access to the tree. 27. Explain the benefits of trees. 28. Describe tree value and how they contribute to ecosystem services. 29. Explain why trees should be assessed for risk. 30. Identify basic and advanced tools used in a risk assessment. 31. Recognize typical defects found in trees and their relative risk factor. 32. Demonstrate the principles of a basic risk assessment for trees. Credits: 4.00

6 Credits

Fall 3rd Year

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 33100 - Forest Ecosystems

Credit Hours: 3.00. Introduction to ecosystem processes, with emphasis on structural dynamics, energy flows, nutrient cycling, spatial patterns, classification and interaction of plant and animal populations. Processes will be related to human activities.

Learning Outcomes: 1. Understand the basic principles of ecology. 2. Understand the response to forest vegetation to environmental factors. 3. Understand the role of disturbance in driving community dynamics, stand development, and ecosystem function. 4. Understand primary productivity and nutrient cycling. 5. Understand plant-animal interactions. 6. Understand the influence of human activities on ecosystem processes. Credits: 3.00

FNR 35700 - Fundamental Remote Sensing

Credit Hours: 3.00. Introduction to the principles of remote sensing, aerial photo interpretation, photogrammetry, geographic information systems, and global positioning systems. Primary applications of geospatial science and technology in forestry and natural resources.

Learning Outcomes: 1. Understand remote sensing fundamentals and gain knowledge about the applications of remotely sensed data in vegetation and land use. 2. Exercise relevant computer software (Erdas Imagine) for handling and aerial photographs and satellite imagery. 3. Use remote sensing skills to solve problems associated with agriculture, forestry, natural resources, and urban areas. Credits: 3.00

FNR 43400 - Tree Physiology

Credit Hours: 3.00. Study of physiology of growth and development of woody plants. Emphasis on the structure and function of trees and their physiological response to environmental factors.

Learning Outcomes: 1. Explain the importance of the various physiological processes through which heredity and environment interact to influence tree growth. 2. Provide an overview of both the form and structure of trees. 3. Define patterns of vegetative growth for temperate-zone and tropical woody plants. 4. Describe the prominent features of the important physiological processes that affect plant growth and development, such as: photosynthesis; respiration; carbohydrate, nitrogen, and mineral nutrient relations; water absorption; transpiration; and plant hormones and other signaling molecules. Credits: 3.00

FNR 44400 - Arboricultural Practices

Credit Hours: 4.00. Course covers a broad spectrum of arboriculture principles and techniques, including pruning, transplanting, fertilization, climbing, rigging, removal, cabling, bracing, lightning protection, hazard tree evaluation, tree appraisal, and street tree inventory.

Learning Outcomes: 1. Recognize and explain the various arboricultural practices that enhance the sustainability of trees in the built environment. 2. Apply essential plant health care practices and arboricultural practices used in the cultivation and management of trees and other woody plants in the built environment including planting, pruning and pest management. Credits: 4.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

16 Credits

Spring 3rd Year

FNR 35500 - Quantitative Methods For Resource Management

Credit Hours: 3.00. Application of analytical and computational techniques for the purpose of making decisions regarding the management of forests.

Learning Outcomes: 1. Evaluate natural resources critically, discern the strength of evidence and arguments, determine credibility, and identify potential bias and overall quality. 2. Use simulation and optimization tools to address various natural resources management problems and challenges. 3. Appreciate the basics of computer simulation, visualization, and data management. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

FNR 40700 - Forest Economics

Credit Hours: 3.00. Implications of unique economic characteristics of forest resources, including a tree as both capital and output, high capital-to-output ratio, location utility of in-forest uses, long investment periods, and non-market outputs.

Learning Outcomes: 1. Describe the different approaches to forest management including the planning concepts. 2. Identify the ecological, social and economic objectives associated with management strategies. 3. Understand concepts related to forest sustainability and conservation. 4. Understand the management implications of contemporary issues. 5. Apply analytical tools of forest decision making. Credits: 3.00

FNR 44500 - Urban Forest Issues

Credit Hours: 3.00. This course presents an array of topics germane to the management of trees in the urban environment. This includes the benefits of trees and general tree care, tree appraisal, tree ordinances, tree inventory and management plans, and tree preservation and construction.

Learning Outcomes: 1. Understand sustainable urban & community forestry and why it is important. 2. Recognize the numerous benefits of urban/community forests to society, and the ecosystem services provided. 3. Identify common issues, challenges and pressures which threaten the urban forest. 4. Recognize the unique features of urban forest systems and how to apply the principles of urban forest management to real-world cases. 5. Acquire an understanding of sustainability as it pertains to urban forests and urban forestry programs in metropolitan regions, cities, towns, communities and neighborhoods. Credits: 3.00

15 Credits

Fall 4th Year

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

FNR 58600 - Urban Ecology

Credit Hours: 3.00. Urbanization is on the rise, transforming natural ecosystems into coupled human-natural ecosystems that encompass complex, novel functional and structural characteristics shaped by people and the inherent environment. Through local field trips and readings of the primary scientific literature, we examine the unique characteristics of coupled human-natural ecosystems. The course is designed to be broadly accessible to students from a variety of backgrounds, interests, and majors who are interested in environmental science and engineering and emphasizes the importance of incorporating an ecological perspective in environmental engineering and natural resource management. This course covers fundamental principles of ecology as applied in urban and other coupled human-natural systems with emphasis on the impacts of modern industrial society on ecosystem structure and function. Organizing themes addressed in this class include macroscale processes, systems thinking, and topics related to urban systems.

Learning Outcomes: 1. Describe and diagram

flows of matter and energy in coupled human and natural systems. 2. Discuss how drivers in each cycle change across an urban-rural gradient. 3. Describe the changes to natural ecosystems imposed by urbanization and other forms of global change (climate change, altered biogeochemical cycling, invasive species, mass extinction, etc.). 4. Compare and contrast urban and rural ecosystem structure and function, including diversity and distribution of organisms, landcover types, and ecosystem services. 5. Discuss provisioning of ecosystem services in urban and rural ecosystems; compare and contrast green vs grey infrastructure; identify areas of traditionally grey infrastructure that have the potential to integrate green infrastructure. 6. Describe the key components of the following ecological concepts and apply them to an analysis of urban vs rural ecosystems: a. resistance and resilience b. dynamic equilibrium c. alternate stable states d. disturbance and succession Credits: 3.00

FNR 35910 - Spatial Ecology

Credit Hours: 2.00. Introduction to the principles of landscape ecology and biogeography. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance.

Learning Outcomes: 1. Able to understand the theory, applications (how theory is applied) can be used to study landscape and larger scale problems related to natural resources. 2. Know what a landscape is. 3. Know the methods to quantify landscape pattern. 4. Understand important terms in landscape ecology and biogeography. 5. Understand the causes (natural and human) of landscape pattern. 6. Understand the threats to biodiversity locally and globally. 7. Able to explain the theory of island biogeography. 8. Define sustainability and know how to calculate an ecological footprint. Credits: 2.00

FNR 35950 - Spatial Ecology Laboratory

Credit Hours: 1.00. The lab will focus on the use and application of spatial databases that are common in natural resource management settings. Introduction to the principles of landscape ecology and biogeography with a laboratory devoted to the analysis of spatial data using geographic information systems and other database tools. Landscape ecology focuses on the important relationships of landscape structure (pattern, heterogeneity) and ecological processes (movement of animals, hydrologic dynamics) and how this information is used for natural resource management. Biogeography examines ecological patterns and processes at larger scales (generally at subcontinental to global) for the purposes of managing plants and animals of global importance. In the last 15 years, tremendous efforts have been made to create spatial databases that help support research and management of natural resources at various scales.

Learning Outcomes: 1. Know methods to quantify landscape pattern. 2. Use GIS to conduct simple and moderately complex analyses using common public domain databases. 3. Know where to get important geospatial data from the internet. 4. Work with US government data and understand the various levels of aggregation of spatial data. Credits: 1.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

FNR 43900 - Silviculture

Credit Hours: 3.00. This course details common silvicultural systems used in North America for establishment and tending of forest stands for a variety of objectives. Topics range from stand dynamics to thinning practices and regenerative harvest systems in naturally-regenerated forests. Lectures focus is on theoretical concepts in order to allow students to apply their knowledge to North American forest ecosystems, while the laboratory portion of this course includes practical experience in marking silvicultural prescriptions and conducting silvicultural treatments. Lab projects emphasize critical thinking, data-driven decision-making (using growth and yield models), technical writing and oral communication. Permission of department required. Credit cannot be earned for both FNR 33800 and FNR 43900.

Learning Outcomes: 1. Be fluent in technical silvicultural terminology. 2. Develop and critically evaluate the effectiveness of alternative site preparation, regeneration, stand tending, and harvesting methods for natural stands. 3. Describe the impacts of silvicultural practices on soil resources, forest health, timber production, wildlife habitat, biodiversity, aesthetics and other aspects in natural stands. 4. Appraise the ecological and economic costs/benefits for various silvicultural treatments. 5. Use growth-and-yield models (i.e., FVS) to help predict future stand development and evaluate silvicultural alternatives (i.e., data-driven decision making). 6. Design silvicultural prescriptions that are applicable to Central Hardwood forests. Credits: 3.00

15-16 Credits

Spring 4th Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

FNR 40910 - Forest Resources Management

Credit Hours: 3.00. This course focuses on the long-term sustainable management of forests for the production of wood fiber, ecological services, and other market and non-market goods and services.

Learning Outcomes: 1. Describe the different approaches to forest management including: planning concepts; ecological, social and economic objectives; forest sustainability and

regulation; certification programs; adaptive management; and forest decision analysis and tools (discounted cash flow, financial maturity, growth and yield estimates and projections, mathematical programming). 2. Confidently develop a management plan for a property including: defining and creating useful stand delineations; assessing the condition of the land and timber; establishing objectives including the goal of long-term sustainability; defining the future forest conditions needed to achieve these objectives; creating alternative prescriptions to achieve the future conditions; and recommending a plan of action, while maintaining a record of alternatives considered, but not recommended. Credits: 3.00

12-13 Credits

French, BA (Language & Culture Track)

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

Pre-Requisite Courses

FR 10100 - French Level I (UCC: HUM)

Credit Hours: 3.00. A beginning French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. Permission of department required. CTL:IWL 1901 French Level I

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Explain and produce biographical information about themselves and others in the French language. 2. Identify necessary information by asking questions about people and things in the French language. 3. Solve a simple survival situation such as ordering food and beverages in the French language. 4. Compose with language by combining learned elements in the French language. Credits: 3.00

FR 10200 - French Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 10100 . CTL:IWL 1902 French Level II

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

FR 20100 - French Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1903 French Level III

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

FR 20200 - French Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 20100 . CTL:IWL 1904 French Level IV

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

French Major

Area A - French Language Courses (6 credits)

FR 30100 - French Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Analyze French language in specific contexts by reading French texts. 2. Analyze French language in specific

contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French texts by focusing on a set of grammatical rules and standards in the language. 4. Produce extended discourse in spoken French in the form of dialogues and presentations. 5. Compare and contrast French culture with other cultures through interaction with French oral and written texts. Credits: 3.00

FR 30200 - French Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Area B - French Literature Course (3 credits)

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French.

Credits: 3.00

Language & Culture Track

Area C - Advanced French Language (6 credits)

FR 40100 - French Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of French speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

FR 40200 - French Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking, listening, reading, and writing abilities in French. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

Area D - French Linguistics Course (3 credits)

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100.

Credits: 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200.

Credits: 3.00

Area E - French Culture Course (3 credits)

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature, music, and philosophy. Lectures in French.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Discuss the main aspects of the French professional world, notably the role of the French government. 2. Present professional interests verbally and in writing (such as conduct and have a job interview, compose resume and write a cover letter to answer a specific job offer). 3. Accomplish simple administrative tasks in French (write a professional letter, give/answer a phone call, make an appointment, etc.). 4. Behave appropriately in a French professional context. Credits: 3.00

FR 32400 - Professional French II

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills at an intermediate level will be developed toward the use of French for business purposes. Course materials cover daily business dealing as well as national and international trade.

Learning Outcomes: 1. Discuss specific aspects of the French professional world, such as the role of the French government in the economy. 2. Accomplish administrative tasks in French (write a professional letter, reports, etc.). 3. Behave appropriately in a French professional context. Credits: 3.00

Area F - French Electives (12 credits)

FR 28000 - Second-Year French: Special Topics

Credit Hours: 3.00. Selected topics on the civilization, culture, and literature of France. Lectures and readings primarily in English, but knowledge of French at the first-year level necessary.

Credits: 3.00

FR 33000 - French Cinema (UCC: HUM)

Credit Hours: 3.00. A general survey of major French cinematic trends from the earliest examples (Melies, Lumiere) to the New Wave (Chabrol, Truffaut, Resnais, Godard, etc.), with a discussion of the historical, social, political, aesthetic, and literary contexts. The French film in relation to world cinema. The relationship between the French cinema and French literature. Reading and analysis of scripts and historical and critical materials. Knowledge of French not required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

FR 34100 - French Literature I: From The Middle Ages To The Enlightenment

Credit Hours: 3.00. Reading of selected poetry, prose, and theatre of France from the Middle Ages through the Enlightenment in historical and cultural context. Readings, discussion, and papers in French.

Credits: 3.00

FR 34200 - French Literature II: The 19th And 20th Centuries

Credit Hours: 3.00. Reading of selected French poetry, novels, theatre, and short fiction of the 19th and 20th centuries in historical and cultural context. Readings, discussion, and papers in French.

Credits: 3.00

FR 38000 - Special Topics In French Culture And Civilization

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 39400 - Special Topics In French Literature

Credit Hours: 3.00. Studies a particular aspect in French literature (e.g., theme, device, character type, motif, place) by

reading a varied selection of works of different genres, styles and/or periods. Readings, discussion, and papers in French.

Credits: 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

FR 44300 - Introduction To Francophone Literature

Credit Hours: 3.00. The study of the most representative Francophone poets, playwrights, and novelists from various countries, such as Leopold Senghor, Aime Cesaire, Jacques Romain, Gabrielle Roy, Michel Tremblay, Mohamed Dib.

Credits: 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

FR 52700 - Etudes de Style

Credit Hours: 3.00. Study of the expression of affective and artistic values in literary French. Detailed grammatical analyses and study of stylistic procedures. Comparison with English usage. Introduction to explication de texte as an approach to literature. Permission of department required.

Credits: 3.00

FR 54100 - Renaissance French Literature

Credit Hours: 3.00. Major works in verse and prose of the sixteenth century. Marot, du Bellay, Ronsard, Rabelais, Montaigne. Permission of department required.

Credits: 3.00

FR 54900 - French Literature And Film

Credit Hours: 3.00. An examination of the interrelationships of contemporary French literature and film. Discussion of the potential of each medium as an art form, problems of visual transposition of literary works, and extension of literary concepts such as Dadaism and Surrealism into cinema. Permission of department required.

Credits: 3.00

FR 55800 - French Novel Of The Twentieth Century

Credit Hours: 3.00. Consideration of the character, aesthetics, and evolution of the twentieth-century French novel. Readings from such representative novelists as Proust, Gide, Bernanos, Giono, Malraux, Camus, Robbe-Grillet, Saporta. Permission of department required.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100.

Credits: 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200.

Credits: 3.00

FR 56300 - History Of The French Language

Credit Hours: 3.00. A survey of the historical development of the French language from Vulgar Latin to the present and of the French language of today as a reflection of past cultural and socio-political conditions. Knowledge of a Romance language or of Latin is recommended but not required.

Credits: 3.00

FR 56400 - Introduction To Old French

Credit Hours: 3.00. Introduction to the study of Old French. Phonetic, syntactic, and stylistic questions will be addressed through the analysis of original texts.

Credits: 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature,

music, and philosophy. Lectures in French.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 58200 - Francophone Cultures

Credit Hours: 3.00. Examines at least three French-speaking regions outside of France (e.g., Caribbean, Maghreb, Quebec, West Africa), including contemporary civilization and the development of cultures throughout history. Explores trends in society, daily life, the arts, and the ideas. Lectures in French.

Credits: 3.00

FR 59400 - Special Topics In French Literature

Credit Hours: 1.00 to 4.00. Special topics in French Literature. Permission of instructor required.

Credits: 1.00 to 4.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Discuss the main aspects of the French professional world, notably the role of the French government. 2. Present professional interests verbally and in writing (such as conduct and have a job interview, compose resume and write a cover letter to answer a specific job offer). 3. Accomplish simple administrative tasks in French (write a professional letter, give/answer a phone call, make an appointment, etc.). 4. Behave appropriately in a French professional context. Credits: 3.00

FR 32400 - Professional French II

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills at an intermediate level will be developed toward the use of French for business purposes. Course materials cover daily business dealing as well as national and international trade.

Learning Outcomes: 1. Discuss specific aspects of the French professional world, such as the role of the French government in the economy. 2. Accomplish administrative tasks in French (write a professional letter, reports, etc.). 3. Behave appropriately in a French professional context. Credits: 3.00

FR 49100 - Special Topics In French

Credit Hours: 1.00 to 4.00. This course will be offered as a guided reading or independent study course on a topic of mutual interest in French or Francophone literature, culture, film, or linguistics, to the student and faculty. Permission of instructor required.

Learning Outcomes: 1. Learning objectives will vary due to the nature of the course. Credits: 1.00 to 4.00

Electives (14-51 credits)

Credit Hours: 3.00. Selected topics on the contemporary civilization of the French-speaking world and on the development of its culture throughout history. Explores trends in society, daily life, the arts, ideas, and technology. Conducted in French.

Credits: 3.00

FR 44300 - Introduction To Francophone Literature

Credit Hours: 3.00. The study of the most representative Francophone poets, playwrights, and novelists from various countries, such as Leopold Senghor, Aime Cesaire, Jacques Romain, Gabrielle Roy, Michel Tremblay, Mohamed Dib.

Credits: 3.00

FR 48000 - French Civilization

Credit Hours: 3.00. The study of modern French life, with special emphasis on the customs and daily life of the people. Lectures in French.

Credits: 3.00

FR 52700 - Etudes de Style

Credit Hours: 3.00. Study of the expression of affective and artistic values in literary French. Detailed grammatical analyses and study of stylistic procedures. Comparison with English usage. Introduction to explication de texte as an approach to literature. Permission of department required.

Credits: 3.00

FR 54100 - Renaissance French Literature

Credit Hours: 3.00. Major works in verse and prose of the sixteenth century. Marot, du Bellay, Ronsard, Rabelais, Montaigne. Permission of department required.

Credits: 3.00

FR 54900 - French Literature And Film

Credit Hours: 3.00. An examination of the interrelationships of contemporary French literature and film. Discussion of the potential of each medium as an art form, problems of visual transposition of literary works, and extension of literary concepts

such as Dadaism and Surrealism into cinema. Permission of department required.

Credits: 3.00

FR 55800 - French Novel Of The Twentieth Century

Credit Hours: 3.00. Consideration of the character, aesthetics, and evolution of the twentieth-century French novel. Readings from such representative novelists as Proust, Gide, Bernanos, Giono, Malraux, Camus, Robbe-Grillet, Saporta. Permission of department required.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 56100 - The Structure Of French I: Phonetics And Phonology

Credit Hours: 3.00. This course presents the sound system of French by examining descriptive and theoretical issues in the patterning of segments on various levels (phonetics, phonemics, morphology, etc.). Students will study current phonological and phonetic issues in recent literature. Credit will not be given for both FR 35100 and 56100.

Credits: 3.00

FR 56200 - The Structure Of French II: Syntax And Morphosyntax

Credit Hours: 3.00. This course presents descriptive and theoretical issues concerning the grammatical structure of French, dealing both with word-level phenomena (inflectional and derivational morphology, etc.) and with phrase-, sentence-, and discourse-level phenomena (syntactic structure, sentence constituents, word order, etc.). Credit will not be given for both FR 36200 and 56200.

Credits: 3.00

FR 56300 - History Of The French Language

Credit Hours: 3.00. A survey of the historical development of the French language from Vulgar Latin to the present and of the French language of today as a reflection of past cultural and socio-political conditions. Knowledge of a Romance language or of Latin is recommended but not required.

Credits: 3.00

FR 56400 - Introduction To Old French

Credit Hours: 3.00. Introduction to the study of Old French. Phonetic, syntactic, and stylistic questions will be addressed through the analysis of original texts.

Credits: 3.00

FR 58100 - French Culture

Credit Hours: 3.00. Development of the cultural life of the French people as reflected in architecture, art, history, literature, music, and philosophy. Lectures in French.

Learning Outcomes: 1. Student will gain practical experience in the language. Credits: 3.00

FR 58200 - Francophone Cultures

Credit Hours: 3.00. Examines at least three French-speaking regions outside of France (e.g., Caribbean, Maghreb, Quebec, West Africa), including contemporary civilization and the development of cultures throughout history. Explores trends in society, daily life, the arts, and the ideas. Lectures in French.

Credits: 3.00

FR 59400 - Special Topics In French Literature

Credit Hours: 1.00 to 4.00. Special topics in French Literature. Permission of instructor required.

Credits: 1.00 to 4.00

FR 42400 - Professional French III

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Discuss the main aspects of the French professional world, notably the role of the French government. 2. Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

FR 10100 - French Level I (UCC: HUM)

Credit Hours: 3.00. A beginning French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. Permission of department required. CTL:IWL 1901 French Level I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Explain and produce biographical information about themselves and others in the French language. 2. Identify necessary information by asking questions about people and things in the French language. 3. Solve a simple survival situation such as ordering food and beverages in the French language. 4. Compose with language by combining learned elements in the French language. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

LC 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (CMPL 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

15 Credits

Spring 1st Year

EDCI 35000 - Community Issues & Applications For Educators

Credit Hours: 1.00 to 3.00. This course is an examination of diverse individual, family, and community characteristics and issues, and potential impacts on teaching and learning processes. Includes service learning with human service agencies and personnel in the school and community. As part of this course, students complete certification to meet the Indiana Department of Education suicide prevention training requirement for teacher licensure.

Learning Outcomes: 1. Become a more effective teacher by developing greater awareness about, caring and respect for, and ability to relate with people (particularly students and their families) whose backgrounds, life experiences, perspectives, and values are different from one's own. 2. Demonstrate responsiveness to students' diverse backgrounds, life experiences, perspectives, and values through WHAT you teach (curriculum topics, content, and processes), HOW you teach (formal and informal interactions with students, inside and outside of classroom), and WHO you are (personally/professional values and commitments). 3. Examine community human service agencies in terms of (a) ways to contribute as a community volunteer, either individually or with students; (b) ways to interact with agencies on behalf of students; and (c) future career opportunities. Credits: 1.00 to 3.00

FR 10200 - French Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 10100 . CTL:IWL 1902 French Level II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

FR 20100 - French Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate French course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1903 French Level III

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching

experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

FR 20200 - French Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of FR 20100 . CTL:IWL 1904 French Level IV

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on

special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2,

4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

FR 30100 - French Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of French speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in France and the other French-speaking countries from various sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze French language in specific contexts by reading French texts. 2. Analyze French language in specific contexts by listening to audio recordings and watching videos of spoken French. 3. Compose French texts by focusing on a set of grammatical rules and standards in the language. 4. Produce extended discourse in spoken French in the form of dialogues and presentations. 5. Compare and contrast French culture with other cultures through interaction with French oral and written texts. Credits: 3.00

15 Credits

Spring 3rd Year

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French.

Credits: 3.00

FR 30200 - French Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in French on the basis of materials dealing with the ideas and events that have shaped present-day France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

LC 47500 - Theories Of Teaching World Languages

Credit Hours: 3.00. This course is designed to assist you in the process of becoming a skilled professional who can teach world language(s). You will gain experiential hours in the secondary classroom. You will also develop an understanding of the connection between effective language teaching and successful language learning, be able to think critically about your own teaching and teaching materials and gain an understanding of various theories, methods, approaches, and techniques in world language teaching. Areas of emphasis include the nature of language learning theories, early approaches to language pedagogy, communicative language teaching methodology, the relationship between theory and practice, aspects of the interaction between speakers in the classroom, skills-based theories, sociocultural perspectives, individual differences between learners, and usage-based approaches to second language acquisition.

Learning Outcomes: 1. Identify various theories of foreign language learning. 2. Describe various theories of foreign language teaching. 3. Analyze how student learning is influenced by different types of instructional practices. 4. Recognize how theories of individual and collaborative learning strategies affect student engagement. 5. Compare and contrast how diverse learners process information and develop language learning skills. Credits: 3.00

15 Credits

Fall 4th Year

EDCI 42700 - Teaching Of World Languages

Credit Hours: 3.00. This is one of the two methods courses required for World Language Teaching major. While LC 47500 is a theoretical course, this course is a practical course on world language teaching in secondary school.

Learning Outcomes: 1. Design lesson plans that draw on knowledge of content areas. 2. Write language learning assessment documents (diagnostic formative, and summative). 3. Design language assessment rubrics. 4. Evaluate their own and others' teaching effectiveness. 5. Plan lessons that incorporate strategies to monitor student learning. 6. Build collaborative relationships with other language teaching professionals. 7. Identify resources for the developing foreign language teaching, including textbooks, scholarly journals, pedagogy associations and conferences.
Credits: 3.00

FR 39600 - Special Topics In French Language Science

Credit Hours: 3.00. Examines a particular aspect entailed in the study of French language, e.g., language acquisition and teaching, language in society, regional dialects of France, French around the world, French creoles. Conducted in French.

Credits: 3.00

FR 40100 - French Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of French speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in France and the other French-speaking countries. Conducted primarily in French.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are

clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

18 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Game Development, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (54 credits)

Required Major Courses (39 credits)

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online

body of work. Credits: 3.00

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14100 - Internet Foundations Technologies And Development

Credit Hours: 3.00. (CNIT 14100) The course explores the history, architecture, and development of the World Wide Web. Current tagging and scripting languages are covered in a tool-independent environment. Topics also include authoring tools, design, graphic and multimedia formats, and commerce, implementation, and security issues. PC literacy required.

Learning Outcomes: 1. Develop web content using client-side technologies. 2. Create production documentation to meet project requirements. 3. Create media for successful inclusion on websites. 4. Deploy web application to common servers and mobile platforms. 5. Evaluate finished solution against criteria set forth in production-documentation for the provided project. Credits: 3.00

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the

execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

CGT 24500 - Game Development I: Core Skills And Technologies

Credit Hours: 3.00. (CNIT 30600) This course introduces students to the fundamental technologies and skill sets required to develop video games. Students will be taught agile development methodologies in a team-based environment.

Learning Outcomes: 1. Demonstrate a moderate level of individual skill with a commercial game engine. 2. Demonstrate the ability to observe game mechanics and reproduce them. 3. Acquire competency in each of the following domains: 3D and 2D level creation, basic art asset creation, visual programming basics, implementing game mechanics. 4. Demonstrate the ability to complete a market-ready video game in a team-based production environment. 5. Demonstrate the ability to implement agile production techniques. Credits: 3.00

CGT 25500 - Game Development II: Design And Psychology

Credit Hours: 3.00. (CNIT 30800) This course examines video game design, theory, and development from aesthetic, psychological, and technical perspectives. Students will gain experience with a commercial game development platform. Advanced game development techniques will be taught in this course.

Learning Outcomes: 1. Deconstruct and analyze an existing game and define its essential elements as per various theories of game design. 2. Identify major psychological paradigms and how they are applied in video game experiences. 3. Demonstrate proficiency in applying behavior modification principles in video games. 4. Demonstrate individual technical proficiency with a commercial game engine. 5. Complete a market-ready video game in a team-based production environment. 6. Implement agile production techniques. Credits: 3.00

CGT 20500 - Portfolio Review

Credit Hours: 0.00. Portfolio review for students in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 40500 - Senior Portfolio Review

Credit Hours: 0.00. Portfolio review for seniors in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 27000 - Introduction To Data Visualization

Credit Hours: 3.00. This course is designed for students with little or no background in Data Visualization. It provides an introductory examination of data visualization through lecture, readings and hands-on experience with current visualization tools. Students will obtain an overview of the various types of data, the fundamentals of the visualization process for information and scientific visualization, and examine detail visualizations workflows that aim to answer "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (trees and networks) questions when visualizing data. After taking the course students will have both the theoretical foundation and practical skills needed to create insightful visualizations for a wide range of data types.

Learning Outcomes: 1. Differentiate between information and scientific visualization. 2. Appreciate the visualization process. 3. Identify

five major information visualization types: charts, tables, graphs, geospatial maps and network maps. 4. Articulate which visualization tool to use for specific data formats. 5. Compare and evaluate different techniques of data representation. Credits: 3.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

CGT 10501 - Introduction To Games (UCC: STS)

Credit Hours: 3.00. Students learn the history of computer game design. Students engage in learning activities that help them remember basic game design principles. These principles are then applied using simple exercises within game engine technology.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Recall key facts about computer game design history. 2. Understand principles of computer game design. 3. Apply computer game design principles in exercises on paper and in game engine technology. 4. Analyze computer games via written critiques. Credits: 3.00

CGT 36500 - Game Development Practicum

Credit Hours: 3.00. This course provides an opportunity for teams of game developers to focus on a project without distraction by competing course deliverables. Students propose a game project and spend the entire semester working only on that project. Course instructors will function as facilitators, producers, and supervisors, helping each student team scaffold their work such that all course goals are met.

Learning Outcomes: 1. Decompose a large term game development project into an actionable sequence of smaller development tasks. 2. Face emergent open-ended development challenges and either solve them or adapt to them as project goals require. 3. Set short-term game production goals and consistently meet them. 4. Self-evaluate completed work and iterate as necessary to ensure it meets the project's quality goals. 5. Accept and incorporate criticism regarding one's work and use it to improve one's craft. 6. Deliver criticism constructively that is in service to meeting project quality goals. 7. Maintain group cohesion and morale across a physically separated accordance with industry best productions practices. 8. Internalize and structure individual work habits in accordance with industry best production practices. Credits: 3.00

CGT 30505 - Portfolio II

Credit Hours: 0.00. Students present online portfolios, and the course instructors review and give feedback to help direct students' online presence in efforts to meet industry standards.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

CGT 11505 - Scripting And Computational Thinking

Credit Hours: 3.00. This course introduces the students to computer programming, computational thinking, and the mathematics of graphics programming. The act of programming is viewed through the lenses of Decomposition, Pattern Matching, Abstraction and Algorithms and then applied to writing some simple games in current scripting languages. No

prior programming experience is required. The principal objective of the course is to provide a working knowledge of programming fundamentals to game designers and artists as well as to prepare game programmers for more advanced game programming coursework. As computer programming is an applied discipline, this course uses an active learning approach that combines lecture time with extensive lab assignments.

Learning Outcomes: 1. Apply the elements of computational thinking to programming tasks. 2. Use scripting languages in a well-structured way to implement math-based graphical solutions. 3. Use scripting languages to create gameplay within a game engine. 4. Use the mathematics of 2D and 3D graphics programming. Credits: 3.00

CGT Entertainment Selectives (15 credits)

Other Departmental/Program Course Requirements (52 credits)

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse

audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws.

2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical

inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive,

explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

CGT 11800 - Fundamentals Of Imaging Technology

Credit Hours: 3.00. This course provides a foundation for the development and use of raster and vector images for a variety of industries. Full-color images and illustrations are produced using computer technologies, with a focus on both technical and aesthetic aspects. Topics include color theory and perception, surface and lighting analysis, rendering techniques, and technical characteristics.

Learning Outcomes: 1. Combine typography, images, colors, and other design elements to create organized visual relationships. 2. Communicate new ideas formulating them into visual concepts. 3. Apply the principles of color, resolution, and imaging formats effectively. 4. Adapt digital images for print, web, animation, and software apps. Credits: 3.00

CGT 14100 - Internet Foundations Technologies And Development

Credit Hours: 3.00. (CNIT 14100) The course explores the history, architecture, and development of the World Wide Web. Current tagging and scripting languages are covered in a tool-independent environment. Topics also include authoring tools, design, graphic and multimedia formats, and commerce, implementation, and security issues. PC literacy required.

Learning Outcomes: 1. Develop web content using client-side technologies. 2. Create production documentation to meet project requirements. 3. Create media for successful inclusion on websites. 4. Deploy web application to common servers and mobile platforms. 5. Evaluate finished solution against criteria set forth in production-documentation for the provided project. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse

function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

CGT 24500 - Game Development I: Core Skills And Technologies

Credit Hours: 3.00. (CNIT 30600) This course introduces students to the fundamental technologies and skill sets required to develop video games. Students will be taught agile development methodologies in a team-based environment.

Learning Outcomes: 1. Demonstrate a moderate level of individual skill with a commercial game engine. 2. Demonstrate the ability to observe game mechanics and reproduce them. 3. Acquire competency in each of the following domains: 3D and 2D level creation, basic art asset creation, visual programming basics, implementing game mechanics. 4. Demonstrate the ability to complete a market-ready video game in a team-based production environment. 5. Demonstrate the ability to implement agile production techniques. Credits: 3.00

CGT 10501 - Introduction To Games (UCC: STS)

Credit Hours: 3.00. Students learn the history of computer game design. Students engage in learning activities that help them remember basic game design principles. These principles are then applied using simple exercises within game engine technology.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Recall key facts about computer game design history. 2. Understand principles of computer game design. 3. Apply computer game design principles in exercises on paper and in game engine technology. 4. Analyze computer games via written critiques. Credits: 3.00

15 Credits

Spring 1st Year

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CGT 25500 - Game Development II: Design And Psychology

Credit Hours: 3.00. (CNIT 30800) This course examines video game design, theory, and development from aesthetic, psychological, and technical perspectives. Students will gain experience with a commercial game development platform. Advanced game development techniques will be taught in this course.

Learning Outcomes: 1. Deconstruct and analyze an existing game and define its essential elements as per various theories of game design. 2. Identify major psychological paradigms and how they are applied in video game experiences. 3. Demonstrate proficiency in applying behavior modification principles in video games. 4. Demonstrate individual technical proficiency with a commercial game engine. 5. Complete a market-ready video game in a team-based production environment. 6. Implement agile production techniques. Credits: 3.00

CGT 27000 - Introduction To Data Visualization

Credit Hours: 3.00. This course is designed for students with little or no background in Data Visualization. It provides an introductory examination of data visualization through lecture, readings and hands-on experience with current visualization tools. Students will obtain an overview of the various types of data, the fundamentals of the visualization process for information and scientific visualization, and examine detail visualizations workflows that aim to answer "when" (temporal data), "where" (geospatial data), "what" (topical data), and "with whom" (trees and networks) questions when visualizing data. After taking the course students will have both the theoretical foundation and practical skills needed to create insightful visualizations for a wide range of data types.

Learning Outcomes: 1. Differentiate between information and scientific visualization. 2. Appreciate the visualization process. 3. Identify five major information visualization types: charts, tables, graphs, geospatial maps and network maps. 4. Articulate which visualization tool to use for specific data formats. 5. Compare and evaluate different techniques of data representation. Credits: 3.00

CGT 17208 - User Experience Design Studio I: Fundamentals (UCC: STS)

Credit Hours: 3.00. Introduction to the fundamental components of human-centered design, focusing on interactive computer systems. Students learn the basic tenets and methods of user-centered design, including usability and visual design principles, user research, and low-fidelity prototyping. The course is platform-independent and encourages students to experiment with new and emerging technologies.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Conduct basic analysis of situations, clients, and problems using data gathering and analysis techniques. 2. Articulate problem statements. 3. Create concepts that address the issues in the problem statement. 4. Demonstrate basic application of principles of visual and interaction design to create low-fidelity prototypes. 5. Apply the fundamental components of user-centered design. 6. Articulate the core values of user-centered design. Credits: 3.00

15 Credits

Fall 2nd Year

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking

about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CGT 11505 - Scripting And Computational Thinking

Credit Hours: 3.00. This course introduces the students to computer programming, computational thinking, and the mathematics of graphics programming. The act of programming is viewed through the lenses of Decomposition, Pattern Matching, Abstraction and Algorithms and then applied to writing some simple games in current scripting languages. No prior programming experience is required. The principal objective of the course is to provide a working knowledge of programming fundamentals to game designers and artists as well as to prepare game programmers for more advanced game programming coursework. As computer programming is an applied discipline, this course uses an active learning approach that combines lecture time with extensive lab assignments.

Learning Outcomes: 1. Apply the elements of computational thinking to programming tasks. 2. Use scripting languages in a well-structured way to implement math-based graphical solutions. 3. Use scripting languages to create gameplay within a game engine. 4. Use the mathematics of 2D and 3D graphics programming. Credits: 3.00

15 Credits

Spring 2nd Year

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the

foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

CGT 25001 - Computer Graphics Professional Practices I

Credit Hours: 1.00. CGT 25001 is a course in the CGT professional practices sequence, with a focus on student professional development and communications in the field of computer graphics. Emphasis will be placed on industry engagement for the development and refinement of a student's professional resume and portfolio; and professional communications practices necessary for securing professional practical work experience. CGT 25001 will be taught in a seminar format with one meeting per week focused on guest speakers, status checks for portfolio and resume development, and professional networking.

Learning Outcomes: 1. Develop a professional portfolio. 2. Develop a professional resume and revise during the semester. 3. Write a professional narrative that outlines skills, goals, and desired career direction. 4. Understand interviewer/interviewee expectations. Credits: 1.00

CGT 20500 - Portfolio Review

Credit Hours: 0.00. Portfolio review for students in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Fall 3rd Year

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical

sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

CGT 36500 - Game Development Practicum

Credit Hours: 3.00. This course provides an opportunity for teams of game developers to focus on a project without distraction by competing course deliverables. Students propose a game project and spend the entire semester working only on that project. Course instructors will function as facilitators, producers, and supervisors, helping each student team scaffold their work such that all course goals are met.

Learning Outcomes: 1. Decompose a large term game development project into an actionable sequence of smaller development tasks. 2. Face emergent open-ended development challenges and either solve them or adapt to them as project goals require. 3. Set short-term game production goals and consistently meet them. 4. Self-evaluate completed work and iterate as necessary to ensure it meets the project's quality goals. 5. Accept and incorporate criticism regarding one's work and use it to improve one's craft. 6. Deliver criticism constructively that is in service to meeting project quality goals. 7. Maintain group cohesion and morale across a physically separated accordance with industry best productions practices. 8. Internalize and structure individual work habits in accordance with industry best production practices. Credits: 3.00

CGT 30505 - Portfolio II

Credit Hours: 0.00. Students present online portfolios, and the course instructors review and give feedback to help direct students' online presence in efforts to meet industry standards.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

15 Credits

Fall 4th Year

CGT 41101 - Contemporary Problems In Applied Computer Graphics I

Credit Hours: 2.00. Groups will identify, design, qualify, and plan a final project relative to existing or emerging issues within applied computer graphics. This project will be done in conjunction with industry and faculty engagement. Activities and experiences will explore related topics such as project planning and management, user expectations, interpersonal communications skills, and quality management. This course is followed by CGT 41201 which includes the execution and evaluation of the capstone project planned in CGT 41101.

Learning Outcomes: 1. Utilize a provided project specification to develop a project completion plan. 2. Develop an appropriate project evaluation plan using accepted techniques. 3. Implement basic project management principles to assign team member tasks, required resources, and time allocations. Credits: 2.00

16 Credits

Spring 4th Year

ENGL 20500 - Introduction To Creative Writing

Credit Hours: 3.00. Practice in writing short prose narratives and poetry for students who have finished composition and wish to develop their skills further. Workshop criticism. CTL:IEL 1230 Introduction To Creative Writing

Learning Outcomes: 1. Compose original poetry. 2. Compose original fiction. 3. Analyze and critique peer work by using the vocabulary of craft.. Credits: 3.00

ENGL 30400 - Advanced Composition (UCC: IL/WC)

Credit Hours: 3.00. Designed for students who wish additional training in composition beyond the basic requirements. Extensive practice in the writing of mature expository, critical, and argumentative prose. (The course satisfies the Indiana certification requirement of three hours of advanced composition.)

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Produce over 8,000 words of polished, rhetorically effective writing, fit for the academy, work, and civic life. 2. Use strategies of close reading and sound research methods for depth of understanding, expansion of knowledge, and honing critical acumen. 3. Apply rhetorical principles and techniques to a variety of writing tasks. 4. Read primary texts on rhetorical history and theory in order to understand them and use them. 5. Expand your knowledge of how persuasion permeates all aspects of life - verbal, visual, and material and increased your ability to discern better and worse forms of influence and argument. Credits: 3.00

ENGL 41900 - Multimedia Writing

Credit Hours: 3.00. Explores the rhetorical and cultural aspects of multimedia design, implementation and publishing. Students will create a broad spectrum of multimodal texts such as digital videos, podcasts and Web sites. The course focuses on preparing students to adapt to ever-changing media landscapes.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Design multimedia documents and digital texts that include attention to accessibility and usability. 4. Communicate complex information via a variety of mediums and or genres. 5. Use common tools for creating multimedia and integrating visuals in written documents. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

CGT 45001 - Computer Graphics Professional Practices II

Credit Hours: 1.00. Preparation for professional employment in computer graphics professions. Topics covered include professional and technical writing, correspondence, corporate and freelance employment considerations; portfolio planning; and interviewing. Students will arrange interviews and portfolio reviews.

Learning Outcomes: 1. Develop and implement technical writing skills. 2. Practice professional correspondence. 3. Create a technical resume. 4. Develop interviewing skills. Credits: 1.00

CGT 41201 - Contemporary Problems In Applied Computer Graphics II

Credit Hours: 2.00. CGT 41201 is the second course in the CGT applied computer graphics capstone sequence with a focus on execution and evaluation of the senior capstone project. Emphasis will be placed on industry engagement for the execution of the project plan that was developed in CGT 41101. Students will work in teams to execute the project plan; develop and execute a project evaluation plan, and make a professional final presentation to industry members, faculty, and peers. Students will execute a project refinement process based on feedback received and incorporate that into a final presentation and project report. CGT 41201 will be taught in a seminar format with one meeting per week focused on project status checks, evaluation plan development and execution, and project presentations.

Learning Outcomes: 1. Execute a project plan to produce a substantial graphics product. 2. Develop and execute an evaluation plan of their capstone project. 3. Develop professional presentations incorporating external feedback and project results. 4. Produce a major project report for their capstone project, including project management, rationale, and substantial findings. Credits: 2.00

CGT 40500 - Senior Portfolio Review

Credit Hours: 0.00. Portfolio review for seniors in Computer Graphics Technology.

Learning Outcomes: 1. Create a portfolio approaching industry standards in content. Credits: 0.00

15 Credits

General Education: Curriculum and Instruction, BA (non-licensure)

About the Program

Degree Requirements

Departmental/Program Major Courses (31 credits)

Required Courses (19 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at

different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and

the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Special Populations Selective (6 credits)

EDCI 38100 - Teaching For Social Justice: Culturally And Linguistically Diverse Learners

Credit Hours: 3.00. This course builds on the content of EDCI 28500 (Multicultural Education) with specific attention to issues of social justice related to literacy and linguistic diversity. Within this framework, students will learn strategies for teaching English language learners, deconstruct deficit perspectives of dialectical differences, and consider approaches to classroom management. Additionally, a field experience component with an ELL teacher will be included in the course.

Learning Outcomes: 1. Engage with the following concepts via reading, analysis/critique,

and consideration of how they might apply in future classrooms: culturally relevant pedagogy and culturally sustaining pedagogy, code switching and code meshing, restorative justice. 2. Learn pedagogical strategies for working with ELLs in secondary English classrooms. 3. Understand the school-to-prison pipeline phenomenon and develop classroom management principles accordingly. 4. Participate in a field experience that requires interaction with culturally and linguistically diverse students in a local ELL classroom. Credits: 3.00

EDPS 21100 - Special Education Law, Policy, And Ethical Guidelines

Credit Hours: 3.00. This course provides opportunities for analysis and practical application of special education law and policy through discourse and advocacy. It is designed to provide students with a foundational understanding of special education, including the historical context for special education and the laws, policies, and ethical guidelines that have driven current special education legislation. Special education professionals hold multiple roles...teacher, case manager, general education consultant, instructional aid supervisor, researcher, and administrator to name a few. Moreover, there are numerous responsibilities required to successfully work in each of these roles and in this course we focus on law, policy, and ethical guidelines where they are relevant to special education pre-service teachers and support personnel.

Learning Outcomes: 1. Use observation, academic and personal engagement, and assessment data to develop and understanding of their students as learners at the individual and group level. 2. Demonstrate a strong knowledge of applicable federal, state, local laws, regulations, and policies pertaining to individuals with exceptionalities and how these laws affect the delivery of services and supports. 3. Demonstrate the ability to advocate for resources and professional learning conditions to help individuals with exceptionalities meet instructional, behavioral, social, and transition goals and outcomes. 4. Demonstrate the knowledge to draft sound and ambitiously appropriate individualized education programs. 5. Demonstrate the ability to engage in professional activities and participate actively in peer and professional learning communities that benefit individuals with exceptionalities and families, colleagues and their own professional growth. 6. Demonstrate the ability to keep current with research and contemporary practices in multiple way. Credits: 3.00

EDCI 32650 - Introduction To Linguistics And Language Acquisition In Education

Credit Hours: 3.00. This course addresses foundational knowledge in language and linguistics for pre-service teachers and educational researchers. The purpose of this course is to survey linguistics, the study of the science of language. In this course, we will focus on phonetics, phonology, morphology, syntax, and semantics. These topics will be discussed in terms of theory, as well as in the context of ESL classroom instruction, materials development, and assessment.

Learning Outcomes: 1. Understand and describe core concepts and terminology of descriptive linguistics, including phonetics, phonology, morphology, syntax, semantics, and pragmatics. 2. Apply course concepts to analyze linguistic data and gain a fuller understanding of the systematic nature of language. 3. Apply descriptive linguistic concepts to instruction to support the four domains of speaking, listening, reading, and writing. 4. Research and describe the biological, social, and cultural dimensions of linguistics, including pragmatics, discourse, dialects, bilingualism, and language in education. 5. Discuss the role of home language and culture in ELL instruction. 6. Apply an understanding of the role of culture and family background in the student's experience of the classroom. Credits: 3.00

EDCI 31950 - Approaches To English Learner Education

Credit Hours: 3.00. This course addresses English language instruction and content instruction for English Learning students in mainstream classrooms. The purpose of this course is to provide information necessary to the design of materials and

instructional strategies for English Language Learners in K-12 context. In this course, we will focus on current issues and techniques in instruction for ELL students who are at different stages of English language acquisition in the K-12 school context. The course will also consider the nature of immigrants' experiences of a new country and school context. Practical field experiences integrated into the course will provide students with the opportunity to apply and demonstrate principles and strategies presented in the course.

Learning Outcomes: 1. Use essential techniques for instruction of ELLs across various grade levels. 2. Evaluate the language used in resources for ELL content instruction. 3. Examine the role of visual and verbal language in ELL instruction. 4. Analyze the ways in which students use literacy as writing, drawing, and talk. 5. Describe the language characteristics of important school genres. 6. Apply the teaching and learning cycle in the genre approach to lesson planning. 7. Implement and reflect on a multimodal, content area ELL lesson. 8. Discuss the role of home language and culture in ELL instruction. 9. Apply an understanding of the role of culture and family background in the student's experience of the classroom. Credits: 3.00

EDPS 34201 - Curriculum And Program Development In Gifted Education

Credit Hours: 3.00. This course is an introduction to curricular materials, curriculum development, and programs for gifted, creative, and talented (GCT) students. It serves the needs of pre-service teachers who are preparing to teach gifted students in mixed-ability, general education or specialized classrooms. Students will be exposed to established program and curriculum models, as well as the nuts and bolts of developing curricular plans, materials, and specialized programs that support the advanced learning needs of gifted students. Major assignments will assess students' understanding and application of foundational concepts related to the education of students with gifts, creativity, and talent. Permission of instructor required.

Learning Outcomes: 1. Determine the degree of alignment between a gifted program's stated goals, continuum of services, and curriculum resources. [NAGC-CEC Standards (2013): 2.4, 3.1, 3.3, -4.4, 4.5, 5.1-5.3, 5.5, 6.1, 7.3] 2. Describe the most widely used curriculum and program models in gifted education. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] 3. Determine which curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. You may conclude that particular models "fit" different grade levels better than others. [NAGC-CEC Standards (2013): 3.1, 3.4, 4.4, 5.1, 5.2, 6.1]. 4. Justify the use of differentiation to meet the academic needs of gifted students. [NAGC-CEC Standards (2013): 3.2-3.4, 4.2, 4.4, 5.1] 5. Evaluate educational materials and practices to assess their suitability for use with high-ability students. [NAGC-CEC Standards (2013): 2.4,3.3, 4.1-4.4, 5.1-5.3, 6.1] 6. Practice designing and revising lessons to incorporate instructional strategies well-suited for high-ability students. [NAGC-CEC Standards (2013): 2.1-2.4, 3.1-3.4, 4.2, 4.4, 4.5,5.1-5.5] Credits: 3.00

EDPS 34501 - Social And Affective Development Of Gifted Students

Credit Hours: 3.00. This course focuses on the social and emotional development of gifted and talented students and provides you with knowledge and skills needed to effectively support healthy psychosocial development through your work with gifted students. As well as providing an overview of the characteristics and needs of gifted students, we will also discuss special populations of gifted learners, diversity issues, family and peer relationships, and current educational approaches and counseling interventions, including considerations for career development for gifted students. Permission of instructor required.

Learning Outcomes: 1. Recognize the social and affective characteristics and needs of high-ability students; describe and apply research-based practices to support their affective developments across home, school, and community. [NAGC-CEC Standards: 1.1, 1.2, 2.1] 2. Practice designing products that incorporate meaningful and engaging social and affective components that promote social-emotional well-being, including coping skills,

proactive, adaptive behaviors, performance skills, and social skills. [NAGC-CEC Standards: 2.1-2.3, 3.1, 3.4, 4.5, 5.1] 3. Discuss characteristics and needs of subpopulations of high-ability learners and the implications for academic instruction, ethical leadership development, and/or counseling interventions. [NAGC-CEC Standards: 2.1-2.3, 4.1-4.5, 6.1, 6.3] 4. Increase knowledge and experience through regular participation in class discussion boards, interaction with gifted students and their parents, and completion of an in-depth, original affective case study of a high-ability students K-12. [NAGC-CEC Standards: 3.1, 4.3, 4.5, 7.1-7.2] Credits: 3.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

Foundations of Literacy (3 credits)

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

EDCI 43400 - Literacy Teaching And Learning In Secondary Schools

Credit Hours: 2.00. Exploration and development of various instructional methods and materials appropriate for supporting adolescent literacy in secondary English (i.e., middle and high school English Language Arts), including the teaching of reading. Content-area literacy methods and materials are also addressed. Includes a field experience of up to 20 hours in a secondary English school setting.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of secondary English literacy. 2. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 3. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary English. Credits: 2.00

EDCI 50000 - Foundations Of Literacy

Credit Hours: 3.00. Survey course in the acquisition of and instruction in reading, writing, and other aspects of language.

Learning Outcomes: 1. Develop a broad background and comprehensive understanding of literacy history, theory, and the socio-cultural influences that have shaped research and practice in the field. 2. Examine the constructs of reading and literacy from multiple theoretical perspectives, and in differing historical contexts. 3. Use new understandings to critically examine current theoretical perspectives and instructional practices. Credits: 3.00

ENGL 39200 - Young Adult Literature

Credit Hours: 3.00. This course examines the construct of Young Adult Literature as a genre crafted specifically for

adolescents. Using both classic and contemporary novels, as well as relevant theoretical and research texts, this course explores how YA literature is defined, what it offers to adolescent readers, and how it is situated in the literary landscape.

Learning Outcomes: 1. Read, respond to, and analyze selected works of Young Adult literature in order to think critically about various concepts and issues connected to the genre. 2. Explore, analyze, and critique the extent to which selected Young Adult literature affects and reflects teenage life. Credits: 3.00

EDCI 21510 - Language & Literacy Foundations For Teachers

Credit Hours: 1.00. The goal of the course is to provide background information in language and literacy necessary for success in literacy methods courses. The course will address basic linguistics and phonetic patterns of English, as well as the structures of literature and literary terms.

Learning Outcomes: 1. Compare and contrast levels of language structure: phoneme, morpheme, root, affix, phrase, sentence. 2. Differentiate graphic from phonological elements of language (e.g., grapheme vs phoneme). 3. Compare and contrast vocabulary terms (e.g. synonym, homonym, homograph). 4. Define and articulate written elements (e.g. digraphs, consonant clusters, long/short vowels). 5. Identify morpho-syntactic structures and phonological patters in written and spoken language. 6. Compare and contrast literary genres (e.g. narrative, non-narrative, fiction, nonfiction). 7. Distinguish the organizational structures of fictional genres from those of nonfictional genres. 8. Identify literary terms in context (e.g. alliteration, character traits, plot, stanza). Credits: 1.00

EDCI 32501 - Teaching Literacy In K-2

Credit Hours: 2.00. Students will study how children's oral language develops, how children learn to read and write in primary grade settings, and the teacher's role in this process. Students will learn how phonemic awareness, phonics, fluency, vocabulary and comprehension influence children's literacy development. Students will learn how to select appropriate instructional materials; employ teaching strategies to meet the cognitive and affective literacy needs of all children, and collect, interpret, and use data from various types of assessments to inform literacy teaching and learning processes.

Learning Outcomes: 1. Develop a sound background in theory and research about children's language and literacy development and learning. 2. Learn how literacy learning, teaching, and assessment in phonemic awareness, phonics, fluency, vocabulary, comprehension and writing can be effectively and systematically integrated and diversified to meet individual or group needs. 3. Design and implement developmentally appropriate instruction for primary grade students. Credits: 2.00

Capstone Experience Selective (3 credits)

EDCI 49000 - Individual Research And Teaching Experience

Credit Hours: 1.00 to 8.00. Primarily for teacher candidates requiring special, individualized experience in research or teaching. Permission of instructor required.

Credits: 1.00 to 8.00

EPCS 40200 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100 /40200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 40200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40100 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire

new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 40100 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100/EPCS 40200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 40100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-

solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

Learning Outcomes: 1. Find research literature. 2. Read and critique educational research. 3. Deepen knowledge of at least one research area in education. 4. Design, conduct, analyze, and write a research project. Credits: 3.00

Required Minor or Certificate (9-15 credits)

Other Departmental/Program Course Requirements (30-31 credits)

Racial, Ethnic & Cultural Diversity (6 credits)

AAS 37500 - The Black Family

Credit Hours: 3.00. This course considers and examines the black family as a social institution, focusing on both recent research as well as more descriptive accounts of issues concerning the black family.

Credits: 3.00

AAS 37300 - Issues In African American Studies

Credit Hours: 3.00. Focuses on a specific topic that relates to selected issues in the life, history, and culture of peoples of African ancestry.

Credits: 3.00

AAS 37000 - Black Women Rising

Credit Hours: 3.00. This course examines the rise of black women and their impact on economic, social, and cultural issues.

Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

ASAM 34000 - Contemporary Issues In Asian American Studies

Credit Hours: 3.00. Overviews various issues in contemporary Asian American Studies through theoretical and literary readings combined with examinations of popular media. Topics examine the multiple intersections of race, ethnicity, class, gender, and sexuality.

Credits: 3.00

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black

American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 39600 - African American History To 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations.
Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an

organized effort to work against hate and violence. Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts. 4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period. They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction (UCC: BSS/HUM)

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics.

University Core Curriculum (UCC): (UCC: BSS/HUM) Credits: 3.00

HIST 39800 - African American History Since 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history from 1877 that focus on Black Americans' struggle to overcome social, economic, and political oppression and to win basic civil and human rights while making valuable contributions to American society.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

U.S. & Global History (6 credits)

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and

post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SYS 30000 - It's A Complex World - Addressing Global Challenges (UCC: STS)

Credit Hours: 3.00. The main goal of this course is to address grand challenges that are of global concern - such as environmental sustainability and energy use, natural and human disasters, and political and economic development - using the ideas and tools of complex adaptive systems. The course exploits the broad expertise of the four faculty members by treating these challenges from diverse disciplinary perspectives, from the biological and physical sciences, to the social sciences, to engineering. By way of a set of case studies, students will analyze the features of these challenges which make them complex, and seek to explain and find solutions to the problems that arise in each case. Their treatment of the cases will be informed by published research and computer simulation. Students will actively participate in discussions regarding these global challenges, and contribute to the progress of the class using oral and written presentations. The course will culminate with a final project completed by teams composed of students from different disciplines.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe global challenges using engineering, biological, physical, and social scientific perspectives, including attention to the interdependence of the different perspectives. 2. Explain the fundamental concepts of 'complex adaptive systems, ' including applications to different global challenges. 3. Develop basic proficiency in applying computer modeling to represent the behavior of complex systems, with applications to the global challenges. 4. Apply the concepts and tools of complexity research to develop a group-based proposal of comprehensive policies/solutions/strategies in a new and unresolved problem area. Credits: 3.00

UCC courses remaining (18-19 credits)

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent).

Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis,

discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

Electives (43-50 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety

of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

14-16 Credits

Spring 1st Year

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

EDPS 43000 - Creating And Managing Learning Environments

Credit Hours: 0.00 to 3.00. The purpose of this course is to enable you to develop a supportive, challenging, and growth-enhancing classroom community for students in elementary grades. Teachers need insightful understanding and strong skills to create a classroom community that enhances achievement, welcomes diversity, makes effective use of technology, and provides appropriate educational experiences for students with diverse needs, backgrounds, and developmental levels.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 0.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and

motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and

family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific

differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Spring 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

Core Educational Studies Classes (10 credits)

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

Four Foundational Special Population Courses: (8 credits)

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals

with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

Collaborative Leadership Certificate (9 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how

interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

EDPS 31600 - Collaborative Leadership: Cross-Cultural Settings (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the cultural nuances of leadership in the United States as well as around the world. This course will include impact of globalism as a context for leadership, conflict resolution in a global environment, and other important factors that impact culturally diverse or global teams.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Better understand what a culture is, broadly defined, and how it functions. 2. Better understand the importance of culturally aware, knowledgeable, and skillful leaders. 3. Increase professional and personal self-awareness in relation to leadership in diverse settings. 4. Better understand the importance of making cultural issues central for constructive conflict management. 5. Understand the complexity of leader-other interaction and impact of psycho-social variables on this interaction. Credits: 3.00

EDPS 31700 - Collaborative Leadership: Mentoring

Credit Hours: 3.00. The purpose of this course is to provide a theoretical and experiential overview of the basic elements of mentoring as a key aspect of effective collaborative leadership. The hallmark of this course is the inclusion of a service-learning component in which students will be paired with undergraduate mentees and required to participate in weekly mentoring meetings for the duration of the semester. This learning experience is designed to promote development of the knowledge, skills, and dispositions required for competent mentorship. Emphasis on peer mentoring.

Learning Outcomes: 1. Differenitate among various types, purposes, roles of mentoring/mentors. 2. Identify the essential elements of effective mentoring relationships. 3. Examine and discuss the ethical considerations involved in mentoring. 4. Acquire knowledge regarding how issues of diversity interact with the process of mentoring. 5. Evaluate empirical findings associated with mentoring. 6. Consider various approaches to evaluating mentoring and the outcomes of mentoring programs. Credits: 3.00

Counseling Psychology (3 credits)

EDPS 50500 - Foundations Of Career Development And Assessment

Credit Hours: 3.00. Treats career development theories which emphasize aspects of the self in decision making, occupational classification systems, and educational and vocational information with applications to individual and group counseling.

Learning Outcomes: 1. Develop a comprehensive understanding of core and emerging theories and areas of research in career development. 2. Demonstrate the ability to conceptualize career counseling cases from various theoretical and multicultural perspectives. 3. Demonstrate the ability to integrate theory and research and utilize this information in such a way that it informs applications of career counseling and assessment. 4. Demonstrate understanding of the role cultural, individual difference (e.g., biological, personality), and developmental factors play in shaping career development processes. Credits: 3.00

EDPS 50700 - Counseling Multicultural And Diverse Populations

Credit Hours: 3.00. Counseling strategies for multicultural and diverse populations encountered by helping professionals. Among the populations considered are ethnic and cultural minorities, older persons, the gifted, and the disabled.

Learning Outcomes: 1. Examine how social and cultural factors influence the counseling relationship and are reflected in counseling

theory and practice. 2. Develop strategies for working with diverse individuals, couples, families, groups, and communities. 3. Develop an awareness of multicultural and pluralistic trends, including characteristics and concerns of specific socially and culturally diverse groups. 4. Examine ethical and legal issues related to counseling diverse populations. Credits: 3.00

Human Development and Family Studies (3 credits)

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

EDPS 21200 - Collaboration And Family Engagement To Support Students With Disabilities

Credit Hours: 3.00. Students will learn strategies for communicating and collaborating with a variety of team members. Finally culture will be explored. Strategies for collaborating with family members, administrators, paraprofessionals and related service personnel will be explored. This course includes a field experience.

Learning Outcomes: 1. Differentiate between professional and personal perspectives that impact teamwork and collaboration. 2. Describe how cultural values, context (e.g., social expectations, home language, resources, etc.), and experiences impact families' educational involvement and student learning. 3. Describe the additional roles and potential stressors families of children with disabilities may experience. 4. Identify strategies and steps for developing home-school partnerships and facilitating communication with families and school personnel. 5. Identify roles and responsibilities of key members (e.g., speech, school counselor, general education, paraeducator, etc.) of the educational team. 6. Outline and describe strategies (e.g., collaborative goal setting, coteaching, planning, etc.) for training and problem solving. Credits: 3.00

Educational Psychology (3 credits)

EDPS 10101 - Learning In Context-An Introduction To The Learning Sciences

Credit Hours: 3.00. This introductory course is designed to acquaint first year Learning Science students with the core

concepts, principles, and research findings of the learning sciences as they apply to a wide range of formal and informal educational contexts. The course provides students with opportunities to interact with and learn about the scholarship of College of Education faculty who conduct research within the framework of the learning sciences. Students will learn about faculty projects that exemplify key features of the Learning Sciences such as attention to the complexity of learning environments, the study of social and cultural as well as individual dimensions of learning, and the cross-disciplinary nature of the field.

Learning Outcomes: 1. Identify the features of education as a design discipline. 2. Identify core principles, questions, and challenges, that define educational research and practice from a Learning Sciences perspective. 3. Identify the varied sources of cross-disciplinary knowledge that contribute to the design and study of effective learning environments. Credits: 3.00

EDPS 53000 - Cognition And Learning In Context

Credit Hours: 3.00. Theories of learning and development, research on instruction and learning, and principles of measurement applied to educational problems.

Learning Outcomes: 1. Understand the central components of Behaviorism, differentiate between classical and operant conditioning, and apply the theories to teaching and learning. 2. Understand the central tenets of constructivism, identify a range of constructivist theories or perspectives, and distinguish constructivism from behaviorism. 3. Understand the central components of theories of learning and development developed by Bandura, Piaget, and Vygotsky, and apply them to teaching and learning. 4. Understand the roles of memory, expertise, transfer, conceptual change, meta-cognition, and self-regulated learning for student learning, and their implications for teaching. 5. Identify the central characteristics of instructional scaffolding, and cooperative and collaborative learning, how they are associated with learning, and how they may be instantiated. 6. Understand central tenets of sociocultural (or sociohistorical) and situated theories of learning and development and apply them to teaching and learning. 7. Understand the central characteristics of inquiry (or project-based learning) and their affordances and limitations with respect to teaching and learning. 8. Understand how policies (educational and otherwise), political priorities, beliefs, and national and international factors affect affordances for teaching and learning. Credits: 3.00

Education Research Methodology (6 credits)

EDPS 53100 - Introduction To Measurement And Instrument Design

Credit Hours: 3.00. An application-oriented introduction to constructing educational and psychological tests and surveys. Class sessions include guided practice with the process of instrument development, from trait and test task domain definition, item writing and revision, and item analysis, to score interpretation and validation.

Learning Outcomes: 1. Explain fundamental concepts and terminology in educational measurement. 2. Evaluate existing measurement instruments and score uses. 3. Contribute to development of instruments for measuring educational outcomes. 4. Interpret descriptive statistics for test and test item scores. Credits: 3.00

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

Learning Outcomes: 1. Find research literature. 2. Read and critique educational research. 3. Deepen knowledge of at least one research area in education. 4. Design, conduct, analyze,

and write a research project. Credits: 3.00

EDPS 53400 - Introduction To Educational Research II: Measurement Consideration

Credit Hours: 3.00. This course is designed to provide an overview of introductory quantitative data analysis methods in education. The course in specially designed to enhance students' quantitative reasoning and skills through discussions of issues in educational data and authentic data analysis experiences of a variety of education data. The topics to be covered in this course include data collection and description, sampling distributions, methods of quantitative data analysis often used in education research. Permission of instructor required.

Learning Outcomes: 1. Describe key concepts and principles of educational measurement. 2. Conduct comprehensive analyses of the characteristics of different assessments (including their advantages and limitations). Credits: 3.00

Other Departmental/Program Course Requirements (33-34 credits)

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

Quantitative Reasoning (6 credits)

MA 13800 - Mathematics For Elementary Teachers II (UCC: QR)

Credit Hours: 3.00. Elementary school teachers must understand how multiplication gives rise to exponents and how to represent, interpret, and compute exponents from problem situations. They must also understand how to represent practical situations using algebraic and fractional expressions, and verbally interpret graphs of functions. They have to know basic concepts of probability theory. This course covers conceptual and practical notions of exponents and radicals; algebraic and rational functions, algebraic equations and inequalities, systems of linear equations, polynomial, exponential, and logarithmic functions. Notions of probability.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To conceptually understand and correctly perform algebraic operations, solve algebraic equations of degree two, perform operations with exponents and radicals, sketch graphs of certain polynomial, exponential and logarithmic functions. 2. To understand inequalities involving linear functions. 3. To solve 2x2 systems of equation. 4. To understand basic notions of probability, including combinations, permutations, probability of one and/or another event and conditional probability. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment

of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

MA 13700 - Mathematics For Elementary Teachers I

Credit Hours: 3.00. Designed for prospective elementary school teachers. Problem solving. Numerical reasoning including self-generated and conventional algorithms. Whole and fractional number systems, elementary number theory. (Not available for credit toward graduation in the College of Science.)

Learning Outcomes: 1. To model and perform arithmetic operations in bases other than base ten. 2. To convert numbers to scientific notation and perform arithmetic operations in scientific notation. 3. To perform operations with signed numbers. 4. To use properties of addition and multiplication to facilitate arithmetic. 5. To determine when two fractions are equivalent, decimals and percents. 6. To use divisibility rules to determine greatest common factors to decide whether numbers are prime. Credits: 3.00

Aesthetic Awareness (3 credits)

AD 20100 - Art For Elementary School Teachers

Credit Hours: 3.00. Art theory and experiences, curriculum theory, and materials preparatory for instruction of elementary school children. No undergraduate students may be enrolled in this course until they have been admitted to teacher education and a copy of this acceptance is on file.

Learning Outcomes: 1. Apply visual arts methods to develop appropriate lessons to construct students' knowledge. 2. Utilize two- and three-dimensional media commonly used by elementary students to teach art production and encourage the expression of ideas. 3. Assess elementary students' artistic development levels and design activities to meet their artistic needs in the classroom. 4. Apply elements of art, principles of design, interpretation skills, and judgment conclusions to evaluate and respond to works of art and to foster that ability in their elementary students. Credits: 3.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 25500 - Art Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the problems overcome by mankind in the origins and growth of art.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

DANC 10100 - Modern Dance Technique I

Credit Hours: 2.00. An introduction to the techniques and principles of modern dance.

Learning Outcomes: 1. Demonstrate elementary level performance of skills and principles of Modern Dance technique. 2. Perform basic dance movement with personal expression. 3. Demonstrate fundamental bodily and spatial awareness, mobility, and strength. Credits: 2.00

DANC 10200 - Ballet I

Credit Hours: 2.00. An introduction to the techniques and principles of classical ballet.

Learning Outcomes: 1. Demonstrate essential ballet skills, principles and techniques used in ballet. 2. Demonstrate correct use of ballet terminology. 3. Recognize and define ballet as a historical classical art form. 4. Perform for an audience all three parts of ballet class: barre, center and across the floor. Credits: 2.00

DANC 10300 - Jazz Dance I

Credit Hours: 2.00. An introduction to the principles of jazz dance techniques: alignment, isolations, rhythmic patterns, and basic locomotion.

Learning Outcomes: 1. Perform basic skills of the body including coordination, proper alignment, and musicality through movement phrases and exercises aligned with Jazz Dance Techniques. 2. Demonstrate an elementary understanding of core principles, techniques and histories under the broad umbrella of Jazz Dance Technique. 3. Demonstrate a fundamental understanding of Jazz Dance vocabulary and basic body anatomy. Credits: 2.00

MUS 25000 - Music Appreciation (UCC: HUM)

Credit Hours: 3.00. The traditions, forms, and styles of classical music. Other types of music may be examined as well. (Students may register through the Continuing Education Student Learning Center at the Tech Statewide locations via distance education.) CTL:IFA 1330 Music Appreciation

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 32400 - Teaching Music In The Elementary School

Credit Hours: 3.00. Develops basic musicianship through singing, playing instruments, reading and writing music, listening and moving to music. Surveys music teaching methods and materials. Includes lesson planning, experiences in teaching, and observation of children in music classes.

Learning Outcomes: 1. Advocate for the importance of music's inclusion (or exclusion, if desired) in the elementary classroom. 2. Develop curricula that appropriately advances the musical abilities, appreciation, and understanding of children. 3. Perform by singing and playing instruments both alone and in a group. 4. Synthesize appropriate terms to describe musical performance and recording. 5. Connect music to a variety of societal, cultural, and historical contexts. Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

THTR 13300 - Acting I

Credit Hours: 3.00. Beginning training and exercises in the basic elements of acting, including vocal and physical preparation, sensory awareness, releasing the imagination, and a basic understanding of action an objective. Staging exercises and terminology are emphasized.

Learning Outcomes: 1. Become familiar with the techniques and practices of acting: vocal and physical techniques, analysis and interpretation.

2. Understand the concepts of given circumstances, action, objective, obstacle, character and conflict, and utilize these in basic scene work. 3. Communicate the play's idea through the medium of character in a scene from a published play. Credits: 3.00

English Literature (3 credits)

CHNS 24100 - Introduction To The Study Of Chinese Literature (UCC: HUM)

Credit Hours: 3.00. Class reading and discussion of selected Chinese poetry, prose, and drama; introduction to the methods of literary criticism, applied to the reading of Chinese literary discourse. Texts, discussion, and written assignments primarily in Chinese. Permission of instructor required.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 23000 - Great Narrative Works (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of great narratives from Homer's Odyssey to the present, considering works from a variety of cultures and time periods in order to develop an understanding of their ideas, structures, styles, and cultural values.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 23100 - Introduction To Literature

Credit Hours: 3.00. Reading and discussion of great works of various types to develop an understanding of their ideas, structures, and styles. Includes poetry, drama, biography, essay, and prose fiction. CTL:IEL 1270 Appreciation Of Literature

Credits: 3.00

ENGL 23200 - Thematic Studies In Literature

Credit Hours: 3.00. Examination of a particular theme, such as the hero, death, or the city, and the techniques by which it is treated in various literary works, usually in more than one genre. Current offerings available from counselors.

Credits: 3.00

ENGL 23400 - Literature And The Environment (UCC: STS)

Credit Hours: 3.00. Literary study of nature writing; writing from the natural sciences; and canonical poetry, fiction, and essays through an ecological lens. Introduces students to ecocritical thought and environmental literary history.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and discursive conventions of literature about the environment. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 23700 - Introduction To Poetry (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of poetry from different periods aimed at enhancing the student's understanding of genre, form, and style; how poetry grows out of and speaks to its historical moment; and how poetry addresses pressing social issues.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate introductory knowledge of a range of genres, topics, and literary conventions of poetry. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 23800 - Introduction To Fiction (UCC: HUM)

Credit Hours: 3.00. Reading and discussion of fiction from different periods aimed at enhancing the student's understanding of genre, form, and style; how fiction grows out of and speaks to its historical moment; and how fiction addresses pressing social issues.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Demonstrate introductory knowledge of a range of genres, topics, and literary conventions of fiction. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature

they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 24000 - British Literature Before 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the medieval to the Romantic period.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Romantic period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Romantic literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 24100 - British Literature After 1789 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from the Romantic period on.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the Romantic period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about literature from the Romantic period to the present based on appropriate use of textual evidence. Credits: 3.00

ENGL 25000 - Great American Books (UCC: HUM)

Credit Hours: 3.00. What makes great American books so compelling? This course examines the dynamic history of American literature and explores how canonical and contemporary books have shaped the cultural landscape of the U.S. and the world.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions related to great American books. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about American books based on appropriate use of textual evidence. Credits: 3.00

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 26200 - Greek And Roman Classics In Translation

Credit Hours: 3.00. Study of important works of Greek and Roman literature, their intrinsic literary values, and their influence on later European and American writing and thinking.

Credits: 3.00

ENGL 26400 - The Bible As Literature (UCC: HUM)

Credit Hours: 3.00. A literary study of selections from the Old and New Testaments as examples of Hebrew and early Christian literature.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Explain the methods, objects of study, and applications of literary studies and the liberal arts, especially related to the Bible. 2. Employ critical approaches from basic building blocks to more advanced ones suited to cultural complexities. 3. Explain and employ different genres of reading, including argument through evidence and close reading. 4. Demonstrate written and visual literacies by analyzing diverse media. 5. Demonstrate knowledge of and proficiency in different types of writing, including argument through evidence and written persuasion. 6. Demonstrate content knowledge of specific Biblical books and their genres. Credits: 3.00

ENGL 26600 - World Literature: From The Beginnings To 1700 A.D. (UCC: HUM)

Credit Hours: 3.00. (CMPL 26600) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. CCN: IEL 1250

World Literature 1

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 26700 - World Literature: From 1700 A.D. To The Present (UCC: HUM)

Credit Hours: 3.00. (CMPL 26700) World literature in translation. A comparative and chronological survey of the masterpieces of Eastern and Western literature. Typically offered Summer Fall Spring. CCN: IEL 1251 World Literature 2

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions characteristic of world literatures. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about the literature they study based on appropriate use of textual evidence. Credits: 3.00

ENGL 35000 - American Literature Before 1865 (UCC: HUM)

Credit Hours: 3.00. A historically oriented survey of genres, authors, and texts from European colonization to the U.S. Civil War. CTL:IEL 1210 American Literature I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the pre-Civil War period. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about pre-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35100 - American Literature After 1865 (UCC: HUM)

Credit Hours: 3.00. A survey of American literature from the Civil War to the present. CTL:IEL 1211 American Literature II

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate knowledge of a range of genres, topics, and literary conventions from the post-Civil War period on. 2. Discuss those genres, topics, and conventions in relation to their diverse historical, cultural, and aesthetic contexts. 3. Produce well-reasoned written arguments about post-Civil War literature based on appropriate use of textual evidence. Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

ENGL 35900 - Black Women Writers

Credit Hours: 3.00. (AAS 35900) This course introduces students to the rich and varied literary texts produced by black women writers. Literary analysis, along with a consideration of historical, cultural, gender, and racial contexts will be emphasized.

Credits: 3.00

ENGL 36000 - Gender And Literature (UCC: HUM)

Credit Hours: 3.00. An introduction to feminist approaches to the study of literature, including poetry, drama, fiction, and/or autobiography. Examines how gender intersects with race, ethnicity, sexual orientation, and class in shaping authorship,

reading, and representation.
University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

ENGL 36500 - Literature And Imperialism (UCC: HUM)

Credit Hours: 3.00. A study through cultural and theoretical works of the impact of imperialism on the ruling nations.
University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism/colonialism. 2. Develop a foundational knowledge of the historical contexts of and theoretical approaches to literary texts: gain an introductory knowledge of postcolonial literary theory. 3. Improve close reading and textual analysis skills. 4. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 36600 - Postcolonial Literatures

Credit Hours: 3.00. A study of Third World Literature, film, and theory that emerged during and after Western rule.
Learning Outcomes: 1. Develop an appreciation and analytical understanding of non-Western literature and culture from the formerly colonized world. 2. Develop a foundational knowledge of historical contexts, scholarly approaches, and theoretical perspectives to literary text formulate significant critical questions about language, gender, sexuality, race, and/or ethnicity and how identity shapes our lives, experiences, institutions, and cultures, particularly in the context of imperialism / colonialism. 3. Gain a complex understanding of global cultures. 4. Gain an introductory knowledge of postcolonial literary theory. 5. Improve close reading and textual analysis skills. 6. Improve critical thinking skills: improve formal writing skills: use textual evidence to support their views, effectively incorporating (and correctly citing) primary and scholarly secondary sources in their writing and class discussion. Credits: 3.00

ENGL 37300 - Science Fiction And Fantasy (UCC: HUM)

Credit Hours: 3.00. Representative works of science fiction and fantasy examined in relation to both mainstream and popular literature. Emphasis is on technique, theme, and form.
University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

FR 24100 - Introduction To The Study Of French Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from France and the Francophone world; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in French.
Credits: 3.00

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German.
Learning Outcomes: 1. Identify common characteristics of primary literary genres (e.g. prose, poetry, drama) as exhibited during one or more time periods in German-language cultures. 2. Discuss (in German) selected literary works that are written in German in respect to their main themes and to devices that help writers convey the texts' meaning, such as symbolism, metaphor, irony, and allusion. 3. Compose (in German, with the aid of a dictionary) analytical essays that examine the relationship between the content, style, and sociohistorical context of selected literary texts.
Credits: 3.00

JPNS 24100 - Introduction To The Study Of Japanese Literature

Credit Hours: 3.00. Reading and discussion of selected Japanese poetry, prose, and drama; introduction to methods of literary criticism, applied to the reading of Japanese literary discourse. Texts, discussion, and written assignments largely in Japanese.

Credits: 3.00

SPAN 24100 - Introduction To The Study Of Hispanic Literature

Credit Hours: 3.00. Reading and discussion of selected poetry, prose, and theatre from Spain and Spanish-speaking America; introduction to critical discourse and basic concepts of literary theory. Texts, discussion, and written assignments in Spanish.

Learning Outcomes: 1. Gain understanding of literature produced in the Spanish speaking world. 2. Develop the ability to talk effectively about and interact with literature in Spanish. 3. Write specific types of texts for analyzing Spanish literature. Credits: 3.00

ENGL 39200 - Young Adult Literature

Credit Hours: 3.00. This course examines the construct of Young Adult Literature as a genre crafted specifically for adolescents. Using both classic and contemporary novels, as well as relevant theoretical and research texts, this course explores how YA literature is defined, what it offers to adolescent readers, and how it is situated in the literary landscape.

Learning Outcomes: 1. Read, respond to, and analyze selected works of Young Adult literature in order to think critically about various concepts and issues connected to the genre. 2. Explore, analyze, and critique the extent to which selected Young Adult literature affects and reflects teenage life. Credits: 3.00

Race, Ethnic & Cultural Diversity (6 credits)

AAS 37500 - The Black Family

Credit Hours: 3.00. This course considers and examines the black family as a social institution, focusing on both recent research as well as more descriptive accounts of issues concerning the black family.

Credits: 3.00

AAS 37300 - Issues In African American Studies

Credit Hours: 3.00. Focuses on a specific topic that relates to selected issues in the life, history, and culture of peoples of African ancestry.

Credits: 3.00

AAS 37000 - Black Women Rising

Credit Hours: 3.00. This course examines the rise of black women and their impact on economic, social, and cultural issues.

Credits: 3.00

ANTH 20500 - Human Cultural Diversity (UCC: BSS)

Credit Hours: 3.00. Offers an engaging introduction to concepts, themes, methods, and ethical concerns that guide research and analysis in cultural anthropology. Students will learn how to identify and interpret the complexities of human culture - what makes cultures different, and in what ways are they more alike than we might assume? Topics include: race and racism; ethnicity and nationalism; gender; sexuality; kinship, family, and marriage; class and inequality; the global economy; politics and power; religion; and health and illness.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Recognize cultural anthropology's historical legacies and contemporary realities. 2. Identify and explain key concepts in cultural anthropology. 3. Demonstrate understanding of how culture intersects with political, economic, and social institutions, including the relationship between power and inequality. 4. Recognize how anthropological theories and methods can provide insight into contemporary life and human experiences. Credits: 3.00

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

ANTH 33600 - Human Variation

Credit Hours: 3.00. Biological differences between human individuals and groups, causes of variations, the role of genetics, concepts of race, and the interrelationship between the social and biological meanings of race will be considered.

Learning Outcomes: 1. Describe the scientific basis of human diversity from evolutionary and biocultural perspectives. 2. Evaluate statements in scientific literature about biological and cultural variation. 3. Explain how humans are continuing to change. 4. Analyze articles in the popular press that deal with human differences. Credits: 3.00

ANTH 37900 - Native American Cultures (UCC: BSS)

Credit Hours: 3.00. General survey of Native cultures of the Americas. Topics to be covered include prehistory, language, religion, aesthetics, culture contact and change, contemporary issues, and social, economic and political organization.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

ASAM 34000 - Contemporary Issues In Asian American Studies

Credit Hours: 3.00. Overviews various issues in contemporary Asian American Studies through theoretical and literary readings combined with examinations of popular media. Topics examine the multiple intersections of race, ethnicity, class, gender, and sexuality.

Credits: 3.00

ENGL 25700 - Literature Of Black America

Credit Hours: 3.00. A survey of literature written by black American authors. Close attention is paid to the history of black literature and to the historical context in which it was written, as well as to the texts of major works by black writers.

Credits: 3.00

ENGL 35200 - Native American Literature

Credit Hours: 3.00. Study of literature by Native American authors in a variety of genres-novels, short stories, poetry, autobiography--using literary analysis, as well as historical, legal, and ethnographic materials.

Credits: 3.00

ENGL 35400 - Asian American Literature

Credit Hours: 3.00. Study of Asian American Literature covering issues such as immigration, identity, class, and gender.

Credits: 3.00

ENGL 35800 - Black Drama

Credit Hours: 3.00. A critical analysis and discussion of selected representative works by African American dramatists - from William Wells Brown to the moderns.

Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 39600 - African American History To 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts,

and to consider the relationship of the past to the present. Credits: 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations. Credits: 3.00

SOC 35600 - Hate And Violence

Credit Hours: 3.00. Examines the causes of and solutions to hatred and violence. Concepts such as anti-Semitism, discrimination, hate crimes, prejudice, racism, bullying, homosexual prejudice, terrorism and other topics will be addressed. This course uses experiential activities, videos, guest speakers and classroom discussion.

Learning Outcomes: 1. Apply sociological approaches and concepts to the study of hate and violence. 2. Identify some of the causes of hate and violence, as well as the forces that perpetuate hate and violence. 3. Identify and critically evaluate institutional responses to hate and violence. 4. Empirically examine an organized effort to work against hate and violence. Credits: 3.00

WGSS 38000 - Comparative Studies In Gender And Culture (UCC: BSS)

Credit Hours: 3.00. This course expands students' understanding of gender issues by exploring the multicultural diversity of women's lives. It examines how race, class, sexuality, and culture interact and shape society and ecology in the United States and in a global context.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the diversity of feminist thought within the U.S. and globally. 2. Summarize the following concepts: 1) sex and gender; 2) social construction and essentialism; 3) oppression; 4) privilege; 6) resistance and social activism. 3. Analyze how gender operates as system of social stratification and differentiation in major arenas of social life such as home and family, work, politics, education, and sexuality across various cultural contexts. 4. Define some of the multi and trans-cultural interactions among gender, race, class, sexuality, and national belonging and some of the ways in which ""woman/women"" and ""man/men"" is a constructed category that is historically and culturally shaped. 5. Demonstrate an understanding of activist awareness and commitment to women's and LGBTQ+ issues from a multi/trans-cultural and global perspective. 6. Make explicit connections between matters discussed in this class and the events and interactions of your daily life. Credits: 3.00

WGSS 28200 - Introduction To LGBTQ Studies (UCC: BSS)

Credit Hours: 3.00. (ANTH 28200) This course offers students an introduction to the interdisciplinary study of lesbian, gay, bisexual, transgender and queer lives. It provides a basic grounding in theories of sexuality and LGBT histories, identities and movements in the U.S. and globally.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Students will gain a broad overview of the cultural history of sexualities both in the West and globally from the pre-modern era to the contemporary period.

They will grasp the way sexual and gender identities change over time and across space. They will analyze how sexual identity intersects with gender, race, and class. They will develop a theoretical understanding of the social construction of sexuality, sexual identities and transgender identities. Credits: 3.00

WGSS 28000 - Women's, Gender, And Sexuality Studies: An Introduction (UCC: BSS/HUM)

Credit Hours: 3.00. An introductory survey of the concepts and research data in the new scholarship on women. Topics covered include biology, sexuality, socialization, family and work, creativity, and politics.

University Core Curriculum (UCC): (UCC: BSS/HUM) Credits: 3.00

HIST 39800 - African American History Since 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history from 1877 that focus on Black Americans' struggle to overcome social, economic, and political oppression and to win basic civil and human rights while making valuable contributions to American society.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

Electives (44-45 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC:

IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HIST 15100 - American History To 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the development of American political, economic, and social institutions from the early explorations and colonial settlements through Reconstruction. CTL:ISH 1010 American History I

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 15200 - United States Since 1877 (UCC: HUM)

Credit Hours: 3.00. A study of the growth of the United States from 1877 to the present. The new industrialism, agrarian problems, depression, the New Deal, the two world wars, the cold war, and similar topics are analyzed. CTL:ISH 1011 American History II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

15-16 Credits

Spring 1st Year

HIST 10400 - Introduction To The Modern World (UCC: HUM)

Credit Hours: 3.00. Traces the expansion of Europe into the Americas, Africa, and Asia. The French Revolution, nationalism, and the development of western European states from the era of the Reformation to the present are studied.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques, and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and

family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

15 Credits

Spring 2nd Year

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices.

Credits: 1.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

EDPS 45900 - Assistive Technology (UCC: STS)

Credit Hours: 3.00. Use of technological applications in special education, including microcomputers, interactive video, auditory and visual enhancement, and other adaptive devices with individuals experiencing disabilities including learning disabilities, intellectual disabilities, sensory and physical disabilities. Typically offered Fall Spring.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Gain knowledge of the various types and forms of assistive technology. 2. Demonstrate an ability to discuss AT and services. 3. Conduct a professional presentation related to assistive technology. 4. Present a valid technology for repurposing. Credits: 3.00

15 Credits

Fall 3rd Year

EDPS 10101 - Learning In Context-An Introduction To The Learning Sciences

Credit Hours: 3.00. This introductory course is designed to acquaint first year Learning Science students with the core concepts, principles, and research findings of the learning sciences as they apply to a wide range of formal and informal educational contexts. The course provides students with opportunities to interact with and learn about the scholarship of College of Education faculty who conduct research within the framework of the learning sciences. Students will learn about faculty projects that exemplify key features of the Learning Sciences such as attention to the complexity of learning environments, the study of social and cultural as well as individual dimensions of learning, and the cross-disciplinary nature of the field.

Learning Outcomes: 1. Identify the features of education as a design discipline. 2. Identify core principles, questions, and challenges, that define educational research and practice from a Learning Sciences perspective. 3. Identify the varied sources of cross-disciplinary knowledge that contribute to the design and study of effective learning environments. Credits: 3.00

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

15 Credits

Spring 3rd Year

EDPS 31600 - Collaborative Leadership: Cross-Cultural Settings (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the cultural nuances of leadership in the United States as well as around the world. This course will include impact of globalism as a context for leadership, conflict resolution in a global environment, and other important factors that impact culturally diverse or global teams.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Better understand what a culture is, broadly defined, and how it functions. 2. Better understand the importance of culturally aware, knowledgeable, and skillful leaders. 3. Increase professional and personal self-awareness in relation to leadership in diverse settings. 4. Better understand the importance of making cultural issues central for constructive conflict management. 5. Understand the complexity of leader-other interaction and impact of psycho-social variables on this interaction. Credits: 3.00

EDPS 50500 - Foundations Of Career Development And Assessment

Credit Hours: 3.00. Treats career development theories which emphasize aspects of the self in decision making, occupational classification systems, and educational and vocational information with applications to individual and group counseling.

Learning Outcomes: 1. Develop a comprehensive understanding of core and emerging theories and areas of research in career development. 2. Demonstrate the ability to conceptualize career counseling cases from various theoretical and multicultural perspectives. 3. Demonstrate the ability to integrate theory and research and utilize this

information in such a way that it informs applications of career counseling and assessment. 4. Demonstrate understanding of the role cultural, individual difference (e.g., biological, personality), and developmental factors play in shaping career development processes. Credits: 3.00

EDPS 50700 - Counseling Multicultural And Diverse Populations

Credit Hours: 3.00. Counseling strategies for multicultural and diverse populations encountered by helping professionals. Among the populations considered are ethnic and cultural minorities, older persons, the gifted, and the disabled.

Learning Outcomes: 1. Examine how social and cultural factors influence the counseling relationship and are reflected in counseling theory and practice. 2. Develop strategies for working with diverse individuals, couples, families, groups, and communities. 3. Develop an awareness of multicultural and pluralistic trends, including characteristics and concerns of specific socially and culturally diverse groups. 4. Examine ethical and legal issues related to counseling diverse populations. Credits: 3.00

15 Credits

Fall 4th Year

EDPS 31700 - Collaborative Leadership: Mentoring

Credit Hours: 3.00. The purpose of this course is to provide a theoretical and experiential overview of the basic elements of mentoring as a key aspect of effective collaborative leadership. The hallmark of this course is the inclusion of a service-learning component in which students will be paired with undergraduate mentees and required to participate in weekly mentoring meetings for the duration of the semester. This learning experience is designed to promote development of the knowledge, skills, and dispositions required for competent mentorship. Emphasis on peer mentoring.

Learning Outcomes: 1. Differenitate among various types, purposes, roles of mentoring/mentors. 2. Identify the essential elements of effective mentoring relationships. 3. Examine and discuss the ethical considerations involved in mentoring. 4. Acquire knowledge regarding how issues of diversity interact with the process of mentoring. 5. Evaluate empirical findings associated with mentoring. 6. Consider various approaches to evaluating mentoring and the outcomes of mentoring programs. Credits: 3.00

EDPS 53100 - Introduction To Measurement And Instrument Design

Credit Hours: 3.00. An application-oriented introduction to constructing educational and psychological tests and surveys. Class sessions include guided practice with the process of instrument development, from trait and test task domain definition, item writing and revision, and item analysis, to score interpretation and validation.

Learning Outcomes: 1. Explain fundamental concepts and terminology in educational measurement. 2. Evaluate existing measurement instruments and score uses. 3. Contribute to development of instruments for measuring educational outcomes. 4. Interpret descriptive statistics for test and test item scores. Credits: 3.00

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

Learning Outcomes: 1. Find research literature. 2. Read and critique educational research. 3. Deepen knowledge of at least one research area in education. 4. Design, conduct, analyze, and write a research project. Credits: 3.00

15 Credits

Spring 4th Year

EDPS 53300 - Introduction To Educational Research I: Methodology

Credit Hours: 3.00. This course presents a sequence of journal articles and exercises that help introduce the foundational concepts of the course, including: research design, reliability and validity, various methodologies commonly used in educational research, and basic quantitative and qualitative data analyses. In addition, contrasting research conclusions are shown in the articles to help students learn why careful analysis of articles and their theoretical framing is critical to evaluating their conclusions.

EDPS 53400 - Introduction To Educational Research II: Measurement Consideration

Credit Hours: 3.00. This course is designed to provide an overview of introductory quantitative data analysis methods in education. The course in specially designed to enhance students' quantitative reasoning and skills through discussions of issues in educational data and authentic data analysis experiences of a variety of education data. The topics to be covered in this course include data collection and description, sampling distributions, methods of quantitative data analysis often used in education research. Permission of instructor required.

Learning Outcomes: 1. Describe key concepts and principles of educational measurement. 2. Conduct comprehensive analyses of the characteristics of different assessments (including their advantages and limitations). Credits: 3.00

15 Credits

General Management, BS

About the Program

Degree Requirements

Department/Program Major Courses (76 credits)

Required Major Courses (55 credits)

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective,

industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as

needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of

managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and

corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and

Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using

advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

Economics Selective - Choose One: (3 credits)

ECON 47100 - Behavioral Economics

Credit Hours: 3.00. Students learn about human behavior in economic environments, with a strong emphasis on classroom laboratory exercises. Topics considered include behavior in a variety of markets - for example, markets with price controls, markets for financial assets and auction markets -- and behavior in social dilemmas that arise when people try to provide public goods voluntarily or when sellers try to conspire to fix prices. Students will also learn how people bargain with, trust each

other, and show social preferences towards others. Decision-making and anomalies for risky and uncertain choices will also be covered.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to human behavior in various economic environments based on classroom laboratory exercises. 2. Understand the perspective provided by economic analysis in social exchanges that involve bargaining, trust, and uncertainty. 3. Identify insights experimental economics provides concerning individuals' behavior in markets. Credits: 3.00

ECON 46600 - International Economics

Credit Hours: 3.00. Analyzes topics in international economics, using more advantage techniques and more detailed treatment than in ECON 37000 or 37100. While coverage varies somewhat with instructor, some topics could include: economic growth, innovation and technology transfer, and the role of multinational corporations.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade and finances. 2. Understand the perspective provided by economic analysis regarding the interaction between economic growth and international trade. 3. Identify insights economics analysis provides concerning the benefits and costs of technology transfer and the role of multinational corporations. Credits: 3.00

ECON 46100 - Industrial Organization

Credit Hours: 3.00. This course examines the determinants of firm and market structure and the resulting market performance in imperfectly-competitive markets. Advanced topics include advertising, research and development, imperfectly competitive international markets, and market integration. Emphasis is placed on using theoretical models of firm and industry behavior to explain and analyze real-world examples of firm behavior.

Learning Outcomes: 1. Use basic versions of the models economists use to analyze imperfectly competitive markets. 2. Recognize the results of empirical tests of those models, in the laboratory and using real-world data. 3. Recognize the implications of these models for public policy toward business competition. Credits: 3.00

ECON 45100 - Game Theory

Credit Hours: 3.00. In the course, economic, political, and social interactions are represented as games, in which strategies and resulting outcomes can be analyzed. The analysis of these interactions is then used to demonstrate how one can make optimal decisions under uncertainty. This course uses Calculus.

Learning Outcomes: 1. Model strategic interactions as a game. 2. Describe behavior in games using strategies. 3. Calculate the Nash equilibrium of a game. 4. Predict behavior in different games. 5. Explain the role of uncertainty in strategic interactions. Credits: 3.00

ECON 38500 - Labor Economics

Credit Hours: 3.00. The purpose of this course is to introduce important topics, theories, institutions, and policy issues relating to the functioning of labor markets. Topics to be considered include labor supply decisions, investments in human capital, compensating wage differentials, labor contract theory, unions, compensation programs, signaling in labor markets, the economics of unemployment, and government employment, retirement, and workplace safety.

Learning Outcomes: 1. Distinguish the major determinants of labor market participation and hours worked. 2. Analyze how welfare programs and business cycles affect labor supply. 3. Derive the short and long term demand for labor. 4. Construct a detailed demand and supply model of the labor market. 5. Find the equilibrium labor market outcomes in the context of the neoclassical model 6. Analyze the role played by jobs' and workers' characteristics in generating wage differentials. 7. Develop a schooling model that explains human capital investment. 8. Distinguish factors that affect earnings inequality and labor market discrimination. Credits: 3.00

ECON 36100 - Antitrust And Regulation

Credit Hours: 3.00. This course studies the influence of laws and regulations on market performance and on the functioning of a free-enterprise system. The focus is on two types of government policies: antitrust law and economic regulation. Antitrust laws define the rules by which firms are supposed to compete. Regulations may require that firms obtain approval to set prices, change prices, or enter new markets. They may require firms to adhere to environmental or safety standards. The focus is on current topics in both areas, including comparison of U.S. practice with that of European Union and elsewhere.

Learning Outcomes: 1. Demonstrate a basic understanding of economics as applied to antitrust and government regulation of firms, including comparisons of U.S. practice with that of the European Union and elsewhere. 2. Understand the perspective provided by economic analysis regarding the interplay between government regulation and firms' decisions regarding such factors as pricing, market entry, and the extent/form of competition. 3. Identify insights economic analysis provides concerning the creation and implementation of optimal regulation of business. Credits: 3.00

ECON 32500 - Economics Of Sports

Credit Hours: 3.00. This class applies economic principles to the professional sports entertainment industry and its derivative input markets. The class begins by examining the microeconomics of demand for (by fans) and supply of (by teams) sports entertainment. The labor markets for the primary input, athletic talent, receive significant attention. Coordination among economic agents, taking the forms of leagues, players' unions, and government, is considered at the end of the class, with an emphasis on how they affect the efficiency of the markets related to sports entertainment. Quantitative empirical analysis is emphasized throughout the class. This is not a sports trivia or fantasy sports strategy class.

Learning Outcomes: 1. Solve models of how fans, teams, and players behave. 2. Describe and evaluate the structures of the markets for sports outputs and inputs, e.g., players. 3. Explain information presented in quantitative forms, e.g., equations, graphs, tables. 4. Analyze the effects of leagues' or governmental polices on market efficiency. 5. Communicate conclusions about sports output and input markets in numerical, graphical, tabular, and written forms. Credits: 3.00

ECON 36200 - Health Economics

Credit Hours: 3.00. This course is designed to introduce upper level undergraduate students in economics to the field of health economics. We will analyze health and health care theories, institutions, and key policy issues using tools from intermediate microeconomic theory. The course begins with an analysis of health care as a commodity and why health is different from other consumer goods. The course then examines the demand for and the production of health and health care, and the behavior and organization of health care providers. The discussion then switches to information asymmetries and the functioning of health insurance markets. Afterwards, the course turns to the analysis of government involvement in the health care system. The class concludes with an examination of medical care systems around the world, paying particular attention to the U.S. health care system.

Learning Outcomes: 1. Describe the main economic theories relating to health and health care markets. 2. Apply economic theory to the analysis of health care policy and institutions. 3. Construct a detailed demand and supply model of the health insurance market. 4. Critically evaluate key policy issues in health and health care from an economic perspective. Credits: 3.00

ECON 48500 - Economics Of Racial And Gender Discrimination

Credit Hours: 3.00. This course focuses on quantifying the extent of, and determining the underlying causes of racial and gender disparities in the labor market. Topics include the impact of prejudice on labor market outcomes, statistical discrimination, early childhood factors and differences in environment, and fertility and reproductive technology.

Learning Outcomes: 1. Quantify racial and gender disparities in economic outcomes. 2. Recognize the differences and importance of disparities that control and do not control for observable factors. 3. Understand the difference between prejudice and discrimination, and the extent to which prejudice can cause

discrimination. 4. Assess how discrimination can occur even in the absence of prejudice. 5. Evaluate the impact of policies designed to reduce disparities, such as affirmative action. Credits: 3.00

Major Selectives (15 credits)

Choose Three: (9 credits)

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 44710 - Competitive Strategy

Credit Hours: 3.00. This course focuses on the dynamics between a firm and the marketplace including interaction with competition. Strategy implementation occurs over multiple periods and is highly dependent on choices and behavior of competition. The course material covers how these dynamics and expectations of competitor response will shape the decisions of managers. This is inclusive of signaling intent to competitors and mutual forbearance to avoid negative sum gain competition.

Learning Outcomes: 1. Improve ability at market and competitive analysis. 2. Recognize opportunities and problems for market entry that may follow from market and competitive analysis. 3. Improve decision making knowledge and skills. Credits: 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage.

Learning Outcomes: 1. Improve ability to assess technology and innovation from a competitive perspective. 2. Learn about disruptive innovation and its effects on incumbents and new firms. 3. Consider internal processes for innovation management in existing firms. 4.

Improve decision-making and skills with respect to technology and innovation. Credits: 3.00

MGMT 44433 - Leading And Working In Teams

Credit Hours: 3.00. This course will explore the forces that affect behavior in teams, and the factors that lead to team success. We will use a variety of readings, cases, activities, and class discussions to build concrete skills related to leading and working in teams. The course will explore the specific challenges associated with leading teams, some of which include: building and designing teams, managing information exchange within and across teams, structuring effective group decision processes, igniting creative thinking, enabling complex problem solving, managing team diversity and conflict, and managing systems of teams. Permission of instructor required.

Learning Outcomes: 1. Identify and define concepts related to team functioning and effectiveness. 2. Apply those concepts to understand and diagnose issues associated with team effectiveness. 3. Develop a course of action to improve team functioning. Credits: 3.00

MGMT 44630 - Innovation Management

Credit Hours: 3.00. In this course you learn why organizations struggle to innovate, how to successfully analyze and implement an innovation strategy, and you learn to manage the innovation process. The course consists of two pillars (or 'walls') that enable a company to become innovative (Innovation Strategy and Organization Design) and the innovation process itself. The innovation process contains how to generate, select, implement, protect, experiment, scale, and diffuse ideas. Consequently, this course will provide you the skills and knowledge to manage innovations. Permission of department required.

Learning Outcomes: 1. Analyze the potential and implication of ideas and innovations for an organization and environment. 2. Formulate an innovation strategy. 3. Develop an innovation process. 4. Distinguish the different approaches to designing an innovative organization. Credits: 3.00

Choose Two: (6 credits)

ECON 46100 - Industrial Organization

Credit Hours: 3.00. This course examines the determinants of firm and market structure and the resulting market performance in imperfectly-competitive markets. Advanced topics include advertising, research and development, imperfectly competitive international markets, and market integration. Emphasis is placed on using theoretical models of firm and industry behavior to explain and analyze real-world examples of firm behavior.

Learning Outcomes: 1. Use basic versions of the models economists use to analyze imperfectly competitive markets. 2. Recognize the results of empirical tests of those models, in the laboratory and using real-world data. 3. Recognize the implications of these models for public policy toward business competition. Credits: 3.00

ECON 37000 - International Trade

Credit Hours: 3.00. Develops an understanding of the economics of globalization, including the movement of goods, people, capital, and ideas across countries. Using the tools of intermediate economic theory, we discuss the benefits and costs of globalization, the implications of globalization for wages, earnings, and national welfare, and their intersection with government policies.

Learning Outcomes: 1. Demonstrate a basic understanding of Economics as applied to international trade, including the movement of goods, people, capital, and ideas across countries. 2. Understand the perspective provided by economic analysis regarding globalization of economies, including the implications for wages, earnings and national welfare. 3. Identify insights economics analysis provides concerning the benefits and costs of globalization and the implications for government policies. Credits: 3.00

MGMT 48400 - Management Of Entrepreneurial Ventures

Credit Hours: 3.00. This course teaches skills required to become an entrepreneur, succeed in a start-up venture, work in venture capital, join a family business, or develop a franchise operation. Students will learn about how to identify and shape emerging market opportunities, innovate new business models, prepare and evaluate business plans, raise capital, build a skilled founding team, network for resources, and grow an initial market.

Learning Outcomes: 1. Identify and shape

emerging market opportunities. 2. Innovate new business models. 3. Prepare and evaluate business plans. 4. Raise capital. 5. Build a skilled founding team, network for resources, and grow an initial market. Credits: 3.00

MGMT 45900 - International Management

Credit Hours: 3.00. This course focuses on the challenges top managers face in developing strategies and management policies in multinational corporations (MNCs). Major topics usually covered include foreign market entry strategies, motivations and organizational challenges of internationalization, analyzing global industries, managing MNC/host government relations, building competitive advantage in global industries, international alliances and acquisitions, structuring and controlling MNCs, risk management, and the country manager role.

Learning Outcomes: 1. Understand the range of competitive opportunities and challenges companies and managers face in creating value worldwide. 2. Appreciate the complexities of national institutions and the dynamics of industry competition. 3. Deal with a company's multiple stakeholders including its internal constituents. 4. Integrate the concepts, principles, skills, and knowledge acquired in functional courses. Credits: 3.00

MGMT 45200 - Manufacturing Strategy And Process Innovation

Credit Hours: 3.00. This course examines the management challenges posed by the growth in worldwide manufacturing capabilities, markets, and competition and by rapid advances in technology and the concomitant decline in product life cycles. The manufacturing function is considered within a broader context encompassing design, engineering, purchasing, marketing, and customer service in an effort to assess the degree to which existing management structures successfully meet the challenges arising from the changing manufacturing environment.

Learning Outcomes: 1. Identify the tradeoffs made between operations flexibility and cost. 2. Identify proper alignment between manufacturing strategy and business strategy. 3. Identify the pros and cons of different types of plant network strategies. 4. Identify the behavioral issues associated with implementation of rigid project management tools. 5. Identify the potential long term implications of outsourcing on the development of competition. Credits: 3.00

MGMT 44429 - Talent Management

Credit Hours: 3.00. This course focuses on the employer-employee relationship at work, and how managers work with employees to improve employee performance. Attention is given to the history of labor relations and performance management in work settings, with an emphasis, however, on contemporary approaches to managing the employer-employee relationship and the systems for managing employee performance.

Learning Outcomes: 1. Identify and understand the tools and techniques of contemporary employee relations at work. 2. Identify and understand the tools and techniques of contemporary performance management at work. 3. Ability to apply these techniques. Credits: 3.00

MGMT 35500 - Consulting Tools And Skills

Credit Hours: 3.00. This novel course will provide an opportunity for motivated students to gain exposure to the skills and tools necessary to succeed in the consulting industry. There will be a chance to work in small teams to define client problems, collect and analyze data, develop solution proposals, and implement recommendations. Students will also be given an insider's look into the history of consulting, common types of consulting, and professional standards in this specialized area of management. Honing skills in project management, presentation delivery, storytelling, and stakeholder engagement will form the foundation of the tools used to solve client challenges.

Learning Outcomes: 1. Effectively and confidently use specific consulting business language. 2. Critically analyze resumes and case interviews. 3. Effectively research businesses and unfamiliar industries. 4. Use a consulting approach to problem solving. 5. Present a professional, engaging, and authentic persona. Credits: 3.00

MGMT 55500 - Leading Management Of Diversity And Inclusion In Organizations

Credit Hours: 2.00 or 3.00. This course is designed to help participants learn to effectively manage self, peers, teams,

clients, and firms in diverse organizational settings and to lead organizational change to foster inclusion, equality, and productive workplaces. The class is designed to develop your skills in leading diversity and inclusion from a multi-level view in the workplace: employee, leader, team member, organizational, and institutional/societal levels. Its goal is to a) improve your ability to work in diverse teams, as well as b) develop your ability to design, and implement strategies to foster cultural and structural change to support the management of an increasingly diverse workforce toward enhanced organizational effectiveness to benefit business, employees, and society. People and leaders in organizations are constantly working with members of different backgrounds, social identities, and experiences, often across distributed and/or digitally connected environments, fostering increased attention to diversity equity and inclusion in transforming employment settings. When understood, supported and leveraged effectively, these differences in social identities, difference and values can help attract and retain talent, strengthen societal and community economic equality, support organizational and team effectiveness; but when overlooked, or mismanaged, these differences can increase turnover, conflict, stress, talent under-utilization, and harm career and work-life wellbeing, health, and productivity. We will focus on advancing understanding of how intersecting organizational and institutional structures and cultures and their relation to strategies for creating diversity; an inclusive culture and positive climate for inclusion and talent management; and developing and retaining diverse talent to foster innovation and organizational effectiveness across multiple levels of intervention. We discuss how to conduct an organizational diagnosis of the current diversity climate and barriers and facilitators for creating a multicultural workplace and a flexible environment supportive of many identities, and how assumptions of "ideal workers" may vary across industry and cultural contexts. You as a leader will be better able to articulate your own DEI vision and develop understanding of strategies that move from description to evidence-based diagnosis to action strategies and implementation in order to move aspirations into organizational change realities. From an individual leadership perspective, we tackle the question: "Why does diversity, equity and inclusion matter in employing organizations and business, what is the state-of-the-art evidence-based knowledge, and what does it mean to me personally in my career and my leadership beliefs?" Specifically, we focus on the business and social science processes - including attitudes toward in-groups and out-groups, stereotyping, identity, privilege, and power, intersectionality, discrimination, bias, influence opportunity, bystander awareness, allyship, difficult conversations, and perspective taking - these topics relate to how members of different social groups perceive and interact with one another. Since managing social identity increasingly involves managing work-life boundaries and work and non-work public and private selves, we will also learn about authenticity choices and social and public/professional identity boundary management. Further, the opportunity to experience higher well-being and work-life balance is increasingly linked to job and life opportunities reflecting growing work-life inequality in society. From an organizational and group perspective, we address the questions: "What are best practices for successful management of diversity and inclusion? And why does it matter to me as a future leader personally and in business and in the communities and world in which I live."

Learning Outcomes: 1. Evaluate the aspects of your identity and personal experiences that shape how you interact and engage with others and how they interact and engage with you in organizations. 2. Explain how issues of power, privilege, discrimination, bias, equality, and equity influence opportunity and effectiveness in organizations operating both in local, domestic and global contexts. 3. Propose ways to make relationships across cultural and cross-cultural and gender differences in organizations more effective. 4. Describe current perspectives on the relationships among diversity, inclusion, creativity, and innovation in domestic and global organizations. 5. Analyze a company's current approach to leading diversity and use content from this course to propose ways to enhance learning and effectiveness in that company. Credits: 2.00 or 3.00

MGMT 55400 - Leading Global Organizations And People Across Cultures

Credit Hours: 2.00 or 3.00. This course focuses on the opportunities and challenges of managing a global multicultural workforce and implementing global organizational people strategies. The overall goal of this class is to help you become a more effective professional and leader in a global world on and off the job by providing information, tools and multicultural opportunities to increase conceptual and practical understanding of how national cultures shape employment settings and its implications for your own behavior as a global business professional and leader who implements human capital and organizational strategies, policies, and practices in a cross-national context. This course will also increase knowledge of and ability to implement current global human capital, international HRM, and organizational strategies for MNES and domestically. To achieve these goals, student engagement in class sessions, and willingness to share perspectives and opinions, and application of course readings and materials, are critical to the success of this course. A range of participative

learning methods are used to facilitate an active classroom environment, including learning log journaling, case analysis, experiential exercises, small group projects, break out discussions, company guest speakers, and self-assessments. The role of the instructor in this course is not always to provide "the" answer, but to create an environment where you can collectively explore, examine and experiment with students' own ideas and share ideas and perspectives on working and managing global firms.

Learning Outcomes: 1. Use cross-cultural leadership and organizational abilities to understand on how cultural differences shape workplace interactions so you can better implement organizational and people strategies to achieve business goals in a global environment. 2. Identify and avoid cultural mishaps and identify how your own national cultural values and assumptions about managing people and organizations shape your effectiveness in managing people, diversity, and systems in a global or cross-cultural firm. 3. Understand the challenges of adapting HRM policies and organizational people strategies when adapting HR and employment systems as organizations "go global" and develop a global workforce. 4. Understand the pros and cons of different multicultural strategies (cultural minimization, accommodation, cultural integration) for successfully implementing human capital strategies and HR practices in multicultural contexts. 5. Develop the core competencies needed by business leaders to work in multicultural teams contexts, including cultural intelligence, the ability to work in cross-cultural teams, develop clear and concise non country biased written communication, the ability to give effective presentations virtually and face to face, and the ability to engage in strategic cross-cultural thinking to implement global HR. 6. Understand and be able to apply core concepts in global HR/OB from 1)Global HR planning and organizational design; 2) Merger and Acquisition with a focus on linkages to successful people and organizational strategies; 3) Global talent management; 4) Development, reward, and performance management of global leaders; 5) Managing Global Teams, diversity, and cross-cultural communication; and 6) Implementing global change and improving organizational effectiveness. Credits: 2.00 or 3.00

MGMT 59200 - Contracts For Managers

Credit Hours: 3.00. Purpose of the course is to provide the student with an understanding of the contract legal environment as it pertains to profit and non-profit organizations and of the ethical considerations and social and political influences that affect such organizations. Students will examine a wide range of substantive rules of public law, which will provide a framework for a discussion of the ways in which managerial decision making affects and is affected by the legal environment.

Learning Outcomes: 1. Demonstrate a high-level of understanding of the law governing the formation of contracts. 2. Demonstrate the ability to identify and apply concepts of the law governing contractual interpretation and construction. 3. Demonstrate the ability to identify and apply concepts of the law governing contractual performance and breach. 4. Demonstrate the ability to identify and apply concepts of the law governing remedies for contract breach. 5. Demonstrate the ability to identify and apply concepts of the law governing the assignment of contractual rights and the delegation of contractual duties. 6. Demonstrate the ability to identify and apply concepts of the law governing third party beneficiaries to contracts. 7. Demonstrate their ability to do legal research and a publishable level. Credits: 3.00

Cultural Competencies I Selectives (3 credits)

Other Departmental Courses (23-35 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through

reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus

course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

Electives (9-21 credits)

Optional Concentrations for General Management, BS

Sample 4-Year Plan

Fall 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods.

Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

MGMT 18700 - Intro To AI For Business

Credit Hours: 2.00. This course provides an introduction to artificial intelligence (AI) and its application within business contexts. Students will explore AI fundamentals, including conceptual, architectural, and data pipeline essentials for successful deployment. It will introduce various machine learning models including predictive models, language models, and generative AI. The examination of AI's role in transforming business operations, decision-making, and customer relations will be a key focus.

Learning Outcomes: 1. Explain the fundamental concepts of AI, including its conceptual, architectural, and data foundations. 2. Differentiate between various AI models, assess their characteristics, and apply practical skills to determine their suitability for solving specific business problems. 3. Evaluate the potential applications of AI across business domains such as finance, marketing, and operations, while considering legal and social implications. 4. Develop and defend critical decisions based on AI-driven insights, fostering innovative problem-solving approaches. Credits: 2.00

16-21 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python

libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

MGMT 34900 - Accounting Analysis & Modeling

Credit Hours: 3.00. Accounting information is found everywhere in business organizations. This introductory course is designed to equip students with the skills to analyze and model accounting information. Although much of the course's focus will be on external users of financial statement information, the course also covers the use of internal information for managerial decision making. The course heavily emphasizes the use of Excel as a tool to prepare and analyze data, as well as to summarize and communicate the results. Students will also gain a basic understanding of Tableau.

Learning Outcomes: 1. Use accounting data to make business decisions. 2. Evaluate firm and managerial financial performance. 3. Develop pro forma financial statements. 4. Model specific accounting line items using excel. 5. Present summarized information in Tableau. Credits: 3.00

MGMT 22300 - Marketing Excel Fundamentals And Data Analytics

Credit Hours: 3.00. This course provides marketing students with essential skills in data management, visualization, and analysis using Microsoft Excel. Students will explore how to leverage data analytics to inform marketing strategies, optimize campaign performance, and drive decision-making. Hands-on training includes using Excel functions, tables, charts, and PivotTables, with a focus on practical, real-world marketing applications such as segmentation analysis, customer profiling, and campaign ROI assessment.

Learning Outcomes: 1. Apply Excel functions to process and analyze marketing data effectively. 2. Create data visualizations that effectively communicate insights to marketing teams and stakeholders. 3. Analyze marketing data using advanced analytical techniques to optimize campaign performance. 4. Develop proficiency in cleaning, validating, and consolidating marketing data for enhanced decision-making. Credits: 3.00

MGMT 24500 - Introduction To Finance With Excel

Credit Hours: 3.00. This course introduces essential Excel skills for finance, including data organization, basic calculations, and summary analysis. Through hands-on projects, students develop practical spreadsheets and formatting skills for real-world applications. No prior Excel experience is required.

Learning Outcomes: 1. Identify and explain the main functionality of Microsoft Excel and other spreadsheet programs. 2. Design effective and professional data presentation using table operations, formatting, and visuals. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and text functions. Credits: 3.00

MGMT 23500 - Data Tools For Business

Credit Hours: 3.00. This course covers the fundamentals of data use and analysis. Students will acquire these skills using a common business suite application for data handling. Students will also be introduced to application software or modern programming language that interacts with the business suite

application and its data to allow for data analysis, management, and presentation for solving business problems.

Learning Outcomes: 1. Identify and explain the main terminology, concepts, and design of a data-oriented business-suite application and the data it manages. 2. Develop and implement data management solutions by creating application models, commands, and functions using a data-oriented business-suite application. 3. Demonstrate proficiency in various types of data analysis and manipulation, including date/time functions, logical functions, conditional functions, statistical functions, financial functions, and analysis functions. 4. Execute and evaluate advanced data management activities such as text manipulation, database functions, and macros to improve data workflows. 5. Integrate and implement third-party data management applications with a data-oriented business-suite application to perform data analysis, management, and presentation, addressing complex business problems. Credits: 3.00

14-17 Credits

Fall 2nd Year

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 29500 - Business Professional Development & Career Strategies

Credit Hours: 1.00. This is a required one-credit-hour career readiness and development course geared toward preparing you to meet your short and long-term career goals. Come prepared to develop your career goals, create and modify your career necessities (resume, LinkedIn profile, elevator pitch, etc.), while growing in the competencies employers are looking for when hiring recent graduates. Following career necessities, you'll get an idea of what you might encounter in the workforce, and what steps you can take to be successful in the workplace.

Learning Outcomes: 1. Identify and communicate professional strengths using Clifton Strengths assessment. 2. Communicate professionally using STAR and SOAR methods in professional documents in order to articulate

their skills and experiences. 3. Develop oral and written communication skills via email, over Zoom, and in person with School of Business alumni, faculty, fellow students, and staff. As a result, students will be able to effectively communicate their skills and experiences in a variety of professional contexts, including networking events, career fairs, and interviews. 4. Identify methods for internship and full-time job search. 5. Identify key financial resources and best practices in regard to benefits packages and money management. Credits: 1.00

MGMT 25400 - Legal Foundations Of Business I

Credit Hours: 3.00. An examination and study, for management students, of the nature and place of law in our society, both national and international, the social and moral bases of law enactment, regulation of business, legal liability, enforcement procedures, and the legal environment for managers.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

STAT 35500 - Statistics For Data Science

Credit Hours: 3.00. An introduction to methodologies for data analysis and simulation. Populations and sampling. Distributions and summaries of distributions. Algorithms for sampling and resampling. Foundational statistical concepts including confidence intervals, hypothesis testing, correlation. Introduction to classification and regression. Essential use is made of statistical software throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 30301, 35000, 35500, 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Utilize simulations to generate data (statistical simulations). 2. Explain sampling distributions, their properties, and methods for resampling (Statistical Reasoning). 3. Explain foundational concepts such as confidence intervals, hypothesis testing, correlations, etc., and apply these concepts in statistical process (Statistical Concepts). 4. Assess statistical problems, and justify and apply statistical methods used to solve the problem (Statistical Thinking). Credits: 3.00

STAT 30301 - Probability And Statistics For Business

Credit Hours: 3.00. This course provides fundamentals for describing data, probability theory, and statistical inference. Topics include exploratory data analysis, discrete and continuous probability distributions, sampling techniques, sampling distributions, confidence intervals and hypothesis tests for means and proportions, and 1 -sample variance, and hypothesis tests about the distributions of categorical variables. Students will utilize Microsoft Excel 2019 or 365.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify selected discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand, interpret standard statistical techniques/methods, analyze data, calculate and use confidence intervals and hypothesis tests for means and proportions, understand the design of samples and experiments. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. Credits: 3.00

MGMT 25500 - Foundations Of Business Ethics

Credit Hours: 1.00. Business ethics can be defined as the principles and standards that determine acceptable conduct in business organizations. During the course, we will examine ethical concepts, then dig into frameworks like Stakeholder Analysis, right v. right, and many more. This is your opportunity to evaluate past cases of ethical violations while also pre-thinking how you want to lead in the organization you work for across your career. Pre-thinking and planning who you want to be and how you want to lead is a critical piece of ethical leadership, and this course is designed to build you in that process.

Learning Outcomes: 1. Describe four theoretical frameworks about business ethics in your own words. 2. Apply business ethics in real-world cases both in class and through discussion board posts. 3. Integrate business stakeholder analysis through real-world cases to increase your awareness of the ethical responsibilities

that exist between a business and its stakeholders. 4. Articulate the importance of adhering to and maintaining ethical principles and conduct in personal and business contexts. Credits: 1.00

15-18 Credits

Spring 2nd Year

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

15 Credits

Fall 3rd Year

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

15 Credits

Spring 3rd Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and

situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 33500 - Strategic Business Writing (UCC: WC)

Credit Hours: 3.00. This course is designed to help Daniels School of Business undergraduate students become more effective, strategic writers in a business setting. However, there will be opportunities in this class to develop and practice speaking and interaction skills as well. The course format involves class lectures/discussions and extensive written work.

University Core Curriculum (UCC): (UCC: WC)

Learning Outcomes: 1. Recognize key communication principles of Audience Analysis, Emotional Intelligence, Critical Thinking and Problem Solving, Building Connection and Trust, and Communication Ethics: Identify an audience and what matters to them; Identify your own emotions when communicating and empathize with others; Recognize when you need to think critically, and problem solve based on the larger situation and context; Apply strategies for how to build connection and trust with an audience; Identify best practices for ethical communication. 2. Employ AI tools ethically and effectively to enhance the quality and impact of written content, while respecting privacy and intellectual property rights: Identify best practices for using AI in business writing; Recognize drawbacks and problems with using AI in business writing. 3. Attain proficiency in producing a range of standard business writing formats, demonstrating versatility and competence in professional communication through exercises and assessments: Identify different types of business writing and when to use them; Recall the key components and formatting requirements to demonstrate a foundational understanding of diverse business writing formats; Find common errors and best practices in business writing through self-assessment and peer feedback, fostering an awareness of areas for improvement and enhancing overall proficiency in professional communication. Credits: 3.00

15 Credits

Fall 4th Year

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

15 Credits

Spring 4th Year

15 Credits

Genetics, BS

About the Program

Genetics is the science of information transfer from one generation to another. We learn the laws of inheritance in all creatures big and small, how they evolve and how they change. On the molecular level we learn about DNA and RNA, on the cellular level we discover what makes a cell cancerous, and on an organismal level we examine the reproductive habits of various organisms. Crucial principles include the structure, function, and transmission of genes. Laboratory techniques explore genetic engineering from the "inside." Genetics is crucial to all of biology, hence a genetics major has great flexibility. This is excellent preparation for advanced study in biological sciences, law, genetic counseling, and many health-related professions.

Genetic Biology Website
Biological Sciences Major Change (CODO) Requirements

Degree Requirements

Departmental/Program Major Courses (31-37 credits)

Biology Core (19 credits)

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms.
Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical

and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

BIOL 14503 - First Year Biology Lab: Disease Ecology-Honors

Credit Hours: 2.00. The course will engage students in authentic research and acquiring the necessary skills and concepts to be a successful biology major. Our research topic will be disease ecology in freshwater systems. Disease ecology is a growing field investigating the causes and effects of pathogen transmission and epidemics, primarily in natural populations. We will begin with a series of skill and knowledge-building laboratories, and then transition into student-led research projects that culminate in a presentation of the results in a poster session. Students will learn the fundamentals of disease ecology, basic laboratory techniques, how to perform scientific experiments, and gain experience communicating findings to other scientists and the public.

Learning Outcomes: 1. Perform basic laboratory techniques needed to succeed as a Biology major. 2. Formulate a testable question and hypothesis. 3. Design and conduct a laboratory study to address a research question. 4. Read and critique scientific journal articles. 5. Communicate scientific ideas and results through oral and written formats. Credits: 2.00

BIOL 14505 - First Year Biology Lab: Phages To Folds-Honors

Credit Hours: 2.00. Students will learn how to use bioinformatics to study a gene sequence of their choice from the local SEA-

PHAGES program. Students will then use molecular biology and biophysical techniques to characterize their gene product. The goal of each project will be to gain insight into the 3-dimensional fold of each of these mysterious novel phage genes. Students will work in teams but will have their own individual project such that each student will learn the necessary skills to perform scientific experiments starting from the bioinformatics to cloning to purification to structural characterization to communicating their findings to others.

Learning Outcomes: 1. Acquire the fundamental skills and concepts necessary to be successful as a biology major and as a research scientist. 2. Learn how to perform basic laboratory techniques. 3. Learn to work effectively as a team. 4. Design and execute experiments. 5. Evaluate and interpret data critically, read and discuss research articles, and to disseminate their research in written and oral formats. Credits: 2.00

BIOL 14504 - First Year Lab: Diet Disease And Immune System-Honors

Credit Hours: 2.00. We are what we eat! The food we put into our bodies not only gives us the nutrients, vitamins and minerals we need to live, but it can also influence other ways in which our bodies function, right down to how well our immune system works. The immune system plays a critical role in defending our body from infection, but can also contribute to autoimmune disease when the immune response becomes dysregulated. Importantly, autoimmune disease is currently skyrocketing in countries that consume a "Western Diet" (i.e., high salt, high sugar, low fiber), suggesting that these dietary components, or lack thereof, may contribute to dysregulation of the immune response. CD4+ T cells, a kind of immune cell, play an important role in the immune system as they control the balance between protective immunity and autoimmune disease. Recent evidence indicates a strong correlation between "Western Diet" and dysfunction of this important immune cell type. Therefore, our goal is to examine the effects of these dietary components on CD4+ T cell function and how this might contribute to autoimmune disease. Students will work in teams and cover a distinct subset of microbial or dietary components. As such, each student will learn the necessary skills to perform scientific experiments starting from the literature search, experimental design, carrying out controlled experiments, interpreting results and conveying the results to the greater scientific community.

Learning Outcomes: 1. Learn how to work in a real laboratory setting and acquire useful laboratory skills while learning how to develop a hypothesis, design experiments to test these hypotheses. 2. Learn how to present their findings to their peers and others in a written and oral format. 3. Develop skills to be able to read scientific literature in their topic area and discuss these findings with their peers. Credits: 2.00

Upper-Level Biology Coursework (12-18 credits)

Intermediate Biology Selective (2-4 credits)

BIOL 32800 - Principles Of Physiology

Credit Hours: 4.00. This course is designed to provide students with an introduction to physiology with an emphasis on cellular mechanisms that underlie anatomical and physiological adaptations used by animals to survive in their habitat. Topics covered will range from cellular respiration to the physical limits of animal performance as we deconstruct and then reconstruct the body to examine how animals can live in extreme environments. Goals for this course are for students to gain a foundation in basic physiological principles, to learn about the integrative nature of the systems of animals, and to appreciate how and why animals have evolved and strategies to help them survive in their unique environment.

Learning Outcomes: 1. Learn the integrative nature of the functioning of different cells, tissues, organs, and organ systems in maintaining adequate conditions for the proper functioning of vertebrate animals. 2. Learn the detailed mechanisms underlying the function of selected physiological systems from the level of the macromolecules to the system as a whole (ex. Cardiovascular system). 3. Appreciate the conserved nature of the fundamental functioning of cells and systems across many different animals from invertebrates to vertebrates. 4. Gain practical experience with some selected systems in the laboratory. 5. Learn how to design and execute independent experiments and take the results from those experiments and analyze and orally present them to the class. 6. Learn how to work as part

of a collaborative team. Credits: 4.00

BIOL 36700 - Principles Of Development

Credit Hours: 2.00. This course deals with the process by which genes in a fertilized egg control cell behavior in the embryo and so determine the nature of the animal or plant. The emphasis is on early development and the laying down of body plan and organ systems in various model systems (Drosophila, nematode, Arabidopsis, zebrafish, mouse, chick, and frog).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students who complete the CMD DS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 7. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. Credits: 2.00

BIOL 41500 - Introduction To Molecular Biology

Credit Hours: 3.00. An introduction to modern molecular biology techniques and how they are used to address current topics in gene regulation. Emphasis will be placed on experimental procedures and model systems, such as site-directed mutagenesis of isolated genes and their subsequent introduction into prokaryotic and eukaryotic cells. Topics will address the molecular control mechanisms associated with DNA replication, RNA transcription, RNA processing, and differential gene expression.

Credits: 3.00

BIOL 41600 - Viruses And Viral Disease

Credit Hours: 3.00. The objective of this course is to provide students with an introductory understanding of viruses and their impact on human health. The course will be divided into two sections. During the first section, we will discuss the cellular and organismal events that occur following virus infection, including viral entry, replication, modulation of cell biology by viral proteins, the host immune response to infection, evasion of the immune response by viruses, and resulting virus-induced disease. The emphasis of this first section will be on the general strategies used by viruses to establish and maintain infection in a population. In the second section, we will discuss in relative detail our current understanding of select important human viruses including influenza, HIV, smallpox, the herpesviruses, and tumor-causing viruses. The objective of this section will be to understand how the unique aspects of each virus's biology affect the outcome of infection with these pathogens. In addition to virus-associated diseases, we will discuss potential ways that viruses may provide symbiotic benefits to their hosts and thereby shape the course of human evolution. Throughout the course, we will emphasize societal and political aspects of virology and virus-derived technologies, including vaccine development, the use of viruses as gene therapy vectors, and the threat of viral bioterror of bio-error.

Credits: 3.00

BIOL 42000 - Eukaryotic Cell Biology

Credit Hours: 3.00. Composition, structure, regulation, and growth of eukaryotic cells.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collections and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These

skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Macromolecules: Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Scope: graduates will understand the chemical and physical principles that govern biochemical and physiological process. 10. Scope: graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 43600 - Neurobiology

Credit Hours: 3.00. This course will cover key aspects in molecular, cellular, and developmental neurobiology. Topics include: Cell biology of neurons and glia, electrophysiological properties of neurons, electrical and chemical signaling between neurons, synaptic integration and plasticity, development and regeneration of the nervous system, nervous system diseases. Up-to-date research findings and techniques will be included. A basic knowledge of cell biology and protein structure and function is strongly recommended.

Learning Outcomes: 1. Understand the organization and function of the major cell types of the nervous system. 2. Understand the underlying mechanisms of membrane, local graded and action potentials. 3. Differentiate between electrical and chemical signaling. 4. Explain the steps of nervous system development. 5. Identify major parts of the nervous system and their function. 6. Understand the underlying causes of major nervous system diseases. Credits: 3.00

BIOL 38700 - Macromolecules

Credit Hours: 2.00. The goal is to expose students to the world of macromolecules, their physicochemical properties, the influence of these properties on function and structure, and how these properties are determined and exploited. Permission of department required.

Learning Outcomes: 1. Describe the types of macromolecules. 2. Describe the biophysical and biochemical properties of macromolecules. 3. Describe how biophysical and biochemical properties are determined. 4. Describe how these physicochemical properties are exploited in various biotechniques. Credits: 2.00

Required Coursework (4 credits)

BIOL 44100 - Biology Senior Seminar In Genetics

Credit Hours: 1.00. This is a required course for genetics majors. It provides exposure to current research in genetics and molecular biology via invited faculty speakers. Students enrolled in the course who have actively participated in research also give a presentation on their own work. Other students are assigned to review current literature in one aspect of the semester's topic. The topic selected for review is in an area of current research in genetics and may vary from year to year.

Credits: 1.00

BIOL 48100 - Eukaryotic Genetics

Credit Hours: 3.00. This course presents the fundamental concepts of classical and modern molecular genetics in eukaryotic systems, using examples from the model genetic organisms, yeast, Drosophila, Caenorhabditis, Arabidopsis, maize, mice and humans. These concepts are applied to solving

problems of genetic analysis. Recent advances in developmental, cancer, and behavioral genetics and genomics, and applications of genetic technology, are used to demonstrate the impact that modern genetics makes at the cutting edge of biological research.

Credits: 3.00

Genetics Selectives (6 credits)

Genetics Selective I: BIOL 500-level (3 credits)

BIOL 51600 - Molecular Biology Of Cancer

Credit Hours: 3.00. A detailed course examining the molecular mechanisms controlling the growth of animal cells. Emphasis will be placed on current experimental approaches to defining the molecular basis of growth regulation in developing systems and the uncontrolled proliferation of cells in metabolic disorders, such as cancer.

Credits: 3.00

BIOL 54100 - Molecular Genetics Of Bacteria

Credit Hours: 3.00. Advanced bacterial genetics, with emphasis on the use of genetics as a powerful and creative intellectual activity that enables us to discover biological functions and to construct new organisms by the manipulation of DNA. Major topics include: mutations, genetic selections, recombination, regulatory mechanisms, and genomic evolution.

Credits: 3.00

BIOL 58000 - Evolution

Credit Hours: 3.00. A study of evolution as a basic concept of the biological sciences; an examination of current methods of experimentation within the area, as well as evidences for the possible mechanisms of evolutionary change.

Credits: 3.00

BCHM 52100 - Comparative Genomics

Credit Hours: 3.00. The course provides an understanding of the forces that act on genome content and organization, and the ability to interpret genetic variation between genomes. Students will acquire skills to utilize public genome databases, visualize genomic regions/features of interest using a genome browser, and perform phylogenetic analysis. The knowledge gained is central within the fields of genetics, bioinformatics, microbiology, and evolutionary biology and have important applications in numerous related fields including medicine, biotechnology, agriculture, and ecology.

Learning Outcomes: 1. Understand the composition, organization and structure of genomes. 2. Understand processes that cause these genome features to change over time. 3. Interpret gene and genome information in common display formats. 4. Evaluate common methods used to interpret genetic variation between genomes. 5. Perform, present and discuss a research project in comparative genomics. Credits: 3.00

BIOL 55101 - Theory Of Molecular Methods

Credit Hours: 3.00. This course will introduce upper-level undergraduate students and graduate students to the theory and practice of many commonly used molecular biology methods. Emphasis will be placed on understanding the theoretical basis for these techniques, their utility in various circumstances, and their limitations. Although taught as a lecture, students should be able to take this knowledge back to the laboratory to help them in their research efforts. The course will be as close as possible to a laboratory experience without being in an actual laboratory setting. This course is designed to prepare students for other in-depth scientific courses, for graduate rotations, and for future laboratory work. Exams will be experimental in nature (e.g., design an experiment to do something or in this type of situation, which technique/vector/etc. would best be used, and why). Permission of instructor required.

Learning Outcomes: 1. Have knowledge about the uses and limitations of various molecular biology techniques. 2. Understand the techniques and how to choose the best technique for a given circumstance. 3. Understand how to interpret the experimental results emanating from each technique. Credits: 3.00

BIOL 51606 - Pathways In Human Health And Disease

Credit Hours: 3.00. This course is intended for both upper-level undergraduate and graduate students. It will cover major intracellular signaling pathways in eukaryotes and their roles in human disease, with an emphasis on cancer but also touching on other major modern diseases such as COVID-19. We will explore avenues being pursued to target signaling mechanisms for therapeutic benefit. Topics include G protein-coupled receptors, receptor tyrosine kinases, nuclear hormone receptors, protein kinases and phosphatases, mTOR, the Wnt/β-catenin pathway, cell cycle control, DNA damage checkpoint control, regulated proteolysis, and programmed cell

death. The course will be taught from current primary literature using a textbook as a background resource. Students will learn how to read and interpret scientific data through regular lectures, extramural seminars, in-class presentations, and take-home assignments.

Learning Outcomes: 1. Identify common molecular mechanisms in major signal transduction pathways. 2. Understand methods commonly used to analyze signal transduction processes. 3. Appreciate how protein domains within signaling proteins impart selectivity by building up signaling pathways via protein protein-interactions. 4. Evaluate and critique data in the scientific literature or in lectures in the signal transduction/cell cycle fields. 5. Exhibit improved oral and written communication skills in the area of signal transduction research. Credits: 3.00

BIOL 58215 - Building The Tree Of Life: Phylogenetic Methods And Applications

Credit Hours: 3.00. The Tree of Life represents Earth's biodiversity and its history and forms the basis of all biological knowledge. Phylogenetic methods allow us to reconstruct the Tree of Life and infer the evolutionary history and relationships of genes and organisms. This knowledge, in turn, can be used to address questions of organismal classification, biogeography, community assembly, and macroevolution. This jointly taught course introduces tree thinking and its underlying algorithms of inferring phylogenies, with an emphasis on the various applications of phylogenetic methods to such topics as those listed above. Through a combination of lectures, computer labs, and discussion of primary literature, the course will provide hands-on experience with commonly used tools and their applications in research for senior undergraduate and graduate students from relevant science backgrounds. Permission from department is required.

Learning Outcomes: 1. Build and visualize phylogenetic trees with commonly used scientific software. 2. Conduct scientific analyses using phylogenetic methods in R, ask testable scientific questions. 3. Perform data mining of phylogenetic resources and utilize the phylogenetic tools to address scientific questions. Credits: 3.00

Genetics Selective II (3 credits)

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 44400 - Human Medical Genetics

Credit Hours: 3.00. An intermediate-level survey course of human genetics with a balanced review of both Mendelian and

molecular aspects. Review of current development and application of DNA technology emphasized.

Learning Outcomes: 1. Describe the basic principles of human genetics in the context of human diseases. 2. Acquire the capability to comprehend and learn new discoveries in human medical genetics. 3. Develop a foundation to analyze social and ethical consequences of the advancement in human medical genetics. 4. Acquire the basic knowledge in human medical genetics to succeed in professional or graduate degrees in the medical fields. Credits: 3.00

BIOL 47800 - Introduction To Bioinformatics

Credit Hours: 3.00. (CS 47800) Bioinformatics is broadly defined as the study of molecular biological information, targeting particularly the enormous volume of DNA sequence and functional complexity embedded in entire genomes. Topics will include understanding the evolutionary organization of genes (genomics), the structure and function of gene products (proteomics), and the dynamics of gene expression in biological processes (transcriptomics). Inherently, bioinformatics is interdisciplinary, melding various applications of computational science with biology. This jointly taught course introduces analytical methods from biology, statistics and computer science that are necessary for bioinformatics investigations. The course is intended for junior and senior undergraduates from various science backgrounds. Our objective is to develop the skills of both tool users and tool designers in this important new field of research.

Learning Outcomes: 1. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. 5. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 6. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 7. Demonstrate an understanding of laboratory skills used in genetics. 8. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 9. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. Credits: 3.00

AGRY 53000 - Advanced Plant Genetics

Credit Hours: 3.00. Advanced treatment of principles and recent advances in plant genetics including: mutagenesis; cell, molecular and direct approaches to genetic analysis and genetic interactions; haploidy; chromosomal organization and aberrations; transposable elements; mutations, para mutation and epigenetics in higher plants; extra nuclear inheritance; cytogenetic and molecular affinities between crop plants and their wild relatives; genetic manipulations; gene discovery; genetic approaches to understanding agriculturally useful plant traits. ESTs and global gene expression analysis, proteomics, metabolic profiling, comparative genomics and genome evolution. Offered in odd-numbered years.

Credits: 3.00

BIOL 41919 - Data Science For Biologists

Credit Hours: 3.00. All of us are drawn to real-world biological questions. Nevertheless, we might underestimate the hidden demand for computing skills to conduct the actual research. By nature, biological data is versatile, vast, complex, and noisy. Therefore, customized scripts are often needed for data processing, analyses, and visualization. Tools for data management and version control function as virtual lab books to ensure that the studies are 100% reproducible. This course is designed to equip students with practical programming skills via an array of biological case studies. Through hands-on computer labs, students will learn how to translate a biological question into logical thinking and write good code in R, perform scientific computing and visualization in R, and manage projects in an organized fashion. Permission from the department is required.

Learning Outcomes: 1. Understand basic computer programming knowledge and skills. 2. Manage and analyze common types of biological data. 3. Conduct reproducible research. 4. Perform data visualization in R, and design and test a hypothesis with a data-driven approach using provided datasets. Credits: 3.00

Base Lab Requirement (0-4 credits)

Other Departmental Requirements: (53-79 credits)

Chemistry (17 credits)

General Chemistry (5 credits)

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

Organic Chemistry (8 credits)

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600. Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

Biochemistry (4 credits)

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites. Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

College of Science Core Requirements

Computing (2-4 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the

program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given

multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (8 credits)

Physics I

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

Physics II

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic

behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

Mathematics (6-10 credits)

Calculus I

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

Calculus II

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits:

4.00

Statistics (3 credits)

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

Electives (4-37 credits)

GPA Requirements

Course Requirements & Notes

Sample 4-Year Plan

Fall 1st Year

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA

1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

16-19 Credits

Spring 1st Year

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to

biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of

absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

16-20 Credits

Fall 2nd Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates

and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

15-16 Credits

Spring 2nd Year

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of

biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written

methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of

scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

14-16 Credits

Fall 3rd Year

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

12-16 Credits

Spring 3rd Year

BIOL 48100 - Eukaryotic Genetics

Credit Hours: 3.00. This course presents the fundamental concepts of classical and modern molecular genetics in eukaryotic systems, using examples from the model genetic organisms, yeast, Drosophila, Caenorhabditis, Arabidopsis, maize, mice and humans. These concepts are applied to solving problems of genetic analysis. Recent advances in developmental, cancer, and behavioral genetics and genomics, and applications of genetic technology, are used to demonstrate the impact that modern genetics makes at the cutting edge of biological research.

Credits: 3.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

14 Credits

Fall 4th Year

BIOL 44100 - Biology Senior Seminar In Genetics

Credit Hours: 1.00. This is a required course for genetics majors. It provides exposure to current research in genetics and molecular biology via invited faculty speakers. Students enrolled in the course who have actively participated in research also give a presentation on their own work. Other students are assigned to review current literature in one aspect of the semester's topic. The topic selected for review is in an area of current research in genetics and may vary from year to year.

Credits: 1.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

12-13 Credits

Spring 4th Year

13-14 Credits

Geology and Geophysics, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (49 credits)

Required Major Courses (37 credits)

EAPS 11200 - Earth Through Time (UCC: SCI)

Credit Hours: 3.00. The history of the planet Earth from its beginnings to the present. This course will explore the causes and effects of processes that have changed the Earth's surface and subsurface through time, the impacts of these changes on the evolution of life, and how scientist interpret Earth history from the geologic record. The laboratory will provide hands-on experience in interpreting various geologic and fossil records. This course may be taken on its own, or as a year-long lab series with EAPS 11100 . EAPS 11100 and EAPS 11200 will fulfill the two course sequence laboratory experience outside the major department.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

EAPS 13700 - Freshman Seminar In Earth, Atmospheric, And Planetary Sciences

Credit Hours: 1.00. Seminar presented by guests in different fields of the Earth and Atmospheric Sciences to expose students to the range of topics included in the department and in possible career paths.

Learning Outcomes: 1. Demonstrate the ability to form high performing teams. 2. Demonstrate the ability to locate and use academic success resources. 3. Demonstrate understanding of time management and study skills. 4. Demonstrate knowledge in the utilization of Purdue degree planning tools. 5. Demonstrate understanding of the academic requirements and career paths in the EAPS program. Credits: 1.00

EAPS 24300 - Mineralogy

Credit Hours: 4.00. Elements of crystallography, physical and chemical properties of rock-forming minerals, and minerals of economic importance. Origin and occurrence of minerals. Prior course work in dynamic earth or physical geology is required.

Learning Outcomes: 1. Know the major element geochemistry of common rock forming minerals that occur in earth, the terrestrial planets, and in meteorites. 2. Understand that minerals form the geochemical reservoirs from which rock materials are derived. 3. Have competence in the rules of crystallography, be able to determine symmetry elements in 1-, 2-, and 3-demensions, and understand how to index different parts of crystals using common notations. 4. Identify rock forming minerals and selected accessory and ore minerals in hand sample. 5. Learn the theory and methods of optical mineralogy, spectroscopy, X-ray diffraction, and electron microbeam analysis. 6. Learn the thermodynamics phase equilibria in rock and mineral systems, and the basic petrology of igneous, metamorphic and sedimentary rocks. Credits: 4.00

EAPS 30900 - Computer-Aided Analysis For Geosciences

Credit Hours: 3.00. Application of computer analysis techniques including error analysis, line and surface fitting, spatial and temporal correlations, contouring, interpolation, and map projections. These methods are discussed in terms of specific geologic applications. All exercises and examples are developed using commercial mathematical software package. A

three-hour-per-week computer laboratory tutorial provides hands-on experience with the techniques discussed in class. Prior course work in computer programming is required.

Learning Outcomes: 1. Carry out computational solutions to a given range of data analysis problems. 2. Select the appropriate analysis and visualization approaches when given a set of data. 3. Appraise and conclude the analysis results professionally. Credits: 3.00

EAPS 31900 - Exploring Earth Through Time

Credit Hours: 3.00. The course will explore the history of the Earth from its beginning 4.5 billion years ago to the present. Our understanding and insight into the history of the Earth has greatly expanded during the last several decades. Emphasis will be placed on the relationships of tectonic processes that shaped the surface of the Earth and the evolution of the Earth's biosphere. The course will also examine how the role of evolution of life has played in the history of the atmosphere and oceans.

Credits: 3.00

EAPS 35200 - Structural Geology

Credit Hours: 3.00. This course deals with the nature and evolution of structures in rock deformed naturally by flow and fracture, as deduced from experimental, theoretical and field studies. Specific topics include: structures in three dimensions using descriptive geometry and stereonets, field measurements of rock geometry, tensors, strain and stress, the theory of brittle and plastic rock behavior, theory and field observation of folds and faults, structural analysis of an outcrop, the structure and mechanics of mountain belts. Students will be expected to show competency with using a general set skills, techniques, and tools commonly used by professional geoscientists.

Learning Outcomes: 1. Interpret geologic structures in three dimensions using descriptive geometry, stereonets, and field measurements of rock geometry. 2. Evaluate quantitatively observations of the deformation in the crust using basic stress and strain theory, the theory of brittle and plastic rock behavior, theory and field observation of folds and faults, structural analysis of an outcrop. 3. Recognize the structures and give a mechanical explanation for the development of mountain belts. 4. Apply these skills in the field. Credits: 3.00

EAPS 35300 - Earth And Planetary Surface Processes

Credit Hours: 3.00. Introduction to a variety of topics in sediment transport and deposition, emphasizing linkages between active processes, landscape evolution, and the rock record. Comparisons will be made between surface processes occurring on Earth and other planetary bodies in the Solar System. Topics include: introductory fluid mechanics; sediment transport by water, ice, and wind, and the development of fluvial bed forms, glacial landscapes, and sand dunes; groundwater geochemistry and the development of karst and caves; impact cratering; comparative planetology. Each major topic is accompanied by field projects that emphasize local geologic history.

Learning Outcomes: 1. Apply fluid dynamics to sediment transport and rock dissolution using physics, chemistry, and calculus. 2. Use dimensionless variables (e.g., Reynolds number, Froude number, Shields number, Drag coefficient) to solve problems in diverse fluid flows (e.g., water, ice, wind, soil, and debris flows). 3. Identify and quantify processes responsible for shaping Indiana's landscape, including mega flooding, glaciation, wind, and karst. 4. Interpret landscape form in terms of geologic processes occurring in the Solar System. 5. Identify sedimentary structures and relate them to active surface processes. 6. Observe and measure active processes in the field. 7. Organize and write a formal scientific paper. Credits: 3.00

EAPS 35400 - Earth And Planetary Geophysics

Credit Hours: 3.00. This course will explore geophysical processes from the scales of individual stresses that deform rocks, to plate motions, to planetary-scale interiors and phenomena. Emphasis will be focused on sources of stress and how this stress is manifested, heat transfer, and fluid processes. Seismic waves, gravity data, planetary shape, and what information they provide about the interior of solid planets will be discussed. The course material will be applied to Earth, other rocky worlds like the Moon and Mars, and icy moons like Europa and Enceladus. This course is an introduction to geophysical processes and serves as a stepping-stone to upper level geophysics courses such as EAPS 35200, EAPS 45000, and EAPS 55700.

Learning Outcomes: 1. Describe the interior

structures of Earth and other planets and large moons, and how we know them. 2. Describe how heat and fluids are transferred within the Earth and other planets and large moons. 3. Describe how interior processes in the Earth are ma09nifested in plate tectonics, and how they result in other tectonic regimes on other planets and large moons. 4. Apply quantitative skills to geophysical problems. 5. Critically evaluate a scientific study and orally communicate your evaluation. Credits: 3.00

EAPS 47400 - Sedimentary Geology

Credit Hours: 4.00. Systematic study of continental and marine depositional environments. Interpretation of sedimentary facies, structures, and microfacies. Principles and applications of stratigraphy, including applications of paleontology, field relations, paleomagnetism, well logs, seismic reflections, and chemistry. Field investigations may be required. Prior course work in earth materials, mineralogy and petrology is required.

Learning Outcomes: 1. Understand core areas of sedimentary geology, and interpret a wide range of earth processes on different temporal and spatial scales. 2. Develop proficiency interpreting depositional processes and environments of ancient sedimentary strata through bedrock exposures, well logs, and drill cores. 3. Demonstrate skills of interpretive analysis and critical thinking with respect to geological problems involving temporal and spatial relationships. 4. Develop writing abilities through scientific reports that will be written individually, revised based on instructor and peer feedback, and subsequently integrated into a comprehensive basin analysis report. 5. Demonstrate competence in collecting scientific data, including field observations and field and analytical measurements. Specifically, demonstrate competency in collecting the following field datasets from outcrops: paleocurrent indicators, lithofacies associations, stratigraphic sections, and facies architectures. 6. Conduct effective independent and collaborative investigations. Specifically, develop your ability to work both independently and collaboratively during acquisition, analysis, and dissemination of scientific datasets as part of basin analysis project. Credits: 4.00

EAPS 47500 - Geology And Geophysics Field Camp - Wasatch-Uinta Field Camp

Credit Hours: 6.00. The Wasatch-Uinta Field Camp is a six-week capstone course designed to prepare students for successful careers in the geosciences. This course emphasizes scientific methodology and traditional techniques that provide a strong foundation for the broad range of modern technologies used by today's industry, academic, government and private workforces. Students learn to develop research strategies, collect field observations and measurements, compile detailed rock descriptions, measure stratigraphic sections, and construct geologic maps and cross sections. Field exercises are located in geologically ideal locations in the Wasatch and Uinta mountains of Utah, the San Rafael Swell of southeastern Utah, Grand Teton National Park in Wyoming, and the Carlin-type gold deposits of Nevada. The Wasatch-Uinta Field Camp was established in 1967 by the University of Minnesota. The camp is operated by a consortium that currently includes Purdue University, the University of Minnesota-Duluth, University of Wisconsin-Madison, the University of Nebraska, and the University of Illinois.

Learning Outcomes: 1. Learn how to make systematic geological observations and also collect relevant data using a Brunton compass. This includes the ability to identify rock types and minerals and primary and secondary geological structures and require skills and information learned in mineralogy, petrology (igneous, metamorphic, and sedimentary), structural geology, and stratigraphy. 2. Collect field observations and measurements, compile detailed rock descriptions, measure stratigraphic sections, which will be used to construct geologic maps and cross sections. 3. Navigate in the field using topographic maps, and compasses. Proficiency in field navigation is crucial for locating and completing field studies. 4. Develop skills in interpreting geological history, including the sequence of

events and the geological evolution of an area based on field observations. 5. Deal with incomplete or ambiguous data and will be required to formulate hypotheses, make educated inferences, and solve geological problems based on limited information. 6. Enhance their ability to work effectively in a team, collaborating with peers on field projects, and communicating geological findings through clear and concise field notes, maps, and reports. 7. Learn to conduct geological fieldwork safely is paramount. Students should be able to identify potential hazards in the field, adhere to ethical and legal guidelines for collecting samples, and understand the importance of preserving natural landscapes. Learn best practices for safely conducting a field study. Credits: 6.00

EAPS 34400 - Igneous And Metamorphic Petrology

Credit Hours: 4.00. This course provides an overview of igneous and metamorphic petrology including, but not limited to, the following topics: experimental petrology and phase diagrams, melting of the Earth's interior, understanding the relationship between mineralogy, chemical composition, and physical conditions, relating magmatism and metamorphism to different tectonic environments, and exploring the similarities, and differences, between magmatism on Earth and other planetary bodies. The lectures and labs emphasize developing a basic understanding of petrology and petrologic processes, rather than the simple memorization of terms, definition, and facts.

Learning Outcomes: 1. Understand how petrologists determine the origin of common igneous and metamorphic rocks and the data that supports current interpretations. 2. Describe the types of igneous and metamorphic rocks that would be found in different tectonic settings. 3. Interpret and understand phase diagrams and how they are constructed. 4. Link mineralogy to chemical compositions and understand how compositions can change during melting, fractional crystallization, or open-system metamorphism. 5. Understand how metamorphic rocks can be utilized to quantitatively constrain the physical conditions that a rock experienced. 6. Gain confidence in understanding and using scientific methods and information to interpret igneous and metamorphic rocks. Credits: 4.00

Geology and Geophysics Selectives (12 credits)

Other Departmental/Program Course Requirements (45-72 credits)

College of Science Additional Requirements

Computing (3-4 credits)

ECE 49500 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 4.00. Topics vary. Permission of department required.

Credits: 1.00 to 4.00

ENGR 14200 - Honors Creativity And Innovation In Engineering Design II

Credit Hours: 3.50. This course continues building on the foundation developed in ENGR 14100 . Students take a more in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students extend and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g., C, Excel®, LabView®, MATLAB®, and Python).

Learning Outcomes: 1. Describe, in greater depth, the engineering disciplines at Purdue and the interrelationships among them as well as know what graduates of at least three disciplines of engineering do. 2. Apply engineering fundamentals and basic engineering science concepts to create feasible engineering solutions that are justifiable. 3. Use a problem identification process to create

written engineering criteria to satisfy a problem. 4. Use an engineering formulation and solving process to translate an engineering scenario into a mathematical model. 5. Explain how an engineering problem solving process relates to a design process. 6. Design a process to communicate technical information orally and visually and demonstrate skills for cross-cultural communication. 7. Further development of strategies to facilitate generating creative ideas for complex design challenges. 8. Apply an engineering problem solving and design process to: generate ideas, model, analyze, predict, and build an innovative object of engineering interest taking into consideration its societal and environmental impact. 9. Implement complex algorithmic solutions to engineering problems/designs using the most appropriate computer tool (C , Excel, LABVIEW, MATLAB, and Python) and be able to explain your rationale for your choice. 10. Apply a systems approach in solving engineering problems and in undertaking design projects. 11. Synthesize your knowledge of effective and ethical membership on a technical team (i.e., teaming skills) to appropriately behavior. 12 Exhibit a work ethic appropriate for the engineering profession. Credits: 3.50

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

ENGR 16200 - Honors Introduction To Innovation And The Physical Science Of Engineering Design II (UCC: IL/SCI)

Credit Hours: 4.00. Students will take an in-depth and holistic approach to integrating multiple disciplines perspectives while constructing innovative engineering solutions to open-ended problems. The students continue to explore more complicated models of physical systems, especially internal energy, entropy, models of gases and fluids, and statistical thermodynamics. The

students will extend the concepts learned in ENGR 16100 and continue to develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, teamwork, and modern engineering tools (e.g. MATLAB and Python). In addition, students will learn how to use hypothesis testing to make informed, quantitative decisions. Finally, they will build systems that incorporate feedback control in an effort to identify and characterize physical material systems.
*(Both ENGR 16100 AND ENGR 16200 are required to meet the IL or SCI requirement)
University Core Curriculum (UCC): (UCC: IL/SCI) Learning Outcomes: 1. Utilize knowledge of the engineering education process, courses, and options, and engineering job functions and roles to prepare a final course of study for academic and career success (3). 2. Develop a unified approach to microscopic and macroscopic behavior of gases and fluids, especially the use of statistics and quantized atomic levels to motivate basic thermodynamic theories (10). 3. Apply the unified approach to material interactions to a broad array of applications including asteroids, black holes, nuclear fission and fusion, quantization in atoms and molecules, and heat capacity (7). 4. Model natural phenomena using computer simulations (7). 5. Integrate engineering ethics, including social, safety, and sustainability issues into engineering thinking and engineering problem solving to ensure that the broader impacts of engineering work are consistently evaluated and accounted for (3). 6. Display proficiency in the applications of engineering content knowledge including statistics, statics, mechanics of materials, the universal accounting equation, electrical theory, and design of experiments (8). 7. Employ academic and career success strategies including managing your personal learning approach, using time management techniques, and seeking opportunities for self-improvement to thoughtfully pursue course activities and the course as a whole (2). 8. Plan and implement systematic design processes using formal project management and design tools such as work breakdown structures and House of Quality to design innovative products and systems (2). 9. Investigate and decompose systems in order to design and construct mathematical or computer models that can be employed to better understand or control the systems (6). 10. Analyze and translate problems into algorithms composed of logical constructs and be able to create programming-language-independent system charts and flow diagrams embodying those algorithms (5). 11. Demonstrate professional communications skills in the areas of technical writing, presentations, and interpersonal communication, to produce engineering reports, convey engineering findings and evidence in writing, verbally, and graphically to readers or audiences, and to work with other members of the class (3). 12. Work alongside individuals with diverse backgrounds in teams, learn interdependently in the team environment, give and demand accountability, and accomplish engineering tasks, while recognizing teaming as an open-ended problem that needs to be actively managed and reflected upon (3). 13. Investigate engineering problems to reach evidence-based conclusions, drawing upon one or more sources of information and data interpretation skills including interpolation, regression, curve fitting, statistics, and data cleaning (3). 14. Apply fundamental engineering skills and knowledge relating to units, dimensions, estimation, spatial reasoning, graphical representation, significant digits, and the problem presentation method to engineering challenges (2). Credits: 4.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on

experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (8 credits)

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a

few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

Mathematics (8-10 credits)

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some

exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100,

STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

EAPS 31000 - Introductory Statistics For Geosciences

Credit Hours: 3.00. Introductory course in statistics and quantitative reasoning for students in geosciences. Topics covered include probability distributions of discrete and continuous random variables, simulation, confidence intervals and hypothesis tests for one and two samples, inference for regression and correlation.

Learning Outcomes: 1. Understand basic concepts of probability and statistics, and gain a solid basis for practical application of statistical methods in geosciences. 2. Obtain hands-on experience in resampling methods to handle data without having to rely on strong assumptions common in classical statistics but rarely met in geosciences. 3. Use statistical software to analyze data and interpret results. Credits: 3.00

Required Pre-Requisite Courses (8-10 credits)

CHM 12500 - Introduction To Chemistry I (UCC: SCI)

Credit Hours: 5.00. Principles of chemistry including stoichiometry; atomic structure and chemical bonding; properties of gases, liquids, and solids; thermochemistry; descriptive inorganic chemistry. Recommended for entering students intending to major in chemistry. One year of high school chemistry or one semester of college chemistry required.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate competency of chemistry concepts through solving of numerical-based chemistry problems. 2. Demonstrate a mastery of concepts, theories, and ideas of chemistry topics specific to this course. 3. Connect chemistry topics in this course to real-world problems and solutions that you and others experience. 4. Meet laboratory learning objectives. Credits: 5.00

CHM 12600 - Introduction To Chemistry II (UCC: SCI)

Credit Hours: 5.00. A continuation of CHM 12500 . Properties of solutions; chemical equilibrium calculations; elementary thermodynamics; oxidation-reduction reactions and electrochemical cells; rates of reaction; qualitative analysis; descriptive chemistry.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 5.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations.

2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts

and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Electives (0-26 credits)

Grade Requirements

GPA Requirements

Course Requirements and Notes

Sample 4-Year Plan

Fall 1st Year

CHM 12500 - Introduction To Chemistry I (UCC: SCI)

Credit Hours: 5.00. Principles of chemistry including stoichiometry; atomic structure and chemical bonding; properties of gases, liquids, and solids; thermochemistry; descriptive inorganic chemistry. Recommended for entering students intending to major in chemistry. One year of high school chemistry or one semester of college chemistry required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate competency of chemistry concepts through solving of numerical-based chemistry problems. 2. Demonstrate a mastery of concepts, theories, and ideas of chemistry topics specific to this course. 3. Connect chemistry topics in this course to real-world problems and solutions that you and others experience. 4. Meet laboratory learning objectives. Credits: 5.00

EAPS 11800 - Introduction To Earth Sciences

Credit Hours: 3.00. Introduction to a range of topics in Earth Science, including: Origin and geological history of Earth, including geological records of climate and evolution; Earth materials (minerals and rocks); Chemical and physical composition and structure of the Earth; Rock weathering, erosion, and sedimentary processes; Geological timescale; Geologic structures including their map and field expression; Tectonic processes; The hydrological cycle with emphasis on groundwater and physical and chemical oceanography; Energy and mineral resources; Astrobiology. (Required for Geology and Geophysics and Earth and Space Science Teaching majors.)

Credits: 3.00

EAPS 13700 - Freshman Seminar In Earth, Atmospheric, And Planetary Sciences

Credit Hours: 1.00. Seminar presented by guests in different fields of the Earth and Atmospheric Sciences to expose students to the range of topics included in the department and in possible career paths.

Learning Outcomes: 1. Demonstrate the ability to form high performing teams. 2. Demonstrate the ability to locate and use academic success resources. 3. Demonstrate understanding of time management and study skills. 4. Demonstrate knowledge in the utilization of Purdue degree planning tools. 5. Demonstrate understanding of the academic requirements and career paths in the EAPS program. Credits: 1.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to

apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using

calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

15-18 Credits

Spring 1st Year

CHM 12600 - Introduction To Chemistry II (UCC: SCI)

Credit Hours: 5.00. A continuation of CHM 12500 . Properties of solutions; chemical equilibrium calculations; elementary thermodynamics; oxidation-reduction reactions and electrochemical cells; rates of reaction; qualitative analysis; descriptive chemistry.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 5.00

EAPS 11200 - Earth Through Time (UCC: SCI)

Credit Hours: 3.00. The history of the planet Earth from its beginnings to the present. This course will explore the causes and effects of processes that have changed the Earth's surface and subsurface through time, the impacts of these changes on the evolution of life, and how scientist interpret Earth history from the geologic record. The laboratory will provide hands-on experience in interpreting various geologic and fossil records. This course may be taken on its own, or as a year-long lab series with EAPS 11100 . EAPS 11100 and EAPS 11200 will fulfill the two course sequence laboratory experience outside the major department.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

EAPS 31900 - Exploring Earth Through Time

Credit Hours: 3.00. The course will explore the history of the Earth from its beginning 4.5 billion years ago to the present. Our understanding and insight into the history of the Earth has greatly expanded during the last several decades. Emphasis will be placed on the relationships of tectonic processes that shaped the surface of the Earth and the evolution of the Earth's biosphere. The course will also examine how the role of evolution of life has played in the history of the atmosphere and oceans.

Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the

interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis

techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

14-17 Credits

Fall 2nd Year

EAPS 24300 - Mineralogy

Credit Hours: 4.00. Elements of crystallography, physical and chemical properties of rock-forming minerals, and minerals of economic importance. Origin and occurrence of minerals. Prior course work in dynamic earth or physical geology is required.

Learning Outcomes: 1. Know the major element geochemistry of common rock forming minerals that occur in earth, the terrestrial planets, and in meteorites. 2. Understand that minerals form the geochemical reservoirs from which rock materials are derived. 3. Have competence in the rules of crystallography, be able to determine symmetry elements in 1-, 2-, and 3-demensions, and understand how to index different parts of crystals using common notations. 4. Identify rock forming minerals and selected accessory and ore minerals in hand sample. 5. Learn the theory and methods of optical mineralogy, spectroscopy, X-ray diffraction, and electron microbeam analysis. 6. Learn the thermodynamics phase equilibria in rock and mineral systems, and the basic petrology of igneous, metamorphic and sedimentary rocks. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

14-15 Credits

Spring 2nd Year

EAPS 35400 - Earth And Planetary Geophysics

Credit Hours: 3.00. This course will explore geophysical processes from the scales of individual stresses that deform rocks, to plate motions, to planetary-scale interiors and phenomena. Emphasis will be focused on sources of stress and how this stress is manifested, heat transfer, and fluid processes. Seismic waves, gravity data, planetary shape, and what information they provide about the interior of solid planets will be discussed. The course material will be applied to Earth, other rocky worlds like the Moon and Mars, and icy moons like Europa and Enceladus. This course is an introduction to geophysical processes and serves as a stepping-stone to upper level geophysics courses such as EAPS 35200, EAPS 45000, and EAPS 55700.

Learning Outcomes: 1. Describe the interior structures of Earth and other planets and large moons, and how we know them. 2. Describe how heat and fluids are transferred within the Earth and other planets and large moons. 3. Describe how interior processes in the Earth are ma09nifested in plate tectonics, and how they result in other tectonic regimes on other planets and large moons. 4. Apply quantitative skills to geophysical problems. 5. Critically evaluate a scientific study and orally communicate your evaluation. Credits: 3.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

13-14 Credits

Fall 3rd Year

EAPS 35300 - Earth And Planetary Surface Processes

Credit Hours: 3.00. Introduction to a variety of topics in sediment transport and deposition, emphasizing linkages between active processes, landscape evolution, and the rock record. Comparisons will be made between surface processes occurring on Earth and other planetary bodies in the Solar System. Topics include: introductory fluid mechanics; sediment transport by water, ice, and wind, and the development of fluvial bed forms, glacial landscapes, and sand dunes; groundwater geochemistry and the development of karst and caves; impact cratering; comparative planetology. Each major topic is accompanied by field projects that emphasize local geologic history.

Learning Outcomes: 1. Apply fluid dynamics to sediment transport and rock dissolution using physics, chemistry, and calculus. 2. Use dimensionless variables (e.g., Reynolds number, Froude number, Shields number, Drag coefficient) to solve problems in diverse fluid flows (e.g., water, ice, wind, soil, and debris flows). 3. Identify and quantify processes

responsible for shaping Indiana's landscape, including mega flooding, glaciation, wind, and karst. 4. Interpret landscape form in terms of geologic processes occurring in the Solar System. 5. Identify sedimentary structures and relate them to active surface processes. 6. Observe and measure active processes in the field. 7. Organize and write a formal scientific paper. Credits: 3.00

EAPS 47400 - Sedimentary Geology

Credit Hours: 4.00. Systematic study of continental and marine depositional environments. Interpretation of sedimentary facies, structures, and microfacies. Principles and applications of stratigraphy, including applications of paleontology, field relations, paleomagnetism, well logs, seismic reflections, and chemistry. Field investigations may be required. Prior course work in earth materials, mineralogy and petrology is required.

Learning Outcomes: 1. Understand core areas of sedimentary geology, and interpret a wide range of earth processes on different temporal and spatial scales. 2. Develop proficiency interpreting depositional processes and environments of ancient sedimentary strata through bedrock exposures, well logs, and drill cores. 3. Demonstrate skills of interpretive analysis and critical thinking with respect to geological problems involving temporal and spatial relationships. 4. Develop writing abilities through scientific reports that will be written individually, revised based on instructor and peer feedback, and subsequently integrated into a comprehensive basin analysis report. 5. Demonstrate competence in collecting scientific data, including field observations and field and analytical measurements. Specifically, demonstrate competency in collecting the following field datasets from outcrops: paleocurrent indicators, lithofacies associations, stratigraphic sections, and facies architectures. 6. Conduct effective independent and collaborative investigations. Specifically, develop your ability to work both independently and collaboratively during acquisition, analysis, and dissemination of scientific datasets as part of basin analysis project. Credits: 4.00

12-14 Credits

Spring 3rd Year

EAPS 30900 - Computer-Aided Analysis For Geosciences

Credit Hours: 3.00. Application of computer analysis techniques including error analysis, line and surface fitting, spatial and temporal correlations, contouring, interpolation, and map projections. These methods are discussed in terms of specific geologic applications. All exercises and examples are developed using commercial mathematical software package. A three-hour-per-week computer laboratory tutorial provides hands-on experience with the techniques discussed in class. Prior course work in computer programming is required.

Learning Outcomes: 1. Carry out computational solutions to a given range of data analysis problems. 2. Select the appropriate analysis and visualization approaches when given a set of data. 3. Appraise and conclude the analysis results professionally. Credits: 3.00

EAPS 35200 - Structural Geology

Credit Hours: 3.00. This course deals with the nature and evolution of structures in rock deformed naturally by flow and fracture, as deduced from experimental, theoretical and field studies. Specific topics include: structures in three dimensions using descriptive geometry and stereonets, field measurements of rock geometry, tensors, strain and stress, the theory of brittle and plastic rock behavior, theory and field observation of folds and faults, structural analysis of an outcrop, the structure and mechanics of mountain belts. Students will be expected to show competency with using a general set skills, techniques, and tools commonly used by professional geoscientists.

Learning Outcomes: 1. Interpret geologic structures in three dimensions using descriptive geometry, stereonets, and field measurements of rock geometry. 2. Evaluate quantitatively observations of the deformation in the crust using basic stress and strain theory, the theory of brittle and plastic rock behavior, theory and

field observation of folds and faults, structural analysis of an outcrop. 3. Recognize the structures and give a mechanical explanation for the development of mountain belts. 4. Apply these skills in the field. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and

sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

EAPS 31000 - Introductory Statistics For Geosciences

Credit Hours: 3.00. Introductory course in statistics and quantitative reasoning for students in geosciences. Topics covered include probability distributions of discrete and continuous random variables, simulation, confidence intervals and hypothesis tests for one and two samples, inference for regression and correlation.

Learning Outcomes: 1. Understand basic concepts of probability and statistics, and gain a solid basis for practical application of statistical methods in geosciences. 2. Obtain hands-on experience in resampling methods to handle data without having to rely on strong assumptions common in classical statistics but rarely met in geosciences. 3. Use statistical software to analyze data and interpret results. Credits: 3.00

EAPS 34400 - Igneous And Metamorphic Petrology

Credit Hours: 4.00. This course provides an overview of igneous and metamorphic petrology including, but not limited to, the following topics: experimental petrology and phase diagrams, melting of the Earth's interior, understanding the relationship between mineralogy, chemical composition, and physical conditions, relating magmatism and metamorphism to different tectonic environments, and exploring the similarities, and differences, between magmatism on Earth and other planetary bodies. The lectures and labs emphasize developing a basic understanding of petrology and petrologic processes, rather than the simple memorization of terms, definition, and facts.

Learning Outcomes: 1. Understand how petrologists determine the origin of common igneous and metamorphic rocks and the data that supports current interpretations. 2. Describe the types of igneous and metamorphic rocks that would be found in different tectonic settings. 3. Interpret and understand phase diagrams and how they are constructed. 4. Link mineralogy to chemical compositions and understand how compositions can change during melting, fractional crystallization, or open-system metamorphism. 5. Understand how metamorphic rocks can be utilized to quantitatively constrain the physical conditions that a rock experienced. 6. Gain confidence in understanding and using scientific methods and information to interpret igneous and metamorphic rocks. Credits: 4.00

13-16 Credits

Summer 3rd Year

EAPS 47500 - Geology And Geophysics Field Camp - Wasatch-Uinta Field Camp

Credit Hours: 6.00. The Wasatch-Uinta Field Camp is a six-week capstone course designed to prepare students for successful careers in the geosciences. This course emphasizes scientific methodology and traditional techniques that provide a strong foundation for the broad range of modern technologies used by today's industry, academic, government and private workforces. Students learn to develop research strategies, collect field observations and measurements, compile detailed rock descriptions, measure stratigraphic sections, and construct geologic maps and cross sections. Field exercises are located

in geologically ideal locations in the Wasatch and Uinta mountains of Utah, the San Rafael Swell of southeastern Utah, Grand Teton National Park in Wyoming, and the Carlin-type gold deposits of Nevada. The Wasatch-Uinta Field Camp was established in 1967 by the University of Minnesota. The camp is operated by a consortium that currently includes Purdue University, the University of Minnesota-Duluth, University of Wisconsin-Madison, the University of Nebraska, and the University of Illinois.

Learning Outcomes: 1. Learn how to make systematic geological observations and also collect relevant data using a Brunton compass. This includes the ability to identify rock types and minerals and primary and secondary geological structures and require skills and information learned in mineralogy, petrology (igneous, metamorphic, and sedimentary), structural geology, and stratigraphy. 2. Collect field observations and measurements, compile detailed rock descriptions, measure stratigraphic sections, which will be used to construct geologic maps and cross sections. 3. Navigate in the field using topographic maps, and compasses. Proficiency in field navigation is crucial for locating and completing field studies. 4. Develop skills in interpreting geological history, including the sequence of events and the geological evolution of an area based on field observations. 5. Deal with incomplete or ambiguous data and will be required to formulate hypotheses, make educated inferences, and solve geological problems based on limited information. 6. Enhance their ability to work effectively in a team, collaborating with peers on field projects, and communicating geological findings through clear and concise field notes, maps, and reports. 7. Learn to conduct geological fieldwork safely is paramount. Students should be able to identify potential hazards in the field, adhere to ethical and legal guidelines for collecting samples, and understand the importance of preserving natural landscapes. Learn best practices for safely conducting a field study.

Credits: 6.00

6 Credits

Fall 4th Year

12-15 Credits

Spring 4th Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: Will update at a later date.

Credits: 3.00

12-15 Credits

German, BA (Language & Culture Track)

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

Pre-requisite Language Courses

GER 10100 - German Level I (UCC: HUM)

Credit Hours: 3.00. A beginning course in German reserved exclusively for students who have had less than two years of German at the ninth-grade level or above. Students with two years or more of previous German study may not take this course for credit. Permission of department required. CTL:IWL 1920 German Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos of spoken German. 4. Compose German sentences by focusing on the set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

GER 10200 - German Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 10100 . CTL:IWL 1921 German Level II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 20100 - German Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate German course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts, and listening to audio recordings, and watching videos of spoken German. 2. Compose German sentences by focusing on a set of grammatical rules and standards in the language. 3. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

GER 20200 - German Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 20100 . CTL:IWL 1923 German Level IV

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 22300 - German Level IV: Science And Engineering

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills, directed toward use of German in science and technology. Work on grammar as needed. Use of materials from recent publications in science and technology. Introduction to general and technical vocabulary. Conducted primarily in German. Credit will not be given for both GER 20200 and 22300.

Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts about science, engineering, and business. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings about science, engineering, and business in spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos about science, engineering, and business in spoken German. 4. Compose German sentences about science, engineering, and business by focusing on a set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations that deal with science, engineering, and business. Credits: 3.00

GER 22400 - German Level IV: Business German

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed toward use of German for business purposes. Work on grammar as needed. Course materials cover daily business dealings as well as national and international trade, living conditions, environmental and social problems.

Credits: 3.00

GER 20500 - Accelerated Intermediate German (UCC: HUM)

Credit Hours: 4.00. An accelerated intermediate level course in German designed to achieve second year language proficiency in German. The course is appropriate for students who would like to accelerate the process of learning German.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading a variety of German texts. 2. Identify German cultural aspects by watching videos in

spoken German language integrated in the book. 3. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 4. Compose grammatically correct German sentences by observing the norms and standards of the language. 5. Produce sentences in spoken German in the form of dialogues and presentations and respond appropriately to questions and statements related to everyday life. Credits: 4.00

German Major

A. German Language (6 credits)

GER 30100 - German Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of German speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Germany from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 30200 - German Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in German on the basis of materials dealing with the ideas and events that have shaped present-day Germany. Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

B. German Literature (3 credits)

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German.

Discuss (in German) selected literary works that are written in German in respect to their main themes and to devices that help writers convey the texts' meaning, such as symbolism, metaphor, irony, and allusion. 3. Compose (in German, with the aid of a dictionary) analytical essays that examine the relationship between the content, style, and sociohistorical context of selected literary texts. Credits: 3.00

Language & Culture Track

C. Advanced German Language (6 credits)

GER 40100 - German Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of German speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Germany. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 40200 - German Level VIII (UCC: HUM)

Credit Hours: 3.00. Further advanced work on speaking,

listening, reading, and writing abilities in German. Course materials will cover a variety of topics illustrated by film and other media, both print and nonprint. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Compose essays in German after reading authentic German articles and books. 2. Discuss current events in German based on print and media sources from German-speaking countries. 3. Formulate arguments during debate in German through group discussion. 4. State their opinions in German on recordings, television shows, and texts. 5. Describe information in German from graphs, charts, diagrams, and pictures. Credits: 3.00

D. Advanced German Literature (6 credits)

GER 34100 - German Literature I: From The Middle Ages To The 18th Century

Credit Hours: 3.00. Reading and discussion of selected texts (poetry, prose, dramatic texts, cultural documents, and artworks) in German from the Middle Ages to the Eighteenth Century.

Credits: 3.00

GER 34200 - German Literature II: From The 18th Century To The 21st Century

Credit Hours: 3.00. Reading and discussion of selected texts in German with the dual context of literary movements and historical developments between the 18th and 21st centuries.

Credits: 3.00

E. German Linguistics (3 credits)

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

F. German Culture and Civilization (3 credits)

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 58100 - German Culture

Credit Hours: 3.00. The development of the cultural life in German-speaking lands as reflected in architecture, art, history, literature, music, and philosophy. Lectures in German.

Credits: 3.00

G. German Selectives (6 credits)

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering

In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

GER 33000 - German Cinema (UCC: HUM)

Credit Hours: 3.00. Viewing and analysis of major German contributions to the cinema from the earliest period to the present. Emphasis on relevant aesthetic theories and on the schools of literature and painting that served as sources. Evaluation of the German film on the basis of social, artistic, and political criteria. Knowledge of German not required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify and describe the major movements and trends of German film history of the 20th and 21st centuries. 2. Analyze the cinematography of representative German films. 3. Interpret the explicit and implicit meanings of representative German films. Credits: 3.00

GER 42400 - Business German

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Learn and practice vocabulary and cultural knowledge that is applicable to business situations in German-speaking countries. 2. Compare business practices in German-speaking countries with those in the United States, and will be able to discuss the similarities and differences in German. Credits: 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 49800 - Advanced Topics In German

Credit Hours: 3.00. Special topics on literature, linguistics and culture of contemporary German-speaking countries. Conducted in German.

Credits: 3.00

GER 52400 - German For International Trade

Credit Hours: 3.00. A broad spectrum of business and cultural materials to prepare students for work in international firms. Intensive study of technical terminology used in business transactions; stylistics in business correspondence and report writing; training for accurate oral expression in business negotiations.

Credits: 3.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

GER 31200 - Advanced German Conversation

Credit Hours: 1.00. One credit hour advanced German conversation course focused on the development of oral and aural skills for self-expression. Course provides students with guided practice in conversation to enhance communicative competence. Discussions in German on various topics. Course may be taken concurrently with GER 30100, 30200, 40100 or 40200.

Learning Outcomes: 1. Develop intermediate listening skills and improve oral German proficiency. 2. Acquire advanced vocabulary and grammar through discovery in various media and conversation. 3. Read, view, listen, and discuss relevant intermediate texts in the target language. Credits: 1.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

GER 42400 - Business German

Credit Hours: 3.00. A study of the terminology and techniques used in commercial transactions, including the interpretation and writing of business materials. Development of the four language skills, with emphasis on writing and speaking.

Learning Outcomes: 1. Learn and practice vocabulary and cultural knowledge that is applicable to business situations in German-speaking countries. 2. Compare business practices in German-speaking countries with those in the United States, and will be able to discuss the similarities and differences in German. Credits: 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 49800 - Advanced Topics In German

Credit Hours: 3.00. Special topics on literature, linguistics and culture of contemporary German-speaking countries. Conducted in German.

Credits: 3.00

GER 52400 - German For International Trade

Credit Hours: 3.00. A broad spectrum of business and cultural materials to prepare students for work in international firms. Intensive study of technical terminology used in business transactions; stylistics in business correspondence and report writing; training for accurate oral expression in business negotiations.

Credits: 3.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

GER 58100 - German Culture

Credit Hours: 3.00. The development of the cultural life in German-speaking lands as reflected in architecture, art, history, literature, music, and philosophy. Lectures in German.

Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

GER 10100 - German Level I (UCC: HUM)

Credit Hours: 3.00. A beginning course in German reserved exclusively for students who have had less than two years of German at the ninth-grade level or above. Students with two years or more of previous German study may not take this course for credit. Permission of department required. CTL:IWL 1920 German Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos of spoken German. 4. Compose German sentences by focusing on the set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

EDST 20010 - Educational Policies And Laws

Credit Hours: 1.00 to 3.00. The interactive course will provide an understanding of the history of schooling in the United States. A special emphasis will be placed on reviewing historical and contemporary educational policies and educational laws as each subject is critical to understanding social, historical, and cultural issues in the United States. Focus will also be on contemporary applications of historical ideas in the classroom and in school systems.

Learning Outcomes: 1. Know how education laws and policies influenced the American education system and vice versa. 2. Understand how race, ethnicity, gender, and social class have affected schooling experiences. 3. Evaluate how schools reflect societal, political, and cultural values historically. 4. Link these larger issues to reflective teaching practices. Credits: 1.00 to 3.00

LC 23700 - Our Common Bond: Languages And Cultures In A Global Context

Credit Hours: 3.00. (CMPL 23700) Students learn what lies behind the concept of Liberal Arts: the capabilities, insights and skills of individuals who think critically and freely. It exposes students from across the university to the ideas, skill-set and inspiration that emanates from the liberal arts. They will be introduced to the discipline of Comparative Literature by

examining the specific roles that languages and cultures play in the globalized world. The course also demonstrates how a Language and Cultures degree will put students at a greater advantage in career opportunities.

Learning Outcomes: 1. Trace how various cultures have shaped our contemporary models of higher education through written and oral assignments. 2. Describe how literary texts from various cultures provided the catalyst for major political and social events throughout history. 3. Identify the impact that literary endeavors have in the development of scientific, medical, corporate, environmental and political ideas. 4. Articulate clearly why a Liberal Arts education that focuses on languages and intercultural competency is both valuable and marketable in today's global context. Credits: 3.00

15 Credits

Spring 1st Year

GER 10200 - German Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 10100 . CTL:IWL 1921 German Level II

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDCI 28550 - Foundations Of Multicultural Education And Community (UCC: BSS)

Credit Hours: 3.00. The purpose of this course is to give students an opportunity to explore various facets of multiculturalism within their communities. We will examine the influence of social group identities on teaching, learning, and communities as they relate to contexts both in and out of schools. While this course is broad in scope, the primary aim is to assist you in exploring what it means to be an educator and/or concerned citizen in a society that is multicultural.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand and describe the impact of diversity on American schools and classrooms. 2. Understand and describe how their own views and perspectives have been shaped by their backgrounds and identities. 3. Understand and describe the challenges of teaching and communicating in diverse and multicultural schools and communities. 4. Demonstrate the awareness, knowledge, skills, and actions needed for teaching in diverse and multicultural schools and communities. 5. Identify strengths as a community volunteer and collaborate with local organizations to identify community needs. 6. Recognize the needs of community stakeholders through formal and informal conversations. Credits: 3.00

15 Credits

Fall 2nd Year

GER 20100 - German Level III (UCC: HUM)

Credit Hours: 3.00. A lower intermediate German course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts, and listening to audio recordings, and watching videos of spoken German. 2. Compose German sentences by focusing on a set of grammatical rules and standards in the language. 3. Produce sentences in spoken German in the form of dialogues and presentations. Credits: 3.00

EDPS 36201 - Positive Behavioral Supports

Credit Hours: 0.00 to 3.00. This course provides an overview of the theory, principles, and application of applied behavior analysis within positive behavior interventions and support. The course focuses on pre-service teacher preparation in designing and implementing group and individual behavior supports. Emphasis is on universal supports, targeted interventions, and data-driven decision-making.

Learning Outcomes: 1. Identify the basic principles of behavior and provide real-world examples. 2. Create behavioral expectations

and design a corresponding behavior matrix. 3. Design class-wide reinforcement systems. 4. Identify interventions to promote social emotional learning for all learners. 5. Apply data-driven decision making to provide and evaluate a multi-tiered systems of support. 6. Design tier-two targeted supports to teach appropriate behavior. 7. Define behavior. 8. Select appropriate behavior measurement system. 9. Measure and graph behavior to assist in data-driven decision making. Credits: 0.00 to 3.00

EDCI 37001 - Teaching And Learning English As A New Language

Credit Hours: 0.00 to 3.00. This course builds foundational knowledge on the theories and practices related to the English language development of English language learners in the P-12 contexts. Particular attention is given to the current issues as well as on techniques for instructing and assessing students at different stages of English language development in the school context. Students will learn to identify students' strengths and current needs in English, to design classroom experiences across the curriculum, and to assess student performance using current WIDA standards.

Learning Outcomes: 1. Develop understanding of the English language and literacy development process of English language learners. 2. Instruct and assess students who are at different stages of English language development. 3. Identify English Learners' strengths and needs in English. 4. Practice in designing classroom experiences across the curriculum on the basis of these strengths and needs. 5. Learn background in WIDA and practice in designing Model Performance Indicators in connection with teaching experiences in the field for English Learners. 6. Develop understanding of their roles as ELL teachers and professionals in advocating on behalf of their ELLs. Credits: 0.00 to 3.00

15 Credits

Spring 2nd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

GER 20200 - German Level IV (UCC: HUM)

Credit Hours: 3.00. Continuation of GER 20100 . CTL:IWL 1923 German Level IV

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

GER 22300 - German Level IV: Science And Engineering

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills, directed toward use of German in science and technology. Work on grammar as needed. Use of materials from recent publications in science and technology. Introduction to general and technical vocabulary. Conducted primarily in German. Credit will not be given for both GER 20200 and 22300.

Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading German texts about science,

engineering, and business. 2. Identify appropriate use of German language in specific contexts by listening to audio recordings about science, engineering, and business in spoken German. 3. Identify appropriate use of German language in specific contexts by watching videos about science, engineering, and business in spoken German. 4. Compose German sentences about science, engineering, and business by focusing on a set of grammatical rules and standards in the language. 5. Produce sentences in spoken German in the form of dialogues and presentations that deal with science, engineering, and business. Credits: 3.00

GER 22400 - German Level IV: Business German

Credit Hours: 3.00. Practical reading, writing, speaking, and listening comprehension skills directed toward use of German for business purposes. Work on grammar as needed. Course materials cover daily business dealings as well as national and international trade, living conditions, environmental and social problems.

Credits: 3.00

GER 48000 - German Civilization

Credit Hours: 3.00. The study of modern German life, with special emphasis on the daily life and customs of the people. Lectures in German.

Credits: 3.00

GER 56100 - The Structure Of German I: Phonology And Derivational Morphology

Credit Hours: 3.00. Linguistic analysis of German, focusing on phonetics, phonology, and word structure. The course will treat various problems of pronunciation, structural sound patterns, and word derivation. One weekly class is devoted to theoretical issues affecting German phonology and morphology. Credit will not be given for both GER 36100 and 56100.

Credits: 3.00

GER 56200 - The Structure Of German II: Inflectional Morphology And Syntax

Credit Hours: 3.00. Linguistic analysis of German, focusing on inflectional morphology, syntax, and semantics. The course will present the grammatical structure of German, dealing with word-level phenomena (inflectional morphology), and phrase- and sentence-level phenomena (constituents, word order, syntactic structure, etc.). Credit will not be given for both GER 36200 and 56200.

Credits: 3.00

GER 56300 - History Of The German Language

Credit Hours: 3.00. A survey of the development of the German language, with emphasis on the factors and events that brought about the ultimate unification of the major German dialects into the standard form of the present. The German language of today as a reflection of past cultural and sociopolitical conditions.

Credits: 3.00

GER 58100 - German Culture

Credit Hours: 3.00. The development of the cultural life in German-speaking lands as reflected in architecture, art, history, literature, music, and philosophy. Lectures in German.

Credits: 3.00

GER 20500 - Accelerated Intermediate German (UCC: HUM)

Credit Hours: 4.00. An accelerated intermediate level course in German designed to achieve second year language proficiency in German. The course is appropriate for students who would like to accelerate the process of learning German.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify appropriate use of German language in specific contexts by reading a variety of German texts. 2. Identify German cultural aspects by watching videos in spoken German language integrated in the book. 3. Identify appropriate use of German language in specific contexts by listening to audio recordings of spoken German. 4. Compose grammatically correct German sentences by observing the norms and standards of the language. 5. Produce sentences in spoken German in the form of dialogues and presentations and respond appropriately to questions and statements related to everyday life. Credits: 4.00

EDPS 26501 - The Inclusive Classroom

Credit Hours: 2.00. This course is designed to provide an overview of the characteristics of children (birth through age 21) with disabilities, causes of disability, assessment techniques,

and instructional strategies. Emphasis is placed upon the development of an inclusive lesson plan based on student needs in the field experience classroom. Characteristics addressed include learning, behavioral, social-emotional, and communicative abilities and needs for students with mild and intense support needs. Issues related to cultural differences and family impact will also be addressed. A field-based component is included.

Learning Outcomes: 1. Know theoretical and historical perspectives of special education. 2. Demonstrate knowledge of both legal (Federal and State) and ethical guidelines as it relates to education and services for individuals with disabilities including the Individuals with Disabilities Education Act (IDEA), Section 504 and Americans with Disabilities Act (ADA). 3. Identify the academic, behavioral, social-emotional, cognitive, communication, and motor/physical characteristics of students with disabilities including etiologies and outcomes. 4. Know the importance of the role of families as it relates to special education and the potential impact of language, culture, and family background have on the delivery of special education services. 5. Know the educators' role (special education and general education) in assessing, collaborating and teaching individual academic, social, communication, daily living, and employment goals for individuals from birth to 21. 6. Learn strategies for creating an inclusive learning environment that includes individualized instructional strategies/supports for one or more individuals with disabilities. 7. Learn how to select and use appropriate formal and informal assessments that minimize bias. 8. Justify how planned strategies/supports address the learning needs of one or more individuals with disabilities. 9. Learn technologies to support instruction for students with disabilities. Credits: 2.00

EDPS 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDCI 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various educational field placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 30 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDCI 20001 - Special Populations Seminar: Focus On Students With Disabilities And Differentiation Approaches

Credit Hours: 1.00. (EDPS 20001) This seminar is focused on special populations of learners for teacher education majors with an emphasis on exceptional students and approaches to curricular differentiation. Students will engage in mentoring activities and ongoing support in their development as a professional. The goal of the seminar is to connect theory to practice by engaging in an immersive field experience that connects to content and courses taken concurrently. The seminar provides an environment conducive to fostering rich relationships with schools and communities, pursuing common inquiry, thinking critically about theory, content and practice and advocating for equitable schooling. This seminar includes a field experience targeting schools and classrooms including exceptional students. This seminar is intended to be taken concurrently with EDPS 24800 and EDPS 26501.

Learning Outcomes: 1. Identify key educational theories and describe practices for implementation across various education field

placements. 2. Discuss and use culturally responsive teaching and communication practices. 3. Reflect on their own learning and the learning of others, gaining insight into themselves, into teaching/learning, and into issues of diversity, equity and social justice. 4. Complete a minimum of 40 hours in the required field experience setting. 5. Demonstrate professional attitudes and conduct that facilitate learning and convey a positive image of the education profession. Credits: 1.00

EDPS 24001 - Foundations Of Gifted Education And Differentiated Instruction

Credit Hours: 2.00. This course is an introduction to the intellectual, social, and emotional characteristics of gifted youth; philosophies of gifted education; and programmatic and classroom approaches for supporting gifted students generally and within different domains (e.g., intellectual, academic, creative, artistic, leadership). This course will also help you learn and apply various research-based strategies and curriculum models aligned with gifted education pedagogy. Through readings, in-person small group discussions, and direct application, you will establish the groundwork for differentiated instruction for all students.

Learning Outcomes: 1. Describe the history, philosophical traditions, paradigms, and policies of gifted education. [NAGC-CEC Standards (2013): 6.2] 2. Describe giftedness, creativity, and talented development related to students in school settings. [NAGC-CEC Standards (2013): 1.2, 1.2, 2.1, 5.4, 6.1] 3. Develop awareness of the diversity that exists within the gifted, creative, and talented population. [NAGCCEC Standards (2013): 1.1; 6.3] 4. Apply specific differentiation models and strategies as a response to the needs, interests, and abilities of learners by modifying curriculum, instruction, learning environment, and/or affect. [NAGCCEC Standards (2013): 3.3; 5.1] 5. Create and justify differentiated lessons that utilize instructional strategies and technologies to engage high-potential, gifted, and multi-exceptional students. [NAGC-CEC Standards (2013): 3.1-3.4, 4.2, 4.4, 5.1] 6. Evaluate curriculum and program model(s) would work best at the elementary, middle, and high school levels in your school district. [NAGC-CEC Standards (2013): 3.1, 5.1, 5.2, 6.1] Credits: 2.00

15 Credits

Fall 3rd Year

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 30900 - Reading In Middle And Secondary Schools: Methods And Problems

Credit Hours: 1.00 to 3.00. For prospective teachers at junior and senior high schools. An overview of reading processes, fundamentals of reading instruction, factors that influence the ability to read text materials, strategies and materials for identifying and reducing reading problems, school resources, and programs for normal and deficient readers. Concurrent

enrollment with program-specified methods course.

Learning Outcomes: 1. Explore multiple, diverse, research-based instructional strategies and materials to support the teaching of content-area literacy. 2. Support the development of pedagogical competency through continued work with issues of teaching and learning in secondary literacy. Credits: 1.00 to 3.00

GER 30100 - German Level V (UCC: HUM)

Credit Hours: 3.00. Continued development of German speaking, listening, reading, and writing abilities, using materials dealing primarily with everyday life and civilization in Germany from a variety of sources (e.g., newspapers, magazines, TV, recent literature, etc.). Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

15 Credits

Spring 3rd Year

GER 24100 - Introduction To The Study Of German Literature

Credit Hours: 3.00. An introduction to the study of German literature based on an overview of the formal elements of poetry, fiction, and drama as well as basic concepts of literary theory. Texts in German; conducted primarily in German.

Learning Outcomes: 1. Identify common characteristics of primary literary genres (e.g. prose, poetry, drama) as exhibited during one or more time periods in German-language cultures. 2. Discuss (in German) selected literary works that are written in German in respect to their main themes and to devices that help writers convey the texts' meaning, such as symbolism, metaphor, irony, and allusion. 3. Compose (in German, with the aid of a dictionary) analytical essays that examine the relationship between the content, style, and sociohistorical context of selected literary texts. Credits: 3.00

GER 30200 - German Level VI (UCC: HUM)

Credit Hours: 3.00. Further work to develop speaking, listening, reading, and writing abilities in German on the basis of materials dealing with the ideas and events that have shaped present-day Germany. Conducted primarily in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

GER 32300 - German Level VI: Science And Engineering

Credit Hours: 3.00. This is an alternative course to GER 30200. Continued development of German speaking, listening, reading, and writing abilities, using materials from recent publications in science and technology. Building of general and technical vocabulary. Conducted in German.

Learning Outcomes: 1. Identify and use science- and engineering-related German vocabulary. 2. Read, understand, and discuss specific articles about science and engineering In German. 3. Speak and write about specific topics in science and engineering Inn German. 4. Gain cultural knowledge and competence in the German business world, specifically the world of science and engineering. Credits: 3.00

LC 47500 - Theories Of Teaching World Languages

Credit Hours: 3.00. This course is designed to assist you in the process of becoming a skilled professional who can teach world language(s). You will gain experiential hours in the secondary classroom. You will also develop an understanding of the connection between effective language teaching and successful language learning, be able to think critically about your own teaching and teaching materials and gain an understanding of various theories, methods, approaches, and techniques in world language teaching. Areas of emphasis include the nature of language learning theories, early approaches to language pedagogy, communicative language teaching methodology, the relationship between theory and practice, aspects of the interaction between speakers in the classroom, skills-based theories, sociocultural perspectives, individual differences between learners, and usage-based approaches to second language acquisition.

Learning Outcomes: 1. Identify various theories of foreign language learning. 2. Describe various theories of foreign language teaching. 3. Analyze how student learning is influenced by different types of instructional practices. 4.

Recognize how theories of individual and collaborative learning strategies affect student engagement. 5. Compare and contrast how diverse learners process information and develop language learning skills. Credits: 3.00

15 Credits

Fall 4th Year

EDCI 42700 - Teaching Of World Languages

Credit Hours: 3.00. This is one of the two methods courses required for World Language Teaching major. While LC 47500 is a theoretical course, this course is a practical course on world language teaching in secondary school.

Learning Outcomes: 1. Design lesson plans that draw on knowledge of content areas. 2. Write language learning assessment documents (diagnostic formative, and summative). 3. Design language assessment rubrics. 4. Evaluate their own and others' teaching effectiveness. 5. Plan lessons that incorporate strategies to monitor student learning. 6. Build collaborative relationships with other language teaching professionals. 7. Identify resources for the developing foreign language teaching, including textbooks, scholarly journals, pedagogy associations and conferences. Credits: 3.00

GER 34100 - German Literature I: From The Middle Ages To The 18th Century

Credit Hours: 3.00. Reading and discussion of selected texts (poetry, prose, dramatic texts, cultural documents, and artworks) in German from the Middle Ages to the Eighteenth Century.

Credits: 3.00

GER 34200 - German Literature II: From The 18th Century To The 21st Century

Credit Hours: 3.00. Reading and discussion of selected texts in German with the dual context of literary movements and historical developments between the 18th and 21st centuries.

Credits: 3.00

GER 40100 - German Level VII (UCC: HUM)

Credit Hours: 3.00. Advanced work on development of German speaking, listening, reading, and writing abilities, focusing on materials dealing primarily with culture and the arts in Germany. Conducted in German.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

EDPS 32700 - Classroom Assessment

Credit Hours: 1.00 to 3.00. Evaluating the impact of instruction on student performance is one of the most important skills for an educator. Effective teachers ask themselves, "How do I know if students are truly learning? Are they meeting educational objectives in the content area?" Using well-chosen assessment approaches, teachers can address these questions. In this course, students will acquire assessment literacy: the ability to gather accurate information about student achievement, and use that information to make instructional decisions that will improve learning. Course activities will focus on assessment tasks relevant to P- 12 classroom settings.

Learning Outcomes: 1. Create a long -term assessment plan. 2. Develop constructed-response tasks with scoring rubrics that are clearly written, aligned with content-area performance goals, and free of bias. 3. Make reasonable interpretations of classroom and large-scale assessment results for individual learners and use these interpretations to inform instructional plans. 4. Provide informative feedback to learners about their assessment results. Credits: 1.00 to 3.00

EDPS 43010 - Secondary Creating And Managing Learning Environments

Credit Hours: 1.00 to 3.00. This course is designed to develop advanced pre-service teachers' skills in recognizing classroom processes and understanding how teachers' beliefs and practices affect secondary students' engagement, learning, and motivation. It focuses on Effective Teaching - what it is, what it looks like, and different ways to enact it in the classroom.

Learning Outcomes: 1. Develop skills for building classroom communities. 2. Analyze different approaches to classroom discipline and the effects of those approaches on the cognitive, social, and emotional development of diverse students. 3. Develop a personal

philosophy of classroom discipline. 4. Understand how student diversity, developmental levels, technology, instructional design, room arrangement, and assessment techniques influence the classroom community and climate. 5. Develop strategies for effective management of professional time and tasks. 6. Learn how to collaborate with colleagues and parents to enhance student learning and development. 7. Develop a comprehensive plan for creating and managing the learning environment in a real or simulated teaching situation. Credits: 1.00 to 3.00

18 Credits

Spring 4th Year

EDCI 49800 - Supervised Teaching (UCC: OC)

Credit Hours: 6.00 to 16.00. Teaching full-time in a school classroom under the supervision of the teacher in charge of the class and a University supervisor. Completion of education methods courses and other Gate requirements for the major area and admittance to teacher education required.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Understand and address each student's development and learning needs. 2. Understand and apply content and curricular knowledge for teaching. 3. Assess, plan, and design contexts for learning. 4. Support each student's learning using effective instruction. 5. Develop as a professional. Credits: 6.00 to 16.00

12 Credits

Global Studies, BA

About the Program

Degree Requirements

Departmental/Program Major Courses (27 credits)

A. Global Studies Foundation Courses (12 credits)

GSLA 10100 - Global Awareness

Credit Hours: 3.00. This course surveys a range of global issues to develop an understanding and appreciation of the major geographical and cultural areas of the world and the issues that both unite and divide such areas and their people. The course will examine key political, economic, social, historical and cultural patterns that define our modern world. It encourages students to raise 'big' questions about what processes and institutions helped constitute the modern moment, as well as about the dynamic interactions between our social world and the natural one. This is a gateway course for prospective Global Studies Majors and Minors.

Learning Outcomes: 1. Develop critical thinking. 2. Develop cultural competence. 3. Understand communication across cultures. 4. Develop ethical decision making. Credits: 3.00

GSLA 30100 - Theories Of Global Studies (UCC: HUM)

Credit Hours: 3.00. The course is designed to introduce students to the major schools of thought in Global and International Studies. It provides students with critical tools to explore the interconnectedness of our world from multiple perspectives. The course will expose students to a variety of international scholars who have understood Global Studies to be more than globalization. Instead, it introduces contested issues and contradictory positions concerning the meaning and significance of globalization.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain an understanding of key theoretical approaches to the question of globalization and its role in the discipline of Global Studies. 2. Learn how to evaluate competing and opposing analytical frameworks. 3. Apply a theoretical framework to a concrete problem or case. Credits: 3.00

GSLA 48000 - Senior Interdisciplinary Capstone Project In Global Studies I

Credit Hours: 3.00. The senior capstone course for Global Studies majors is designed to give students the chance to define and complete a research project of personal interest, and to integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001. The capstone courses are offered to students in their senior year to be completed the final two semesters of their major. Students will assemble a committee of two or more faculty members willing to direct their work. The Director of Global Studies will be an ex-officio member of the committee. Students will incorporate their prior coursework (including foreign language training), study abroad, and/or internships into their final project. The capstone may be, but is not limited to, a senior honors project, a multimedia project, service learning, or directed research. Timeline for a successful capstone project: Spring of Sophomore year: After three semesters of coursework, the student will start defining an area of interest or passion that will form the basis of their capstone research. Junior Year: The student will select courses in their interest area. They will also start speaking to faculty members in the field in order to assemble their committee. Spring of Junior Year: Students will finalize their faculty committee to direct their research. Fall of Senior Year: Research Semester, as directed by the committee. GSLA 48000. Spring of Senior Year: Complete project. GSLA 48001.

Learning Outcomes: 1. Demonstrate an awareness of Global issues through academic inquiry and extracurricular engagement. 2. Critically apply multi-perspective research frameworks to a concrete problem or case. 3. Recognize historic roots of Global inequality. 4. Develop intercultural competence and demonstrate empathy for difference. Credits: 3.00

GSLA 48001 - Senior Interdisciplinary Capstone Project In Global Studies II

Credit Hours: 3.00. The senior capstone is a year-long course for which Global Studies majors enroll in consecutive semesters. Its primary goal is for students to define and complete a research project of personal, academic, and/or professional interest, as they integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001 in order to complete the Global Studies major.

Learning Outcomes: 1. Varies per student project/ capstone. Credits: 3.00

B. Tracks (12 credits)

C. International Experience: Study Abroad or International Internship (3 credits)

Electives (20-57 credits)

GPA Requirements

GSLA 48000 - Senior Interdisciplinary Capstone Project In Global Studies I

Credit Hours: 3.00. The senior capstone course for Global Studies majors is designed to give students the chance to define and complete a research project of personal interest, and to integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001. The capstone courses are offered to students in their senior year to be completed the final two semesters of their major. Students will assemble a committee of two or more faculty members willing to direct their work. The Director of Global Studies will be an ex-officio member of the committee. Students will incorporate their prior coursework (including foreign language training), study abroad, and/or internships into their final project. The capstone may be, but is not limited to, a senior honors project, a multimedia project, service learning, or directed research. Timeline for a successful capstone project: Spring of Sophomore year: After three semesters of coursework, the student will start defining an area of interest or passion that will form the basis of their capstone research. Junior Year: The student will select courses in their interest area. They will also start speaking to faculty members in the field in order to assemble their committee. Spring of Junior Year: Students will finalize their faculty committee to direct their research. Fall of Senior Year: Research Semester, as directed by the committee. GSLA 48000. Spring of Senior Year: Complete project. GSLA 48001.

Learning Outcomes: 1. Demonstrate an awareness of Global issues through academic inquiry and extracurricular engagement. 2. Critically apply multi-perspective research frameworks to a concrete problem or case. 3. Recognize historic roots of Global inequality. 4. Develop intercultural competence and demonstrate empathy for difference. Credits: 3.00

SCLA 49000 - Directed Reading

Credit Hours: 1.00 to 3.00. Designed for a student to work with an instructor on a topic of special interest.

Credits: 1.00 to 3.00

15 Credits

Spring 4th Year

GSLA 48001 - Senior Interdisciplinary Capstone Project In Global Studies II

Credit Hours: 3.00. The senior capstone is a year-long course for which Global Studies majors enroll in consecutive semesters. Its primary goal is for students to define and complete a research project of personal, academic, and/or professional interest, as they integrate the interdisciplinary aspects of their entire curricula into one project. Students must complete GSLA 48000 and GSLA 48001 in order to complete the Global Studies major.

Learning Outcomes: 1. Varies per student project/ capstone. Credits: 3.00

About the Program

Degree Requirements

Departmental/Program Major Courses (40-41 credits)

Biology Core (19 credits)

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular

components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and

execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental

design. Credits: 2.00

BIOL 14503 - First Year Biology Lab: Disease Ecology-Honors

Credit Hours: 2.00. The course will engage students in authentic research and acquiring the necessary skills and concepts to be a successful biology major. Our research topic will be disease ecology in freshwater systems. Disease ecology is a growing field investigating the causes and effects of pathogen transmission and epidemics, primarily in natural populations. We will begin with a series of skill and knowledge-building laboratories, and then transition into student-led research projects that culminate in a presentation of the results in a poster session. Students will learn the fundamentals of disease ecology, basic laboratory techniques, how to perform scientific experiments, and gain experience communicating findings to other scientists and the public.

Learning Outcomes: 1. Perform basic laboratory techniques needed to succeed as a Biology major. 2. Formulate a testable question and hypothesis. 3. Design and conduct a laboratory study to address a research question. 4. Read and critique scientific journal articles. 5. Communicate scientific ideas and results through oral and written formats. Credits: 2.00

BIOL 14505 - First Year Biology Lab: Phages To Folds-Honors

Credit Hours: 2.00. Students will learn how to use bioinformatics to study a gene sequence of their choice from the local SEA-PHAGES program. Students will then use molecular biology and biophysical techniques to characterize their gene product. The goal of each project will be to gain insight into the 3-dimensional fold of each of these mysterious novel phage genes. Students will work in teams but will have their own individual project such that each student will learn the necessary skills to perform scientific experiments starting from the bioinformatics to cloning to purification to structural characterization to communicating their findings to others.

Learning Outcomes: 1. Acquire the fundamental skills and concepts necessary to be successful as a biology major and as a research scientist. 2. Learn how to perform basic laboratory techniques. 3. Learn to work effectively as a team. 4. Design and execute experiments. 5. Evaluate and interpret data critically, read and discuss research articles, and to disseminate their research in written and oral formats. Credits: 2.00

BIOL 14504 - First Year Lab: Diet Disease And Immune System-Honors

Credit Hours: 2.00. We are what we eat! The food we put into our bodies not only gives us the nutrients, vitamins and minerals we need to live, but it can also influence other ways in which our bodies function, right down to how well our immune system works. The immune system plays a critical role in defending our body from infection, but can also contribute to autoimmune disease when the immune response becomes dysregulated. Importantly, autoimmune disease is currently skyrocketing in countries that consume a "Western Diet" (i.e., high salt, high sugar, low fiber), suggesting that these dietary components, or lack thereof, may contribute to dysregulation of the immune response. CD4+ T cells, a kind of immune cell, play an important role in the immune system as they control the balance between protective immunity and autoimmune disease. Recent evidence indicates a strong correlation between "Western Diet" and dysfunction of this important immune cell type. Therefore, our goal is to examine the effects of these dietary components on CD4+ T cell function and how this might contribute to autoimmune disease. Students will work in teams and cover a distinct subset of microbial or dietary components. As such, each student will learn the necessary skills to perform scientific experiments starting from the literature search, experimental design, carrying out controlled experiments, interpreting results and conveying the results to the greater scientific community.

Learning Outcomes: 1. Learn how to work in a real laboratory setting and acquire useful laboratory skills while learning how to develop a hypothesis, design experiments to test these hypotheses. 2. Learn how to present their findings to their peers and others in a written and oral format. 3. Develop skills to be able to read scientific literature in their topic area and discuss these findings with their peers. Credits: 2.00

Upper-Level Biology Coursework (21-22 credits)

Intermediate Biology Selective (3 credits)

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

Human Anatomy & Physiology (8 credits)

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with

professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

Health & Disease Selective (3 credits)

BIOL 41600 - Viruses And Viral Disease

Credit Hours: 3.00. The objective of this course is to provide students with an introductory understanding of viruses and their impact on human health. The course will be divided into two sections. During the first section, we will discuss the cellular and organismal events that occur following virus infection, including viral entry, replication, modulation of cell biology by viral proteins, the host immune response to infection, evasion of the immune response by viruses, and resulting virus-induced disease. The emphasis of this first section will be on the general strategies used by viruses to establish and maintain infection in a population. In the second section, we will discuss in relative detail our current understanding of select important human viruses including influenza, HIV, smallpox, the herpesviruses,

and tumor-causing viruses. The objective of this section will be to understand how the unique aspects of each virus's biology affect the outcome of infection with these pathogens. In addition to virus-associated diseases, we will discuss potential ways that viruses may provide symbiotic benefits to their hosts and thereby shape the course of human evolution. Throughout the course, we will emphasize societal and political aspects of virology and virus-derived technologies, including vaccine development, the use of viruses as gene therapy vectors, and the threat of viral bioterror of bio-error.

Credits: 3.00

BIOL 53700 - Immunobiology

Credit Hours: 3.00. Readings and discussion in the structural, cellular, and genetic basis of the immune response. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

Biology Selectives (for HLDS) (5-6 credits)

Lecture Course Options (2-6 credits)

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

BIOL 32800 - Principles Of Physiology

Credit Hours: 4.00. This course is designed to provide students with an introduction to physiology with an emphasis on cellular mechanisms that underlie anatomical and physiological adaptations used by animals to survive in their habitat. Topics covered will range from cellular respiration to the physical limits of animal performance as we deconstruct and then reconstruct the body to examine how animals can live in extreme environments. Goals for this course are for students to gain a foundation in basic physiological principles, to learn about the integrative nature of the systems of animals, and to appreciate how and why animals have evolved and strategies to help them survive in their unique environment.

Learning Outcomes: 1. Learn the integrative nature of the functioning of different cells, tissues, organs, and organ systems in maintaining adequate conditions for the proper functioning of vertebrate animals. 2. Learn the detailed mechanisms underlying the function of selected physiological systems from the level of the macromolecules to the system as a whole (ex. Cardiovascular system). 3. Appreciate the conserved nature of the fundamental functioning of cells and systems across many different animals from invertebrates to vertebrates. 4. Gain practical experience with some selected systems in the laboratory. 5. Learn how to design and execute independent experiments and take the results from those experiments and analyze and orally present them to the class. 6. Learn how to work as part of a collaborative team. Credits: 4.00

BIOL 36700 - Principles Of Development

Credit Hours: 2.00. This course deals with the process by which genes in a fertilized egg control cell behavior in the embryo and so determine the nature of the animal or plant. The emphasis is on early development and the laying down of body plan and organ systems in various model systems (Drosophila, nematode, Arabidopsis, zebrafish, mouse, chick, and frog).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting

and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students who complete the CMD DS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 7. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. Credits: 2.00

BIOL 41500 - Introduction To Molecular Biology

Credit Hours: 3.00. An introduction to modern molecular biology techniques and how they are used to address current topics in gene regulation. Emphasis will be placed on experimental procedures and model systems, such as site-directed mutagenesis of isolated genes and their subsequent introduction into prokaryotic and eukaryotic cells. Topics will address the molecular control mechanisms associated with DNA replication, RNA transcription, RNA processing, and differential gene expression.

Credits: 3.00

BIOL 41600 - Viruses And Viral Disease

Credit Hours: 3.00. The objective of this course is to provide students with an introductory understanding of viruses and their impact on human health. The course will be divided into two sections. During the first section, we will discuss the cellular and organismal events that occur following virus infection, including viral entry, replication, modulation of cell biology by viral proteins, the host immune response to infection, evasion of the immune response by viruses, and resulting virus-induced disease. The emphasis of this first section will be on the general strategies used by viruses to establish and maintain infection in a population. In the second section, we will discuss in relative detail our current understanding of select important human viruses including influenza, HIV, smallpox, the herpesviruses, and tumor-causing viruses. The objective of this section will be to understand how the unique aspects of each virus's biology affect the outcome of infection with these pathogens. In addition to virus-associated diseases, we will discuss potential ways that viruses may provide symbiotic benefits to their hosts and thereby shape the course of human evolution. Throughout the course, we will emphasize societal and political aspects of virology and virus-derived technologies, including vaccine development, the use of viruses as gene therapy vectors, and the threat of viral bioterror of bio-error.

Credits: 3.00

BIOL 42000 - Eukaryotic Cell Biology

Credit Hours: 3.00. Composition, structure, regulation, and growth of eukaryotic cells.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collections and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Macromolecules: Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Scope: graduates will understand the chemical and physical principles that govern biochemical and physiological process. 10. Scope: graduates will

understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 43600 - Neurobiology

Credit Hours: 3.00. This course will cover key aspects in molecular, cellular, and developmental neurobiology. Topics include: Cell biology of neurons and glia, electrophysiological properties of neurons, electrical and chemical signaling between neurons, synaptic integration and plasticity, development and regeneration of the nervous system, nervous system diseases. Up-to-date research findings and techniques will be included. A basic knowledge of cell biology and protein structure and function is strongly recommended.

Learning Outcomes: 1. Understand the organization and function of the major cell types of the nervous system. 2. Understand the underlying mechanisms of membrane, local graded and action potentials. 3. Differentiate between electrical and chemical signaling. 4. Explain the steps of nervous system development. 5. Identify major parts of the nervous system and their function. 6. Understand the underlying causes of major nervous system diseases. Credits: 3.00

BIOL 44400 - Human Medical Genetics

Credit Hours: 3.00. An intermediate-level survey course of human genetics with a balanced review of both Mendelian and molecular aspects. Review of current development and application of DNA technology emphasized.

Learning Outcomes: 1. Describe the basic principles of human genetics in the context of human diseases. 2. Acquire the capability to comprehend and learn new discoveries in human medical genetics. 3. Develop a foundation to analyze social and ethical consequences of the advancement in human medical genetics. 4. Acquire the basic knowledge in human medical genetics to succeed in professional or graduate degrees in the medical fields. Credits: 3.00

BIOL 44600 - Molecular Bacterial Pathogenesis

Credit Hours: 3.00. This course will focus on the interface of classical cell biology and microbiology, with emphasis on the exploitation of mammalian host cell by medically relevant pathogens, such as Yersinia, Salmonella, and Listeria. This course will cover the molecular mechanisms of infectious diseases. It will introduce modern cellular microbial strategies for studying the complex interaction between pathogens and their host cells. Topics and readings will be prepared from the most current literature.

Credits: 3.00

BIOL 47800 - Introduction To Bioinformatics

Credit Hours: 3.00. (CS 47800) Bioinformatics is broadly defined as the study of molecular biological information, targeting particularly the enormous volume of DNA sequence and functional complexity embedded in entire genomes. Topics will include understanding the evolutionary organization of genes (genomics), the structure and function of gene products (proteomics), and the dynamics of gene expression in biological processes (transcriptomics). Inherently, bioinformatics is interdisciplinary, melding various applications of computational science with biology. This jointly taught course introduces analytical methods from biology, statistics and computer science that are necessary for bioinformatics investigations. The course is intended for junior and senior undergraduates from various science backgrounds. Our objective is to develop the skills of both tool users and tool designers in this important new field of research.

Learning Outcomes: 1. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and

analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. 5. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 6. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 7. Demonstrate an understanding of laboratory skills used in genetics. 8. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 9. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. Credits: 3.00

BIOL 48100 - Eukaryotic Genetics

Credit Hours: 3.00. This course presents the fundamental concepts of classical and modern molecular genetics in eukaryotic systems, using examples from the model genetic organisms, yeast, Drosophila, Caenorhabditis, Arabidopsis, maize, mice and humans. These concepts are applied to solving problems of genetic analysis. Recent advances in developmental, cancer, and behavioral genetics and genomics, and applications of genetic technology, are used to demonstrate the impact that modern genetics makes at the cutting edge of biological research.

Credits: 3.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

BIOL 51600 - Molecular Biology Of Cancer

Credit Hours: 3.00. A detailed course examining the molecular mechanisms controlling the growth of animal cells. Emphasis will be placed on current experimental approaches to defining the molecular basis of growth regulation in developing systems and the uncontrolled proliferation of cells in metabolic disorders, such as cancer.

Credits: 3.00

BIOL 51700 - Molecular Biology: Proteins

Credit Hours: 2.00. Principles of protein three-dimensional architecture. The molecular and structural basis of protein folding, function, and evolution.

Credits: 2.00

BIOL 52900 - Bacterial Physiology

Credit Hours: 3.00. A detailed consideration of the central metabolic routes, their role in generation of energy and key intermediates, and the conversion of those intermediates to small molecule building blocks. Regulatory mechanisms will be stressed.

Credits: 3.00

BIOL 53300 - Medical Microbiology

Credit Hours: 3.00. Host-parasite relationships. Immunology. Bacteria and viruses associated with infectious diseases.

Credits: 3.00

BIOL 53700 - Immunobiology

Credit Hours: 3.00. Readings and discussion in the structural, cellular, and genetic basis of the immune response. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

BIOL 53800 - Molecular, Cellular, And Developmental Neurobiology

Credit Hours: 3.00. Molecular mechanisms of neural cell biology and development are considered. Topics and readings are drawn from the current primary literature. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

BIOL 54100 - Molecular Genetics Of Bacteria

Credit Hours: 3.00. Advanced bacterial genetics, with emphasis

on the use of genetics as a powerful and creative intellectual activity that enables us to discover biological functions and to construct new organisms by the manipulation of DNA. Major topics include: mutations, genetic selections, recombination, regulatory mechanisms, and genomic evolution.

Credits: 3.00

BIOL 54900 - Microbial Ecology

Credit Hours: 2.00. A study of microbial interactions with other organisms and the environment. Aquatic and terrestrial ecosystems as well as interactions between nonpathogenic microbes and plants and animals will be discussed. Offered in alternate years.

Credits: 2.00

BIOL 56200 - Neural Systems

Credit Hours: 3.00. (SLHS 50700, PSY 51200) Overview of the structure and function of neural systems including those involved with motor, somatosensory, visual, auditory, learning, memory, and higher cortical processes. Molecular and cellular aspects of neural function are integrated with discussion of relevant neuroanatomy. Background in cell biology, psychobiology, physiology or anatomy is recommended.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection, and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. Credits: 3.00

BIOL 58000 - Evolution

Credit Hours: 3.00. A study of evolution as a basic concept of the biological sciences; an examination of current methods of experimentation within the area, as well as evidences for the possible mechanisms of evolutionary change.

Credits: 3.00

BIOL 58705 - Animal Communication

Credit Hours: 3.00. This course will be a broad-scaled analysis of animal communication. Topics will include the physics of sound- and light-signal production, propagation and reception of signals, the use of communication as a means of information transfer, and the evolution of signaling systems. Mathematical principles are covered (e.g. in the evolution of signals), so some background in mathematics (e.g. calculus or algebra and introductory physics) is helpful.

Learning Outcomes: 1. Understand ways in which organisms interact ecologically with each other and their environment. 2. Understand how evolutionary forces influence organisms to produce adaptations. 3. Acquire knowledge of the ways in which animals communicate with each other. 4. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 5. Familiar with taxonomic and phylogenetic relationships among organisms. 6. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 7. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 8. Demonstrate an in dept knowledge of nervous system function at the systems, cellular and molecular level. Credits: 3.00

BIOL 59100 - Field Ecology

Credit Hours: 0.00 to 4.00. A field course in ecology that stresses natural history and testing ecological theory under natural conditions. Group and individual projects include observational and experimental approaches. Emphasis is on the study of plant and animal species interactions in terrestrial (including montane and coastal) and aquatic habitats. Issues in community, population, behavioral, and conservation biology are addressed. Several all-day Saturday and two weekend field

trips. Offered in alternate years. Permission of instructor required.

Credits: 0.00 to 4.00

BIOL 59200 - The Evolution Of Behavior

Credit Hours: 3.00. An investigation of behaviors as adaptations: specializations of sensory and motor mechanisms involved in behavior; animal communication systems; behavioral ecology; patterns of social behavior as solutions to ecological problems, such as predator avoidance and resource exploitation. Emphasis will be on theoretical principles; examples will be broadly comparative, ranging from microorganisms to mammals. Offered in alternate years.

Credits: 3.00

BIOL 56310 - Protein Bioinformatics

Credit Hours: 3.00. Accumulation of biological data, such as genome sequences, protein structures and sequences, metabolic pathways, opened up a new way of research in biology-bioinformatics. Through the survey of the various active research topics in bioinformatics, in this course we will learn bioinformatics databases, tools, and algorithms behind these tools. Special emphasis is placed on protein sequence and structure analyses. Covered topics will include methods for protein sequence comparison, protein structure comparison, protein structure prediction/modeling, protein docking prediction, protein function prediction, and protein network analysis.

Learning Outcomes: 1. Utilize biological database searches including protein and nucleotide sequences, motifs, and structures, and interpret results in statistically correct fashion. 2. Develop bioinformatics analysis pipeline that apply a series of appropriate bioinformatics tools with proper setting for predicting protein function and structures and interpret results correctly by knowing algorithms, strengths, and limitations of the tools used. 3. Construct the tertiary structure models of protein and protein complexes with appropriate software and predict the accuracy of the models built. 4. Apply functional analysis of gene networks and compute the statistical significance of results. 5. Discuss appropriateness of bioinformatics analyses in biology literature and propose alternative approaches that may work better than ones used in the literature. Credits: 3.00

BIOL 58210 - Ecological Statistics

Credit Hours: 3.00. This course covers topics that are useful for successfully designing and analyzing statistically observational and experimental studies in ecology, animal behavior, evolutionary biology, forestry, wildlife sciences, fisheries, etc. Some topics are: differences between hypotheses and predictions, design of an ecological study, general linear models, assumptions, different types of designs (factorial, nested, repeated measures, blocks, split-plots, etc.), fitting models to data, etc. The course will focus on the conceptual understanding of these topics (e.g., interpreting the results of statistical tests) and practice with statistical programs and real datasets.

Learning Outcomes: 1. Pose scientific questions, hypotheses, and predictions. 2. Plan and design ecological research projects. 3. Determine sample size requirements. 4. Use and interpret descriptive statistics. 5. Use general linear models and interpret their results. 6. Check for the assumptions of general linear models. 7. Manage data. 8. Understand the potential and limitations of statistics in ecological research. Credits: 3.00

BIOL 53601 - Biological And Structural Aspects Of Drug Design And Action

Credit Hours: 3.00. (BCHM 53600) This course is aimed at expanding students' fundamental interests in biology, chemistry and biochemistry to how drugs work. The course will provide an overview of the modern day drug discovery pipeline and an in-depth look at the basic biology, structure, and mechanisms-of-action behind marketed therapeutics. The course will start with a historical account of the discovery of natural product drugs such as aspirin and penicillin and will then venture into the modern day era of drug discovery including structure-based drug design. We will explore different classes of antibiotics, antiviral, and anti-cancer drugs and their targets including small molecule drugs and modern biologics-based drugs.

Learning Outcomes: 1. Understand and communicate the site and mechanism-of-action of a drug. 2. Understand and communicate the relationship between the pharmacologic mechanism and the therapeutic use of a drug. 3. Understand and communicate the scientific basis for the therapeutic use of a drug. 4. Predict, verbally or in writing, the biological

response, if any, from a given chemical structure. 5. Understand and communicate the relationship between the structural features of a compound and the physicochemical properties that might influence biological response or the design of new agents. 6. Predict, verbally or in writing, the biochemical mechanism-of-action of a biologically active substrate or compound from its chemical structure. 7. Communicate and describe the relationship between the chemical structure of a biologically active compound and the receptor or active binding site, using enzyme or receptor models. 8. Predict, verbally or in writing, the biological response resulting from the chemical alteration or biochemical pathways. 9. Discuss the relationship between in vitro reaction mechanisms and the structural features that alter the in vivo biotransformation of a drug. 10. Understand and communicate the pathophysiologic processes associated with a particular disease state, and how they might be affected by drug therapy. Credits: 3.00

BCHM 43400 - Medical Topics In Biochemistry

Credit Hours: 3.00. This course applies the principles of biochemistry and metabolic regulation to understand the diagnosis and treatment of human disease. The course emphasizes the biochemistry relevant to diabetes, blood disorders and the medical consequences of liver disease and aging. Roughly half of the class time is focused on small group activities including team-based learning and problem-based learning using patient cases. Students will search authoritative sources to discover links between biochemistry and clinical symptoms and communicate that information to their peers.

Learning Outcomes: 1. Understand mechanisms that regulate metabolic pathways within individual cells, tissues and organ systems in healthy and disease patients. 2. Predict biochemical and clinical effects given specific defects in a pathway. 3. Appreciate ethical issues facing life science professionals who perform research involving humans or human tissues. 4. Communicate scientific knowledge effectively to non-scientists. Credits: 3.00

BCHM 52100 - Comparative Genomics

Credit Hours: 3.00. The course provides an understanding of the forces that act on genome content and organization, and the ability to interpret genetic variation between genomes. Students will acquire skills to utilize public genome databases, visualize genomic regions/features of interest using a genome browser, and perform phylogenetic analysis. The knowledge gained is central within the fields of genetics, bioinformatics, microbiology, and evolutionary biology and have important applications in numerous related fields including medicine, biotechnology, agriculture, and ecology.

Learning Outcomes: 1. Understand the composition, organization and structure of genomes. 2. Understand processes that cause these genome features to change over time. 3. Interpret gene and genome information in common display formats. 4. Evaluate common methods used to interpret genetic variation between genomes. 5. Perform, present and discuss a research project in comparative genomics. Credits: 3.00

BIOL 32101 - Experimental Design And Quantitative Analysis Honors

Credit Hours: 3.00. This course is aimed at preparing students in experimental design and quantitative analysis specifically as applied to Life Sciences in order to read the scientific literature critically, generate scientific questions, hypotheses and predictions, design research studies, analyze the data statistically, and communicate results. The course will use R and RStudio, which are open-source platforms that are increasingly used in the scientific community to analyze data quantitatively.

Learning Outcomes: 1. Understand the logic behind the scientific method in Life Sciences. 2. Be able to pose research questions, hypotheses, and predictions. 3. Understand the benefits and limitations of statistical testing. 4. Design a research study following experimental design principles. 5. Understand and critically assess data collection. 6. Interpret and visualize the results of statistical tests. 7. Communicate and present quantitative results effectively (i.e.,

writing the Results section of a scientific paper). 8. Run statistical analyses and generate publication quality figures in R. Credits: 3.00

BIOL 38700 - Macromolecules

Credit Hours: 2.00. The goal is to expose students to the world of macromolecules, their physicochemical properties, the influence of these properties on function and structure, and how these properties are determined and exploited. Permission of department required.

Learning Outcomes: 1. Describe the types of macromolecules. 2. Describe the biophysical and biochemical properties of macromolecules. 3. Describe how biophysical and biochemical properties are determined. 4. Describe how these physicochemical properties are exploited in various biotechniques. Credits: 2.00

BIOL 51099 - Neural Mechanisms In Health And Disease

Credit Hours: 3.00. An examination of the mechanisms by which nervous systems process information in normal and pathologic states. Cellular and systems-level information processing will be studied with a focus on sensory and motor systems. Students will gain some hands-on experience in the analysis of neural data. Some neuroanatomy will be included to understand how nervous systems are organized. Pathological states such as Alzheimer's, autism, and aging will be studied, both in terms of understanding the systems and cellular deficits as well as examining potential solutions to improve the outcomes for these neural disorders.

Learning Outcomes: 1. Describe the organization of the mammalian nervous system, cellular neurophysiology, and neural plasticity. 2. Apply neural information processing principles to determine how external and internal variables drive neural activity and behavior. 3. Design experiments by selecting appropriate techniques and measurements in order to address an experimental question or hypothesis. 4. Analyze and interpret neural data, mainly neurophysiological data, to answer questions about neural coding and with respect to an experimental hypothesis. 5. Develop preliminary therapeutic solutions to neural disorders based on understanding neural mechanisms and devices used to measure or treat these disorders. Credits: 3.00

BIOL 52905 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management.

Learning Outcomes: 1. Evaluate the roles played by the diversity of parasites and pathogens found in complex natural systems. 2. Apply the foundational principles of disease ecology - the importance of hosts, pathogens and the environment in disease dynamics - to understand disease dynamics in natural systems. 3. Evaluate the strengths and weaknesses of different modeling approaches in disease ecology. 4. Understand how disease models are used in management and conservation. 5. Apply both ecological and evolutionary theory to examine the impact of infectious disease on host populations, communities and ecosystems. 6. Demonstrate an understanding of patterns in pathogen diversity and abundance across landscape to regional scales. 7. Articulate understanding of disease ecology through written and oral communication. 8. Demonstrate an understanding of the scientific literature and an ability to critically evaluate this research for an interdisciplinary topic. Credits: 3.00

BIOL 55101 - Theory Of Molecular Methods

Credit Hours: 3.00. This course will introduce upper-level undergraduate students and graduate students to the theory and practice of many commonly used molecular biology methods. Emphasis will be placed on understanding the theoretical basis for these techniques, their utility in various circumstances, and their limitations. Although taught as a lecture, students should be able to take this knowledge back to

the laboratory to help them in their research efforts. The course will be as close as possible to a laboratory experience without being in an actual laboratory setting. This course is designed to prepare students for other in-depth scientific courses, for graduate rotations, and for future laboratory work. Exams will be experimental in nature (e.g., design an experiment to do something or in this type of situation, which technique/vector/etc. would best be used, and why). Permission of instructor required.

Learning Outcomes: 1. Have knowledge about the uses and limitations of various molecular biology techniques. 2. Understand the techniques and how to choose the best technique for a given circumstance. 3. Understand how to interpret the experimental results emanating from each technique. Credits: 3.00

BIOL 58601 - Ecology

Credit Hours: 3.00. This is an advanced ecology course that examines the ecological process and dynamics of populations, communities, and ecosystems. Topics include the physical, physiological, behavioral, and population genetic factors that influence how organisms interact with one another and their environment, the nature of population growth, and attributes of community structure. Course material integrates case studies from field and laboratory experiments, simulations, and theoretical models to understand life histories, species interactions, and community and ecosystem processes.

Learning Outcomes: 1. Apply ecological principles to interpret patterns of abundance and distribution of organisms in natural systems. 2. Use conceptual and mathematical models to predict the dynamics of populations and communities. 3. Critically evaluate the experimental design and data interpretation of ecological studies in the published literature. 4. Communicate scientific ideas and results through discussions and written assignments. Credits: 3.00

BIOL 51202 - Methods And Measures In Biophysical Chemistry

Credit Hours: 3.00. Biological applications of physical methods including absorption spectroscopy (UV-Vis, FTIR and Raman and CD spectroscopy), fluorescence spectroscopy and super high-resolution imaging, spin resonance methods (NMR and ESR spectroscopy), mass and thermodynamic based methods (thermophoresis, analytical ultracentrifugation, ITC and surface plasmon resonance) and diffraction/structural methods using NMR, cryo-EM and X-ray scattering/crystallography. Each topic is treated at an introductory level with examples from the literature. The course objective for students is to obtain a general understanding of the physical principles underlying each of the techniques, as well as the basic ability to apply the technique to biological systems of interest.

Learning Outcomes: 1. Understand basic biophysical principles and the biophysical approach to research. 2. Interpret biophysical data from real experimental examples in the literature. 3. Develop presentation skills. 4. Practice Team Cooperation. 5. Demonstrate an understanding of biophysical methods and how these are used in modern biological experiments. Credits: 3.00

BIOL 51606 - Pathways In Human Health And Disease

Credit Hours: 3.00. This course is intended for both upper-level undergraduate and graduate students. It will cover major intracellular signaling pathways in eukaryotes and their roles in human disease, with an emphasis on cancer but also touching on other major modern diseases such as COVID-19. We will explore avenues being pursued to target signaling mechanisms for therapeutic benefit. Topics include G protein-coupled receptors, receptor tyrosine kinases, nuclear hormone receptors, protein kinases and phosphatases, mTOR, the Wnt/β-catenin pathway, cell cycle control, DNA damage checkpoint control, regulated proteolysis, and programmed cell death. The course will be taught from current primary literature using a textbook as a background resource. Students will learn how to read and interpret scientific data through regular lectures, extramural seminars, in-class presentations, and take-home assignments.

Learning Outcomes: 1. Identify common molecular mechanisms in major signal transduction pathways. 2. Understand methods commonly used to analyze signal transduction processes. 3. Appreciate how protein domains within signaling proteins impart selectivity by building up signaling pathways via protein protein-interactions. 4. Evaluate and critique data in the scientific literature or in lectures in the signal transduction/cell cycle fields. 5. Exhibit improved oral and written communication skills in the area of signal

transduction research. Credits: 3.00

BIOL 51101 - Intro To X-Ray Crystallography

Credit Hours: 3.00. This course will provide an introduction to structure determination of macromolecules using X-ray crystallography and will attempt to balance theory and practice, consisting of ~60% lectures and ~40% lab modules. The course is divided into five 3-week modules covering (i) Crystallization, (ii) Data Collection, (iii) Molecular Replacement, (iv) Experimental Phasing, and (v) Model Building and Refinement, Validation, and Visualization. The goal of the course is to equip students with the necessary tools to develop and execute an X-ray crystallography project, starting from construct design to publication. By the end of the course, students should be familiar with the (i) structure determination pipeline, (ii) theory behind X-ray diffraction methods, (iii) methods for crystallization, (iv) phasing options for solving a crystal structure, and (v) contemporary crystallography software.

Learning Outcomes: 1. Learn the theory behind X-ray crystallography. 2. Learn how to use contemporary software that is used to solve structures and what that software are doing. 3. Gain hands-on experience in crystallization and handling crystals for data collection. 4. Gain hands-on experience collection data remotely from a synchrotron source and at a home source X-ray instrument. 5. Learn how to determine a structure using either molecular replacement and/or experimental phasing; and will learn how to prepare their results for a publication and deposition. Credits: 3.00

BIOL 41919 - Data Science For Biologists

Credit Hours: 3.00. All of us are drawn to real-world biological questions. Nevertheless, we might underestimate the hidden demand for computing skills to conduct the actual research. By nature, biological data is versatile, vast, complex, and noisy. Therefore, customized scripts are often needed for data processing, analyses, and visualization. Tools for data management and version control function as virtual lab books to ensure that the studies are 100% reproducible. This course is designed to equip students with practical programming skills via an array of biological case studies. Through hands-on computer labs, students will learn how to translate a biological question into logical thinking and write good code in R, perform scientific computing and visualization in R, and manage projects in an organized fashion. Permission from the department is required.

Learning Outcomes: 1. Understand basic computer programming knowledge and skills. 2. Manage and analyze common types of biological data. 3. Conduct reproducible research. 4. Perform data visualization in R, and design and test a hypothesis with a data-driven approach using provided datasets. Credits: 3.00

BIOL 57340 - Neurobiology Of Learning And Memory

Credit Hours: 3.00. How does our brain learn? How are our memories created? We will discuss a range of learning processes from cellular and molecular mechanisms to perception and behavior. We will look at the history of the key concepts and discoveries, including the technological advances, such as optogenetics. Most of the research discussed will be from animal studies.

Learning Outcomes: 1. Describe the cellular, molecular, and circuit-level mechanisms underlying learning and memory. 2. Evaluate critically primary literature on learning and memory, with a focus on findings from animal models. 3. Demonstrate an understanding of how tools like patch clamp, optogenetics have advanced the study of neural processes related to learning and memory. 4. Relate neural mechanisms to behavioral outcomes, including how learning influences perception and decision-making. 5. Outline the historical progression of major discoveries in the neurobiology of learning and memory. 6. Apply course concepts to different topics in neuroscience, such as the development of therapies for memory-related disorders. Credits: 3.00

BIOL 58215 - Building The Tree Of Life: Phylogenetic Methods And Applications

Credit Hours: 3.00. The Tree of Life represents Earth's biodiversity and its history and forms the basis of all biological knowledge. Phylogenetic methods allow us to reconstruct the Tree of Life and infer the evolutionary history and relationships of genes and organisms. This knowledge, in turn, can be used to address questions of organismal classification, biogeography, community assembly, and macroevolution. This jointly taught course introduces tree thinking and its underlying algorithms of inferring phylogenies, with an emphasis on the various applications of phylogenetic methods to such topics as those

listed above. Through a combination of lectures, computer labs, and discussion of primary literature, the course will provide hands-on experience with commonly used tools and their applications in research for senior undergraduate and graduate students from relevant science backgrounds. Permission from department is required.

Learning Outcomes: 1. Build and visualize phylogenetic trees with commonly used scientific software. 2. Conduct scientific analyses using phylogenetic methods in R, ask testable scientific questions. 3. Perform data mining of phylogenetic resources and utilize the phylogenetic tools to address scientific questions. Credits: 3.00

Undergraduate Research (2-3 credits if selected)

BIOL 49400 - Biology Research

Credit Hours: 1.00 to 4.00. Supervised individual research performed by juniors and seniors. Project must be approved by the Honors Committee, Department of Biological Sciences. Honors Research Program students should register for BIOL 49900. Permission of department required.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. Credits: 1.00 to 4.00

BIOL 49900 - Biology Honors Thesis Research

Credit Hours: 1.00 to 4.00. Research under the guidance of a scientist. Submission of honors tutorial petition and consent of faculty tutor and Honors Committee. Permission of department required.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. Credits: 1.00 to 4.00

Laboratory Modules (2-3 credits if selected)

BIOL 44212 - Microscopy And Cell Biology

Credit Hours: 1.00. In this five-week module, students will learn how to prepare specimens for viewing by fluorescence microscopy. Specimens include mammalian tissue culture cells and zebrafish embryos. The emphasis will be on the staining of the cytoskeleton in these preparations, utilizing antibodies and fluorescence probes. The specimens will be viewed by wide-field and confocal laser scanning fluorescence microscopy. Images will be acquired, processed and analyzed by modern computational methods. Students will learn the basics of cell culture, immunocytochemistry, fluorescence microscopy, digital image processing and data analysis. At the end of the course, students prepare a PowerPoint presentation of their images and data.

Learning Outcomes: 1. Students demonstrate proficiency with skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Students

demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. Credits: 1.00

BIOL 54202 - Computer Laboratory: Data Analysis In Neuroscience

Credit Hours: 1.00. This course introduces students to computational techniques for analyzing real-world neuroscience data using Python and Jupyter Notebooks. Focusing on datasets such as neural time series, students will learn how to preprocess, visualize, and statistically analyze complex data. Topics include basic programming, statistical modeling, and practical applications relevant to neuroscience research. Emphasis is placed on developing hands-on skills for interpreting experimental data and solving real-world problems, preparing students for advanced study or careers in data-driven neuroscience.

Learning Outcomes: 1. Apply Python programming to process and analyze real-life neuroscience datasets, including time-series data. 2. Perform statistical modeling and hypothesis testing on neuroscience data to extract meaningful insights. 3. Use computational tools to create effective visualizations and interpret their relevance to neuroscience research. 4. Design and implement reproducible data analysis workflows using Jupyter Notebooks. 5. Combine programming, statistics, and neuroscience concepts to address real-world research questions. Credits: 1.00

Base Lab Requirement (2 credits)

BIOL 43900 - Laboratory In General Microbiology

Credit Hours: 2.00. Includes enrichment cultures to isolate microorganisms, studies of cell composition, measurements of cell growth, and examination of enzyme regulation.

Credits: 2.00

BIOL 500-level Selective (0 credits)

Other Departmental Requirements: (56-80 credits)

Chemistry (17 credits)

General Chemistry (5 credits)

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

Organic Chemistry (8 credits)

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

Biochemistry (4 credits)

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and

eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems.
Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing.
Credits: 1.00

Pre-Professional Selective (3 credits)

PUBH 40000 - Human Diseases And Disorders

Credit Hours: 3.00. The major communicable and noncommunicable diseases and disorders that afflict modern man, with particular emphasis upon the etiology, epidemiology, and ecology of these diseases and disorders.

Learning Outcomes: 1. Describe risk factors and modes of transmission for infectious and chronic diseases and how these diseases affect

both personal and population health. 2. List the leading causes of mortality and morbidity, and health disparities among local, regional, and global populations. 3. Discuss major local, national, and global health challenges. 4. Explain the influence that science and technology have on individual and population health. 5. Describe the multiple determinants of health. Credits: 3.00

PUBH 40500 - Principles Of Epidemiology

Credit Hours: 3.00. The study of the distribution of diseases in human populations and factors that influence these distributions.

Learning Outcomes: 1. Interpret results of statistical analyses found in public health studies. 2. Develop written and oral presentations based on statistical analyses for both public health professionals and educated lay audiences. 3. Identify key sources of data for epidemiological purposes. 4. Identify the principles and limitations of public health screening programs. 5. Describe a public health problem in terms of magnitude, person, place, and time. 6. Explain the importance of epidemiology for informing scientific, ethical, economic, and political discussions of health issues. 7. Comprehend basic, ethical, and legal principles pertaining to the collection, use, and dissemination of epidemiological data. 8. Apply the basic terminology and definitions of epidemiology. 9. Calculate basic epidemiology measures. 10. Communicate epidemiologic information to lay and professional audiences. 11. Draw appropriate inferences from epidemiologic data. 12. Evaluate the strengths and limitations of epidemiologic reports. Credits: 3.00

ANTH 21200 - Culture, Food And Health

Credit Hours: 3.00. This course is designed to provide an introduction to the field of Nutritional Anthropology in which we will examine issues related to diet, health and illness from holistic anthropological perspectives.

Learning Outcomes: 1. Develop an understanding of the theoretical basis of nutritional anthropology. 2. Recognize core methods of nutritional anthropology. 3. Describe evolutionary and cross-cultural approaches to the study of food and nutrition. 4. Analyze the intersection of biology and culture in regard to eating practices. 5. Evaluate information on food and nutrition that is shared in the popular media. Credits: 3.00

ANTH 34000 - Global Perspectives On Health

Credit Hours: 3.00. This course examines health issues and risks faced by individuals around the world, but especially in resource poor geographical areas. We will explore in-depth the gendered, ethnic, cultural, and class dimensions that underlie the patterning of disease and illness worldwide.

Learning Outcomes: 1. Describe what anthropology contributes to the study of health globally and over time. 2. Explain how diverse communities around the world define health and organize health care. 3. Analyze the social and historical influences on health inequities. 4. Apply anthropological theories and methods to contemporary health issues. Credits: 3.00

PHIL 27000 - Biomedical Ethics (UCC: STS)

Credit Hours: 3.00. An examination of the moral problems raised by developments in medicine and the biomedical sciences. Topics include abortion, reproductive technologies, euthanasia and physician-assisted suicide, experiments involving human subjects, and health care delivery.

University Core Curriculum (UCC): (UCC: STS) Credits: 3.00

PHIL 28000 - Ethics And Animals (UCC: HUM)

Credit Hours: 3.00. An exploration through the study of major historical and contemporary philosophical writings of basic moral issues as they apply to our treatment of animals. Rational understanding of the general philosophical problems raised by practices such as experimentation on animals or meat-eating will be emphasized.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

SOC 27500 - Sociology Of Aging And The Life Course (UCC: BSS)

Credit Hours: 3.00. An examination of research on the social context of human aging, including demographic and developmental changes. A life course perspective is emphasized for studying health, life events, and quality of life. Considers exceptional longevity in comparative perspective.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Comprehension of the basic concepts, theories, and methods of the sociology of aging. 2. Think sociologically and write more clearly. 3. Application of course content in personal and vocational experiences. Credits: 3.00

SOC 35200 - Drugs, Culture, And Society (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of the social and cultural underpinnings of drug use across societies. Students engage with various topics, including addiction, global markets, drug epidemics, public policy, and cross-cultural differences in drug use.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 37400 - Medical Sociology (UCC: BSS)

Credit Hours: 3.00. Medical sociology provides an overview of the social determinants of health and health disparities, the experience of illness and being a patient, the organization of the medical profession, and the health care system in the United States as well as other areas of the world.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Articulate the contours of health disparities in the contemporary US. 2. Hold an informed discussion about current debates surrounding the organization of the health care system. 3. Have a greater understanding of the experiences of people suffering from chronic illness. Credits: 3.00

HIST 36305 - The History Of Medicine And Public Health (UCC: HUM/STS)

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Understand how and why public health has evolved over the course of the past two centuries. 2. Identify and analyze how scientific beliefs and social anxieties contribute to policies and practices of medicine and health. 3. Develop critical thinking skill to assess the impact of public health reforms on everyday life. Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

SOC 46100 - Health And Social Behavior

Credit Hours: 3.00. This course provides a sociological examination of health and illness, with a particular focus on social position (e.g., race, socioeconomic status, gender), stress and social support, and health care. Goals for this course include developing critical thinking skills, understanding the broader implications of issues related to health, and thinking creatively about potential societal solutions to these issues.

Learning Outcomes: 1. Understand the ways in which social factors influence health and social behavior as well as the broader implications of these issues. 2. Develop critical thinking skills through critical writing and classroom discourse on issues related to the sociology of health and illness. 3. Apply a sociological perspective to potential solutions to health-related issues. Credits: 3.00

College of Science Additional Requirements

Computing (3-4 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting,

manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (8 credits)

Physics I

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

Physics II

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

Mathematics (6-10 credits)

Calculus I

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional

models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

Calculus II

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

Electives (0-24 credits)

GPA Requirements

Course Requirements & Notes

Sample 4-Year Plan

Fall 1st Year

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of

functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

16-19 Credits

Spring 1st Year

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and

power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

16-20 Credits

Fall 2nd Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting

and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

15-16 Credits

Spring 2nd Year

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and

function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms.

Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing

biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and

organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

14 Credits

Fall 3rd Year

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors

in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion

in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

13-14 Credits

Spring 3rd Year

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

14-15 Credits

Fall 4th Year

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 43900 - Laboratory In General Microbiology

Credit Hours: 2.00. Includes enrichment cultures to isolate microorganisms, studies of cell composition, measurements of cell growth, and examination of enzyme regulation.

Credits: 2.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation,

goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

14 Credits

Spring 4th Year

BIOL 41600 - Viruses And Viral Disease

Credit Hours: 3.00. The objective of this course is to provide students with an introductory understanding of viruses and their impact on human health. The course will be divided into two sections. During the first section, we will discuss the cellular and organismal events that occur following virus infection, including viral entry, replication, modulation of cell biology by viral proteins, the host immune response to infection, evasion of the immune response by viruses, and resulting virus-induced disease. The emphasis of this first section will be on the general strategies used by viruses to establish and maintain infection in a population. In the second section, we will discuss in relative detail our current understanding of select important human viruses including influenza, HIV, smallpox, the herpesviruses, and tumor-causing viruses. The objective of this section will be to understand how the unique aspects of each virus's biology affect the outcome of infection with these pathogens. In addition to virus-associated diseases, we will discuss potential ways that viruses may provide symbiotic benefits to their hosts and thereby shape the course of human evolution. Throughout the course, we will emphasize societal and political aspects of virology and virus-derived technologies, including vaccine development, the use of viruses as gene therapy vectors, and the threat of viral bioterror of bio-error.

Credits: 3.00

BIOL 53700 - Immunobiology

Credit Hours: 3.00. Readings and discussion in the structural, cellular, and genetic basis of the immune response. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

12-14 Credits

History Honors, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

Area A - U.S. History (3 credits)

Area B - European History (3 credits)

Area C - Latin American, Asian, Middle Eastern, or African History (3 credits)

Area D - Period prior to 1800 (3 credits)

Area E - Thematic History (3 credits)

Area F - Advanced History (6 credits)

Additional Course (3 credits)

Junior Research Seminar (3 credits)

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming

historical arguments. It is a writing-intensive course and counts as one of the major requirements.

Learning Outcomes: 1. History majors will learn historical skills such as primary source research and analysis and how to form historical arguments. 2. Acquire analytical skills sufficient to distinguish between primary and secondary sources, to analyze arguments and interpretations, and to recognize interpretive conflicts. 3. Engage in integrative learning. 4. Develop the ability to recognize, analyze and incorporate primary source material into scholarly investigations and analyses. 5. Improve their information literacy and enhance their creative thinking. 6. Strengthen skills in critical thinking and oral communication. 7. Improve their writing skills. Credits: 3.00

Honors Thesis (6 credits)

HIST 42100 - Honors Historical Methods

Credit Hours: 3.00. Designed as a prequel to Honors Thesis; this course introduces the Honors students to various advanced interpretative approaches to history and methods of historical research. Students also choose their topic for their Honors Thesis and begin research.

Credits: 3.00

HIST 42200 - Honors Thesis In Historical Research

Credit Hours: 3.00. Designed as a sequel to HIST 42100 (Honors Historical Methods); this course is intended as the culminating academic experience for students in the Department of History Honors Program. It will require the completion of an undergraduate thesis in history. Permission of instructor required.

Credits: 3.00

Area A - U.S. History (3 credits)

Electives (14-51 credits)

About the Program

History of Science, Technology, and Medicine, BA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (33 credits)

Area A - History of Science, Technology, and Medicine (12 credits)

HIST 38400 - History Of Aviation (UCC: HUM/STS)

Credit Hours: 3.00. A comparative history of human flight and air power (in Europe, the Americas, and Asia) from its origin in the early inventors and pilots, through its reflection in the popular media, to the global development of civil and military aviation.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 38700 - History Of The Space Age (UCC: HUM/STS)

Credit Hours: 3.00. The historical interaction between human values and space exploration in the contemporary age, focusing on issues of global interdependence. Topics include the international competition in rocketry, the Cold War in space, the moon missions, space disasters, and satellite technology.

University Core Curriculum (UCC): (UCC: HUM/STS) Credits: 3.00

HIST 39400 - Environmental History Of The United States (UCC: HUM)

Credit Hours: 3.00. This is a mid-level survey designed to provide students of environmental science with historical background and students of history with the unique perspective of environmental history.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 36305 - The History Of Medicine And Public Health (UCC: HUM/STS)

Credit Hours: 3.00. The purpose of this course is to provide students with a historical understanding of the role public health and medicine has played in American history during the 19th and 20th centuries. How does the health status of Americans reflect and shape the U.S.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Understand how and why public health has evolved over the course of the past two centuries. 2. Identify and analyze how scientific beliefs and social anxieties contribute to policies and practices of medicine and health. 3. Develop critical thinking skill to assess the impact of public health reforms on everyday life. Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

HIST 31405 - Science, Technology, Engineering And Mathematics (STEM) And Gender (UCC: HUM/STS)

Credit Hours: 3.00. Scientific and technological innovation has been a cornerstone of American identity. How science and technology matters to gender, and gender matters to science and technology, will be explored through studying amateur and professional scientists and engineers, industrialization, education, sexual division of labor, and home and work spaces in twentieth-century America. Examining technological, scientific, and engineering innovation through the lens of gender

reveals changing relationships between men and women in modern America.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to gender. 2. Understand and recognize how assumptions about gender may influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses.

Learning Outcomes: 1. Gain knowledge of some of the major debates in the history of insanity. 2. Be able to identify a research question, conduct primary source research, and form a thesis. 3. Use a variety of databases to assemble a range of primary sources. 4. Learn to interrogate and compare primary sources for viewpoint and implicit value system. 5. Gain knowledge of some of the major theoretical approaches and frameworks used for studying the history of insanity. 6. Be able to discuss ideas and research in formal writing and in seminar discussion. Credits: 3.00

HIST 35205 - Death, Disease And Medicine In Twentieth Century American History (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of disease, dying, and medicine in the United States in the 20th century.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Identify and explain the relationship between science and culture and interdisciplinarity. 2. Analyze texts and cultural artifacts about medicine. 3. Identify medical practice and how it is informed by context and culture. Credits: 3.00

HIST 30605 - Technology And War In U.S. History (UCC: HUM/STS)

Credit Hours: 3.00. War has been a central component of U.S. statecraft from the war of independence through the war on terror. This lecture class examines the complicated relationship between technology and war from the colonial period through the present day.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Gain understanding about the importance of technologies to the development of techniques of war in the context of U.S. history. 2. Contemplate the role of technology in shaping society and of society in shaping technology. 3. Consider ethical questions about the use and effects of technologies in war. 4. Sharpen critical analytical, reading, and writing skills. 5. Sharpen their ability to use primary and secondary source materials as evidence in persuasive written argument. 6. Improve ability to work as a team. 7. Practice public speaking skills. Credits: 3.00

HIST 33205 - The Nuclear Age (UCC: HUM/STS)

Credit Hours: 3.00. Once seen as a revolutionary and exceptional, nuclear technologies have become central to many aspects of life in the U.S. This course uses the history of nuclear technologies to trace how American society has grappled with technological change.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Write a persuasive essay evaluating nuclear energy as a source of power, using primary and secondary historical sources to support your claims. 2. Create a compelling argument about how societies cope with technological change, using the history of nuclear technologies as a central example. 3. Summarize the importance of

nuclear technologies in US history, drawing on primary and secondary historical sources introduced in the course. Credits: 3.00

HIST 30805 - History Of Life Sciences

Credit Hours: 3.00. This course will examine the development of life sciences from 1750 to the present, introducing students to critical problems related to biology and society through the study of primary and secondary sources. The "life sciences" include all the sciences that deal with life as an organic entity. A prominent theme in this historical treatment is the impact of social and political ideas on the life sciences. Topics will include theories of life, the origin of life, taxonomy and classification, theories of development, natural selection, genetics, eugenics, science and religion, the evolutionary synthesis, biodiversity, ecology and environmentalism, sociobiology, the discovery of DNA, cognition and the brain, and gender in science. Students will develop crucial skills in the interpretation of primary and secondary sources, research, analysis, and presentation.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical material. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 30905 - History Of Environmental Science

Credit Hours: 3.00. This course introduces students to various approaches to environmental science through time. It considers critical problems related to the environment and society. The "environmental sciences" include all the sciences that deal with the Earth's physical and organic environments.

Learning Outcomes: 1. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence within an essay format. 2. Formulate and write cogent arguments based on research with primary and secondary historical materials. 3. Evaluate and employ appropriate technology in the collection and analysis of data used as evidence for the required critical essays. Credits: 3.00

HIST 31305 - Medical Devices And Innovation (UCC: HUM/STS)

Credit Hours: 3.00. This course examines the history of material cultures of health care in the United States. The class will analyze how technological innovation has become central to medicine over the last two centuries and how we are coping with the consequences, both intended and unintended, of our reliance upon such medical devices. We will look at identities associated with medical devices, the ways in which disease is constructed, how technologies contribute to the naming of maladies, and implications for emergent bioengineering and biotechnologies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Appreciate the circumstances and history of technological innovation in relation to medicine. 2. Understand and recognize how assumptions about health influence the practice of science and development of technologies during the late 19th and 20th centuries. 3. Analyze the design of objects to understand cultural consequences of their use. 4. Develop skills for reading critical historical commentaries and evaluating them. 5. Gain ability to question technological artifacts, practice, and knowledge in historical context. Credits: 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of

science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

HIST 30701 - History Of Artificial Intelligence: Minds And Machines

Credit Hours: 3.00. This course examines the long history of efforts in automating human cognition. Historically, the attempts to automate human cognitive functions - from the mere reckoning of numbers to complex decision-making have been entangled with heated debates about what counts as good, proper, and desirable thinking; whose thinking machines should emulate; and whether the thinking of some humans is inferior to that of machines. In this course, we will examine how the invention of calculating machines - analogue and then digital - has developed in tandem with philosophical and scientific theories of human thinking and intelligence. In their turn, the latter developed as a response to changing social, political, and economic currents.

Learning Outcomes: 1. Critique the epistemological foundations and ethical implications of past and present approaches to the automation of human cognition. 2. Use primary sources to make arguments about the role of social, political, economic, and cultural currents that have historically provided the impulses for research and development in the automation of human cognition. 3. Assess historical scholarly arguments about social, economic, and political power asymmetries surrounding artificial intelligences. 4. Create websites to use text, imagery, and video content and effectively communicate how social factors have historically shaped the development of artificial intelligence. Credits: 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society in pre-modern East Asia. 2. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 3. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 4. Investigate the diversity of human experience in pre-modern East Asia, explain how social factors such as ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, have shaped the development or application of science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. 5. Identify and explain the major themes of the history of science, technology, and environment, write about the role of science in society, and describe ethical implications of technological and scientific developments. Credits: 3.00

HIST 30705 - History Of Data: How Data Became Big

Credit Hours: 3.00. This course offers a long history of Big Data. The first module focuses on how states collected data

from the 16th to 19th centuries. Here we will focus on mortality bills, census, statistics, and accounting tables. In the second model, we will pay special attention to data collection and privacy in the 20th century. In the third module, students will explore how previous developments in data collection were applied to the new developments in analog and digital computing. The final weeks of the course will focus on present-day artificial intelligence, big data, their technical limitations, and the ways they often amplify, exploit, and contribute to a wide array of social problems.

Learning Outcomes: 1. Understand a variety of historical contexts that have shaped how we use, collect, and analyze data in the 21st century. 2. Assess historical arguments about the place of data in the growth of state bureaucracies, colonialism, eugenics, national security, warfare, and scientific research made in scholarly secondary sources. 3. Use primary sources to make arguments about the historical contingency of the ways practitioners have been using data to solve state problems. 4. Develop critical thinking about data-empowered algorithms and envision a human-centered and ethical way of creating and implementing data technologies. Credits: 3.00

HIST 30902 - History Of Biotechnology

Credit Hours: 3.00. This class examines historical intersections between engineering and biology in the Western world. The course begins by considering several possible meanings of "biotechnology." It examines how and why different biotechnologies from the life sciences, biology, and medicine have arisen in specific historical contexts, changed over time, and affected society from the late 19th century to the present. We will study vaccines and beer-making in the 19th century, cell culture, birth control pills, and DNA sequencing in the 20th century, and 21st-century genome editing and synthetic biology, for example. Overall, this course argues that biotechnologies have always forced human beings to consider whether living and non-living entities are made up of the same fundamental "stuff," the implications of manipulating living things, and the nature of life itself.

Learning Outcomes: 1. Identify and describe examples of biotechnologies. 2. Describe the role of biotechnology in history and its relevance for society today. 3. Explain major themes in the history of biotechnology, such as how biotechnologies have changed through time and impacted society by way of their interactions with (for example) ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class. 4. Investigate the history and social impacts of a biotechnology of their choosing that has not been discussed in depth in this class. 5. Explain how and why this biotechnology arose in a specific historical context, changed over time, and impacted (or impacts) society (using historical methods). Credits: 3.00

HIST 28400 - The Computer Age From Babbage To The Blockchain

Credit Hours: 3.00. In this course we will explore the history of computing-from the pre-electronic days through the computer's ascent in the twentieth century to the various electronic computing and communications technologies that surround us today. This course will investigate why there was a desire to create computing machines in the first place, the economic and political arrangements that brought computers into existence, the debates over what computers could (and should) be used for, the development of the IT profession, and the gradual shift from computers being room-sized specialty machines to everyday objects that people carry around in their pockets.

Learning Outcomes: 1. Identify social, economic, political, and historic factors that have shaped the development and application of computer technology. 2. Describe the history of computing and its relevance for the world today. 3. Locate primary source materials, critically analyze those sources by considering their context and the reasons for their creation. 4. Examine work produced by, and arguments made by, historians. 5. Discuss the role that computers play in everyday life with an expansive view of the wide breadth of computerized systems that surround us. Credits: 3.00

HIST 30801 - American Eugenics

Credit Hours: 3.00. This course explores the pre-history and history of American eugenics, as well as its afterlives. It analyzes how Americans have used scientific ideas to grapple

with questions of heredity and human worth from the Early Republic to the present. We will explore the social and political uses of phrenology, physiognomy, and eugenics, and consider how those scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering.

Learning Outcomes: 1. Read and discuss primary sources. 2. Interpret how scientific knowledge has been applied in human lives and society from the 18th century to the present. 3. Analyze major themes in the history of eugenics. 4. Investigate how and why specific ideas about human value and genetic worth arise in specific historical contexts. 5. Critique the extent to which scientifically discredited ideas do and do not shape modern studies in demography, genetics, social work, and genetic engineering. Credits: 3.00

HIST 36405 - Patient Voices In The History Of Medicine

Credit Hours: 3.00. This course examines the history of medicine in the United States from the early twentieth century to the present by starting with patient voices, which provide a glimpse into the experience of illness. Using patient reflections as the primary lens through which to examine the history of medicine, topics covered include historical changes and historical decision making related to the diagnostic process, therapeutic interventions, access to care, and medical institutions. The course also examines how assumptions about gender, race, and class have shaped differential health outcomes such as mortality rates, time to diagnosis, and determination of treatment approach and efficacy.

Learning Outcomes: 1. Identify in written and oral communication key features of the U.S. medical system by examining how patient experiences have changed over time and in different contexts. 2. Analyze how assumptions about race, gender, and class can affect the experience of illness, access to care, and health outcomes. 3. Engage with primary sources such as journal entries, memoirs, newspaper articles, artwork, and audiovisual material to identify patient perspectives and place them in historical context, and to illustrate how social, cultural, political, and economic factors have shaped the practice of medicine. 4. Reflect on the ethical issues that have arisen in medicine using patient voices as a lens to examine the impact of technology on the illness experience. 5. Examine patient experiences to make an argument about the history of medical practice, such as the diagnostic process or therapeutic approaches, using historical methods. Credits: 3.00

HIST 28200 - Science And Society In The Twentieth Century World (UCC: HUM/STS)

Credit Hours: 3.00. An introductory survey emphasizing cultural contexts, relationships with other institutions, and the lives of major figures. Covering selected major achievements as well as the problems these generate. Neither science nor engineering background is required.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society during the Twentieth Century. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society during the Twentieth Century. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contributions of different social groups in science and society during the Twentieth Century. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science during the Twentieth Century. Credits: 3.00

HIST 28000 - Science And Society In Western Civilization I (UCC: HUM/STS)

Credit Hours: 3.00. A survey of the main lines in the development of science and society in Western civilization from

earliest times to Newton's discovery of gravitation. Beginning with prehistory and Egyptian and Mesopotamian civilizations, the course treats in more detail the Greeks and Romans. The course then considers science during the Middle Ages, examining the transmissions of ancient science and its incorporation into the body of Christian doctrines. The course concludes with the new efforts of physicians and astronomers to free their studies from the influence of the Church and antiquity, and the new accommodations between science and society during the Scientific Revolution.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science.
Credits: 3.00

HIST 28100 - Science And Society In Western Civilization II (UCC: HUM/STS)

Credit Hours: 3.00. This course considers Western science and society from the time of Newton to the present. Beginning with Copernicus to Newton, topics next include biological classification, modern chemistry, and the onset of the industrial revolution. For the nineteenth century the course stresses the maturation of biology. Darwinian evolution, the dynamic synthesis and electromagnetic studies, and the second industrial revolution. In the twentieth century, the course covers modern physics, the life sciences, the understanding of the universe, and the interaction between pure and applied science. The course concludes with some of the modern social and political problems which science caused by its success.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science.
Credits: 3.00

Area B - General History (3 credits)

Area C - Period prior to 1800 (3 credits)

HIST 10300 - Introduction To The Medieval World (UCC: HUM)

Credit Hours: 3.00. Barbarians, kings, queens, peasants, witches, saints, teachers, students, heretics, Moslems, Jews, Christians, love, death, monks, farm life, city life, ordinary men, women, and children as Europe develops from A.D. 500 to 1500.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 10500 - Survey Of Global History (UCC: HUM)

Credit Hours: 3.00. A survey of the interaction between the civilizations of Asia, Africa, Europe, and the Americas since 1500, with attention to cultural comparisons over time, and to the implications of global interdependence for the environment, health, economy, and geopolitics.

University Core Curriculum (UCC): (UCC: HUM)
Credits: 3.00

HIST 20100 - Special Topics In History

Credit Hours: 3.00. This variable title course deals with broad historical topics that transcend and telescope traditional analytical, chronological, and geographical boundaries. Content will vary with the instructors teaching the class.

Credits: 3.00

HIST 22800 - English History To 1688

Credit Hours: 3.00. This course is designed to survey the growth and development of English society from its beginning through the seventeenth century. Emphasis is put upon those institutions and events that influenced the establishments of the English legal system.

Credits: 3.00

HIST 23800 - History Of Russia From Medieval Times To 1861 (UCC: HUM)

Credit Hours: 3.00. This course explores the main characteristics of early Russian society, culture and politics. Topics include: the Kievan principalities, Orthodox Christianity, the Mongols, the rise of Moscow, the Petrine reforms, peasant and national rebellions, revolutionary movements, and the Tsarist empire to the Crimean War.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Identify the major geographical features of the Russian homeland, the Baltics, Belarus, Ukraine, the Caucuses, Central Asia, the Volga-Urais, Siberia, and the Far East. 2. Trace and describe the main historical characteristics of Russian culture, social structure, and political life from the earliest origins under the Viking conquests to the emancipation of the serfs in 1861. 3. Analyze what the Russians both gave and took from the hundreds of Caucuses, Siberian, Central Asian, and European peoples, whom they gathered into the all-Russian state. 4. Understand the sources of Russia's triumphs and tragedies through the empire's consolidation of autocracy and serfdom. 5. Create a game-style simulation on the topic Russia's Circular Frontier and the Rise of Muscovy. Credits: 3.00

HIST 24000 - East Asia And Its Historic Tradition (UCC: HUM)

Credit Hours: 3.00. Survey of the great historic traditions of China, Japan, and Korea from earliest times to approximately 1600, with special attention to state formation, society, intellectual, philosophical, and religious developments, and the visual, musical, and literary arts.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

HIST 27100 - Introduction To Colonial Latin American History (1492-1810) (UCC: HUM)

Credit Hours: 3.00. The purpose of this general survey course is to introduce students to the principle historical themes of Latin America during the colonial period (roughly, from 1492 to 1810). No prior knowledge of Latin American history is required.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Demonstrate a grasp of the historical forces that in many ways laid the foundation for present-day Latin America. 2. Express understanding of how these major political, social, economic, and cultural issues unfolded in different ways in Latin America, with respect to region, time, and culture. Credits: 3.00

HIST 30200 - Historical Topics

Credit Hours: 3.00. This variable-title course deals with broad historical topics that transcend and collapse traditional analytical, chronological, and geographic boundaries. Content will vary with faculty member teaching the class.

Learning Outcomes: 1. Students will acquire a perspective on and basic understanding of the course content. 2. Students will engage in integrative learning as they examine the course content that transcends and collapses traditional analytical, chronological, and geographic boundaries. 3. Students will develop their creative and critical thinking skills. 4. Students will strengthen their information literacy and improve their writing skills. Credits: 3.00

HIST 31700 - A History Of The Christian Church And The Expansion Of Christianity I

Credit Hours: 3.00. A history of the emergence of Christianity, the development of the Christian church, and the impact of Christian thought and institutions upon western Europe prior to the Reformation.

Credits: 3.00

HIST 33900 - Traditional China

Credit Hours: 3.00. Chinese civilization from its origins to the end of the Ming Dynasty. Attention is divided equally between political and cultural history, giving emphasis to the development of traditional institutions in Chinese society as well as to art, literature, religion, and philosophy.

Credits: 3.00

HIST 34300 - Traditional Japan (UCC: HUM)

Credit Hours: 3.00. The course considers Japanese civilization from its origins to the establishment of the Tokugawa Shogun (1603). Divided between political and cultural history, it will emphasize the development of traditional institutions in Japanese society, religion, philosophy, art, and literature.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 37700 - History And Culture Of Native America (UCC: HUM)

Credit Hours: 3.00. This course explores the societies of Native North America in a historical context, from pre-historic times to the present, examining Native world views and belief systems to understand their historical relations with each other, and with Europeans and their descendants.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

HIST 39600 - African American History To 1877 (UCC: HUM)

Credit Hours: 3.00. This course covers major themes in African American history to 1877 that emphasizes Black Americans' African origins and their experiences in the transatlantic slave trade, American slavery, Colonial America and the early United States as well as their fight for abolition and freedom during the Civil War and Reconstruction.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Gain a knowledge and understanding of the relationship between the experiences of African Americans and United States history as a whole. 2. Gain an understanding and knowledge of the political, economic, and social processes that shaped African American history. 3. Learn how to ""think historically"" by placing documents written in the past in their historical contexts, and to consider the relationship of the past to the present. Credits: 3.00

HIST 46100 - The Revolutionary Era, 1763 To 1800

Credit Hours: 3.00. An analysis of the origins, nature, and consequences of the American Revolution; of the achievements and difficulties of the new nation under the Articles of Confederation; of the drafting and adoption of the Constitution; and of the initial political, economic, and social progress of the United States under the Federalists.

Credits: 3.00

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision

process. Credits: 3.00

HIST 51200 - England Under The Stuarts

Credit Hours: 3.00. This intensive study of seventeenth-century England focuses on the political, religious, and economic tensions under the early Stuarts; the Civil War; Cromwell's Protectorate; and The Glorious Revolution. Topics discussed include parliament, puritanism, radicalism, the Restoration, and the Whig Oligarchy.

Credits: 3.00

HIST 32105 - Spain: The First Global Empire, 1469-1713

Credit Hours: 3.00. This course examines the history of Spain's global empire from the unification of the kingdoms of Castile and Aragon to the War of the Spanish Succession. Topics include Spain's European possessions, overseas empire, ruling dynasty, society, and culture.

Learning Outcomes: 1. Assess the mechanisms that made the Spanish imperial system successful and, likewise, appraise its inherit weaknesses. 2. Distinguish the different stages in the development of the Spanish empire. 3. Judge the extent of the Spanish empire's impact on international politics and regional histories. 4. Evaluate the substantial cultural output of the period. Credits: 3.00

HIST 37005 - Queens And Empresses In Early Modern Europe

Credit Hours: 3.00. This course explores the lives and legacies of queens and empresses in early modern Europe within the wider context of gender, political authority, culture, and monarchy. Students will be introduced to new scholarly approaches to the study of female rulership.

Learning Outcomes: 1. Compare the legal, cultural, and symbolic aspects of queenly authority across monarchies and centuries applying the relevant vocabulary and conceptual frameworks. 2. Evaluate the political intervention of various individual queens and empresses taking into account the many variables that shaped their rule. 3. Distinguish the ways in which queens and empresses shaped national histories as well as European international politics and culture. Credits: 3.00

HIST 30105 - Big History: Time And Scale

Credit Hours: 3.00. This course explores Big History, a new form of world / global history. Like all forms of world history, Big History transcends the limitations of nation-centered perspectives. Drawing on the history of science and environmental history, Big History considers the many forces (physical, biological, environmental, social, and political) that drive change across time.

Learning Outcomes: 1. Examine, interpret, and explain trends in Big History / World History at multiple scales. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to Big History. 3. Identify and explain the major themes of Big History. 4. Write about the role of Big History and social implications of science. Credits: 3.00

HIST 40500 - The French Revolution And Napoleon

Credit Hours: 3.00. A study of revolutionary France from the fall of the ancient regime to the Congress of Vienna. Divided in emphasis between the period of the revolution and the era of Napoleon, the course stresses social, political, ideological, and institutional developments.

Credits: 3.00

HIST 46000 - American Colonial History

Credit Hours: 3.00. An investigation of the foundation of the American colonies, their place in the British imperial structure, and the eventual conflict of imperial exigencies with colonial self-interest and national feeling.

Credits: 3.00

HIST 40300 - Europe In The Reformation

Credit Hours: 3.00. A study of decay and renewal in European society, 1300 to 1650. Concentrates on the Protestant and Catholic Reformation and religious wars, but also covers the Northern Renaissance, the New Monarchies, and the discovery and exploration of the New World.

Credits: 3.00

HIST 36105 - History Of Science, Technology, And Environment In Pre-Modern East Asia

Credit Hours: 3.00. This course explores developments in scientific, technological, and ecological history specifically in Pre-modern East Asia. In this class, we will read basic theories

and methods in the history of science and technology, as well as basic debates and questions that challenge scholars studying the history of science, technology, and the environment in a non-western pre-modern context. We will explore how society, culture, and politics affect knowledge production and people's engagement with nature, and how these interactions, in turn, shaped society, culture, and politics. All readings are in English. No prior knowledge of East Asia is necessary.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural, economic, and social experiences and/or structures shaped the history of science and society in pre-modern East Asia. 2. Discuss examples of scientific and technological changes and the costs and benefits for individuals and specific societies. 3. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 4. Investigate the diversity of human experience in pre-modern East Asia, explain how social factors such as ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, have shaped the development or application of science and technology, including tools and strategies by which societies promote, constrain, or otherwise influence scientific and technical innovation. 5. Identify and explain the major themes of the history of science, technology, and environment, write about the role of science in society, and describe ethical implications of technological and scientific developments.
Credits: 3.00

HIST 28000 - Science And Society In Western Civilization I (UCC: HUM/STS)

Credit Hours: 3.00. A survey of the main lines in the development of science and society in Western civilization from earliest times to Newton's discovery of gravitation. Beginning with prehistory and Egyptian and Mesopotamian civilizations, the course treats in more detail the Greeks and Romans. The course then considers science during the Middle Ages, examining the transmissions of ancient science and its incorporation into the body of Christian doctrines. The course concludes with the new efforts of physicians and astronomers to free their studies from the influence of the Church and antiquity, and the new accommodations between science and society during the Scientific Revolution.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science.
Credits: 3.00

Area D - Advanced History of Science, Technology, and Medicine (9 credits)

HIST 49200 - Seminar In Historical Topics

Credit Hours: 3.00. Course description will vary according to specific topic proposed to study.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will develop the ability to distinguish between primary and secondary sources. 3. Students will analyze arguments and interpretations, and recognize interpretive conflicts. 4. Students will strengthen skills in oral communication. 5. Students will improve their information literacy and engage in creative and critical thinking. 6. Students will become familiar with multi-draft writing and the

revision process. Credits: 3.00

HIST 47005 - Women And Health In America (UCC: HUM)

Credit Hours: 3.00. This course examines the historical relationship between women and health by exploring a number of critical themes that have affected women's health in the United States.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Analyze the ways in which societal assumptions about gender, health and sickness, along with race and class, help to determine the course of treatment. 2. Analyze the role of primary sources in contributing to our understanding of women's health. Credits: 3.00

HIST 48005 - Madness And The Asylum In The United States

Credit Hours: 3.00. This course explores how Americans have understood insanity and asylums. We analyze historical concepts of insanity, the evolution of asylums, how psychiatrists have debated therapeutics, and how ordinary people have experienced treatments and diagnoses.

Learning Outcomes: 1. Gain knowledge of some of the major debates in the history of insanity. 2. Be able to identify a research question, conduct primary source research, and form a thesis. 3. Use a variety of databases to assemble a range of primary sources. 4. Learn to interrogate and compare primary sources for viewpoint and implicit value system. 5. Gain knowledge of some of the major theoretical approaches and frameworks used for studying the history of insanity. 6. Be able to discuss ideas and research in formal writing and in seminar discussion. Credits: 3.00

HIST 49400 - Science And Society In American Civilization

Credit Hours: 3.00. This course examines the development of science in the United States from colonial times to the present. Emphasis in the earlier periods is placed on comparison and contrast of the American scene with that of Europe. Subsequent treatment deals with industrialization, and maturation of the American scientific community, and the increasing social effects of science. Among those considered are the forces making for urbanization, for greater interdependence among science, industry and government, and for repercussions in intellectual affairs.

Learning Outcomes: 1. Examine, interpret, and explain how personal, political, cultural economic, and social experiences and/or structures shaped the history of science and society. 2. Analyze data using historical methodologies to evaluate causal arguments and analyze assertions, assumptions, and explanatory evidence related to the history of science and society. 3. Investigate the diversity of human experience within Western culture, considering, for example, ethnicity, gender, language, race, religion, sexual orientation, age, culture, disability, and social class, and appreciate the contribution of different social groups in science and society. 4. Identify and explain the major themes of the history of science and write about the role of science in society and social implications of science. Credits: 3.00

Junior Research Seminar (3 credits)

HIST 39500 - Junior Research Seminar

Credit Hours: 3.00. Variable title seminar for history majors in their junior year intended to teach historical skills, including research in primary sources, analytical skills, and forming historical arguments. It is a writing-intensive course and counts as one of the major requirements.

Learning Outcomes: 1. History majors will learn historical skills such as primary source research and analysis and how to form historical arguments. 2. Acquire analytical skills sufficient to distinguish between primary and secondary sources, to analyze arguments and interpretations, and to recognize interpretive conflicts. 3. Engage in integrative learning. 4. Develop the ability to recognize, analyze and incorporate primary source material into scholarly investigations and analyses. 5. Improve their information literacy and enhance

their creative thinking. 6. Strengthen skills in critical thinking and oral communication. 7. Improve their writing skills. Credits: 3.00

Senior Research Seminar (3 credits)

HIST 49500 - Research Seminar In Historical Topics

Credit Hours: 3.00. This course is designed to train history majors in the fundamentals of historical research and writing. Course descriptions vary according to specific topics proposed for study by instructors.

Learning Outcomes: 1. Students will acquire a perspective on and advanced understanding of the course content. 2. Students will learn historical skills such as primary source research and analysis and how to form historical arguments. 3. Students will advance their information literacy and creative and critical thinking, acquire analytical skills sufficient to distinguish between primary and secondary sources. 4. Students will learn to analyze argument and interpretations and recognize interpretive conflicts. 5. Students will become familiar with multi-draft writing and the revision process. Credits: 3.00

About the Program

Horticulture: Controlled Environment Agriculture Concentration, BS

Degree Requirements

Departmental/Program Major Courses (72 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Controlled Environment Agriculture Concentration (55 credits)

Controlled Environment Agriculture Required Courses (21 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the

topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

HORT 31110 - Aquaponics

Credit Hours: 1.00. (SFS 31100) (FNR 31300) There has been a significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia; and our impending food crisis has kindled an interest in developing aquaponics systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. The waste disposal problem of the fish can become the nutrient supply to the plants.

Learning Outcomes: 1. Understand the nature

of interactions among organisms, in particular those involving plants: mutualism, commensalism, parasitism, herbivory. 2. Understand the relationships among host, environment and pathogen for development of plant disease. 3. Know principal pathogens of Midwestern crops. 4. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 5. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 6. Understand the importance of energy in society and in agricultural production systems. 7. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 8. Have a broad awareness of the role of agriculture in global society. 9. Understand the advantages and disadvantages of different approaches to food production. 10. Understand the principles of food marketing and sales. 11. Understand the principles of post harvest food storage and pest management. Credits: 1.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

Concentration Selectives (34 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and

agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health,

industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and

non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such

as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of

organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (4-5 credits)

Supplemental List

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve

problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

15-16 Credits

Fall 2nd Year

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and

transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

14 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

14 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

HORT 31110 - Aquaponics

Credit Hours: 1.00. (SFS 31100) (FNR 31300) There has been a significant renewed interest in the investigation of integrated fish-food plant systems. Such systems have a long and rich history, particularly in Asia; and our impending food crisis has kindled an interest in developing aquaponics systems in western countries. Many growers are turning to controlled environment and hydroponic production methods to produce high-value crops in tight quarters. The waste disposal problem of the fish can become the nutrient supply to the plants.

Learning Outcomes: 1. Understand the nature of interactions among organisms, in particular those involving plants: mutualism, commensalism, parasitism, herbivory. 2. Understand the relationships among host, environment and pathogen for development of plant disease. 3. Know principal pathogens of Midwestern crops. 4. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 5. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 6. Understand the importance of energy in society and in agricultural production systems. 7. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 8. Have a broad awareness of the role of agriculture in global society. 9. Understand the advantages and disadvantages of different approaches to food production. 10. Understand the principles of food marketing and sales. 11. Understand the principles of post harvest food storage and pest management. Credits: 1.00

HORT 32100 - Hydroponics Systems

Credit Hours: 3.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in controlled environment agriculture (CEA). This course offers students foundational information and hands-on experience on hydroponic and soilless cultivation of horticultural crops. Production practices, growing systems, new technologies, and current challenges are discussed.

Learning Outcomes: 1. Describe essential components of single-pass and recirculating hydroponic systems. 2. Compare different substrates and hydroponic system designs. 3. Interpret water quality analysis results and recommend corrections. 4. Create nutrient solutions using salts or mixed fertilizers. 5. Evaluate the importance of water quality, dissolved oxygen, salinity, and pH management for hydroponics. 6. Select hydroponic systems for production of leafy greens, herbs, and vegetable crops. 7. Apply solution chemistry knowledge and plant biology concepts to manage hydroponic systems. Credits: 3.00

16 credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

15 Credits

Fall 4th Year

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 51400 - Sensors And Automation For Horticultural Crop Production

Credit Hours: 3.00. This course is designed to provide undergraduate (senior level) and graduate students with the knowledge of a wide range of environmental and plant sensors and automation devices for horticultural crop production, especially controlled environment production. Lectures will focus on the theory and application of different plant and

environmental sensors, electronic devices and computer programming for automation and environmental control using sensors while the laboratory activities provide hands-on experience on the application of sensors and automation devices to control below and above-ground environment during production.

Learning Outcomes: 1. Examine theory associated with different environmental and plant sensor measurements. 2. Implement methods to interface sensors to measurement devices such as dataloggers and micro-controllers and program them for automated and continuous sensor measurements. 3. Examine digital sensing technologies based on image analysis. 4. Demonstrate knowledge and practice hands-on experience with precision environmental control using datalogger and microcontrollers. Credits: 3.00

16 Credits

Spring 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

13-14 Credits

Horticulture: Horticultural Production and Marketing Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (68 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can

assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Horticultural Production and Marketing Concentration Required Courses (26 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be

taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding

of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

Horticultural Production and Marketing Concentration Selective Courses (25 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition.

Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens.

Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their

environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical

transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts

such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (8-9 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions.

6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

SFS 21000 - Small Farm Experience I

Credit Hours: 3.00. This is the first course of two designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

SFS 21100 - Small Farm Experience II

Credit Hours: 3.00. This course is a continuation of SFS 21000 and is designed to help students gain an understanding of what is needed to establish a productive small farm enterprise. There will be short field trips to local small farming enterprises. Classes will also be taught by guest lecturers and local farmers who have been successful at establishing small farming enterprises. Students in the class will be responsible for working on the Purdue Student Farm to gain practical experience on the topics and concepts being taught in the class.

Learning Outcomes: 1. Develop a broader appreciation of the range of agricultural enterprises that are feasible in the Midwest. 2. Lean and experience a range of skills pertaining to small farm management. 3. Improve ability to design, market, and operate a small farming business. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

15-16 Credits

Fall 2nd Year

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

14 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

14 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the

formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

15 Credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

15 Credits

Fall 4th Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

16 Credits

Spring 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers

use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

16-17 Credits

Horticulture: Landscape Contracting and Management Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (74 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab

prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Landscape Contracting and Management Concentration Required Courses (48 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound

approaches for weed management that promote sustainability, especially when integrated with other weed control methods. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student.

Learning Outcomes: 1. Develop graphic ability to clearly describe design ideas, concepts and proposals. 2. Develop an awareness of the range of graphic representations, techniques and methods available to the designer. 3. Develop a working vocabulary for graphic communication in landscape design. 4. Foster the value of CRAFTSMANSHIP and PROFESSIONALISM in the preparation of graphics. Credits: 3.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.

Learning Outcomes: 1. Apply the fundamental tools and processes of design: spatial organizations and relationships, analytical tools and ordering principles. 2. Demonstrate basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate the investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Make effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Articulate the roles, contributions and responsibilities of landscape architecture to society and to environmental health. 6. Demonstrate time/task management, learning and functioning in a studio environment,

working independently and as a team member. Credits: 3.00

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences

in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

Landscape Contracting and Management Concentration Selective Courses (9 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single

gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions,

kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to

identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in

influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (2-3 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and

services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts

such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

SPAN 10100 - Spanish Level I (UCC: HUM)

Credit Hours: 3.00. A beginning Spanish course with emphasis on communicative skills (listening and speaking), literacy skills (reading and writing) and culture. CTL:IWL 1910 Spanish Level I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe themselves, their friends and families, their personal interests and activities using the present and preterit verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, hobbies, holidays, daily schedules, food, and shopping. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

15-16 Credits

Fall 2nd Year

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student.

Learning Outcomes: 1. Develop graphic ability to clearly describe design ideas, concepts and proposals. 2. Develop an awareness of the range of graphic representations, techniques and methods available to the designer. 3. Develop a working vocabulary for graphic communication in landscape design. 4. Foster the value of CRAFTSMANSHIP and PROFESSIONALISM in the preparation of

graphics. Credits: 3.00

SPAN 10200 - Spanish Level II (UCC: HUM)

Credit Hours: 3.00. Continuation of SPAN 10100. CTL:IWL 1911 Spanish Level II

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Describe aspects of daily life and communicate in personal and professional situations using the present and various past verb tenses. 2. Identify and describe salient aspects of Hispanic culture from around the world. 3. Summarize and discuss orally and in written form short readings on a variety of topics about the Hispanic world, including university life, daily schedules, food, social engagement, and technology. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

15 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific

method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.
Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.
Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.
Learning Outcomes: 1. Apply the fundamental tools and processes of design: spatial organizations and relationships, analytical tools and ordering principles. 2. Demonstrate basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate the investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Make effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Articulate the roles, contributions and responsibilities of landscape architecture to society and to environmental health. 6. Demonstrate time/task management, learning and functioning in a studio environment, working independently and as a team member. Credits: 3.00

17 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

15 Credits

Spring 3rd year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

HORT 21000 - Fundamentals Of Turfgrass Culture

Credit Hours: 3.00. (AGRY 21000) An introductory course in turfgrass management emphasizing turfgrass growth and development, species characteristics, their adaptation and basic cultural requirements for ornamental and functional turfgrass areas. The requirements and cultural inputs needed for proper establishment and maintenance of a high-quality, low-maintenance lawn will be discussed.

Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

LA 34604 - Site Engineering: Materials And Construction

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails.

Learning Outcomes: 1. Demonstrate an understanding of common landscape construction materials and their application in the built environment. 2. Demonstrate an understanding of structural qualities and limitations of construction materials and systems. 3. Demonstrate an understanding of basic construction documentation. 4. Demonstrate the ability to access, evaluate, and document a variety of materials and construction systems commonly found in landscape construction. Credits: 4.00

16 Credits

Fall 4th Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

BTNY 30400 - Introductory Weed Science

Credit Hours: 3.00. A survey of the scientific principles underlying weed control practices; emphasis is on the ecology of weeds and control in crop associations. It is recommended that this course be followed by BTNY 50400.

Learning Outcomes: 1. Demonstrate your knowledge on the characteristics of weed species to properly identify and assess the negative impact the plants have on a site. 2. Describe how the characteristics of weed species and the specific site area influence the effectiveness of cultural, mechanical, chemical, and biological weed control methods. 3. Apply the aspects of herbicide use to develop sound approaches for weed management that promote sustainability, especially when integrated with

other weed control methods. Credits: 3.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.
Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.
Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

15 Credits

Spring 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.
Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

12-13 Credits

Horticulture: Landscape Design Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (75 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.
University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with

emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Landscape Design Concentration Required Courses (43 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student.

Learning Outcomes: 1. Develop graphic ability to clearly describe design ideas, concepts and proposals. 2. Develop an awareness of the range of graphic representations, techniques and methods available to the designer. 3. Develop a working vocabulary for graphic communication in landscape design. 4. Foster the value of CRAFTSMANSHIP and PROFESSIONALISM in the preparation of

graphics. Credits: 3.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.

Learning Outcomes: 1. Apply the fundamental tools and processes of design: spatial organizations and relationships, analytical tools and ordering principles. 2. Demonstrate basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate the investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Make effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Articulate the roles, contributions and responsibilities of landscape architecture to society and to environmental health. 6. Demonstrate time/task management, learning and functioning in a studio environment, working independently and as a team member. Credits: 3.00

LA 32500 - Ecological Landscape Performance And Planting

Credit Hours: 3.00. Study of plants and their integration with other site features (e.g., water, landform) to increase sustainability. Plants will not only be studied for their aesthetic and spatial uses in the landscape, but also their ecological functions and temporal dynamics. The relationship of plants to site planning, ecosystems, and human use will be explored. Various scales, sustainable practices, and landscape performance will be considered. Class trip may be required. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Be familiar with and able to use design principles and elements in the development of planting designs and understand the implications of plants as living things. 2. Understand the relationship of planting design, ecological functions, social factors, and sustainability. 3. Have a clear understanding of the concept and measurement methods of landscape performance. 4. Set smart and measurable sustainable goals and be able to select suitable plant material and create effective compositions appropriate for a variety of site conditions. 5. Know how to observe plants from multiple perspectives (plant needs & site/environmental conditions; human spatial needs; aesthetic responses; ecological implications) and be able to integrate these perspectives into functional designs. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

LA 22704 - Studio III: Planting Design

Credit Hours: 4.00. Review of design principles as related to plant design characteristics; design implications of plant responses to environment; review of landscape plants.

Learning Outcomes: 1. Apply knowledge of plant requirements and characteristics to the design of landscape spaces using plants and plant communities as the primary design material. 2. Construct appropriate plant palettes using both native and horticultural plants to

build a cohesive sense of place, including a palette that is regionally appropriate to the Midwest. 3. Explore alternative solutions and use personal judgments to select plant combinations for technical, functional, and aesthetic uses in the landscape. 4. Distinguish the differences in garden styles and know the characteristics of each style. 5. Create a planting plan and schedule, incorporating appropriate nursery standards, and understand how these elements are part of the necessary construction documents for site construction. 6. Apply design process (site, inventory, analysis, concept, schematic, and master plan) to planting design. Credits: 4.00

LA 34604 - Site Engineering: Materials And Construction

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails.

Learning Outcomes: 1. Demonstrate an understanding of common landscape construction materials and their application in the built environment. 2. Demonstrate an understanding of structural qualities and limitations of construction materials and systems. 3. Demonstrate an understanding of basic construction documentation. 4. Demonstrate the ability to access, evaluate, and document a variety of materials and construction systems commonly found in landscape construction. Credits: 4.00

Landscape Design Concentration Selective Courses (15 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking

opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test

hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription,

protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to

construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the

difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis

will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (1-2 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of

horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

15-16 Credits

Fall 2nd Year

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

LA 11600 - Graphic Communication In Design I

Credit Hours: 3.00. A foundational course that covers a broad spectrum of hand-graphic communication techniques fundamental to landscape design including hand-drafting, sketching, architectural lettering, conceptual graphics, illustrative rendering, technical drawing, and drawing to scale. A series of short studio exercises will foster three-dimensional thinking and associated drawing methods. Materials used are purchased by the student.

Learning Outcomes: 1. Develop graphic ability to clearly describe design ideas, concepts and proposals. 2. Develop an awareness of the range of graphic representations, techniques and methods available to the designer. 3. Develop a working vocabulary for graphic communication in landscape design. 4. Foster the value of CRAFTSMANSHIP and PROFESSIONALISM in the preparation of graphics. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design

response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

14 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher

plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

LA 21600 - Studio I: Foundational Design

Credit Hours: 3.00. Landscape architectural site design, an introduction into processes and products. Building on the introduction to graphics in LA 11600 this is an introduction to the processes and production of site design and development drawings. Recording, conceptualizing and presenting site design ideas through problem solving projects. Emphasis on hand and computer drafting and drawing skills to communicate design ideas. Permission of department required.

Learning Outcomes: 1. Apply the fundamental tools and processes of design: spatial organizations and relationships, analytical tools and ordering principles. 2. Demonstrate basic critical thinking, and a foundation of literacy in design and environmental ideas. 3. Demonstrate the investigations and processes that lead to the formation of design concepts, and their realization as objects, plans and places. 4. Make effective use of basic communication methods and the tools used in their making: diagrams, drawing, lettering, model making, speaking and writing. 5. Articulate the roles, contributions and responsibilities of landscape architecture to society and to environmental health. 6. Demonstrate time/task management, learning and functioning in a studio environment, working independently and as a team member. Credits: 3.00

17 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be

familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

15 Credits

Spring 3rd Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

LA 22704 - Studio III: Planting Design

Credit Hours: 4.00. Review of design principles as related to plant design characteristics; design implications of plant responses to environment; review of landscape plants.

Learning Outcomes: 1. Apply knowledge of plant requirements and characteristics to the design of landscape spaces using plants and plant communities as the primary design material. 2. Construct appropriate plant palettes using both native and horticultural plants to build a cohesive sense of place, including a palette that is regionally appropriate to the Midwest. 3. Explore alternative solutions and use personal judgments to select plant combinations for technical, functional, and aesthetic uses in the landscape. 4. Distinguish the differences in garden styles and know the characteristics of each style. 5. Create a planting plan and schedule, incorporating appropriate nursery standards, and understand how these elements are part of the necessary construction documents for site construction. 6. Apply design process (site, inventory, analysis, concept, schematic, and master plan) to

planting design. Credits: 4.00

LA 34604 - Site Engineering: Materials And Construction

Credit Hours: 4.00. Earthwork, grading, surface drainage and storm water management. Properties of contour lines and topographic representation. Standards for grading practices, notation and nomenclature. Methods for calculating volumes of cut and fill. Methodology for horizontal and vertical alignment of roads and trails.

Learning Outcomes: 1. Demonstrate an understanding of common landscape construction materials and their application in the built environment. 2. Demonstrate an understanding of structural qualities and limitations of construction materials and systems. 3. Demonstrate an understanding of basic construction documentation. 4. Demonstrate the ability to access, evaluate, and document a variety of materials and construction systems commonly found in landscape construction. Credits: 4.00

17 Credits

Fall 4th Year

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

LA 32500 - Ecological Landscape Performance And Planting

Credit Hours: 3.00. Study of plants and their integration with other site features (e.g., water, landform) to increase sustainability. Plants will not only be studied for their aesthetic and spatial uses in the landscape, but also their ecological functions and temporal dynamics. The relationship of plants to site planning, ecosystems, and human use will be explored. Various scales, sustainable practices, and landscape performance will be considered. Class trip may be required. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Be familiar with and able to use design principles and elements in the development of planting designs and understand the implications of plants as living things. 2. Understand the relationship of planting design, ecological functions, social factors, and sustainability. 3. Have a clear understanding of the concept and measurement methods of landscape performance. 4. Set smart and measurable sustainable goals and be able to select suitable plant material and create effective compositions appropriate for a variety of site conditions. 5. Know how to observe plants from multiple perspectives (plant needs & site/environmental conditions; human spatial needs; aesthetic responses; ecological implications) and be able to integrate these perspectives into functional designs. Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

15 Credits

Spring 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

12-13 Credits

Horticulture: Landscape Enterprise Management Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (70 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of

horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Required Concentration Courses (29 credits)

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of

accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape

architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

Landscape Enterprise Management Concentration Selectives (24 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates

knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts,

and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to

produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4.

Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear

regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The

role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to

work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (6-7 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

15-16 Credits

Fall 2nd Year

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students

who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MGMT 21200 - Business Accounting

Credit Hours: 3.00. The two primary objectives are to teach the skills to produce financial information-to send the relevant signals to decision makers; and to teach the skills to interpret the financial report-to receive the signals. To meet these objectives the students will gain an understanding of the reasoning behind the processes used to record financial information and the manner in which it is reported to external decision makers; gain an understanding of the four basic statements; and an understanding of the importance of financial statement information in interpreting the performance of organizations.

Learning Outcomes: 1. Teach basics of accounting to students as future business owners and employees. 2. Establish communications with accountants and financial advisors when entering the workforce. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

15 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems.

4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

14 Credits

Fall 3rd Year

AGEC 33000 - Management Methods For Agricultural Business

Credit Hours: 3.00. Management of nonfarm, agriculturally related businesses. Topics include tools for management decision making, legal forms of business organization, basics of accounting, and important financial management techniques. Case studies and computer simulation game.

Credits: 3.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements;

and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

15 Credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

15 Credits

Fall 4th Year

AGEC 33100 - Principles Of Industrial Selling

Credit Hours: 3.00. The principles of selling and their application to the industrial businesses. Topics include attitudes and value systems, basic behavioral patterns, the purchase decision process, relationship of sales to marketing, selling strategies, preparing for sales calls, making sales presentations, handling objections, and closing sales. Emphasis is placed on application of principles to real-world situations and on building selling skills through class projects. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Learning Outcomes: 1. Learn about different aspects of buyer behavior, organized business communication, and psychology as it affects the

sales of technical goods in industrial settings. 2. Interact with several salespeople to learn first-hand some of the opportunities and frustrations of a career in selling. 3. Prepare and apply sales concepts through an interactive sales presentation that is evaluated by a professional salesperson. Credits: 3.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

15 Credits

Spring 4th Year

HORT 43500 - Developing An Agricultural Startup

Credit Hours: 4.00. Principles of marketing and business management in the horticultural industries; market organization, performance, and planning; financial planning, pricing, promotion, cost control, and legal aspects of retailing. Case studies in direct farm, floral, and garden center management.

Learning Outcomes: 1. Become critical thinkers. 2. Gain an understanding of marketing principles and theory. 3. Develop an understanding of marketing information available to horticulture industry professionals and how this information can be used. 4. Identify the four kinds of resources managers use. 5. Develop an understanding of financial terminology sufficiently to communicate with financial professionals and make informed decisions. 6. Construct and use an income statement, balance sheet, strategic profitability model, and cash flow budget. 7. Establish a level of confidence in creating a business plan as a tool to assess, create, and communicate a business concept. 8. Understand how to manage people in the workplace. Credits: 4.00

14-15 Credits

Horticulture: Plant Science Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (67-68 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

Plant Science Concentration Required Courses (26-27 credits)

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and

quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic

And Biochemistry w/lab

Credits: 1.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 21400 - The Nature Of Physics (UCC: SCI)

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 12100 - Medicine In The Garden (UCC: STS)

Credit Hours: 1.00. A survey of the uses and properties of horticultural plants for human health and well-being. Topics will focus on the close relationships between plants and human physiology, nutrition, medicines, mind-altering drugs, poisons, and beverages.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 4. Demonstrate the ability to work effectively as part of a problem-solving team. 5. Demonstrate skills necessary for lifelong learning. Credits: 1.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research. 2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research activity might improve. Credits: 1.00

BTNY 26200 - Plant Structure And Tissue Biology

Credit Hours: 3.00. This course focuses on fundamental knowledge of the internal structure of plants, including distinct cell types, tissues, tissue systems, and organs that make up a plant. Lectures and laboratories will cover the structural parts that comprise the plant body including three major vegetative organs (roots, stems, and leaves) and a set of reproductive organs (flowers, fruits, and seeds). The goal of this course is to understand the internal organization of plants, to learn multiple lab techniques critical for plant science research, and to develop critical thinking and problem solving skills.

Learning Outcomes: 1. Describe the internal structure of plants. 2. Perform lab techniques, such as fresh sectioning and microscopy, for plant science research. 3. Critically evaluate plant cell, tissue, and organ structures. Credits: 3.00

Plant Science Concentration Selective Courses (24 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure,

and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of

disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations,

perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance. Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the

causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-

long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (8-10 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to

construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

16-17 Credits

Fall 2nd Year

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

HORT 12100 - Medicine In The Garden (UCC: STS)

Credit Hours: 1.00. A survey of the uses and properties of horticultural plants for human health and well-being. Topics will focus on the close relationships between plants and human physiology, nutrition, medicines, mind-altering drugs, poisons, and beverages.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 2. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 3. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 4. Demonstrate the ability to work effectively as part of a problem-solving team. 5. Demonstrate skills necessary for lifelong learning. Credits: 1.00

BTNY 26200 - Plant Structure And Tissue Biology

Credit Hours: 3.00. This course focuses on fundamental knowledge of the internal structure of plants, including distinct cell types, tissues, tissue systems, and organs that make up a plant. Lectures and laboratories will cover the structural parts that comprise the plant body including three major vegetative organs (roots, stems, and leaves) and a set of reproductive organs (flowers, fruits, and seeds). The goal of this course is to understand the internal organization of plants, to learn multiple lab techniques critical for plant science research, and to develop critical thinking and problem solving skills.

Learning Outcomes: 1. Describe the internal structure of plants. 2. Perform lab techniques, such as fresh sectioning and microscopy, for plant science research. 3. Critically evaluate plant cell, tissue, and organ structures. Credits: 3.00

15 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7.

Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

14 Credits

Fall 3rd Year

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts,

and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

15-16 Credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R

programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

HORT 49100 - Special Assignments In Horticulture

Credit Hours: 1.00 to 3.00. Training in research techniques, statistical methods, and record procedures. Assigned research problems. A written report of work accomplished is required. Permission of instructor required.

Credits: 1.00 to 3.00

16 Credits

Fall 4th Year

HORT 51300 - Nutrition Of Horticulture Crops

Credit Hours: 1.00. An integrated course about plant nutrition focused on horticultural crops. The unique features of nutrient availability in a soil-less horticultural media will be highlighted. An emphasis will be placed on understanding the physiological basis of plant responses to nutrient application. Weeks 1-5.

Credits: 1.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

14 Credits

Spring 4th Year

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research. 2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research activity might improve. Credits: 1.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

14-16 Credits

Horticulture: Public Horticulture Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (67 credits)

Required Major Courses (17 credits)

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of

field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

Public Horticulture Concentration Required Courses (32 credits)

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase

your communication skills by creating and presenting a poster. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

HORT 30600 - History Of Horticulture (UCC: STS)

Credit Hours: 3.00. The origins and development of agriculture, with specific emphasis on horticulture from prehistory to the present in relation to civilization and modern culture.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

LA 16600 - History And Theory Of Landscape Architecture

Credit Hours: 3.00. A study of the historic evolution of landscape architecture to the status of a recognized profession. The course covers the social, economic, political, climatic, and other factors that have influenced the development of design styles and theories.

Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four

ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research. 2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research activity might improve. Credits: 1.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative

range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

Public Horticulture Concentration Selective Courses (18 credits)

Other Departmental/Program Course Requirements (43-44 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional

conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 11000 - Introduction To Plant Science (UCC: SCI)

Credit Hours: 4.00. An introduction to the major groups in the plant kingdom, their origin, classification, and economic importance. The areas of anatomy, morphology, cytology, physiology, biochemistry, molecular biology, genetics, and ecology will be explored as they relate to plant sciences and agriculture. Course may also be offered for dual credit with cooperating Indiana high schools upon documented approval by the Department of Botany and Plant Pathology.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. Credits: 4.00

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in

deciding whether to use management strategies. Credits: 3.00

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI) Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary

mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

STAT 51100 - Statistical Methods

Credit Hours: 3.00. Descriptive statistics; elementary probability; sampling distributions; inference, testing hypotheses, and estimation; normal, binomial, Poisson, hypergeometric distributions; one-way analysis of variance; contingency tables; regression. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: Two semesters of college calculus.

Learning Outcomes: 1. Understand the difference between population parameters and sample statistics. 2. Understand practical data displays: meaning and interpretation of common data displays in the media. 3. Appreciate various interpretations of probability and where they enter into statistical studies. 4. Understand statistical distributions: difference between discrete and continuous random variables. Computing the mean and variance using various important probability distributions such as the Binomial, Hypergeometric, Poisson, Normal, Exponential, Gamma. Computing probabilities using these distributions. 5. Understand statistical distributions of two or more random variables: Sample statistics and their distributions. Understanding the Central Limit Theorem. 6. Understand statistical inference: to understand what this means and what are some practical and important applications. Examples include Confidence Intervals, Tests of Hypotheses for one, two or more populations. Linear Regression with emphasis on the difference between causation and relationships. Credits: 3.00

STAT 51200 - Applied Regression Analysis

Credit Hours: 3.00. Inference in simple and multiple linear regression, residual analysis, transformations, polynomial regression, model building with real data, nonlinear regression. One-way and two-way analysis of variance, multiple comparisons, fixed and random factors, analysis of covariance.

Use of existing statistical computer programs. Prerequisite: Coursework in Statistical Methods with a calculus prerequisite.

Learning Outcomes: 1. Learn to build and analyze simple and multiple regression models, analysis of variance and covariance (ANOVA/ANCOVA) for regression, inference for regression, diagnostics and remedial measures for regression, transformations, residual analysis, model building, polynomial and interaction models. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and

ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape

Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

Electives (9-10 credits)

Supplemental List

Internship/Work Experience Requirement

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12000 - Introduction To Horticulture And Landscape Architecture Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Horticulture and Landscape Architecture. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

HORT 10100 - Fundamentals Of Horticulture (UCC: SCI)

Credit Hours: 3.00. Biology and technology involved in the production, storage, processing, and marketing of horticultural plants and products. Laboratories include experiments demonstrating both the theoretical and practical aspects of horticultural plant growth and development.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

HORT 12200 - Living Landscapes: Grow, Design, Sustain

Credit Hours: 1.00. This course is designed for students in the department of Horticulture and Landscape Architecture or those interested in HLA majors. Students will learn about concepts such as plant science, land use, landscape design, sustainability, food systems, and more. Activities include learning from faculty in various fields, taking field trips, and participating in engaging academic and social activities. The course will cover broad topics related to plants, what you can study and courses you can take, and how you can put plants to work in a variety of careers.

Learning Outcomes: 1. Demonstrate an understanding of Horticulture and Landscape Architecture. 2. Explain several examples of how HLA is involved in your education. 3. Have improved ability to critically evaluate sources of information. 4. Be increasingly connected to an academic program. Credits: 1.00

15 Credits

Spring 1st Year

HORT 20100 - Plant Propagation

Credit Hours: 3.00. Theoretical and applied aspects of controlled plant reproduction by sexual and asexual techniques, including seeds, grafting and budding, layering, cuttings, micropropagation (in vitro culture), and specialized structures. Lectures emphasize morphological changes and physiological processes involved in plant propagation. Laboratory exercises illustrate the practical applications of propagation techniques.

Learning Outcomes: 1. Demonstrate the various common propagation techniques. 2. Determine which technique would be most applicable for a particular situation. 3. Discuss the biological principles underlying the techniques. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

16-17 Credits

Fall 2nd Year

HORT 21700 - Woody Landscape Plants

Credit Hours: 4.00. Recognition and identification of woody landscape plants; plant characteristics in terms of landscape function.

Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students

who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

LA 16100 - Land And Society (UCC: STS)

Credit Hours: 1.00. An introduction to human interaction with the landscape with emphasis on the science of ecology and the technological advancements that form the response to contemporary social and environmental issues. Specific topics include: shifting cultural views of nature, climate change, land development patterns, green infrastructure and building technologies, and the role of design in shaping responses.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe social and cultural views of nature and land leading to the shape of American settlement patterns, cities, rural areas, and suburbs. 2. Define the four ecological systems and describe the interrelationship of their components. 3. Describe the human response to these four ecological systems in settlement patterns. 4. Apply an understanding of ecological sciences in making judgments about landscapes and their relationship to the cultures who created them. 5. Evaluate the impact of climate change on U.S. landscapes and describe the design response to these present and future changes. 6. Describe the impact of technological changes in measuring and recording land on the cultural understanding of natural and built systems. 7. Apply the understanding of complex interrelationships of ecological sciences to make judgements on the potential of green infrastructure technologies to make beneficial changes. Credits: 1.00

LA 10110 - Survey Of Landscape Architecture

Credit Hours: 2.00. An overview of landscape architecture, this course provides students with their first introduction to the knowledge areas, skills, and abilities that form the foundation of the landscape architecture profession. The course offers a preview of the discipline for pre-landscape architecture and horticulture students while also providing general information for students across campus who have an interest in becoming familiar with landscape architecture.

Learning Outcomes: 1. Define landscape architecture and the scope of projects and design services offered by LAs. 2. Apply an understanding of natural, social and behavior sciences in making judgments about landscape spaces. 3. Describe different types of landscape architectural practices, and a representative range of professional landscape architectural projects. 4. Communicate using the vocabulary of landscape architectural design processes, materials and construction practices, and professional practice. Credits: 2.00

14 Credits

Spring 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test

hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

HORT 11000 - Opportunities In Horticulture

Credit Hours: 1.00. A survey of the field of horticulture, with emphasis on horticultural information and career opportunities. This course will utilize a lecture format with a combination of presentations by the instructor and guest speakers with expertise and experience in specialized areas of horticulture.

Learning Outcomes: 1. Identify important issues and opportunities in the horticulture industry. 2. Identify different career paths in the field of horticulture. 3. Utilize the department, college and university job placement facilities to find summer jobs, internships, and permanent job opportunities. 4. Identify individuals who can assist you in career counseling and job placement. 5. Experience some the many great activities and opportunities that Purdue has to offer. Credits: 1.00

HORT 30100 - Plant Physiology

Credit Hours: 4.00. Basic physiological processes of higher plants, particularly as related to the influence of environmental factors on growth, metabolism, and reproduction. Laboratory experiments involve hands-on experience with numerous aspects of plant physiology, including water relations, photosynthesis, growth, dormancy, hormones, and flowering.

Learning Outcomes: 1. Learn plant physiology. 2. Attain understanding of mechanisms and processes critical for plant life essential functions, metabolism, growth and development, and environmental adaptation and acclimation. Credits: 4.00

15 Credits

Fall 3rd Year

BTNY 30100 - Introductory Plant Pathology

Credit Hours: 3.00. Basic principles of plant pathology, including etiology, symptomatology, control, and epidemiology of representative diseases of plants.

Learning Outcomes: 1. Recognize the signs and symptoms of plant disease so that you can

distinguish between diseases caused by pathogenic entities and those caused by environmental factors. This is important for the formulation of methods to manage the disease. 2. Compare and contrast the survival and spread of the major plant pathogen groups: fungal and fungal-like pathogens, bacteria, viruses, nematodes, and parasitic plants so that appropriate control methods can be used to mitigate diseases caused by these pathogens. Control measures are based on the biology of the pathogen 3. Explain how pathogens, hosts, and environments interact in plant disease epidemics to predict the severity of a disease at a given time. Such information is important in deciding whether to use management strategies. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

HORT 21810 - Flowers For Color

Credit Hours: 1.00. Survey of annual and tender/tropical perennial ornamentals commonly used for seasonal color programs and curb appeal; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 1.00

HORT 21820 - Hardy Herbaceous Landscape Plants

Credit Hours: 2.00. Survey of hardy perennial herbaceous ornamentals including native and non-native species, bulbs, groundcovers, grasses, ferns, aquatics; recognition; cultural requirements; and use in landscape plantings.

Learning Outcomes: 1. Identify basic herbaceous ornamental plants on sight. 2. Use proper nomenclature with these taxa. 3. Be familiar with the cultural requirements for these taxa. 4. Design planting layouts that reflect appropriate design criteria. Credits: 2.00

15 Credits

Spring 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

BTNY 30200 - Plant Ecology

Credit Hours: 3.00. This course will provide an introduction to the broad field of plant ecology. Through lectures and lab assignments, students will gain an in-depth understanding of ecological concepts regarding the distribution and abundance of plant species and populations. Students will also gain insights into the application of these concepts to the conservation and management of plant species and populations.

Learning Outcomes: 1. Understand ecological concepts regarding the distribution and abundance of plant species. 2. Develop insight into the application of basic ecological concepts to the conservation and management of plant species and populations. 3. Gain experience in the design and analysis (using the R programming language) of ecological experiments. 4. Gain experience collecting and analyzing plant community data. 5. Increase your communication skills by creating and presenting a poster. Credits: 3.00

15 Credits

Fall 4th Year

HORT 31700 - Landscape Contracting And Management

Credit Hours: 3.00. Principles and practices applicable to the installation and management of landscape plants. Topics include site and project assessment, site modification and plant installation, the business practices of estimating and bidding, and plant management. Requires class trips. Students will pay individual lodging or meal expenses when necessary.

Credits: 3.00

HORT 31800 - Field Production Of Horticultural Crops

Credit Hours: 3.00. A survey of the principles and practices of field production of horticultural crops: fruits, vegetables, herbs, and nursery crops. Production principles will be discussed in lab prep while laboratory exercises will emphasize practical hands-on experience in modern technology of specialty crop production including management inputs, cultivar selection, crop manipulation, harvesting and handling.

Learning Outcomes: 1. Learn how horticultural crops are produced at various farm sizes for direct-to-consumer production and marketing, and commercial production for wholesale markets and processing. 2. Interact with industry leaders in the commercial horticulture industry. 3. Become familiar with the requirements for certified organic production. 4. Compare and contrast various approaches to maximize production, including breeding and biotechnology. Credits: 3.00

15 Credits

Spring 4th Year

HORT 30600 - History Of Horticulture (UCC: STS)

Credit Hours: 3.00. The origins and development of agriculture, with specific emphasis on horticulture from prehistory to the present in relation to civilization and modern culture.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

LA 16600 - History And Theory Of Landscape Architecture

Credit Hours: 3.00. A study of the historic evolution of landscape architecture to the status of a recognized profession. The course covers the social, economic, political, climatic, and other factors that have influenced the development of design styles and theories.

Credits: 3.00

HORT 42700 - Horticulture Capstone

Credit Hours: 1.00. Based on an approved work or internship experience, or case study, or mentored research experience, or production activity, students will collect information and develop a written analytical exploration of the commercial enterprise, internship institution, or research or production activity. The written analysis will be appropriate to the student's area of concentration. In addition, a summary oral presentation based on specific aspects of their experience will be made by each student. Prerequisite: Completion of an approved work or internship experience or mentored research experience.

Learning Outcomes: 1. Describe the structure and operation of a horticultural enterprise, public horticultural institution or the methodology for hypothesis testing in research.

2. Give examples of strengths and weaknesses of a horticultural enterprise, public horticultural institution or the methodology used in the research project. 3. Apply principles learned in coursework to evaluation of the observed horticultural enterprise, public horticultural institution or the methodology used in the research project including the management, operational, or horticultural setting and strategies. 4. Formulate proposals for ways in which the observed horticultural enterprise, public horticultural institution or the research activity might improve. Credits: 1.00

HORT 32200 - Greenhouse Crop Production

Credit Hours: 3.00. This course will offer students foundational information on the principles of planning, organizing, and managing greenhouse operations for bedding plant production. Students will learn about current cultural practices and challenges faced by the industry, as well as how environmental factors are monitored and controlled in production facilities. Hands-on activities will focus on integrated crop management practices for commercial greenhouse production. Case studies and discussions of relevant literature will help prepare students for positions in the green industry.

Learning Outcomes: 1. Demonstrate basic technical knowledge of the operations performed in a commercial greenhouse facility. 2. Explain methods of monitoring and manipulating environment factors (e.g., light temperature) and cultural practices (e.g., fertilizer composition and rate, container size, substrate type) to help maximize plant quality and minimize production costs. 3. Demonstrate skills required for bedding plant management in production. 4. Describe the various production technologies used by the greenhouse industry. Credits: 3.00

15-16 Credits

Hospitality and Tourism Management, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (68-69 credits)

CSR 48400 - Consumer Investment And Savings Decisions

Credit Hours: 3.00. A survey of consumer investment alternatives, with emphasis on financial assets.

Learning Outcomes: 1. Analyze investment decisions and investment risk management through portfolio management, capital market equilibrium and asset pricing theories. Credits: 3.00

HTM 10010 - Exploring Transformational Experiences In Hospitality And Tourism

Credit Hours: 1.00. In an age where experiences have become the new currency, businesses must adapt and thrive in the experience economy to succeed. This course introduces students to the concept of transformational experiences within the experience economy, providing them with the knowledge and skills needed to navigate this dynamic landscape. Students will gain a better understanding of where their passions lie within the broader scope of hospitality and tourism, preparing them for academic and career-related success.

Learning Outcomes: 1. Describe transformational experiences that drive business success in the experience economy. 2. Outline current and trending transformational experiences in hospitality, tourism, and affiliated industries. 3. Identify potential career paths within hospitality, tourism, and affiliated industries. Credits: 1.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries.

Learning Outcomes: 1. Explain the tourism system including the roles of travelers, tourism businesses and destinations, and other tourism system components. 2. Describe the impacts of tourism and the basic components of sustainable tourism practices. 3. Identify the key principles of destination marketing and management. 4. Describe key factors that influence consumer travel behavior including personal, interpersonal, and environmental factors. 5. Describe how to apply experience design principles to develop tourism products, services, and experiences. Credits: 3.00

HTM 21200 - Leading For Success In Service Industries

Credit Hours: 3.00. Effective leaders possess knowledge of organizational behavior and skills which provide the capacity to enhance organizational performance. Drawing upon leadership and organizational behavior theories, this course will provide students with the tools necessary to lead teams in service industries. Areas of focus include understanding individual differences and team dynamics, motivating and developing employees, effective decision-making, communication, influence, diversity, and leading change. This course will include preparation for a leadership development certificate, such as the Dale Carnegie Leadership certificate, to be earned upon successful completion of the course.

Learning Outcomes: 1. Describe the roles of managers and leaders in hospitality and tourism and the concepts of organizational efficiency and effectiveness. 2. Identify and explain basic management principles of planning, organizing, directing and controlling as applied to the hospitality and tourism business. 3. Identify basic leadership skills that effective managers in the hospitality and tourism industry possess, including business communication, motivation, decision making, and change management. 4. Identify contemporary management and leadership issues facing the hospitality and tourism industry. 5. Explain the basics of human behavior in organizations, including individual behavior and team dynamics. 6. Discriminate between ethical and non-ethical behaviors on the part of individuals inside and outside the organization. 7. Analyze the impacts of culture and diversity on organizations. Credits: 3.00

HTM 23100 - Marketing In Service Industries

Credit Hours: 3.00. Marketing plays a crucial role in service industries, addressing unique service challenges. Its importance lies in engaging customers, establishing trust and credibility, distinguishing from competitors, boosting revenue, and fostering sustainable growth and success. This course equips students with a customer-centric approach to service industry marketing, emphasizing the integral role of marketing in a service organization's strategic planning. The course exposes students to service marketing principles, components, and marketing practices.

Learning Outcomes: 1. Explain the unique challenges in marketing and managing services. 2. Describe the role of marketing in supporting

the strategic direction of a service organization. 3. Evaluate the role of the service marketing mix in solving marketing related problems and promoting the overall success for service organizations. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

HTM 30200 - Hospitality And Tourism Industry Internship I

Credit Hours: 1.00 or 2.00. Opportunities for learning through professional work experience that is practical, meaningful, and aligned with career aspirations are important for career development, planning, and goal setting. As part of the professional development curriculum, this internship course provides students with entry-level experience within the hospitality and tourism industry, broadening their exposure and understanding of the industry to explore potential career paths. Guided by the Ray Kavanagh Career Center and the National Association of Colleges and Employers (NACE) Career Readiness Competencies, students apply what they are learning in the classroom to the workplace.

Learning Outcomes: 1. Develop and apply interviewing and negotiating skills during the process of seeking and being hired into an internship. 2. Recall and explain the strengths and weaknesses of departments and work units from the hospitality operation in which they interned. 3. Describe and explain interactions with the hospitality operation's guests and the development of a positive service oriented attitude. 4. Compare and contrast the differences and similarities of management styles and leadership skill of the supervisors they worked with; evaluate the effectiveness of supervisor or manager; analyze which type of style or skill fits best with their style. 5. Identify new and different experiences encountered during the internship; distinguish the positive and negative aspects of the experience, and appraise these experiences as to their value to their future Hospitality management career. 6. Recall coursework related knowledge and apply and demonstrate this knowledge in areas of Human Resource Management, Finance, Management, Law, and other applicable areas in a hospitality organization. 7. Synthesize the total internship learning experience by completing comprehensive management reports. Credits: 1.00 or 2.00

HTM 31200 - Talent Management For Service Industries

Credit Hours: 3.00. Service organizations are labor-intensive, requiring effective talent management to be successful. Managers must be able to attract, develop, motivate, and retain employees to deliver exceptional service. Building on leadership skills and management principles, this course will emphasize the strategic role of human resource management with topics that span the lifecycle of a job (e.g., recruitment, selection, training, performance management, compensation, etc.). Students will explore the science behind effective talent management, developing knowledge and skills that will prepare them to manage a growing and diverse workforce.

Learning Outcomes: 1. Explain the importance of the various elements of strategic human resource management and their contribution to organizational performance. 2. Critique human resource practices by applying theories and research. 3. Create solutions that would address current human resource issues in service industries such as associate engagement, diversity, ethics, and employee well-being. Credits: 3.00

HTM 38110 - Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management plays a vital role in guiding service businesses to allocate resources efficiently, understand customer behavior, stay competitive, and achieve long-term sustainability and profitability. This course provides students with the theoretical foundation and practical applications of revenue management in service industries. The course cultivates students' revenue optimization mindset and analytical skills. Students will have the opportunity to earn an industry-recognized certification.

Learning Outcomes: 1. Describe the evolution of revenue management in lodging business. 2. Explain commonly used terms in revenue management. 3. Describe the duties and responsibilities of the hotel revenue manager. 4. Demonstrate knowledge of common revenue management activities. 5. Apply the concepts of constrained capacity, market segmentation, and differential pricing when setting prices. 6. Forecast demand. 7. Explain the trade-off between dilution and spoilage when allocating capacity. 8. Set Booking limits with overbooking policies. 9. Explain the role of distribution channels in market competition. 10. Apply revenue management fundamentals to other areas of lodging business such as to food and beverage and meeting and events in hotels. 11. Differentiate between ethical and unethical practices in revenue management. 12. Identify latest technologies used in revenue management. 13. Discuss contemporary issues affecting revenue management." Credits: 3.00

HTM 41100 - Hospitality And Tourism Law

Credit Hours: 3.00. Legal issues can damage or even destroy businesses. The primary goal of this course is to educate students to identify behaviors and situations that are likely to result in legal liability for themselves and their operation. By identifying potential legal liabilities, students will be able to develop strategies to reduce their exposure and better determine when to involve a lawyer. Topics include court procedures, civil rights, contracts, negligence, legal and ethical relationships with patrons, employment law, real estate law, ethics, and risk management. Students will use critical thinking and effective problem-solving to analyze cases and determine potential ways to reduce the likelihood of similar legal problems in the future.

Learning Outcomes: 1. Discuss the framework of the legal system and how a case progresses. 2. Analyze legal and ethical standards for hospitality and tourism enterprises including interactions with guests, other patrons, tenants, suppliers, and employees to determine potential consequences if they have not been met. 3. Analyze torts impacting hospitality and tourism enterprises and describe their legal impacts. 4. Describe the dynamics of risk management and develop strategies to mitigate losses. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise,

including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

HTM 49901 - Strategic Management In Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. By analyzing internal and external forces, students develop strategies to help a service organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy development and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of a service organization. The course is structured to enhance students' analytical, critical thinking, and communication skills by integrating their academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Integrate and apply prior knowledge areas from the HTM curriculum in developing a business. 2. Develop and analyze the feasibility, situational, and operational aspects of a hospitality and tourism business. 3. Select and implement an appropriate business model in development of a business plan. 4. Describe the characteristics of a successful business and apply that knowledge to mitigate situational and operational risks. 5. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting a business development plan to potential stakeholders. 6. Prepare and present a business development plan. Credits: 3.00

HTM 21800 - Creating Experiences For A Diverse Society

Credit Hours: 3.00. This course will provide students with knowledge and skills related to diversity, equity, and inclusion (DEI), and provide students an opportunity to actively increase their cultural competence to help them work with others effectively in professional settings. The course provides frameworks, terminology, and tools for engaging in productive conversations around difficult topics related to DEI. Students use critical and reflective thinking, as well as effective problem solving to create inclusive experiences for all stakeholders.

Learning Outcomes: 1. Define and apply terminology and concepts related to diversity, equity, and inclusion (DEI). 2. Develop awareness and knowledge of DEI best practices to create inclusive experiences for all stakeholders. 3. Demonstrate an understanding of issues related to DEI within the White Lodging-J.W. Marriott, Jr. School of Hospitality and Tourism Management disciplines. 4. Engage in inclusive and interdisciplinary collaborations. 5. Apply best practices to address and propose solutions to current DEI topics within students' academic disciplines. 6. Demonstrate effective oral, written, and visual communication. Credits: 3.00

HTM 25501 - Fundamentals Of Excel And Data Analytics In Service Industries

Credit Hours: 3.00. The proper application of data analytics is important for optimizing the performance of service enterprises. Spreadsheet programs make it easy to manage and visualize data as well as perform basic data analyses. Microsoft Excel is one of the primary tools used for business reporting and decision-making tasks. In this course, students will receive hands-on training in a wide range of Excel functionalities including using functions and formulas, working with tables, creating charts, and analyzing data using PivotTables. This course will use practical, real-world applications to train students how to make business decisions.

Learning Outcomes: 1. Apply built-in Excel functions and create formulas necessary to analyze data. 2. Apply data visualization techniques to identify and communicate business issues. 3. Demonstrate proficiency using Excel to formulate and solve business problems. Credits: 3.00

HTM 42200 - Hospitality Facilities Design And Management

Credit Hours: 3.00. The facility is the largest asset for most hospitality operations and profoundly impacts guest experience. How it is designed and managed can be the difference between operational success and failure. The primary goal of this course is to foster student understanding of facility design and physical plant maintenance. Students will learn standard language and concepts along with problem-solving and project management techniques to enable cost-effective decisions in creating a physical environment that maximizes the guest experience.

Learning Outcomes: 1. Explain how systems within a facility function and are maintained in a cost-effective, environmentally friendly manner that meets regulatory requirements and promotes a welcoming, safe environment for employees and guests. 2. Analyze a wide range of facility design and physical plant problems and improvement opportunities to develop cost-effective solutions using systematic problem-solving techniques. 3. Apply standard project management tools and techniques to design a hospitality facility space, including physical plant elements, that promotes a positive guest experience that is ergonomically friendly to guests and employees. Credits: 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

HTM 40000 - Career Mastery: Navigating Your Career And Professional Development Seminar

Credit Hours: 1.00. Successful professionals possess a strong sense of self and the ability to observe the world around them, reflecting, synthesizing, and responding effectively. As the capstone to the professional development curriculum, students have the ability to refine these skills through discussion and reflection in this seminar-style course. Guided by the National Association of Colleges and Employers (NACE) Career Readiness Competencies, this course focuses on honing various aspects of personal and professional development, with a focus on contemporary issues in the workplace, ensuring students are prepared to be effective leaders. Students will be confident, proactive, and well-prepared professionals with a mindset required to successfully transition into the professional world.

Learning Outcomes: 1. Demonstrate a strong sense of professional self-awareness, leadership competencies, and areas for future development. 2. Refine personal brand that best positions self in the competitive job market. 3. Critique complex workplace issues to formulate effective leadership strategies. 4. Formulate a career plan trajectory to achieve identified career goals post-graduation. Credits: 1.00

HTM 40200 - Hospitality And Tourism Industry Internship II

Credit Hours: 1.00. Career development is an ongoing process of refinement and reflection of professional aspirations as one moves along their career path accumulating work experience. As part of the professional development curriculum, and building on the HTM 30200 entry-level internship experience, this course provides students with a graduate-ready experience in their chosen field, focusing on leadership skill development. Through hands-on experiences and guided learning, students gain real-world professional experience while refining their leadership abilities. Students reflect on their performance to foster personal growth in preparedness for careers post-graduation.

Learning Outcomes: 1. Apply theoretical knowledge gained in the classroom to the

workplace. 2. Practice career readiness competencies as defined by National Association of Colleges and Employers (NACE) to entry-level management experience. 3. Demonstrate proficiency in effective leadership skills and styles relevant to an entry-level management position. 4. Assess leadership skill development and strengths through self-reflection. Credits: 1.00

HTM 18000 - Hospitality Operations

Credit Hours: 3.00. Hospitality leaders require a deep understanding of the fundamental principles and practical aspects of managing operations within the dynamic and fast-paced hospitality industry to effectively run a business. This course will address topics including principles of management, organizational structures, managerial decision-making, hospitality metrics, and the responsibilities of managers. Through these topics, the course will strengthen students' understanding of the hospitality industry as it exists today while preparing them for the industry of the future.

Learning Outcomes: 1. Describe the key principles of management. 2. Identify organizational structures, including brands, management, and ownership. 3. Compute key hospitality metrics. 4. Explain how work groups in major types of hospitality businesses interconnect. 5. Understand the responsibilities of leaders in hospitality operations. Credits: 3.00

HTM 18101 - The Union Club Hotel Experience

Credit Hours: 1.00. Hospitality businesses are complex operations requiring unique managerial approaches to deliver exceptional guest and employee experiences. The Union Club Hotel is ideally positioned to expose students to managerial roles in a multi-million-dollar asset. Students will shadow managers who oversee hotel departments and interact with corporate leaders through this experiential course while learning how managers ensure an exceptional guest experience, provide a positive employee experience, and execute efficient hospitality operations. The knowledge gained in this course is transferable to all hospitality businesses, making this course valuable for all.

Learning Outcomes: 1. Identify principles of management as demonstrated by managers of a hospitality operation. 2. Describe how various departments of a hospitality business interconnect to deliver the guest experience. 3. Describe the importance of fostering a positive work environment for hospitality employees. Credits: 1.00

HTM 35700 - Disruption And Innovation In Hospitality & Tourism

Credit Hours: 3.00. Hospitality and tourism businesses face unprecedented industry shifts requiring proactive leaders. Through this course students will develop an innovative mindset, rethink the status quo, and amplify their creative thinking in designing solutions to current and future business challenges.

Learning Outcomes: 1. Describe innovation theories and trends. 2. Explain how building and sustaining a culture of innovation is a competitive advantage. 3. Describe the core aspects of an end-to-end innovation process. 4. Develop and evaluate innovative solutions to product and service challenges. Credits: 3.00

HTM 38600 - Fundamentals Of Hotel Asset Management

Credit Hours: 3.00. The value of a hotel is based on both its operation and the real estate holding. A successful manager needs to understand the relationship between operations and the management of the real estate asset. Hotel asset management involves overseeing operating performance and real estate planning with the goal of achieving long-term profitability and enhancing the value of the hotel property. This course will introduce students to the principles and practices of hotel asset management including real estate management, contracts, as well as the planning and execution of hotel investments. Students with an interest in hospitality finance and real estate investment are encouraged to take graduate-level courses in this area and explore the finance and real estate minors following the successful completion of this course.

Learning Outcomes: 1. Explain the foundations and process of asset management. 2. Identify the key issues related to planning and managing real estate and physical assets. 3. Analyze the effects of contracts on hotel operations and asset value. 4. Apply financial theories and concepts in planning and executing hotel investments. Credits: 3.00

HTM 34200 - Financial Management For Service Industries

Credit Hours: 3.00. To create value for owners, managers need

to understand the implications of long-term investment and the importance of securing finance to ensure sustainable growth. The primary purpose of this course is to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, and capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Demonstrate proficiency in using Excel to model cash flows and calculate returns in the capital budgeting process. 3. Explain how the risk-return relationship affects cost of capital and stocks/bonds valuation. 4. Explain how capital structure affects firm value and dividend decisions. Credits: 3.00

HTM 44300 - Hospitality Operations Control And Analysis

Credit Hours: 3.00. To be successful, a business must maximize revenue and efficiently control costs. This course will equip students with the knowledge and skills needed to plan, analyze, and control service operations. Students will learn essential managerial skills such as establishing operational standards, forecasting sales, budgeting, controlling, and evaluating performance throughout the product cycle.

Learning Outcomes: 1. Identify and monitor operational standards at each stage of the product cycle. 2. Analyze financial statements to identify the strengths and weaknesses of a business. 3. Make business decisions based on the cost structure and business environment. 4. Forecast future demand based on historical and advanced booking data. 5. Develop operational plans and incorporate in operations budgeting. Credits: 3.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

Optional Concentrations

Other Departmental/Program Course Requirements (36-43 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ANTH 10000 - Being Human: Introduction To Anthropology (UCC: BSS)

Credit Hours: 3.00. Introduces anthropology's holistic approach to human nature and behavior. This course uses the tools of cultural, biological, archaeological, and linguistic anthropology to follow the human journey of uniformity and diversity through time and across space.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Describe the basic concepts and applications of anthropology, including biological, cultural, archaeological, and linguistic anthropology. 2. Recognize the deep social and biological histories that have shaped contemporary life. 3. Examine processes of ongoing biological and social change that influence the environment, social organization, language, and other aspects of the world they experience. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of

differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the

causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MA 15555 - Quantitative Reasoning (UCC: QR)

Credit Hours: 3.00. This course will cover important mathematical ideas, including proportion, weighted averages, linear models, exponential models, basic probability and statistics, and some algebra, by using concrete real-world problems. It will not be a prerequisite for any other mathematics course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn proportion and how to apply it to unit conversions, percentage, sales tax and discounts, and inflation. 2. Learn weighted averages and how they apply to the consumer price index and other examples. 3. Learn paradoxes involving weighted averages. 4. Learn linear models and how they apply to electricity bills, income taxes, and climate change. 5. Learn exponential growth and how it applies to compound interest and other financial issues. 6. Learn basic probability theory and how it applies to insurance and games of chance. 7. Learn how algebra is related to the other things learned. Credits: 3.00

Electives (8-16 credits)

Supplemental Lists

Grade Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HTM 10010 - Exploring Transformational Experiences In Hospitality And Tourism

Credit Hours: 1.00. In an age where experiences have become the new currency, businesses must adapt and thrive in the experience economy to succeed. This course introduces students to the concept of transformational experiences within the experience economy, providing them with the knowledge and skills needed to navigate this dynamic landscape. Students will gain a better understanding of where their passions lie within the broader scope of hospitality and tourism, preparing them for academic and career-related success.

Learning Outcomes: 1. Describe transformational experiences that drive business success in the experience economy. 2. Outline current and trending transformational experiences in hospitality, tourism, and affiliated industries. 3. Identify potential career paths within hospitality, tourism, and affiliated industries. Credits: 1.00

HTM 17300 - Tourism Systems

Credit Hours: 3.00. Tourism is a global phenomenon impacting destination communities, incorporating a range of hospitality-related businesses and organizations, and enriching the lives of tourists and residents alike. This course examines key elements of tourism systems, how these elements interact to deliver unique travel experiences, and how destination stakeholders can use tourism for sustainable development. The course will strengthen students' understanding of tourism systems while preparing them to successfully engage in it for a variety of career options in tourism and hospitality industries.

Learning Outcomes: 1. Explain the tourism system including the roles of travelers, tourism businesses and destinations, and other tourism system components. 2. Describe the impacts of tourism and the basic components of sustainable tourism practices. 3. Identify the key principles of destination marketing and management. 4. Describe key factors that influence consumer travel behavior including

personal, interpersonal, and environmental factors. 5. Describe how to apply experience design principles to develop tourism products, services, and experiences. Credits: 3.00

MA 15300 - College Algebra (UCC: QR)

Credit Hours: 3.00. Exponents and radicals; algebraic and fractional expressions. Equations and inequalities, systems of linear equations. Polynomial, exponential, and logarithmic functions. Not open to students with credit in MA 15900. Not available for credit toward graduation in the School of Science. CTL:IMA 1601 College Algebra

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Correctly perform algebraic operations, to solve algebraic equations of degree two, to perform operations with exponents and radicals. 2. Sketch graphs of certain polynomial, exponential and logarithmic functions. 3. Solve systems of equations and inequalities. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 15555 - Quantitative Reasoning (UCC: QR)

Credit Hours: 3.00. This course will cover important mathematical ideas, including proportion, weighted averages, linear models, exponential models, basic probability and statistics, and some algebra, by using concrete real-world problems. It will not be a prerequisite for any other mathematics course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn proportion and how to apply it to unit conversions, percentage, sales tax and discounts, and inflation. 2. Learn weighted averages and how they apply to the consumer price index and other examples. 3. Learn paradoxes involving weighted averages. 4. Learn linear models and how they apply to electricity bills, income taxes, and climate change. 5. Learn exponential growth and how it applies to compound interest and other financial issues. 6. Learn basic probability theory and

how it applies to insurance and games of chance. 7. Learn how algebra is related to the other things learned. Credits: 3.00

HTM 18000 - Hospitality Operations

Credit Hours: 3.00. Hospitality leaders require a deep understanding of the fundamental principles and practical aspects of managing operations within the dynamic and fast-paced hospitality industry to effectively run a business. This course will address topics including principles of management, organizational structures, managerial decision-making, hospitality metrics, and the responsibilities of managers. Through these topics, the course will strengthen students' understanding of the hospitality industry as it exists today while preparing them for the industry of the future.

Learning Outcomes: 1. Describe the key principles of management. 2. Identify organizational structures, including brands, management, and ownership. 3. Compute key hospitality metrics. 4. Explain how work groups in major types of hospitality businesses interconnect. 5. Understand the responsibilities of leaders in hospitality operations. Credits: 3.00

13-16 Credits

Spring 1st Year

CSR 28200 - Customer Relations Management

Credit Hours: 3.00. A course that provides insight into the structure and working of customer relations management and its role in business and government agency. Analysis of how consumer needs, complaints, and education are handled. Customer relations' management in the real world and techniques used in managing customer relations toward the goal of maximizing customer satisfaction. This course has a real-world focus and is more applied than the usual introductory course.

Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

HTM 14100 - Financial Accounting For The Service Industries

Credit Hours: 3.00. In today's ever-changing service industry, a strong grasp of financial accounting is crucial for effective financial management and business success. In this course, students will learn the practical skills needed to create accurate financial statements, analyze financial data, and make informed decisions.

Learning Outcomes: 1. Demonstrate an understanding of fundamental accounting principles, including the double-entry system and accrual accounting, to accurately record financial transactions and prepare financial statements. 2. Demonstrate proficiency in preparing, analyzing, and interpreting financial statements, such as income statements, balance sheets, and cash flow statements. 3. Demonstrate ability to accurately adjust for depreciation and amortization. 4. Explain and demonstrate the accounting procedures for merchandising, inventories, cost of goods, payroll, and receivables and payables. 5. Explain the principles of internal control and the role of ethics in financial reporting. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4.

Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

HTM 18101 - The Union Club Hotel Experience

Credit Hours: 1.00. Hospitality businesses are complex operations requiring unique managerial approaches to deliver exceptional guest and employee experiences. The Union Club Hotel is ideally positioned to expose students to managerial roles in a multi-million-dollar asset. Students will shadow managers who oversee hotel departments and interact with corporate leaders through this experiential course while learning how managers ensure an exceptional guest experience, provide a positive employee experience, and execute efficient hospitality operations. The knowledge gained in this course is transferable to all hospitality businesses, making this course valuable for all.

Learning Outcomes: 1. Identify principles of management as demonstrated by managers of a hospitality operation. 2. Describe how various departments of a hospitality business interconnect to deliver the guest experience. 3. Describe the importance of fostering a positive work environment for hospitality employees. Credits: 1.00

16 Credits

Fall 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

ANTH 10000 - Being Human: Introduction To Anthropology (UCC: BSS)

Credit Hours: 3.00. Introduces anthropology's holistic approach to human nature and behavior. This course uses the tools of cultural, biological, archaeological, and linguistic anthropology to follow the human journey of uniformity and diversity through time and across space.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Describe the basic concepts and applications of anthropology, including biological, cultural, archaeological, and linguistic anthropology. 2. Recognize the deep social and biological histories that have shaped contemporary life. 3. Examine processes of ongoing biological and social change that influence the environment, social organization, language, and other aspects of the world they experience. Credits: 3.00

HTM 24100 - Managerial Accounting In Service Industries

Credit Hours: 3.00. Interpreting, analyzing, and making decisions based on financial data are core management competencies critical for business success. This course is designed to enable students to interpret and analyze financial data within dynamic and fast-paced service industries. This course focuses on the application of accounting principles, financial tools, and decision-making strategies in service industries.

Learning Outcomes: 1. Analyze financial statements to evaluate company performance and make recommendations. 2. Utilize cost behavior to make pricing decision. 3. Prepare financial budgets and conduct variance analysis. 4. Prepare the statement of cash flows and develop strategies for cash management. 5. Use time value of money to make investment decisions. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060

Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

HTM 25501 - Fundamentals Of Excel And Data Analytics In Service Industries

Credit Hours: 3.00. The proper application of data analytics is important for optimizing the performance of service enterprises. Spreadsheet programs make it easy to manage and visualize data as well as perform basic data analyses. Microsoft Excel is one of the primary tools used for business reporting and decision-making tasks. In this course, students will receive hands-on training in a wide range of Excel functionalities including using functions and formulas, working with tables, creating charts, and analyzing data using PivotTables. This course will use practical, real-world applications to train students how to make business decisions.

Learning Outcomes: 1. Apply built-in Excel functions and create formulas necessary to analyze data. 2. Apply data visualization techniques to identify and communicate business issues. 3. Demonstrate proficiency using Excel to formulate and solve business problems. Credits: 3.00

HTM 20000 - Career Exploration And Development Seminar

Credit Hours: 1.00. Successfully pursuing a career takes time and intentional effort to build the required expertise to compete

in today's job market. As part of the professional development curriculum, this course is designed to equip students with essential skills and knowledge to start the journey in their chosen careers. Through interactive discussions, practical exercises, and guest speakers, students will gain insights into various aspects of career planning, job search strategies, personal branding, and professional growth. The course aims to help students become confident, proactive, and well-prepared professionals as they begin their time at university, while aligning with the National Association of Colleges and Employers Career Readiness Competencies.

Learning Outcomes: 1. Identify personal strengths, skills, and interests using the Strengths Finder Assessment and describe how these align with the National Association of Colleges and Employers Career Readiness Competencies. 2. Construct a professional profile, identifying areas for development in building a personal brand. 3. Explore competencies sought by employers for an internship or entry-level position and how they link to individual skills and strengths. 4. Demonstrate proficiency in a professional interview. Credits: 1.00

HTM 29001 - Food And Beverage Management

Credit Hours: 3.00. Food and beverage (F&B) operations are integral to the hospitality and tourism industry. This course equips students with the foundational knowledge needed to directly manage commercial and non-commercial F&B operations and successfully partner with external F&B providers in lodging, events, tourism, and other hospitality settings. Students are introduced to how F&B processes are integrated with marketing, procurement, and financial management. Students must pass accredited industry recognized certification exams.

Learning Outcomes: 1. Describe food and beverage (F&B) operations terminology, processes, equipment, and technology. 2. Demonstrate management competency in responsible and safe service of food and beverages by passing accredited exams in food protection management and safe service of alcohol. 3. Demonstrate how menu development and management contribute to the success of F&B operations. 4. Analyze ethical dilemmas in F&B operations. Credits: 3.00

16 Credits

Spring 2nd Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

HTM 21200 - Leading For Success In Service Industries

Credit Hours: 3.00. Effective leaders possess knowledge of organizational behavior and skills which provide the capacity to enhance organizational performance. Drawing upon leadership and organizational behavior theories, this course will provide students with the tools necessary to lead teams in service industries. Areas of focus include understanding individual differences and team dynamics, motivating and developing employees, effective decision-making, communication, influence, diversity, and leading change. This course will include preparation for a leadership development certificate, such as the Dale Carnegie Leadership certificate, to be earned upon successful completion of the course.

Learning Outcomes: 1. Describe the roles of managers and leaders in hospitality and tourism and the concepts of organizational efficiency and effectiveness. 2. Identify and explain basic management principles of planning, organizing, directing and controlling as applied to the hospitality and tourism business. 3. Identify basic leadership skills that effective managers in the hospitality and tourism industry possess, including business communication, motivation, decision making, and change management. 4. Identify contemporary management and leadership issues facing the hospitality and tourism industry. 5. Explain the basics of human behavior in organizations, including individual behavior and team dynamics. 6. Discriminate

between ethical and non-ethical behaviors on the part of individuals inside and outside the organization. 7. Analyze the impacts of culture and diversity on organizations. Credits: 3.00

HTM 23100 - Marketing In Service Industries

Credit Hours: 3.00. Marketing plays a crucial role in service industries, addressing unique service challenges. Its importance lies in engaging customers, establishing trust and credibility, distinguishing from competitors, boosting revenue, and fostering sustainable growth and success. This course equips students with a customer-centric approach to service industry marketing, emphasizing the integral role of marketing in a service organization's strategic planning. The course exposes students to service marketing principles, components, and marketing practices.

Learning Outcomes: 1. Explain the unique challenges in marketing and managing services. 2. Describe the role of marketing in supporting the strategic direction of a service organization. 3. Evaluate the role of the service marketing mix in solving marketing related problems and promoting the overall success for service organizations. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

HTM 21800 - Creating Experiences For A Diverse Society

Credit Hours: 3.00. This course will provide students with knowledge and skills related to diversity, equity, and inclusion (DEI), and provide students an opportunity to actively increase their cultural competence to help them work with others effectively in professional settings. The course provides frameworks, terminology, and tools for engaging in productive conversations around difficult topics related to DEI. Students use critical and reflective thinking, as well as effective problem solving to create inclusive experiences for all stakeholders.

Learning Outcomes: 1. Define and apply terminology and concepts related to diversity, equity, and inclusion (DEI). 2. Develop awareness and knowledge of DEI best practices to create inclusive experiences for all stakeholders. 3. Demonstrate an understanding of issues related to DEI within the White Lodging-J.W. Marriott, Jr. School of Hospitality and Tourism Management disciplines. 4. Engage in inclusive and interdisciplinary collaborations. 5. Apply best practices to address and propose solutions to current DEI topics within students' academic disciplines. 6. Demonstrate effective oral, written, and visual communication. Credits: 3.00

14 Credits

Summer 2nd Year

HTM 30200 - Hospitality And Tourism Industry Internship I

Credit Hours: 1.00 or 2.00. Opportunities for learning through professional work experience that is practical, meaningful, and aligned with career aspirations are important for career development, planning, and goal setting. As part of the professional development curriculum, this internship course provides students with entry-level experience within the hospitality and tourism industry, broadening their exposure and understanding of the industry to explore potential career paths. Guided by the Ray Kavanagh Career Center and the National Association of Colleges and Employers (NACE) Career Readiness Competencies, students apply what they are

learning in the classroom to the workplace.

Learning Outcomes: 1. Develop and apply interviewing and negotiating skills during the process of seeking and being hired into an internship. 2. Recall and explain the strengths and weaknesses of departments and work units from the hospitality operation in which they interned. 3. Describe and explain interactions with the hospitality operation's guests and the development of a positive service oriented attitude. 4. Compare and contrast the differences and similarities of management styles and leadership skill of the supervisors they worked with; evaluate the effectiveness of supervisor or manager; analyze which type of style or skill fits best with their style. 5. Identify new and different experiences encountered during the internship; distinguish the positive and negative aspects of the experience, and appraise these experiences as to their value to their future Hospitality management career. 6. Recall coursework related knowledge and apply and demonstrate this knowledge in areas of Human Resource Management, Finance, Management, Law, and other applicable areas in a hospitality organization. 7. Synthesize the total internship learning experience by completing comprehensive management reports. Credits: 1.00 or 2.00

1-2 credits

Fall 3rd Year

CSR 48400 - Consumer Investment And Savings Decisions

Credit Hours: 3.00. A survey of consumer investment alternatives, with emphasis on financial assets.

Learning Outcomes: 1. Analyze investment decisions and investment risk management through portfolio management, capital market equilibrium and asset pricing theories. Credits: 3.00

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

STAT 22500 - Introduction To Probability Models

Credit Hours: 3.00. An introduction to basic probability. Emphasis is placed on formulation of models and applications. Probability calculus, standard distributions, random variables, and moments. Credit cannot be given for more than one of STAT 22500, 31100, or 41600.

Learning Outcomes: 1. Understand basic terminology, set theory, and counting rules related to probability. 2. Identify various discrete and continuous probability models/distributions and apply them to answer probability questions. 3. Understand the Normal distribution and how to use the Standard Normal Table. 4. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 5. Have a foundation in statistical methodology including the basics of hypothesis testing. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and

several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

HTM 38600 - Fundamentals Of Hotel Asset Management

Credit Hours: 3.00. The value of a hotel is based on both its operation and the real estate holding. A successful manager needs to understand the relationship between operations and the management of the real estate asset. Hotel asset management involves overseeing operating performance and real estate planning with the goal of achieving long-term profitability and enhancing the value of the hotel property. This course will introduce students to the principles and practices of hotel asset management including real estate management, contracts, as well as the planning and execution of hotel investments. Students with an interest in hospitality finance and real estate investment are encouraged to take graduate-level courses in this area and explore the finance and real estate minors following the successful completion of this course.

Learning Outcomes: 1. Explain the foundations and process of asset management. 2. Identify the key issues related to planning and managing real estate and physical assets. 3. Analyze the effects of contracts on hotel operations and asset value. 4. Apply financial theories and concepts in planning and executing hotel investments. Credits: 3.00

HTM 34200 - Financial Management For Service Industries

Credit Hours: 3.00. To create value for owners, managers need to understand the implications of long-term investment and the importance of securing finance to ensure sustainable growth. The primary purpose of this course is to understand the role of financial management, to learn analytic concepts and managerial tools for making capital investment decisions and to become familiar with major financial instruments and concepts such as time value of money, risk-return, capital budgeting, cost of capital, and capital structure.

Learning Outcomes: 1. Identify financial management roles and describe the agency problem in hospitality and tourism businesses. 2. Demonstrate proficiency in using Excel to model cash flows and calculate returns in the capital budgeting process. 3. Explain how the risk-return relationship affects cost of capital and stocks/bonds valuation. 4. Explain how capital structure affects firm value and dividend decisions. Credits: 3.00

15 Credits

Spring 3rd Year

HTM 31200 - Talent Management For Service Industries

Credit Hours: 3.00. Service organizations are labor-intensive, requiring effective talent management to be successful. Managers must be able to attract, develop, motivate, and retain employees to deliver exceptional service. Building on leadership skills and management principles, this course will emphasize the strategic role of human resource management with topics that span the lifecycle of a job (e.g., recruitment, selection, training, performance management, compensation, etc.). Students will explore the science behind effective talent management, developing knowledge and skills that will prepare them to manage a growing and diverse workforce.

Learning Outcomes: 1. Explain the importance of the various elements of strategic human resource management and their contribution to organizational performance. 2. Critique human resource practices by applying theories and research. 3. Create solutions that would address current human resource issues in service industries such as associate engagement, diversity, ethics, and employee well-being. Credits: 3.00

HTM 38110 - Revenue Management In Service Industries

Credit Hours: 3.00. Revenue management plays a vital role in guiding service businesses to allocate resources efficiently, understand customer behavior, stay competitive, and achieve long-term sustainability and profitability. This course provides students with the theoretical foundation and practical applications of revenue management in service industries. The course cultivates students' revenue optimization mindset and analytical skills. Students will have the opportunity to earn an industry-recognized certification.

Learning Outcomes: 1. Describe the evolution of revenue management in lodging business. 2. Explain commonly used terms in revenue management. 3. Describe the duties and responsibilities of the hotel revenue manager. 4. Demonstrate knowledge of common revenue management activities. 5. Apply the concepts of constrained capacity, market segmentation, and differential pricing when setting prices. 6. Forecast demand. 7. Explain the trade-off between dilution and spoilage when allocating capacity. 8. Set Booking limits with overbooking policies. 9. Explain the role of distribution channels in market competition. 10. Apply revenue management fundamentals to other areas of lodging business such as to food and beverage and meeting and events in hotels. 11. Differentiate between ethical and unethical practices in revenue management. 12. Identify latest technologies used in revenue management. 13. Discuss contemporary issues affecting revenue management." Credits: 3.00

HTM 35700 - Disruption And Innovation In Hospitality & Tourism

Credit Hours: 3.00. Hospitality and tourism businesses face unprecedented industry shifts requiring proactive leaders. Through this course students will develop an innovative mindset, rethink the status quo, and amplify their creative thinking in designing solutions to current and future business challenges.

Learning Outcomes: 1. Describe innovation theories and trends. 2. Explain how building and sustaining a culture of innovation is a competitive advantage. 3. Describe the core aspects of an end-to-end innovation process. 4. Develop and evaluate innovative solutions to product and service challenges. Credits: 3.00

15 Credits

Summer 3rd Year

HTM 40200 - Hospitality And Tourism Industry Internship II

Credit Hours: 1.00. Career development is an ongoing process of refinement and reflection of professional aspirations as one moves along their career path accumulating work experience. As part of the professional development curriculum, and building on the HTM 30200 entry-level internship experience, this course provides students with a graduate-ready experience in their chosen field, focusing on leadership skill development. Through hands-on experiences and guided learning, students gain real-world professional experience while refining their leadership abilities. Students reflect on their performance to foster personal growth in preparedness for careers post-graduation.

Learning Outcomes: 1. Apply theoretical knowledge gained in the classroom to the workplace. 2. Practice career readiness competencies as defined by National Association of Colleges and Employers (NACE) to entry-level management experience. 3. Demonstrate proficiency in effective leadership skills and styles relevant to an entry-level management position. 4. Assess leadership skill development and strengths through self-reflection. Credits: 1.00

1 credit

Fall 4th Year

HTM 41100 - Hospitality And Tourism Law

Credit Hours: 3.00. Legal issues can damage or even destroy businesses. The primary goal of this course is to educate students to identify behaviors and situations that are likely to result in legal liability for themselves and their operation. By identifying potential legal liabilities, students will be able to develop strategies to reduce their exposure and better determine when to involve a lawyer. Topics include court procedures, civil rights, contracts, negligence, legal and ethical relationships with patrons, employment law, real estate law, ethics, and risk management. Students will use critical thinking and effective problem-solving to analyze cases and determine potential ways to reduce the likelihood of similar legal problems in the future.

Learning Outcomes: 1. Discuss the framework of the legal system and how a case progresses. 2. Analyze legal and ethical standards for hospitality and tourism enterprises including interactions with guests, other patrons, tenants, suppliers, and employees to determine potential consequences if they have not been met. 3. Analyze torts impacting hospitality and tourism enterprises and describe their legal impacts. 4. Describe the dynamics of risk management and develop strategies to mitigate losses. Credits: 3.00

HTM 40000 - Career Mastery: Navigating Your Career And Professional Development Seminar

Credit Hours: 1.00. Successful professionals possess a strong sense of self and the ability to observe the world around them, reflecting, synthesizing, and responding effectively. As the capstone to the professional development curriculum, students have the ability to refine these skills through discussion and reflection in this seminar-style course. Guided by the National Association of Colleges and Employers (NACE) Career Readiness Competencies, this course focuses on honing various aspects of personal and professional development, with a focus on contemporary issues in the workplace, ensuring students are prepared to be effective leaders. Students will be confident, proactive, and well-prepared professionals with a mindset required to successfully transition into the professional world.

Learning Outcomes: 1. Demonstrate a strong sense of professional self-awareness, leadership competencies, and areas for future development. 2. Refine personal brand that best positions self in the competitive job market. 3. Critique complex workplace issues to formulate effective leadership strategies. 4. Formulate a career plan trajectory to achieve identified career goals post-graduation. Credits: 1.00

HTM 44300 - Hospitality Operations Control And Analysis

Credit Hours: 3.00. To be successful, a business must maximize revenue and efficiently control costs. This course will equip students with the knowledge and skills needed to plan, analyze, and control service operations. Students will learn essential managerial skills such as establishing operational standards, forecasting sales, budgeting, controlling, and evaluating performance throughout the product cycle.

Learning Outcomes: 1. Identify and monitor operational standards at each stage of the product cycle. 2. Analyze financial statements to identify the strengths and weaknesses of a business. 3. Make business decisions based on the cost structure and business environment. 4. Forecast future demand based on historical and advanced booking data. 5. Develop operational plans and incorporate in operations budgeting. Credits: 3.00

15-17 Credits

Spring 4th Year

HTM 49901 - Strategic Management In Service Industries

Credit Hours: 3.00. Effective management of organizational resources in a coherent and seamless manner is necessary to realize a competitive advantage. By analyzing internal and external forces, students develop strategies to help a service organization realize its goals and objectives. Through the application of concepts, tools, and principles of strategy development and competitive advantage, this course emphasizes strategy formulation, implementation, and evaluation to ensure the long-term success of a service organization. The course is structured to enhance students' analytical, critical thinking, and communication skills by integrating their academic and experiential knowledge from previous functional courses such as accounting, finance, marketing, operations, human resources, etc.

Learning Outcomes: 1. Integrate and apply prior knowledge areas from the HTM curriculum in developing a business. 2. Develop and analyze the feasibility, situational, and operational aspects of a hospitality and tourism business. 3. Select and implement an appropriate business model in development of a business plan. 4. Describe the characteristics of a successful business and apply that knowledge to mitigate situational and operational risks. 5. Evaluate between ethical and unethical behaviors on the parts of individuals when preparing and presenting a business development plan to potential stakeholders. 6. Prepare and present a business development plan. Credits: 3.00

HTM 42200 - Hospitality Facilities Design And Management

Credit Hours: 3.00. The facility is the largest asset for most hospitality operations and profoundly impacts guest experience. How it is designed and managed can be the difference between operational success and failure. The primary goal of this course is to foster student understanding of facility design and physical plant maintenance. Students will learn standard language and concepts along with problem-solving and project management techniques to enable cost-effective decisions in creating a physical environment that maximizes the guest experience.

Learning Outcomes: 1. Explain how systems within a facility function and are maintained in a cost-effective, environmentally friendly manner that meets regulatory requirements and promotes a welcoming, safe environment for employees and guests. 2. Analyze a wide range of facility design and physical plant problems and improvement opportunities to develop cost-effective solutions using systematic problem-solving techniques. 3. Apply standard project management tools and techniques to design a hospitality facility space, including physical plant elements, that promotes a positive guest experience that is ergonomically friendly to guests and employees. Credits: 3.00

13-14 Credits

Human Resource Development, BS

About the Program

Degree Requirements

Departmental/Program Major Requirements (60 credits)

Required Major Courses (45 credits)

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for

identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

TLI 31400 - Leading Innovation In Organizations

Credit Hours: 3.00. This course provides the foundation for understanding the manner in which companies capture innovation and use it to set themselves apart from competitors. Topics covered include the attributes of organizations that are successful in fostering a culture of innovation; the characteristics and roles of leaders and members in innovative organizations; managerial processes and organizational systems that facilitate the successful development, commercialization, and adoption of innovative technologies, products, and services; and methods used to measure innovation-related outcomes.

Learning Outcomes: 1. Describe the characteristics of successful innovations. 2. Explain how innovations develop from ideas to successful outcomes. 3. Analyze practices and strategies that lead to the successful development and adoption of innovations. 4. Communicate how innovation strategies help organizations succeed in competitive markets. 5. Identify managerial behaviors that foster a culture of innovation among employees. 6. Differentiate the attributes of successful leaders and employees in innovative organizations. 7. Analyze methods used to measure innovation-related outcomes. Credits: 3.00

TLI 25500 - Foundations Of Human Resource Development

Credit Hours: 3.00. Much has been discussed about the importance of people in organizations, difficulties within organizations, and challenges faced by today's organizations. This course covers the field of human resource development (HRD) as an important area of practice within organizations. The course provides an introduction to HRD theories, principles, concepts, and practices. It provides foundations through the study of history, current paradigms, and perspectives on the future of the field of HRD while specifically focusing on training and development, organization development, and career development as organizational functions within HRD.

Learning Outcomes: 1. Conduct a learning assessment. 2. Conduct a performance assessment. 3. Write training performance improvement objectives. 4. Describe core HRD functions. 5. Describe methods of HRD program evaluation. Credits: 3.00

TLI 35510 - Training And Talent Development

Credit Hours: 3.00. This course is designed to develop theoretical and applied perspectives on needs assessment, design, development, delivery, and evaluation of training and development in organizational contexts. Emphasis is placed on assessing learning and performance outcomes throughout the training and development process. Implication of training to talent development are also highlighted in a highly automated workplace.

Learning Outcomes: 1. Conduct a training needs assessment. 2. Analyze job tasks for purposes of planning training activities. 3. Write training learning objectives. 4. Describe an instructional system design process. 5. Describe methods of training program evaluation. 6. Identify talent development approaches in a digitalized economy. Credits: 3.00

TLI 35520 - Organization Development And Change

Credit Hours: 3.00. This course provides an introduction to

major theories, concepts, skills and techniques for the practice of organization development processes and interventions using a consultancy approach. Implications for organizational change are integrated as part of an OD effort.

Learning Outcomes: 1. Describe the historical roots and theoretical underpinnings of organizational development. 2. Apply the action research model for professional practice. 3. Effectively participate in small groups. 4. Identify intervention strategies at the individual, small group, and large systems levels. 5. Conduct organization development analysis. Credits: 3.00

TLI 35530 - Strategic Human Resources

Credit Hours: 3.00. This course equips you with the skills to lead strategic human resource initiatives, enhancing your understanding of how HR strategy impacts organizational performance. Strategic Human Resources involves aligning HR practices with organizational goals to optimize the value of human capital. As future HR professionals, you will learn to contribute significantly to strategic planning and organizational success by leveraging human talent strategically and effectively.

Learning Outcomes: 1. Design and execute HR strategies that align with organizational goals and enhance overall performance. 2. Assess how various HR practices contribute to achieving strategic objectives and improving organizational outcomes. 3. Apply HR strategies to various case studies from actual company/industry scenarios to address key business issues and leverage human capital effectively. 4. Gain a deep understanding of the principles and theories underlying strategic HR and their application in real-world scenarios. 5. Identify and propose solutions to current strategic business issues faced by HR professionals in today's dynamic workplace. Credits: 3.00

TLI 35560 - Employment And Labor Law For The Human Resource Professionals

Credit Hours: 3.00. This course provides a foundation for understanding the impact of labor laws and legal issues in organizations. Topics include corporate social responsibility, employment law, environmental issues, conflict resolution, and global challenges.

Learning Outcomes: 1. Select and apply legally and practically appropriate staffing techniques according to basic principles of validity and reliability. 2. Articulate the value of employee training, development, job design, and job enrichment. 3. Summarize basic components of compensation plans and performance evaluation systems, assess potential deficiencies, and compare elements as they relate to organizational objectives. 4. Apply major labor laws to employment practices in employee relations, health, safety and security, and to consider the connection between labor relations practices and outcomes. 5. Articulate unique challenges throughout HRM related to practice in public, private, and non-profit sectors. 6. Compare HRM practices and policies from varying perspectives, evaluate source credibility, and draw conclusions based on that information. Credits: 3.00

TLI 45570 - Global Human Resources

Credit Hours: 3.00. This course prepares students to lead human resource activities within a global, technology-driven economy and business environment. Topics include recruitment, training and development processes, cultural issues, policies and regulations within a global and international context.

Learning Outcomes: 1. Identify the main differences between domestic and international human resources. 2. Understand the challenges of international business dynamics on international human resources and the procedures for preparing employees for international assignments. 3. Understand how managing expatriates helps to improve their performance and minimize their business failures in international assignments. 4. Recognize that training and development of expatriates is a key factor for their success in their assignments. 5. Understand the complexity of international human resources and the need

for staffing international human resources in accordance to the models of business organizations. 6. Recognize the challenges of repatriation of expatriates and develop the skill to minimize their stress in the parent country organizations. 7. Recognize the need for balancing the process international human resource adaptation and standardization in the host country. 8. Identify relevant theories on performance management in the context of international human resources. 9. Develop intercultural knowledge and competence. Credits: 3.00

TLI 45580 - Human Resource Information Systems And People Analytics

Credit Hours: 3.00. This class surveys Human Resource Information Systems (HRIS) to understand how they facilitate communication processes, policy implementations and change management. Big data is transforming how firms recruit and develop talent and this course introduces concepts and methods for making better through people analytics.

Learning Outcomes: 1. Translate the origins of HR Information Technology to an organization; and infer the need to obtain involvement and commitment from others to set in place mechanisms to affect successful Human Resources Information System Programs and strategies. 2. Develop an understanding of basic systems and the criteria for success in using HR software in organizations. 3. Identify HR Information Systems trends. 4. Detail various approaches to Human Resources Information systems design, selection and implementation and define characteristics of current Human Resource Information technology implementation strategies. 5. Recognize HR Information System and its relationship with compliance with federal and state regulations/Laws. 6. Explain benefits of new technologies in recruiting and training in individual development of employees. 7. Describe and discuss the various HR Portal and associated programs and their associated values, costs, and benefits to the organization. 8. Students will employ statistical software to conduct quantitative analyses, for example to predict the potential of applicants to improve hiring decisions or to evaluate the effectiveness of training and talent development programs. 9. Students will learn how to manage the workforce and how to take advantage of analytics in their decision making process. Credits: 3.00

TLI 31500 - New Product Development

Credit Hours: 3.00. This course introduces the process of technological innovation and new product development from concept to commercialization. Topics covered include ideation, R&D, prototyping (design and modeling), testing for quality, the patent process, intellectual property rights, marketing and cost evaluation.

Learning Outcomes: 1. Describe the process of innovation as it relates to new product development. 2. Identify quality standards and testing procedures for new products. 3. Describe the patent process. 4. Explain methods for protecting domestic and international intellectual property rights. 5. Describe the process for conducting market research. Credits: 3.00

TLI 35570 - Job Analysis And Job Design

Credit Hours: 3.00. This course demonstrates procedures for analyzing tasks related to specific jobs. Topics include collecting occupational data and information, the relevance of job analysis on individual and organizational performance, impact on training and development, and associated legal issues.

Learning Outcomes: 1. Explain the background and progression of job analysis techniques. 2. Collect information about jobs and develop an organized job analysis report. 3. Conduct job analysis. 4. Effectively utilize the Dictionary of Occupational Titles and O*NET to gain occupational information. 5. Recognize HR Information System and its relationship with compliance with federal and state

regulations/Laws. 6. Analyze jobs within an organization for the purpose of developing training or recommending other performance interventions. 7. Demonstrate various uses of job analysis. 8. Articulate the role of a job analysis in the improvement of organizational performance. Credits: 3.00

TLI 35580 - The Individual And Organizational Performance

Credit Hours: 3.00. This course develops an understanding of the principles and theoretical foundations of individual and organizational performance management. Emphasis is placed on the perspectives, methodology, and theoretical frameworks as well as applications for performance management from the perspective of human resources professionals.

Learning Outcomes: 1. Develop an understanding of the principles and theoretical foundations of individual and organizational performance management. 2. Identify and analyze performance problems in an organizational system. 3. Identify and evaluate interventions in performance improvement at different levels (individual, team/process and organizational). 4. Understand human resource approaches to individual and organizational performance management. 5. Examine various technologies for managing individual and organizational performance. Credits: 3.00

TLI 45560 - Professional Internship In Human Resources

Credit Hours: 3.00. The undergraduate internship course is designed as a culminating learning experience for students nearing graduation. Students have an opportunity to seek out practical work experience related to human resources to use knowledge acquired in the classroom. The course will serve as a professional development opportunity helping students reflect and build upon their experiences gained through the required 500-hours human resources related work.

Learning Outcomes: 1. Learn and grow personally and professionally from an internship experience. 2. Express gained competencies and skills through evidence and critical reflection. 3. Receive, evaluate and apply constructive performance feedback and evaluation, as assessed by the internship supervisor. 4. Understand one's self in a professional context. 5. Integrate HRD theory and professional practice. Credits: 3.00

TLI 45590 - Foundations Of Human Resources Capstone

Credit Hours: 3.00. This course synthesizes all of the required and secondary content areas described in the SHRM HR Curriculum Guidelines. Students will prepare for the SHRM Certified Professional (SHRM-CP) exam while demonstrating their accumulated knowledge and in the area of human resources.

Learning Outcomes: 1. Reflect on the entire HR-related areas. 2. Synthesize all HR-related knowledge, skills, and competencies. 3. Engage in test-taking for obtaining licensure. 4. Demonstrate an understanding of all HR-related concepts, terms, applications, and processes. 5. Successfully complete mock SHRM-CP exams. Credits: 3.00

Human Resource Management Minor required (15 credits)

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Describe workforce planning implementation issues and the importance of continuous refinement of the plan. 2. Define talent acquisition and differentiate between recruiting and selection processes. 3. Understand the various talent acquisition organization models. 4. Use tangible and intangible data to build a business case for effective talent acquisition. 5. Articulate the steps in a common talent analysis and translate the analysis into selection criteria and methods. 6. Conduct a job-fit and organization-fit analysis and translate the analysis into selection criteria and methods. 7. Develop behavior-based and situation-based interview questions derived from job analysis and conduct a professional interview. 8. Design a process for final candidate evaluation. 9. Highlight various strategies to orient and onboard new acquired talent. 10. Articulate an employer's legal responsibilities in the talent acquisition process. Credits: 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and

intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys.

Learning Outcomes: 1. Evaluate the difference Total Rewards programs can make in organizations. 2. Distinguish between total rewards and compensation and identify compensation and non-compensation elements of total rewards. 3. Recognize various reward systems, their relationship and connection to a total compensation and benefits philosophy, and how they impact the quality of work life and productivity organizations. 4. Assess the practical issues in compensation and employee benefits in light of a company's management philosophy and human resources strategies. 5. Define job evaluation and its use to develop internally equitable compensation systems. 6. Identify the implications of using salary surveys to ensure externally equitable and fiscally responsible compensation systems. 7. Explain the concepts of salary administration and application of compensation programs in the business environment. 8. Better understand effective salary and wage structures in organizations today. 9. Explain the relationship between performance evaluation methods and reward systems. 10. Discuss the legal aspects of compensation, benefits and performance appraisals. Credits: 3.00

Other Departmental/Program Course Requirements (50-52 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life.

Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)

Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business

documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and

technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

TLI 15500 - Foundations Of Learning In Human Resource Development

Credit Hours: 3.00. This course explores the concept of learning within the interdisciplinary field of Human Resource Development, focusing on how people learn in different environments in the workplace - both formal (e.g., training) and informal (e.g., on the job). The course will cover theoretical frameworks, learning methods, and practical applications to enhance workplace learning and outcomes.

Learning Outcomes: 1. Understand key theories and concepts of learning in HRD. 2. Analyze the impact of cognitive, social, and cultural factors on workplace learning. 3. Explain the role of technology in workplace learning. 4. Evaluate assessment and evaluation approaches in workplace learning. 5. Apply learning principles to real-world workplace challenges. Credits: 3.00

Electives (8-10 credits)

Supplemental List

Grade Requirements

GPA Requirements

HRD Professional Requirement

TLI 45560 - Professional Internship In Human Resources

Credit Hours: 3.00. The undergraduate internship course is designed as a culminating learning experience for students nearing graduation. Students have an opportunity to seek out practical work experience related to human resources to use knowledge acquired in the classroom. The course will serve as a professional development opportunity helping students reflect and build upon their experiences gained through the required 500-hours human resources related work.

Learning Outcomes: 1. Learn and grow personally and professionally from an internship experience. 2. Express gained competencies and skills through evidence and critical reflection. 3. Receive, evaluate and apply constructive performance feedback and evaluation, as assessed by the internship supervisor. 4. Understand one's self in a professional context. 5. Integrate HRD theory and professional practice. Credits: 3.00

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

MA 15800 - Precalculus - Functions And Trigonometry (UCC: QR)

Credit Hours: 3.00. Functions, Trigonometry, and Algebra of calculus topics designed to fully prepare students for all first semester calculus courses. Functions topics include Quadratic, Higher Order Polynomials, Rational, Exponential, Logarithmic, and Trigonometric. Other focuses include graphing of functions and solving application problems. Not Available for credit toward graduation in the College of Science. Students may not receive credit for both MA 15400(Inactive) and MA 15800. Students may not receive credit for both MA 15900 and MA 15800.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. An understanding of the concept of a function. 2. An ability to graph and interpret the graphs of a wide variety of functions. 3. An ability to develop mathematical models and solve a variety of application problems, using various types of equations, systems of equations, and functions. 4. An understanding the concept of an inverse function and how to apply that in particular with exponential, logarithmic and trigonometric functions. 5. An understanding of graphical transformations of functions. 6. An understanding of Polar Equations and the ability to graph Polar Equations. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a

technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

15-16 Credits

Spring 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Credit Hours: 3.00. This course explores the concept of learning within the interdisciplinary field of Human Resource Development, focusing on how people learn in different environments in the workplace - both formal (e.g., training) and

informal (e.g., on the job). The course will cover theoretical frameworks, learning methods, and practical applications to enhance workplace learning and outcomes.

Learning Outcomes: 1. Understand key theories and concepts of learning in HRD. 2. Analyze the impact of cognitive, social, and cultural factors on workplace learning. 3. Explain the role of technology in workplace learning. 4. Evaluate assessment and evaluation approaches in workplace learning. 5. Apply learning principles to real-world workplace challenges. Credits: 3.00

14-15 Credits

Fall 2nd Year

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

TLI 31400 - Leading Innovation In Organizations

Credit Hours: 3.00. This course provides the foundation for understanding the manner in which companies capture innovation and use it to set themselves apart from competitors. Topics covered include the attributes of organizations that are successful in fostering a culture of innovation; the characteristics and roles of leaders and members in innovative organizations; managerial processes and organizational systems that facilitate the successful development, commercialization, and adoption of innovative technologies, products, and services; and methods used to measure innovation-related outcomes.

Learning Outcomes: 1. Describe the characteristics of successful innovations. 2. Explain how innovations develop from ideas to successful outcomes. 3. Analyze practices and strategies that lead to the successful development and adoption of innovations. 4. Communicate how innovation strategies help organizations succeed in competitive markets. 5. Identify managerial behaviors that foster a culture of innovation among employees. 6. Differentiate the attributes of successful leaders and employees in innovative organizations. 7. Analyze methods used to measure innovation-related outcomes. Credits: 3.00

TLI 25500 - Foundations Of Human Resource Development

Credit Hours: 3.00. Much has been discussed about the importance of people in organizations, difficulties within organizations, and challenges faced by today's organizations. This course covers the field of human resource development (HRD) as an important area of practice within organizations. The course provides an introduction to HRD theories, principles, concepts, and practices. It provides foundations through the study of history, current paradigms, and perspectives on the future of the field of HRD while specifically focusing on training and development, organization development, and career development as organizational functions within HRD.

Learning Outcomes: 1. Conduct a learning assessment. 2. Conduct a performance assessment. 3. Write training performance improvement objectives. 4. Describe core HRD functions. 5. Describe methods of HRD program evaluation. Credits: 3.00

TLI 31500 - New Product Development

Credit Hours: 3.00. This course introduces the process of technological innovation and new product development from concept to commercialization. Topics covered include ideation, R&D, prototyping (design and modeling), testing for quality, the patent process, intellectual property rights, marketing and cost evaluation.

Learning Outcomes: 1. Describe the process of innovation as it relates to new product development. 2. Identify quality standards and testing procedures for new products. 3. Describe the patent process. 4. Explain methods for protecting domestic and international intellectual property rights. 5. Describe the process for conducting market research. Credits: 3.00

15 Credits

Spring 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers'

statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

15 Credits

Fall 3rd Year

MGMT 44428 - Human Resources Management

Credit Hours: 3.00. Survey of the techniques and practices used in human resource management. Emphasis is on legal requirements, cost/benefit considerations, and strategic needs in managing human resources. Topics include recruitment, selection and placement, compensation, work design, and reactions to work. Specific techniques reviewed include assessment centers, incentive plans, structured interviewing, and autonomous work groups. Current issues and managerial decision making are emphasized.

Learning Outcomes: 1. Develop an understanding of the major HR management needs of most organizations. 2. Develop a familiarity with alternative HR systems designed to address those needs, and the advantages and disadvantages of each. 3. Gain an awareness of the technology underlying the HR systems, so that the range of quality can be understood. 4. Develop an appreciation for basic HR decisions. Credits: 3.00

MGMT 44301 - Management Of Human Resources

Credit Hours: 3.00. Survey of theory and techniques used in human resource management within organizations. Emphasis is placed on legal concerns, human resource staffing and development, reward systems, and the role of unions in American society. Techniques studied include job analysis, the

use of various recruitment and selection procedures, compensation, administration, and collective bargaining. No credit for students in the School of Management.

Learning Outcomes: 1. Students will learn about human resource management including legal concerns, human resource staffing, development, rewards systems, and the role of unions through study of job analysis, recruitment and selection procedures, compensation, administration, and collective bargaining. Credits: 3.00

MGMT 30400 - Introduction To Financial Management

Credit Hours: 3.00. Introductory course providing a foundation in corporate finance and covering topics such as: discounted cash flow valuation, bond valuation, equity valuation, option valuation, factors influencing a firm's cost of capital, and international finance issues.

Learning Outcomes: 1. Provide non-School of Management majors with a foundation in corporate finance. Credits: 3.00

TLI 35510 - Training And Talent Development

Credit Hours: 3.00. This course is designed to develop theoretical and applied perspectives on needs assessment, design, development, delivery, and evaluation of training and development in organizational contexts. Emphasis is placed on assessing learning and performance outcomes throughout the training and development process. Implication of training to talent development are also highlighted in a highly automated workplace.

Learning Outcomes: 1. Conduct a training needs assessment. 2. Analyze job tasks for purposes of planning training activities. 3. Write training learning objectives. 4. Describe an instructional system design process. 5. Describe methods of training program evaluation. 6. Identify talent development approaches in a digitalized economy. Credits: 3.00

TLI 35560 - Employment And Labor Law For The Human Resource Professionals

Credit Hours: 3.00. This course provides a foundation for understanding the impact of labor laws and legal issues in organizations. Topics include corporate social responsibility, employment law, environmental issues, conflict resolution, and global challenges.

Learning Outcomes: 1. Select and apply legally and practically appropriate staffing techniques according to basic principles of validity and reliability. 2. Articulate the value of employee training, development, job design, and job enrichment. 3. Summarize basic components of compensation plans and performance evaluation systems, assess potential deficiencies, and compare elements as they relate to organizational objectives. 4. Apply major labor laws to employment practices in employee relations, health, safety and security, and to consider the connection between labor relations practices and outcomes. 5. Articulate unique challenges throughout HRM related to practice in public, private, and non-profit sectors. 6. Compare HRM practices and policies from varying perspectives, evaluate source credibility, and draw conclusions based on that information. Credits: 3.00

TLI 35570 - Job Analysis And Job Design

Credit Hours: 3.00. This course demonstrates procedures for analyzing tasks related to specific jobs. Topics include collecting occupational data and information, the relevance of job analysis on individual and organizational performance, impact on training and development, and associated legal issues.

Learning Outcomes: 1. Explain the background and progression of job analysis techniques. 2. Collect information about jobs and develop an organized job analysis report. 3. Conduct job analysis. 4. Effectively utilize the Dictionary of Occupational Titles and O*NET to gain occupational information. 5. Recognize HR Information System and its relationship with compliance with federal and state regulations/Laws. 6. Analyze jobs within an organization for the purpose of developing training or recommending other performance interventions. 7. Demonstrate various uses of job analysis. 8. Articulate the role of a job

analysis in the improvement of organizational performance. Credits: 3.00

15 Credits

Spring 3rd Year

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

MGMT 44690 - Negotiation And Decision Making

Credit Hours: 3.00. The purpose of this course is to understand the theory and processes of negotiation so that you can negotiate successfully in organizational and management settings. This course covers a wide variety of negotiation problems faced by business people. In addition, models of effective and ineffective decision-making are introduced and students will have the opportunity to make decisions at both the individual and group levels.

Learning Outcomes: 1. Improve ability to effectively negotiate. 2. Recognize and analyze negotiation situations. 3. Gain confidence negotiating. 4. Improve decision-making knowledge and skills. Credits: 3.00

TLI 35520 - Organization Development And Change

Credit Hours: 3.00. This course provides an introduction to major theories, concepts, skills and techniques for the practice of organization development processes and interventions using a consultancy approach. Implications for organizational change are integrated as part of an OD effort.

Learning Outcomes: 1. Describe the historical roots and theoretical underpinnings of organizational development. 2. Apply the action research model for professional practice. 3. Effectively participate in small groups. 4. Identify intervention strategies at the individual, small group, and large systems levels. 5. Conduct organization development analysis. Credits: 3.00

TLI 35530 - Strategic Human Resources

Credit Hours: 3.00. This course equips you with the skills to lead strategic human resource initiatives, enhancing your understanding of how HR strategy impacts organizational performance. Strategic Human Resources involves aligning HR practices with organizational goals to optimize the value of human capital. As future HR professionals, you will learn to contribute significantly to strategic planning and organizational success by leveraging human talent strategically and effectively.

Learning Outcomes: 1. Design and execute HR strategies that align with organizational goals and enhance overall performance. 2. Assess how various HR practices contribute to achieving strategic objectives and improving organizational outcomes. 3. Apply HR strategies to various case studies from actual company/industry scenarios to address key business issues and leverage human capital effectively. 4. Gain a deep understanding of the principles and theories underlying strategic HR and their application in real-world scenarios. 5. Identify and propose solutions to current strategic business issues faced by HR professionals in today's dynamic workplace. Credits: 3.00

TLI 35580 - The Individual And Organizational Performance

Credit Hours: 3.00. This course develops an understanding of the principles and theoretical foundations of individual and organizational performance management. Emphasis is placed on the perspectives, methodology, and theoretical frameworks as well as applications for performance management from the perspective of human resources professionals.

Learning Outcomes: 1. Develop an understanding of the principles and theoretical foundations of individual and organizational performance management. 2. Identify and analyze performance problems in an organizational system. 3. Identify and evaluate interventions in performance improvement at different levels (individual, team/process and organizational). 4. Understand human resource approaches to individual and organizational performance management. 5. Examine various technologies for managing individual and organizational performance. Credits: 3.00

15 Credits

Fall 4th Year

TLI 45570 - Global Human Resources

Credit Hours: 3.00. This course prepares students to lead human resource activities within a global, technology-driven economy and business environment. Topics include recruitment, training and development processes, cultural issues, policies and regulations within a global and international context.

Learning Outcomes: 1. Identify the main differences between domestic and international human resources. 2. Understand the challenges of international business dynamics on international human resources and the procedures for preparing employees for international assignments. 3. Understand how managing expatriates helps to improve their performance and minimize their business failures in international assignments. 4. Recognize that training and development of expatriates is a key factor for their success in their assignments. 5. Understand the complexity of international human resources and the need for staffing international human resources in accordance to the models of business organizations. 6. Recognize the challenges of repatriation of expatriates and develop the skill to minimize their stress in the parent country organizations. 7. Recognize the need for balancing the process international human resource adaptation and standardization in the host country. 8. Identify relevant theories on performance management in the context of international human resources. 9. Develop intercultural knowledge and competence. Credits: 3.00

TLI 45580 - Human Resource Information Systems And People Analytics

Credit Hours: 3.00. This class surveys Human Resource Information Systems (HRIS) to understand how they facilitate communication processes, policy implementations and change management. Big data is transforming how firms recruit and develop talent and this course introduces concepts and methods for making better through people analytics.

Learning Outcomes: 1. Translate the origins of HR Information Technology to an organization; and infer the need to obtain involvement and commitment from others to set in place mechanisms to affect successful Human Resources Information System Programs and strategies. 2. Develop an understanding of basic systems and the criteria for success in using HR software in organizations. 3. Identify HR Information Systems trends. 4. Detail various approaches to Human Resources Information systems design, selection and implementation and define characteristics of current Human Resource Information technology implementation strategies. 5. Recognize HR Information System and its relationship with compliance with federal and

state regulations/Laws. 6. Explain benefits of new technologies in recruiting and training in individual development of employees. 7. Describe and discuss the various HR Portal and associated programs and their associated values, costs, and benefits to the organization. 8. Students will employ statistical software to conduct quantitative analyses, for example to predict the potential of applicants to improve hiring decisions or to evaluate the effectiveness of training and talent development programs. 9. Students will learn how to manage the workforce and how to take advantage of analytics in their decision making process. Credits: 3.00

MGMT 44430 - Staffing: Talent Acquisition

Credit Hours: 3.00. This course focuses on the effective management of the flow of talent into and through organizations. It covers workforce planning, recruiting and selection, career transitions and other workforce movement. It is designed to teach students the skills to recruit and select the best talent to help drive organizational strategy. It will also prepare students to evaluate methods for job analysis and selection. Students will learn how to design and ask interview questions that are behaviorally anchored and focused on organization-person fit and person-job fit, both of which are important for successful adaptation and effective performance on the job. Students will also learn how to design a process and framework for final individual or group selection. Lastly, they will learn several strategies to successfully orient and onboard new employees.

Learning Outcomes: 1. Describe workforce planning implementation issues and the importance of continuous refinement of the plan. 2. Define talent acquisition and differentiate between recruiting and selection processes. 3. Understand the various talent acquisition organization models. 4. Use tangible and intangible data to build a business case for effective talent acquisition. 5. Articulate the steps in a common talent analysis and translate the analysis into selection criteria and methods. 6. Conduct a job-fit and organization-fit analysis and translate the analysis into selection criteria and methods. 7. Develop behavior-based and situation-based interview questions derived from job analysis and conduct a professional interview. 8. Design a process for final candidate evaluation. 9. Highlight various strategies to orient and onboard new acquired talent. 10. Articulate an employer's legal responsibilities in the talent acquisition process. Credits: 3.00

TLI 45560 - Professional Internship In Human Resources

Credit Hours: 3.00. The undergraduate internship course is designed as a culminating learning experience for students nearing graduation. Students have an opportunity to seek out practical work experience related to human resources to use knowledge acquired in the classroom. The course will serve as a professional development opportunity helping students reflect and build upon their experiences gained through the required 500-hours human resources related work.

Learning Outcomes: 1. Learn and grow personally and professionally from an internship experience. 2. Express gained competencies and skills through evidence and critical reflection. 3. Receive, evaluate and apply constructive performance feedback and evaluation, as assessed by the internship supervisor. 4. Understand one's self in a professional context. 5. Integrate HRD theory and professional practice. Credits: 3.00

15 Credits

Spring 4th Year

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse

audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

MGMT 44431 - Compensation: Total Rewards

Credit Hours: 3.00. This course examines the tangible and intangible aspects of compensation, through the lens of a total reward philosophy of an organization in order to attract, motivate, and retain their Human Capital. It also provides an overview of the considerations necessary to develop a compensation system that is internally and externally equitable and fiscally responsible, including the use of job evaluation and salary surveys.

Learning Outcomes: 1. Evaluate the difference Total Rewards programs can make in organizations. 2. Distinguish between total rewards and compensation and identify compensation and non-compensation elements of total rewards. 3. Recognize various reward systems, their relationship and connection to a total compensation and benefits philosophy, and how they impact the quality of work life and productivity organizations. 4. Assess the practical issues in compensation and employee benefits in light of a company's management philosophy and human resources strategies. 5. Define job evaluation and its use to develop internally equitable compensation systems. 6. Identify the implications of using salary surveys to ensure externally equitable and fiscally responsible compensation systems. 7. Explain the concepts of salary administration and application of compensation programs in the business environment. 8. Better understand effective salary and wage structures in organizations today. 9. Explain the relationship between performance evaluation methods and reward systems. 10. Discuss the legal aspects of compensation, benefits and performance appraisals. Credits: 3.00

TLI 45590 - Foundations Of Human Resources Capstone

Credit Hours: 3.00. This course synthesizes all of the required and secondary content areas described in the SHRM HR Curriculum Guidelines. Students will prepare for the SHRM Certified Professional (SHRM-CP) exam while demonstrating their accumulated knowledge and in the area of human resources.

Learning Outcomes: 1. Reflect on the entire HR-related areas. 2. Synthesize all HR-related knowledge, skills, and competencies. 3. Engage in test-taking for obtaining licensure. 4. Demonstrate an understanding of all HR-related concepts, terms, applications, and processes. 5. Successfully complete mock SHRM-CP exams. Credits: 3.00

15 Credits

Human Services, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (45 credits)

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and

associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 34600 - Research Design And Program Evaluation

Credit Hours: 3.00. This course is an introduction to research methods as used in community programs for children and families including review and application of existing research literature, generating research questions, conducting program needs assessments, evaluating processes and outcomes of existing programs, designing and interpreting applied research studies, and understanding ethical responsibilities in the use and application of research. Instruction has been designed to provide the skills necessary to use existing research and generate new data to benefit programs.

Learning Outcomes: 1. Understand the role of research (and the necessity of using strong research methodology) in the acquisition of knowledge. 2. Acquire knowledge, skills, and professional perspectives for the comprehension, application, analysis, synthesis, interpretation, and evaluation of research/finding. 3. Become familiar with the methods and tools of research, including common research search engines. 4. Develop the basic knowledge and skills needed to understand the research process, including

generating a research question, designing a study, analyzing data, and interpreting results. 5. Understand the ethics of conducting and using/not using empirical research findings in academic and professional practice settings. 6. Demonstrate an ability to apply research results to ethical decision making practice. 7. Develop an appreciation for the value of research in improving the quality of professional practice. 8. Write a critical and comprehensive review of the literature on a topic of educational or professional significance and design a research study (using the APA formatting style) as part of a research proposal. 9. Effectively present research studies and findings to a group. Credits: 3.00

HDFS 45100 - Internship & Career Preparation For Human Services

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship. 5. Develop and apply professional interview skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

Other Departmental/Program Requirements (40-46 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results

from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills

with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

CS 10100 - Digital Literacy (UCC: STS)

Credit Hours: 3.00. Survey of the digital world, computers as multi-purpose machines, digital information, definition of programming, computers everywhere (the Internet of things), computers that perform simultaneous computations, how apps work, data storage and searching, databases, digital audio, graphics, video, computer networks and the Internet, the World Wide Web and Internet sharing services, network and Internet performance, real-time services, artificial intelligence, cloud computing, security, and privacy. CS students may take course for elective credit only.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand how to decide the disk size needed when purchasing a computer or smart phone. 2. Understand why smart phones, desktop, and laptop computers have more than one processor (such as dual-core and quad-core devices). 3. Understand why computers are embedded in appliances and automobiles. 4. Understand why saving a document is required after changes are made and what a computer does when one saves a document. 5. Understand why music is available in a variety of digital formats, such as m4a, mp3, and wav. 6. Understand why someone acquires an Internet service that is 10 times faster than their current service, it is unlikely that web pages will load 10 times faster. 7. Understand when someone uses the Internet to communicate with a person who is halfway

around the world, how the information travels between the two computers. 8. Understand why when someone streams a movie, they have to wait before the movie starts playing. 9. Understand why a computer may be able to fool you into thinking a human is really answering your questions. 10. Understand whether it is possible for a computer to control a car and navigate it through traffic on an actual highway. 11. Understand how, if you receive an email message that appears to come from a friend asking you to click on a link to see a Facebook page, you can tell whether it is safe to click the link or not. 12. Understand where, when you upload a video to a cloud service (e.g., YouTube), the video is stored 13. Understand whether if a new virus appears, the virus protection software on your computer will prevent the virus from infecting your computer. 14. Understand whether or not if your bank's URL begins with "https", a criminal who wiretaps your Internet connection can see each keystroke you send to the bank. Credits: 3.00

Sample 4-Year Plan

Fall 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the

requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

CS 10100 - Digital Literacy (UCC: STS)

Credit Hours: 3.00. Survey of the digital world, computers as multi-purpose machines, digital information, definition of programming, computers everywhere (the Internet of things), computers that perform simultaneous computations, how apps work, data storage and searching, databases, digital audio, graphics, video, computer networks and the Internet, the World Wide Web and Internet sharing services, network and Internet performance, real-time services, artificial intelligence, cloud computing, security, and privacy. CS students may take course for elective credit only.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand how to decide the disk size needed when purchasing a computer or smart phone. 2. Understand why smart phones, desktop, and laptop computers have more than one processor (such as dual-core and quad-core devices). 3. Understand why computers are embedded in appliances and automobiles. 4. Understand why saving a document is required after changes are made and what a computer does when one saves a document. 5. Understand why music is available in a variety of digital formats, such as m4a, mp3, and wav. 6. Understand why someone acquires an Internet service that is 10 times faster than their current service, it is unlikely that web pages will load 10 times faster. 7. Understand when someone uses the Internet to communicate with a person who is halfway around the world, how the information travels between the two computers. 8. Understand why when someone streams a movie, they have to wait before the movie starts playing. 9. Understand why a computer may be able to fool

you into thinking a human is really answering your questions. 10. Understand whether it is possible for a computer to control a car and navigate it through traffic on an actual highway. 11. Understand how, if you receive an email message that appears to come from a friend asking you to click on a link to see a Facebook page, you can tell whether it is safe to click the link or not. 12. Understand where, when you upload a video to a cloud service (e.g., YouTube), the video is stored 13. Understand whether if a new virus appears, the virus protection software on your computer will prevent the virus from infecting your computer. 14. Understand whether or not if your bank's URL begins with "https", a criminal who wiretaps your Internet connection can see each keystroke you send to the bank. Credits: 3.00

16 Credits

Spring 1st Year

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences,

situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

Fall 2nd Year

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be

introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

15 Credits

15 Credits

Spring 2nd Year

HDFS 34600 - Research Design And Program Evaluation

Credit Hours: 3.00. This course is an introduction to research methods as used in community programs for children and families including review and application of existing research literature, generating research questions, conducting program needs assessments, evaluating processes and outcomes of existing programs, designing and interpreting applied research studies, and understanding ethical responsibilities in the use and application of research. Instruction has been designed to provide the skills necessary to use existing research and generate new data to benefit programs.

Learning Outcomes: 1. Understand the role of research (and the necessity of using strong research methodology) in the acquisition of knowledge. 2. Acquire knowledge, skills, and professional perspectives for the comprehension, application, analysis, synthesis, interpretation, and evaluation of research/finding. 3. Become familiar with the methods and tools of research, including common research search engines. 4. Develop the basic knowledge and skills needed to understand the research process, including generating a research question, designing a study, analyzing data, and interpreting results. 5. Understand the ethics of conducting and using/not using empirical research findings in academic and professional practice settings. 6. Demonstrate an ability to apply research results to ethical decision making practice. 7. Develop an appreciation for the value of research in improving the quality of professional practice. 8. Write a critical and comprehensive review of the literature on a topic of educational or professional significance and design a research study (using the APA formatting style) as part of a research proposal. 9. Effectively present research studies and findings to a group. Credits: 3.00

15 Credits

15 Credits

Fall 3rd Year

HDFS 28000 - Diversity In Individual And Family Life (UCC: BSS)

Credit Hours: 3.00. Students are introduced to aspects of individual and family life in diverse cultures, particularly racially and/or ethnically diverse families in the United States. The nature of relationships between dominant and minority cultures is considered. Implications of diversity for practice with diverse populations are emphasized throughout the course.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand why and how individuals and families are diverse. 2. Comprehensively explore and synthesize evidence about cultural values, family patterns, and historical experiences of major groups in the United States. 3. Analyze how individual and family lives are mutually influenced by societal systems (e.g., economy, government, media). Credits: 3.00

HDFS 33100 - Skills For Helping Professionals In Individual, Family And Group Settings

Credit Hours: 3.00. This course is an introduction to skills commonly used in helping professions, including relationship-building skills, beginning interviewing skills, and group process skills. Attention is paid to cultural competence and professional ethics. This course includes a weekly lab experience involving practice of the helping skills, as well as a service-learning project in which helping skills are used in a community setting.

Learning Outcomes: 1. Use basic helping skills effectively in both individual and group contexts. 2. Evaluate your own helping interactions and those of others, including making constructive suggestions for improvement. 3. Design, implement, and reflect on a service-learning project that uses helping skills in a community setting. 4. Contribute to your team's successful service-learning project and provide leadership to the team as appropriate. 5. Reflect on your experiences in the course through your writing and use those reflections to promote development toward your own professional goals. Credits: 3.00

15-17 Credits

15-17 Credits

Spring 3rd Year

HDFS 34300 - Assessment And Case Management

Credit Hours: 3.00. This course is an introduction to case management as a service delivery approach for helping individuals and families in need. This course provides opportunities to practice basic helping and case management skills such as building rapport, assessing client needs, developing intervention plans, professional ethics, and professional writing.

Learning Outcomes: 1. Explain the case management approach to addressing the health and human service needs of children, adults, and families. 2. Differentiate among the various phases and task responsibilities of case management. 3. Analyze how individual differences in human development and motivation for change influence case management work. 4. Apply basic assessment and case management skills in practice interviews with individuals and families. 5. Demonstrate professional documentation and writing ability through the preparation of assessment reports, case notes, and intervention plans. 6. Demonstrate professional helping capacities such as ethical behavior and reflective practice. Credits: 3.00

13-15 Credits

13-15 Credits

Fall 4th Year

HDFS 34100 - Working With Parents

Credit Hours: 3.00. This course focuses on developing and maintaining effective relationships between parents and professionals working with children, within the context of family-centered practices. Issues related to cultural, linguistic, economic, and developmental differences that affect relations between families and professionals are examined.

Learning Outcomes: 1. Demonstrate an understanding of the development tasks and concerns of parents across the life course. 2. Demonstrate an understanding of the content and design of innovative professional practices and program strategies that seek to promote positive parenting outcomes or reduce/prevent unhealthy parenting outcomes in each developmental stage of parenting. 3. Demonstrate an understanding of how diverse family characteristics and circumstances shape the developmental tasks, concerns, and needs of parents. 4. Demonstrate an understanding of the implications of diverse family characteristics and circumstances for professional practices

and program strategies aimed at supporting parents. 5. Demonstrate an understanding of how to creatively work with students colleagues to develop an original program idea that supports parents during a particular developmental stage. Credits: 3.00

HDFS 34800 - Administration Of Social Service Not-For-Profit Organizations

Credit Hours: 3.00. This course introduces students to aspects of not-for-profit management identified as keys by leaders in existing agencies. Students will prepare themselves for specifically establishing, building, working in and leading not-for-profit organizations.

Learning Outcomes: 1. Demonstrate knowledge, comprehension, analysis and application supporting competence in the defining features of nonprofit management by interactively thinking critically and creatively to develop a board of directors; design a strategic plan; write a corresponding operations plan; diagram an evaluation logic model; prepare a budget; making a fund raising ask; write a fund raising letter; write a grant proposal; write a press release; and make oral presentations. 2. Demonstrate knowledge, comprehension, application, analysis and synthesis by interactively solving an administrative problem in a nonprofit agency case study and presenting the solution. Credits: 3.00

HDFS 45100 - Internship & Career Preparation For Human Services

Credit Hours: 2.00. This course includes an overview of HDFS-related professions, self-evaluation, career search skills, exploration of internship opportunities, and professional development. Students will complete arrangements for their field placement.

Learning Outcomes: 1. Assess career interests and identify potential internship sites. 2. Create a professional cover letter and resume. 3. Identify how resources available at the Purdue Center for Career Opportunities (CCO) and its website (myCCO) can be used in the job/internship search. 4. Develop skills and strategies for conducting an effective job/internship. 5. Develop and apply professional interview skills. 6. Demonstrate professional behavior through the successful and timely completion of course assignments. 7. Demonstrate preparation for the transition from student to intern. Credits: 2.00

16 Credits

16 Credits

Spring 4th Year

HDFS 45500 - Human Services Capstone Internship

Credit Hours: 6.00 or 12.00. Supervised full-time or half-time internship in human services, doing work typical of an entry-level bachelor-degreed professional. Students will integrate and build upon knowledge developed during their studies in human services. Students will use and enhance their skills in direct service to client or indirect service. Students will work in the placement setting secured during HDFS 45400. Example field placement sites include: government or community agencies; social service agencies; hospitals; and recreational settings. Permission of Department required. Must be a student in good academic standing during the internship semester.

Learning Outcomes: 1. Synthesize previously acquired and new knowledge about individual development, family processes, and broader social contexts and apply it to their responsibilities in their internship setting. 2. Demonstrate skills in direct service to children, adults, and/or families in the planning, evaluation, management, or support of human services programs. 3. Exhibit professional work attitudes and behavior. Credits: 6.00 or 12.00

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

HDFS 10000 - Orientation To Current Issues In Human Development And Family Science

Credit Hours: 1.00. Introduction to fields related to Human Development and Family Science, including majors and career paths. You will meet faculty, alumni, and professionals working in related areas. You will be matched with an advanced student mentor who will help you learn how to become successful as a HDFS student and beyond. Required of all students majoring in the department. Non-majors interested in learning more about HDFS majors are also welcome.

Learning Outcomes: 1. Demonstrate an understanding of the field of Human Development and Family Studies, including the disciplines represented, the topics studied, and associated careers. 2. Identify the program options in HDFS and distinguish the requirements for his/her major by establishing a personal plan of study. 3. Establish relationships with fellow students, student mentors, and faculty. Credits: 1.00

HDFS 20100 - Introduction To Relationship And Family Science (UCC: BSS)

Credit Hours: 3.00. An examination of interpersonal processes involved in forming and maintaining quality relationships with family members and close others. Emphasis is on relationship dynamics and family functioning across the life course. Also considered are linkages between relationship and family processes and the broader social environment. Basic components of the research process will be introduced.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply family and relationship theories to the unique interactions and dynamics within families and close relationships. 2. Recognize the diversity of relationships and families in our society. 3. Examine interaction patterns within families and close relationships. 4. Describe the importance of relationship and family science. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

CNIT 13600 - Personal Computing Technology And Applications

Credit Hours: 3.00. This course provides an intermediate coverage of PC technology and problem solving. Topics include computer hardware, operations and ethics, and operating systems and environments. Students will gain hands-on skills with applications such as desktop and file management; word processing; spreadsheets; presentation graphics; electronic mail; personal information management; and internet browsing, searching, and publishing.

Learning Outcomes: 1. Identify the role of

computers as an integral part of an information system. 2. Define terminology associated with information systems and computers. 3. Identify components of a computer system. 4. Demonstrate proficiency in the use of various business application packages. 5. Discuss various social issues associated with computers and information systems. Credits: 3.00

CS 10100 - Digital Literacy (UCC: STS)

Credit Hours: 3.00. Survey of the digital world, computers as multi-purpose machines, digital information, definition of programming, computers everywhere (the Internet of things), computers that perform simultaneous computations, how apps work, data storage and searching, databases, digital audio, graphics, video, computer networks and the Internet, the World Wide Web and Internet sharing services, network and Internet performance, real-time services, artificial intelligence, cloud computing, security, and privacy. CS students may take course for elective credit only.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Understand how to decide the disk size needed when purchasing a computer or smart phone. 2. Understand why smart phones, desktop, and laptop computers have more than one processor (such as dual-core and quad-core devices). 3. Understand why computers are embedded in appliances and automobiles. 4. Understand why saving a document is required after changes are made and what a computer does when one saves a document. 5. Understand why music is available in a variety of digital formats, such as m4a, mp3, and wav. 6. Understand why someone acquires an Internet service that is 10 times faster than their current service, it is unlikely that web pages will load 10 times faster. 7. Understand when someone uses the Internet to communicate with a person who is halfway around the world, how the information travels between the two computers. 8. Understand why when someone streams a movie, they have to wait before the movie starts playing. 9. Understand why a computer may be able to fool you into thinking a human is really answering your questions. 10. Understand whether it is possible for a computer to control a car and navigate it through traffic on an actual highway. 11. Understand how, if you receive an email message that appears to come from a friend asking you to click on a link to see a Facebook page, you can tell whether it is safe to click the link or not. 12. Understand where, when you upload a video to a cloud service (e.g., YouTube), the video is stored 13. Understand whether if a new virus appears, the virus protection software on your computer will prevent the virus from infecting your computer. 14. Understand whether or not if your bank's URL begins with "https", a criminal who wiretaps your Internet connection can see each keystroke you send to the bank. Credits: 3.00

About the Program

Industrial Design Professional Program, BFA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (76 credits)

A. Art & Design Core (12 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in

a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

B. Industrial Design Core (36 credits)

AD 14600 - Design Drawing I

Credit Hours: 3.00. Problems in the skills and methods of professional design drawing. Emphasis on development of drawing as a conceptual tool and as part of the design process. Concentration on the media and techniques used in contemporary design drawing.

Learning Outcomes: 1. Identify and apply the fundamentals of industrial design drawing, including line quality, perspective, and proportions. 2. Develop a habit of regular drawing exercises and warm-ups to enhance their creativity and skill. 3. Apply design drawing techniques to effectively communicate and visualize design concepts. 4. Understand the basics of presentations and storytelling. 5. Demonstrate entry-level research to product design. Credits: 3.00

AD 21500 - Materials And Processes

Credit Hours: 3.00. An introductory course in the selection of materials and processes as relevant to design, with laboratory experiences in the safe and proper use of tools and equipment.

Required of students wishing extensive access to A&D tools and equipment.

Learning Outcomes: 1. Demonstrate proper and safe handling of tools and machinery through design fabrication. 2. Develop and apply time management skills to manage a rigorous workload effectively. 3. Produce designs that reflect aesthetic and material awareness through curated projects. Credits: 3.00

AD 23500 - Materials And Processes II

Credit Hours: 3.00. Problems in three-dimensional design, incorporating materials, production processes, and applications of current technology, emphasizing aspects of society and technology. An introduction to complete industrial design problems, including problem definition, concepts, resource information, design development, final proposals, and presentation techniques.

Learning Outcomes: 1. Apply knowledge of design for manufacturing and use of materials by creating and fabricating selected projects. 2. Evaluate the aesthetics, ergonomics, and manufacturability of designs by participating in in-class design critiques. 3. Utilize skills to analyze an existing product and redesign it with an expanded function. Credits: 3.00

AD 24600 - Design Drawing II

Credit Hours: 3.00. Continuation of the work done in A&D 245. Emphasis on development of skills and presentation quality design drawing.

Credits: 3.00

AD 25600 - Presentation Techniques

Credit Hours: 3.00. Studio preparing students for project presentations. Classes will cover graphic techniques, including page layout, typography, portfolio formats, perspective drawings, photography, and verbal communication.

Learning Outcomes: 1. Create original designs using iterative visualization techniques to improve and refine their design concepts. 2. Develop computer-aided design skills to present these design concepts. 3. Demonstrate 3-D computer modeling skills. 4. Demonstrate computer rendering skills. Credits: 3.00

AD 30500 - Industrial Design I

Credit Hours: 3.00. Introduction to design principles in processes employing basic problem-solving techniques. Emphasis will be placed on man's interaction with form, thought processes, procedures, craftsmanship, and use of materials. Acceptance into professional industrial design concentration by successful performance in the mandatory portfolio review. Prerequisites: Passing mandatory portfolio review.

Learning Outcomes: 1. Improve functions, meet production needs efficiently, refine aesthetics, and always keep the user in mind. 2. Control advanced computer modeling, to be able to model complex forms accurately. 3. Create presentations that effectively communicate the student's design ideas. Credits: 3.00

AD 30600 - Industrial Design II

Credit Hours: 3.00. An analysis of design through organic and aesthetic principles, natural solutions, and man-made systems. Skills and techniques for communication of creative design solutions. Rapid visualization, rendering, model making, and working models will be stressed.

Credits: 3.00

AD 31500 - Design Methodology

Credit Hours: 3.00. This course will cover the fundamental concepts of design methodology. Studies in various problem-solving and research methods as they apply to the designer and society.

Learning Outcomes: 1. Design three-dimensional forms with attention to aesthetic and functional aspects. 2. Create presentations that effectively communicate the students' design ideas to diverse audiences. 3. Apply design research skills, including market mapping, ethnographic observation, and ergonomic analysis, to inform design decisions. 4. Develop skills in collaborative design, emphasizing teamwork, communication, and problem-solving. Credits: 3.00

AD 31600 - Seminar On Ideas In Industrial Design I: Design And Society

Credit Hours: 3.00. A study of design and the designer and the factors in society that affect his or her work.

Credits: 3.00

AD 40500 - Industrial Design III

Credit Hours: 3.00. Design projects emphasizing sophisticated problem-solving methods. Design projects will stress diversity of industrial design and will trace the development of products from initial concept, research, and development through production.

Credits: 3.00

AD 40600 - Industrial Design IV

Credit Hours: 3.00. Design of products in their relation to economic, physiological, psychological, and behavioral patterns of the consumer. Emphasis upon total thought processes to allow environmental considerations as well as technological realities.

Credits: 3.00

AD 41500 - Professional Techniques

Credit Hours: 3.00. Research development for product design, with emphasis on socioeconomic concerns and documentation techniques. Portfolio refinement, including verbal, written, and other visual documentation and presentation skills in various media, such as drawing. Photography and computer-generated graphics will be stressed.

Credits: 3.00

AD 25601 - Industrial Design Sophomore Review

Credit Hours: 0.00. This course is a qualifying assessment supervised by faculty members to monitor student learning and progress. Students who do not pass the review will be ineligible for Industrial Design upper-level studio courses. Permission from department required.

Learning Outcomes: 1. Present selected projects and design portfolio to the Industrial Design faculty members. 2. Be assessed by faculty to identify the student's strengths, abilities, and areas of needed improvement. Credits: 0.00

C. Industrial Design Supportive Requirements (19 credits)

AD 23400 - Art And Design Internship Preparation

Credit Hours: 1.00. Introduction and preparation for Art & Design Internship experience. Students will develop a resume, cover letter, and other resources in their search for a suitable internship placement.

Learning Outcomes: 1. Students will have the opportunity for design work experience from the internship program that will familiarize the students with the culture and environment of the professional studio and professional practice. Credits: 1.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 38500 - History Of Interior Design

Credit Hours: 3.00. A survey of the historical changes in interior design and architecture from the 18th century to the present in their social, cultural, and political contexts. The course situates the history of interior design within broader debates about the social uses of space and the cultural significance of architecture and interiors.

Learning Outcomes: 1. Discuss stylistic and technical changes in interior design and architecture from the 18th century to the present. 2. Discuss the social, political, and cultural context of design. 3. Analyze of primary sources and artifacts related to the history of interiors. 4. Analyze and discuss scholarly readings on the history of interiors design and architecture. 5. Conduct primary and scholarly

research on the history of interior design and architecture. Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

AD 41600 - Seminar On Ideas In Industrial Design II: Design And Creative Problem Solving Methods

Credit Hours: 3.00. A study of creative problem solving methods as used by the designer in his or her work.

Credits: 3.00

AD 47800 - Internship In Art And Design

Credit Hours: 1.00 to 8.00. Intensive exposure to professional experience through supervised internship in art-and-design-related firms, departments, or studios. Consent to enroll, amount of credit, placement, and evaluation to be approved and coordinated by department.

Learning Outcomes: 1. Experience culture and environment of a professional studio and professional practice related to their major course of study in Art and Design. Credits: 1.00 to 8.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

AD 34000 - Furniture Development

Credit Hours: 3.00. This course is an introduction to furniture design. The focus of this course is information relevant to furniture design including: basic ergonomics, structural techniques and materials and processes. Additional pertinent information regarding new and ongoing design trends will be explored. A mid-semester field trip to a major furniture manufacturer and/or design studio is offered. Students will design and build two of the following objects: a small freestanding shelving unit, small table, bench, table top object or stool. Students must pass mandatory portfolio review for this course.

Learning Outcomes: 1. Increase knowledge of materials and processes including furniture design construction methods. 2. Gain a basic understanding of ergonomics. 3. Increase aesthetic sensibility. 4. Develop an awareness

of contemporary issues and trends in furniture design. 5. Design and build an original piece of furniture by the end of the class. Credits: 3.00

ANTH 38400 - Designing For People: Anthropological Approaches

Credit Hours: 3.00. This course is about designing for people. You will use anthropological knowledge and skills to better understand human and technology interactions. With students from other fields, you will learn how to apply an anthropological perspective to human centered design and design with the needs of a specific user group in mind.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

D. Industrial Design Selectives - (9 credits)

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be able to discuss art in an educated manner. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 20500 - Design III

Credit Hours: 3.00. Problems in two- and three-dimensional design, utilizing a variety of tools, materials, and processes. Study is made of the interaction between designer and society, involving concepts in art, psychology, technology, anthropology, and history.

Learning Outcomes: 1. Demonstrate a practical understanding of visual communication design. 2. Modify visual hierarchies to convey ideas clearly and effectively. 3. Apply professional approaches to design problem-solving. 4. Utilize visual language vocabulary and design knowledge to communicate ideas. 5. Identify and explain the basics of typography, page structure, and sequencing. Credits: 3.00

AD 20600 - Studio In Visual Communication Design

Credit Hours: 3.00. Investigation of visual communication design theory, history, skills, and methodology, as well as preparation of art and mechanicals for graphic arts reproduction.

Learning Outcomes: 1. Transition from fundamental design skills to advanced graphic design applications. 2. Introduce layout/grid systems and their theoretical and practical applications. 3. Introduce students to the fundamentals of typography, exploring the relationships between type and image. 4. Increase proficiency in graphic software in the context of graphic design projects. 5. Gain a better understanding of the history of graphic design. 6. Develop more advanced problem-solving skills. 7. Prepare students for the Sophomore Review, and advanced junior- and

senior-level design courses. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 22000 - Computers In Art

Credit Hours: 3.00. Introduction to computer graphics concepts and the electronic image as a fine art form. Emphasis is placed on personal expression, using the computer as a two-dimensional art tool.

Learning Outcomes: 1. Demonstrate individualized forms of creative expression through the use of computers and art. 2. Create a series of creative projects incorporating a range of digital techniques. 3. Critique and assess their creative work and the work of their peers. Credits: 3.00

AD 22800 - Visual Communication Design Computing I

Credit Hours: 3.00. An introductory course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Illustrator and Adobe InDesign. 2. Experiment with and iterate through image-making utilizing various methods and vector-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Increase ability to generate and choose intensely metaphoric imagery to enhance visual communication. 5. Understand and use design terminology and design principles. 6. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 22900 - Visual Communication Design Computing II

Credit Hours: 3.00. An intermediate course in visual design computing programs used in the study and production of visual communication design.

Learning Outcomes: 1. Develop skills using industry standard design software specifically Adobe Photoshop and Adobe XD. 2. Experiment with and iterate through image-making utilizing various methods and pixel-based digital techniques. 3. Strengthen conceptual image-making skills. 4. Understand and use design terminology and design principles. 5. Strengthen attention to detail and craft knowledge. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

AD 23600 - Lighting Fundamentals For Photography

Credit Hours: 3.00. Introductory course in understanding electronic strobe lighting. Begins with a review of basic lighting principles and a series of problem-solving assignments, which introduce control, and applications of electronic strobe lighting. Still life photography and portraiture are emphasized and covers on-location lighting.

Learning Outcomes: 1. Gain an understanding of the basic principles of light and how to use those principles to light photographic subject

matter. 2. Gain a basic understanding of the function of photographic lighting equipment. 3. Compile a portfolio of images that demonstrate a skill set learned regarding product and portrait and simple space lighting. Credits: 3.00

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate the technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

AD 26700 - Digital Imaging

Credit Hours: 3.00. An introductory course in the creative generation and digital enhancement of photo-related imagery. Emphasis is on the development of technical and critical thinking skills, as well as fostering an awareness of pertinent theoretical issues in digital age.

Learning Outcomes: 1. Gain knowledge of intermediate and advanced Photoshop. 2. Gain an understanding of constructed image making in photography using Photoshop. 3. Understand contemporary artists whose photographic works generated through computer manipulation. 4. Gain knowledge of theoretical and historical concerns regarding post photography. Credits: 3.00

AD 34200 - Ceramics II

Credit Hours: 3.00. A continuation of AD 24200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques, methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 36200 - Jewelry And Metalwork

Credit Hours: 3.00. Lost wax casting and mold making, mechanisms and stone setting for jewelry and metalwork.

Learning Outcomes: 1. Students will be able to design and make wax and non-wax models for jewelry and small metal projects by reductive, addictive, and construction processes. 2. Students will learn to sprue, invest and cast their models by the lost wax centrifugal and vacuum casting methods. 3. They will learn to make waste molds and reusable rubber molds to produce their jewelry projects. 4. They will learn to make mechanisms for jewelry and settings for incorporating stones or other nonmetal materials into their jewelry. Credits: 3.00

AD 36800 - Etching And Intaglio Printmaking

Credit Hours: 3.00. An introduction to the techniques of etching, engraving, aquatint, drypoint, collagraph, monoprint, and related processes. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 36900 - Lithographic Printmaking

Credit Hours: 3.00. An introduction to the techniques of stone and plate lithography. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

Credits: 3.00

AD 40000 - Advanced Painting

Credit Hours: 3.00. A studio course concentrating on the development of an advanced body of work built upon the conceptual and technical skills of painting. This course is designed to help individual students gain a greater awareness of their personal creative goals and to foster means of expression.

Credits: 3.00

AD 40400 - Moldmaking And/Or Wheel-Throwing Production Techniques In Ceramics

Credit Hours: 3.00 to 6.00. This course will teach mold-making or wheel-throwing (depending on the individual student's interest) with a view to creating ceramic objects suitable for commercial mass-production. Both tableware and/or sculptural objects will be explored. For the wheel-throwing option the students must have at least one year of high school throwing or AD 24200 with a grade of at least "B" or permission of instructor. For the mold making and casting option only, students must be an Art and Design student or have permission of instructor.

Learning Outcomes: 1. The student will learn how to design a model, make the model from clay, make a mold of the designed model (or found object), cast and assemble cast ceramics pieces for possible commercial mass-production. If choosing the wheel-throwing option, the student will learn advanced techniques of throwing and assembling parts to make either functional and sculptural objects for mass-production. 2. Students will also learn simple glazing techniques, and have the option of learning how to screen print and use decals on their final products. Credits: 3.00 to 6.00

AD 41700 - Variable Topics In Electronic And Time-Based Art

Credit Hours: 3.00. Examination of thematic or specialized topics reflecting the most recent developments and contemporary artistic practices in Electronic and Time-Based Art. Permission of department required.

Learning Outcomes: 1. Use essential tools and techniques for generating, sketching and realizing ideas in the field of new media art using DIY strategies, commercial as well as open source software and hardware solutions for creative production. 2. Able to analyze key works and artists in the emerging field of Electronic and Time-Based Art. Credits: 3.00

AD 44200 - Ceramics III

Credit Hours: 3.00. A continuation of AD 34200 ; according to student needs in creating ceramic forms, a variety of in-depth experiences: experimental kiln building and firing techniques,

methods of ceramic construction, surface treatment, and clay and glaze formulation.

Credits: 3.00

AD 46200 - Metalsmithing

Credit Hours: 3.00. Metal forming and metalsmithing processes for small metal objects and jewelry.

Learning Outcomes: 1. Identify and utilize traditional jewelry and metalsmithing tools and materials in art metal projects. 2. Design and construct specialized tooling for metalworks. 3. Utilize newly developed tools into the fabrication of jewelry and other metal projects. Credits: 3.00

AD 51200 - Interaction Design Studies

Credit Hours: 3.00. This course examines concepts and methods for interaction design (IXD). It emphasizes a human-centered perspective and explores fundamental components involved in IXD research. Students will explore a wide range of literature and implement IXD theories in multi-disciplinary collaborative projects.

Learning Outcomes: 1. Understand the fundamental architecture and principles of the interaction design. 2. Be familiar with a range of research interests in the domain and start to consider the thesis research topic. 3. Be aware of the diversity of research areas, methodologies and practices relevant to the interaction design program, and be exposed to work of researchers beyond the university, drawn from regional and international venues, to keep informed about updated research achievements. 4. Identify and apply compositional theory to interaction design practice. 5. Develop the ability to articulate intention in work through design iteration. 6. Organize and conduct a design process within an interdisciplinary team. 7. Have a working level of programming fluency, in order to independently produce a working prototype that satisfies given design requirements. 8. Assess and improve production value through design practice, optimization, and media technique. 9. Explore creative process, perception, and problem solving. Credits: 3.00

AD 52200 - Interaction Design Evaluation

Credit Hours: 3.00. This course builds a foundation for interaction designers to conduct evaluation research. Students start from analyzing evaluation cases on interactive designs and systems to employing evaluation in design projects using quantitative, qualitative, or mixed methods of inquiry.

Learning Outcomes: 1. Identify the need, justification, and goal of conducting an evaluation. 2. Understand systematic knowledge, logical-deductive processes and various research types, and recognize causes & effects, systematic bias and measurement/observation errors in research. 3. Be familiar with different kinds of qualitative and quantitative research methods and how they differ from each other. Build up reliable knowledge for them. 4. Understand the structure of paradigms, theories, concepts, hypotheses, constructs, variables and data. 5. Be familiar with the techniques such as observation, interviews, contamination, exogenous effects, and unobtrusive measures. 6. Be able to organize quantitative and qualitative data, and use analysis software such as SPSS and ALTAS.ti to find patterns. 7. Present the evaluation outcomes, and try to organize and write research papers based on the analysis. Credits: 3.00

AD 53500 - Furniture Design

Credit Hours: 3.00. Examination of furniture design trends and designers. Explore materials and manufacturing processes. Design and build a full-size seating unit. Shop skills required. Permission of instructor required.

Credits: 3.00

AD 54200 - Information Visualization Design

Credit Hours: 3.00. This course starts from exploring visual perception and attention theories, studying modern visualization technologies and toolkits, and reviewing evolving visualization research. Students work on small exercises, and then

accomplish complicated virtual and physical visualization projects for information representation and communication.

Learning Outcomes: 1. Learn the principals involved in information visualization. Gain a background that will aid the design of new, innovative visualizations. 2. Learn about the variety of existing techniques and systems in information visualization. 3. Build a sound foundation in human visual perception and how it relates to creating effective information visualization. 4. Proceed through graph and map-making best practices toward advanced topics of data structure and programmatic visualizations. 5. Gain experience describing and critiquing the methods and approaches of data visualization through presentations and critiques. 6. Understand the key design principles for creating information visualizations. 7. Explore the communication and narrative potential of information visualizations. 8. Develop skills in critiquing visualization techniques as applied to particular tasks. 9. Evaluate information visualizations tools. 10.Design new, innovative visualizations. Credits: 3.00

MGMT 42300 - New Product Development

Credit Hours: 3.00. Provides an overview of the new product development process. Detailed insights are provided in the "fuzzy front end" of this process. Targeting positioning, and product decisions are also covered. The second half of the course completes the marketing mix and covers various market testing and product launch issues.

Learning Outcomes: 1. Understand new product development process. 2. Analyze new product development cases. 3. Develop and test a new product idea. Credits: 3.00

AD 11700 - Black And White Photography (UCC: HUM)

Credit Hours: 3.00. An introductory course in silver-based photographic processes and creative image making. Emphasis is on the development of camera and darkroom techniques, and fostering critical thinking skills related to the traditions and aesthetics of black and white photographic practice.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate how to operate analog film cameras. 2. Apply skills learned to create black and white film developing and printing processes. 3. Evaluate and analyze the history and critical theory of analog photography. Credits: 3.00

TECH 34000 - Prototyping Technology For People

Credit Hours: 3.00. Innovating in our complex world requires us to think strategically and make the best decisions possible for both designing and business development. Accordingly, this unique course brings together perspectives from technology and business management to iteratively prototype innovative solutions to student-selected problems. This process will include creating prototypes in a variety of media, using the appropriate methods/tools, as well as exploring the processes and biases related to how people process information and make decisions. This type of work will help to guide the innovation process by gaining insights from testing prototypes and interacting with people to deepen one's understanding of customer needs, market segments, costs of goods, competitor operations, and market strategies. At the conclusion of the course, students will pitch a viable design solution and business model for a validated problem to a variety of potential investors and/or stakeholders. Note: This class engages the material in both the classroom and innovation labs. Students of all levels of experience, will explore tools/programs related to computer aided design, 3D printing, app development, and digital prototyping.

Learning Outcomes: 1. Recognize biases in how people process information, conducting user tests and interviews to gain insights from prototypes to make business development decisions. 2. Engage in decision-making strategies to develop prototypes in a variety of media (digital and/or physical) for the level of fidelity necessary to communicate, understand, and test innovative ideas/designs. 3. Select and use appropriate methods/tools/equipment to make decisions and prototype innovative ideas. 4. Revise designs to reflect a deepening understanding of customer needs, market segments, costs of goods, competitor operations, and market strategies. 5. Pitch a viable design solution/business model for a

validated problem to a variety of potential investors and/or stakeholders. Credits: 3.00

Electives (16-27 credits)

GPA Requirements

Course Requirements and Notes

Non-Course / Non-Credit Requirements and Notes

Additional Information

Sample 4-Year Plan

Fall 1st Year

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

CGT 11600 - Geometric Modeling For Visualization And Communication

Credit Hours: 3.00. A core introductory computer graphics course that provides entry-level experiences in geometric modeling. Students develop geometric analysis and modeling construction techniques and processes to produce accurate computer models for graphic visualization and communication.

Learning Outcomes: 1. Problem-solve and create through the means of 3D modeling. 2. Develop fine motor skills: Becoming a digital artisan. 3. Explore Aesthetics as it pertains to 3D modeling. 4. Learn and practice professional methods of 3D modeling. 5. Practice creating and curating a portfolio/online body of work. Credits: 3.00

15-16 Credits

Spring 1st Year

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 14600 - Design Drawing I

Credit Hours: 3.00. Problems in the skills and methods of professional design drawing. Emphasis on development of drawing as a conceptual tool and as part of the design process. Concentration on the media and techniques used in contemporary design drawing.

Learning Outcomes: 1. Identify and apply the fundamentals of industrial design drawing, including line quality, perspective, and proportions. 2. Develop a habit of regular drawing exercises and warm-ups to enhance their creativity and skill. 3. Apply design drawing techniques to effectively communicate and visualize design concepts. 4. Understand the basics of presentations and storytelling. 5. Demonstrate entry-level research to product design. Credits: 3.00

AD 22600 - History Of Art To 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from their beginnings to the end of the Middle Ages. CTL:IFA 1311 Art History I

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Use field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

15 Credits

Fall 2nd Year

AD 21500 - Materials And Processes

Credit Hours: 3.00. An introductory course in the selection of materials and processes as relevant to design, with laboratory experiences in the safe and proper use of tools and equipment. Required of students wishing extensive access to A&D tools and equipment.

Learning Outcomes: 1. Demonstrate proper and safe handling of tools and machinery through design fabrication. 2. Develop and apply time management skills to manage a rigorous workload effectively. 3. Produce designs that reflect aesthetic and material awareness through curated projects. Credits: 3.00

AD 24600 - Design Drawing II

Credit Hours: 3.00. Continuation of the work done in A&D 245. Emphasis on development of skills and presentation quality design drawing.

Credits: 3.00

AD 39500 - History Of Design (UCC: STS)

Credit Hours: 3.00. A survey of the historical development of design from the industrial revolution to the present that examines the influence of new technologies, materials, and style on design practice as well as the role of design in shaping the technologies and things of everyday life. Throughout the course, students will analyze design within the broader social, cultural, and political context of production, consumption, and use.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Identify a range of styles from the 18th century to the present. 2. Critically analyze primary source material (artifacts/designed objects, images, and text). 3. Discuss important developments in the history of design. 4. Discuss the social, political, cultural, economic and technological context of design production, consumption, and use. Credits: 3.00

15 Credits

Spring 2nd Year

AD 23400 - Art And Design Internship Preparation

Credit Hours: 1.00. Introduction and preparation for Art & Design Internship experience. Students will develop a resume, cover letter, and other resources in their search for a suitable internship placement.

Learning Outcomes: 1. Students will have the opportunity for design work experience from the internship program that will familiarize the students with the culture and environment of the professional studio and professional practice. Credits: 1.00

AD 23500 - Materials And Processes II

Credit Hours: 3.00. Problems in three-dimensional design, incorporating materials, production processes, and applications of current technology, emphasizing aspects of society and technology. An introduction to complete industrial design problems, including problem definition, concepts, resource information, design development, final proposals, and presentation techniques.

Learning Outcomes: 1. Apply knowledge of design for manufacturing and use of materials by creating and fabricating selected projects. 2. Evaluate the aesthetics, ergonomics, and manufacturability of designs by participating in in-class design critiques. 3. Utilize skills to analyze an existing product and redesign it with an expanded function. Credits: 3.00

AD 25600 - Presentation Techniques

Credit Hours: 3.00. Studio preparing students for project presentations. Classes will cover graphic techniques, including page layout, typography, portfolio formats, perspective drawings, photography, and verbal communication.

Learning Outcomes: 1. Create original designs using iterative visualization techniques to improve and refine their design concepts. 2. Develop computer-aided design skills to present these design concepts. 3. Demonstrate 3-D computer modeling skills. 4. Demonstrate computer rendering skills. Credits: 3.00

AD 25601 - Industrial Design Sophomore Review

Credit Hours: 0.00. This course is a qualifying assessment supervised by faculty members to monitor student learning and progress. Students who do not pass the review will be ineligible for Industrial Design upper-level studio courses. Permission from department required.

Learning Outcomes: 1. Present selected projects and design portfolio to the Industrial Design faculty members. 2. Be assessed by faculty to identify the student's strengths, abilities, and areas of needed improvement. Credits: 0.00

16 Credits

Fall 3rd Year

AD 30500 - Industrial Design I

Credit Hours: 3.00. Introduction to design principles in processes employing basic problem-solving techniques.

Emphasis will be placed on man's interaction with form, thought processes, procedures, craftsmanship, and use of materials. Acceptance into professional industrial design concentration by successful performance in the mandatory portfolio review. Prerequisites: Passing mandatory portfolio review.

Learning Outcomes: 1. Improve functions, meet production needs efficiently, refine aesthetics, and always keep the user in mind. 2. Control advanced computer modeling, to be able to model complex forms accurately. 3. Create presentations that effectively communicate the student's design ideas. Credits: 3.00

AD 31500 - Design Methodology

Credit Hours: 3.00. This course will cover the fundamental concepts of design methodology. Studies in various problem-solving and research methods as they apply to the designer and society.

Learning Outcomes: 1. Design three-dimensional forms with attention to aesthetic and functional aspects. 2. Create presentations that effectively communicate the students' design ideas to diverse audiences. 3. Apply design research skills, including market mapping, ethnographic observation, and ergonomic analysis, to inform design decisions. 4. Develop skills in collaborative design, emphasizing teamwork, communication, and problem-solving. Credits: 3.00

AD 47800 - Internship In Art And Design

Credit Hours: 1.00 to 8.00. Intensive exposure to professional experience through supervised internship in art-and-design-related firms, departments, or studios. Consent to enroll, amount of credit, placement, and evaluation to be approved and coordinated by department.

Learning Outcomes: 1. Experience culture and environment of a professional studio and professional practice related to their major course of study in Art and Design. Credits: 1.00 to 8.00

17 Credits

Spring 3rd Year

AD 30600 - Industrial Design II

Credit Hours: 3.00. An analysis of design through organic and aesthetic principles, natural solutions, and man-made systems. Skills and techniques for communication of creative design solutions. Rapid visualization, rendering, model making, and working models will be stressed.

Credits: 3.00

AD 31600 - Seminar On Ideas In Industrial Design I: Design And Society

Credit Hours: 3.00. A study of design and the designer and the factors in society that affect his or her work.

Credits: 3.00

AD 33400 - New Media Culture

Credit Hours: 3.00. This lecture course provides a historical overview of the development of new media art. In their research, project papers, and practical assignments, students explore issues of media criticism, technology's impact on culture and society and visions of media utopias.

Learning Outcomes: 1. Summarize the key characteristics of new media based on course texts and artistic examples. 2. Analyze and critique new media-related texts and cultural productions through group discussion and oral presentation. 3. Apply project-based methods to respond creatively and critically to the material history and social context of new media. Credits: 3.00

AD 38500 - History Of Interior Design

Credit Hours: 3.00. A survey of the historical changes in interior design and architecture from the 18th century to the present in their social, cultural, and political contexts. The course situates the history of interior design within broader debates about the social uses of space and the cultural significance of architecture and interiors.

Learning Outcomes: 1. Discuss stylistic and technical changes in interior design and architecture from the 18th century to the present. 2. Discuss the social, political, and cultural context of design. 3. Analyze of primary

sources and artifacts related to the history of interiors. 4. Analyze and discuss scholarly readings on the history of interiors design and architecture. 5. Conduct primary and scholarly research on the history of interior design and architecture. Credits: 3.00

AD 34000 - Furniture Development

Credit Hours: 3.00. This course is an introduction to furniture design. The focus of this course is information relevant to furniture design including: basic ergonomics, structural techniques and materials and processes. Additional pertinent information regarding new and ongoing design trends will be explored. A mid-semester field trip to a major furniture manufacturer and/or design studio is offered. Students will design and build two of the following objects: a small freestanding shelving unit, small table, bench, table top object or stool. Students must pass mandatory portfolio review for this course.

Learning Outcomes: 1. Increase knowledge of materials and processes including furniture design construction methods. 2. Gain a basic understanding of ergonomics. 3. Increase aesthetic sensibility. 4. Develop an awareness of contemporary issues and trends in furniture design. 5. Design and build an original piece of furniture by the end of the class. Credits: 3.00

ANTH 38400 - Designing For People: Anthropological Approaches

Credit Hours: 3.00. This course is about designing for people. You will use anthropological knowledge and skills to better understand human and technology interactions. With students from other fields, you will learn how to apply an anthropological perspective to human centered design and design with the needs of a specific user group in mind.

Learning Outcomes: 1. Identify opportunities for innovation that emerge from ethnographic studies and divergent thinking approaches to design. 2. Apply diverse team approaches to address open-ended and ill-defined design problems. 3. Describe and apply ethical decision-making to real-world design settings. 4. Demonstrate documentation of the design process from ethnography through choosing a design idea to make, including fieldnotes, drawings and digital presentation techniques. Credits: 3.00

18 Credits

Fall 4th Year

AD 40500 - Industrial Design III

Credit Hours: 3.00. Design projects emphasizing sophisticated problem-solving methods. Design projects will stress diversity of industrial design and will trace the development of products from initial concept, research, and development through production.

Credits: 3.00

AD 41500 - Professional Techniques

Credit Hours: 3.00. Research development for product design, with emphasis on socioeconomic concerns and documentation techniques. Portfolio refinement, including verbal, written, and other visual documentation and presentation skills in various media, such as drawing. Photography and computer-generated graphics will be stressed.

Credits: 3.00

AD 47800 - Internship In Art And Design

Credit Hours: 1.00 to 8.00. Intensive exposure to professional experience through supervised internship in art-and-design-related firms, departments, or studios. Consent to enroll, amount of credit, placement, and evaluation to be approved and coordinated by department.

Learning Outcomes: 1. Experience culture and environment of a professional studio and professional practice related to their major course of study in Art and Design. Credits: 1.00 to 8.00

15 Credits

Spring 4th Year

AD 40600 - Industrial Design IV

Credit Hours: 3.00. Design of products in their relation to economic, physiological, psychological, and behavioral patterns of the consumer. Emphasis upon total thought processes to

allow environmental considerations as well as technological realities.

Credits: 3.00

AD 41600 - Seminar On Ideas In Industrial Design II: Design And Creative Problem Solving Methods

Credit Hours: 3.00. A study of creative problem solving methods as used by the designer in his or her work.

Credits: 3.00

15 Credits

Industrial Engineering Technology, BS

About the Program

The Industrial Engineering Technology major is part of the Industrial Engineering Technology program. The industrial engineering technology program is accredited by the Engineering Technology Accreditation Commission of ABET, https://www.abet.org, under the commission's general criteria and program criteria for Industrial Engineering Technology and similarly named programs.
When you major in industrial engineering technology at Purdue University, you will gain skills to prepare you for a wide variety of career options: manufacturing plants, government agencies, hospitals, healthcare organizations, retail companies, and more. You will focus on both technical and human-centered approaches to technology management. You will learn how to manage and coordinate engineering operations and lead projects from design to implementation. Coursework is enhanced with an overview of business and economics.

School of Engineering Technology Major Change (CODO) Requirements

Degree Requirements

Department/Program Major Courses (40 credits)

Required Department Courses (40 credits)

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

IET 33520 - Human Factors For Technology Systems

Credit Hours: 3.00. This course provides the foundation for examining the intersection of people, technology, policy, and work across technology systems. Topics include the evaluation, analysis, and design recommendations for improving the safety and efficiency of human-technology interactions.

Learning Outcomes: 1. Describe the relationship between human factors and technology systems. 2. Solve human-machine interaction problems, using appropriate human factors principles. 3. Recommend actions to correct safety deficiencies in existing environments. 4. Apply principles of innovation to design, conduct, and document a human factors study. Credits: 3.00

IET 33620 - Total Productive Maintenance

Credit Hours: 3.00. This course emphasizes the importance of effective maintenance planning and execution for efficient and economical operation of service or technology systems. A systems approach to maintenance planning is taken. Maintenance activities are discussed from reliability and productivity perspectives in the context of technology systems. Semester-long, team-based research project is typically required.

Learning Outcomes: 1. Differentiate among the various types of maintenance activities. 2. Calculate failure rate, mean time between failures, reliability, and maintenance cost versus profit. 3. Identify various state-of-the-art technologies and applications in PM and PDM maintenance management. 4. Evaluate maintenance management philosophies, organization, and practices of a manufacturing entity. 5. Articulate maintenance management philosophies and practices for manufacturing entities. Credits: 3.00

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Learning Outcomes: 1. Calculate various elements of time study and Takt time. 2. Apply various flow analysis tools. 3. Apply the principles of line balancing. 4. Calculate the efficiency of an assembly line. 5. Calculate facility space requirements. 6. Develop a systematic approach to layout and resource planning, incorporating basic material handling systems. Credits: 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of experiments. The course examines the difference between single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.

Learning Outcomes: 1. Formulate null and alternate hypotheses. 2. Apply appropriate statistical tests. 3. Design an appropriate experiment to test a hypothesis. 4. Differentiate between main effects and interaction effects. 5. Distinguish between factorial and fractional factorial designs. 6. Apply response surface methodology. Credits: 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam.

Learning Outcomes: 1. Explain how Lean Six Sigma principles are used for process improvement. 2. Apply the DMAIC method to solve technical systems problems. 3. Design/conduct experiments. 4. Analyze/interpret experiment results. 5. Communicate experiment findings. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution recommendations. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and

issues in engineering technology. Credits: 4.00

IET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

Other Departmental Courses (72 credits)

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial

views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

ENGT 10500 - Industrial Technology Introduction To Design

Credit Hours: 3.00. This course develops students' problem-solving skills, with emphasis placed upon the concept of developing a three-dimensional model of an object. Students focus on the application of visualization processes and tools currently used in the design and manufacturing environments.

Learning Outcomes: 1. Apply the engineering design process to real-world problems. 2. Create detailed technical drawings. 3. Present design solutions to stakeholders. 4. Explore the economic, environmental, and societal impact of engineering solutions. Credits: 3.00

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in

programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have

formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

Electives (8 credits)

Additional Requirements

Program Requirements

Fall 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

CGT 11000 - Technical Graphics Communications

Credit Hours: 3.00. This course is an introduction to the graphic language used to communicate design ideas using CAD. Topics include sketching, multiview drawings, auxiliary views, pictorial views, working drawings, dimensioning practices, and section views.

Learning Outcomes: 1. Describe the importance of engineering/technical graphics in the design of made products. 2. Communicate engineering ideas using visual techniques. 3. Utilize two and three dimensional geometry for engineering and technical applications. 4. Apply basic industry graphics standards to engineering design. 5. Sketch basic freehand representations of technical concepts. 6. Demonstrate proficiency using basic 3D computer-aided design (CAD) processes. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they

relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

ENGT 10500 - Industrial Technology Introduction To Design

Credit Hours: 3.00. This course develops students' problem-solving skills, with emphasis placed upon the concept of developing a three-dimensional model of an object. Students focus on the application of visualization processes and tools currently used in the design and manufacturing environments.

Learning Outcomes: 1. Apply the engineering design process to real-world problems. 2. Create detailed technical drawings. 3. Present design solutions to stakeholders. 4. Explore the economic, environmental, and societal impact of engineering solutions. Credits: 3.00

TECH 12000 - Design Thinking In Technology (UCC: IL/STS)

Credit Hours: 3.00. Student will engage in critical analysis of real-world problems and global challenges. They will demonstrate the ability to recognize opportunity and to take initiative in developing solutions applying the principles of human centered design. Students will be able to communicate effectively and to work well on teams. Problems and solutions will be examined from societal, cultural, and ethical perspectives.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Write a narrowly focused problem statement. 2. Apply ethnographic methods to understand technological problems. 3. Develop a search strategy, access technical databases and evaluate results and source quality. 4. Create a technical report documenting results of the design process. 5. Manage design projects, develop project timelines and negotiate individual responsibilities and accountability in the team environment. 6. Apply strategies of ideation to develop novel and innovation solutions. 7. Demonstrate rapid prototyping solutions for purposes of design, testing and communication. Credits: 3.00

MFET 10301 - Geometric Modeling Applications

Credit Hours: 3.00. This course provides an introduction to the process of 3D geometric CAD modeling, and the construction techniques used in the creation of constraint-based solid and surface models used in engineering disciplines. Part modeling and assembly modeling are included, as well as manipulation of the geometric model to derive variant designs. Emphasis is on the use of the engineering design process as a problem-solving method to capture modeling behavior to enable the downstream use of 3D data in the overall product design process, and its re-use in the product lifecycle.

Learning Outcomes: 1. Demonstrate fluency in constraint-based modeling techniques using commercial CAD tools. 2. Understand the role of geometric modeling in the product lifecycle. 3. Create effective 3D CAD data to support the incorporation of design intent. 4. Manipulate a solid model database to support geometry re-use in a PLM setting. 5. Understand the primary differences between constraint-based, NURBs, behavioral and polygonal modeling and their application to various communicative problems and tasks. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish

and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

ENGT 18200 - Gateway To Engineering Technology

Credit Hours: 4.00. This course introduces School of Engineering Technology students to the resources and skills needed to define and solve technical problems, which will help them be successful in their studies and ultimately in their careers. Instruction is given in analytical and computational problem-solving techniques. The application of software for analysis and problem-solving is emphasized. Foundational principles for electrical, industrial, manufacturing, and mechanical engineering technology are studied. Teamwork, global and societal concerns, and professional ethics are integrated into course.

Learning Outcomes: 1. Develop an academic pathway for success in the student's selected major. 2. Select appropriate strategies and technologies to solve technical problems. 3. Apply foundational principles and tools of electrical, industrial, manufacturing, and mechanical engineering technology to address technical problems. 4. Apply computational tools to address technical problems. 5. Work in a team to solve an engineering technology problem. 6. Demonstrate awareness of professional standards, practices, culture, and issues in engineering technology. Credits: 4.00

15 Credits

Spring 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide

constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MET 14300 - Materials And Processes I

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of metals and ceramics commonly used in industry is presented. Problem solving skills are developed in the areas of materials selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure, characteristics and properties of metals and ceramics. 2. Understand the common manufacturing processes used for metals and ceramics. 3. Communicate with colleagues in the field using the vocabulary of metals and ceramics and their manufacturing processes. 4. Conduct, analyze and interpret standard material tests for metals and ceramics. 5. Describe key design considerations for components made of metals and ceramics. Credits: 3.00

TLI 11200 - Foundations Of Organizational Leadership

Credit Hours: 3.00. A survey of individual and organizational behavioral concepts and principles that provide a foundation for leadership in technology organizations. The focus will be toward the understanding of behaviors necessary for effective organizational leadership, including concepts of work in a technology-rich environment.

Learning Outcomes: 1. Define the foundational theories, concepts, and practices of organizational behavior and technology leadership. 2. Use self-assessment for identifying behaviors and skills of technology leadership. 3. Define and implement reflective practice for leadership growth. 4. Explain the systematic study of organizational behavior. 5. Describe dimensions of technology as they relate to the organizational behavior and leadership. Credits: 3.00

IET 21400 - Introduction To Supply Chain Management Technology

Credit Hours: 3.00. This course is an introduction to supply chain management technology. Topics include supply chain functions including how to organize a supply chain, supply chain strategy, supply chain process mapping, and use of supply chain technologies, analysis, and performance measurements.

Learning Outcomes: 1. Describe the building blocks of supply chain strategy. 2. Explain the steps involved in designing a global supply chain network. 3. Plan and coordinate operations across the supply chain. 4. Describe key elements required to manage product flow. 5. Use enterprise resource planning (ERP) software to manage supply chain operations. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of

print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

MET 14400 - Materials And Processes II

Credit Hours: 3.00. An overview of structures, properties, processing, and applications of polymers, composites, laminates, biomaterials, green materials, nanomaterials, and pharmaceuticals commonly used in industry is presented. Problem solving skills are developed in the areas of material selection, evaluation, measurement, and testing.

Learning Outcomes: 1. Understand the structure and characteristics of major polymers, and related industry terminology. 2. Conduct standard polymer material tests. 3. Describe key design considerations for polymer process equipment components. 4. Describe fibers, matrices, and fabrication techniques related to various composite materials. 5. Identify green materials and green manufacturing strategies. 6. Describe biomaterials and biomedical device manufacturing concepts. Credits: 3.00

15 Credits

Fall 2nd Year

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MET 24500 - Manufacturing Systems

Credit Hours: 3.00. This course surveys the manufacturing processes and tools commonly used to convert cast and molded, formed, and joined materials into finished products. It includes the fundamentals of material removal, measurement, statistical quality control, assembly processes, process planning and optimization, CNC programming and automated manufacturing.

Learning Outcomes: 1. Select and use appropriate measurement instruments and quality control methods, interpret their results, recognize potential issues and resolve them. 2. Select appropriate machining operations, appropriate tooling, and determine basic process parameters. 3. Recognize basic features of a manufacturing system and methods for its improvement towards cellular manufacturing. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the

ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

IET 23500 - Introduction To Systems Thinking And Process Improvement

Credit Hours: 3.00. This course provides the foundation for technology systems processes and practices. The content covers the discussion of current systems issues, basic systems technology processes, and the role of systems engineering professionals in a global business environment. Topics include basic principles of systems thinking, the concepts of performance and cost measures, alternative design concepts, lean processes, and sustainable life-cycle management within an enterprise and across the supply chain.

Learning Outcomes: 1. Describe the essential system components and their interrelationships. 2. Identify, analyze, and generate solutions to problems. 3. Clearly and effectively communicate findings and results. 4. Describe principles for managing and operating basic systems. 5. Identify opportunities for system improvement. 6. Explain the impact of risk on the enterprise system. Credits: 3.00

16 Credits

Spring 2nd Year

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

TLI 21300 - Project Management

Credit Hours: 3.00. Project management is an ad hoc technique for accomplishing specialized missions or work. Examples of projects include research and development studies, consulting projects, reorganizations efforts, implementation of total quality management, installation of new equipment, advertising campaigns, construction or other one-time efforts. This course will provide a leadership approach to project management, including team development and team selection.

Learning Outcomes: 1. Demonstrate ability to function effectively in teams. 2. Document and manage a project using accepted project management principles. 3. Identify strategies for managing organizational stakeholders. 4. Demonstrate effective oral and written communication skills. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic

theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

15 Credits

Fall 3rd Year

IET 31600 - Statistical Quality Control

Credit Hours: 3.00. This course introduces the application of statistical and probability tools to develop, implement, and maintain effective quality assurance in technology and service systems. A systems approach to product or service quality from inception to disposal is employed. Factors affecting variation in quality are studied. The concepts and implications of quality from a global business environment are examined.

Learning Outcomes: 1. Describe the role and importance of quality planning, implementation, and control in manufacturing and service industries. 2. Apply quality improvement tools to solve problems. 3. Apply basic statistics to solve quality control problems. 4. Construct various control charts. 5. Apply fundamental probability concepts. 6. Examine the role of "code of ethics" and ethical practices in business and industry. 7. Communicate basic quality concepts. Credits: 3.00

IET 33400 - Economic Analysis For Technology Systems

Credit Hours: 3.00. This course examines techniques of economic analysis for systems technologists, engineers, and leaders who evaluate and determine the financial attractiveness of multiple alternatives. Emphasizes economic feasibility and applying time value of money concepts to cost-volume-profit decisions. Topics include present worth, rate of return, benefit-cost, payback, breakeven analysis, depreciation, economic optimization, and decision-making under uncertainty.

Learning Outcomes: 1. Apply compound interest factors to establish economic equivalencies. 2. Use present worth analysis to evaluate alternatives. 3. Use annual worth analysis to evaluate alternatives. 4. Calculate the internal rate of return for a project. 5. Apply economic analysis concepts to personal finances. Credits: 3.00

IET 33620 - Total Productive Maintenance

Credit Hours: 3.00. This course emphasizes the importance of effective maintenance planning and execution for efficient and economical operation of service or technology systems. A systems approach to maintenance planning is taken. Maintenance activities are discussed from reliability and productivity perspectives in the context of technology systems. Semester-long, team-based research project is typically required.

Learning Outcomes: 1. Differentiate among the various types of maintenance activities. 2. Calculate failure rate, mean time between failures, reliability, and maintenance cost versus profit. 3. Identify various state-of-the-art technologies and applications in PM and PDM maintenance management. 4. Evaluate maintenance management philosophies, organization, and practices of a manufacturing entity. 5. Articulate maintenance management philosophies and practices for manufacturing entities. Credits: 3.00

15 Credits

Spring 3rd Year

MFET 34400 - Automated Manufacturing Processes

Credit Hours: 3.00. Shop floor components of computer-integrated manufacturing are explored. Emphasis is focused on current applications and programming practices of various computer-automated manufacturing processes and technologies. Topics include CAD/CAM integration, computer-assisted numerical control programming for 2 ½ and 3-axis contouring, and CNC program verification.

Learning Outcomes: 1. Use integrated CAD/CAM tools in the successful manufacture of a product. 2. Program and execute CNC programs on a multi-axis milling machine or lathe. Credits: 3.00

MFET 24800 - Industrial Robot Programming And Applications

Credit Hours: 3.00. This course introduces the fundamental concepts of robotics with emphasis on hands-on experience in programming and application of industrial robots. Topics covered include the introduction of robotics, robot classifications, robot programming, end-of-arm tooling, safety considerations, automation sensors, and robot and system integration.

Learning Outcomes: 1. Describe the fundamentals of robotics. 2. Create robot programs for various applications. 3. Implement robot applications that use peripheral devices or sensors. Credits: 3.00

MET 28400 - Introduction To Industrial Controls

Credit Hours: 3.00. This course examines the concepts, devices, and common practices associated with modern industrial control systems. Common industrial control devices are studied. Students learn how to wire, program, and troubleshoot programmable logic controller (PLC) based control systems. PLC applications focus on interfacing and controlling a variety of electromechanical devices such as motors and pneumatic actuators. Industrial safety practices and procedures are emphasized throughout the course.

Learning Outcomes: 1. Identify and explain the fundamental operation of various discrete input devices and output actuators that are commonly used with PLC-based control systems. 2. Identify, describe, and effectively use the core instructions contained in a PLC's instruction set. 3. Demonstrate the ability to successfully use the PLC programming software to perform common programming tasks. 4. Read writing diagrams and wire I/O devices. Credits: 3.00

IET 33520 - Human Factors For Technology Systems

Credit Hours: 3.00. This course provides the foundation for examining the intersection of people, technology, policy, and work across technology systems. Topics include the evaluation, analysis, and design recommendations for improving the safety and efficiency of human-technology interactions.

Learning Outcomes: 1. Describe the relationship between human factors and technology systems. 2. Solve human-machine interaction problems, using appropriate human factors principles. 3. Recommend actions to correct safety deficiencies in existing environments. 4. Apply principles of innovation to design, conduct, and document a human factors study. Credits: 3.00

IET 43630 - Design Of Experiments

Credit Hours: 3.00. Introduction to statistical design of experiments. The course examines the difference between single, multivariate, and factorial experimental designs. Concepts of optimization and response surface methodologies are introduced. The course focuses on interpreting and communicating experimental results.

Learning Outcomes: 1. Formulate null and alternate hypotheses. 2. Apply appropriate statistical tests. 3. Design an appropriate experiment to test a hypothesis. 4. Differentiate between main effects and interaction effects. 5. Distinguish between factorial and fractional factorial designs. 6. Apply response surface methodology. Credits: 3.00

IET 43640 - Lean Six Sigma

Credit Hours: 3.00. A study of the Lean Six Sigma quality and process improvement methodology, using the define, measure, analyze, improve, and control (DMAIC) process. The course addresses advanced topics in statistical quality; introduces quality management concepts as they pertain to the Lean Six Sigma methodology; and provides preparation for the Green Belt Certification exam.

Learning Outcomes: 1. Explain how Lean Six Sigma principles are used for process improvement. 2. Apply the DMAIC method to solve technical systems problems. 3. Design/conduct experiments. 4. Analyze/interpret experiment results. 5. Communicate experiment findings. Credits: 3.00

15 Credits

Fall 4th Year

IET 43530 - Operations Planning And Management

Credit Hours: 3.00. A study of enterprise operations and management, demand forecasting, capacity analysis, research and development, production, personnel, and sales. Examples of the procedures necessary to provide a product or service are included. The course focuses on the tools necessary to solve problems, such as decision analysis, linear programming, transportation modeling, enterprise resource planning (ERP) systems, and forecasting models. Field trips may be required and industry-sponsored research projects are typically completed.

Learning Outcomes: 1. Explain key concepts of operations planning and management. 2. Explain the importance of enterprise resource planning (ERP) in technology systems management and supply chain operations. 3. Apply quantitative methods to solve operations management problems. 4. Define a problem, develop solution alternatives, and communicate findings to appropriate audiences. Credits: 3.00

IET 48001 - Engineering Technology Capstone I

Credit Hours: 3.00. This is the first course of a two-term senior capstone sequence. The skills needed to define, design and develop engineering technology solutions are introduced and developed. Planning and designing alternatives that meet cost, performance, and user-interface goals are emphasized. Project planning, scheduling, and management techniques are studied. Different design approaches are compared. Teamwork, global and societal concerns, and professional ethics are integrated into course projects.

Learning Outcomes: 1. Apply the engineering design process to engineering technology problems. 2. Evaluate customer needs when defining a solution. 3. Determine a preferred solution. 4. Define and develop a plan for implementing a technical solution. Credits: 3.00

15 Credits

Spring 4th Year

IET 43540 - Facilities Planning And Material Handling

Credit Hours: 3.00. This course takes a systematic approach to design of facilities and material handling systems for effective and lean production of goods and services. An array of qualitative and quantitative tools and techniques are introduced and utilized, emphasizing lean principles, waste reduction, and overall efficiency of operations. Flow analysis and optimization tools, including computer simulation, are introduced. Strong emphasis is placed on a comprehensive semester-long team project as an integral component of this course.

Learning Outcomes: 1. Calculate various elements of time study and Takt time. 2. Apply various flow analysis tools. 3. Apply the principles of line balancing. 4. Calculate the efficiency of an assembly line. 5. Calculate facility space requirements. 6. Develop a systematic approach to layout and resource planning, incorporating basic material handling systems. Credits: 3.00

ENGT 48100 - Engineering Technology Capstone II

Credit Hours: 3.00. This is the second course of two-term capstone sequence, addressing an industry-based problem. The focus of the course is on designing and implementing an acceptable solution.

Learning Outcomes: 1. Participate effectively in teams. 2. Use appropriate research and discipline processes to design a solution. 3. Develop a final project report, properly acquiring, using, and citing sources. 4. Identify limitations/improvements as well as strengths of the design solution. 5. Present final solution recommendations. Credits: 3.00

14 Credits

Notes

Industrial Engineering, BSIE

About the Program

Degree Requirements

Industrial Engineering Major Requirements (51 credits)

Required IE Courses (36 credits)

IE 20000 - Industrial Engineering Seminar

Credit Hours: 0.00. An orientation course to inform students of the major options in the industrial engineering program, assistance in selection of appropriate electives to meet career objectives, introduction to the faculty, and selection of an academic advisor.

Credits: 0.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IE 33200 - Computing In Industrial Engineering

Credit Hours: 3.00. Introduction to computing in industrial engineering. Reinforcement of scientific programming skills on typical IE tasks, together with introduction to simulation and related computer tools.

Credits: 3.00

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs.

Credits: 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38300 - Integrated Production Systems I

Credit Hours: 3.00. Basic concepts in the design and operational control of integrated production systems. Includes topics on facility layout and material handling, material flow and information flow, resource and capacity planning, and shop floor control and scheduling.

Credits: 3.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

IE 43100 - Industrial Engineering Design

Credit Hours: 3.00. Capstone design experience for industrial engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations. Prerequisite: all 30000-level industrial engineering courses required for the BS IE degree.

Credits: 3.00

IE 47400 - Industrial Control Systems

Credit Hours: 3.00. Introduction to automatic controls with reference to automation of industrial machines and processes, including linear dynamic systems, feedback control, and elements of systems analysis. Introduction to digital control.

Learning Outcomes: 1. Able to design basic control systems using block diagrams. 2. Able

to determine the feedback equation of block diagrams. 3. Able to interpret state-space models. 4. Able to compute state-spaced equations. 5. Able to conduct basic dynamic modeling of a control system. 6. Able to classify a linear time-invariant system into known classes. 7. Able to compute the dynamic response of a control system. Credits: 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600 . Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems.

Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

IE Selectives (15 credits)

IE Selectives (6 credits)

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

IE 48400 - Integrated Production Systems II

Credit Hours: 3.00. Extensions of topics on the design and operational control of integrated production systems. Includes production databases, facility layout, material handling, advanced control and scheduling, and physical distribution. Case studies, lab assignments, and projects.

Credits: 3.00

Technical Selectives (9 credits)

Other Departmental/Program Requirements (72-85 credits)

Engineering Requirements for First Year (29-39 credits)

Other Course Requirements (25-28 credits)

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure

vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.
Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.
Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.
University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.
University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.
University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace

transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

IE General Education Requirement (18 credits)

Supplemental List

Course Requirements and Notes

GPA Requirements

Pass/No Pass Policy

Sample Industrial Engineering Plan of Study

Fall 2nd Year

IE 20000 - Industrial Engineering Seminar

Credit Hours: 0.00. An orientation course to inform students of the major options in the industrial engineering program, assistance in selection of appropriate electives to meet career objectives, introduction to the faculty, and selection of an academic advisor.

Credits: 0.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with

projects. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

16 Credits

Spring 2nd Year

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

18 Credits

Fall 3rd Year

IE 33500 - Operations Research - Optimization

Credit Hours: 3.00. Introduction to deterministic optimization modeling and algorithms in operations research. Emphasis on formulation and solution of linear programs, networks flows, and integer programs.

Credits: 3.00

IE 33600 - Operations Research - Stochastic Models

Credit Hours: 3.00. Introduction to probabilistic models in operations research. Emphasis on Markov chains, Poisson processes, and their application to queuing systems.

Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems.

4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

15 Credits

Spring 3rd Year

IE 33200 - Computing In Industrial Engineering

Credit Hours: 3.00. Introduction to computing in industrial engineering. Reinforcement of scientific programming skills on typical IE tasks, together with introduction to simulation and related computer tools.

Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38300 - Integrated Production Systems I

Credit Hours: 3.00. Basic concepts in the design and operational control of integrated production systems. Includes topics on facility layout and material handling, material flow and information flow, resource and capacity planning, and shop floor control and scheduling.

Credits: 3.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

18 Credits

Fall 4th Year

IE 47400 - Industrial Control Systems

Credit Hours: 3.00. Introduction to automatic controls with reference to automation of industrial machines and processes, including linear dynamic systems, feedback control, and elements of systems analysis. Introduction to digital control.

Learning Outcomes: 1. Able to design basic control systems using block diagrams. 2. Able to determine the feedback equation of block diagrams. 3. Able to interpret state-space models. 4. Able to compute state-spaced equations. 5. Able to conduct basic dynamic modeling of a control system. 6. Able to classify a linear time-invariant system into known classes. 7. Able to compute the dynamic response of a control system. Credits: 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600 . Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems.

Credits: 3.00

15 Credits

Spring 4th Year

IE 43100 - Industrial Engineering Design

Credit Hours: 3.00. Capstone design experience for industrial engineering students involving analysis and synthesis of unstructured problems in practical settings. Students work in teams to formulate issues, propose solutions, and communicate results in formal written and oral presentations. Prerequisite: all 30000-level industrial engineering courses required for the BS IE degree.

Credits: 3.00

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

IE 48400 - Integrated Production Systems II

Credit Hours: 3.00. Extensions of topics on the design and operational control of integrated production systems. Includes production databases, facility layout, material handling, advanced control and scheduling, and physical distribution. Case studies, lab assignments, and projects.

Credits: 3.00

15 Credits

Insect Biology, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (46 credits)

Required Major Courses (43 credits)

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

ENTM 21000 - Introduction To Insect Behavior (UCC: SCI)

Credit Hours: 3.00. Description and introductory analysis of innate and learned insect behavior, including basic orientations and movements, behavioral periodicity, communication, chemical and structural defenses, host selection and feeding, reproduction, and insect societies. General biology and introductory entomology are desirable, but not essential.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect interactions, other insects and their environment. Topics include population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended.

Learning Outcomes: 1. Comprehend ecological principles at different scales of biological organization, from the individual to the population to the community to the ecosystem. 2. Understand the mechanisms that mediate interactions of insects with their biotic and abiotic environments. 3. Appreciate the importance of insects as stabilizing and destabilizing components of food webs. 4. Recognize the value and application of insect ecology n solving real-world problems. 5. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. Credits: 3.00

ENTM 33500 - Introduction To Insect Identification

Credit Hours: 4.00. This class is designed for learning more about the collection and identification of adult insects. Emphasis

will be placed on collection and sampling techniques, the preparation of specimens for future study, and identification.

Learning Outcomes: 1. Use keys and other published resources to identify unknown insects to the correct family and by-sight identification. 2. Collect a diversity of insects and related arthropods and to prepare specimens to professional standards. 3. State the scientific names, critical taxonomic characters, natural history and biology, unique or interesting behaviors, ecological role, taxonomic relationships and impacts on human activities of selected families. Credits: 4.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

ENTM 10100 - Insect Biology And Societal Grand Challenges

Credit Hours: 1.00. An introduction to the roles of insect biologists in addressing societal grand challenges.

Learning Outcomes: 1. Appreciate the scope of societal grand challenges. 2. Understand and demonstrate where Insect Biology and grand challenges intersect. 3. Evaluate and critique popular literature and media surrounding these issues. 4. Identify gaps in our current knowledge and understand future needs. Credits: 1.00

ENTM 10200 - The Practice Of Science

Credit Hours: 2.00. A critical examination of science, best practices for conducting science, the contribution of research to knowledge accumulation, and the ethical obligations of scientists.

Learning Outcomes: 1. Understand and practice the fundamental components of conducting scientific investigations (observation, explanation, and investigation). 2. Understand the concept of falsifiable hypotheses and their role in the practice of science. 3. Understand concepts underlying approaches to the quantitative analysis of data. 4. Appreciate the importance of accuracy, precision, and the identification and mitigation of sources of error in data collection and analysis. 5. Understand the ethical expectations of peers, sponsors, and the general public in the practice of science. 6. Understand the distinction between science and pseudoscience, and be able to recognize each. Credits: 2.00

ENTM 25300 - Insect Physiology And Biochemistry

Credit Hours: 4.00. Introductory course in insect cell biology, biochemistry, and physiology including structures and functions of insect internal and external tissues and organs. A year of college biology or equivalent knowledge is expected.

Learning Outcomes: 1. Understand (i) the structure and functions of insect cells, the major internal organ systems of insects, the insect integument, and homeostatic mechanisms; (ii) insect development and reproduction, and their endocrine control; and (iii) the neural mechanisms that underlie the interactions of insects with their environment and coordinated behavior. 2. Understand the physical and chemical principles underpinning animal physiology. 3. Understand the dependence of function on structure in physiology and biochemistry. 4. Acquire familiarity with commonly used experimental procedures for research in insect physiology and biochemistry. Credits: 4.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common basic statistical packages. Credits: 3.00

ENTM 31200 - Plant-Insect Chemical Ecology

Credit Hours: 3.00. An overview of the structure and function of natural and synthetic chemical products in insect ecology. One year of college biology. One year of college chemistry strongly recommended.

Learning Outcomes: 1. Appreciate the history and scope of chemical ecology as a discipline. 2. Understand the role of chemistry in the biology/ecology of plants and animals. 3. Appreciate how chemical products influence processes at various levels of biological integration - from genes to ecosystems. 4. Evaluate and critique primary literature on chemical ecology. 5. Recognize the application of insect chemical ecology in solving grand challenges in entomology. Credits: 3.00

ENTM 35300 - Insecticides And Environment

Credit Hours: 3.00. Insecticides, their interactions with biological organisms and the environment, regulatory policies, environmental and human health outcomes, and current controversies. A year of college biology and college chemistry or equivalent knowledge is expected.

Learning Outcomes: 1. Communicate to the public about insecticide issues including risk, best practices for management and use. 2. Apply principles of toxicology including dose response, target sites, differential toxicity, and resistance. 3. Evaluate environmental hazards, their management and mitigation. 4. Interpret and implement insecticide label instructions. 5. Explain how Risk Assessment and Management is implemented in the U.S. to protect human health and safety balance economic and environmental risks. Credits: 3.00

ENTM 39300 - Insect Biology Practicum

Credit Hours: 1.00. Imbedded programmatic experiences for undergraduate students in Insect Biology including focused reflection on the knowledge, skills, and values necessary for contributions in the discipline. Permission of instructor required.

Learning Outcomes: 1. Survey and experience the scope of the discipline of Insect Biology. 2. Be able to make relevant connections to their own academic, professional and personal motivations and goals in Insect Biology. 3. Understand procedures and approaches useful for research, teaching and extension in Insect Biology. 4. Communicate to others how societal grand challenges are being addressed through the lens of the mentor's program. Credits: 1.00

ENTM 40100 - Addressing Grand Challenges Through Insect Biology

Credit Hours: 1.00. This course engages students in an examination of societal grand challenges by identifying the problems, understanding the current state of knowledge, identifying knowledge gaps, and implementing possible solutions. Permission of department required.

Learning Outcomes: 1. Explain how the accumulated knowledge and experiences of Insect Biology majors can be applied to address Grand Challenges. 2. Demonstrate where capstone projects and grand challenges intersect. 3. Explain roles insect biologists play in addressing grand challenges, and the relationship to future career options. 4. Demonstrate skills in communication, critical thinking and teamwork. Credits: 1.00

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate

familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 49310 - Insect Biology Capstone Experience

Credit Hours: 2.00 or 4.00. Insect Biology majors complete a capstone project under the guidance of a faculty mentor. Permission of instructor required.

Learning Outcomes: 1. Conduct a capstone project and analyze and interpret the information generated. Credits: 2.00 or 4.00

ENTM 49390 - Insect Biology Capstone Forum

Credit Hours: 1.00. Students apply their accumulated knowledge to grand challenges and careers in insect biology. Permission of department required.

Learning Outcomes: 1. Demonstrate ability to integrate accumulated knowledge, technical and social skills to identify and solve a problem relevant to Insect Biology. 2. Communicate the results the Capstone mentored research project through oral and written presentations. Credits: 1.00

ENTM 39310 - Insect Biology Practicum II

Credit Hours: 1.00. This course provides imbedded programmatic experiences for undergraduate students. It introduces students to the breadth of the discipline of entomology by engaging them at a programmatic level. This is accomplished by incorporating students into laboratory meetings, research, extension or teaching activities and through discussions with the faculty instructor about the goals and motivations driving their weekly research, extension or teaching activities and how these activities address societal grand challenges. All students enrolled in ENTM 39310 will be required at the end of each of the 8-week sessions and provide a recorded presentation overviewing some aspect of the mentor's program and its linkage to societal grand challenges. Permission of department required.

Learning Outcomes: 1. Survey and experience the scope of the discipline of entomology. 2. Provide students with an opportunity to make relevant connections to their own academic, professional and personal motivations and goals in entomology. 3. Understand procedures and approaches useful for research, teaching and extension in entomology. 4. Communicate to others how societal grand challenges are being addressed through the lens of the mentor's program. Credits: 1.00

ENTM 49320 - Insect Biology Capstone Experience II

Credit Hours: 2.00 to 4.00. This course is an experiential meant to familiarize students with the options and procedures associated with the Entomology capstone experience and provide students with an avenue for fulfilling their capstone requirement by conducting a capstone project. Students may use a research, extension or teaching project to meet this

requirement. Although the capstone project may build on or extend a previously conducted undergraduate research project, independent study, or study abroad, students enrolled in ENTM 49320 must conduct their capstone project in a manner that is independent from any other project for which credit will be awarded or for which they will be paid as an employee. Students may enroll in ENTM 49320 and conduct the capstone project at any time during the last 2 years of study. Permission of department required.

Learning Outcomes: 1. Demonstrate their ability to integrate their accumulated knowledge and technical and social skills in order to identify and solve a problem relevant to Entomology. 2. Conduct a capstone project and analyze or interpret the information generated. Credits: 2.00 to 4.00

Directed Science Selective (3 credits)

Other Departmental /Program Course Requirements (53-60 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11700 - Introduction To Entomology Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Entomology. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal

aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding.

7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721

Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and

trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

PHYS 21400 - The Nature Of Physics (UCC: SCI)

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 25200 - Macroeconomics (UCC: BSS)

Credit Hours: 3.00. This course examines how the US economy functions and provides an overview of important macroeconomic issues including: unemployment, inflation, social security, national debt, international trade, the sub-prime crisis, and business cycles. Emphasis is placed upon the role and limits of government fiscal and monetary policy in promoting economic growth and stable prices. CTL: ISH 1041 Macroeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understand the causes of economic prosperity. 2. Recognize the causes and effects of unemployment, inflation, and business cycles. 3. Demonstrate an understanding of monetary and fiscal policy options as they relate to economic stabilization. 4. Critically assess economic information contained in news reports, policymakers' statements, and specialized publications. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s)

to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s)

to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Electives (14-21credits)

GPA Requirements

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 11700 - Introduction To Entomology Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in the Department of Entomology. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the

mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the

molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

ENTM 10100 - Insect Biology And Societal Grand Challenges

Credit Hours: 1.00. An introduction to the roles of insect biologists in addressing societal grand challenges.

Learning Outcomes: 1. Appreciate the scope of societal grand challenges. 2. Understand and demonstrate where Insect Biology and grand challenges intersect. 3. Evaluate and critique popular literature and media surrounding these issues. 4. Identify gaps in our current knowledge and understand future needs. Credits: 1.00

ENTM 10200 - The Practice Of Science

Credit Hours: 2.00. A critical examination of science, best practices for conducting science, the contribution of research to knowledge accumulation, and the ethical obligations of scientists.

Learning Outcomes: 1. Understand and practice the fundamental components of conducting scientific investigations (observation, explanation, and investigation). 2. Understand the concept of falsifiable hypotheses and their role in the practice of science. 3. Understand concepts underlying approaches to the quantitative analysis of data. 4. Appreciate the importance of accuracy, precision, and the identification and mitigation of sources of error in data collection and analysis. 5. Understand the ethical expectations of peers, sponsors, and the general public in the practice of science. 6. Understand the distinction between science and pseudoscience, and be able to recognize each. Credits: 2.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

14-17 Credits

Spring 1st Year

ENTM 21000 - Introduction To Insect Behavior (UCC: SCI)

Credit Hours: 3.00. Description and introductory analysis of innate and learned insect behavior, including basic orientations and movements, behavioral periodicity, communication, chemical and structural defenses, host selection and feeding, reproduction, and insect societies. General biology and introductory entomology are desirable, but not essential.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the

experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

16-18 Credits

Fall 2nd Year

ENTM 20600 - General Entomology (UCC: SCI)

Credit Hours: 2.00. A general course on insect structure, function, biology, ecology and population management. Coordinated with the ENTM 20700 laboratory as an introductory course in entomology.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 2.00

ENTM 20700 - General Entomology Laboratory

Credit Hours: 1.00. Laboratory exercises parallel topics presented in ENTM 20600 . Insect structures and function are studied as a basis for learning to identify insects and other arthropods.

Credits: 1.00

PHYS 21400 - The Nature Of Physics (UCC: SCI)

Credit Hours: 3.00. Development of basic concepts and theories in physics; a terminal survey course designed for non-science majors. CTL:IPS 1750 Survey Of Physical Science

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)
Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.
Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing.
Credits: 3.00

15 Credits

Spring 2nd Year

ENTM 31100 - Insect Ecology

Credit Hours: 3.00. Insect ecology investigates the fundamental concepts of ecology as they relate to insects, including insect interactions, other insects and their environment. Topics include

population and community ecology, plant-insect interactions, insect biodiversity and biogeography, and theoretical and applied ecology. Examples from current entomological and ecological studies are used. Completion of college biology or an introductory course in entomology is recommended.

Learning Outcomes: 1. Comprehend ecological principles at different scales of biological organization, from the individual to the population to the community to the ecosystem. 2. Understand the mechanisms that mediate interactions of insects with their biotic and abiotic environments. 3. Appreciate the importance of insects as stabilizing and destabilizing components of food webs. 4. Recognize the value and application of insect ecology n solving real-world problems. 5. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. Credits: 3.00

ENTM 25300 - Insect Physiology And Biochemistry

Credit Hours: 4.00. Introductory course in insect cell biology, biochemistry, and physiology including structures and functions of insect internal and external tissues and organs. A year of college biology or equivalent knowledge is expected.

Learning Outcomes: 1. Understand (i) the structure and functions of insect cells, the major internal organ systems of insects, the insect integument, and homeostatic mechanisms; (ii) insect development and reproduction, and their endocrine control; and (iii) the neural mechanisms that underlie the interactions of insects with their environment and coordinated behavior. 2. Understand the physical and chemical principles underpinning animal physiology. 3. Understand the dependence of function on structure in physiology and biochemistry. 4. Acquire familiarity with commonly used experimental procedures for research in insect physiology and biochemistry. Credits: 4.00

16 Credits

Fall 3rd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan

and perform an experiment. Credits: 1.00

ENTM 33500 - Introduction To Insect Identification

Credit Hours: 4.00. This class is designed for learning more about the collection and identification of adult insects. Emphasis will be placed on collection and sampling techniques, the preparation of specimens for future study, and identification.

Learning Outcomes: 1. Use keys and other published resources to identify unknown insects to the correct family and by-sight identification. 2. Collect a diversity of insects and related arthropods and to prepare specimens to professional standards. 3. State the scientific names, critical taxonomic characters, natural history and biology, unique or interesting behaviors, ecological role, taxonomic relationships and impacts on human activities of selected families. Credits: 4.00

ENTM 30100 - Experimentation And Analysis

Credit Hours: 3.00. Introduction to experimentation and quantitative data analysis in the life sciences with a focus on examples from insect biology.

Learning Outcomes: 1. Start with an observation and design appropriate experiment that recognizes and avoids common pitfalls. 2. Apply the general linear model and its variants in data analysis. 3. Appropriately use common basic statistical packages. Credits: 3.00

ENTM 39300 - Insect Biology Practicum

Credit Hours: 1.00. Imbedded programmatic experiences for undergraduate students in Insect Biology including focused reflection on the knowledge, skills, and values necessary for contributions in the discipline. Permission of instructor required.

Learning Outcomes: 1. Survey and experience the scope of the discipline of Insect Biology. 2. Be able to make relevant connections to their own academic, professional and personal motivations and goals in Insect Biology. 3. Understand procedures and approaches useful for research, teaching and extension in Insect Biology. 4. Communicate to others how societal grand challenges are being addressed through the lens of the mentor's program. Credits: 1.00

13-15 Credits

Spring 3rd Year

BTNY 35000 - Biotechnology In Agriculture

Credit Hours: 3.00. A study of the methods used to produce genetically modified organisms, primarily using gene transfer technology, and the application of these organisms in agriculture. The uses of microbes, plants, and animals in agricultural biotechnology are examined. Social, economic, and ethical issues related to biotechnology are discussed.

Learning Outcomes: 1. Understand the broad scientific principles that underlie biotechnology. 2. Understand how principles underlying biotechnology are applied in agriculture. 3. Describe how transgenic plants are produced. 4. Explain how transgenic organisms and other biotechnology tools are applied in agriculture. 5. Evaluate the impact of these technologies in agriculture. 6. Analyze the controversies that surround the use of these technologies. Credits: 3.00

ENTM 31200 - Plant-Insect Chemical Ecology

Credit Hours: 3.00. An overview of the structure and function of natural and synthetic chemical products in insect ecology. One year of college biology. One year of college chemistry strongly recommended.

Learning Outcomes: 1. Appreciate the history and scope of chemical ecology as a discipline. 2. Understand the role of chemistry in the biology/ecology of plants and animals. 3. Appreciate how chemical products influence processes at various levels of biological integration - from genes to ecosystems. 4. Evaluate and critique primary literature on chemical ecology. 5. Recognize the application of insect chemical ecology in solving grand challenges in entomology. Credits: 3.00

ENTM 35300 - Insecticides And Environment

Credit Hours: 3.00. Insecticides, their interactions with biological organisms and the environment, regulatory policies, environmental and human health outcomes, and current controversies. A year of college biology and college chemistry or equivalent knowledge is expected.

Learning Outcomes: 1. Communicate to the public about insecticide issues including risk, best practices for management and use. 2. Apply principles of toxicology including dose response, target sites, differential toxicity, and resistance. 3. Evaluate environmental hazards, their management and mitigation. 4. Interpret and implement insecticide label instructions. 5. Explain how Risk Assessment and Management is implemented in the U.S. to protect human health and safety balance economic and environmental risks. Credits: 3.00

ENTM 39310 - Insect Biology Practicum II

Credit Hours: 1.00. This course provides imbedded programmatic experiences for undergraduate students. It introduces students to the breadth of the discipline of entomology by engaging them at a programmatic level. This is accomplished by incorporating students into laboratory meetings, research, extension or teaching activities and through discussions with the faculty instructor about the goals and motivations driving their weekly research, extension or teaching activities and how these activities address societal grand challenges. All students enrolled in ENTM 39310 will be required at the end of each of the 8-week sessions and provide a recorded presentation overviewing some aspect of the mentor's program and its linkage to societal grand challenges. Permission of department required.

Learning Outcomes: 1. Survey and experience the scope of the discipline of entomology. 2. Provide students with an opportunity to make relevant connections to their own academic, professional and personal motivations and goals in entomology. 3. Understand procedures and approaches useful for research, teaching and extension in entomology. 4. Communicate to others how societal grand challenges are being addressed through the lens of the mentor's program. Credits: 1.00

15-16 Credits

Fall 4th Year

ENTM 41000 - Applied Insect Biology

Credit Hours: 2.00. Identification, biology and management of insects associated with global food and energy security and human and animal health and well-being. Students are expected to have a knowledge of college biology.

Learning Outcomes: 1. Identify insects impacting global food and energy security, human and animal health and well-being, and environmental integrity. 2. Demonstrate familiarity with the biology of insect pests. 3. Understand and demonstrate the principles and practice of insect management and conservation. Credits: 2.00

ENTM 41001 - Insects Of Urban Landscapes

Credit Hours: 1.00. Students focus on identification and biology of insects associated with turfgrass and ornamental plants. The role of experimentation in applied insect biology is examined.

Learning Outcomes: 1. Identify pest and beneficial insects associated with turfgrass and ornamental plants. 2. Understand and describe the biology of pest and beneficial insects associated with turfgrass and ornamental plants. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 41002 - Insects Of Agricultural Crops

Credit Hours: 1.00. Students focus on identification, biology, and management of pests of agricultural crops, identification of natural enemies, and application of scientific method to applied insect biology.

Learning Outcomes: 1. Identify pest insects associated with agricultural crops and understand their biology and management. 2. Identify natural enemies of pest species

associated with agricultural corps and explain how they can be used in pest management. 3. Participate in the design, implementation, analysis, summary and critique of a semester-long group research project or experiment in applied insect biology. Credits: 1.00

ENTM 49310 - Insect Biology Capstone Experience

Credit Hours: 2.00 or 4.00. Insect Biology majors complete a capstone project under the guidance of a faculty mentor. Permission of instructor required.

Learning Outcomes: 1. Conduct a capstone project and analyze and interpret the information generated. Credits: 2.00 or 4.00

12-13 Credits

Spring 4th Year

ENTM 40100 - Addressing Grand Challenges Through Insect Biology

Credit Hours: 1.00. This course engages students in an examination of societal grand challenges by identifying the problems, understanding the current state of knowledge, identifying knowledge gaps, and implementing possible solutions. Permission of department required.

Learning Outcomes: 1. Explain how the accumulated knowledge and experiences of Insect Biology majors can be applied to address Grand Challenges. 2. Demonstrate where capstone projects and grand challenges intersect. 3. Explain roles insect biologists play in addressing grand challenges, and the relationship to future career options. 4. Demonstrate skills in communication, critical thinking and teamwork. Credits: 1.00

ENTM 49390 - Insect Biology Capstone Forum

Credit Hours: 1.00. Students apply their accumulated knowledge to grand challenges and careers in insect biology. Permission of department required.

Learning Outcomes: 1. Demonstrate ability to integrate accumulated knowledge, technical and social skills to identify and solve a problem relevant to Insect Biology. 2. Communicate the results the Capstone mentored research project through oral and written presentations. Credits: 1.00

ENTM 49320 - Insect Biology Capstone Experience II

Credit Hours: 2.00 to 4.00. This course is an experiential meant to familiarize students with the options and procedures associated with the Entomology capstone experience and provide students with an avenue for fulfilling their capstone requirement by conducting a capstone project. Students may use a research, extension or teaching project to meet this requirement. Although the capstone project may build on or extend a previously conducted undergraduate research project, independent study, or study abroad, students enrolled in ENTM 49320 must conduct their capstone project in a manner that is independent from any other project for which credit will be awarded or for which they will be paid as an employee. Students may enroll in ENTM 49320 and conduct the capstone project at any time during the last 2 years of study. Permission of department required.

Learning Outcomes: 1. Demonstrate their ability to integrate their accumulated knowledge and technical and social skills in order to identify and solve a problem relevant to Entomology. 2. Conduct a capstone project and analyze or interpret the information generated. Credits: 2.00 to 4.00

12-17 Credits

Integrated Business & Engineering, BS

About the Program

Degree Requirements

Department/Program Major Courses (85 credits)

Business Courses (46 credits)

Business Core Courses (37 credits)

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock

and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and

persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

MGMT 49200 - Intellectual Property Management

Credit Hours: 2.00. Intellectual property (IP) has become a strategic opportunity for creating value for the firm. Firms are tasked with understanding how to utilize intellectual property as a competitive advantage in multiple market contexts. In the current economic environment, intellectual assets can be the largest portion of a firm's total wealth. Strategic management of these assets is very critical. Managing intellectual property is about transforming a firm's ideas, know-how, etc., into learning, products, and ultimately cash flow. In Managing Intellectual Property, we examine this topic by viewing intellectual property as both a legal asset (property ownership) and business asset (value-adding). The focus of Managing Intellectual Property is on the integration of IP generation, IP protection, and strategizing functions of the firm in creating value with an IP portfolio. Concepts and frameworks discussed/developed in lecture are exercised in case studies from multiple contexts.

Learning Outcomes: 1. Understand key elements in intellectual property management. 2. Aware of the different types/forms of intellectual property. 3. Understand how the difference in the types of intellectual property provides strategic opportunities. 4. Confidence in your own abilities to manage intellectual property. 5. Aware of the role of multiple functions in creating an intellectual property portfolio (e.g. R&D, Marketing, Legal, Merger & Acquisition, Business Development, Human Resources, Finance). Credits: 2.00

MGMT 49300 - Storytelling With Data

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course (Storytelling with Data) is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and effective skills to express your ideas in ways that connect.

Learning Outcomes: 1. Understand the importance of communication context, elements of good storytelling, and basic principles of human information processing as related to data visualization. 2. Apply this understanding to the communication of complex (i.e., data-driven) information. 3. Analyze data visualization design choices. 4. Evaluate the effectiveness of data communication. 5. Create a compelling story using data with the tools and skills taught in this course. Credits: 2.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

Business Method Selectives (6 credits)

MGMT 47200 - Advanced Spreadsheet Modeling And Simulation

Credit Hours: 3.00. This course covers up-to-date and practical spreadsheet modeling tools that can be applied to a wide variety of business problems from finance, marketing, and operations. The topical coverage consists of the following five modules: (1) Excel functions, skills and financial models; (2) deterministic and stochastic optimization techniques to determine the best managerial actions under internally-and/or externally-imposed constraints; (3) probability distribution fitting techniques to find the most likely description of the uncertainty in future business; (4) simulation modeling techniques to discover and analyze the risk and uncertainties in business environment and processes; (5) application of spreadsheet modeling and simulation techniques in forecasting asset dynamics(stock price) and pricing options and real investment opportunities. This course provides hands-on experience of computer application using Microsoft Excel and the spreadsheet add-ins @RISK, RISKOptimizer, SimQuick, etc.

Learning Outcomes: 1. Acquire advanced Excel skills to quickly build business spreadsheets that easily convey information and significance to the reader. 2. Construct complex deterministic and stochastic computer models to aid in the decision making process. 3. Use simulation modeling to identify and assess the risks in decisions and processes. 4. Conduct financial analysis including asset and options pricing. 5. Become skilled in the use of @RISK, RiskOptimizer, SolverTable, SimQuick and other software packages in making and analyzing business decisions. Credits: 3.00

MGMT 30600 - Management Science

Credit Hours: 3.00. Use of optimization, simulation, and decision theory models to support management decision making. Emphasis on modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Computer applications are stressed.

Learning Outcomes: 1. Learn management decision making through optimization, simulation, and decision theory models, by modeling and interpreting results for managerial applications of linear and integer programming models, network problems, simulation models, and decision analysis. Credits: 3.00

MGMT 47400 - Predictive Analytics

Credit Hours: 3.00. Students build and evaluate predictive models to support regression-type and classification-type business problems using popular industry tools (e.g., RStudio, SAS Enterprise Miner). Methods covered include multiple linear regression, ridge regression, lasso, CART, logistic regression, LDA/QDA, SVM, and ensemble methods such as random forests.

Learning Outcomes: 1. Generate a valid predictive analytics solution by following a structured process. 2. Demonstrate practical understanding of frequently used predictive analytics techniques. 3. Demonstrate a working knowledge of RStudio and SAS Enterprise Miner to build an access predictive models. 4. Demonstrate project poster and presentation of a predictive analytics solution to a business problem. Credits: 3.00

MGMT 46600 - Project Management

Credit Hours: 3.00. This course seeks to introduce different phases of managing projects from conception to termination with particular emphasis on quantitative tools for planning, scheduling, resource allocation, monitoring, and control. In addition, topics such as risk management, quality management and procurement management will be covered. Students will also gain a working knowledge of MSProject software.

Learning Outcomes: 1. Provide in-depth exposure to the use of project management tools and philosophies. 2. Demonstrate a realistic experience using these tools to plan and control a project. 3. Know basic steps in project planning: work breakdown, scheduling, resource allocation, information systems, and control. Credits: 3.00

Business Depth Selective (3 credits)

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations

of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 44362 - Leadership In A Changing World

Credit Hours: 3.00. This course is designed to help you become a more effective leader in a complex and rapidly changing world. Effective leadership-developed over time through practice, feedback, and self-reflection-is crucial for organizational success. While engaging in effective leadership practices can be rewarding, it is also a significant challenge for most people. This course aims to equip you with the knowledge and tools necessary to improve your leadership capabilities and confidence based on evidence-based practices and leadership theories. Through interactive sessions, we will explore various aspects of effective leadership, assess where you stand in your leadership development journey, and hone your leadership skills. By the end of the course, you should be able to recognize the importance of interpersonal relationship skills and abilities in effective leadership, discuss key leadership principles and practices in organizational settings with peers, colleagues, supervisors, and mentors, identify your own leadership strengths and areas for development, propose evidence-based solutions to real-world leadership problems, and develop a leadership philosophy based on your personal values and evidence-based strategies.

Learning Outcomes: 1. Discuss effective leadership practices occurring in organizational settings with peers, colleagues, supervisors, and mentors. 2. Recognize your own leadership-relevant strengths and opportunities for development. 3. Develop your leadership skills and perspectives based on evidence-based strategies and personal values. 4. Propose actionable and evidence-based solutions to real-world leadership problems. Credits: 3.00

MGMT 44810 - Technology Strategy

Credit Hours: 3.00. In today's business environment, it is increasingly apparent that business success is driven by a firm's ability to create and capture value through technology and innovation. Thus, the processes used by firms to develop new technologies, the choices they make regarding how to commercialize their technical knowledge, and the strategies they used to position and build a dominate competitive position all are important issues facing the firm. This course seeks to develop tools for understanding industry evolution with respect to new technology, forecast technological change, and understand the basis for technology in competitive advantage.

Learning Outcomes: 1. Improve ability to assess technology and innovation from a competitive perspective. 2. Learn about disruptive innovation and its effects on incumbents and new firms. 3. Consider internal processes for innovation management in existing firms. 4. Improve decision-making and skills with respect to technology and innovation. Credits: 3.00

MGMT 46300 - Supply Chain Analytics

Credit Hours: 3.00. This course focuses on rigorous quantitative decision-making in supply chain management. It covers optimization (linear, nonlinear, and integer), stochastics/probability, and simulation. The coursework is conducted through experiential learning activities based on real-world data, proficiency with analytics software, and operation research case studies. MGMT 30600 is highly recommended but not required. Basic Calculus, Statistics, and Excel literacy are required.

Learning Outcomes: 1. Gain analytical insights on major supply chain tradeoffs. 2. Know supply chain functions: demand forecasting, procurement, inventory, transportation, pricing, contract, revenue management, reverse supply chain and integration of multiple functions. 3. Know a systematic set of analytical methodologies to use effectively in their future careers. Credits: 3.00

MGMT 42710 - Digital Marketing Strategy

Credit Hours: 3.00. Digital marketing is where marketing meets

the internet, wireless devices, and other digital media. The course covers a variety of topics including online advertising, search engine optimization, participation in social media, online listening and monitoring, and web & social media analytics. Through a combination of lecture, case studies, hands-on exercises, and course projects, students develop capabilities in designing, implementing, and evaluating digital marketing strategies. Students can also gain hand-on learning experience in the course by participating in an online marketing project. In the online marketing project, each student team is given $50 to promote a chosen business or organization via online or social media platform (including search engine advertising and online display advertising).

Learning Outcomes: 1. Enable students to rethink marketing in the evolving digital age. 2. Develop capabilities in designing, implementing, and evaluating digital marketing strategies. 3. Understand major tools of digital marketing by gaining hands-on learning experience of search engine advertising tools by participating in a Google sponsored online marketing challenge competition. Credits: 3.00

MGMT 47300 - Data Mining

Credit Hours: 3.00. Students follow a structured analytical process using popular industry tools (e.g., RStudio, Tableau, SQL) to identify, visualize, and summarize relationships within large data sets to support business problems. More focus is on descriptive analytics which includes business segmentation and clustering methods, but also introduces two predictive analytic methods, decision trees, and neural networks.

Learning Outcomes: 1. Demonstrate working knowledge of relationship databases, SQL queries, and efficient sampling. 2. Demonstrate working knowledge of RStudio to perform EDA, visualization, and data mining techniques. 3. Demonstrate working knowledge of data visualization and exploration using Tableau. 4. Demonstrate practical understanding of popular unsupervised and supervised learning methods. Credits: 3.00

ECON 30100 - Managerial Economics

Credit Hours: 3.00. This course provides students with essential tools from intermediate microeconomic theory to support effective decision-making in business and institutional settings. By exploring fundamental economic concepts such as marginal analysis, profit maximization, cost minimization, and pricing strategies, students will enhance their strategic thinking and managerial capabilities. The course addresses key topics including consumer behavior, demand, production and costs, factor demand, market structure, and strategic behavior, equipping students to tackle complex business challenges and make sound economic decisions. By the end of the course, students will have developed the skills to determine optimal strategies in various market conditions, preparing them to succeed as informed business managers.

Learning Outcomes: 1. Learn how to identify goals and constraints, and use inductive and deductive reasoning to draw logical conclusions. 2. Recognize the nature and importance of profits in directing resources to their highest value in use. 3. Understand how incentives shape individual and institutional decisions. 4. Understand the functioning of markets in managing individual and social allocation of scarce resources. 5. Recognize the importance of time value of money in making sound managerial decisions. 6. Learn the value of "thinking at the margin" when we seek to reach optimal outcomes. Credits: 3.00

MGMT 48800 - Data-Driven Decisions In Digital Markets

Credit Hours: 3.00. This course analyzes the changes in business models that have been enabled by Internet technologies, and exposes students to hands-on data analyses to quantify the impact these technologies and business models have on firms, economies, and people. A programming course such as MGMT 28800 Programming for Business Applications or MGMT 38800 Python for Business or CS 17600 Data Engineering in Python or CS 17700 Programming with Multimedia Objects or CNIT 17500 Visual Programming or CS 18000 Problem Solving & Object Oriented Programming and a statistics course such as STAT 30301 Probability & Statistics for Business or MGMT 30500 Business Statistics is highly recommended.

Learning Outcomes: 1. Recognize the role of business models and data-driven decisions in digital markets. 2. Measure, evaluate, and improve online technology usage, advertisement campaigns, and product pricing to meet specific business objective like better serving customers, customer acquisition, quantifying network effects, etc. 3. Analyze the

sheer amount of data ("traces") collected by businesses from different touch points - Google Glass, Apple Watch, smart phones, or simple computing devices - and make critical business decisions. Credits: 3.00

MGMT 35300 - Intermediate Accounting For Non-Accounting Majors

Credit Hours: 3.00. The course is designed to meet the needs of students of predominantly finance students, as a firm grasp of key accounting concepts is critical to success in most finance professions. Throughout the course we will study measurement and reporting issues related to selected important financial statement items. The goal of this course is to educate students on major accounting topics that are likely to influence key financial decisions such as different inventory methods, different depreciation methods, lease recognition, pension accounting, among other topics.

Learning Outcomes: 1. Identify, analyze, and interpret intermediate financial accounting concepts that are relevant to market participants (i.e., shareholders, debtholders, regulators, among others). 2. Demonstrate a thorough understanding of complex financial accounting concepts that are vital to understanding firms' financial statements. 3. Outline how firms use accounting to communicate business results to stakeholders and other interested parties. Credits: 3.00

Engineering Courses (16 credits)

Engineering Required Courses (7 credits)

EPCS 12100 - First Year Participation In EPICS II (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and educational organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project for two or more semesters. First-year students participating in EPICS gain insight into the specific project, and more generally, into the design and development process. Under mentorship from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Ability to apply material from their discipline to the design of community-based projects. 2. Understanding of design as a start-to-finish process. 3. Ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Awareness of the customer. 5. Ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Ability to communicate effectively with audiences with widely-varying backgrounds. 7. Awareness of professional ethics and responsibility. 8. Appreciation of the role that their discipline can play in social contexts. Credits: 1.00

EPCS 11100 - First Year Participation In EPICS I (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one-year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and education organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project team for two or more semesters. First-year students participating in EPCS gain insight into the specific project, and more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected to attend all team meetings. Under mentorship from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding

of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsibility. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 1.00

VIP 17911 - First Year Participation In Vertically Integrated Projects (VIP) I (UCC: STS)

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Apply engineering design to create a product that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 1.00

VIP 17912 - First Year Participation In Vertically Integrated Projects (VIP) II

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze

and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 1.00

ENGR 13300 - Transforming Ideas To Innovation, EPICS/VIP (UCC: IL)

Credit Hours: 2.00. Introduces students to the engineering professions using multidisciplinary, societally relevant content. Students will develop engineering approaches to systems, generate and explore creative ideas, and use quantitative methods to support design decisions. Students will experience the process of design and analysis in engineering including how to work effectively in teams, and will develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB). An emphasis will be placed on computing logic development and builds upon the co-requisite experience of the students in the EPICS class.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Examine and analyze career information from various resources to make informed decisions about which engineering discipline to pursue. 2. Develop metacognitive skills in evaluating own teamwork and leadership abilities, recognizing how own behavior impact the whole team, and make team process adjustments when necessary. 3. Explain critical and diverse use of modeling in engineering to understand problems, represent solutions, compare alternatives, make predications, etc. 4. Use multiple models, estimation, and logic to triangulate and evaluate information coming from various data sources. 5. Collect, analyze, and represent data to make informative explanations and persuasive arguments. 6. Develop a logical problem solving process which includes sequential structures, conditional structures, and repetition structures for fundamental engineering problems. 7. Solve fundamental engineering problems using computer tools. 8. Perform basic file management tasks using an appropriate computer tool. 9. Work effectively and ethically as a member of a technical team. 10. Develop a work ethic appropriate for the engineering profession. 11. Reflect on personal and team performance to achieve continuous improvement. Credits: 2.00

Engineering IBE Core Selectives - Choose Two: (6 credits)

ABE 20500 - Computations For Engineering Systems

Credit Hours: 3.00. Development of engineering problem solving and design skills. Use of Excel, MATLAB, and Mathcad for problem solving, data analysis, numerical modeling, and statistics. Introduction to elementary statics, dynamics, materials, thermodynamics, fluid mechanics, and energy topics.

Learning Outcomes: 1. Apply and interpret descriptive statistical tests to describe variability in data. 2. Identify structure and specific elements of good experimental design. 3. Select and apply appropriate statistical tests to quantify relationships and differences in data. 4.

Interpret results of statistical analyses and communicate findings to technical and non-technical audiences. Credits: 3.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

CEM 20100 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. This course introduces concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role of estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed. Prerequisite: First Year Engineering Curriculum must be completed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity and the costs associated with construction equipment labor. 4. Calculate the peak financial requirement for a given project based on project revenues and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

EEE 30000 - Environmental And Ecological Systems Modeling

Credit Hours: 3.00. Introduction to computational methods for describing physical, chemical, and microbiological processes that occur in natural and engineered aqueous systems, including rivers and lakes, and within water and wastewater treatment systems. Emphases on understanding and conceptualizing important processes, data analysis, algorithm development, and competency in the use of programming tools.

Learning Outcomes: 1. Apply simple models to natural and engineered systems. 2. Identify processes critical to proper formulation of ecological and environmental models. 3. Formulate models to analyze specific issues concerning natural waters and wastewaters. 4. Encode model algorithms into common software packages. 5. List limitations and assumptions of classic and self-formulated models. Credits: 3.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for

this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

Engineering Selectives - Choose One: (3 credits)

IE 47200 - Imagine, Model, Make

Credit Hours: 3.00. This course develops a holistic view of an initial competency in engineering design by conceiving, designing, manufacturing, and optimizing a system component such as a complex structural part. Activities include hand sketching, CAD modeling, and operation of CNC machining equipment for rapid prototyping. Tolerance requirements will be verified and optimized prior to the fabrication of the part in the laboratory using rapid prototyping techniques. The focus is on the design process itself as well as the complementary roles of human creativity and computational methods and tools.

Learning Outcomes: 1. Create any object using

3D CAD design software (modeling, texturing, and animation). 2. Evaluate and optimize 3D designs for different manufacturing processes and materials. 3. Apply the principles of engineering tolerance to 3D CAD design. 4. Use rapid prototyping techniques (laser cutting, laser engraving, injection molding, and 3D printing) to manufacture 3D CAD designs. Credits: 3.00

SYS 30000 - It's A Complex World - Addressing Global Challenges (UCC: STS)

Credit Hours: 3.00. The main goal of this course is to address grand challenges that are of global concern - such as environmental sustainability and energy use, natural and human disasters, and political and economic development - using the ideas and tools of complex adaptive systems. The course exploits the broad expertise of the four faculty members by treating these challenges from diverse disciplinary perspectives, from the biological and physical sciences, to the social sciences, to engineering. By way of a set of case studies, students will analyze the features of these challenges which make them complex, and seek to explain and find solutions to the problems that arise in each case. Their treatment of the cases will be informed by published research and computer simulation. Students will actively participate in discussions regarding these global challenges, and contribute to the progress of the class using oral and written presentations. The course will culminate with a final project completed by teams composed of students from different disciplines.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe global challenges using engineering, biological, physical, and social scientific perspectives, including attention to the interdependence of the different perspectives. 2. Explain the fundamental concepts of 'complex adaptive systems, ' including applications to different global challenges. 3. Develop basic proficiency in applying computer modeling to represent the behavior of complex systems, with applications to the global challenges. 4. Apply the concepts and tools of complexity research to develop a group-based proposal of comprehensive policies/solutions/strategies in a new and unresolved problem area. Credits: 3.00

SYS 35000 - Systems Methods

Credit Hours: 3.00. Introduction to modeling tools and methods for understanding and designing systems. Topics include: defining the problem; defining and validating stakeholders' needs; system modeling and types of models; defining and modeling system behavior; defining and modeling functional, physical and allocated system architectures; and evaluating and modeling the tradeoffs between alternative system designs.

Learning Outcomes: 1. Emphasize patterns of systems thinking. 2. Introduce systems modeling and design processes and methods. 3. Introduce model-based systems analysis and design. 4. Provide practice in using model-based systems tools. Credits: 3.00

Seminar & Innovation Lab Selectives (11 credits)

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts.

Credits: 2.00

VIP 37920 - Junior Participation In Vertically Integrated Projects (VIP) (UCC: STS)

Credit Hours: 2.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 2.00

MGMT 49400 - IBE Capstone

Credit Hours: 3.00. The objective of the IBE Capstone course is to provide students with the opportunity to apply and integrate what they have learned from prior courses in "Real World" settings. There are no traditional classes. Rather, students will work in self-managed teams of 5-6 on projects that have both business and engineering elements with the support of a mentor; in many cases the mentor will be from a sponsoring company. The role of the company mentor is to provide advice and guidance to the student team as well as to expose the students to the approaches and processes used in industrial and commercial organizations. The course instructors will also meet with the student teams on a weekly basis to assess progress and provide guidance. Possible options for the projects include: 'Product Design' and 'Business Solution'. The Product Design projects would be focused on the marketing, technical, and economic feasibility of a new product concept. The Business Solution projects would be focused on technical issues in a business context and developing solutions to a "real world" problem presented by a sponsoring company. Examples of these projects might include use of 3-D printing for spare and replacement parts or incorporation of autonomous transportation into a company's operations and supply chain.

Learning Outcomes: 1. Exhibit integrity, accept responsibility, take initiative, and provide leadership necessary to ensure project success. 2. Produce product designs or business solutions that meet important performance requirements while satisfying relevant societal, legal/regulatory, and professional constraints. 3. Establish relationships and implement practices with team members, advisors, and other stakeholders that support high performance and continuous improvement. 4. Plan, monitor, and manage project schedule, resources, and work assignments to ensure successful project completion. 5. Utilize and synthesize prior

knowledge, independent research, published information, and original ideas in addressing problems and generating solutions. 6. Make decisions based on customer and user needs, product design or business solution requirements, resource availability, and associated risks. 7. Demonstrate effective use of contemporary tools for engineering and business analysis. 8. Test and defend performance of a product design or business solution with respect to key requirements. 9. Use formal and informal communications with team, advisor, and other stakeholders to document and facilitate progress and to enhance impact of design products. Credits: 3.00

MGMT 29110 - Integrated Business & Engineering Seminar I

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29120 - Integrated Business & Engineering Seminar II

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29130 - Integrated Business & Engineering Seminar III

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29140 - Integrated Business & Engineering Seminar IV

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of

seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

Specialty Areas - Choose One (12 credits)

A. Data Analytics Concentration

B. Financial Engineering Area

MGMT 41100 - Investment Management

Credit Hours: 3.00. Examination of investment alternatives relevant to the individual and/or family-unit investor. Operations of the markets in which securities are traded. Theory and application of security valuation, portfolio construction, capital markets, and performance evaluation. Particular attention given to fixed income securities, common stocks, options, investment companies, and other popular investment alternatives.

Learning Outcomes: 1. Learn about the investment alternatives relevant to the individual and/or family-unit investor by studying operations of the markets in which securities are traded, examining theory and application of security valuation, portfolio construction, capital markets, and performance evaluations. 2. Learn more in-depth information regarding fixed income securities, common stocks, options, investments companies, and other popular investment alternatives. Credits: 3.00

MGMT 41250 - Fixed Income Securities

Credit Hours: 3.00. This course includes examination of fixed income securities institutions that invest, roles in institution, portfolios and math associated with assessing characteristics of fixed income securities.

Learning Outcomes: 1. Examine management of fixed income securities. 2. Examine portfolios and risk management strategies. 3. Demonstrate use of simulation models for risk assessment. Credits: 3.00

MGMT 41150 - Futures And Options

Credit Hours: 3.00. The course covers basic features and pricing of derivative securities such as forwards, futures, and options.

Learning Outcomes: 1. Understand the basic features and pricing of commonly used derivative products. 2. Develop necessary analytical tools needed to make good managerial decisions using derivatives. Credits: 3.00

MGMT 41310 - Financial Data Analysis And Modeling

Credit Hours: 3.00. In the business world today, finance professionals are going to be given opportunities to analyze and model data. The objective of MGMT 41310 is to give students opportunities to work with financial data sets to ask and answer real questions that businesses have. In this course, students will use several data analysis software packages including R. Additionally, the course will include extensive application of Excel tools for Financial Modeling.

Learning Outcomes: 1. Understand how to set up, perform financial analysis, as well as work in teams on complex assignments. Credits: 3.00

MGMT 41650 - Financial Engineering

Credit Hours: 3.00. The objective of this course is to develop necessary skills to value and hedge a wide variety of derivative contracts traded in financial markets. The main tool of analysis of the course is stochastic calculus set in continuous time. Some basic knowledge of stochastic processes would be helpful, but not essential: what needed will be covered in class. The analytic valuation and hedging of derivatives using the modern martingale methods will be the main focus of the course. Applications will include forwards, futures, and options on stocks, bonds and foreign currencies. The numerical methods such as parameter estimation, Monte Carlo simulations, discretization schemes as well as the conditional volatility estimation techniques will also be addressed. In addition to the valuation and hedging derivatives, course also covers Value-at-Risk, credit risk, modeling the term structure of interest rates and the construction of the VIX index using the S&P 500 index options obtained from the IvyDB OptionMetric database.

Learning Outcomes: 1. Value and hedge commonly traded financial derivatives. 2. Outline and design new financial derivatives. 3. Develop the VIX index using options data. Credits: 3.00

C. Operations & Supply Chain Management Concentration

D. Student Designed Specialty Area

Other Departmental/Program Course Requirements (32-38 credits)

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through

reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of

revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate

them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences

and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in

lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Electives (0-3 credits)

Optional Concentrations for Integrated Business & Engineering, BS

Sample 4-Year Plan

Fall 1st Year

EPCS 11100 - First Year Participation In EPICS I (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one-year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and education organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project team for two or more semesters. First-year students participating in EPCS gain insight into the specific project, and more generally, into the design and development process. They attend planning and reporting meetings with the customer and are expected to attend all team meetings. Under mentorship from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsibility. 8. An

appreciation of the role that their discipline can play in social contexts. Credits: 1.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

MGMT 20000 - Introductory Accounting

Credit Hours: 3.00. The objectives of the course are to help students: (1) understand what is in financial statements and what the statements say about a business, (2) identify the business activities that caused the amounts that appear in the statements, and (3) understand how, when, and at what amount

the effects of manager and employee actions will appear in the statements. CTL:IPO 1801 Accounting I

Learning Outcomes: 1. Gain an understanding of accounting terminology, principles and concepts. 2. Learn how business events and transactions are reported in financial statements. 3. Prepare basic financial statements for a business. 4. Analyze financial statements to assess the performance and risk of a business. 5. Learn how financial information is utilized in the decision-making process. Credits: 3.00

VIP 17911 - First Year Participation In Vertically Integrated Projects (VIP) I (UCC: STS)

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Apply engineering design to create a product that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 1.00

MGMT 29110 - Integrated Business & Engineering Seminar I

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

ENGR 13300 - Transforming Ideas To Innovation, EPICS/VIP (UCC: IL)

Credit Hours: 2.00. Introduces students to the engineering professions using multidisciplinary, societally relevant content. Students will develop engineering approaches to systems, generate and explore creative ideas, and use quantitative methods to support design decisions. Students will experience

the process of design and analysis in engineering including how to work effectively in teams, and will develop skills in project management, engineering fundamentals, oral and graphical communication, logical thinking, and modern engineering tools (e.g., Excel and MATLAB). An emphasis will be placed on computing logic development and builds upon the co-requisite experience of the students in the EPICS class.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Examine and analyze career information from various resources to make informed decisions about which engineering discipline to pursue. 2. Develop metacognitive skills in evaluating own teamwork and leadership abilities, recognizing how own behavior impact the whole team, and make team process adjustments when necessary. 3. Explain critical and diverse use of modeling in engineering to understand problems, represent solutions, compare alternatives, make predications, etc. 4. Use multiple models, estimation, and logic to triangulate and evaluate information coming from various data sources. 5. Collect, analyze, and represent data to make informative explanations and persuasive arguments. 6. Develop a logical problem solving process which includes sequential structures, conditional structures, and repetition structures for fundamental engineering problems. 7. Solve fundamental engineering problems using computer tools. 8. Perform basic file management tasks using an appropriate computer tool. 9. Work effectively and ethically as a member of a technical team. 10. Develop a work ethic appropriate for the engineering profession. 11. Reflect on personal and team performance to achieve continuous improvement. Credits: 2.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s)

to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

15-18 Credits

Spring 1st Year

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

EPCS 12100 - First Year Participation In EPICS II (UCC: STS)

Credit Hours: 1.00. Together, Engineering Projects in Community Service (EPICS) courses create a vertical project track under which students work in multidisciplinary teams on long-term engineering-based design projects. Projects of at least one year in duration are intended to solve real problems that are defined in consultation with "customers" from not-for-profit community and educational organizations. EPCS courses are open to students from all disciplines; each student contributes expertise in his/her academic discipline. Each team consists of a mix of first-year, sophomores, juniors, and seniors. Students are encouraged to participate in an EPICS project for two or more semesters. First-year students participating in EPICS gain insight into the specific project, and more generally, into the design and development process. Under mentorship from upper-level students and instructors, they perform and report upon design tasks consistent with their level of discipline expertise.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Ability to apply material from their discipline to the design of community-

based projects. 2. Understanding of design as a start-to-finish process. 3. Ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Awareness of the customer. 5. Ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Ability to communicate effectively with audiences with widely-varying backgrounds. 7. Awareness of professional ethics and responsibility. 8. Appreciation of the role that their discipline can play in social contexts. Credits: 1.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe

Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

VIP 17912 - First Year Participation In Vertically Integrated Projects (VIP) II

Credit Hours: 1.00. This course provides an opportunity for undergraduate students to engage in authentic and extended research and design projects related to active research areas of Purdue faculty members and national, international, and industry-sponsored design challenges. Students will work on interdisciplinary and vertically-integrated teams (first-year through seniors) with faculty and graduate student mentors to address these real-world research and design challenges. Students will participate in weekly lectures and professional development activities that include topics related to design, research, documentation and technical writing, communication, leadership and teamwork, ethics, project management, intellectual property, information literacy, and introduction to a broad range of applicable research topics, technologies and development tools.

Learning Outcomes: 1. Apply engineering design to create a product (device, system, process, software, etc.) that meets the specified needs of this engineering design experience with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. 2. Develop and conduct experimentation, analyze and interpret data, and use engineering judgment to draw conclusions related to the development of the product of this engineering design experience. 3. Identify, formulate, and solve complex engineering problems arising

from this engineering design experience by applying principles of engineering, science, and mathematics. 4. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives associated with this design experience. 5. Communicate effectively with a range of audiences appropriate to this design experience in both a written report and oral presentation. 6. Acquire and apply new knowledge as needed, using appropriate learning strategies to complete the engineering design experience associated with this course. 7. Recognize ethical and professional responsibilities associated with this engineering design experience and make informed judgments which must consider the impact of the product of this engineering design experience in global, economic, environmental, and societal contexts. Credits: 1.00

15-16 Credits

Fall 2nd Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for

lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

STAT 35000 - Introduction To Statistics

Credit Hours: 3.00. This course provides a data-oriented introduction to applied statistics, covering exploratory data analysis, experimental design, probability distributions, simulation, sampling distributions, and the Central Limit Theorem. Students will learn the fundamentals of statistical inference, including confidence intervals and hypothesis tests for population means, paired and independent comparisons of means, analysis of variance, and regression. The course emphasizes hands-on experience with statistical software and is primarily intended for students majoring in the mathematical sciences. Prerequisite: two semesters of college calculus.

Learning Outcomes: 1. Understand basic terms, graphs, and symbols and be able to interpret statistics in the media. 2. Understand and be able to explain statistical processes and be able to fully interpret statistical results. 3. Understand why and how statistical investigations are conducted and the "big ideas" that underlie statistical investigations. 4. Be able to use a statistical package (R or SAS) to analyze data and interpret result. 5. Big Ideas in Statistics: variability, distributions, and models; causation vs correlation; practical significance vs statistical significance, etc. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

MGMT 20100 - Management Accounting I

Credit Hours: 3.00. An introduction to management's internal use of accounting information--for decision making, production management, product costing, motivating and evaluating performance, and budgeting. CTL:IPO 1802 Accounting II

Learning Outcomes: 1. Understand how managerial accounting and financial accounting differ and the role of managerial accounting in costing a company's products or services. 2. Understand how accounting information is used to make decisions for the firm, improving its operational efficiency and increasing its profits. 3. Understand how accounting information can be used to evaluate the performance of managers at all levels of an organization. 4. Understand concepts, and not rely on memorization, so that one can use the

topics/information in new situations, in other courses and in one's professional career. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

MGMT 29120 - Integrated Business & Engineering Seminar II

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

17-18 Credits

Spring 2nd Year

MGMT 32400 - Marketing Management

Credit Hours: 3.00. The objective of this course is to introduce students to the concepts, analyses, and activities that comprise marketing management, and to provide practice in analyzing and solving marketing problems. The course is also a foundation for advanced elective courses in marketing. Topics covered in the course include customer behavior, market segmentation, product positioning, market research, product management, pricing, promotion, sales force management and competitive analysis.

Learning Outcomes: 1. Develop understanding

of marketing activities and the marketing concept. 2. Provide an understanding of how marketing ties in with other corporate functions. 3. Develop your intuition in analyzing a business environment and making subsequent decisions. Credits: 3.00

MGMT 31000 - Financial Management

Credit Hours: 3.00. Management of the financial affairs of the industrial enterprise. Working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions.

Learning Outcomes: 1. Know management of financial affairs of the industrial enterprise, including working capital management, current asset management, capital budgeting, stock and bond valuation, and capital structure decisions. Credits: 3.00

MGMT 30500 - Business Statistics

Credit Hours: 3.00. Introduction to business statistics as related to facilitating managerial decision making. Topics include descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Students use software to do their own analyses.

Learning Outcomes: 1. Learn about business statistics as they relate to facilitating managerial decision making, through topics such as descriptive statistics, probability models, estimation, hypothesis testing, and regression analysis. Credits: 3.00

MGMT 29130 - Integrated Business & Engineering Seminar III

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

MGMT 38800 - Python For Business

Credit Hours: 3.00. This course will cover the business rules and logic in a business application development context. These skills will be acquired using computer programming; specifically employing Python. Solution development will reinforce logical concepts process flow, variable assignment, and control structures, as well as proper programming and application development practices.

Learning Outcomes: 1. Program Python, a strong and popular open source programming language. 2. Develop algorithmic thinking. 3. Program using Basic Data types, conditional branching, looping, functions. 4. Utilize Python libraries that can be used for business analytics. 5. Produce a Python solution for a business application. Credits: 3.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

16 Credits

Fall 3rd Year

MGMT 36100 - Operations Management

Credit Hours: 3.00. Operations Management (OM) is an area of business concerned with the production of goods and services. It involves the responsibility of ensuring that business operations are efficient in terms of using as little resource as needed, and effective in terms of meeting customer requirements. The course covers five major OM topics: process analysis, process variability, quality management, inventory management, and supply chain management. The course aims to provide a working knowledge of the vocabulary of OM, to help students develop an ability to design, improve, and manage processes by answering the questions: What are the components of a process? How should various process parameters such as capacities, output, and work-in-process inventories be calculated? What are the major opportunities for improving a process? The students get familiar with key issues (cost, quality, delivery, and flexibility) and problems (e.g., variability) facing an operations manager. At the end of the course, the students analyze operational strengths and weaknesses of a local firm, suggest some improvements of its operations and present the results.

Learning Outcomes: 1. Achieve depth of understanding and application of essential content in business functional areas. Credits: 3.00

MGMT 49200 - Intellectual Property Management

Credit Hours: 2.00. Intellectual property (IP) has become a strategic opportunity for creating value for the firm. Firms are tasked with understanding how to utilize intellectual property as a competitive advantage in multiple market contexts. In the current economic environment, intellectual assets can be the largest portion of a firm's total wealth. Strategic management of these assets is very critical. Managing intellectual property is about transforming a firm's ideas, know-how, etc., into learning, products, and ultimately cash flow. In Managing Intellectual Property, we examine this topic by viewing intellectual property as both a legal asset (property ownership) and business asset (value-adding). The focus of Managing Intellectual Property is on the integration of IP generation, IP protection, and strategizing functions of the firm in creating value with an IP portfolio. Concepts and frameworks discussed/developed in lecture are exercised in case studies from multiple contexts.

Learning Outcomes: 1. Understand key elements in intellectual property management. 2. Aware of the different types/forms of intellectual property. 3. Understand how the difference in the types of intellectual property provides strategic opportunities. 4. Confidence in your own abilities to manage intellectual property. 5. Aware of the role of multiple functions in creating an intellectual property portfolio (e.g. R&D, Marketing, Legal, Merger & Acquisition, Business Development, Human Resources, Finance). Credits: 2.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

13 Credits

Spring 3rd Year

MGMT 38200 - Management Information Systems

Credit Hours: 3.00. This case-oriented course is designed to familiarize students with existing and emerging technologies and their business applications. It also covers issues, problems, and opportunities that information systems (IS) executives and general managers face when managing IS resources in their organizations. Includes lectures, presentations, case analyses and discussions, and a World Wide Web project. Case discussions cover real situations and deal with the operational and strategic decisions that every IS manager has to make in managing and exploiting the available information technology.

Learning Outcomes: 1. Students will learn about existing and emerging technologies and their business applications. 2. Students will learn about issues, problems, and opportunities that

information systems executives and general managers face through a variety of learning objectives, including lectures, case discussions, presentations, and projects. Credits: 3.00

MGMT 29150 - IBE Professional Development

Credit Hours: 0.00. This course is meant to promote meaningful reflection on multiple experiential learning opportunities offered to IBE cohort members as 2nd Year/Sophomores & 3rd Year/Juniors. The course will be required each semester during the 2nd and 3rd Years of the IBE program cohort experience. Assignments will include a reflection quiz or paper based on each event experience. Students will be required to complete at a minimum, 3 experiential learning experiences and corresponding reflections. All questions for surveys will be available on the Brightspace page.

Learning Outcomes: 1. Reflect upon learning experiences that allow you to connect these opportunities in an academic, professional, and social context. 2. Determine how curricular, co-curricular, and industry-based experiences affect your goals and professional development. Credits: 0.00

14 Credits

Fall 4th Year

OBHR 33000 - Introduction To Organizational Behavior

Credit Hours: 3.00. This course investigates the impact that individuals, groups, and organizational structure have on behavior within organizations for the purpose of applying such knowledge toward improving an organization's effectiveness. Attention is given to such topics as motivation, leadership, group processes, organizational structure, technological innovation, and conflict management. Emphasis is placed on developing management skills and application of organizational behavior theories.

Learning Outcomes: 1. Learn basic principles and concepts of organizational behavior. 2. Examine issues relating to the interaction between human beings and the organizational context within which they work. 3. Gain a better understanding of their own organizational behavior, both as an employee, team member and leader. Credits: 3.00

MGMT 35200 - Strategic Management

Credit Hours: 3.00. The course focuses on understanding competitive forces and how organizations strive to build sustainable competitive advantages through business- and corporate-level strategies. It integrates and builds upon previous training in functional areas and presents new analytical tools for developing an understanding of the strategic decisions that determine future directions and effectiveness of the organization.

Learning Outcomes: 1. Develop and practice diagnostic reasoning skills relevant to problems of strategic management. 2. Learn and practice communicating your reasoning and judgments related to problems of strategic management - both through face-to-face listening and persuading, and through writing formal strategic analysis reports. 3. Understand the conceptual frameworks that will guide you in framing the relevant issues in a strategic situation. Credits: 3.00

MGMT 49300 - Storytelling With Data

Credit Hours: 2.00. Business students are trained to be experts in turning data into information. With a strong focus on data visualization, the purpose of this course (Storytelling with Data) is to help students take the next step: Turning that information into action. This course will provide you with helpful frameworks for understanding your audience, insights about how people perceive information best, and effective skills to express your ideas in ways that connect.

Learning Outcomes: 1. Understand the importance of communication context, elements of good storytelling, and basic principles of human information processing as related to data visualization. 2. Apply this understanding to the communication of complex (i.e., data-driven) information. 3. Analyze data visualization design choices. 4. Evaluate the effectiveness of data communication. 5. Create a compelling story using data with the tools and skills taught in this course. Credits: 2.00

MGMT 29140 - Integrated Business & Engineering Seminar IV

Credit Hours: 1.00. The seminar courses to expose students to contemporary topics related to the design and management of modern organizations and enterprises. These seminars will leverage the expertise of faculty across Purdue, prominent alumni, and thought leaders in each (flexible, rotating) topic area. Seminar topics might include contemporary topics, for example, artificial intelligence, cybersecurity, climate resilience, and sustainable economic growth. Seminars will also focus on professional development of students along with discovery, development, and practice of skills required to enable a diverse team to address complex problems affecting a wide range of stakeholder through collaboration, communication, and application of a wide range of influencing strategies and techniques. Simulation, guest speakers, projects, field visits will be used as appropriate.

Learning Outcomes: 1. Demonstrate mastery of seminar topics. 2. Synthesize and critically evaluate. 3. Apply the topics to a situation. Credits: 1.00

15-16 Credits

Spring 4th Year

MGMT 49400 - IBE Capstone

Credit Hours: 3.00. The objective of the IBE Capstone course is to provide students with the opportunity to apply and integrate what they have learned from prior courses in "Real World" settings. There are no traditional classes. Rather, students will work in self-managed teams of 5-6 on projects that have both business and engineering elements with the support of a mentor; in many cases the mentor will be from a sponsoring company. The role of the company mentor is to provide advice and guidance to the student team as well as to expose the students to the approaches and processes used in industrial and commercial organizations. The course instructors will also meet with the student teams on a weekly basis to assess progress and provide guidance. Possible options for the projects include: 'Product Design' and 'Business Solution'. The Product Design projects would be focused on the marketing, technical, and economic feasibility of a new product concept. The Business Solution projects would be focused on technical issues in a business context and developing solutions to a "real world" problem presented by a sponsoring company. Examples of these projects might include use of 3-D printing for spare and replacement parts or incorporation of autonomous transportation into a company's operations and supply chain.

Learning Outcomes: 1. Exhibit integrity, accept responsibility, take initiative, and provide leadership necessary to ensure project success. 2. Produce product designs or business solutions that meet important performance requirements while satisfying relevant societal, legal/regulatory, and professional constraints. 3. Establish relationships and implement practices with team members, advisors, and other stakeholders that support high performance and continuous improvement. 4. Plan, monitor, and manage project schedule, resources, and work assignments to ensure successful project completion. 5. Utilize and synthesize prior knowledge, independent research, published information, and original ideas in addressing problems and generating solutions. 6. Make decisions based on customer and user needs, product design or business solution requirements, resource availability, and associated risks. 7. Demonstrate effective use of contemporary tools for engineering and business analysis. 8. Test and defend performance of a product design or business solution with respect to key requirements. 9. Use formal and informal communications with team, advisor, and other stakeholders to document and facilitate progress and to enhance impact of design products. Credits: 3.00

12 Credits

Integrated Studio Arts, BFA

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (78 credits)

A. Art & Design Core (15 credits)

AD 10500 - Design I

Credit Hours: 3.00. Two-dimensional design fundamentals: concepts and processes. Studio problems are used to introduce concepts, vocabulary, and skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of two-dimensional media and computer applications.

Learning Outcomes: 1. Identify basic design principles within two-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work and the work of others. Credits: 3.00

AD 10600 - Design II

Credit Hours: 3.00. Three-dimensional fundamentals: concepts and processes. Studio problems introduce design concepts, vocabulary, and construction skills applicable to continued study in a variety of visual disciplines. Includes introduction to a variety of 3-D media and 3-D computer graphics concepts.

Learning Outcomes: 1. Identify basic design principles within three-dimensional media and computer applications. 2. Apply principles of design effectively within a series of studio project/problems. 3. Critique and assess the application of basic design principles in their own work, and the work of their peers. Credits: 3.00

AD 11300 - Basic Drawing (UCC: HUM)

Credit Hours: 3.00. An introduction to drawing and sketching as a means of communication of ideas. CTL:IFA 1320 Drawing.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Develop and strengthen observational, perceptual, and creative drawing skills. 2. Apply drawing skills across a variety of media, practices, and concepts. 3. Evaluate drawings through constructive criticism. Credits: 3.00

AD 22700 - History Of Art Since 1400 (UCC: HUM)

Credit Hours: 3.00. Review of painting, sculpture, and architecture from 1400 to present. CTL:IFA 1312 Art History II.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Identify important developments in the history of western art and visual culture. 2. Understand field-specific vocabulary. 3. Analyze and interpret artistic works in their cultural, intellectual, and historical contexts. 4. Apply the knowledge acquired in this class to artists, artworks, and cultural developments not studied in class. Credits: 3.00

AD 23300 - Electronic Media Studio

Credit Hours: 3.00. Introductory class to artistic practices on the computer. Students will work with digital still images, sounds, stop-frame animation and HTML-based websites and learn how to connect simple sensors to the computer to control digital images and sounds interactively.

Learning Outcomes: 1. Apply key concepts from a variety of new media art practices by relating them to their own ideas developed in this class. 2. Assess their own creative work as well as the work of their peers through group discussions and critiques. 3. Produce a variety of artworks, such as animations, soundscape compositions and basic audio-visual systems by the creative application of technology. Credits: 3.00

B. Integrated Studio Arts Core (18 credits)

2D Extended Media

AD 11400 - Drawing II

Credit Hours: 3.00. Continuation of AD 11300 ; emphasis is given to the exploration of a variety of media, the structuring of pictorial space, and figure drawing.

Learning Outcomes: 1. To increase and widen drawing skills. 2. To understand pictorial space as structured through design composition. 3. Be

able to discuss art in an educated manner. Credits: 3.00

AD 20000 - Beginning Painting

Credit Hours: 3.00. This course is an introduction to painting, emphasizing fundamental painting techniques and materials in conjunction with varied subject matter. Traditional and nontraditional approaches and their art historical meanings will be examined and applied.

Learning Outcomes: 1. Recognize, identify and employ techniques and methods from both historical and contemporary painting. 2. Create quality craftsmanship and employ professional practice in painting. 3. Demonstrate a comprehension of course content through implementing the use of grisaille, glazing, value, color, line, texture and mark making within painting. Credits: 3.00

AD 21300 - Life Drawing I

Credit Hours: 3.00. Introduction to drawing the human figure with emphasis upon structure and gesture.

Learning Outcomes: 1. Develop fundamental technical and perceptual skills of figure drawing. 2. Identify and describe major anatomical features of the human body. 3. Compose sound figurative compositions using basic design principles, foundation drawing techniques, and a variety of drawing materials. Credits: 3.00

AD 26500 - Relief Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of woodcut, linocut, collagraph, and related media. Emphasis on fine art conceptual issues, creativity, matting and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Create contemporary personal work with expressive and original ideas informed by the study of historic and contemporary relief printmaking artists and art concepts. 2. Demonstrate relief printmaking through carving multiple printing materials, printing by hand, using a printing press, and through multiple-layered registration. 3. Invent, solve, and self-assess visual problems using concept, content, design, color, composition, and sketchbook during the creative process and printing. 4. Describe and analyze the work of professional printmaking artists, self and peers. 5. Demonstrate knowledge and technical skills in carving skills and making fully inked prints. Credits: 3.00

AD 26600 - Silkscreen Printmaking (UCC: HUM)

Credit Hours: 3.00. An introduction to the techniques of silkscreen printmaking on paper, including the uses of handmade and light-sensitive stencils. Emphasis on fine art conceptual issues, creativity, matting, and framing art, and professional practices.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

AD 31400 - Experimental Drawing

Credit Hours: 3.00. Individual development of students' drawing abilities and skills at intermediate and advanced levels, emphasizing drawing as primary means of expression, experimentation with materials, and exposure to many different modes of creating in the area of drawing.

Learning Outcomes: 1. Communicate visually through the use of a variety of drawing materials, some structured assignments, and individual projects. 2. Form an understanding of historical and contemporary artists' use of drawing as a primary means of expression. 3. Build a vocabulary integral to the critical thinking process. Credits: 3.00

Craft & Material Studies

AD 24200 - Ceramics I (UCC: HUM)

Credit Hours: 3.00. An introduction to ceramic materials and processes used in creating wheelthrown and hand-formed pottery and sculpture. Emphasis on contemporary interpretations of traditional forms. Freshman and Sophomore students have priority.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Demonstrate the

technical basics of using clay as a material for both sculptural and thrown work. 2. Compare the applications of slips, stains, glazes, and wax resist in oxidation and reduction glazes and firings from Cone 04 to Cone 10 temperatures. 3. Create ceramics and functional work using hand building and learn how to center and throw on the wheel with design intention. 4. Apply skill in hand building figurative work with exact proportions. 5. Demonstrate successful making of clay from dry chemicals and how to recycle clay using a clay mixer and pugmill. Credits: 3.00

AD 26200 - Jewelry And Metalwork I

Credit Hours: 3.00. An introduction to the design and execution of hand-wrought jewelry and metalwork.

Learning Outcomes: 1. Plan, and design functional and meaningful original small-scale metal objects and jewelry. 2. Create small scale metal sculptures and jewelry. 3. Demonstrate skill in sawing, filing, sanding and soldering and apply these techniques to produce small-scale metal sculptures and jewelry. Credits: 3.00

AD 27000 - Constructed Textiles

Credit Hours: 3.00. A beginning class in non-loom constructed textile techniques such as macram and card-weaving. Emphasis on three-dimensional design in fiber using historical textile structures as the basis for contemporary interpretations.

Credits: 3.00

AD 27100 - Dyed Textiles

Credit Hours: 3.00. Beginning course in non-screen fabric dyeing techniques such as tie-dye and batik. Survey of historical surface design for contemporary interpretations in both two and three dimensions.

Credits: 3.00

AD 27500 - Beginning Sculpture (UCC: HUM)

Credit Hours: 3.00. An introductory course in sculpture, exploring basic concepts, techniques, and materials. Problems in class will emphasize individual student's aesthetic understanding of techniques and inventive use of materials.

University Core Curriculum (UCC): (UCC: HUM)
