteins, carbohydrates, lipids) in foods and impacts on shelf-life. 4. Identify the major components and reactions occurring in major food groups, including fruits, vegetables, grains, legumes, red meats, poultry, eggs, fish, and shellfish. 5. Be able to describe types and uses of basic sensory tests. 6. Be able to identify functions of most or all ingredients listed on the ingredient label of a food product. 7. Be able to discuss alternative ingredient choices for food products. 8. Be able to write a scientific abstract using IFT formatting. Credits: 3.00

FS 45400 - Food Chemistry Laboratory

Credit Hours: 1.00. Laboratory to demonstrate application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Performance of the students' progress will be evaluated by 7 lab reports and 3 in-class problem solving activities. Credits: 1.00

FS 46700 - Food Analysis

Credit Hours: 3.00. Application of quantitative and qualitative physical, chemical, and instrumental methods of analysis to the examination of food products; evaluation of methods for specific applications.

Learning Outcomes: 1. Describe the principles of the official and rapid methods of analysis for the following food components: moisture, ash, fat, and protein. 2. Select and justify the use of: (for any given food product) a) an official method, and b) a rapid method of analysis for the following food components: moisture, ash, fat, and protein. 3. Describe the principles of the method(s) of analysis for the following food components or properties: individual sugars, starch, total dietary fiber, individual minerals, oxygen demand, texture, color, lipid oxidation, lipid saturation, titratable acidity, extraneous matter, protein nutritional quality, protein functional properties. 4. Explain the principles and applications of the following techniques in food analysis: chromatography, electrophoresis, spectroscopy, spectrometry, immune-based assays, enzymatic assays, animal assays. 5. Identify government regulations that dictate

industrial standard practices of food analysis. Credits: 3.00

FS 46900 - Food Analysis Laboratory

Credit Hours: 2.00. Practical laboratory applications of food analysis, including relevant calculations using data gathered and interpretation of data. (Intended for upper-division students.)

Learning Outcomes: 1. Demonstrate practical proficiency in a food analysis laboratory, including relevant calculations using data gathered. Credits: 2.00

FS 48200 - Food Science Senior Seminar

Credit Hours: 1.00. Oral and written reports on selected food science topics.

Credits: 1.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

FS 53000 - Food Ingredient Technology

Credit Hours: 1.00. Identifies functions of ingredients listed on ingredient labels of food products and discusses alternative ingredient choices for food products.

Credits: 1.00

Other Departmental/Program Course Requirements (70-71 credits)

Course Requirements (67-68 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of

economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11800 - Introduction To Food Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Food Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods,

solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of

chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media.

Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum

theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data

sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Professional Communications Selective (3 credits)

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

COM 21000 - Addressing Public Issues

Credit Hours: 3.00. Survey of argumentation and persuasion theories addressing contemporary public issues. Readings and discussions on cultural norms, audience reasoning, civic discourse, and constructing appeals addressing policies and practices. Preparation of appeals for public campaigns and social movements.

Learning Outcomes: 1. Describe argumentation and persuasion theories as applied to contemporary public issues. 2. Identify cultural norms, values, and beliefs of diverse communities contribute to civic discourse and audience reasoning. 3. Construct written and oral appeals addressing public issues, policies, and practices. Credits: 3.00

COM 22400 - Communicating In The Global Workplace (UCC: BSS)

Credit Hours: 3.00. This introductory course explores communication issues that arise in the global workplace. The course develops an appreciation of the relationship among culture, communication, and ways of organizing and doing business.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Critically analyze communication issues arising in culturally diverse organizations in the global environment by utilizing conceptual and theoretical frameworks. 2. Develop intercultural competencies for better managing communication issues in the global workplace by developing practical strategies for contemporary organizations operating in multiple cultures. 3. Explain macro social trends that are impacting global organizations by illustrating current examples. Credits: 3.00

COM 25200 - Writing For Mass Media

Credit Hours: 3.00. Labor intensive course teaches basics of newspaper writing, broadcast writing, news releases, and online journalism.

Credits: 3.00

COM 31400 - Advanced Presentational Speaking

Credit Hours: 3.00. Development of a marked degree of skill in the composition and delivery of various types of speeches including presentations in corporate board rooms, orientation meetings, banquet halls, public forms. Special emphasis on speeches related to the student's major vocational area.

Credits: 3.00

COM 31500 - Speech Communication Of Technical Information

Credit Hours: 3.00. The organization and presentation of information of a practical technical nature. Emphasis is placed upon the study, preparation, and use of audiovisual materials in such presentations.

Credits: 3.00

COM 32000 - Small Group Communication

Credit Hours: 3.00. A study of group thinking and problem-solving methods; participation in, and evaluation of, committee, and informal discussion groups. Focus on the roles, networks, and messages employed by small group communicators.

Credits: 3.00

COM 32500 - Interviewing: Principles And Practice

Credit Hours: 3.00. Theory and practice of methods in selected interview settings: informational, employment, and persuasive. Emphasis on communication between two persons, questioning techniques, and the logical and psychological bases of interpersonal persuasion.

Credits: 3.00

COM 37400 - Social Interaction Skills: Assessment And Development

Credit Hours: 3.00. An examination of several major communication skills and procedures for their development. Focus is on skill measurement, methods of enhancement, assessment of training programs, and personal skill development. Skills examined include those for conversing, managing conflict, providing support, and influencing.

Credits: 3.00

COM 41500 - Discussion Of Technical Problems

Credit Hours: 3.00. Principles of speech communication related to interpersonal and group discussions on technical topics and problems; practice in using these modes in situations typically encountered by technologists.

Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for

creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ENGL 43300 - Writing Proposals And Grants

Credit Hours: 3.00. Writing Proposals and Grants is a professional writing workshop that teaches students to write workplace proposals and grants in for-profit and not-for-profit companies and organizations. Students will also learn how to write business plans, a specialized form of proposal.

Learning Outcomes: 1. Analyze rhetorical situations to determine needs of readers and contexts. 2. Generate new ideas for businesses, products, and services. 3. Organize proposals and grants using various proposal genres. 4. Write in a plain and persuasive style that is appropriate to readers. 5. Design documents in ways that make information accessible. 6. Edit and revise proposals and grants. 7. Work with authors, customers, and funding agencies to sharpen the message of a proposal or grant. Credits: 3.00

Electives (12-13 credits)

GPA Requirements

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services,

scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11800 - Introduction To Food Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Food Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

FS 16100 - Science Of Food (UCC: STS)

Credit Hours: 3.00. Chemical and physical properties of foods; issues pertaining to safety, food-diet-health relationship; government regulations pertaining to food safety, quality and additives; preservation techniques and transformation of agricultural commodities to food products; Food facts, myths, and practices that are important for making intelligent food decisions. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Food Science.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD

BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15 Credits

Spring 1st Year

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics.

Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Fall 2nd Year

FS 29800 - Sophomore Seminar

Credit Hours: 1.00. Current food science issues will be discussed by students, staff, and guest speakers. Career planning and improvement of communication skills will be emphasized.

Learning Outcomes: 1. Construct a professional resume that includes educational background and experience. 2. Construct a professional cover letter in reference to a job posting. 3. Demonstrate the ability to professionally answer interview questions in an interview setting. 4. Demonstrate the ability to present information with PowerPoint software. 5. Identify your Myers Briggs personality profile. 6. Explore some current issues in the food industry. 7. Plan your coursework for each semester through graduation. Credits: 1.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and

chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of

STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.

Credits: 3.00

16 Credits

Spring 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.

Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

FS 24500 - Food Packaging

Credit Hours: 1.00. Elements of packaging science and technology applied to preservation, distribution, and marketing of food products; packaging materials; principles of diffusion and permeability; procedures for developing, evaluating, and testing food packages; packaging requirements for specific types of foods; other special topics of current interest.

Learning Outcomes: 1. Appreciate the important role that packaging plays in today's sophisticated food processing operations, its effect on final product quality and self-life, and its influence on distribution methods and marketing related decisions. 2. Understand the basic packaging materials and the technology to produce food packages. 3. Understand basic concepts of diffusion, permeation, and migration, especially as they relate to package properties, food quality, and product shelf-life. 4. Develop general guidelines for selecting appropriate packaging materials to fit the needs of specific food products. 5. Have a general appreciation of the methods used to test and evaluate packaging materials for specific properties and whole containers for integrity, suitability, and overall performance. 6. Intelligently discuss current food packaging related topics (i.e. package degradability/recyclability, tamper evident/proof packaging, modified atmosphere packaging, aseptic packaging, microwaveable packaging, etc.) Credits: 1.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence

demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices.
CTL:ISH 1040 Introduction To Economics
University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

15 Credits

Fall 3rd Year

FS 34100 - Food Processing I

Credit Hours: 2.00. Applications of the fundamentals of food engineering, microbiology, and chemistry to methods of food processing and preservation; emphasis will be on processing concepts, preparation for food processing, food formulation, and thermal processing.
Learning Outcomes: 1. Explain the sources of variability of raw food materials and their impact on food processing operations. 2. List and describe the major methods covered in class to control deterioration and spoilage in foods. 3. Identify the conditions under which important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Identify conditions including sanitation practices under which microorganisms are commonly inactivated, killed, or made harmless in foods. 5. Demonstrate use mass and energy balances for a food process. 6. Explain the transport processes and unit operations involved in processing a particular food. 7. Identify the principles and current practices of processing techniques and the effects of processing parameters in product quality. 8. Predict changes in food quality during storage or processing. 9. Understand the requirements for water utilization and waste management in food and food processing. Credits: 2.00

FS 34200 - Food Processing I Laboratory

Credit Hours: 1.00. This laboratory course applies food engineering principles and thermal processing methods for production of safe and high-quality foods. The course will include applications of mathematics and physics principles in food processing operations, engineering problem-solving exercises and laboratory demonstrations. Engineering concepts such as heat transfer, fluid flow, mass and energy balances applied to various food systems will be a major portion of this laboratory.
Learning Outcomes: 1. Apply mathematical principles to food processing application. 2. Demonstrate an understanding of energy, heat transfer and fluid flow principles. 3. Apply engineering principles to thermal processing of foods. 4. Identify conditions under which microorganisms are commonly inactivated, killed, or made harmless in foods including pasteurization, sterilization, and aseptic processing. 5. Demonstrate use mass and energy balances for a food process. Credits: 1.00

FS 36100 - Food Plant Sanitation

Credit Hours: 1.00. Relation of food-plant sanitation to good manufacturing practices and regulations affecting sanitation; organization of a food-plant sanitation program; sanitary building and equipment construction; selection of cleaning, sanitizing, and pesticidal compounds; water, air, and waste treatment; food

storage and transportation.

Credits: 1.00

FS 36200 - Food Microbiology

Credit Hours: 3.00. Microbiology of foods, with emphasis on the conditions for growth of microorganisms and degradation of food components, preservation methods, use of Hazard Analysis and Critical Control Point (HACCP) concepts, and microorganisms associated with foodborne illness, and modern detection methods.

Learning Outcomes: 1. Students should be able to identify the major components of food that affect microbial growth, to identify degradation in foods when microorganisms grow. 2. Students will be able to explain how preservations methods affect microbes in food, to explain major foodborne pathogens and under what conditions they thrive, to use microbiological information and molecular techniques to solve practical problems of the food industry. Credits: 3.00

FS 36300 - Food Microbiology Laboratory

Credit Hours: 2.00. Classic and molecular methods for enumerating, isolating, and identifying spoilage, fermentative, and pathogenic food microorganisms in food systems.

Learning Outcomes: 1. Perform proper aseptic technique. 2. Sample foods for microbial analyses. 3. Test food products for common microorganism. 4. Interpret data obtained from microbiological analysis. 4. Understand basic molecular techniques used to identify foodborne pathogens. Credits: 2.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

17 Credits

Spring 3rd Year

FS 45300 - Food Chemistry

Credit Hours: 3.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Understand the importance of food chemistry and the relationship of food chemistry to other food science areas. 2. Understand the structures and functions of major food components, including water, proteins, carbohydrates, lipids, vitamins, and minerals. 3. Understand major reactions occurring with macronutrients (water, proteins, carbohydrates, lipids) in foods and impacts on shelf-life. 4. Identify the major components and reactions occurring in major food groups, including fruits, vegetables, grains, legumes, red meats, poultry, eggs, fish, and shellfish. 5. Be able to describe types and uses of basic sensory tests. 6. Be able to identify functions of

most or all ingredients listed on the ingredient label of a food product. 7. Be able to discuss alternative ingredient choices for food products. 8. Be able to write a scientific abstract using IFT formatting. Credits: 3.00

FS 45400 - Food Chemistry Laboratory

Credit Hours: 1.00. Laboratory to demonstrate application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Performance of the students' progress will be evaluated by 7 lab reports and 3 in-class problem solving activities. Credits: 1.00

FS 46700 - Food Analysis

Credit Hours: 3.00. Application of quantitative and qualitative physical, chemical, and instrumental methods of analysis to the examination of food products; evaluation of methods for specific applications.

Learning Outcomes: 1. Describe the principles of the official and rapid methods of analysis for the following food components: moisture, ash, fat, and protein. 2. Select and justify the use of: (for any given food product) a) an official method, and b) a rapid method of analysis for the following food components: moisture, ash, fat, and protein. 3. Describe the principles of the method(s) of analysis for the following food components or properties: individual sugars, starch, total dietary fiber, individual minerals, oxygen demand, texture, color, lipid oxidation, lipid saturation, titratable acidity, extraneous matter, protein nutritional quality, protein functional properties. 4. Explain the principles and applications of the following techniques in food analysis: chromatography, electrophoresis, spectroscopy, spectrometry, immune-based assays, enzymatic assays, animal assays. 5. Identify government regulations that dictate industrial standard practices of food analysis. Credits: 3.00

FS 46900 - Food Analysis Laboratory

Credit Hours: 2.00. Practical laboratory applications of food analysis, including relevant calculations using data gathered and interpretation of data. (Intended for upper-division students.)

Learning Outcomes: 1. Demonstrate practical proficiency in a food analysis laboratory, including relevant calculations using data gathered. Credits: 2.00

15 Credits

Fall 4th Year

FS 44200 - Food Processing II

Credit Hours: 2.00. Study of food processing and preservation methods based on the integrated knowledge of microbiology, chemistry, and food engineering; emphasis will be on temperature reduction, water activity, concentration, dehydration, irradiation, and extrusion.

Learning Outcomes: 1. Have sufficient knowledge of food chemistry to control reactions in foods. 2. Understand the major chemical reactions that limit shelf-life of foods. 3. Identify the conditions under which the important pathogens are commonly inactivated, killed, or made harmless in foods. 4. Understand the principles involving food preservation via fermentation processes. 5. Be able to identify the conditions, including sanitation practices under which the important pathogens and spoilage microorganisms are commonly inactivated, killed, or made harmless in foods. 6. Explain the spoilage and deterioration mechanisms in foods and methods to control deterioration and spoilage. 7. Understand the principles that make a food product safe for consumption. 8. Be able to use mass and energy balances for a given food process. 9. Explain the unit operation required to produce a given food product. 10.Understand

the principles and current practices of processing techniques and the effects of processing parameters on product quality. 11.Be able to apply and incorporate the principles of food science in practical, real-world situations. 12.Define a problem, identify causes and possible solutions, and make thoughtful recommendations. 13.Work effectively on a team project. Credits: 2.00

FS 44400 - Statistical Process Control

Credit Hours: 1.00. Basic concepts and techniques of solving quality problems and assuring the quality of production processes; emphasis is on quality improvement programs, problem-solving tools, control charts for variables and attributes, process capability analysis, and sampling methods. Course meets during weeks 6-10.

Credits: 1.00

FS 44700 - Food Processing II Laboratory

Credit Hours: 1.00. This lab is designed to build upon fundamental concepts associated with the preservation and processing of various food products. Concepts to be covered include water activity, dehydration (drum, spray and freeze drying), frying, high pressure, microwave and ohmic heating. The focus of this lab will be hands-on production of various food products and the demonstration of fundamental food processing unit operations and calculations related to each preservation method.

Learning Outcomes: 1. Perform experiments using appropriate food processing unit operations to create various food products. 2. Write a lab report that includes analysis and interpretation of the results. 3. Work on a project team to duplicate a commercial food product and present the finding of the project in an oral and written report. Credits: 1.00

FS 48200 - Food Science Senior Seminar

Credit Hours: 1.00. Oral and written reports on selected food science topics.

Credits: 1.00

FS 53000 - Food Ingredient Technology

Credit Hours: 1.00. Identifies functions of ingredients listed on ingredient labels of food products and discusses alternative ingredient choices for food products.

Credits: 1.00

12 Credits

Spring 4th Year

FS 34000 - Introduction To Food Law And Regulations

Credit Hours: 1.00. This course will cover basic knowledge and familiarity of the principal law and regulations governing raw and processed foods. Class meets during weeks 1-5.

Learning Outcomes: 1. To gain a basic knowledge and familiarity of the principal laws and regulations governing raw and processed foods. 2. To develop an understanding of the law's core - adulteration and misbranding. 3. To learn basic food labeling and health claim regulations. 4. To obtain a working knowledge of US food law and promulgated regulations, current issues concerning food regulations, and how to obtain further information for specific regulatory problems. Credits: 1.00

FS 43500 - Sensory Science

Credit Hours: 1.00. Introduction to the fundamental concepts and practices of sensory analysis of food products. Technical aspects of planning and conducting human sensory panels on food products including analysis and interpretation of collected data. Course meets weeks 1-8.

Learning Outcomes: 1. Solve typical sensory problems occurring in the food industry. 2. Conduct sensory testes, analyze and interpret the results. 3. Write a report and executive summary of the findings. Credits: 1.00

FS 44300 - Food Product Design (Capstone)

Credit Hours: 3.00. Teams develop a new product from concept through marketing. Final case study defense is presented to faculty and peers. Classes include guest lectures from the food industry.

Learning Outcomes: 1. Apply fundamental aspects of food chemistry, microbiology, food safety, nutrition, processing and packaging in

the design and develop a new product from market concepts to practical prototype. 2. Apply knowledge food ingredient sourcing and functionality to the product development process. 3. Understand the basics of project management in the context of group projects. 4. Develop insight into bench top to pilot scale prototyping of food products. 5. Apply statistical principles through process control, experimental design and assessment of experimental data. 6. Have an appreciation for factors impacting product shelf-life and methods to control spoilage. 7. Intelligently discuss current topics in food science and trends that impact the food industry. Credits: 3.00

13-14 Credits

Forestry: Forest Management Concentration, BSFOR

About the Program

Degree Requirements

Departmental/Program Major Courses (68 credits)

Required Major Courses (36 credits)

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data

in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various

types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth

and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

Forestry Management Concentration Courses (32 credits)

Forest Management Concentration Required Courses (26 credits)

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Learn fundamental

principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and

behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common basic statistical packages. Credits: 3.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

FNR 43300 - Grand Challenges In Forest Management

Credit Hours: 3.00. This course will guide students through readings, discussions, and presentations of the grand challenges that face the field of forest management. These topics will vary with each iteration of the class but may include topics such as climate change, invasive species, pressure on forest lands from a growing population, altered disturbance regimes, development of new silvicultural techniques, economic pressure at multiple scales, and shifting public perceptions on the management of forests. Students will examine and discuss these challenges from the vantage points of multiple stakeholders to gain insight into their complexity and importance. Students will read and discuss on average 2-4 research or review articles, book chapters, or other sources per week.

Learning Outcomes: 1. Identify and discuss major challenges facing the field of forest management. 2. Describe how these challenges interact and develop an understanding of how these interactions may result in amplified effects on forests. 3. Understand how these challenges may be viewed from a variety of perspectives by different stakeholders. 4. Identify how forest management may be used to mitigate some of the effects of these challenges. 5. Organize and present an oral and written case study of a forest management scenario that is linked to multiple challenges discussed in class. Credits: 3.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

Forest Health Selectives (3 credits)

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BTNY 52500 - Intermediate Plant Pathology

Credit Hours: 3.00. Examines the biological and pathological characteristics of major causal agents; concepts of epidemiology and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions; disease management practices; and methods of disease diagnosis.

Learning Outcomes: 1. Understand concepts of disease and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions. 2. Understand the current state of knowledge in plant pathology from applied to molecular plant pathogen interactions. 3. Understand importance of plant disease in food security. 4. Understand plant pathogens and how they cause diseases; the biological and pathological characteristics of major pathogens; Understand pathogenesis of bacterial, fungal, nematode and viral diseases. 5. Understand plant disease resistance pathways, genetic resistance mechanisms starting form gene for gene interactions. 6. Understand resistance to necrotrophic plant pathogens. 7. Understand biotechnological approaches to plant diseases resistance. 8. Identify and describe an economically important plant disease. Credits: 3.00

BTNY 53500 - Plant Disease Epidemiology

Credit Hours: 3.00. Plant disease epidemics occur due to the suitable combination of various elements of the agroecosystem. Many plant pathogens and diseases have increased their geographic distribution and intensity in the U.S. and the world. A lack of epidemiological understanding can exacerbate problems and significantly challenge the management of diseases at the field level. This course is an introduction to the epidemiological basis of disease management strategies. The course includes concepts in botanical epidemiology, disease assessment and measurement, disease modeling, epidemics comparison, and a revision of the traditional plant disease control principles. *Plant Disease Epidemiology* is an upper-level course for students interested in plant pathology, agronomy, data-driven Ag, national or international agriculture, or closely related areas. Although some pathosystems are used as model systems, *Plant Disease Epidemiology* is not a "how-to" course on controlling specific plant diseases.

Learning Outcomes: 1. Standardize terminology used in epidemiology for disease management purposes. 2. Analyze the accuracy and precision of data. 3. Use models to describe plant disease epidemics. 4. Explain how epidemiology is used to evaluate disease

management options. Credits: 3.00

BTNY 55800 - Pathogens Of Plants

Credit Hours: 3.00. Plant pathology is the science of plant diseases and of the microorganisms that cause them and of our attempts to manage plant diseases. The ultimate goal of plant pathologists is to reduce the losses caused by diseases, thereby, increasing both the quality and quantity of the world food supply. Plant diseases are caused by the same types of microorganisms that cause disease in animals and humans and, as such, many of the principles that apply to human and animal medicine apply to plant diseases. It is the objective of this course to introduce students to the major types of plant pathogens (plant pathogenic bacteria, viruses, nematodes, and fungi), their basic biology and examples of the types of diseases they cause. It will be expected that students have knowledge in plant pathology.

Learning Outcomes: 1. Describe the characteristics of plant pathogenic bacteria, fungi, viruses, and nematodes and to distinguish between these pathogens. 2. Describe the methods that each pathogen group utilizes for reproduction, spread, infection of hosts, disease induction in hosts, and long term survival. 3. Classify plant pathogens in current taxonomic schemes. 4. Describe the disease cycles for plant pathogens covered in the course. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

Forestry Selectives (3 credits)

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical

properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

FNR 44400 - Arboricultural Practices

Credit Hours: 4.00. Course covers a broad spectrum of arboriculture principles and techniques, including pruning, transplanting, fertilization, climbing, rigging, removal, cabling, bracing, lightning protection, hazard tree evaluation, tree appraisal, and street tree inventory.

Learning Outcomes: 1. Recognize and explain the various arboricultural practices that enhance the sustainability of trees in the built environment. 2. Apply essential plant health care practices and arboricultural practices used in the cultivation and management of trees and other woody plants in the built environment including planting, pruning and pest management. Credits: 4.00

FNR 53500 - Forest Regeneration And Restoration

Credit Hours: 3.00. An overview of the dynamics associated with the regeneration of forestlands in North America. Topics include: seed collection and handling, forest tree nursery operations, seedling quality, managing for environmental stresses, planting operations, early stand management, and natural regeneration. Permission of instructor required. Offered in odd-numbered years.

Learning Outcomes: 1. Apply the following activities common in forest regeneration and restoration projects: artificial and natural regeneration, tree seed, site preparation, seedling quality and assessment, seedling storage and handling, planting operations, vegetation management, managing stresses in the regeneration environment, early stand management, and regeneration planning. Credits: 3.00

FNR 53600 - Ecology Of Disturbance

Credit Hours: 2.00. Advanced lecture- and discussion-based class examining how disturbance shapes the composition and structure of communities and landscapes across major terrestrial biomes. Students will examine and discuss the relationships between disturbance intensity, frequency, and spatial extent and how these characteristics affect ecological processes and ecologically-based management of forest and grassland ecosystems. The class will also examine the synergistic effects of multiple disturbances and the restoration of endemic disturbance regimes in contemporary ecosystems. Course is reading intensive; students will read and discuss on average 3-8 journal articles per week.

Learning Outcomes: 1. Describe how disturbance shapes community composition and structure for several major terrestrial biomes. 2. Understand how disturbance regulates biological diversity across terrestrial and aquatic ecosystems. 3. Understand the relationship between disturbance intensity, frequency, and spatial extent and how those factors affect management of forest and grassland ecosystems. 4. Describe the synergistic nature of disturbance and identify how disturbance factors interact across a landscape. 5. Describe how contemporary and restored disturbance regimes may facilitate or suppress the spread of invasive species. 6. Understand how management activities can mimic endemic disturbance regimes to promote biodiversity and sustainability. Credits: 2.00

FNR 53601 - Ecology Of Disturbance Practicum

Credit Hours: 1.00. This course is the practicum for FNR 53600 , hence enrollment is contingent upon enrollment in FNR 53600 . Course consists of a one or two-week long field trip to a remote site; prior trips have been taken to the Great Smokey National Park over spring break. Course requires an additional travel fee, depending on location visited.

Learning Outcomes: 1. How disturbance shapes

community composition and the distribution of species across landscapes. 2. How alterations to endemic disturbance regimes affect the composition, structure, and function of ecosystems. 3. How interactions between natural disturbance and invasion of exotic species influence forest community development. 4. Management that uses natural disturbance to restore and maintain biotic communities and ecosystems. Credits: 1.00

Other Departmental/Program Course Requirements (48-50 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or

networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and

non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the

design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Electives (6-8 credits)

GPA Requirements

Program Requirements

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed

include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

14-15 Credits

Spring 1st Year

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. 16-17 Credits

Fall 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with

applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

15 Credits

Spring 2nd Year

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

15 Credits

Summer Session

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems.

Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

6 Credits

Fall 3rd Year

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define

patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

15 Credits

Spring 3rd Year

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common

basic statistical packages. Credits: 3.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

15 Credits

Fall 4th Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and

consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

16 Credits

Spring 4th Year

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

FNR 43300 - Grand Challenges In Forest Management

Credit Hours: 3.00. This course will guide students through readings, discussions, and presentations of the grand challenges that face the field of forest management. These topics will vary with each iteration of the class but may include topics such as climate change, invasive species, pressure on forest lands from a growing population, altered disturbance regimes, development of new silvicultural techniques, economic pressure at multiple scales, and shifting public perceptions on the management of forests. Students will examine and discuss these challenges from the vantage points of multiple stakeholders to gain insight into their complexity and importance. Students will read and discuss on average 2-4 research or review articles, book chapters, or other sources per week.

Learning Outcomes: 1. Identify and discuss major challenges facing the field of forest management. 2. Describe how these challenges interact and develop an understanding of how these interactions may result in amplified effects on forests. 3. Understand how these challenges may be viewed from a variety of perspectives by different stakeholders. 4. Identify how forest management may be used to mitigate some of the effects of these challenges. 5. Organize and present an oral and written case study of a forest management scenario that is linked to multiple challenges discussed in class. Credits: 3.00

10-12 Credits

Forestry: Forest Science Concentration, BSFOR

About the Program

Degree Requirements

Departmental/Program Major Courses (70 credits)

Required Major Courses (36 credits)

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic

principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain

how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand

tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

Forest Science Concentration Courses (34 credits)

Forest Science Concentration Required Courses (22 credits)

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

FNR 49900 - Thesis

Credit Hours: 1.00 to 6.00. Thesis. Permission of instructor required.

Learning Outcomes: 1. Write a research proposal describing a research initiative and explaining the scientific value in conducting the research. 2. Conduct research including forming the project scope, initiating and conducting the research, analyzing data and summarizing the results. 3. Present a summary of the research's findings in either oral or written format. Credits: 1.00 to 6.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on

examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common basic statistical packages. Credits: 3.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

Forest Health Selectives (3 credits)

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BTNY 52500 - Intermediate Plant Pathology

Credit Hours: 3.00. Examines the biological and pathological characteristics of major causal agents; concepts of epidemiology and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions; disease management practices; and methods of disease diagnosis.

Learning Outcomes: 1. Understand concepts of disease and disease assessment; physiology, genetics, and molecular biology of host-pathogen interactions. 2. Understand the current state of knowledge in plant pathology from applied to molecular plant pathogen interactions. 3. Understand importance of plant disease in food security. 4. Understand plant pathogens and how they cause diseases; the biological and pathological characteristics of

major pathogens; Understand pathogenesis of bacterial, fungal, nematode and viral diseases. 5. Understand plant disease resistance pathways, genetic resistance mechanisms starting form gene for gene interactions. 6. Understand resistance to necrotrophic plant pathogens. 7. Understand biotechnological approaches to plant diseases resistance. 8. Identify and describe an economically important plant disease. Credits: 3.00

BTNY 53500 - Plant Disease Epidemiology

Credit Hours: 3.00. Plant disease epidemics occur due to the suitable combination of various elements of the agroecosystem. Many plant pathogens and diseases have increased their geographic distribution and intensity in the U.S. and the world. A lack of epidemiological understanding can exacerbate problems and significantly challenge the management of diseases at the field level. This course is an introduction to the epidemiological basis of disease management strategies. The course includes concepts in botanical epidemiology, disease assessment and measurement, disease modeling, epidemics comparison, and a revision of the traditional plant disease control principles. *Plant Disease Epidemiology* is an upper-level course for students interested in plant pathology, agronomy, data-driven Ag, national or international agriculture, or closely related areas. Although some pathosystems are used as model systems, *Plant Disease Epidemiology* is not a "how-to" course on controlling specific plant diseases.

Learning Outcomes: 1. Standardize terminology used in epidemiology for disease management purposes. 2. Analyze the accuracy and precision of data. 3. Use models to describe plant disease epidemics. 4. Explain how epidemiology is used to evaluate disease management options. Credits: 3.00

BTNY 55800 - Pathogens Of Plants

Credit Hours: 3.00. Plant pathology is the science of plant diseases and of the microorganisms that cause them and of our attempts to manage plant diseases. The ultimate goal of plant pathologists is to reduce the losses caused by diseases, thereby, increasing both the quality and quantity of the world food supply. Plant diseases are caused by the same types of microorganisms that cause disease in animals and humans and, as such, many of the principles that apply to human and animal medicine apply to plant diseases. It is the objective of this course to introduce students to the major types of plant pathogens (plant pathogenic bacteria, viruses, nematodes, and fungi), their basic biology and examples of the types of diseases they cause. It will be expected that students have knowledge in plant pathology.

Learning Outcomes: 1. Describe the characteristics of plant pathogenic bacteria, fungi, viruses, and nematodes and to distinguish between these pathogens. 2. Describe the methods that each pathogen group utilizes for reproduction, spread, infection of hosts, disease induction in hosts, and long term survival. 3. Classify plant pathogens in current taxonomic schemes. 4. Describe the disease cycles for plant pathogens covered in the course. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

Forest Science Selectives (9 credits)

Biometrics and Statistics

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

STAT 51400 - Design Of Experiments

Credit Hours: 3.00. Fundamentals, completely randomized design; randomized complete blocks; latin square; multi-classification; factorial; nested factorial; incomplete block and fractional replications for 2n, 3n, 2m x 3n; confounding; lattice designs; general mixed factorials; split plot; analysis of variance in regression models; optimum design. Use of existing statistical programs.

Learning Outcomes: 1. Understand design principles and use these principles to plan and implement an experiment in such a way that a statistical analysis results in valid and objective conclusions. 2. Know how to choose an appropriate design given the available resources, factors of interest, and information on nuisance factors. 3. Perform the proper statistical analysis and draw valid conclusions from any designed experiment. Credits: 3.00

BIOL 58210 - Ecological Statistics

Credit Hours: 3.00. This course covers topics that are useful for successfully designing and analyzing statistically observational and experimental studies in ecology, animal behavior, evolutionary biology, forestry, wildlife sciences, fisheries, etc. Some topics are: differences between hypotheses and predictions, design of an ecological study, general linear models, assumptions, different types of designs (factorial, nested, repeated measures, blocks, split-plots, etc.), fitting models to data, etc. The course will focus on the conceptual understanding of these topics (e.g., interpreting the results of statistical tests) and practice with statistical programs and real datasets.

Learning Outcomes: 1. Pose scientific questions, hypotheses, and predictions. 2. Plan and design ecological research projects. 3. Determine sample size requirements. 4. Use and interpret descriptive statistics. 5. Use general linear models and interpret their results. 6. Check for the assumptions of general linear models. 7. Manage data. 8. Understand the potential and limitations of statistics in ecological research. Credits: 3.00

Forest Ecology and Silviculture

AGRY 34900 - Soil Ecology

Credit Hours: 3.00. An introductory course that will cover the basic concepts of soil ecology. Biological diversity and the interactions between and within biotic and abiotic components of the soil ecosystem, nutrient cycling, and genetic engineering are introduced.

Credits: 3.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

BIOL 59100 - Field Ecology

Credit Hours: 0.00 to 4.00. A field course in ecology that stresses natural history and testing ecological theory under natural conditions. Group and individual projects include observational and experimental approaches. Emphasis is on the study of plant and animal species interactions in terrestrial (including montane and coastal) and aquatic habitats. Issues in community, population, behavioral, and conservation biology are addressed. Several all-day Saturday and two weekend field trips. Offered in alternate years. Permission of instructor required.

Credits: 0.00 to 4.00

FNR 53500 - Forest Regeneration And Restoration

Credit Hours: 3.00. An overview of the dynamics associated with the regeneration of forestlands in North America. Topics include: seed collection and handling, forest tree nursery operations, seedling quality, managing for environmental stresses, planting operations, early stand management, and natural regeneration. Permission of instructor required. Offered in odd-numbered years.

Learning Outcomes: 1. Apply the following activities common in forest regeneration and restoration projects: artificial and natural regeneration, tree seed, site preparation, seedling quality and assessment, seedling storage and handling, planting operations, vegetation management, managing stresses in the regeneration environment, early stand management, and regeneration planning. Credits: 3.00

FNR 53600 - Ecology Of Disturbance

Credit Hours: 2.00. Advanced lecture- and discussion-based class examining how disturbance shapes the composition and structure of communities and landscapes across major terrestrial biomes. Students will examine and discuss the relationships between disturbance intensity, frequency, and spatial extent and how these characteristics affect ecological processes and ecologically-based management of forest and grassland ecosystems. The class will also examine the synergistic effects of multiple disturbances and the restoration of endemic disturbance regimes in contemporary ecosystems. Course is reading intensive; students will read and discuss on average 3-8 journal articles per week.

Learning Outcomes: 1. Describe how disturbance shapes community composition and structure for several major terrestrial biomes. 2. Understand how disturbance regulates biological diversity across terrestrial and aquatic ecosystems. 3. Understand the relationship between disturbance intensity, frequency, and spatial extent and how those factors affect management of forest and grassland ecosystems. 4. Describe the synergistic nature of disturbance and identify how disturbance factors interact across a landscape. 5. Describe how contemporary and restored disturbance regimes may facilitate or suppress the spread of invasive species. 6. Understand how management activities can mimic endemic disturbance regimes to promote biodiversity and sustainability. Credits: 2.00

FNR 53601 - Ecology Of Disturbance Practicum

Credit Hours: 1.00. This course is the practicum for FNR 53600 , hence enrollment is contingent upon enrollment in FNR 53600 . Course consists of a one or two-week long field trip to a remote site; prior trips have been taken to the Great Smokey

National Park over spring break. Course requires an additional travel fee, depending on location visited.

Learning Outcomes: 1. How disturbance shapes community composition and the distribution of species across landscapes. 2. How alterations to endemic disturbance regimes affect the composition, structure, and function of ecosystems. 3. How interactions between natural disturbance and invasion of exotic species influence forest community development. 4. Management that uses natural disturbance to restore and maintain biotic communities and ecosystems. Credits: 1.00

FNR 54300 - Conservation Biology I

Credit Hours: 3.00. Introduction to conservation biology, including population dynamics and genetic structure of rare organisms. Recovery planning, restoration ecology, environmental policy making, and sustainable developments are considered, as is ethics in conservation of biological diversity. Offered in odd-numbered years. Permission of instructor required.

Learning Outcomes: 1. Read and interpret the scientific literature on conservation of natural resources with an awareness of the current status of what is known about biodiversity, endangered species and ecosystems, biological invasions, and the effects of climate change on natural communities. 2. Explain how conservation research is carried out, and appreciate common pitfalls in designing research for goals of conservation interest. 3. Consider and evaluate the balance between conservation goals and other priorities in land management, societal and economic goals, and socio-political systems. Credits: 3.00

Forest Geospatial Analytics

ASM 21600 - Introduction To Surveying

Credit Hours: 1.00. Introduction to plane surveying, including instruction and practice in the use of surveying instruments. Basic overview of distance/angle measurement, leveling, direction, traversing, and mapping. Each weekly topic includes practical application and field exercises as applied to landscape architecture and forestry.

Learning Outcomes: 1. Demonstrate appropriate listening, speaking, writing, presentation, and interpersonal skills needed to interact and communicate effectively. 2. Function on multidisciplinary teams. 3. Use economics principles, scientific technologies, techniques, and skills necessary to manage agricultural systems. Credits: 1.00

AT 20900 - Autonomous Aircraft Technology And Maintenance I

Credit Hours: 3.00. This course introduces fundamental concepts of autonomous aircraft technology and maintenance. Topics include history, airframe and powerplant selection, regulations governing uncrewed systems, airspace descriptions, safety, autonomous system programming and calibration, data package options, weather, system maintenance and repair, manual flight training, and aerodynamics and flight controls for autonomous aircraft.

Learning Outcomes: 1. Reflect on the history of UAS and project the future growth of UAS. 2. Analyze data sources to determine flight feasibility and mitigate hazards. 3. Collaborate effectively as a crew member both in the lab and in the field. 4. Design and print flight ready 3D model. 5. Assess airspace and flight feasibility by submission of FAA waiver application. 6. Demonstrate effective design choices. Credits: 3.00

Plant Biology

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given

information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

AGRY 48000 - Plant Genetics

Credit Hours: 3.00. Principles and recent advances in plant genetics including: genetic segregation, linkage, DNA markers and applications, chromosomes and genomes, variation in chromosome number and structure, mutation, recombination and DNA repair, quantitatively inherited traits, introduction to principles of population genetics, gene expression, gene organization, regulation of gene activity, gene function, identifying important genes, cloning genes, reverse genetics, plant transformation, applications of genetic engineering, genome sequencing, using sequence data.

Credits: 3.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer

technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

BTNY 42000 - Plant Cellular And Developmental Biology

Credit Hours: 3.00. This course will focus on the fundamentals of plant cellular and developmental biology. Topics to be covered include: the structure and function of plant organelles and membranes; the cell cycle; DNA, RNA and protein synthesis; the secretory pathway, and the cellular basis of development and whole plant morphogenesis.

Learning Outcomes: 1. Understand the organization of plant genomes and cells. 2. Know how plant organs, tissues and cells are organized. 3. Know how a plant cell secretes proteins. 4. Know the mechanism of protein degradation and why it is a key aspect of developmental pathways. 5. Know the function of each plant hormone, understand where and how it is made, and most importantly, how that hormone exerts its influence. 6. Feel confident entering a graduate-level course in plant molecular, cellular or developmental biology. Credits: 3.00

FNR 30500 - Conservation Genetics

Credit Hours: 3.00. Fundamentals and principles of genetics, including Mendelian inheritance, genetic mapping & linkage, DNA fingerprinting, phylogeography, and speciation. Topics cover the theoretical and empirical evidence illustrating how mutation, migration, drift, and natural selection influence the evolution of genes in natural populations. Designed for ecologists and natural resource professionals.

Learning Outcomes: 1. Develop conceptual understanding of modern genetics and the use of molecular markers in studies of wildlife/fisheries/forest management, ecology, and evolutionary biology. 2. Explore how genetic information is used in sportfish stockings, wildlife reintroductions, and selective harvest of native trees. 3. Recognize and predict the genetic ramifications of these artificial activities. 4. Compare these effects to the consequences of natural disturbances. (e.g., glaciations). Credits: 3.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students

will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 39500 - Special Assignments

Credit Hours: 0.00 to 18.00. Reading, discussions, written reports, seminar presentations, and field or laboratory work provided for enrichment in special areas of the biological sciences. Permission of instructor required.

Credits: 0.00 to 18.00

BIOL 41500 - Introduction To Molecular Biology

Credit Hours: 3.00. An introduction to modern molecular biology techniques and how they are used to address current topics in gene regulation. Emphasis will be placed on experimental procedures and model systems, such as site-directed mutagenesis of isolated genes and their subsequent introduction into prokaryotic and eukaryotic cells. Topics will address the molecular control mechanisms associated with DNA replication, RNA transcription, RNA processing, and differential gene expression.

Credits: 3.00

BIOL 47800 - Introduction To Bioinformatics

Credit Hours: 3.00. (CS 47800) Bioinformatics is broadly defined as the study of molecular biological information, targeting particularly the enormous volume of DNA sequence and functional complexity embedded in entire genomes. Topics will include understanding the evolutionary organization of genes (genomics), the structure and function of gene products (proteomics), and the dynamics of gene expression in biological processes (transcriptomics). Inherently, bioinformatics is interdisciplinary, melding various applications of computational science with biology. This jointly taught course introduces analytical methods from biology, statistics and computer science that are necessary for bioinformatics investigations. The course is intended for junior and senior undergraduates from various science backgrounds. Our objective is to develop the skills of both tool users and tool designers in this important new field of research.

Learning Outcomes: 1. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. 5. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 6. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 7. Demonstrate an understanding of laboratory skills used in genetics. 8. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 9. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry

and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

AGRY 52000 - Principles And Methods Of Plant Breeding

Credit Hours: 3.00. Introduction to methods and techniques of breeding field crops, with emphasis on the application of genetic principles; analysis of and present approach to the solution of specific breeding problems in selected field crops.

Credits: 3.00

AGRY 52500 - Crop Physiology And Ecology

Credit Hours: 3.00. Study of the physiological basis for growth, yield, and adaptation of crop plants. Topics emphasized include: carbohydrate assimilation and partitioning, nitrogen metabolism, crop growth and development, water relations, stress tolerance, and crop improvement using physiological genetics. Basic background in college level plant biology is recommended.

Credits: 3.00

BTNY 55200 - Molecular Approaches In Plant Biology

Credit Hours: 3.00. This is mainly a laboratory exercise course designed to help students to be more familiar with common molecular techniques used in plant pathology studies. Techniques will include DNA/RNA isolation, hybridization, sequence analyses, various PCR reactions, library construction and screening, protein isolation, and plant transformation. Lectures will cover basic principles and applied aspects of molecular studies in plant pathology, and recent advances in genomics and proteomics techniques.

Learning Outcomes: 1. To understand the basic principles of common molecular and genomic techniques. 2. To become familiar with the application of common molecular and genomic approaches in the field of plant biology/pathology.3)To obtain laboratory experience of performing common techniques used in molecular biology. Credits: 3.00

CHM 53300 - Introductory Biochemistry

Credit Hours: 3.00. A rigorous one-semester introduction to biochemistry.

Credits: 3.00

Other Departmental/Program Course Requirements (48-50 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex

philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections.

Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to

fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Electives (4-6 credits)

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world

issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. 14-15 Credits

Spring 1st Year

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

16-17 Credits

Fall 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically

evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

15 Credits

Spring 2nd Year

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

15 Credits

Summer Session

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos.

6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk

assessment for trees. Credits: 4.00

6 Credits

Fall 3rd Year

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

15 Credits

Spring 3rd Year

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance

management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 49900 - Thesis

Credit Hours: 1.00 to 6.00. Thesis. Permission of instructor required.

Learning Outcomes: 1. Write a research proposal describing a research initiative and explaining the scientific value in conducting the research. 2. Conduct research including forming the project scope, initiating and conducting the research, analyzing data and summarizing the results. 3. Present a summary of the research's findings in either oral or written format. Credits: 1.00 to 6.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common basic statistical packages. Credits: 3.00

FNR 38400 - Statistics For Natural Resources

Credit Hours: 3.00. Methods of statistical analysis and modeling for data and problems encountered in natural resources conservation, science and management. Emphasis is on application of methods and interpretation of results in the context of natural resource problems. Topics include introductory sampling design, exploratory analyses, general linear models, generalized linear models, introduction to resampling methods, likelihood-based model selection, and model goodness-of-fit.

Learning Outcomes: 1. Describe the importance of proper design and analysis when seeking answers/solutions to a broad array of natural resources issues. 2. Independently assess the relative merits of multiple analysis approaches when presented with data collected to improve our understanding of a particular process or pattern in natural resources. 3. Fit and evaluate regression models for quantitative and categorical response variables with an appropriate underlying probabilistic structure. Credits: 3.00

16 Credits

Fall 4th Year

FNR 49900 - Thesis

Credit Hours: 1.00 to 6.00. Thesis. Permission of instructor required.

Learning Outcomes: 1. Write a research proposal describing a research initiative and explaining the scientific value in conducting the research. 2. Conduct research including forming the project scope, initiating and conducting the research, analyzing data and summarizing the results. 3. Present a summary of the research's findings in either oral or written format. Credits: 1.00 to 6.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better

business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

13 Credits

Spring 4th Year

FNR 49900 - Thesis

Credit Hours: 1.00 to 6.00. Thesis. Permission of instructor required.

Learning Outcomes: 1. Write a research proposal describing a research initiative and explaining the scientific value in conducting the research. 2. Conduct research including forming the project scope, initiating and conducting the research, analyzing data and summarizing the results. 3. Present a summary of the research's findings in either oral or written

format. Credits: 1.00 to 6.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

12-14 Credits

Forestry: Sustainable Biomaterials Concentration, BSFOR

About the Program

Degree Requirements

Departmental/Program Major Courses (69 credits)

Required Major Courses (36 credits)

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems.

3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes

change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and

function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

Sustainable Biomaterials Concentration Courses (33 credits)

Sustainable Biomaterials Required Courses (21 credits)

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and

maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

FNR 48410 - Sustainable Wood Products, Furniture Design And Manufacturing

Credit Hours: 3.00. This project-based course explains principles of product development, furniture construction, strength design, performance testing, and product sustainability (life cycle analysis and end-of-life options). The course familiarizes students with methods such as Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer Numerical Control (CNC) router operation, rapid prototyping, and basics of secondary wood products manufacturing, to build an actual product.

Learning Outcomes: 1. Understand Computer Aided Design (CAD). 2. Understand Computer Aided Manufacturing (CAM). 3. Understand CNC router operation. 4. Understand rapid prototyping. 5. Understand the basics of secondary wood products manufacturing. 6. Understand the principles of sustainable product development. Credits: 3.00

Sustainable Biomaterials Selectives (12 credits)

AGEC 31000 - Farm Organization

Credit Hours: 3.00. Economic factors controlling success in farming; types of farming; business records and analysis; adjustment in organization to meet changing economic conditions; organization and management of successful farms.

Credits: 3.00

AGEC 32100 - Principles Of Commodity Marketing

Credit Hours: 3.00. An in-depth background on the origin, operation, and application of futures and options in risk management for agriculture. Covers grain, livestock, and yield futures and options. Applications of futures and options to price and yield risk management is provided. Comparison of expected results from various risk management alternatives and decision-making processes to use in selecting a risk management strategy.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

CSR 30900 - Leadership Strategies

Credit Hours: 3.00. Provides knowledge of humanistic processes that contribute to development of effective leadership.

Learning Outcomes: 1. Identify leadership principles and skills for the 21st-century organization. 2. Understand and apply ethical leadership. 3. Connect theory to applied solutions. 4. Apply critical thinking to leadership principles through in-class discussion and written assignments. Credits: 3.00

CSR 33200 - Cross-Cultural Marketing And International Retailing

Credit Hours: 3.00. Examination of marketing/retail practices used to target domestic and global consumer market segments. Development of successful retail and marketing strategies is stressed.

Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

AD 49000 - Special Problems In Art And Design

Credit Hours: 1.00 to 6.00. Individual problems in art and design. Permission of instructor required.

Learning Outcomes: 1. Varies due to nature of the course. Credits: 1.00 to 6.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design

of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Learning Outcomes: 1. Calculate various elements of time study and Takt time. 2. Apply various flow analysis tools. 3. Apply the principles of line balancing. 4. Calculate the efficiency of an assembly line. 5. Calculate facility space requirements. 6. Develop a systematic approach to layout and resource planning, incorporating basic material handling systems. Credits: 3.00

AD 53500 - Furniture Design

Credit Hours: 3.00. Examination of furniture design trends and designers. Explore materials and manufacturing processes. Design and build a full-size seating unit. Shop skills required. Permission of instructor required.

Credits: 3.00

ENTR 31000 - Marketing And Management For New Ventures

Credit Hours: 3.00. This course builds on the foundational skills developed in ENTR 20000 (prerequisite course) to bring students through the process of launching a new venture. Students work in teams to develop and validate business models for potential startups. This occurs through experiential activities including gathering feedback from potential customers, creating forecasts, developing a go-to-market strategy, and pitching to investors. Students can choose ENTR 31000, ENTR 31500, or ENTR 32500 to serve as the second required core course for the Certificate in Entrepreneurship and Innovation.

Learning Outcomes: 1. Validate new business concepts and business models. 2. Conduct primary market research with prospective customers. 3. Apply the financial knowledge necessary for sales forecasting and cash flow management. 4. Evaluate methods to acquire and manage financial resources for a proposed venture. 5. Persuade investors and partners to support an entrepreneurial venture. 6. Identify and recruit talent for an entrepreneurial team. 7. Participate effectively as a team member or leader. Credits: 3.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

TLI 15200 - Business Principles For Organizational Leadership

Credit Hours: 3.00. This course will introduce the topic of applied organization leadership in the context of working organizations. Topics include basic functions, structures, and operations of organizations, and an introduction to reading and understanding balance sheets, cash flow statements, and profit-loss statements.

Learning Outcomes: 1. Identify the business information that organizational leaders are expected to know to comprehensively manage the function and operation of profit and not-profit organizations. 2. Describe the major functions of business, including: operations, finance, marketing, and information technology. 3. Interpret balance sheets, cash flow statements,

and profit-loss statements. 4. Explore how organizations use technology to become competitive entities in global business environments. Credits: 3.00

Other Departmental/Program Course Requirements (48-50 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as

usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions.

6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Electives (5-7 credits)

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand

academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute

integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 1st Year

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8.

Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

16-17 Credits

Fall 2nd Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view.
Credits: 3.00

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana.
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.
Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

15 Credits

Spring 2nd Year

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

15 Credits

Summer Session

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17.

Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

6 Credits

Fall 3rd Year

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important

physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

13-15 Credits

Spring 3rd Year

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

15 Credits

Fall 4th Year

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 48410 - Sustainable Wood Products, Furniture Design And Manufacturing

Credit Hours: 3.00. This project-based course explains principles of product development, furniture construction, strength design, performance testing, and product sustainability (life cycle analysis and end-of-life options). The course familiarizes students with methods such as Computer-Aided Design (CAD), Computer-Aided Manufacturing (CAM), Computer Numerical Control (CNC) router operation, rapid prototyping, and basics of secondary wood products manufacturing, to build an actual product.

Learning Outcomes: 1. Understand Computer Aided Design (CAD). 2. Understand Computer Aided Manufacturing (CAM). 3. Understand CNC router operation. 4. Understand rapid prototyping. 5. Understand the basics of secondary wood products manufacturing. 6. Understand the principles of sustainable product development. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making).

6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

13 Credits

Spring 4th Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

15 Credits

Forestry: Urban Forestry, BSFOR

About the Program

Degree Requirements

Departmental/Program Major Courses (75 credits)

Required Major Courses (36 credits)

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos, topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on

the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30.

Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and

written communication. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

Urban Forestry Concentration Courses (39 credits)

Urban Forestry Required Courses (33 credits)

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of

forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

FNR 44400 - Arboricultural Practices

Credit Hours: 4.00. Course covers a broad spectrum of arboriculture principles and techniques, including pruning, transplanting, fertilization, climbing, rigging, removal, cabling, bracing, lightning protection, hazard tree evaluation, tree appraisal, and street tree inventory.

Learning Outcomes: 1. Recognize and explain the various arboricultural practices that enhance the sustainability of trees in the built environment. 2. Apply essential plant health care practices and arboricultural practices used in the cultivation and management of trees and other woody plants in the built environment including planting, pruning and pest management. Credits: 4.00

FNR 44500 - Urban Forest Issues

Credit Hours: 3.00. This course presents an array of topics germane to the management of trees in the urban environment. This includes the benefits of trees and general tree care, tree appraisal, tree ordinances, tree inventory and management plans, and tree preservation and construction.

Learning Outcomes: 1. Understand sustainable urban & community forestry and why it is important. 2. Recognize the numerous benefits of urban/community forests to society, and the ecosystem services provided. 3. Identify common issues, challenges and pressures which threaten the urban forest. 4. Recognize the unique features of urban forest systems and how to apply the principles of urban forest management to real-world cases. 5. Acquire an understanding of sustainability as it pertains to urban forests and urban forestry programs in metropolitan regions, cities, towns, communities and neighborhoods. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know

what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

Urban Forestry Concentration Selectives (6 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and

symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

FNR 30110 - Sustainable Wood Products Manufacturing

Credit Hours: 3.00. Sustainable wood processing methods for hardwood and softwood sawmilling; veneering; plywood; pallets; lumber drying; reconstituted products including particleboard, medium density fiberboard, and oriented strand board; wood preservation including lumber, crossties, poles, and piling; secondary products including furniture, cabinets, millwork; and others; wood residues, woody biomass and others as appropriate will be covered. In addition to processing methods, the grading of material, including logs, hardwood and softwood lumber and consideration of applicable standards, and sustainability initiatives will be covered.

Learning Outcomes: 1. Provide insight into the many products and processes which are used to sustainably convert round timber into consumer and industrial products, emphasis on the hardwood industry. 2. Provide adequate background in order to be employable by the wood manufacturing industry. Credits: 3.00

FNR 31110 - Identification And Basic Properties Of Wood

Credit Hours: 3.00. The identification of macro characteristics of North American wood species and discussion of their availability, distribution, and unique characteristics. Basic physical, mechanical and working properties of wood, including orthotropic nature of wood, grain, texture, moisture content, shrinking, specific gravity, machining, thermal properties, electrical properties, strength prosperities, natural characteristics affecting mechanical properties, also the effect of manufacturing and service environment on mechanical properties through laboratory exercises and field trips. Students will study the cellular structure and arrangement of woody biomaterials, their manufacturing characteristics and uses.

Learning Outcomes: 1. Learn the identifying macro characteristics of commercially important woody biomaterials (color, odor, cellular arrangement, grain patterns, character marks, etc.) through laboratory exercises and field trips. 2. Learn the cellular structure and arrangement of woody biomaterials. 3. Know the manufacturing characteristics and uses of woody biomaterials. 4. Identify upon sight the major commercial hardwood and softwood species produced in North America. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay

individual lodging or meal expenses when necessary.

Credits: 3.00

LA 32500 - Ecological Landscape Performance And Planting

Credit Hours: 3.00. Study of plants and their integration with other site features (e.g., water, landform) to increase sustainability. Plants will not only be studied for their aesthetic and spatial uses in the landscape, but also their ecological functions and temporal dynamics. The relationship of plants to site planning, ecosystems, and human use will be explored. Various scales, sustainable practices, and landscape performance will be considered. Class trip may be required. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Be familiar with and able to use design principles and elements in the development of planting designs and understand the implications of plants as living things. 2. Understand the relationship of planting design, ecological functions, social factors, and sustainability. 3. Have a clear understanding of the concept and measurement methods of landscape performance. 4. Set smart and measurable sustainable goals and be able to select suitable plant material and create effective compositions appropriate for a variety of site conditions. 5. Know how to observe plants from multiple perspectives (plant needs & site/environmental conditions; human spatial needs; aesthetic responses; ecological implications) and be able to integrate these perspectives into functional designs. Credits: 3.00

LA 32600 - Studio V: Community Design And Planning

Credit Hours: 4.00. Community planning and design. Past, current and emerging planning theories are investigated via lectures, research assignments and studio projects. The interrelationship of land use, circulation, and open space are explored using environmental and sustainable principles within a framework of traditional neighborhood design.

Learning Outcomes: 1. Understand the fundamental terminologies, design strategies, and workflow of master plan community planning. 2. Distinguish the attributes and characteristics of different residential types. 3. Articulate, utilize and specify methods for spatial layout and resource Integration (open space, transportation, parking and facilities, and building blocks) in different community planning projects. 4. Develop well-reasoned design concept and defensible design decisions that best respond to site constraints and planning regulations. 5. Apply knowledge of stormwater management and sustainable practices to community design. 6. Improve the abilities to research, critical thinking, collaboration, model making (hand and digital), verbal representation, and digital rendering techniques. Credits: 4.00

ENTM 40100 - Addressing Grand Challenges Through Insect Biology

Credit Hours: 1.00. This course engages students in an examination of societal grand challenges by identifying the problems, understanding the current state of knowledge, identifying knowledge gaps, and implementing possible solutions. Permission of department required.

Learning Outcomes: 1. Explain how the accumulated knowledge and experiences of Insect Biology majors can be applied to address Grand Challenges. 2. Demonstrate where capstone projects and grand challenges intersect. 3. Explain roles insect biologists play in addressing grand challenges, and the relationship to future career options. 4. Demonstrate skills in communication, critical thinking and teamwork. Credits: 1.00

Other Departmental/Program Course Requirements (45-47 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other

topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and

accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in

achieving efficiency and equity. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

Electives (2-4 credit)

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11900 - Introduction To Forestry And Natural Resources Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Forestry and Natural Resources. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and

regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-16 Credits

Spring 1st Year

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students

for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

16 Credits

Fall 2nd Year

FNR 22500 - Dendrology

Credit Hours: 3.00. Field identification, taxonomy, and ecological characteristics of trees, shrubs, and herbs found in forests, prairies, old fields, and wetlands.

Learning Outcomes: 1. Understand factors that control the distribution of major tree species that are native to forest regions of North America. 2. Gain exposure to silviculture, ecology, commercial, and wildlife uses of the tree species in various forest types. 3. Learn identifying characteristics of woody vegetation in North America, with emphasis on Indiana. Credits: 3.00

FNR 23000 - The World's Forests And Society (UCC: STS)

Credit Hours: 3.00. Examination of structure, function, and environmental and cultural significance of forest ecosystems throughout the world.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Comprehend the complexity of the forests worldwide and understand their variety, distribution, ecological functioning, and role in developing societies and communities. 2. Provide a global perspective of forests' social and economic values, their multiple uses, and the variety of products derived from them. 3. Understand the most critical factors threatening forests and related natural resources in developing and developed countries. 4. Understand the strong connection between forests and related natural resource fields (ecology, wildlife, forest products, sustainability, etc.). Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

FNR 24150 - Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 3.00. Introduction to the ecology and systematics of Fish, Amphibians and Reptiles. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of fish, amphibians and reptiles.

Learning Outcomes: 1. Know about the evolutionary history of fishes, amphibians and reptiles. 2. Know the major taxa of fishes, amphibians and reptiles and the special anatomical, morphological, behavioral, and ecological features that characterize each group. 3. Be familiar with many of the techniques used to study the behavior and ecology of fishes, amphibians and reptiles. 4. Be familiar with major threats facing these groups. Credits: 3.00

FNR 25150 - Ecology And Systematics Of Mammals And Birds

Credit Hours: 3.00. Introduction to the ecology and systematics of mammals and birds. Discuss the evolutionary adaptations and ecological processes of these vertebrate groups at the individual, population, and community levels. Examine the roles of phylogeny, physiology, morphology, and behavior in influencing organismal responses to the environment. Assess issues related to the conservation of mammals and birds.

Learning Outcomes: 1. Be familiar with the evolutionary origins of mammals and birds. 2. Know the major taxa of mammals and birds. 3. Be familiar with the behavioral and ecological characteristics of wild mammals and birds. 4. Be familiar with major threats facing wild mammal and bird populations. 5. Gain experience reading and summarizing primary literature on wild mammals and birds. Credits: 3.00

FNR 25250 - Laboratory In Ecology And Systematics Of Mammals And Birds

Credit Hours: 1.00. Basic anatomy, classification, and identification of mammals and birds. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Identify important North American mammal and bird species, with an emphasis on species of the Midwestern U.S. 2. Be familiar with the ecology, natural history, and systematics of the mammals and birds. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxonomic keys. Credits: 1.00

FNR 24250 - Laboratory In Ecology And Systematics Of Fishes, Amphibians And Reptiles

Credit Hours: 1.00. Basic anatomy, classification, and identification of fishes, amphibians and reptiles. Identification deals with representative species from selected phylogenetic and geographic groupings in North America.

Learning Outcomes: 1. Learn to identify important North American fish, amphibians, and reptile species, with an emphasis on species of the Midwestern U.S. 2. Be familar with the ecology, natural history, and systematics of the fish, amphibians, and reptiles. 3. Describe the characteristic features of some of the important North American vertebrates, using a combination of preserved specimens, photographic images, field guides, and taxomonic keys. Credits: 1.00

13 Credits

Spring 2nd Year

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

FNR 35300 - Natural Resources Measurement

Credit Hours: 3.00. An introduction to sampling techniques and fundamental principles for measuring natural resources.

Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate hypothesis tests, conduct and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using evidence-based information to develop sound responses to complex problems. 3 . Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and ethics. Credits: 3.00

PHIL 11100 - Introduction To Ethics (UCC: HUM)

Credit Hours: 3.00. A study of the nature of moral value and obligation. Topics such as the following will be considered: different conceptions of the good life and standards of right conduct; the relation of nonmoral and moral goodness; determinism, free will, and the problem of moral responsibility; the political and social dimensions of ethics; the principles and methods of moral judgment. Readings will be drawn both from contemporary sources and from the works of such philosophers as Plato, Aristotle, Aquinas, Butler, Hume, Kant, and J. S. Mill. CTL:ISH 1051 Ethics

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate exposure to and knowledge of the views and approaches to specific issues in ethics as presented in the writings of important moral philosophers, including Aristotle, Kant, and Mill. 2. Recognize important ethical concepts and ethical theories, including virtue ethics, deontological ethics, and consequentialist ethics. 3. Develop the ability to present, explain, defend and critically evaluate complex philosophical ideas, theories, and perspectives, in oral and written communication. 4. Develop the ability to locate, interpret, understand and evaluate philosophical arguments encountered in complex philosophical texts within the contexts and traditions that inform those arguments and texts. 5. Develop critical thinking and writing skills. Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

PHIL 29000 - Environmental Ethics (UCC: HUM)

Credit Hours: 3.00. An introduction to philosophical issues surrounding debates about the environment and our treatment of it. Topics may include endangered species, "deep ecology," the scope and limits of cost-benefit analyses, and duties to future generations.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

FNR 21000 - Natural Resource Information Management

Credit Hours: 3.00. Introduction to natural resource and land information systems and data management technologies. Principles of data storage, organization, and retrieval for both textual and spatial data (geographic information systems), data acquisition, accuracy assessment, mapping, and use of this data in natural resource management are presented.

Learning Outcomes: 1. Define basic spatial data concepts (GIS). 2. Create and use spatial and textual databases. 3. Develop spatial analysis abilities using ArcGIS Pro. 4. Contribute to the following: critical thinking, problem solving, quantitative reasoning, information literacy and written communication. Credits: 3.00

15 Credits

Summer Session

FNR 37010 - Natural Resources Practicum

Credit Hours: 1.00. Specific field instruction in forestry, fisheries and aquatic sciences and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Identify common local trees and shrubs. 2. Use aerial photos,

topographic maps, magnetic compass and pacing to navigate on the landscape. 3. Use aerial photos and topgraphic maps to determine distance, area, landforms and cover types on the landscape. 4. Identify habitat types with aerial photos and define habitat boundaries on ground with hand-held GPS. 5. Delineate watershed boundaries with stereo aerial photos. 6. Locating land marks with Lat-Lon and UTM coordinates under different datum systems. Credits: 1.00

FNR 37050 - Forest Habitats And Communities Practicum

Credit Hours: 1.00. Specific field instruction in forestry and wildlife. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Use field classification keys to perform habitat typing of forest communities. 2. Collect and analyze field vegetation data to describe forest composition and structure. 3. Identify soil, site, and disturbance characteristics that determine the distribution and abundance of plant and animal species. 4. Describe the responsibilities, duties, and challenges of working as a professional forester or wildlife biologist. 5. Evaluate wildlife abundance using a variety of field methods and understand the differences between population estimates and indices. Credits: 1.00

FNR 37200 - Forestry Practicum

Credit Hours: 4.00. Specific field instruction in forestry. Students pay university tuition plus a fee for living facilities and subsistence.

Learning Outcomes: 1. Perform basic surveying skills. 2. Perform basic GIS/GPS operations. 3. Perform forest inventory and measurement techniques. 4. Utilize computer applications and analysis of inventory data. 5. Define silvicultural terminology. 6. Explain ecological concepts related to forest-stand development. 7. Explain how forest management affects various resources including: soil, water, timber, wildlife, biodiversity, aesthetics, and forest health. 8. Describe tree improvement, seedling production, and reforestation practices. 9. Plant a seedling properly and understand how to check planting quality of a planting crew. 10. Explain what management practices can be used to promote forest health. 11. Explain the differences in primary production processes for paper, dimensional lumber and engineered wood. 12. Explain the differences in primary production processes for OSB and paper. 13. Estimate the stumpage value of a stand. 14. Assess plant biodiversity of a stand. 15. Estimate recreational values of a national forest. 16. Describe flows of matter and energy in coupled human and natural systems. 17. Discuss how drivers of ecological processes change across an urban-rural gradient. 18. Compare and contrast forest ecosystem structure and function in urban and rural settings, including diversity and distribution of organisms, landcover types, and ecosystem services. 19. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 20. Recognize the various types of nursery stock available for planting and their purpose. 21. Describe the best management practices for installing a landscape-scale tree in the urban environment. 22. Demonstrate proper technique for planting and transplanting trees by installing a tree using best management practices. 23. Explain why arborists climb trees. 24. Describe situational awareness of tree work aloft including H.O.P.E. 25. Recognize the basic equipment for ascending a tree and how they are applied in climbing operations. 26. Demonstrate basic ascending and descending techniques for
