techniques, skills and modern tools of the motorsports industry. 2. Apply current knowledge and solve introductory problems relevant to the motorsports industry. 3. Possess a general knowledge of the history and evolution of motor racing nationally and internationally. 4. Develop technical writing skills beyond those learned in first-year engineering. 5. Recognize professional, ethical, and societal responsibilities in the context of the motorsports industry. Credits: 1.00

15 Credits

Spring 2nd Year

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture

course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

ME 26400 - Introduction To Manufacturing For Mechanical Design

Credit Hours: 3.00. Introduction to manufacturing processes for typical engineering materials. Basics of material properties and behavior for manufacturing processes. Material selection and manufacturing process selection for mechanical design. Hands-on projects in the lab reinforce the knowledge of manufacturing processes.

Learning Outcomes: 1. Understand material properties and behavior for design and manufacturing. 2. Gain a fundamental knowledge of manufacturing processes. 3. Gain knowledge of the practice of measurements and manufacturing processes through laboratory experiments. 4. Enhance knowledge on the selection of materials and manufacturing processes for product design. 5. Enhance technical communication skills through short technical lab reports. Credits: 3.00

17 Credits

Fall 3rd Year

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.

Learning Outcomes: 1. Provide a fundamental knowledge of the theory of measurement sciences. (A2, A3, A4) 2. Gain knowledge of the practice and art of measurements through laboratory experiments. (A2, A3, A4) 3. Sharpen skills in problem formulation and integration of a broad range of technical capabilities through certain deliberately ill-defined experimental procedures. (A2, A3, A4) Credits: 3.00

ME 32301 - Mechanics Of Materials Laboratory

Credit Hours: 1.00. Experimental methods and techniques employed for the measurement of mechanical properties and evaluation of mechanical structures. Application of mechanics of materials and fundamental concepts to measuring and analyzing mechanical structures. A laboratory design project on mechanical structures.

Learning Outcomes: 1. Conduct simple experiments and analyze data. 2. Enhance systematic problem-solving skills and sharpen written-communication skills through short technical laboratory memos. 3. Complete a design project on a mechanical structure. Credits: 1.00

MSPE 35000 - Computer Aided Design And Manufacturing

Credit Hours: 3.00. This course provides the basis for the computer-aided engineering and analysis skills needed in the Motorsports Industry. The ability to visualize and conceptualize a real part in the physical world and produce graphical representations of it in 2D and 3D in Solidworks or an equivalent

is a primary objective. Further skills to be developed include the ability to produce large assemblies of such parts with appropriate tolerancing, free form surfacing, casting shapes and casting machining, 2D drawings for use in 3D sheet metal fabrication including shrink and stretch, use of 3D models to facilitate Finite Element Analysis, Conversation of CAD model to programming of CAM machining.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to problems involving the design and manufacturing of components and systems. 2. Design a system, component, or process to meet desired needs. 3. Identify, formulate, and solve engineering problems involving the design and manufacturing of components and systems. 4. Use the techniques, skill, and modern engineering tools necessary for engineering practice. Credits: 3.00

MSPE 47200 - Vehicle Dynamics

Credit Hours: 3.00. Analytical and mathematical model development of the automotive and motorsports vehicles to understand how key vehicle parameters influence vehicle performance. Areas of focus include rectilinear motion, lateral motion, suspension kinematics, tire dynamics and drivetrain modeling.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools necessary for analysis of vehicle dynamics and design of vehicle systems. 2. Apply current knowledge and adapt to emerging applications appropriate to the topic of vehicle dynamics. 3. Conduct, analyze and interpret experiments and apply experimental results to improve processes. 4. Apply creativity in the design of systems, components or processes appropriate to program objectives. 5. Function effectively on teams. 6. Identify, analyze and solve technical problems. 7. Communicate effectively. Credits: 3.00

MSPE 33000 - Systems Engineering For Motorsports

Credit Hours: 3.00. Systems engineering encompasses the engineering knowledge to specify, design, program and analyze the electrical systems of a motorsports vehicle. The course will explore those systems to provide the engineering foundation in instrumentation, data analysis, data reduction, and system programming. Project work will supplement the learning outcomes through direct engagement of designing and specifying a data system for a motorsports vehicle, manufacturing a motorsports vehicle sensor loom, and programming the communication pathways between different vehicle electrical systems.

Learning Outcomes: 1. Understand the fundamentals of the data acquisition systems installation, operation, software, and maintenance, while appreciating the importance of data integrity 2. Understand the implications of design decisions when designing the data acquisition system or designing around the data acquisition system. 3. Understand the limitations and possibilities of the data acquisition system. 4. Utilize data acquisition analysis tools to properly import and display data signals. 5. Understanding on how to write math channels to interpret and analyze data. 6. Initial understanding of how recorded data represents vehicle and driver performance. 7. Utilize motorsports wiring tools to manufacture a motorsports sensor harness. 8. Understand the basics of digital car communication including the math associated with communicating digital signals throughout the vehicle. Credits: 3.00

16 Credits

Spring 3rd Year

ME 37500 - Measurement And Control Systems II

Credit Hours: 3.00. This course provides an introduction to modeling electrical, mechanical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Modeling techniques based on physical laws and principles are used to generate subsystem and system transfer functions. Closed-loop system analysis will include the use of proportional, integral, and derivative elements to control system response.

Learning Outcomes: 1. Introduce a systematic

and unified system level modeling of lumped dynamic systems in different domains using first principles. (A2, A3) 2. Provide necessary mathematical tools for analyzing and predicting the performance of an engineered system based on its dynamic response. (A2, A3) 3. Provide an introductory treatment of designing feedback controllers to achieve closed-loop stability and specified system performance. (A2, A3) Credits: 3.00

ME 30800 - Fluid Mechanics

Credit Hours: 3.00. Continuum description, velocity field, fluid statics, manometers, basic conservation laws for systems and control volumes, dimensional analysis. Bernoulli's equation along a streamline and with head losses. Flow over submerged bodies, boundary layers. Viscous flows in pipes, turbomachinery, system performance. One-dimensional gas dynamics.

Learning Outcomes: 1. Develop the ability to identify and classify the various types of flows one may encounter. 2. Develop (from rigorous first principles) the control volume formulation of the basic laws with emphasis on conservation of mass and Newton's 2nd law. 3. Apply the control volume formulation of the basic laws to model physical systems. Credits: 3.00

MSPE 31700 - Motorsports Practicum I

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a professional motorsports organization.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team. 10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 32000 - Motorsports Design I

Credit Hours: 3.00. Introduction to the principles of design and analysis of vehicle subsystems and components within those subsystems. Vehicle subsystems are reviewed and evaluated for functionality, and reliability with emphasis on the utilization of analytical tools in design. Analytical methods developed in vehicle dynamics are utilized to support the understanding of forward and reverse engineering principles.

Learning Outcomes: 1. Apply knowledge of mathematics, science, and engineering to solution of design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively. Credits: 3.00

16 Credits

Fall 4th Year

ME 30801 - Fluid Mechanics Laboratory

Credit Hours: 1.00. This course is the lab component of an already established ME 30900 Fluid Mechanics (4 cr) course, which is now being split into an ME 30800 (3 cr) Fluid Mechanics lecture course, and the material covered in this new ME 30801 (1 cr) Fluid Mechanical Laboratory. The content of both of these courses remains unchanged. The splitting of the lab from the lecture will enable better enrollment load balancing in the existing ME undergraduate laboratory facilities. Details of this new laboratory are outlined in the appended material below.

Learning Outcomes: 1. Know physical experiments in fluid mechanics. 2. Know application of fluid mechanics theory and fundamental concepts to measuring and

analyzing fluid systems and flows. 3. Learn a laboratory design project on a flow system reinforces the design process. Credits: 1.00

MSPE 48200 - Motorsports Aerodynamics

Credit Hours: 3.00. A focused introductory course into the study of aerodynamics principles as applied to automotive and motorsports vehicles. Broad range of topics introduce students to the complexity of fluid flow in and around the vehicle. Analytical methods including Computational Fluid Dynamics are utilized to emphasize key aerodynamics principles taught in the course.

Learning Outcomes: 1. Students will understand the basics of aerodynamic analysis and design as applied to motorsports vehicles. 2. Students will be able to apply Computational Fluid Dynamics modeling and analysis techniques to motorsports design. 3. Students will be able to integrate the various aspects of motorsports modeling and design. Credits: 3.00

MSPE 41700 - Motorsports Practicum II

Credit Hours: 1.00. This course engages students in a hands-on experiential learning opportunity in which they participate in the design, fabrication, assembly, and preparation of a race vehicle just as they might when engaged with a race team in the motorsports industry. Students will be expected to show mastery of at least 12 of the 12 skills outlined in the Course Objectives.

Learning Outcomes: 1. Conceptual design work capable of taking a rough concept to a preliminary design configuration. 2. Use of Solidworks, or equivalent, to do basis component design. 3. Analysis of designs using engineering fundamentals and/or FEM. 4. Practical fabrication experience. 5. Practical at-track experience through student competitions or track days. 6. System management of a vehicle subsystem. 7. Data analysis. 8. Project management. 9. Marketing/business aspects relative to operation of a small race team. 10.Applied simulation. 11.Documentation of process and/or analysis. 12.Mentoring new students to the team. Credits: 1.00

MSPE 42600 - Internal Combustion Engines

Credit Hours: 3.00. This course will cover fundamentals of hybrid electric and battery electric transportation systems with particular emphasis on high performance vehicles. It will cover powertrain configurations of Hybrid Electric Vehicle (HEV), Plug-in Hybrid Electric Vehicle (PHEV), and Battery Electric Vehicle (BEV). Component sizing and energy management topics will also be covered.

Learning Outcomes: 1. Demonstrate an appropriate mastery of the knowledge, techniques, skills and modern tools needed for design and analysis of engines. 2. Apply current knowledge and adapt to emerging applications in engine development. 3. Conduct, analyze and interpret experiments and apply results to improve processes. 4. Function effectively on teams. 5. Identify, analyze and solve technical problems. 6. Communicate effectively. Credits: 3.00

17 Credits

Spring 4th Year

MSPE 41400 - Motorsports Design II

Credit Hours: 3.00. This is the culminating course in the Motorsports Engineering Plan of Study, tying together concepts from all the other courses in the curriculum, and requires a capstone design project representative of a real world project with the Motorsports Industry.

Learning Outcomes: 1. Apply knowledge of mathematics, science and engineering to the solution of complex and comprehensive design problems relative to the motorsports industry. 2. Design a system, component, or process to meet desired needs pertinent to the motorsports industry. 3. Function on a multi-disciplinary team. 4. Identify, formulate, and solve engineering problems. 5. Recognize professional and ethical responsibility. 6. Communicate effectively in written reports and oral presentations. 7. Use the technique, skill,

and modern engineering tools necessary for engineering practice in the motorsports industry. Credits: 3.00

MSPE 43100 - Race Engineering

Credit Hours: 3.00. Motorsports engineering knowledge obtained throughout the curriculum are brought together to create foundational knowledge in the discipline. Analytical tools in Excel or Matlab along with data analysis tools from Cosworth or Motec are utilized to guide the application of motorsports engineering principles to vehicle performance optimization. Race strategy topics are investigated to provide foundational knowledge beyond vehicle system.

Learning Outcomes: 1. Utilize Excel or Matlab to analyze vehicle systems and performance. 2. Utilize Cosworth Toolbox or Motec i2 software to analyze vehicle systems and performance. 3. Calculate fuel error and its impact on race strategy. 4. Understand tire degradation principles and its impact on race strategy. 5. Write technical reports to disseminate the technical information in a clear and concise manner. Credits: 3.00

15 Credits

Multidisciplinary Engineering/Acoustical Engineering Concentration, BSE

About the Program

Degree Requirements

Acoustical Engineering Concentration (32 credits)

Sound System Option (32 credits)

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace

transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 30862 - Object-Oriented Programming In C++ And Java

Credit Hours: 3.00. C++ and Java programming languages, including classes, inheritance, encapsulation, polymorphism, class derivation, abstract classes, interfaces, static class members, object construction and destruction, namespaces, exception handling, function, overloading and overriding, function name overload resolution, container classes, and template classes.

Learning Outcomes: 1. An understanding of the concepts of inheritance and polymorphism. 2. An ability to overload operators in C++. 3. An understanding of the difference between function overloading and function overriding. 4. An ability to incorporate exception handling in object-oriented programs. 5. An ability to use template classes and the STL Library in C++. 6. An ability to write object-oriented programs of moderate complexity in Java. 7. An ability to write programs with multiple threads and use synchronization among threads. Credits: 3.00

ECE 32100 - Electromechanical Motion Devices

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications are presented.

Learning Outcomes: 1. Analyze/design electromagnetic circuits/devices. 2. Understand the concepts and principles of electromagnetic energy conversion. 3. Understand the concept of time-varying transformations in the analysis of time-varying systems. 4. Analyze dc machines. 5. Understand converters for dc drives. 6. Analyze brushless dc machines. 7. Analyze induction machines. Credits: 3.00

ECE 45300 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. Nanoelectronic devices are an integral part of our life, including the billion-plus transistors in every smartphone, each of which has an active region that is only a few hundred atoms long. This course is designed to convey the key concepts developed in the last 25 years which constitute the fundamentals of nanoelectronics and mesoscopic physics, assuming a minimal set of prerequisites. Topics covered include the new Ohm's law, conductance quantization, the nanotransistor, spin valves, thermoelectricity, quantum systems and the non-equilibrium Green's function (NEGF) method.

Learning Outcomes: 1. Ability to perform semiclassical analysis of charge flow in nanoelectonic devices. 2. Ability to perform semiclassical analysis of spin flow and heat flow in nanoelectronic devices. 3. Ability to perform quantum analysis of nanoelectonic devices. Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.

Credits: 3.00

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 25300 - Intro To Audio System Documentation

Credit Hours: 3.00. This course explores the creation and interpretation of production deliverables for theatrical audio systems. Through hands-on exercises and the study of industry-standard documentation, students will learn to draft, interpret, and apply audio system design drawings. Emphasis will be placed on creating clear and precise documentation that can be used by technicians, designers, and production teams in a theatrical environment.

Learning Outcomes: 1. Recognize standard symbols and notation used in audio system documentation. 2. Construct detailed signal flow diagrams, block diagrams, and rack layouts for theatrical sound systems. 3. Apply industry-standard software and techniques for creating professional AV system documentation. Credits: 3.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 35300 - Audio Technology I

Credit Hours: 3.00. This course introduces the fundamental principles of audio technology with a focus on live sound reinforcement. Topics covered include acoustics, audio signal flow, microphone techniques, mixing consoles, and loudspeaker systems.

Learning Outcomes: 1. Identify key vocabulary in room acoustics and components of audio systems. 2. Apply industry best practices and standards in system designs and design documentation. 3. Demonstrate understanding of the functions of major audio equipment such as mixing consoles, amplifiers, loudspeakers, and digital signal processing. Credits: 3.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years.

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 55300 - Theatre Audio Technology II

Credit Hours: 3.00. The study of the technical aspects of audio as they relate to use of, and experimentation with, various techniques in the design, installation, and specification of theatre sound systems, etc. Priority for majors. Offered in alternate years. Permission of instructor required.

Credits: 3.00

THTR 56300 - Advanced Sound Design

Credit Hours: 3.00. Advanced study of the principles of sound design for theatre and theory application to specific problems. Offered in alternate years.

Credits: 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required.

Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 30411 - Electromagnetics I

Credit Hours: 3.00. This course is a continued study of vector calculus, electrostatics, magnetostatics, and Maxwell's Equations. It serves as an introduction to electromagnetic waves and transmission lines, which is continued in ECE 30412.

Learning Outcomes: 1. Work with electrostatic fields and find electric and potential fields from charge distributions including the presence of dielectric materials. 2. Work with magnetostatic fields and find magnetic fields from current distributions including the presence of magnetic materials. 3. Work with time varying fields including wave propagation. 4. Work with transmission lines in the time and frequency domains. Credits: 3.00

Vibrational Option (32 credits)

CE 31100 - Architectural Engineering

Credit Hours: 3.00. This course introduces energy efficiency, thermal comfort, indoor environmental quality and green building design concepts. The course covers engineering fundamentals required for the design and analysis of building systems such as thermodynamics, fluid mechanics, heat and mass transfer, light and sound transmission. The course presents engineering principles and selected applications related to hydrothermal analysis of building enclosures, air conditioning processes in heating, ventilating and air conditioning systems, building illumination, and building acoustics.

Learning Outcomes: 1. Identify and analyze the characteristics of building environmental loads, building construction, and building operations as they define the requirements for a comfortable and healthy indoor environment. 2. Demonstrate knowledge of thermodynamics , fluid mechanics, heat and mass transfer, photometric quantities and sound transmission for use in building design. 3. Identify, formulate and solve realistic Architectural Engineering problems related to hygrothermal analysis of building enclosures, air conditioning processes in Heating Ventilating and Air Conditioning Systems, pipe and duct flow, building illumination and building acoustics. 4.

Demonstrate an understanding of building systems integration to achieve efficient operation. Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.

Credits: 3.00

DANC 36800 - Dance Sound Design

Credit Hours: 1.00. The study and application of sound design for dance, with emphasis on creation of sound scores for Modern Dance concerts. Instructor permission required.

Learning Outcomes: 1. Feel comfortable researching sound and music. 2. Feel more comfortable using an audio sequencer and other associated software to create a dance sound design. 3. Gain valuable experience integrating the finished design into the dance performance. 4. Add an important credential to the resume and portfolio. Credits: 1.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 25300 - Intro To Audio System Documentation

Credit Hours: 3.00. This course explores the creation and interpretation of production deliverables for theatrical audio systems. Through hands-on exercises and the study of industry-standard documentation, students will learn to draft, interpret, and apply audio system design drawings. Emphasis will be placed on creating clear and precise documentation that can be used by technicians, designers, and production teams in a theatrical environment.

Learning Outcomes: 1. Recognize standard symbols and notation used in audio system documentation. 2. Construct detailed signal flow diagrams, block diagrams, and rack layouts for theatrical sound systems. 3. Apply industry-standard software and techniques for creating professional AV system documentation. Credits: 3.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

THTR 35300 - Audio Technology I

Credit Hours: 3.00. This course introduces the fundamental principles of audio technology with a focus on live sound reinforcement. Topics covered include acoustics, audio signal flow, microphone techniques, mixing consoles, and loudspeaker systems.

Learning Outcomes: 1. Identify key vocabulary in room acoustics and components of audio systems. 2. Apply industry best practices and standards in system designs and design documentation. 3. Demonstrate understanding of the functions of major audio equipment such as mixing consoles, amplifiers, loudspeakers, and digital signal processing. Credits: 3.00

THTR 36300 - Sound Design

Credit Hours: 3.00. Project course in utilizing the principles of design as they can be formed into auditory response and environment. Emphasis on the interrelationship among all aspects of production and how sound becomes a building block toward total picturization. Majors have priority. Offered alternate years.

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

ME 51300 - Engineering Acoustics

Credit Hours: 3.00. The simple oscillator. Lumped acoustical elements. Electro-mechanical-acoustical analogies. Wave motion in strings and membranes. Introduction to linear acoustics through derivation of the wave equation and simple solutions. Plane and spherical waves. Acoustic intensity. Plane wave transmission through fluid layers and simple barriers. Sound absorption. Modeling of acoustical sources: monopoles, dipoles, quadrupoles. Mechanisms of sound generation and directionality. Sound propagation in one-dimensional systems (e.g., ducts and mufflers). Introduction to room acoustics.

Credits: 3.00

THTR 55300 - Theatre Audio Technology II

Credit Hours: 3.00. The study of the technical aspects of audio as they relate to use of, and experimentation with, various techniques in the design, installation, and specification of theatre sound systems, etc. Priority for majors. Offered in alternate years. Permission of instructor required.

Credits: 3.00

THTR 56900 - Special Problems In Audio Production

Credit Hours: 3.00. Advanced study and application of sound studio production techniques to different audio related disciplines. Permission of instructor required.

Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

Sample Multidisciplinary Engineering Plan of Study/Acoustical Engineering Concentration (Sound Systems)

Fall 2nd Year

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an

understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I;

however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

15-16 Credits

Spring 2nd Year

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability.

3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties

and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

THTR 16300 - Introduction To Sound Design And Technology

Credit Hours: 2.00. Introduction to theatre sound design and technology for general theatre students. Involvement in Department of Theatre production program.

Learning Outcomes: 1. Develop the necessary elements for a sound design. 2. Locate resources within the sound area for Purdue Theatre. 3. Participate as an efficient member of a sound crew. Credits: 2.00

THTR 25300 - Intro To Audio System Documentation

Credit Hours: 3.00. This course explores the creation and interpretation of production deliverables for theatrical audio systems. Through hands-on exercises and the study of industry-standard documentation, students will learn to draft, interpret, and apply audio system design drawings. Emphasis will be placed on creating clear and precise documentation that can be used by technicians, designers, and production teams in a theatrical environment.

Learning Outcomes: 1. Recognize standard symbols and notation used in audio system documentation. 2. Construct detailed signal flow diagrams, block diagrams, and rack layouts for theatrical sound systems. 3. Apply industry-standard software and techniques for creating professional AV system documentation. Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

THTR 26300 - Introduction To Sound Studios

Credit Hours: 3.00. An introduction to theories and techniques of audio production.

Learning Outcomes: 1. Identify fundamental functions of a sound system, explain their operations and demonstrate a basic ability to manipulate their characteristics in simple audio productions. 2. Produce music and audio recordings that demonstrate an ability to meet basic audio technical and production standards. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2.

Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

14-19 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic

pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of

stresses and principal stresses; elastic stability, elected topics.
Credits: 3.00

15-16 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.
Credits: 3.00

ME 41300 - Noise Control

Credit Hours: 3.00. Fundamentals of acoustic waves. Psychoacoustics and theories of hearing. Environmental and building acoustics. Measurement methods and common instrumentation. Noise control methods. Machinery noise. Community reaction. Legal aspects. Design-oriented semester project. Course work in differential equations.
Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.
Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.
Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

16-17 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.
Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15-17 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex

product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Multidisciplinary Engineering/Educational Engineering Concentration, BSE

About the Program

Degree Requirements

Educational Engineering Concentration (32-35 credits)

EDPS 10500 - Academic And Career Planning (UCC: IL)

Credit Hours: 3.00. Builds understanding of career interests and personality characteristics related to academic and career decisions. Expands knowledge of Purdue academic programs and of the world of work. Introduces decision-making strategies.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Describe and explain multiple facets of your identity. 2. Identify and analyze potential academic majors. 3. Identify and analyze potential careers. 4. Evaluate potential majors and careers in relation to yourself. Credits: 3.00

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EDPS 26500 - The Inclusive Classroom

Credit Hours: 3.00. Characteristics of students with special needs/talents; strategies for helping students learn and develop in general educational settings. Emphasis placed upon research evidence, case studies, problem-based learning, and development of a plan for an inclusive classroom. A field-based component is included.

Credits: 3.00

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors.

4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

EDPS 31600 - Collaborative Leadership: Cross-Cultural Settings (UCC: BSS)

Credit Hours: 3.00. In this course, students will explore the cultural nuances of leadership in the United States as well as around the world. This course will include impact of globalism as a context for leadership, conflict resolution in a global environment, and other important factors that impact culturally diverse or global teams.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Better understand what a culture is, broadly defined, and how it functions. 2. Better understand the importance of culturally aware, knowledgeable, and skillful leaders. 3. Increase professional and personal self-awareness in relation to leadership in diverse settings. 4. Better understand the importance of making cultural issues central for constructive conflict management. 5. Understand the complexity of leader-other interaction and impact of psycho-social variables on this interaction. Credits: 3.00

EDCI 20500 - Exploring Teaching As A Career (UCC: WC)

Credit Hours: 0.00 to 3.00. Students will become familiar with the work of teachers and begin to develop their educational philosophies through examining what it means to teach and to learn and the nature and purpose of schools. Students will critically evaluate teaching as their chosen profession. This course includes a required weekly field-based experience in an elementary, middle, or high school classroom.

University Core Curriculum (UCC): (UCC: WC) Learning Outcomes: 1. Learn what it means to teach as they reflect on why, whom, and how they will teach. 2. Learn to shift from a student perspective to a teacher perspective through the examination of teaching, learning, and schools. 3. Learn that teaching is affected by socio-political, community and school contexts. Credits: 0.00 to 3.00

EDCI 27000 - Introduction To Educational Technology And Computing (UCC: IL)

Credit Hours: 1.00 to 3.00. Addresses fundamentals of educational technology, including the integration of instructional design, media, computers and related technologies within the classroom setting.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Demonstrate the ability to use various forms of technology to access, generate, and manipulate information; as well as to present and communicate results. 2. Given the background information and resources for a potential lesson, identify the instructional activities, methods, and media that should optimally be selected, implemented and evaluated within the lesson. 3. Apply educational technology to plan and deliver instructional lessons that integrate a variety of software, applications, and learning tools. 4. Identify issues (e.g. equity, privacy, security, plagiarism, isolationism) that have been produced or enhanced because of the integration of technology and describe how these issues can be effectively addressed. Credits: 1.00 to 3.00

EDCI 42100 - The Teaching Of Biology In Secondary Schools

Credit Hours: 3.00. The rationale, objectives, methods, and materials of teaching biology and life science in junior and senior high schools. Extensive use of multimedia resources in planning specifically for the student teaching experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Have a conceptual understanding of science, how to develop a learning community within a classroom, and an understanding of and strategies to implement educational equity in a classroom. 2. Learn how to carry out the practical activities of science

teaching, develop worksheets, hold class discussions, develop and grade tests, and use textbooks. 3. Learn about the nature of scientific understanding and classroom communities, and how to use theoretical knowledge of learners & communities to guide their teaching. Credits: 3.00

EDCI 42400 - The Teaching Of Earth And Physical Science In The Secondary Schools

Credit Hours: 3.00. The methods and materials needed for the teaching of chemistry, earth-space, physics, and general science in the secondary schools, including field experience. No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education. May be taken for two credits (no field experience) by students who are enrolled in another methods course with field experience.

Learning Outcomes: 1. State your goals for secondary science teaching based on an informal position. 2. Use questions, demonstrations, and activities to probe students' concepts. 3. Describe teaching strategies which motivate students and which foster learning. 4. Describe teaching strategies to encourage meaningful problem solving. 5. Plan a science unit using a model of science teaching which takes student conceptual change into account. 6. Teach a lesson, lab, or demonstration employing appropriate strategies. 7. Choose appropriate assessment techniques to evaluate various learning outcomes. 8. Compare and evaluate secondary science curriculum materials, including audio-visual and computer materials. 9. Be able to store and/or dispose of materials properly and select experiments based on appropriate safety guidelines. 10. Describe strategies to provide appropriate learning for a diverse student population. Credits: 3.00

EDCI 42500 - Teaching Of Secondary Mathematics - Methods I

Credit Hours: 3.00. This is the first of two methods courses designed for students who are planning to be secondary mathematics teachers. The course content is organized around principles of equity, curriculum, teaching, learning, assessment and technology. It also focuses on the cycle of effective teaching, which includes justifying planning decisions, analyzing teaching, and using data to inform instruction. The courses addresses NCTM's principles and standards, as well as the content and process standards included in Indiana Academic Standards for Mathematics, and pedagogical strategies for teaching these in ways that serve the diverse population of mathematics learners.

Learning Outcomes: 1. Develop an understanding of students' thinking and the processes by which they come to learn mathematics and think mathematically. 2. Develop an understanding of teaching and learning environments through analyzing classroom interactions and the interplay among mathematics, classroom tasks, teacher moves, and students' ways of thinking and being. 3. Develop an understanding of the scope and significance of school mathematics through an examination of state and national standards and mathematics education research. 4. Develop professional attitudes and work habits and identify professional organizations and resources locally and nationally. 5. Continue learning mathematics, especially in ways that promote inquiry and investigation. Credits: 3.00

EDCI 42600 - Teaching Of Secondary Mathematics - Methods II

Credit Hours: 3.00. This is the second of two methods courses designed for students who are planning to be secondary mathematics teachers. The course content is organized around principles of equity, mathematical task design, classroom discourse, classroom environment assessment and technology. It also focuses on the cycle of effective teaching, which includes justifying planning decisions, analyzing teaching, and using data to inform instruction. The courses addresses NCTM's Professional Standards as well as the content and process standards included in Indiana Academic Standards for Mathematics and pedagogical strategies for teaching in ways that serve the diverse population of mathematics learners.

Learning Outcomes: 1. Develop an understanding of students' thinking and the processes by which they come to learn mathematics and think mathematically. 2.

Develop an understanding of teaching and learning environments through analyzing classroom interactions and the interplay among mathematics, classroom tasks, teacher moves, and students' ways of thinking and being. 3. Develop an understanding of the scope and significance of school mathematics through an examination of state and national standards and mathematics education research. 4. Develop professional attitudes and work habits and identify professional organizations and resources locally and nationally. 5. Continue learning mathematics, especially in ways that promote inquiry and investigation. Credits: 3.00

EDCI 42800 - Teaching Science In The Middle And Junior High School

Credit Hours: 2.00. Designed to prepare preservice teachers to teach science in the middle and junior high school (grades 5-9). No undergraduate students may be enrolled in any of these undergraduate courses until they have been admitted to teacher education.

Learning Outcomes: 1. Gain knowledge about Indiana's middle school science standards. 2. Gain knowledge about curriculum of the courses that they will be student teaching. 3. Gain knowledge about relevant professional organizations and communities. 4. Gain skills to write a high school science lesson plan and teach. 5. Gain skills to write a lab lesson plan. 6. Gain skills to identify and use resources from professional communities. 7. Gain skills to develop project-based learning unit. 8. Gain skills to write a lesson plan to teach NOS. 9. Gain skills to collaborate in a team of teachers. Credits: 2.00

ENE 49800 - Undergraduate Research In Engineering Education

Credit Hours: 1.00 to 3.00. Individual research projects for students with the approval of their academic advisors. Requires prior approval of, and arrangement with, a faculty research advisor in the Department of Engineering Education. Written and oral final reports are required. Permission of instructor required.

Credits: 1.00 to 3.00

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire

new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

ENE 50200 - History And Philosophy Of Engineering Education

Credit Hours: 3.00. Examines the history and philosophy of engineering education by: (1) exploring the history of engineering education through archival research and historical documents (critical moments, tensions, issues); (2) investigating philosophies of education and the philosophies that have guided engineering as a profession; and (3) critiquing the evolution of engineering education, identifying alternative scenarios, and imagining a future role in engineering education. This course introduces students to the field of engineering education while broadening their views of the roles of interrelationships between teaching and research. Open to students in Engineering Education. Permission of instructor required.

Learning Outcomes: 1. Develop a culture of critical reflection, engagement, and collaborative learning. 2. Provide opportunities for students to identify and understand tools to inquire into the history and philosophy of engineering education and develop the skills for using these tools. 3. Provide opportunities for students to use these inquiry tools to form persuasive arguments about the nature of engineering education. Credits: 3.00

ENE 59000 - Special Problems In Engineering Education

Credit Hours: 1.00 to 6.00. Project or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum. Interested students should seek a faculty advisor by meeting individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken and expected outcomes and deliverables. An individual project must be approved by the faculty member supervising the project and the student's advisor before registering for the course. An approved written report is required. Permission of instructor required.

Learning Outcomes: 1. Objectives vary based on course topics. Credits: 1.00 to 6.00

EDCI 28500 - Multiculturalism And Education (UCC: BSS)

Credit Hours: 2.00 to 3.00. This course integrates an understanding of multiculturalism with principles of democratic education. Historical, sociological, cultural, political, philosophical, and pedagogical foundations of multiculturalism are explored and related to issues of pedagogy in a pluralistic society.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop awareness of issues and concerns related to multicultural education. 2. Develop knowledge of how multiculturalism impacts teachers, schools, classrooms, and society. 3. Develop skills of critical thinking and reflection that will enable educators to contribute to meeting the needs of students in a multicultural and global world. Credits: 2.00 to 3.00

IDE 38500 - Design Methodologies For Diverse Stakeholders

Credit Hours: 3.00. This course focuses on engineering design methodologies with a concern for the needs of diverse stakeholders. The course brings together topics drawn from a variety of disciplines (including anthropology, education, psychology, human-computer interaction and engineering) to introduce interdisciplinary engineering approaches to: (1) design tools, systems, and/or environments to support cognitive processes and (2) engage in human-centered and learner-centered design. The semester design project provides a context for students to apply these methods. Permission of Instructor required.

Learning Outcomes: 1. Learn about cognitive processes (including learning processes), how to design products, processes and environments to support cognition. 2. Learn methodologies and develop skills to be able to apply human-centered principles in the design of interfaces, every-day products and learning environments, whether in industrial or academic settings. 3. Engage in reflective practices to connect the course material to previous learning experiences as well as personal learning goals, with a goal of furthering their life-long learning skills. Credits: 3.00

Sample Multidisciplinary Engineering Plan of Study/Engineering Education Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate

technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2.

Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing

operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

17-19 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st

order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

14-16 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag

coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

14-15 Credits

Spring 3rd Year

EDPS 23500 - Learning And Motivation (UCC: BSS)

Credit Hours: 0.00 to 3.00. Introduction to concepts of learning and motivation in educational contexts (i.e., Educational Psychology). Influence of development, culture, and individual differences on learning and motivation. Uses of assessment and technology in promoting learning and motivation. A field-based experiential component is included.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Understanding of the learning processes including the role of previous experiences and the constructive nature of learning, cognitive constraints, and the role of the social environment. 2. Understanding of the principles of cognitive, personal, social, and moral development. 3. Understanding of principles of motivation including how to initiate and maintain student engagement. 4. Understand the fundamental assessment concepts including the purpose of assessment, the importance of alignment to instructional goals, and the interpretation and use of data. 5. Understanding of the creation of environments conducive for learning. Credits: 0.00 to 3.00

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts.

Credits: 2.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of

statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

17 Credits

Fall 4th Year

EPCS 41200 - Senior Design Participation In EPICS

Credit Hours: 2.00. Continuation of EPICS courses. Seniors using EPCS 41200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 41200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 41100 and EPCS 41200 students. Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the first year, sophomores and juniors. May not be taken concurrently with EPCS 41100 .

Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsiblity. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 2.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

16-18 Credits

Spring 4th Year

EPCS 41200 - Senior Design Participation In EPICS

Credit Hours: 2.00. Continuation of EPICS courses. Seniors using EPCS 41200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 41200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 41100 and EPCS 41200 students. Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the first year, sophomores and juniors. May not be taken concurrently with EPCS 41100 .

Learning Outcomes: 1. An ability to apply material from their discipline to the design of community-based projects. 2. An understanding of design as a start-to-finish process. 3. An ability to identify and acquire new knowledge as a part of the problem-solving/design process. 4. An awareness of the customer. 5. An ability to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. An ability to communicate effectively with audiences with widely-varying backgrounds. 7. An awareness of professional ethics and responsiblity. 8. An appreciation of the role that their discipline can play in social contexts. Credits: 2.00

14 Credits

Multidisciplinary Engineering/Engineering Management Concentration, BSE

About the Program

Degree Requirements

Engineering Management Concentration (32 credits)

Sample Multidisciplinary Engineering Plan of Study/ Engineering Management Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting

processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and

their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies.

Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena

in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-19 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases

in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

14 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments

from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

16-17 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15-17 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex

product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Multidisciplinary Engineering/General Engineering Concentration, BSE

About the Program

Degree Requirements

General Engineering Concentration (32 credits)

Engineering Design Selective (3 credits)

Beginning Engineering Selective (3 credits)

AAE 33400 - Aerodynamics

Credit Hours: 3.00. Incompressible airfoil and lifting line theory. Steady and unsteady, one-dimensional, linear and nonlinear flows. Normal shock waves. Steady, supersonic, two-dimensional linear and nonlinear flows. Oblique shock waves. Perturbation theory for wings and bodies. Design applications.

Credits: 3.00

ABE 33000 - Design Of Machine Components

Credit Hours: 3.00. Introduction to design; stress analysis; deformation and stiffness considerations; static and fatigue strength design; design of components of the food processing, farm and off-highway machines, and mechanical systems.

Credits: 3.00

ABE 43500 - Hydraulic Control Systems For Mobile Equipment

Credit Hours: 3.00. Design of basic fluid power components and systems. Includes power steering, hydrostatic and hydromechanical transmission, electrohydraulic servo valves, servomechanism, and manually controlled systems.

Credits: 3.00

CHE 20500 - Chemical Engineering Calculations

Credit Hours: 4.00. Quantitative applications of steady-state mass and energy balances to solve problems involving multi-component systems and multi-unit chemical processes. Single-component and multi-component phase equilibria, single-reaction and multiple-reaction stoichiometry, coupled mass and energy balances, chemical processes involving bypass and recycle streams.

Learning Outcomes: 1. Estimate physical properties of real chemical systems. 2. Evaluate introductory single-component and multi-component phase equilibria and incorporate these concepts into solutions of mass and energy balance problems. 3. Solve steady state and transient mass and energy balance problems for both reacting and non-reacting systems with or without recycle using analytical and computational methods. 4. Work professionally and ethically in teams to solve new mass and energy balance problems. 5. Identify contemporary chemical engineering problems, including their societal, environmental, and global impacts. Credits: 4.00

CE 20300 - Principles And Practice Of Geomatics

Credit Hours: 4.00. This course provides a broad overview of geomatics engineering including fundamental principles required for practical geomatics applications. This course includes subjects in traditional surveying, GPS surveying, remote sensing, photogrammetry, laser scanning, and Geographic Information Systems (GIS). Basic concepts on these subjects are applied to solve practical problems in various civil engineering applications; including computations for engineering project control and construction layout; theory of error propagation; fundamental concepts of horizontal and vertical curves; topographic mapping using various geospatial data acquisition technologies from ground, air, and space; GIS

for visualization and analysis of geospatial data.

Learning Outcomes: 1. Design and execute a leveling survey. 2. Design and execute a traverse survey. 3. Use survey data to produce a topographic map. 4. Perform horizontal and vertical curve computations. 5. Collect GPS/RTK/RTN data with survey grade accuracy. 6. Perform remote sensing image classification. 7. Measure digital photographs and perform camera calibration. 8. Use software to generate 3D point cloud from digital imagery. 9. Perform multi-image bundle block adjustment. 10. Manipulate 3D point cloud data from a laser scanner, and extract engineering parameters. 11. Select appropriate geodetic references and map projections for geomatics applications. 12. Collect and register geospatial data from multiple sources for engineering applications. 13. Map and visualize collected geospatial data. Credits: 4.00

CE 22200 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. The objective of this course is to introduce concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity of construction equipment as well as the costs associated with construction equipment and construction labor. 4. Calculate the peak financial requirement for a given project based on project revenue and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

CE 31100 - Architectural Engineering

Credit Hours: 3.00. This course introduces energy efficiency, thermal comfort, indoor environmental quality and green building design concepts. The course covers engineering fundamentals required for the design and analysis of building systems such as thermodynamics, fluid mechanics, heat and mass transfer, light and sound transmission. The course presents engineering principles and selected applications related to hydrothermal analysis of building enclosures, air conditioning processes in heating, ventilating and air conditioning systems, building illumination, and building acoustics.

Learning Outcomes: 1. Identify and analyze the characteristics of building environmental loads, building construction, and building operations as they define the requirements for a comfortable and healthy indoor environment. 2. Demonstrate knowledge of thermodynamics , fluid mechanics, heat and mass transfer, photometric quantities and sound transmission for use in building design. 3. Identify, formulate and solve realistic Architectural Engineering problems related to hygrothermal analysis of building enclosures, air conditioning processes in Heating Ventilating and Air Conditioning Systems, pipe and duct flow, building illumination and building acoustics. 4. Demonstrate an understanding of building systems integration to achieve efficient operation. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop

original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

CE 47000 - Structural Steel Design

Credit Hours: 3.00. The elements of structural steel design, including tension members and their connections; structural connections, including welding, and high-strength bolts; compression members; rolled and built-up flexural members; and combined axial and flexural loading effects.

Credits: 3.00

CEM 20100 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. This course introduces concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role of estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed. Prerequisite: First Year Engineering Curriculum must be completed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity and the costs associated with construction equipment labor. 4. Calculate the peak financial requirement for a given project based on project revenues and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

ECE 26400 - Advanced C Programming

Credit Hours: 3.00. Continuation of a first programming course. Topics include files, structures, pointers, and the proper use of dynamic data structures. A basic knowledge of the UNIX operating system and an introductory C programming course; C programming knowledge should include basic syntax, control structures, and file I/O, as well as experience in declaring and using functions.

Learning Outcomes: 1. Ability to read and write C programs that use files. 2. Ability to read and write C programs that use structures. 3. Ability to read and write C programs that use dynamic data structures. Credits: 3.00

EEE 25000 - Environmental, Ecological, And Engineering Systems

Credit Hours: 3.00. An overview of systems thinking and examples, and applications to environmental, ecological, and engineering systems. Students will develop an understanding of complex and global systems, along with the tools and analysis methods required to deal with them. Basic environmental and ecological science concepts are also included.

Learning Outcomes: 1. Understand the types of relationships and dynamics common in complex systems, including environmental systems, ecological systems, and engineering systems.

2. Able to apply fundamental systems tools and modeling approaches to a wide variety of engineering, environmental, and ecological problems. 3. Understand the foundational concepts and vocabulary of global environment and ecological systems. 4. Appreciate the complexity of contemporary issues related to society and EEE, including and understanding of the roles and responsibilities of stakeholders. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding. Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

ME 26300 - Introduction To Mechanical Engineering Design, Innovation And Entrepreneurship

Credit Hours: 3.00. The product design process. Development of product design specifications using customer inputs, benchmarking, product/market research and patent review. Concept generation and evaluation using brainstorming, functional decomposition, modeling and decision matrices. Detailed product design including assembly, economic analysis, CAD, and bill of materials. Oral and written design reviews. Key skills developed include teamwork, communication, project planning, innovation, design, and entrepreneurship.

Learning Outcomes: 1. Instill the philosophy that real engineering design problems are open-ended and multifaceted. 2. Teach a systemic design methodology. 3. Provide guidance in applying engineering principles to open-ended problems. 4. Develop the ability to mathematically model and analyze engineering systems. 5. Sharpen skills in leadership, teamwork, communication, project planning, innovation, design and entrepreneurship. 6. Instill a philosophy of professional and ethical behavior. 7. Provide a foundation for the rest of the mechanical engineering curriculum and future careers. Credits: 3.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.

Learning Outcomes: 1. Provide a fundamental knowledge of the theory of measurement sciences. (A2, A3, A4) 2. Gain knowledge of the practice and art of measurements through laboratory experiments. (A2, A3, A4) 3. Sharpen skills in problem formulation and integration of a broad range of technical capabilities through certain deliberately ill-defined experimental procedures. (A2, A3, A4) Credits: 3.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

CE 45600 - Wastewater Treatment Processes

Credit Hours: 3.00. (EEE 45600) Fundamental design principles and practice of wastewater treatment to prepare students for designing wastewater treatment systems. The major topics include design and construction process, preliminary treatment of wastewater, primary treatment, wastewater microbiology, secondary treatment, nitrogen removal, phosphorus removal, attached microbial growth, secondary settling, disinfection and post-aeration, tertiary treatment, and wastewater plant residuals management.

Learning Outcomes: 1. Understand design principles and practice of wastewater treatment. 2. Apply the knowledge to select the best process to treat wastewater. 3. Design a wastewater treatment component or process to meet water quality goals. 4. Critically review relevant literature or contemporary issues in wastewater treatment. Credits: 3.00

Follow-up Engineering Selective (3 credits)

AAE 33400 - Aerodynamics

Credit Hours: 3.00. Incompressible airfoil and lifting line theory. Steady and unsteady, one-dimensional, linear and nonlinear flows. Normal shock waves. Steady, supersonic, two-dimensional linear and nonlinear flows. Oblique shock waves. Perturbation theory for wings and bodies. Design applications.

Credits: 3.00

AAE 33800 - Thermal Sciences

Credit Hours: 3.00. A fundamental course covering a range of topics selected from the disciplines of engineering thermodynamics, fluid mechanics, heat transfer and combustion, with an emphasis on their application to propulsion. This is an entry level course to prepare students for advanced analysis of propulsion and energy systems. Upon completion of this course, students are expected to be able to apply fundamental principles to perform thermodynamic analysis for thermophysical problems involving fluid flow, heat transfer and combustion.

Learning Outcomes: 1. Identify types of problems from thermo-fluid systems. 2. Perform heat conduction analysis for steady and unsteady problems. 3. Perform analysis for radiation heat transfer. 4. Develop deeper understanding of the laws of thermodynamics and their applications to various problems. 5. Apply fundamentals of fluid mechanics to various fluid flow problems. 6. Analyze convection heat transfer problems. 7. Conduct analysis of simple combustion systems such as

adiabatic or chemical equilibrium. 8. Analyze simple thermo-fluid systems using fundamentals we learn from the class. Credits: 3.00

ABE 43500 - Hydraulic Control Systems For Mobile Equipment

Credit Hours: 3.00. Design of basic fluid power components and systems. Includes power steering, hydrostatic and hydromechanical transmission, electrohydraulic servo valves, servomechanism, and manually controlled systems.

Credits: 3.00

CHE 37800 - Heat And Mass Transfer

Credit Hours: 4.00. Macroscopic and differential energy balances. Heat transfer coefficients for free and forced convection and phase change. Conductive and radiative heat transfer. Applications to heat transfer equipment design and compressible fluid flow. Macroscopic and differential species balances. Mass transfer coefficients and analogies. Mass transfer with and without chemical reaction. Mass transfer equipment design.

Learning Outcomes: 1. Identify and explain the three mechanisms of heat transfer: conduction, convection, and radiation. 2. Apply microscopic and macroscopic thermal energy balances incorporating Fourier's Law for the solution of problems describing steady-state and transient conduction, including convective heat transfer. 3. Utilize mass and thermal energy balances for the design of heat transfer equipment and the analysis of its operation. 4. Identify and explain the two main mechanisms of mass transfer: convection and diffusion. 5. Apply microscopic and macroscopic species mass balances incorporating Fick's Law for the solution of problems describing steady-state and transient diffusion, including relevant rate equations and convective mass transfer. 6. Identify and apply the analogies between momentum, heat, and mass transfer. 7. Utilize mass balances and appropriate phase equilibrium relations for the design of continuous mass transfer equipment and the analysis of its operation. 8. Work professionally and ethically in teams to conduct heat and mass transfer-based laboratory experiments. 9. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

ECE 30862 - Object-Oriented Programming In C++ And Java

Credit Hours: 3.00. C++ and Java programming languages, including classes, inheritance, encapsulation, polymorphism, class derivation, abstract classes, interfaces, static class members, object construction and destruction, namespaces, exception handling, function, overloading and overriding, function name overload resolution, container classes, and template classes.

Learning Outcomes: 1. An understanding of the concepts of inheritance and polymorphism. 2. An ability to overload operators in C++. 3. An understanding of the difference between function overloading and function overriding. 4. An ability to incorporate exception handling in object-oriented programs. 5. An ability to use template classes and the STL Library in C++. 6. An ability to write object-oriented programs of moderate complexity in Java. 7. An ability to write programs with multiple threads and use synchronization among threads. Credits: 3.00

ECE 32100 - Electromechanical Motion Devices

Credit Hours: 3.00. The general theory of electromechanical motion devices relating electric variables and electromagnetic forces. The basic concepts and operational behavior of DC, induction, brushless DC, and stepper motors used in control applications are presented.

Learning Outcomes: 1. Analyze/design electromagnetic circuits/devices. 2. Understand the concepts and principles of electromagnetic energy conversion. 3. Understand the concept of time-varying transformations in the analysis of time-varying systems. 4. Analyze dc machines. 5. Understand converters for dc drives. 6. Analyze brushless dc machines. 7. Analyze induction machines. Credits: 3.00

IE 37000 - Manufacturing Processes I

Credit Hours: 3.00. Principal manufacturing processes; metal cutting, grinding and metal forming operations, machine tools, and tools and tooling. Nontraditional machining and welding.

Introduction to computer-aided manufacturing and computer-aided graphics and design, N/C programming, robots, and flexible manufacturing systems. Classroom and laboratory demonstrations included. Not open to students with credit in ME 36300.

Credits: 3.00

IE 38600 - Work Analysis And Design I

Credit Hours: 3.00. Fundamentals of work methods and measurement. Applications of engineering, psychological, and physiological principles to the analysis and design of human work systems.

Credits: 3.00

IE 47000 - Manufacturing Processes II

Credit Hours: 3.00. The interrelations of materials, processes, and design with various aspects of manufacturing.

Credits: 3.00

IE 48600 - Work Analysis And Design II

Credit Hours: 3.00. Continuation of IE 38600 . Applications of engineering, computer sciences, information sciences, and psychological principles and methods to the analysis and design of human work systems.

Credits: 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties.

Credits: 3.00

ME 30000 - Thermodynamics II

Credit Hours: 3.00. Properties of gas mixtures, air-vapor mixtures, applications. Thermodynamics of combustion processes, equilibrium. Energy conversion, power, and refrigeration systems.

Credits: 3.00

ME 31500 - Heat And Mass Transfer

Credit Hours: 4.00. Fundamentals of heat transfer by conduction, convection, and radiation; mass transfer by convection. Relevance to engineering applications.

Learning Outcomes: 1. Develop the ability to identify the relevant transport processes (heat, momentum and energy) when confronted with a particular problem. [1, 7] 2. Develop the ability to model and analyze heat and mass transfer processes. [1, 2, 3, 5, 7] 3. Augment the ability to design and conduct experiments to solve open-ended engineering problems. [2, 3, 5, 6, 7] 4. Reinforce technical written and oral communication skills through a formal project report. [3, 4, 5] Credits: 4.00

ME 36500 - Measurement And Control Systems I

Credit Hours: 3.00. The fundamentals of dynamic system modeling are reviewed with special reference to measurement systems. Analytical and experimental techniques of general importance in systems engineering are presented, including sensor utilization in feedback control. Engineering measurement fundamentals, including digital and frequency domain techniques noise and error analysis are covered.

Learning Outcomes: 1. Provide a fundamental knowledge of the theory of measurement sciences. (A2, A3, A4) 2. Gain knowledge of the practice and art of measurements through laboratory experiments. (A2, A3, A4) 3. Sharpen skills in problem formulation and integration of a broad range of technical capabilities through certain deliberately ill-defined experimental procedures. (A2, A3, A4) Credits: 3.00

ME 37500 - Measurement And Control Systems II

Credit Hours: 3.00. This course provides an introduction to modeling electrical, mechanical, fluid, and thermal systems containing elements such as sensors and actuators used in feedback control systems. Modeling techniques based on physical laws and principles are used to generate subsystem and system transfer functions. Closed-loop system analysis will include the use of proportional, integral, and derivative elements to control system response.

Learning Outcomes: 1. Introduce a systematic and unified system level modeling of lumped dynamic systems in different domains using first principles. (A2, A3) 2. Provide necessary mathematical tools for analyzing and predicting

the performance of an engineered system based on its dynamic response. (A2, A3) 3. Provide an introductory treatment of designing feedback controllers to achieve closed-loop stability and specified system performance. (A2, A3) Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

Advanced Engineering Elective (3 credits)

ENGR 30500 - Fundamentals Of Innovation Theory And Practice

Credit Hours: 3.00. This course is designed to provide students with initial exposure to the fundamental patterns, mindsets, behaviors, attributes, tools, and methods employed in the innovative activity of individuals and organizations. Emphasis is placed on understanding and effectively utilizing techniques to systematically drive innovation that are drawn from the fields of business, design, problem-solving, engineering, and the social sciences. Lecture, in-class small group activities, and individual and team assignments are employed across an array of contemporary socio-technical challenges to provide students with the opportunity to apply conveyed theory and methods to rigorously structure problems, understand involved stakeholders, utilize innovation motifs and analogical reasoning to develop robust views of potential solutions spaces, tailor solution design to stakeholder context, consider the full suite of functional, social, and emotional dimensions that could influence solution prioritization, and document and systematically assess underlying solution assumptions to iterate toward a viable and sustainable forward-looking plan that could achieve target outcomes. This course counts toward, serves as a required entry course for, the College of Engineering Minor in Innovation and Transformational Change.

Learning Outcomes: 1. Develop working knowledge of established innovation forms and motifs. 2. Demonstrate ability to link innovation motifs to specific classes of problems. 3. Understand, and be able to pursue, the core

aspects of an end-to-end innovation process. 4. Recognize the mental models, mindsets and behaviors of innovators. 5. Gain awareness of the approaches various forms of organizations take to systematically innovate. 6. Acquire leadership and communication skills through teamwork, oral presentations, and written deliverables. Credits: 3.00

ENGR 49001 - Breakthrough Thinking For Complex Challenges

Credit Hours: 3.00. This course helps students learn and effectively employ high-impact design principles and structured problem solving methods to address complex multi-stakeholder socio-technical challenges. Case discussions of historical and contemporary high impact solutions to complex challenges are used to introduce techniques to frame problems, structure ambiguity, intentionally design non-incremental solutions, and communicate, trial, and iterate solutions to drive adoption and multifaceted sustainability. Techniques are drawn from multiple schools of thought such as business, design, engineering, and the social sciences. Over the course of the term, multi-disciplinary student teams directly apply cumulative learning to address selected parts of a real-world complex societal challenge in close collaboration with a partner organization, in an experiential learning format. This course can be counted toward the College of Engineering Minor in Innovation and Transformational Change and the Burton D. Morgan Center for Entrepreneurship (BDMCE) Certificate in Entrepreneurship and Innovation. Permission of instructor required.

Learning Outcomes: 1. Employ rigorous issue analysis methods to develop mutually-exclusive collectively-exhaustive structured inventories of the issues involved in a major challenge. 2. Understand stakeholder motivation and interpret the funds, services, and influence exchanged in stakeholder ecosystems. 3. Understand the benefits and limitations of qualitative and quantitative methods to identify and interpret stakeholder needs. 4. Gain familiarity with habit conversion methodologies and the role they can play in design activities. 5. Recognize the importance of empathy in solution design and apply structured ideation methods to engender empathy in designers. 6. Understand patterns of innovation success and the contextual circumstances in which they apply. 7. Understand combinatorial business design methods to explore and prioritize alternative paths to achieve financial sustainability for an idea. 8. Discern the broader societal impacts of design activities. 9. Develop robust assessments of the assumptions underlying new ideas and means to test those assumptions rapidly and at low cost. 10. Recognize and define influence paths and communication methods to drive awareness, consideration, conversion, and retention of new solutions. Credits: 3.00

ENGR 31000 - Engineering In Global Context (UCC: STS)

Credit Hours: 3.00. This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields. 2. Understand the historical development of engineering education and the engineering profession in the United States. 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering. 4. Explain the significance of

diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts. 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice. 6. Demonstrate written communication capabilities at the level of emerging or higher (as defined by the Purdue Core Curriculum guidelines). Credits: 3.00

Engineering Electives (5 credits)

Area Electives (15 credits)

Sample Multidisciplinary Engineering Plan of Study / General Engineering Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case

studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment,

establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples:

Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed

throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve

systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

14 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's

circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

16-17 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15-17 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex

product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Multidisciplinary Engineering/Humanitarian Engineering Concentration, BSE

About the Program

Degree Requirements

Humanitarian Engineering Concentration (32 credits)

Area Electives - Humanitarian Interests (15 credits)

Engineering Design Selective (3 credits)

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

Engineering Elective (2 credits)

Engineering Selectives (6 credits)

ABE 30500 - Physical Properties Of Biological Materials

Credit Hours: 3.00. Physical properties of agricultural crops and food products and their relationship to harvesting, storage, and processing. Physical properties covered include: density, shape, moisture content, water potential, water activity, friction and flow or particulate solids, terminal velocity, thermal properties, interaction with electromagnetic radiation, and viscoelastic behavior of solids.

Credits: 3.00

ABE 32500 - Soil And Water Resource Engineering

Credit Hours: 4.00. Interrelationships of the plant-water-air-soil system; hydrologic processes; protection of surface and ground water quality; GIS targeting of soil and water protection measures; and design of subsurface and overland drainage systems, irrigation systems, and soil erosion control practices.

Learning Outcomes: 1. Understand the agricultural and biological engineering profession and practice. 2. Able to understand and apply knowledge of mathematics, science, and engineering. 3. Understand and able to, identify, formulate, model and solve problems for engineering systems. 4. Able to design a system, component or process to meet desired goal subject to constraints. Credits: 4.00

CE 32201 - Project Control And Life Cycle Execution Of Constructed Facilities

Credit Hours: 3.00. The objective of this course is to continue an introduction to construction management and engineering concepts for future engineers, contractors and owner representatives involved at different stages in the life-cycle of constructed faculties. Building on the broad framework introduced in the prerequisite course, this course develops further ability with analytical tools and extends the basic foundation for advanced topics in construction engineering and management. Specifically, this course focuses on the principles, tools, and procedures used in the construction industry for project selection and financing, advanced planning and scheduling techniques, resource management, and project monitoring.

Learning Outcomes: 1. Demonstrate an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. 2. Demonstrate an ability to design a process to meet desired needs within realistic constraints. Credits: 3.00

CE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

CE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (EEE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions

about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

CEM 20100 - Life Cycle Engineering And Management Of Constructed Facilities

Credit Hours: 3.00. This course introduces concepts relating to the engineering and construction of facilities throughout their life cycle. Topics that will be explored include the nature of the construction industry, construction contracts, legal and management organization of construction companies, basics of the design and construction process, as well as an introduction to the role of estimating and project scheduling. Cost, time, safety and quality concepts of construction management relationships will also be discussed. Prerequisite: First Year Engineering Curriculum must be completed.

Learning Outcomes: 1. Work with construction schedules and determine which activities are critical to the timely completion of the project. 2. Identify different types of construction contracts and specifications. 3. Calculate the productivity and the costs associated with construction equipment labor. 4. Calculate the peak financial requirement for a given project based on project revenues and expenses. 5. Understand the importance of safety on the construction site. 6. Understand the principles involved in estimating and controlling costs on a construction project. Credits: 3.00

EEE 35000 - Introduction To Environmental And Ecological Engineering

Credit Hours: 3.00. Introduction to water pollution, air pollution, noise, hazardous and solid wastes, and their control. Environmental impact statements and global pollution issues. Field trips required.

Learning Outcomes: 1. An ability to apply material balance tools to environmental systems. 2. An ability to describe the different types of air, soil, and water pollutants and how they affect environmental quality on a local or global scale. 3. An ability to explain the principles of water, wastewater, air, soil, and hazardous waste treatment processes. 4. An ability to describe the professional and ethical responsibility of engineers in the context of environmental management. 5. An ability to describe the key roles and responsibilities of public institutions and private organizations in managing environmental resources. Credits: 3.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in

teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone.
Credits: 3.00

IE 49000 - Special Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Special topic courses and projects of contemporary importance or of special interest that are outside the scope of the standard undergraduate curriculum. Permission of instructor required.
Credits: 1.00 to 6.00

ME 41500 - Energy Systems Engineering

Credit Hours: 3.00. Application of Thermodynamics, fluid mechanics, and heat transfer fundamentals to the design of energy systems. Applications include thermal regulation in buildings, electronic equipment, energy generation, conversion, and storage, manufacturing processes, and combustion processes. Beyond the fundamentals, this course will focus on design and analysis techniques, including analysis of energy costs, economics, and environmental issues.
Credits: 3.00

ME 43000 - Power Engineering

Credit Hours: 3.00. Rankine cycle analysis, fossil-fuel steam generators, energy balances, fans, pumps, cooling towers, steam turbines, availability (second law) analysis of power systems, energy management systems, and rate analysis.
Credits: 3.00

ENE 55400 - Globalization And Engineering

Credit Hours: 3.00. The focus is on the multifaceted dynamics of globalization, and its impact on engineering practice and the lives and education of engineers. The course emphasizes engineering and globalization from the perspectives of the emerging Asian economies and Europe, as well as the United States. This course is designed for practicing engineers and engineering educators. It is taught within a learner-centric, highly interactive, collaborative learning environment in which students are expected to learn from the experiences and thinking of each other, as well as from the instructor, and other course resources. The course places emphasis on reading, writing, web-based research, and discussion. Students are recommended (but not required) to have a minimum of two years work experience as a practicing engineer and strong communication skills (self-assessed). Permission of instructor is required.
Learning Outcomes: 1. Have increased global awareness. 2. Have knowledge of the dynamics of globalization as an economic and social process including contrasting theories and interpretations of events. 3. Have knowledge of how globalization is studied and characterized by economists, political scientists, and sociologists. 4. Able to interpret studies and research on globalization. 5. Understand the nature and roles of engineering education and life-long learning within the globalization dynamic. 6. Understand the innovation process within a global enterprise including contrasting theories and the ability to analyze specific cases. 7. Able to lead and innovate within a rapidly globalizing profession. 8. Know the engineering profession, engineering education, and globalization from the perspectives of countries beyond the United States, particularly perspectives from Europe and the emerging

economies of Asia. Credits: 3.00

IE 59000 - Topics In Industrial Engineering

Credit Hours: 1.00 to 6.00. Selected topics in industrial engineering for seniors and graduate students. Permission of instructor required.

Credits: 1.00 to 6.00

ME 51400 - Fundamentals Of Wind Energy

Credit Hours: 3.00. Basic operating principles and analysis of performance characteristics of gas turbine engines for aircraft and vehicular propulsion and stationary power. Turbojet, turbofan, turboshaft cycle analysis. Analysis of flow through compressors, turbines, combustors, inlets, nozzles, and regenerators. Component machine and off-design performance. Inspection trip to industrial plan required.

Learning Outcomes: 1. Introduce students to the technology and economics of converting wind energy to electricity. 2. Inform students to the environmental concerns of wind energy. 3. Understand principles of wind turbine aerodynamics. 4. Develop the ability to design optimum blading. 5. Develop the ability to evaluate a potential site in terms of wind energy. 6. Understand wind turbine structural dynamics issues. Credits: 3.00

ME 59700 - Advanced Mechanical Engineering Projects I

Credit Hours: 0.00 to 6.00. Projects or special topics of contemporary importance or of special interest that are outside the scope of the standard graduate curriculum can be studied under the Mechanical Engineering Projects course. Interested students should seek a faculty advisor by meeting with individual faculty members who work in their area of special interest and prepare a brief description of the work to be undertaken in cooperation with their advisor. Permission of instructor required.

Credits: 0.00 to 6.00

EEE 38500 - Environmental Soil Chemistry

Credit Hours: 4.00. (AGRY 38500) Designed as an upper-level introductory course covering environmental soil chemistry concepts in framework most applicable to inorganic and organic chemical contamination of soil and water resources and intended for students in environmental science fields that may not have a strong chemistry and/or math background. (el.5).

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 4.00

EEE 36001 - Water Quality And Treatment Laboratory

Credit Hours: 3.00. Laboratory procedures are described and performed that examine chemical, physical, and biological properties and constituent concentrations of natural waters. In addition, water treatment process experiments are performed to show how constituent concentrations can be altered during water treatment processes. Procedures include the analytical determination of several chemical and biological constituents in water by titrimetric, colorimetric, or chromatographic methods, whereas treatment processes include reactor design, pH adjustment, ion exchange, lime softening, coagulation, and disinfection.

Learning Outcomes: 1. Apply physical, chemical, and biological principles to each experimental procedure or measurement technique. 2. Conduct laboratory experiments, making quantitative measurements to assess water quality and water treatment process performance. 3. Organize, report, and graphically display experimental data in common software packages. 4. Analyze and evaluate experimental data on its quality and

significance (i.e., usefulness). 5. Identify issues (i.e., problems) with data collection and data uses. Credits: 3.00

Global Design Team (3 credits)

ENGR 50000 - Global Design Team V

Credit Hours: 0.00 to 3.00. Global Design Team brings together undergraduate and graduate students from different disciplines, inside and outside of the College of Engineering to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic and GPA. Permission of department required.

Learning Outcomes: 1. An awareness of varying regulations, codes of practice, standards, technical specifications testing/inspection procedures, environmental regulations, and systems of measurement between countries and regions. 2. Familiarity with the concept of a "global product platform". 3. Ability to apply familiar concepts to unfamiliar, real-world problems. 4. Ability to use design tools to solve engineering problems. 5. Ability to adapt to cultural norms in a professional arena and act appropriately. 6. Ability to make ethical and socially responsible decisions in the context of a culture divergent from my own. 7. Ability to analyze problems from a different cultural frame of reference. 8. Ability to communicate professionally in a culturally-appropriate manner. 9. Ability to practice social and cultural responsibility, e.g. resource sustainability. 10. Proficiency in a second language. 11. Ability to be cross-culturally adaptable/flexible. 12. Ability to contribute to a culturally-diverse team. Credits: 0.00 to 3.00

GEP 40000 - Global Design Team IV

Credit Hours: 1.00 to 3.00. Global design Team (GDT) brings together undergraduate and graduate students from different disciplines inside and outside of the College of Engineering, to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses, and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic, and GPA. Department approval required.

Learning Outcomes: 1. Real-world, full-cycle design experience in the context of a different culture and geographical region. 2. Increased global awareness and competence. 3. Global humanitarian impact. Credits: 1.00 to 3.00

ENGR 39697 - Global Engineering Projects

Credit Hours: 1.00 to 3.00. Students will work in teams to formulate solutions to engineering problems. Project topics will focus on a problem outside the U.S. and/or incorporate teammates from international universities. International teams may work remotely with the possibility for international travel and in-person collaboration. Permission of instructor required.

Learning Outcomes: 1. Obtain practical skills through engagement in a real-life project utilizing engineering principles. 2. Enhance communication and teamwork skills through experience working on a diverse team. Credits: 1.00 to 3.00

Global Engineering Requirement (3 credits)

ENGR 31000 - Engineering In Global Context (UCC: STS)

Credit Hours: 3.00. This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in

engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields. 2. Understand the historical development of engineering education and the engineering profession in the United States. 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering. 4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts. 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice. 6. Demonstrate written communication capabilities at the level of emerging or higher (as defined by the Purdue Core Curriculum guidelines). Credits: 3.00

Sample Multidisciplinary Engineering Plan of Study/Humanitarian Engineering Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in

biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple

models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6.

Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-19 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear

resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

17-19 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of

such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

EPCS 30100 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's

circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

ENGR 31000 - Engineering In Global Context (UCC: STS)

Credit Hours: 3.00. This course provides students with opportunities to study how engineering is intertwined with larger economic, social, cultural, and technological dynamics in an era of intensified globalization. Its major goals are to help students understand and appreciate what engineering is, how engineers are trained, what engineers do, and how engineering and society interact. The course approaches these themes through discussion of: the relation and interaction of engineering, science, technology, and society; the historical origins and development of engineering as a profession; diversity issues in engineering and other STEM fields; engineering in cross-national/cultural contexts; and contemporary challenges related to globalization, ethics, and sustainability. In summary, the course is designed to help students understand what it means to identify as, and/or work with, engineers. Recitation sections and/or independent projects (at the instructor's discretion) provide further opportunities for students to expand their knowledge and improve their skills in relation to course themes.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe and evaluate the specific kinds of knowledge and methods typically employed by engineers, including in comparison with other professional fields. 2. Understand the historical development of engineering education and the engineering profession in the United States. 3. Recognize how national differences are important in engineering work, including by comparing and contrasting different national cultures and styles of engineering. 4. Explain the significance of diversity in engineering education and professional practice, including by evaluating competing perspectives on diversity in different historical and sociocultural contexts. 5. Understand contemporary trends and issues related to globalization, ethics, social responsibility, and sustainability, and interpret their significance in relation to engineering education and practice. 6. Demonstrate written communication capabilities at the level of emerging or higher (as defined by the Purdue Core Curriculum guidelines). Credits: 3.00

14-15 Credits

Spring 3rd Year

EPCS 30200 - Junior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). The responsibilities of juniors include working with the seniors in the planning and organization of the project, contributing to the design process, problem-solving by contributing expertise from their discipline, meeting with the customer, and the mentorship of sophomores and freshmen. EPCS 30200 is offered for two credits. The EPICS procedures manual provides information on expected relative workload for EPCS 30100 and EPCS 30200 students. May not be taken concurrently with EPCS 30100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

ENGR 50000 - Global Design Team V

Credit Hours: 0.00 to 3.00. Global Design Team brings together

undergraduate and graduate students from different disciplines, inside and outside of the College of Engineering to design solutions to solve real-world problems over the course of one academic semester. Depending on the size and scope of the project, teams may range from one to twenty students under the advisement of a faculty member. GDTs partner student teams with non-governmental organizations, businesses and/or other research institutions in international development projects. Approval for registration is granted based on an application process that takes into consideration previous design experience, level of interest in the topic and GPA. Permission of department required.

Learning Outcomes: 1. An awareness of varying regulations, codes of practice, standards, technical specifications testing/inspection procedures, environmental regulations, and systems of measurement between countries and regions. 2. Familiarity with the concept of a "global product platform". 3. Ability to apply familiar concepts to unfamiliar, real-world problems. 4. Ability to use design tools to solve engineering problems. 5. Ability to adapt to cultural norms in a professional arena and act appropriately. 6. Ability to make ethical and socially responsible decisions in the context of a culture divergent from my own. 7. Ability to analyze problems from a different cultural frame of reference. 8. Ability to communicate professionally in a culturally-appropriate manner. 9. Ability to practice social and cultural responsibility, e.g. resource sustainability. 10. Proficiency in a second language. 11. Ability to be cross-culturally adaptable/flexible. 12. Ability to contribute to a culturally-diverse team. Credits: 0.00 to 3.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

14 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15-17 Credits

Multidisciplinary Engineering/Lighting Concentration, BSE

About the Program

Degree Requirements

Lighting Engineering Concentration (32 credits)

Area Selectives (13 credits)

CE 31100 - Architectural Engineering

Credit Hours: 3.00. This course introduces energy efficiency, thermal comfort, indoor environmental quality and green building design concepts. The course covers engineering fundamentals required for the design and analysis of building systems such as thermodynamics, fluid mechanics, heat and mass transfer, light and sound transmission. The course presents engineering principles and selected applications related to hydrothermal analysis of building enclosures, air conditioning processes in heating, ventilating and air conditioning systems, building illumination, and building acoustics.

Learning Outcomes: 1. Identify and analyze the characteristics of building environmental loads, building construction, and building operations as they define the requirements for a comfortable and healthy indoor environment. 2. Demonstrate knowledge of thermodynamics , fluid mechanics, heat and mass transfer, photometric quantities and sound transmission for use in building design. 3. Identify, formulate and solve realistic Architectural Engineering problems related to hygrothermal analysis of building enclosures, air conditioning processes in Heating Ventilating and Air Conditioning Systems, pipe and duct flow, building illumination and building acoustics. 4. Demonstrate an understanding of building systems integration to achieve efficient operation. Credits: 3.00

CE 41300 - Building Envelope Design And Thermal Loads

Credit Hours: 3.00. This course discusses the basic thermal processes in buildings and presents comprehensive methods for thermal design of envelope assemblies in commercial and residential buildings. The first part of the course includes steady-state transient conduction through envelope assemblies, convection and radiation heat transfer in buildings, solar radiation and solar gains, thermal performance of windows,

internal gains, ventilation and infiltration. The second part of the course considers surface and room energy balance equations and presents analytical and computational models for calculation of hourly heating and cooling loads throughout the year. Climate-based standards, passive solar design, advanced energy guides, and innovative technologies for high performance buildings are discussed. The course also includes a design project on analytical heating/cooling load calculations for a commercial building.

Learning Outcomes: 1. Calculate heat transfer through envelope assemblies for commercial and residential buildings. 2. Solve energy balance equations for building surfaces and room air. 3. Calculate solar and internal gains and predict transient hourly heating and cooling loads for a building throughout the year using analytical and computational models. 4. Design building envelopes according to national standards. 5. Understand principles of passive solar design and the application of innovative envelope technologies. Credits: 3.00

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

CE 51300 - Lighting In Buildings

Credit Hours: 3.00. This course focuses on the design of illumination systems in buildings (electric and natural lighting) in order to achieve energy efficiency and visual comfort. The first part of the course includes analytical lighting calculation techniques, visual perception, radiative transfer, lamp characteristics, electric lighting system design and control for calculation of required indoor illuminance levels. The second part of the course covers daylighting (natural lighting) systems, including state-of-the-art daylighting prediction models as well as design and control of such devices and advanced metrics. The course also has a lab section, in which the students learn how to work with lighting and daylighting tools and build their own computational transient lighting models in open programming languages, in order to design illumination systems and predict electricity consumption and potential energy savings.

Learning Outcomes: 1. Understand fundamental illumination concepts. 2. Design and assess the performance of electric and natural lighting systems in buildings. 3. Calculate fundamental

illuminance, non-point sources, radiant energy, lamp types, lighting controls, interior lighting design, daylight prediction models, optical properties of windows, advanced metrics and shading devices. 4. Build and solve lighting and daylighting models using advanced software and programming techniques to design lighting systems and calculate energy savings from the use of natural light and lighting controls. 5. Design a project, submit a project report and make an oral presentation (only individual projects are allowed). The project themes cover a wide variety of lighting/daylighting design and control such as: daylighting and lighting design of commercial buildings, measurements/monitoring of lighting levels in laboratory settings, prediction of protentional energy savings, impact of shading design and control, and advanced daylighting system modeling. Credits: 3.00

THTR 56800 - Advanced Problems In Design

Credit Hours: 1.00 to 3.00. A described tutorial in theatrical design or design research. Permission of instructor required.

Credits: 1.00 to 3.00

THTR 36200 - Light Design

Credit Hours: 3.00. A project course in utilizing the principles of design as they can convey an environment and its qualities to further dramatic action. Emphasis on the interrelationship among all aspects of production and how light becomes a building block toward total picturization. Offered in alternate years.

Credits: 3.00

ECE Required Course (3 credits)

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE Selective (3 credits)

ECE 29595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 31100 - Electric And Magnetic Fields

Credit Hours: 3.00. Continued study of vector calculus, electrostatics, and magnetostatics, and Maxwell's equations. Introduction to electromagnetic waves, transmission lines, and radiation from antennas.

Credits: 3.00

ECE 41200 - Introduction To Engineering Optics

Credit Hours: 3.00. The control and characteristics of optical radiation are covered. Applications to optical instrumentation, thin films, holography, and polarizing optics are discussed.

Learning Outcomes: 1. Analyze simple optical systems (dielectric slabs, thin lenses, reflectors). 2. Model Gaussian beams and the transformation of beams. 3. Analyze and design polarization systems, including polarizers and wave plates. 4. Know optical interferometers and the operations of interferometers such as the Michelson, Fabry-Perot and double-slit. 5. Analyze diffraction patterns. Credits: 3.00

ECE 41400 - Elements Of Electro And Fiber Optics

Credit Hours: 3.00. Introduction to the use of lasers, fiber and integrated optical components and devices in communication and sensory applications. Topics include generation, transformation, modulation, deflection, and detection of laser beams, and their applications in fiber communication sensory systems.

Credits: 3.00

Engineering Design Selective (4 credits)

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

Theatre Course (2 credits)

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.

Credits: 2.00

Engineering Electives (7 credits)

Non-course / Non-credit Requirements

Sample Multidisciplinary Engineering Plan of Study/ Lighting Engineering Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and

equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an

understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

THTR 16200 - Introduction To Light Design And Technology

Credit Hours: 2.00. A course that introduces the student to the basic equipment and design process of stage lighting design.
Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.
University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.
University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.
University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.
Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

16-18 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided

design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-19 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace

transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

ECE 20008 - Electrical Engineering Fundamentals II Lab

Credit Hours: 1.00. This is a course in electronic measurement, circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments including discrete semiconductor measurement, transistor amplifiers, motor control, and operational amplifier internals. The experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20002 Electrical Engineering Fundamentals II; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in other courses.

Learning Outcomes: 1. Ability to competently select, use, and automate electronic measurement instruments. 2. Design, wire, and troubleshoot electronic circuits. 3. Ability to simulate electronic circuits. 4. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 5. Demonstrate knowledge of laboratory safety precautions. 6. Maintain laboratory notes and create professional experiment reports. Credits: 1.00

14 Credits

Spring 3rd Year

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps,

etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

ECE 29595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 30100 - Signals And Systems

Credit Hours: 3.00. Classification, analysis and design of systems in both the time- and frequency-domains. Continuous-time linear systems: Fourier Series, Fourier Transform, bilateral Laplace Transform. Discrete-time linear systems: difference equations, Discrete-Time Fourier Transform, bilateral Z-Transform. Sampling, quantization, and discrete-time processing of continuous-time signals. Discrete-time nonlinear systems: median-type filters, threshold decomposition. System design examples such as the compact disc player and AM radio.

Learning Outcomes: 1. Able to classify signals (e.g., periodic, even) and systems (e.g., causal, linear) and an understanding of the difference between discrete and continuous time signals and systems. 2. Able to determine the impulse response of a differential or difference equation. 3. Able to determine the response of linear systems to any input signal by convolution in the time domain. 4. Understand the definitions and basic properties (e.g., time-shift, modulation, Parseval's Theorem) of Fourier series, Fourier transforms, bilateral Laplace transforms, Z transforms, and discrete time Fourier transforms and an ability to compute the transforms and inverse transforms of basic examples using methods such as partial fractions expansions. 5. Able to determine the response of linear systems to any input signal by transformation to the frequency domain, multiplication, and inverse transformation to the time domain, an ability to apply the Sampling theorem, reconstruction, aliasing, and Nyquist's theorem to represent continuous-time signal in discrete time so that they can be processed by digital computers. Credits: 3.00

ECE 31100 - Electric And Magnetic Fields

Credit Hours: 3.00. Continued study of vector calculus, electrostatics, and magnetostatics, and Maxwell's equations. Introduction to electromagnetic waves, transmission lines, and radiation from antennas.

Credits: 3.00

ECE 41200 - Introduction To Engineering Optics

Credit Hours: 3.00. The control and characteristics of optical radiation are covered. Applications to optical instrumentation, thin films, holography, and polarizing optics are discussed.

Learning Outcomes: 1. Analyze simple optical systems (dielectric slabs, thin lenses, reflectors). 2. Model Gaussian beams and the transformation of beams. 3. Analyze and design

polarization systems, including polarizers and wave plates. 4. Know optical interferometers and the operations of interferometers such as the Michelson, Fabry-Perot and double-slit. 5. Analyze diffraction patterns. Credits: 3.00

ECE 41400 - Elements Of Electro And Fiber Optics

Credit Hours: 3.00. Introduction to the use of lasers, fiber and integrated optical components and devices in communication and sensory applications. Topics include generation, transformation, modulation, deflection, and detection of laser beams, and their applications in fiber communication sensory systems.

Credits: 3.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15-16 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate

the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

16 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid

design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

14 Credits

Multidisciplinary Engineering/Nano Engineering, BSE

About the Program

Degree Requirements

Nano Engineering Concentration (32 credits)

Area Selectives - Choose one sequence (15 credits)

Chemistry Sequence (15 credits)

CHM 37300 - Physical Chemistry I

Credit Hours: 3.00. Physical chemistry of matter. Properties of gases, liquids, and solids; equations of state; thermodynamics; energy, heat, and work; entropy; spontaneity and equilibrium; chemical potential; chemical equilibrium; phase diagrams; colligative properties.

Learning Outcomes: 1. Understand universal physical laws as they apply to chemistry. 2. Use theory to understand/predict experimental observations. 3. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 4. Develop problem-solving skills: identifying the objective. 5. Carry out calculations related to specific chemistry topics. 6. Understand energetics and kinetics of chemical transformations. 7. Reduce complex problems into simpler components. Credits: 3.00

CHM 37301 - Physical Chemistry Laboratory I

Credit Hours: 1.00. A physical chemistry laboratory course that will provide students with hands-on experience that illustrates the core concepts presented in the associated physical chemistry lecture course CHM 37300.

Learning Outcomes: 1. Gain some familiarity with modern instrumentation methods in Physical Chemistry, including UV/Vis spectroscopy and pressure-detected chemical kinetics. 2. Learn Python programming syntax for reading, plotting, and fitting experimental data. 3. Understand how the abstract principles described in CHM 37300 show up in the real world. 4. Learn good laboratory notebook habits for recording and organizing experimental data. Credits: 1.00

CHM 37400 - Physical Chemistry II

Credit Hours: 3.00. Physical chemistry of molecules. Wave properties of matter; quantum mechanics of translation, rotation, and vibration; atomic structure; molecular orbitals; quantum states; statistical mechanics; chemical kinetics; collision theory; transition state theory.

Learning Outcomes: 1. Give examples that demonstrate the fundamental principles in quantum mechanics. 2. Apply simple quantum mechanical models such as particle-in-a-box to atomic and molecular structures to predict wave functions and calculate energy levels. 3.

Interpret simple optical spectroscopy of atoms and molecules based on quantum mechanical principles. Credits: 3.00

CHM 37401 - Physical Chemistry Laboratory II

Credit Hours: 1.00. A physical chemistry laboratory course that will provide students with hands-on experience that illustrates the core concepts presented in the associated physical chemistry lecture course CHM 37400.

Learning Outcomes: 1. Use modern physical chemistry instrumentation. 2. Collect and analyze data with Python. 3. Interpret data and uncertainties. 4. Demonstrate fundamental principles experimentally of quantum mechanics. 5. Perform Raman spectroscopy to identify various materials. 6. Perform a quantum chemistry simulation with Gaussian software. Credits: 1.00

Physics Sequence (15 credits)

PHYS 31000 - Intermediate Mechanics

Credit Hours: 4.00. For students familiar with calculus. Elements of vector algebra; statics of particles and rigid bodies; theory of couples; principle of virtual work; kinematics; dynamics of particles and rigid bodies; work, power, and energy.

Learning Outcomes: 1. To Understand order in Nature as contained in the Laws of Physics. The student exhibits the knowledge of and the ability to apply the core physics subject of Classical Mechanics. Credits: 4.00

PHYS 34400 - Introduction To Quantum Science

Credit Hours: 4.00. This course offers an introduction to quantum mechanics, exploring how it has transformed our understanding of the physical world and revolutionized modern technology. The concepts will be illustrated with a variety of contemporary physics results and applications, including relativistic effects and a brief overview of the emerging field of quantum information science and engineering.

Learning Outcomes: 1. Understand key concepts in quantum mechanics, including wave-particle duality, superposition, entanglement, and the uncertainty principle. Apply these concepts to predict the behavior of quantum magnets (spins) and quantum light (photons). 2. Learn the wavefunction, the Schrodinger equation, and probability and measurement outcomes in quantum mechanics. Solve the Schrodinger equation in simple model systems and use the results to understand atom spectra, nuclear reactions, molecular bonds, and electronic motion in solids (including semiconductors and superconductors). 3. Understand how quantum mechanics has enabled many modern technologies, including lasers, transistors, solar cells, magnetic resonance imaging, electron microscopy, and the global positioning system. Understand basic ideas of the theory of relativity and relativistic effects in contemporary quantum science. 4. Gain an overview of the emerging field of quantum information science and engineering by exploring quantum computing, quantum communication, and quantum sensing. Credits: 4.00

PHYS 36000 - Quantum Mechanics

Credit Hours: 3.00. Contemporary approach to quantum science that combines traditional quantum mechanics with aspects of quantum information science. Primary topics include quantum states, operators, measurement, spin, angular momentum, entanglement, qubits, and the Schrodinger Equation. Special attention is given to the Einstein-Podolsky-Rosen paradox, quantum cryptography, and an introduction to quantum computing.

Learning Outcomes: 1. Utilize the fundamental assumptions of quantum mechanics to distinguish between classical and quantum physics. 2. Solve the Schrodinger equation when applied to standard examples of constant potentials, including harmonic oscillators and the hydrogen atom. 3. Apply quantum measurement concepts and entanglement to describe the fundamental physics behind quantum cryptography and quantum computing. Credits: 3.00

STEM Selectives

Electrical or Materials Option - Choose one (17 credits)

Electrical Option (17 credits)

Required Courses (10 credits)

ECE 27000 - Introduction To Digital System Design

Credit Hours: 4.00. An introduction to digital system design and hardware engineering, with an emphasis on practical design techniques and circuit implementation.

Learning Outcomes: 1. Analyze and design CMOS logic gates. 2. Analyze and design combinational logic circuits. 3. Analyze and design sequential logic circuits. 4. Analyze and design computer logic circuits. 5. Realize, test, and debug practical digital circuits. Credits: 4.00

ECE 31100 - Electric And Magnetic Fields

Credit Hours: 3.00. Continued study of vector calculus, electrostatics, and magnetostatics, and Maxwell's equations. Introduction to electromagnetic waves, transmission lines, and radiation from antennas.

Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

Electrical Selectives (6 credits)

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 39595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits:

1.00 to 5.00

ECE 45300 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. Nanoelectronic devices are an integral part of our life, including the billion-plus transistors in every smartphone, each of which has an active region that is only a few hundred atoms long. This course is designed to convey the key concepts developed in the last 25 years which constitute the fundamentals of nanoelectronics and mesoscopic physics, assuming a minimal set of prerequisites. Topics covered include the new Ohm's law, conductance quantization, the nanotransistor, spin valves, thermoelectricity, quantum systems and the non-equilibrium Green's function (NEGF) method.

Learning Outcomes: 1. Ability to perform semiclassical analysis of charge flow in nanoelectonic devices. 2. Ability to perform semiclassical analysis of spin flow and heat flow in nanoelectronic devices. 3. Ability to perform quantum analysis of nanoelectonic devices. Credits: 3.00

Engineering Electives (1 credit)

Materials Options (17 credits)

Engineering Design Selective (3 credits)

Materials Selecive - Choose Four (12 credits)

MSE 23500 - Second Year Materials Engineering Laboratory

Credit Hours: 3.00. Laboratory experiments using standard equipment to measure material properties, characterize material structure and composition, and explore processing methods to form functional shapes, and modify properties of the formed shapes. Experiments are carried out with metal, ceramic, and polymeric materials to illustrate property-structure-processing relationships.

Learning Outcomes: 1. Identify and properly utilize primary sources and online databases to find information about material structures, properties, and processing techniques. 2. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 3. Apply characterization techniques appropriate for the class of material analyzed. 4. Assess validity of experimental data and recognize experimental factors affecting data. 5. Accurately and clearly report engineering data using figures, graphs, and tables and proper statistical methods. 6. Display effective written communication in technical reports. Credits: 3.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity

coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

MSE 27000 - Atomistic Materials Science

Credit Hours: 3.00. Introductory course with an atomistic view point on material properties. Three primary class sections: bonding crystallography and statistical mechanics. Bonding topics include introduction to quantum mechanics, emphasis on understanding of metallic, ionic and covalent bonding. Crystallography topics include crystal descriptions and symmetry principles. Statistical mechanics development with application to electronic and thermodynamic properties.

Credits: 3.00

MSE 33000 - Processing And Properties Of Materials

Credit Hours: 3.00. An introduction to the relationships between the processing of materials and their properties. Heat treating, forming, casting, consolidation, and other more material-specific manufacturing processes. Elucidation of the role of phenomena such as heat flow, mass diffusion, nucleation, interfacial tension, elastic and plastic deformation, precipitation, grain growth.

Credits: 3.00

MSE 33500 - Materials Characterization Laboratory

Credit Hours: 3.00. The principles of analytical methods for characterization of materials for structure and composition; optical microscopy, scanning electron microscopy, X-ray spectroscopy and diffraction, atomic absorption, emission spectroscopy, and mass spectrometry. Laboratory experiments in X-ray spectroscopy, X-ray diffraction, optical microscopy, and scanning electron microscopy.

Credits: 3.00

MSE 36700 - Materials Processing Laboratory

Credit Hours: 3.00. This laboratory is intended as an intensive experience in processing techniques used for ceramics, metals, and polymers. Sintering of a ceramic, casting and post-processing (work hardening, heat treatment, etc.) of a metal, and preparation and extrusion of a polymer are the suggested processes. The measurements (e.g., powder size, compaction force, temperature, grain size, molecular weight) applicable to

the successful processing of the material and the final properties (e.g., hardness, ductility, strength, stiffness) will be emphasized.

Learning Outcomes: 1. Demonstrate the use of a variety of processing techniques for metals, ceramics, and polymers and to identify the changes in microstructure and properties they cause. 2. Demonstrate effective written communication in lab reports. 3. Demonstrate effective oral communication in final project presentation. 4. Characterize the physical mechanisms that underlie the basic interactions between macroscopic shaping processes and microstructure development for the core bulk processing routes of each of the main classes of materials and how they relate to properties. 5. Assess validity of experimental data and recognize experimental factors affecting data. 6. Identify specific processing capabilities and limitations for the main classes of materials. Credits: 3.00

MSE 37000 - Electrical, Optical, And Magnetic Properties Of Materials

Credit Hours: 3.00. An introductory course to provide basic background on the behavior of materials; electronic band structure, electronic and ionic conduction, electronic processes in semiconductors, dielectric, optical, and magnetic properties, and superconductivity; emphasis is on the relation between the properties and the structural aspects of materials.

Credits: 3.00

Engineering Electives (2 credits)

Sample Multidisciplinary Engineering Plan of Study/ Nano Engineering Concentration (Electrical)

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in

biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple

models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model

natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

14-16 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8.

Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-19 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of

flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

ECE 20002 - Electrical Engineering Fundamentals II

Credit Hours: 3.00. Continuation of Electrical and Computer Engineering Fundamentals I. The course addresses mathematical and computational foundations of circuit analysis (differential equations, Laplace Transform techniques) with a focus on application to linear circuits having variable behavior as a function of frequency, with emphasis on filtering. Variable frequency behavior is further considered for applications of electronic components through single-transistor and operational amplifiers. The course ends with consideration of how circuits behave and may be modeled for analysis at high frequencies. Permission of Department required.

Learning Outcomes: 1. Analyze 2nd order linear circuits with sources and/or passive elements. 2. Compute responses of linear circuits with and

without initial conditions via one-sided Laplace transform techniques. 3. Compute responses to linear circuits using transfer function and convolution techniques. 4. Analyze and design transistor amplifiers at low, mid and high frequencies. 5. Ability to work with transmission line models to analyze circuits at high-frequency. 6. Use a CAD tool (e.g., SPICE) in circuit analysis and design. Credits: 3.00

16-17 Credits

Spring 3rd Year

ECE 31100 - Electric And Magnetic Fields

Credit Hours: 3.00. Continued study of vector calculus, electrostatics, and magnetostatics, and Maxwell's equations. Introduction to electromagnetic waves, transmission lines, and radiation from antennas.

Credits: 3.00

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15 Credits

Fall 4th Year

ECE 29595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2.

Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 39595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 45300 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. Nanoelectronic devices are an integral part of our life, including the billion-plus transistors in every smartphone, each of which has an active region that is only a few hundred atoms long. This course is designed to convey the key concepts developed in the last 25 years which constitute the fundamentals of nanoelectronics and mesoscopic physics, assuming a minimal set of prerequisites. Topics covered include the new Ohm's law, conductance quantization, the nanotransistor, spin valves, thermoelectricity, quantum systems and the non-equilibrium Green's function (NEGF) method.

Learning Outcomes: 1. Ability to perform semiclassical analysis of charge flow in nanoelectonic devices. 2. Ability to perform semiclassical analysis of spin flow and heat flow in nanoelectronic devices. 3. Ability to perform quantum analysis of nanoelectonic devices. Credits: 3.00

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and

ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15 Credits

Spring 4th Year

ECE 29595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits:

1.00 to 5.00

ECE 30500 - Semiconductor Devices

Credit Hours: 3.00. Introduces and explains terminology, models, properties, and concepts associated with semiconductor devices. Provides detailed insight into the internal workings of the "building-block" device structures such as the pn-junction diode, Schottky diode, BJT, and MOSFET. Presents information about a wide variety of other devices including solar cells, LEDs, HBTs, and modern field-effect devices. Systematically develops the analytical tools needed to solve practical device problems.

Credits: 3.00

ECE 39595 - Selected Topics In Electrical And Computer Engineering

Credit Hours: 1.00 to 5.00. Topics vary. Permission of department required.

Learning Outcomes: 1. Able to apply knowledge of mathematics, science and engineering. 2. Able to design and conduct experiments, as well as to analyze and interpret data. 3. Able to design a system, component, or process to meet desired needs. 4. Able to function on a multidisciplinary team. 5. Able to identify, formulate, and solve engineering problems. 6. Understand the professional and ethical responsibility. 7. Able to communicate effectively. 8. Understand the impact of engineering solutions in a global and societal context. 9. Recognize the need for, and an ability to engage in, life-long learning. 10. Know the contemporary issues. 11. Able to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00 to 5.00

ECE 45300 - Fundamentals Of Nanoelectronics

Credit Hours: 3.00. Nanoelectronic devices are an integral part of our life, including the billion-plus transistors in every smartphone, each of which has an active region that is only a few hundred atoms long. This course is designed to convey the key concepts developed in the last 25 years which constitute the fundamentals of nanoelectronics and mesoscopic physics, assuming a minimal set of prerequisites. Topics covered include the new Ohm's law, conductance quantization, the nanotransistor, spin valves, thermoelectricity, quantum systems and the non-equilibrium Green's function (NEGF) method.

Learning Outcomes: 1. Ability to perform semiclassical analysis of charge flow in nanoelectonic devices. 2. Ability to perform semiclassical analysis of spin flow and heat flow in nanoelectronic devices. 3. Ability to perform quantum analysis of nanoelectonic devices. Credits: 3.00

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Sample Multidisciplinary Engineering Plan of Study/ Nano Engineering Concentration (Materials)

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and

solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct

equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three

dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

14-16 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving

differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-19 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and

equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

16-17 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret

regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and

modern engineering tools necessary for engineering practice. Credits: 1.00

15 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Multidisciplinary Engineering/Theatre Engineering Concentration, BSE

About the Program

Degree Requirements

Theatre Engineering Concentration (32 credits)

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and

demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 55000 - Advanced Scenery Technology

Credit Hours: 3.00. A theoretical and practical study of theatrical scenery planning, construction, and stage use. Topics will vary by semester and will include project management techniques, mechanical design, automation systems, show control systems, rigging, and safety issues. Permission of instructor required.

Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

Sample Multidisciplinary Engineering Plan of Study

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials. Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and

thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate

effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase

transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

THTR 15001 - Introduction To Drafting

Credit Hours: 1.00. An introduction to hand and computer-aided drafting techniques for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of typical hand drafting equipment. 2. Demonstrate basic computer-aided drafting skills and techniques. 3. Demonstrate proper application of USITT Graphic Standards in scenery, lighting, sound and construction drafting, in both manual practice and CAD. Credits: 1.00

THTR 15002 - Introduction To Scenery Construction Tools And Techniques

Credit Hours: 1.00. An introduction to common tools, techniques, and practices in scenery production for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Demonstrate proper and safe use of basic woodworking tools, metal working tools, and personal protective equipment common to scenery construction. 2. Demonstrate proper use of basic theatrical stage equipment. 3. Demonstrate basic scenic construction and working techniques. Credits: 1.00

THTR 15003 - Introduction To Rigging For Theatre

Credit Hours: 1.00. An introduction to rigging techniques and equipment for theatre and live entertainment. Permission of Instructor required.

Learning Outcomes: 1. Identify and demonstrate the proper use of single-purchase counterweight systems. 2. Identify and demonstrate proper use of PPE (personal protective equipment) for rigging. 3. Identify and demonstrate safe usage of typical static rigging equipment (basket, sling, turnbuckle, etc.). 4. Demonstrate proper installation and safe usage of chain motors and truss rigging. 5. Calculate safe working loads. Credits: 1.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to

directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

17-19 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about

linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

THTR 55000 - Advanced Scenery Technology

Credit Hours: 3.00. A theoretical and practical study of theatrical scenery planning, construction, and stage use. Topics will vary by semester and will include project management techniques, mechanical design, automation systems, show control systems, rigging, and safety issues. Permission of instructor required.

Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

16 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps, etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

THTR 25400 - Drafting For Theatre

Credit Hours: 3.00. Projects course in drafting for the theatre using graphic standards and presentations techniques accepted in the performing arts industry.

Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

THTR 55000 - Advanced Scenery Technology

Credit Hours: 3.00. A theoretical and practical study of theatrical scenery planning, construction, and stage use. Topics will vary by semester and will include project management techniques, mechanical design, automation systems, show control systems, rigging, and safety issues. Permission of instructor required.

Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions.

Credits: 2.00

15-17 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

THTR 20100 - Theatre Appreciation (UCC: HUM)

Credit Hours: 3.00. Understanding and appreciation of the theatre's role in the modern world, dramatic structure and analysis, the actor, director, designer, and critic; attendance at current stage productions; class discussion of production elements. CTL:IFA 1302 Theatre Appreciation

University Core Curriculum (UCC): (UCC: HUM)

Credits: 3.00

THTR 36800 - Theatre Production II

Credit Hours: 1.00 to 2.00. The study and application of theatre practices. Students will be assigned to all levels of departmental production of applied practice. Permission of instructor required.

Credits: 1.00 to 2.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

16 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues. Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15-17 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

THTR 59700 - Production And Design Seminar

Credit Hours: 3.00. Training in theatrical design based upon a variety of theatrical presentation forms. The type of presentation alternates, and specific content varies each semester.

Credits: 3.00

12 Credits

Multidisciplinary Engineering/Visual Design Engineering Concentration, BSE

About the Program

Degree Requirements

Visual Design Engineering Concentration (32 credits)

Engineering Design Selective (3 credits)

Engineering Electives (14 credits)

Area Selectives (15-20 credits)

Sample Multidisciplinary Engineering Plan of Study/Visual Design Engineering Concentration

Fall 2nd Year

AAE 20300 - Aeromechanics I

Credit Hours: 3.00. Fundamental concepts and principles of bodies in motion, with applications to aeronautical and astronautical problems. Subjects covered include rectilinear motion, curvilinear motion, rotation, and plane motion. The static equilibrium and quasistatic equilibrium situations are treated as a part of motion in which the acceleration is zero. Problems involving impact, separation, work, and energy are considered.

Learning Outcomes: 1. Compute velocities and accelerations for any type of motion. 2. Compute angular velocities and accelerations of rigid bodies. 3. Model forces and apply Newton's Laws in particle dynamic problems. 4. Model forces and solve general statics of bodies problems. Credits: 3.00

ABE 20100 - Material And Energy Balances In Biological Engineering

Credit Hours: 4.00. Thermodynamic principles associated with biological systems and processing of biological materials.

Emphasis on the first law of thermodynamics. Fundamentals of steady-state mass and energy balances for reacting and non-reacting processes including multiple unit operations emphasizing living systems and bioprocessing. Applications of the first law conservation of energy to biological systems, energy conversion systems, and the environmental impacts of energy production. Development of engineering problem solving skills via MathCad and MatLab software. Laboratory emphasizes combining technical engineering skills with professional skill development through computer and laboratory exercises including two extensive projects that result in a biological product design.

Learning Outcomes: 1. Analyze problems and use a systematic approach to problem solving in the engineering of biological systems. 2. Develop mass balances for systems with and without biochemical reactions for in vivo and in vitro biological systems. 3. Characterize the properties of solids, liquids, and gases common to biological systems. 4. Estimate gas/vapor properties using gas laws. 5. Understand the relationships between pressure, partial pressure, and humidity. 6. Apply the basic thermodynamic concepts to quantify phase and chemical equilibrium parameters for food and biological systems. 7. Use models to predict the physical behavior of materials at equilibrium in multi-component, multi-phase systems. 8. Use computational software to solve problems in biological systems. 9. Able to apply science and math skills to develop a new product and the processes required to transform the input materials into the final product. 10. Able to apply engineering fundamentals and analytical skills, specifically mass and energy balances and thermodynamics, to product and process development projects. 11. Able to communicate technical information, oral and written. 12. Develop leadership and teamwork skills through personal awareness and reflection, and team experiences. 13. Develop an innovative and a strong work ethic through new product development. 14. Have increased awareness of ethical responsibility through evaluating case studies and classroom discussion. 15. Be more curious and persistent learners through self-directed team projects. Credits: 4.00

ABE 21000 - Thermodynamics Principles Of Engineering And Biological Systems

Credit Hours: 3.00. Application of thermodynamic principles to the design and operation of biological and engineering systems. The focus is on mass and energy balances for non-reacting processes and on the second law of thermodynamics. These principles are applied to biological and agricultural engineering systems. Specific topics include refrigeration systems, power cycles, energy conversion systems, and environmental impacts of energy production.

Learning Outcomes: 1. An ability to apply knowledge of mathematics, science, and engineering. 2. An ability to design a system, component, or process to meet desired needs within realistic constraints such as economics, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 3. An ability to function on multidisciplinary teams. 4. An ability to identify, formulate, and solve engineering problems. 5. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 6. A knowledge of contemporary issues. 7. An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 3.00

CHE 21100 - Introductory Chemical Engineering Thermodynamics

Credit Hours: 4.00. Basic principles and concepts of thermodynamics applied to chemical engineering problems; use of basic thermodynamic functions of enthalpy, entropy, free energy to solutions, phase equilibria, and chemical equilibria; thermodynamic processes and efficiencies; equations of state; and relation of macroscopic to molecular properties.

Learning Outcomes: 1. Apply the First Law of thermodynamics in the analysis of closed and open systems. 2. Apply the Second Law of thermodynamics in the analysis of closed and open systems, and reversible and irreversible processes, including power cycles. 3. Derive

and apply thermodynamic relations and relationships between thermodynamic potentials. 4. Estimate the physical properties of ideal and non-ideal fluids. 5. Use chemical potentials, fugacities and activity coefficients to analyze the phase equilibrium behavior of ideal and non-ideal fluids. 6. Use chemical potentials, fugacities and activity coefficients to evaluate single and multi-component chemical reaction equilibria for ideal and non-ideal fluids. 7. Utilize computational tools in the solution of thermodynamics problems. Credits: 4.00

CE 29700 - Basic Mechanics I (Statics)

Credit Hours: 3.00. Statics of particles. Rigid bodies: equivalent systems of forces, equilibrium. Centroids and centers of gravity. Static analysis of trusses, frames, and machines. Friction. Area moments of inertia.

Learning Outcomes: 1. Utilize fundamental vector mechanics concepts to understand, explain, and describe the behavior of particle and rigid-body equilibrium. 2. Determine centroids and moments of inertia of areas. 3. Analyze the behavior of typical engineering components using force and moment equilibrium. Credits: 3.00

IDE 30100 - Professional Preparation In Interdisciplinary Engineering

Credit Hours: 1.00. Seminar covering topics required for professional preparation of engineers including functioning in teams, communication, ethics, global and societal impacts, how people learn, and contemporary issues impacting and impacted by engineering.

Learning Outcomes: 1. Communicate effectively to a range of audiences. 2. Recognize ethical & professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental, and societal contexts. 3. Function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives. 4. Acquire and apply new knowledge as needed, using appropriate learning strategies. Credits: 1.00

MSE 26000 - Thermodynamics Of Materials

Credit Hours: 3.00. Fundamental laws of thermodynamics and their applications to material systems; criteria for equilibrium; reaction and phase equilibria; properties of solutions; thermodynamic origins of phase diagrams.

Learning Outcomes: 1. Understand the concept of equilibrium, material properties, and equations of state. Examples: Define extensive and intensive variables; Define equilibrium material properties for gases, solids and liquids; Stipulate requirements for a thermodynamic equation of state. 2. Understand and apply the first and second law of thermodynamics to describe material properties, phase transformations, chemical reactions, and processing operations. Examples: Construct equations of state to describe elastic and inelastic solids that comply with the laws of thermodynamics. For example, construct equations of state for elastic solids, dielectric materials, and magnetic systems. Construct equations of state to describe the response of dielectric materials, in compliance with the laws of thermodynamics. 3. Apply the laws of thermodynamics for the construction of single and multicomponent phase diagrams. Incorporation of experimental data into analytical and numerical descriptions of phase diagrams. Examples: Understand and apply the concept of regular solution for the description of spinodal decomposing solids; Understand the concepts of chemical potential, activity, activity coefficient, and apply it to graphically build Gibbs free energy descriptions to perform simple calculations; Construct temperature-composition diagrams for regular solutions; Construct and Identify thermodynamically

consistent phase diagrams. 4. Read and make sense of the scientific literature that addresses and/or uses thermodynamic concepts to describe, model, or engineer material properties and processes. Examples: Develop an ability to read, collect, and report in technical report format reliable thermodynamic data to calculate the phase diagram of iron; Review the scientific literature of multiferroic materials and put it in the context of the Laws of Thermodynamics. Synthesize the acquired knowledge in technical paper format. 5. Develop expertise on the mathematics of thermodynamic systems. Examples: Formulate differential expressions that comply with the laws of thermodynamics; Develop an ability to apply Maxwell relations to establish mathematical expressions between the different thermodynamic quantities; Apply the concept homogeneous functions, Gibbs-Duhem relation, etc., to construct equations of state that are first-order homogeneous functions; Understand the reaches and limitations of the ideal gas equation of state and the Van der Waals equation of state as models to describe real gases. 6. Ability to apply simple models describing the transformation of different forms of energy, and its application to technological systems. Examples: Piezoelectric actuators, Elastic solids, Chemical Actuators, Superconductors. 7. Understand and apply the effects of surfaces and interfaces on the macroscopic properties of materials, phase transformations, and industrial processing operations. Examples: Understand the effect of surface energy on the melting point, solubility limit, etc.; Understand and apply the effect of surface tension on the construction of single-component and binary phase diagrams. 8. Apply the laws of thermodynamics to make sense of the scientific literature and use them to formulate consistent models. Examples: Research the scientific literature to formulate theoretical and Mathematica-based models to describe the Ag-Cu phase diagram (reported in technical paper format). Credits: 3.00

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

MFET 16300 - Foundations In Geometric Modeling And Data Management

Credit Hours: 2.00. This course introduces the process of 3D geometric modeling, and the construction techniques used in the creation of constraint-based solid and surface models. Part modeling and assembly modeling are included, as well as manipulation of the geometric model. Emphasis is on the use of the design process as a problem-solving method and the capture of design intent and modeling behavior to enable the downstream use of 3D solid and surface modeling databases. The role of the 3D model in the overall product design process and the place of the geometric product definition in the product lifecycle are covered. Product Data management (PDM) and Product Lifecycle Management (PLM) are covered as they relate to the design process.

Learning Outcomes: 1. Distinguish between the different product design processes. 2. Explain the most appropriate design process for a given project. 3. Leverage project management techniques to manage individual and group work. 4. Explain the importance of freehand sketching as a communication tool for the designer. 5. Construct clear freehand Multiview and pictorial freehand sketches to convey design ideas. Credits: 2.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

CM 16400 - Graphics For Civil Engineering And Construction

Credit Hours: 2.00. This course introduces the fundamentals of construction engineering graphics and computer-aided documentation, focusing on their application in civil engineering and construction-related professions. Emphasizing the future of digital communication in the industry, students will explore advanced visualization and analysis techniques through the integration of sketching, computer-aided design (CAD), and emerging technologies. The course covers industry-standard graphic conventions, database management strategies, and methods for generating, interpreting, and sharing precise geometric models. Students will develop skills in creating, manipulating, and analyzing 2D and 3D visualizations to effectively communicate and solve complex construction problems in a dynamic, technology-driven environment.

Learning Outcomes: 1. Understand the Role of Construction Graphics: Demonstrate knowledge of the history, theories, and importance of engineering design processes and graphics in construction, including their role in real-world problem-solving and communication. 2. Apply

Geometric and Graphic Standards: Develop proficiency in creating and solving 2D and 3D geometric forms and applying construction graphic standards and codes to engineering problems. 3. Utilize Computer Graphics and Visualization: Effectively use computer-aided design (CAD) tools and 3D visualization skills to analyze, solve, and communicate construction challenges. 4. Enhance Communication Through Graphic Conventions: Present solutions clearly and accurately using appropriate 2D and 3D graphical communication standards and conventions. Credits: 2.00

16-18 Credits

Spring 2nd Year

CE 29800 - Basic Mechanics II Dynamics

Credit Hours: 3.00. Kinematics of particles. Kinetics of particles and systems of particles. Kinematics of rigid bodies. Mass moments of inertia. Kinetics of rigid bodies. Mechanical vibrations.

Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

MA 26200 - Linear Algebra And Differential Equations (UCC: QR)

Credit Hours: 4.00. Linear algebra, elements of differential equations. Not open to students with credit in MA 26500 or 26600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the properties of and standards methods of solving first-order differential equations and linear differential equations of second and higher orders. 6. Learn basic numerical methods for solving differential equations. 7. Learn about the applications of differential equations to mechanical, physical, and biological models. 8. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 4.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

ECE 20007 - Electrical Engineering Fundamentals I Lab

Credit Hours: 1.00. This is an introduction course in electronic measurement and circuit modeling, simulation and design techniques. These skills are developed through a variety of laboratory experiments ranging from voltage, current, and frequency, to resistors, inductors, capacitors, and operational amplifiers. When possible, the experiments develop practical skills through small design and soldering tasks. Finally, the course culminates in a two week group design project. In many ways this course is the laboratory of the co-requisite lecture course ECE 20001: Electrical Engineering Fundamentals I; however, we remind students that this is a standalone course that expects students will learn and demonstrate material not taught in ECE 20001.

Learning Outcomes: 1. Select and use electronic measurement instruments competently. 2. Design, wire, and troubleshoot electronic circuits. 3. Simulate electronic circuits. 4. Keep a laboratory notebook and prepare a formal laboratory report. 5. Function on an interdisciplinary team that draws on diverse backgrounds. 6. Design, build, and test resistor-inductor-capacitor, operational amplifier, etc. circuits to meet specifications. 7. Demonstrate knowledge of laboratory safety precautions. Credits: 1.00

14 Credits

Fall 3rd Year

AAE 20400 - Aeromechanics II

Credit Hours: 3.00. Loads on aircraft. Strain, stress, and equations of equilibrium. Description of aircraft structures and materials. Torsion of shafts. Fuselage and wing structures. Symmetrical bending and stiffness analysis of solid and stringer-panel box beams. Structural failures.

Learning Outcomes: 1. Describe the material behavior of deformable bodies when subjected to loads. 2. Create and use free-body diagrams to compute resultant support forces and moments. 3. Compute internal force and moment distributions. 4. Properly select and use materials based upon their mechanical properties. 5. Compute stresses, strains, deformation and displacements of basic structural components. 6. Predict structural integrity based on the calculations. 7. Apply these ideas for analysis of components related to aerospace applications. Credits: 3.00

AAE 33300 - Fluid Mechanics

Credit Hours: 3.00. Kinematics of fluids and conservation equations for mass, momentum, and energy. Viscous and inviscid incompressible flow. Lift and drag in subsonic flow. Introduction to compressibility and boundary layers. Potential flow.

Learning Outcomes: 1. Calculate hydrostatic pressure distributions, forces, and moments. 2. Calculate aerodynamic forces and moments from pressure and shear stress distributions. 3. Apply similitude to scale data. 4. Apply global conservation of mass and momentum (Control Volume analysis) to engineering systems. 5. Apply Bernoulli's equation to relate velocity and pressure. 6. Calculate velocity and pressure fields using potential theory. 7. Apply the Navier-Stokes Equations to obtain exact solutions and compute shear stress and other flow quantities. 8. Apply the Blasius Boundary Layer Solution and integral methods to obtain boundary-layer flow properties. Credits: 3.00

CHE 37700 - Momentum Transfer

Credit Hours: 4.00. Differential (microscopic) and integral (macroscopic) mass, momentum, and energy balances. Newtonian and non-Newtonian fluids. Fluid statics. One-dimensional steady and transient laminar flows. Turbulence. Dimensional analysis and similarity. Friction factors and drag coefficients. Applications to engineering analysis of practical problems. Introduction to numerical analysis and visualization of flows.

Learning Outcomes: 1. Explain the physical properties of a fluid and the consequences of such properties on fluid flow. 2. Apply momentum and/or force balances to the analysis of problems in hydrostatics. 3. Apply mass, momentum and energy balances for the solution of problems involving inviscid, steady flow. 4. Use appropriate macroscopic and microscopic mass, momentum, and energy balances to analyze steady laminar and turbulent flow of incompressible fluids in conduits and past submerged bodies. 5. Apply dimensional analysis and kinematic similarity for the interpretation of experimental fluid flow data and the design of fluid transfer equipment. 6. Utilize appropriate mass, momentum and energy balances for the design of fluid transfer equipment (pipelines, agitated vessels, pumps,

etc.) and to analyze its operation. 7. Work professionally and ethically in teams to conduct fluid mechanics-based laboratory experiments. 8. Effectively report results in written form and practice safety as an integral part of laboratory work. Credits: 4.00

CE 34000 - Hydraulics

Credit Hours: 3.00. Fluid properties; hydrostatics; kinematics and dynamics of fluid flows; conservation of mass, energy, and momentum; flows in pipes and open channels. Formal laboratory experiments.

Credits: 3.00

CE 34300 - Elementary Hydraulics Laboratory

Credit Hours: 1.00. The laboratory covers basic concepts in analysis of experimental data and methods in hydraulic measurements. A variety of simple laboratory experiments illustrating the principles of hydraulics are performed.

Credits: 1.00

MSE 23000 - Structure And Properties Of Materials

Credit Hours: 3.00. The relationship between the structure of materials and the resulting mechanical, thermal, electrical, and optical properties. Atomic structure, bonding, atomic arrangement; crystal symmetry, crystal structure, habit, lattices, defects, and the use of X-ray diffraction. Phase equilibria and microstructural development. Applications to design.

Learning Outcomes: The learning outcomes for this course have more than 2,000 characters. Please see the course catalog for the learning outcomes. Credits: 3.00

MSE 34000 - Transport Phenomena

Credit Hours: 3.00. Mechanism and rates of heat, mass, and momentum transfer. Macroscopic and differential energy, mass, and momentum balances. Application to systems with phase transformations and chemical reaction.

Credits: 3.00

ME 32300 - Mechanics Of Materials

Credit Hours: 3.00. Integrated approach to mechanics of materials emphasizing mechanics fundamentals as applied to machine design applications. Stress and strain in machine elements; mechanical properties of materials; extension, torsion, and bending of members; thermal stress; pressure vessels; static indeterminacy, stress transformation, Mohr's circle.

Credits: 3.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

16-17 Credits

Spring 3rd Year

IE 23000 - Probability And Statistics In Engineering I

Credit Hours: 3.00. An introduction to probability and statistics. Probability and probability distributions. Mathematical expectation. Functions of random variables. Estimation. Applications oriented to engineering problems.

Credits: 3.00

IDE 36000 - Multidisciplinary Engineering Statistics

Credit Hours: 3.00. Statistical methodology is critical to the engineering problem-solving process. This course introduces engineering students to the role of statistics in problem-solving, and to the design and presentation of simple models and experiments. An emphasis will be placed on using computer software to perform statistical analyses and to the interpretation of the software results. This is a recommended course for the MDE statistics elective. Permission of instructor is required.

Learning Outcomes: 1. Describe the role of statistics in engineering. 2. Construct and interpret summary statistics and visual data displays using computer software. 3. Apply probability models to describe uncertainty and to make decisions. 4. Perform statistical analyses using computer software and to interpret the software results. 5. Construct simple empirical models from data, and design simple controlled experiments. 6. Formulate research questions, collect and analyze data, and present findings through a written report and oral presentation. 7. Work effectively in

problem-solving teams and carry out meaningful performance assessments of individual team members. Credits: 3.00

IE 33000 - Probability And Statistics In Engineering II

Credit Hours: 3.00. Introduction to statistical inference and experimental design. Correlation, regression, single and multi-factor ANOVA, non-parametric methods. Applications to statistical quality control.

Learning Outcomes: 1. Use statistical software packages (e.g. Minitab) to perform statistical tests. 2. Compute and interpret statistical confidence, tolerance, and prediction intervals given engineering and scientific data. 3. Conduct and interpret parametric statistical tests (e.g. t-test, ANOVA) on engineering and scientific data. 4. Conduct and interpret non-parametric statistical tests on engineering and scientific data. 5. Conduct and interpret regression analysis on engineering and scientific data. 6. Determine the appropriate statistical test or procedure to use on engineering and scientific data. 7. Design basic factorial experiments and conduct basic statistical process control analysis. Credits: 3.00

15 Credits

Fall 4th Year

IE 34300 - Engineering Economics

Credit Hours: 3.00. Cost measurement and control in engineering studies. Basic accounting concepts, income measurement, and valuation problems. Manufacturing cost control and standard cost systems. Capital investment, engineering alternatives, and equipment replacement studies. Not open to students with credit in CE 39400.

Learning Outcomes: 1. Learn how to evaluate the financial worth of an engineered project. 2. Learn how to choose between multiple engineering projects. 3. Learn how economic concepts affect cash flows associated with projects. Credits: 3.00

IDE 48700 - Multidisciplinary Engineering Senior Professional Development

Credit Hours: 1.00. Senior professional development covers and assesses students in Multidisciplinary Engineering professional outcomes including, teamwork, professional and ethical responsibility, communication, impact of engineering in context, lifelong learning, impact of contemporary issues, and leadership. Methods to obtain a professional position after graduation.

Learning Outcomes: 1. An ability to function on multidisciplinary teams. 2. An understanding of professional and ethical responsibility and actions that are congruent with this understanding. 3. An ability to communicate effectively by speaking and writing. 4. The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context. 5. An understanding of how one learns and recognition of the need for lifelong learning. 6. A knowledge of how contemporary issues affect engineering and how engineering can impact these issues. 7. An understanding of the principles, applications and importance of leadership. Credits: 1.00

IDE 48400 - Multidisciplinary Engineering Design Methodology

Credit Hours: 1.00. Engineering design methods targeted for MDE students. Introduction to Multidisciplinary Teams, Design Project Scoping and Task Clarification, Design Data Acquisition & Management, Design Communication & Iteration. and Design Review Processes. Permission of department required.

Learning Outcomes: 1. Apply math, science and engineering. 2. Analyze and interpret data. 3. Design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability. 4. Identify, formulate, and solve engineering problems. 5. Impact engineering in global, economic, environmental and societal context. 6. Know contemporary issues that affect engineering and how engineering can impact these issues.

Credits: 1.00

IDE 48300 - Multidisciplinary Engineering Analysis And Decision Making

Credit Hours: 1.00. Application of product evaluation, cost estimating, and product/project feasibility and viability analysis from multidisciplinary perspectives in the context of new product development. Topics include exposure to company success measures, quantitative and qualitative analysis, sensitivity analysis, cost-benefit analysis, project comparisons, new product life-cycle analysis, and related engineering decisions. Topics are explored through case-based, industrially focused examples. The course centers on the creation and use of analytical spreadsheets with computer tools/software for routine engineering analysis and decision-making.

Learning Outcomes: 1. Analyze and interpret data. 2. Design, subject to economic constraints. 3. Identify, formulate, and solve engineering problems. 4. Impact engineering in global, economic, environmental, and societal context. 5. Use the techniques, skills, and modern engineering tools necessary for engineering practice. Credits: 1.00

15-17 Credits

Spring 4th Year

IDE 48500 - Multidisciplinary Engineering Design Project

Credit Hours: 3.00. Capstone design experience for multidisciplinary engineering students. Physical system or process system design projects, related to contemporary or potential problems involving interdisciplinary teams of engineers. Permission of instructor required.

Learning Outcomes: 1. Function as an effective member of a multidisciplinary team. 2. Demonstrate leadership in a team context. 3. Apply a systemic approach to the early design stages of the product life cycle. 4. Identify and verify stakeholder needs and thus develop valid design requirements. 5. Idently competing technical, commercial, socio-environmental issues. 6. Use advanced informtion seeking and computer knowledge management tools. 7. Synthesize a conceptual design for a complex product, machine or system. 8. Use advanced computer tools to model and test the behaviour of design ideas. 9. Estimate the life cycle costs of a system at the conceptual phase. 10. Manage technical and other types of risk in early stages of the design process. 11. Demonstrate effective project management and apply professional judgement. 12. Conduct professional design reviews. Credits: 3.00

15 Credits

Multidisciplinary Technology, BS (Statewide)

About the Program

From businesses to industries to government, Purdue's multidisciplinary technology program will give you the skills to focus on the management, operation, and maintenance of complex technological systems. In this program you'll prepare for a career that requires knowledge in industrial and manufacturing technologies as well as quality assurance and plant supervision. The skills you gain will help your employers become more efficient and safe.
Purdue Polytechnic Vincennes students receive their A.S. degree from Vincennes University before continuing on with the B.S. with Purdue Polytechnic. Each plan of study below corresponds with a different A.S. major that feeds into the B.S. program.

- Computer Integrated Manufacturing - Industrial Maintenance
- Computer Integrated Manufacturing/Robotics
- Drafting and Design/CAD
- Electronics Technology
- Machine Trades - Injection Molding
- Machine Trades - Tool & Die

Music: General Music Studies Concentration, BA

About the Program

Degree Requirements

Auditions and Interviews

Departmental/Program Major Courses (42-46 credits)

Required Major Courses (24-28 credits)

Foundational Studies (15 credits)

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

Discovery Forum (0 credits)

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

Symposia (Non-course Requirement)

Music History (3 credits)

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Music Making Studies (6-10 credits)

Studio Courses (6 credits)

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

Ensemble Participation (0-4 credits)

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an

organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

BAND 34100 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 33100 - Summer Jazz Bands

Credit Hours: 2.00. Continuation of BAND 33000.

Credits: 2.00

BAND 33000 - Summer Concert Bands

Credit Hours: 2.00. Continuation of BAND 32000.

Credits: 2.00

BAND 12100 - Symphony Orchestra

Credit Hours: 2.00. Symphony Orchestra.

Credits: 2.00

BAND 11900 - Varsity Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11800 - Collegiate Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11700 - Concert Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11600 - Symphonic Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11500 - String Orchestra

Credit Hours: 2.00. The rehearsal, study, and performance of string orchestra music from the classical, romantic and contemporary areas of composition.

Credits: 2.00

BAND 11300 - Jazz Ensemble

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Permission of instructor required.

Credits: 2.00

BAND 11000 - Marching Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Mandatory participation required in Marching Band Workshop one week prior to start of fall classes which conflicts with Boilermaker Gold Rush. Workshop covers similar orientation to Gold Rush. Do enroll in BAND 11000 during summer registration prior to the workshop and audition process.

Credits: 2.00

General Music Studies Concentration (18 credits)

Required Courses

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the

globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

History

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Theory and Composition Studies

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part

compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of music theory from the late Romantic era through current practice. Students may be asked to compose works in a variety of styles that include late Romanticism, Impressionism, Neoclassicism, Atonality, Pointillism, Minimalism, Sound-Mass Composition, Indeterminacy, Ambient music, Graphic Notation and Neoromanticism.

Learning Outcomes: 1. Demonstrate a theoretical understanding of harmonic practice from the Late Romantic Era through the contemporary period. 2. Analyze the structural elements of music from the Late Romantic Era through the contemporary period. 3. Produce original compositions in the styles associated with the Late Romantic Era through the contemporary period. Credits: 3.00

Music Courses 30000+

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Other Departmental - Liberal Arts Core For BFA, Professional, & Education (25-34 credits)

Core III: Linguistic Diversity (3-4 credits)

Foundational Requirements (21-30 credits)

Notes

Electives (40-53 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research,

compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

15-16 Credits

Spring 1st Year

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

15-17 Credits

Fall 2nd Year

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre,

describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

17-18 Credits

Spring 2nd Year

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated

with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

15 Credits

Spring 4th Year

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain

awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Music Making Studies (6-10 credits)

Studio Courses (6 credits)

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to

perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility.

Credits: 2.00

Ensemble Participation (0-4 credits)

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

BAND 34100 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 33100 - Summer Jazz Bands

Credit Hours: 2.00. Continuation of BAND 33000.

Credits: 2.00

BAND 33000 - Summer Concert Bands

Credit Hours: 2.00. Continuation of BAND 32000.

Credits: 2.00

BAND 12100 - Symphony Orchestra

Credit Hours: 2.00. Symphony Orchestra.

Credits: 2.00

BAND 11900 - Varsity Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11800 - Collegiate Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11700 - Concert Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11600 - Symphonic Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11500 - String Orchestra

Credit Hours: 2.00. The rehearsal, study, and performance of string orchestra music from the classical, romantic and contemporary areas of composition.

Credits: 2.00

BAND 11300 - Jazz Ensemble

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Permission of instructor required.

Credits: 2.00

BAND 11000 - Marching Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Mandatory participation required in Marching Band Workshop one week prior to start of fall classes which conflicts with Boilermaker Gold Rush. Workshop covers similar orientation to Gold Rush. Do enroll in BAND 11000 during summer registration prior to the workshop and audition process.

Credits: 2.00

Jazz Studies Concentration (18 credits)

Music Studies (9 Credits)

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.

Learning Outcomes: 1. Explain common chords, scales and modes used in contemporary jazz music. 2. Define common terms used in jazz arranging and composition. 3. Explain and demonstrate common features of various jazz styles. 4. Create original jazz compositions and arrangements. Credits: 3.00

Music Studies II (3 Credits)

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe

performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Jazz Improvisation (6 Credits)

MUS 17100 - Jazz Improvisation I

Credit Hours: 2.00. This course is an introduction to the development of beginning jazz improvisational and theoretical skills for all instrumentalists and vocalists. Fundamentals theoretical and musicianship skills are addressed through practical application, guided listening, dictation, transcription, harmonic and rhythmic analysis, and performance of standard jazz repertoire.

Learning Outcomes: 1. Explain the fundamentals of jazz theory and musicianship. 2. Write or transcribe a jazz solo from a recording. 3. Explain and notate jazz harmonies and voicings using established forms of analysis. 4. Describe various jazz styles in performance. 5. Perform selected jazz repertoire. 6. Perform an improvised jazz solo. Credits: 2.00

MUS 27100 - Jazz Improvisation II

Credit Hours: 2.00. This course is a continuation of MUS 17100, Jazz Improvisation I. Students will continue to develop their jazz improvisation skills that include scale development, pattern playing, guided listening, dictation, transcription skills, harmonic, melodic and rhythmic studies as well as performing standard jazz repertoire. Students should have at least two years of previous experience in band, orchestra, choir, or piano study prior to enrolling in this course. Students will be required to perform in class. Prerequisites for this class are MUS 13200, Music Theory I and MUS 17100, Jazz Improvisation I or consent of the department.

Learning Outcomes: 1. Define common terminology and techniques used in jazz. 2. Explain common chord progressions found in jazz. 3. Demonstrate common linear approaches to jazz improvisation. 4. Explain similarities and differences between various jazz styles and how they impact improvisation. 5. Perform effective jazz solos. Credits: 2.00

Music Courses 30000+

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Other Departmental - Liberal Arts Core For BFA, Professional, & Education (25-34 credits)

Core III: Linguistic Diversity (3-4 credits)

Foundational Requirements (21-30 credits)

Notes

Electives (40-53 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)
Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

15-16 Credits

Spring 1st Year

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices;

nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

15-17 Credits

Fall 2nd Year

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

17-18 Credits

Spring 2nd Year

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

14-15 Credits

Fall 3rd Year

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

14 Credits

Spring 3rd Year

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.

Learning Outcomes: 1. Explain common chords, scales and modes used in contemporary jazz music. 2. Define common terms used in jazz arranging and composition. 3. Explain and demonstrate common features of various jazz styles. 4. Create original jazz compositions and arrangements. Credits: 3.00

15 Credits

Fall 4th Year

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits:

3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

15 Credits

Spring 4th Year

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

15 Credits

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe

performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Music Making Studies (6-10 credits)

Studio Courses (6 credits) - Courses must be repeated

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

Ensemble Participation (0-4 credits)

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

BAND 34100 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 33100 - Summer Jazz Bands

Credit Hours: 2.00. Continuation of BAND 33000.

Credits: 2.00

BAND 33000 - Summer Concert Bands

Credit Hours: 2.00. Continuation of BAND 32000.

Credits: 2.00

BAND 12100 - Symphony Orchestra

Credit Hours: 2.00. Symphony Orchestra.

Credits: 2.00

BAND 11900 - Varsity Band

Credit Hours: 2.00. Open through audition. Additional lab and

activity fees involved.

Credits: 2.00

BAND 11800 - Collegiate Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11700 - Concert Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11600 - Symphonic Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11500 - String Orchestra

Credit Hours: 2.00. The rehearsal, study, and performance of string orchestra music from the classical, romantic and contemporary areas of composition.

Credits: 2.00

BAND 11300 - Jazz Ensemble

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Permission of instructor required.

Credits: 2.00

BAND 11000 - Marching Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Mandatory participation required in Marching Band Workshop one week prior to start of fall classes which conflicts with Boilermaker Gold Rush. Workshop covers similar orientation to Gold Rush. Do enroll in BAND 11000 during summer registration prior to the workshop and audition process.

Credits: 2.00

Music Technology Concentration (18 credits)

Required Courses (12 credits)

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 38300 - Digital Audio Recording And Production I

Credit Hours: 3.00. This course is an introduction to digital audio recording and production practices. Topics covered will include design and structure of sound studios, musical sequencing and recording, microphones, fundamentals of sound reinforcement, and sound editing. Students will be required to develop music recording projects.

Learning Outcomes: 1. Explain the fundamentals of musical acoustics. 2. Define digital audio and MIDI (Musical Instrument Digital Interface) terminology. 3. Explain and

demonstrate the principles of music recording (studio and live mixes). 4. Explain and demonstrate the fundamentals of sound reinforcement (live sound performances). 5. Explain and demonstrate microphone selection and placement. 6. Design a recording studio. 7. Explain and demonstrate musical sequencing and digital audio editing. 8. Explain and demonstrate how to combine digital sequenced data with natural acoustic sounds. 9. Create professional mixes: adding reverb, compression, special effects, etc. Credits: 3.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS 38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.

Learning Outcomes: 1. Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in combining sound and music to video and film productions. Credits: 3.00

Culture (3 credits)

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Theory & Composition Studies (3 credits)

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st

Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of music theory from the late Romantic era through current practice. Students may be asked to compose works in a variety of styles that include late Romanticism, Impressionism, Neoclassicism, Atonality, Pointillism, Minimalism, Sound-Mass Composition, Indeterminacy, Ambient music, Graphic Notation and Neoromanticism.

Learning Outcomes: 1. Demonstrate a theoretical understanding of harmonic practice from the Late Romantic Era through the contemporary period. 2. Analyze the structural elements of music from the Late Romantic Era through the contemporary period. 3. Produce original compositions in the styles associated with the Late Romantic Era through the contemporary period. Credits: 3.00

Music Courses 30000+

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Electives (40-53 credits)

Other Departmental - Liberal Arts Core For BFA, Professional, & Education (25-34 credits)

Core III: Linguistic Diversity (3-4 credits)

Foundational Requirements (21-30 credits)

Notes

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and

chords. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM)

Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

15-16 Credits

Spring 1st Year

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

15-17 Credits

Fall 2nd Year

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western

European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

17-18 Credits

Spring 2nd Year

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

14-15 Credits

Fall 3rd Year

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference

between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 38300 - Digital Audio Recording And Production I

Credit Hours: 3.00. This course is an introduction to digital audio recording and production practices. Topics covered will include design and structure of sound studios, musical sequencing and recording, microphones, fundamentals of sound reinforcement, and sound editing. Students will be required to develop music recording projects.

Learning Outcomes: 1. Explain the fundamentals of musical acoustics. 2. Define digital audio and MIDI (Musical Instrument Digital Interface) terminology. 3. Explain and demonstrate the principles of music recording (studio and live mixes). 4. Explain and demonstrate the fundamentals of sound reinforcement (live sound performances). 5. Explain and demonstrate microphone selection and placement. 6. Design a recording studio. 7. Explain and demonstrate musical sequencing and digital audio editing. 8. Explain and demonstrate how to combine digital sequenced data with natural acoustic sounds. 9. Create professional mixes: adding reverb, compression, special effects, etc. Credits: 3.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

14 Credits

Spring 3rd Year

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS 38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.

Learning Outcomes: 1. Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in

combining sound and music to video and film productions. Credits: 3.00

15 Credits

Fall 4th Year

15 Credits

Spring 4th Year

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

Auditions and Interviews

Departmental/Program Major Courses (42-46 credits)

Required Major Courses (24-28 credits)

Foundational Studies (15 credits)

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital

interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

Symposia (Non-course Requirement)

Music History (3 credits)

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Music Making Studies (6-10 credits)

Studio Courses (6 credits)

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique.
Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility.
Credits: 2.00

Ensemble Participation (0-4 credits)

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

BAND 34100 - Renaissance Ensemble

Credit Hours: 2.00. A survey of renaissance and baroque ensemble literature to be played on appropriate instruments. Reproductions of renaissance and baroque wind, stringed, and brass instruments are available for use in the Department of Bands.

Credits: 2.00

BAND 33100 - Summer Jazz Bands

Credit Hours: 2.00. Continuation of BAND 33000.

Credits: 2.00

BAND 33000 - Summer Concert Bands

Credit Hours: 2.00. Continuation of BAND 32000.

Credits: 2.00

BAND 12100 - Symphony Orchestra

Credit Hours: 2.00. Symphony Orchestra.

Credits: 2.00

BAND 11900 - Varsity Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11800 - Collegiate Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11700 - Concert Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11600 - Symphonic Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved.

Credits: 2.00

BAND 11500 - String Orchestra

Credit Hours: 2.00. The rehearsal, study, and performance of string orchestra music from the classical, romantic and contemporary areas of composition.

Credits: 2.00

BAND 11300 - Jazz Ensemble

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Permission of instructor required.

Credits: 2.00

BAND 11000 - Marching Band

Credit Hours: 2.00. Open through audition. Additional lab and activity fees involved. Mandatory participation required in Marching Band Workshop one week prior to start of fall classes which conflicts with Boilermaker Gold Rush. Workshop covers similar orientation to Gold Rush. Do enroll in BAND 11000 during summer registration prior to the workshop and audition process.

Credits: 2.00

Music Theory and Composition Concentration (18 credits)

Music Theory and Composition Required Courses (9 Credits)

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of music theory from the late Romantic era through current practice. Students may be asked to compose works in a variety of styles that include late Romanticism, Impressionism, Neoclassicism, Atonality, Pointillism, Minimalism, Sound-Mass Composition, Indeterminacy, Ambient music, Graphic Notation and Neoromanticism.

Learning Outcomes: 1. Demonstrate a theoretical understanding of harmonic practice from the Late Romantic Era through the contemporary period. 2. Analyze the structural elements of music from the Late Romantic Era through the contemporary period. 3. Produce original compositions in the styles associated with the Late Romantic Era through the contemporary period. Credits: 3.00

Music Studies I (3 Credits)

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.

Learning Outcomes: 1. Explain common chords, scales and modes used in contemporary jazz music. 2. Define common terms used in jazz arranging and composition. 3. Explain and demonstrate common features of various jazz styles. 4. Create original jazz compositions and arrangements. Credits: 3.00

MUS 32100 - Songwriting

Credit Hours: 3.00. This course is an introduction to contemporary songwriting. Topics covered will include the study of contemporary chord progressions, melodic development, essential songwriting forms and lyric writing. Students will analyze and compose original songs that will cover a wide range of musical styles and genres including folk, country, pop, rock, jazz and hip-hop. Students interested in Art Song composition should take MUS 34100 or 34200, Composition I-II. Prerequisites include MUS 13200, Music Theory I and MUS 27000, Computer Skills in Music or consent of department.

Learning Outcomes: 1. Demonstrate a theoretical and practical understanding of contemporary songwriting. 2. Explain traditional and contemporary harmonic and melodic practice in songwriting. 3. Define common terms such as verse, chorus, bridge, refrain and hook. 4. Analyze and compose works in simple forms such as binary, ternary, AABA and blues forms. 5. Explain and demonstrate common features of various beats and styles associated with songwriting: samba, bossa nova, swing, bop, funk, hip-hop. 6. Analyze and write effective lyrics. 7. Create original songs. Credits: 3.00

Music History and Literature (3 Credits)

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

Music Studies II (3 Credits)

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and

performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 29200 - Music, Media, And Technology

Credit Hours: 3.00. This course explores the broad dimensions of technology and media as they impact music and society. Elements of recorded and live music making and performance will be analyzed. An attempt will be made to become more aware of other technologies that hold promise for performance, entertainment, and distribution. The end goal of this course is to have each student become a reflective music consumer, producer, and curator, curious about technological pos-sibilities of media and music, willing to explore its many dimensions.

Learning Outcomes: 1. Survey trends in media throughout the 20th and 21st century to gain awareness of technologies as they relate to music. 2. Analyze recording and performance standards of mediated music. (music that is not performed acoustically and live) 3. Build confidence discussing media and technological advances in musical performance and recording. Credits: 3.00

MUS 38400 - Digital Record And Production II

Credit Hours: 3.00. This course is a continuation of MUS 38300, Digital Audio Recording and Production I. Topics covered will include advanced musical sequencing, multitrack audio recording, audio signal processing, mixing, mastering and advanced audio and digital production. Students will be required to develop music recording and production projects.

Learning Outcomes: 1. Explain and demonstrate multitrack recording, mixing, analog and digital effects processing, sampling, use of specialized filters and audio tools such as vocoders and other electronic instruments to shape and edit sound. 2. Explain and demonstrate advanced musical sequencing and digital audio editing. 3. Explain and demonstrate issues and techniques used when combining digital sound with acoustic instruments and voices. 4. Create professional mixes that use reverb, compression, and special effects, etc. 5. Explain and demonstrate techniques used in combining sound and music to video and film productions. Credits: 3.00

MUS 32800 - Jazz Theory, Composition And Arranging

Credit Hours: 3.00. This course is an introduction to contemporary jazz theory, composition and arranging practices. Topics covered will include the study of chord and scale constructions, substitutions, analyzing and building harmonic progressions, modal functions, identifying various styles and idioms, and writing for combo and big band. Students will learn how to compose in various jazz styles and score their works for small and large ensembles. Prerequisites: MUS 13300, Music Theory II and MUS 27000, Computer Skills in Music or consent of instructor.

Learning Outcomes: 1. Explain common chords, scales and modes used in contemporary jazz music. 2. Define common terms used in jazz arranging and composition. 3. Explain and demonstrate common features of various jazz styles. 4. Create original jazz compositions and arrangements. Credits: 3.00

MUS 32100 - Songwriting

Credit Hours: 3.00. This course is an introduction to contemporary songwriting. Topics covered will include the study of contemporary chord progressions, melodic development, essential songwriting forms and lyric writing. Students will analyze and compose original songs that will cover a wide range of musical styles and genres including folk, country, pop, rock, jazz and hip-hop. Students interested in Art Song composition should take MUS 34100 or 34200, Composition I-II. Prerequisites include MUS 13200, Music Theory I and MUS 27000, Computer Skills in Music or consent of department.

Learning Outcomes: 1. Demonstrate a theoretical and practical understanding of contemporary songwriting. 2. Explain traditional and contemporary harmonic and melodic practice in songwriting. 3. Define common terms such as verse, chorus, bridge, refrain and hook. 4. Analyze and compose works in simple forms such as binary, ternary, AABA and blues

forms. 5. Explain and demonstrate common features of various beats and styles associated with songwriting: samba, bossa nova, swing, bop, funk, hip-hop. 6. Analyze and write effective lyrics. 7. Create original songs. Credits: 3.00

MUS 37000 - Introduction To Instrumental And Choral Conducting

Credit Hours: 3.00. This course is an introduction to instrumental and choral conducting. Topics covered will include the study of essential skills necessary to lead vocal and instrumental ensembles that will involve warmup techniques, choral and instrumental tone production, baton and directing patterns, ensemble organizational leadership and score analysis. Prerequisites include MUS 13300, Music Theory II or consent of the department.

Learning Outcomes: 1. Define common terms used in musical scores. 2. Demonstrate a wide variety of conducting hand and baton patterns. 3. Explain how musical analysis can influence conducting. 4. Explain standard organizational and leadership approaches in conducting musical groups. 5. Explain frequent errors made by conductors. Credits: 3.00

Music Courses 30000+

BAND 36000 - Wind Ensemble II

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year.

Credits: 2.00

BAND 35000 - Wind Ensemble I

Credit Hours: 2.00. The University Wind Ensemble is an organization composed of 42 instrumentalists selected by audition from staff, graduate students, and symphony band members. Concentrating on the rehearsal and performance of contemporary wind music of a highly virtuoso and concertante nature, it offers its members extensive opportunities to rehearse and study works of considerable difficulty from the contemporary area of composition as well as some aspects of the baroque and classical fields. This organization meets once a week throughout the academic year. Permission of instructor required.

Credits: 2.00

MUS 37600 - World Music (UCC: HUM)

Credit Hours: 3.00. Exploration of musical traditions around the globe through lectures, readings, recordings, DVDs, and performances. Students will discover how cultural traditions, life rituals, arts, and other traditions influence each region's expression of music.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer,

performer and audience for this piece. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 34200 - Music Composition II

Credit Hours: 3.00. A continuation of Music Composition I with emphasis upon musical techniques after WWII through various writing and analytical assignments. Permission of instructor required.

Learning Outcomes: 1. Understand theoretical and practical musical developments since WWII, Modern contrapuntal practice, serialism, set theory, minimalism, Postmodernism, and large ensemble compositional approaches. Credits: 3.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Other Departmental - Liberal Arts Core For BFA, Professional, & Education (25-34 credits)

Core III: Linguistic Diversity (3-4 credits)

Foundational Requirements (21-30 credits)

Notes

Electives (40-53 credits)

GPA Requirements

Additional Information

Sample 4-Year Plan

Fall 1st Year

MUS 16100 - Class Piano And Musicianship I

Credit Hours: 3.00. A study of essential keyboard skills that include reading beginning level piano pieces, major and minor scales, transposition, sight reading and adding chords to a given melody. The musicianship includes essential aural skills: rhythmic dictation, interval and chord identification, and rhythmic and melodic dictation.

Learning Outcomes: 1. Play elementary level piano music, transpose, sight read, and add chords to a melody. 2. Take rhythmic and melodic dictation and recognize intervals and chords. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to

present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13200 - Music Theory I (UCC: HUM)

Credit Hours: 3.00. Course comprises instruction in melodic and harmonic processes in tonal music; development of analytic, listening and piano techniques with musical equipment. Music reading ability is required, verified through Placement Exam.

University Core Curriculum (UCC): (UCC: HUM) Learning Outcomes: 1. Notate and identify (visually and aurally) keys, intervals, rhythms and meters, melodic and harmonic relationships, phrase structure, formal processes in diatonic tonal music. 2. Harmonize a melody, realize a figured bass and understand the three basic diatonic chord progressions. 3. Perform at the piano: diatonic chord progressions, melodies with chordal accompaniments, arpeggios. 4. Sing diatonic melodies in simple and compound meters. Credits: 3.00

MUS 23200 - Music Theory III

Credit Hours: 3.00. A study of Renaissance and Baroque contrapuntal practices that will include writing two-part compositions in each style. The course will also cover music theory in the early Romantic era concentrating on composers such as Schubert, Mendelssohn, Schumann and Brahms.

Learning Outcomes: 1. Demonstrate a theoretical understanding of Renaissance (16th century) counterpoint, Baroque (18th century) counterpoint, and Romantic Era (19th century) harmonic practice. 2. Analyze the structural elements of music from the 16th through 19th centuries. 3. Produce original two-part and piano compositions in the Renaissance, Baroque, and Romanic Era styles. Credits: 3.00

15-16 Credits

Spring 1st Year

MUS 16200 - Class Piano And Musicianship II

Credit Hours: 3.00. A continuation of MUS 16100 that includes reading intermediate level piano pieces, sight reading, scales, transposition and adding chords to a melody. The musicianship component includes intermediate level aural skills, rhythmic and melodic dictation, intervals, chordal and harmonic dictation.

Learning Outcomes: 1. Play intermediate level piano music, transpose, sight read and add chords to a melody. 2. Take rhythmic and melodic dictation, recognize intervals, and chord progressions. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 13300 - Music Theory II

Credit Hours: 3.00. A variety of styles and forms of music serve to exemplify melodic and harmonic processes and voice-leading practices in diatonic tonal music. Activities include analytic reading of musical scores, developing musical listening skills, and acquiring functional piano techniques.

Learning Outcomes: 1. Have a theoretical and practical understanding of the following: diatonic chord progressions; voice leading practices; nonchord tones; period forms; figured bass; secondary dominants; chromatic harmonies. Credits: 3.00

MUS 23300 - Music Theory IV: Contemporary Music

Credit Hours: 3.00. A study of music theory from the late Romantic era through current practice. Students may be asked to compose works in a variety of styles that include late Romanticism, Impressionism, Neoclassicism, Atonality, Pointillism, Minimalism, Sound-Mass Composition, Indeterminacy, Ambient music, Graphic Notation and Neoromanticism.

Learning Outcomes: 1. Demonstrate a theoretical understanding of harmonic practice from the Late Romantic Era through the contemporary period. 2. Analyze the structural elements of music from the Late Romantic Era through the contemporary period. 3. Produce original compositions in the styles associated with the Late Romantic Era through the contemporary period. Credits: 3.00

15-17 Credits

Fall 2nd Year

MUS 38100 - Music History I: Antiquity To Mozart

Credit Hours: 3.00. Survey of the development of Western European music history from antiquity to Mozart.

Learning Outcomes: 1. Able to listen to a piece composed between antiquity to 1800 and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 38200 - Music History II: Beethoven To The Present

Credit Hours: 3.00. Survey of the development of Western European music history from Beethoven to the present.

Learning Outcomes: 1. Able to listen to a piece composed between and the present day and compare it to other pieces, recognize its genre, describe its stylistic features, suggest possible composer and date, place it in historical context, describe its social function, describe performance practice, and describe composer, performer and audience for this piece. Credits: 3.00

MUS 34100 - Music Composition I

Credit Hours: 3.00. Learn essential musical composition skills common in the 20th and 21st Centuries through various writing and analytical projects.

Learning Outcomes: 1. Define melodic and harmonic developments in the 20th and 21st Centuries. 2. Define common terms and techniques used in musical composition today. 3. Create original musical compositions. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

17-18 Credits

Spring 2nd Year

MUS 27000 - Computer Skills In Music

Credit Hours: 3.00. Learn essential music technology skills that include computer based music notation practices, fundamentals of music synthesis and sequencing and basic recording practices.

Learning Outcomes: 1. Understand theoretical and practical conventions of musical notation, fundamentals of MIDI (musical instrument digital interface), computer-based music notation programs, music synthesis and sequencing techniques and basic digital audio recording techniques. Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

MUS 35200 - Studio Voice

Credit Hours: 2.00. Students will study and perform selected works for voice from a wide range of styles, and genres within a masterclass setting. The instructor will demonstrate important issues related to voice performance and work with the students in both private and group settings. Students will be required to perform works in class. This course may be repeated.

Learning Outcomes: 1. Demonstrate music style and interpretation in legit/art song and/or contemporary singing. 2. Vocally produce scales, arpeggios and other musical patterns. 3. Prepare and perform selected musical repertoire. 4. Interpret and explain phraseology, articulation, dynamics, etc. 5. Demonstrate elements of vocal dexterity and technical facility. Credits: 2.00

14-15 Credits

Fall 3rd Year

MUS 37800 - Jazz History (UCC: HUM)

Credit Hours: 3.00. A historical and stylistic study of jazz.

University Core Curriculum (UCC): (UCC: HUM) Credits: 3.00

MUS 10100 - Discovery Forum

Credit Hours: 0.00. Discovery Forum is a weekly gathering where music majors and faculty perform, share research, compositions, arrangements or other related topics associated with music today. It is a forum where new approaches and ideas about music can be presented. No prior coursework required.

Learning Outcomes: 1. Describe diverse genres and approaches to music making. 2. Explain to others appropriate concert etiquette, how to present musical scholarship to an audience, and how to speak publicly about music. 3. Communicate new perspectives and ideas regarding musical structure, design, performance, and research. Credits: 0.00

MUS 35100 - Studio Piano

Credit Hours: 2.00. Students will study and perform selected piano or digital keyboard literature with the focus on improving their technical and interpretive performance skills. Students will also learn about particular historical, analytical or technical issues related to work(s) studied.

Learning Outcomes: 1. Explain the difference between various musical styles. 2. Perform scales, arpeggios and other common musical patterns. 3. Perform selected musical repertoire. 4. Explain phraseology, articulation, and dynamics. 5. Explain how to improve technique. Credits: 2.00

Natural Resources and Environmental Science: Climate and Energy Solutions Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and

points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based

laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Climate and Energy Solutions Concentration Courses (27-28 credits)

Climate And Energy Solutions Required Courses (15-16 credits)

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

NRES 23000 - Survey Of Meteorology (UCC: SCI)

Credit Hours: 3.00. (EAPS 22100) An introductory course for both science and non-science students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate, ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)
Credits: 3.00

EAPS 22100 - Survey Of Atmospheric Science (UCC: SCI)

Credit Hours: 3.00. (NRES 23000) An introductory course for both science and nonscience students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand and describe a wide range of meteorological phenomena using fundamental principles of physics and chemistry. 2. Learn a unified approach that relates the behavior of air parcels acting under forces to the observed weather and climate. 3. Represent weather parameters quantitatively on maps and charts. 4. Identify the principal threat to the stratospheric ozone shield and the gases responsible for the greenhouse effect. 5. Understand the Coriolis effect and how it determines wind direction and circulation in cyclones and anticyclones in the Northern and Southern Hemispheres. 6. Identify conditions that lead to the formation of hazardous weather. Credits: 3.00

EAPS 22500 - Science Of The Atmosphere (UCC: SCI)

Credit Hours: 3.00. This course provides a quantitative introduction to how to use the laws of physics to understand the behavior of the Earth's atmosphere. Emphasizes key processes that govern the climate system and the weather phenomena that arise within it. Topics covered may include the Earth's energy balance, heat transfer, the greenhouse effect, atmospheric convection, precipitation, the general circulation, the Coriolis effect, atmospheric chemistry, weather systems, weather forecasting, and climate change.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Solve simple quantitative problems by manipulating equations, plugging in numbers, and checking units. 2. Visualize how our atmosphere varies in space and time by interpreting graphs and maps of atmospheric data as a function of

latitude, longitude, and/or height/pressure. 3. Use key physical laws to explain (mathematically and in words)...Physical properties (composition, density, temperature, pressure, specific humidity, relative humidity) of our atmosphere; How energy transfer between the Sun, Earth, and outer space affect the properties of our atmosphere; How horizontal variability in air properties gives rise to circulations, such as the jet stream. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

Climate and Energy Solutions Selective Courses (12 credits)

EPCS 40200 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 2.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100 /40200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 40200 is offered for 2 credits. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40100 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 2.00

EPCS 40100 - Senior Participation In EPICS (UCC: STS)

Credit Hours: 1.00. Continuation of EPCS courses (see EPCS 10100). Seniors are responsible for the management tasks of planning and organizing their team project activity. They are expected to contribute expertise from their discipline to the design of the team's projects throughout most of the design process phases of problem identification, specification development, design, production, and deployment. Seniors will also meet with the customer and mentor the freshman, sophomores and juniors. Seniors using EPCS 40100/EPCS 40200 to fulfill capstone or design requirements where approved for their major may be required to satisfy additional course requirements specified by their degree program. EPCS 40100 is offered for 1 credit. The EPICS procedures manual provides information on expected relative workload for EPCS 40100 and EPCS 40200 students. May not be taken concurrently with EPCS 40200 .

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Able to apply material

from their discipline to the design of community-based projects. 2. Understand design as a start-to-finish process. 3. Able to identify and acquire new knowledge as a part of the problem-solving/design process. 4. Aware of the customer. 5. Able to function on multidisciplinary teams and an appreciation for the contributions from individuals from multiple disciplines. 6. Able to communicate effectively with audiences with widely-varying backgrounds. 7. Aware of professional ethics and responsibility. 8. Appreciate the role that their discipline can play in social contexts. Credits: 1.00

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

ANTH 21000 - Technology And Culture (UCC: STS)

Credit Hours: 3.00. This course explores the social dimensions of technology from the perspective of ancient, modern, and post-modern society. Topics include the origins of particular technologies; processes of technical development and dissemination; the politics of everyday artifacts; virtual identities; and technologies of the body. Suggested courses (not pre-requisite): ANTH 10000, 20100 and/or 20500.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the origins and social consequences of technologies. 2. Analyze technology as a social process and debate the inevitability of technological progress. 3. Interpret the complex interplay between technical fields and social identity. 4. Summarize science and technology over time and across diverse places. Credits: 3.00

AD 39700 - Sustainability In The Built Environment

Credit Hours: 3.00. The study of philosophical concepts, principles, and theories of sustainability as they pertain to building methods, materials, systems, and occupants. To provide a foundation for evaluation of materials, processes, and applications of design components for environmentally responsible. Field trips will be required.

Learning Outcomes: 1. Define sustainability and assess the ways that sustainable design strategies, processes, and products may be integrated effectively into the built environment. 2. Identify complex social, ecological, and

economic dimensions that affect the well-being of humans, neighborhoods, communities, and ecological systems. 3. Apply critical thinking skills to explain how green building methods affect the way built environments are designed, constructed, and operated. 4. Utilize appropriate methodological tools to analyze sustainable problems and provide environmentally responsible solutions for a green-building scenario. 5. Articulate a comprehensive, progressive world view that integrates diverse approaches to sustainability. 6. Utilize USGBC materials and other educational sources to explain the LEED rating system, LEED professional credentials, and Green Building principles and techniques preparatory to obtaining the LEED Green Associate credential. Credits: 3.00

POL 42800 - The Politics Of Regulation

Credit Hours: 3.00. Politics and policies of federal and state regulatory agencies. Explanations of regulatory agency behavior, arguments for and against government regulation, and alternatives to government regulation.

Credits: 3.00

EAPS 10900 - The Dynamic Earth

Credit Hours: 3.00. This course covers the formation and development of the solid earth, atmosphere, hydrosphere, and bio-sphere. The course studies the whole earth as a system of many interacting parts and focuses on the changes within and between these parts. This course is intended for all majors in earth and atmospheric sciences.

Credits: 3.00

EAPS 32700 - Climate, Science And Society

Credit Hours: 3.00. This course will examine the broad problems of climate change by examining the relationship between science, politics, and society by using climate change as a lens through which to examine larger issues. Students will be encouraged to identify similar themes in their own experiences as emerging scientists, engineers and global leaders. Adequate preparation to write essays and perform basic arithmetic calculations needed. Prior knowledge of climate change science is not necessary.

Learning Outcomes: 1. Able to think logically and creatively. 2. Able to apply knowledge to practical situations. 3. Able to respond flexibly as situation changes. 4. Understand ethical issues, particularly in Science. 5. Appreciate diverse experiences, thoughts, backgrounds. 6. Understand and appreciate Science in the world environment. Credits: 3.00

EAPS 37500 - Great Issues - Fossil Fuels, Energy And Society

Credit Hours: 3.00. Prosperity of the 20th century was based on abundant and cheap energy; during the 21st century we will be faced with difficult challenges. Our society will face higher energy prices, decline of petroleum based fuels supplies, increased environmental effects of fossil fuels usage, and the challenge of solving the technological problems of developing alternative fuels. This course will review the structure, economics, and geopolitical issues faced by fossil fuel industries and the mitigation strategies that will be needed to change to low fossil fuel use society based on low polluting renewable energy sources. Counts for Great Issues course in College of Science for Juniors and Seniors.

Credits: 3.00

EAPS 42000 - Global Change Modeling

Credit Hours: 3.00. Understanding, monitoring, and modeling global environmental change. Each session examines the response of the interrelated earth systems to different geological, ecological, atmospheric, oceanic, or societal impacts. Topics include global warming, major biogeochemical cycles, atmospheric ozone, coevolution of life and climate, asteroid impacts, and ecological disruptions. The laboratory uses object-oriented modeling software and current NASA satellite data. No prior knowledge of computer programming is required.

Credits: 3.00

ECET 22400 - Electronic Systems

Credit Hours: 3.00. This course is a survey of key electrical and electronics systems, their basic performance and applications. DC fundamentals include sources, resistance, Ohm's and Kirchhoff's Laws with simple circuits. AC systems include transformers and reactive elements, power production and distribution, filtering, motors and relays. Computer systems are presented with a microprocessor and provide the ability to write and read both digital and analog data. Analog systems include diodes, transistors, IC amplifiers, and analog-digital and digital to analog conversions. The semester closes by combining all of the topics presented in the control of motor speed.

Learning Outcomes: 1. Apply Ohm's Law and

Kirchhoff's Laws to series and parallel DC circuits. 2. Define, measure, and apply sinusoidal parameters in passive RLC circuits. 3. Explain power generation and distribution. 4. Use a microprocessor to input, output, and manipulate digital and analog signals. 5. Apply diodes, transistors, analog ICs, ADC and DAC to control the performance of a motor. Credits: 3.00

MET 53000 - Facilities Engineering Technology

Credit Hours: 3.00. A study of the application of the engineering sciences and technology to the solution of problems associated with mechanical and electrical systems in buildings. Emphasizes commercial and industrial facilities. Identifying energy conservation measures for both mechanical and electrical systems and evaluating their economic impact are an important focus of the course.

Learning Outcomes: 1. Explain building energy trends and related policy. 2. Explain the organizations and personnel supporting the built environment. 3. Use building automation systems to monitor and control building operation. 4. Quantify energy use in building systems. 5. Use accepted professional practice for technical computations and writing. 6. Calculate the economic impact of energy and resource conservation measures for buildings. 7. Compute the impact of solar energy use for a building. 8. Apply strategies for maintaining Indoor Air Quality in buildings. 9. Evaluate the performance of mechanical or electrical systems in buildings. Credits: 3.00

EAPS 31500 - Biogeochemistry

Credit Hours: 3.00. The course examines the main element cycles of Earth: carbon, oxygen/hydrogen, nitrogen, sulfur, phosphorous, and trace metals, and how they are interconnected from terrestrial, aquatic/ocean, and atmospheric perspectives. General chemistry concepts such as equilibrium, free energy, electrochemistry are used to understand the energetics of the cycles. Connection between the cycles and environmental problems, such as climate change and air pollution will be emphasized.

Learning Outcomes: 1. Construct a mental model of the Earth system and the flow of elements among different parts of the system. 2. Examine modern problems caused by human perturbation of the main biogeochemical cycles. 3. Perform basic research tasks and present scientific findings. Credits: 3.00

EAPS 53000 - Extreme Weather And Climate: Science And Risk

Credit Hours: 3.00. This project-oriented course introduces students to the real-world analysis of weather and climate risk, including under climate change. Course will provide a risk-relevant introduction to different types of impactful weather (e.g., hurricanes, drought) and how the climate system can cause them to vary on monthly (e.g., Madden-Julian Oscillation), seasonal (e.g., El Nino and La Nina), and longer timescales (e.g., climate change). The course will further connect this intrinsic uncertainty in weather outcomes to uncertainties in real-world applications (e.g., crop yields) across a variety of economic sectors - "risk". Students will be introduced to basic methods in probability and statistics for analyzing data required to help someone make real-world decisions that depend on weather/climate. The principal course outcome is a semester-long "start-to-finish" project where students define a hypothetical real-world decision that is weather-dependent, find and analyze data to guide that decision-maker, write a concise report on their findings, and concisely present their results orally to the class.

Learning Outcomes: 1. Explain the meaning of "risk" in weather/climate and impacts. 2. Describe the basics of various types of impactful weather. 3. Describe how modes of climate variability cause weather to vary on monthly, seasonal, and longer time scales. 4. Explain how weather and climate variability translates to risk in a wide range of applications and economic sectors. 5. Analyze weather/climate data to find real-world solutions to weather risk problems. 6. Gain experience working as a hypothetical weather/climate science consultant in a team setting. 7. Summarize research in a succinct and compelling technical report. 8. Summarize research in a succinct and compelling oral presentation. 9. Use data to help someone find a solution to a real-world problem that depends on the weather/climate. Credits: 3.00

PHIL 40300 - Moral Psychology And Climate Change

Credit Hours: 3.00. This course investigates the ethical challenges posed by climate change in conjunction with the deep cognitive and motivational factors that shape our individual and collective responses to it. Current research on human moral psychology is examined, drawing on work from a range of disciplines. Ethical theories concerning the unique moral challenges posed by a threat that spans national borders and human generations are considered. Strategies for addressing climate change that try to avoid our common cognitive foibles, and to leverage what we know about human moral capacities for collective action, are examined.

Learning Outcomes: 1. Identify the structure, thesis statement, and main lines of argumentation in written work of philosophers and psychologists, and also to analyze the arguments by breaking them down into their component parts, and formulating their own objections. 2. Discuss a wide variety of issues and sources surrounding moral psychology, from philosophers, psychologists, biologists, economists and anthropologists; they will develop this ability by summarizing and commenting on the assigned readings in weekly blog posts. 3. Compare the threat raised by climate change to other existential threats by reporting on the way different kinds of threats are processed cognitively. 4. Appraise the strengths and weaknesses of different strategies for addressing climate change, as assessed from the point of view of the state of the art understanding of human cognition and moral motivation; they will write a research paper that assesses the pros and cons of such strategies. 5. Identify common cognitive blind spots, predictable irrationalities, and motivational hurdles, and will be able to use this to appreciate the scope of the collective action problems associated with climate change; they will develop these skills by reading academic texts devoted to these issues. Credits: 3.00

ASEC 35500 - Controversial Science And Media In The Public Sphere (UCC: HUM/STS)

Credit Hours: 3.00. This course will utilize case studies of controversial science news to explore the multiple factors that converge to influence how science and technology become controversial issues across a variety of social/ political domains. In addition to foundational understanding of communication theory, students will develop two primary skills: 1) a structure for the critical analysis of science news, 2) the skills to meaningfully communicate across stakeholders. The science content (GMOs, climate change, pesticide use, etc.) will provide the background information for analysis of the main focus of the course, which is in learning the communication process for effectively communicating science to non-science audiences. Case studies and applied critical media theory will be utilized to explore such controversies as climate change, genetically modified foods, and other emergent science controversies.

University Core Curriculum (UCC): (UCC: HUM/STS) Learning Outcomes: 1. Evaluate forces shaping public understanding of/and engagement with/science, including the role of technology in misinformation (fake news, bots, algorithms, misinformation campaigns, and propaganda) and the role of commercial funding of media. 2. Able to critically analyze media reports of science issues including: Types of Journalism, Levels of Completeness, and Evidence within the story. 3. Apply reliable evidence from your critical news analysis to your projects. 4. Identify and analyze prominent and recurrent patterns in the communication of controversial issues. 5. Apply the skills learned to communicate controversial science to a non-science audience. 6. Critically evaluate the evolving role of media in shaping understanding of science across democratic societies. 7. Know content (quizzes and reflection papers). 8. Process Knowledge (Discussion and applied projects). 9. Use integrated knowledge to meaningfully critique others work. 10. Demonstrate process comprehension through construction of a critical news analysis of a current controversial issue. Credits: 3.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology.

Learning Outcomes: 1. Analyze a response scene to stop the release or potential releases of hazardous substances. 2. Connect knowledge and awareness to meet OSHA requirements. (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. 3. Receive their 40-hour HAZWOPER Certification after successfully completing all requirements. Credits: 3.00

Other Departmental/Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career

opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process

through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and

principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12.

Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to

construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral

formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7.

Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals

in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions,

social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab

results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-20 credits)

Supplemental Lists

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource

system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)
Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions.

6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits:

3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use

evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general

developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit

proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 2nd Year

AGRY 33500 - Weather And Climate

Credit Hours: 3.00. An introductory course in meteorology and climatology with applications to daily life. The study of the fundamental physical principles behind weather and climate and how they apply to the homeowner and the world citizen. Emphasis is on how to interpret weather conditions and forecasts, what controls the wide range of climates in the world, and what the future may hold.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 23000 - Survey Of Meteorology (UCC: SCI)

Credit Hours: 3.00. (EAPS 22100) An introductory course for both science and non-science students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate, ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

EAPS 22100 - Survey Of Atmospheric Science (UCC: SCI)

Credit Hours: 3.00. (NRES 23000) An introductory course for both science and nonscience students. A general study of the atmosphere, basic meteorological principles, and weather systems. Relationships of the changing atmosphere to climate ozone depletion, and other contemporary issues.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of meteorological phenomena using fundamental principles of physics and chemistry. 2. Learn a unified approach that relates the behavior of air parcels acting under forces to the observed weather and climate. 3. Represent weather parameters quantitatively on maps and charts. 4. Identify the principal threat to the stratospheric ozone shield and the gases responsible for the greenhouse effect. 5. Understand the Coriolis effect and how it determines wind direction and circulation in cyclones and anticyclones in the Northern and Southern Hemispheres. 6. Identify conditions that lead to the formation of hazardous weather. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their

structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

13-14 Credits

Spring 3rd Year

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how

people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

14-15 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

EAPS 22500 - Science Of The Atmosphere (UCC: SCI)

Credit Hours: 3.00. This course provides a quantitative introduction to how to use the laws of physics to understand the behavior of the Earth's atmosphere. Emphasizes key processes that govern the climate system and the weather phenomena that arise within it. Topics covered may include the Earth's energy balance, heat transfer, the greenhouse effect, atmospheric convection, precipitation, the general circulation, the Coriolis effect, atmospheric chemistry, weather systems, weather forecasting, and climate change.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Solve simple quantitative problems by manipulating equations, plugging in numbers, and checking units. 2. Visualize how our atmosphere varies in space and time by interpreting graphs and maps of atmospheric data as a function of latitude, longitude, and/or height/pressure. 3. Use key physical laws to explain (mathematically and in words)...Physical properties (composition, density, temperature, pressure, specific humidity, relative humidity) of our atmosphere; How energy transfer between the Sun, Earth, and outer space affect the properties of our atmosphere; How horizontal variability in air properties gives rise to circulations, such as the jet stream. Credits: 3.00

13-16 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

12-14 Credits

Natural Resources and Environmental Science: Emerging Environmental Challenges Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the

application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Emerging Environmental Challenges Concentration Courses (27-28 credits)

Other Departmental /Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are

determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or

15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource

policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications,

develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS

workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at

least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the

design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and

communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of

controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-20 credits)

Supplemental Lists

Transfer Credit Policy

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and

the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem

of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading,

writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension.

Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use

evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students

demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral

pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 2nd Year

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8.

Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students

will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

16-17 Credits

Spring 3rd Year

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

12-15 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

12-14 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

12-14 Credits

Natural Resources and Environmental Science: Environmental Policy and Analysis Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture

supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to

solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.
Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.
University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural

resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Environmental Policy And Analysis Concentration Courses (27-28 credits)

Required Concentration Courses (9 Credits)

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS)

Credits: 3.00

AGEC 52500 - Environmental Policy Analysis

Credit Hours: 3.00. Designed to assist in understanding how environmental information and knowledge are produced, disseminated, and utilized in a variety of institutional contexts. Readings are selected to promote discussion and interaction concerning alternative mechanisms for protecting environmental resources. Prerequisite: introductory microeconomics course suggested.

Credits: 3.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

Environmental Policy And Analysis Selectives (18-19 credits)

Other Departmental/Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral

communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS)
Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)
Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent).

Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit

proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving

spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical

situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science

stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits:

3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to

understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-20 credits)

Supplemental Information

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and

services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and

trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits:

3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic

probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic

theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to

produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 2nd Year

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function,

molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

POL 32700 - Global Green Politics (UCC: BSS)

Credit Hours: 3.00. Analysis and assessment of the nature of global environmentalism, its connections with other new social movements, and its impact on domestic and international

politics worldwide, with particular attention to green political parties and nongovernmental organizations.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

13-14 Credits

Spring 3rd Year

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

12-16 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages

business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

AGEC 52500 - Environmental Policy Analysis

Credit Hours: 3.00. Designed to assist in understanding how environmental information and knowledge are produced, disseminated, and utilized in a variety of institutional contexts. Readings are selected to promote discussion and interaction concerning alternative mechanisms for protecting environmental resources. Prerequisite: introductory microeconomics course suggested.

Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6.

Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form,

poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

12 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

12-15 Credits

Natural Resources and Environmental Science: Environmental Quality And Restoration Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test

hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear

regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining

what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Environmental Quality And Restoration Concentration Courses (27-28 credits)

Required Concentration Courses (15-16 credits)

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology.

Learning Outcomes: 1. Analyze a response scene to stop the release or potential releases of hazardous substances. 2. Connect knowledge and awareness to meet OSHA requirements. (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. 3. Receive their 40-hour HAZWOPER Certification after successfully completing all requirements. Credits: 3.00

Environmental Quality and Restoration Selective (12 credits)

Other Departmental/Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors.

4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research

and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as

modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit

proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems.

2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for

organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking

about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational

understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human

nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations.

2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-20 credits)

Supplemental Information

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of

differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors

and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics.

Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

14-18 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit

proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 2nd Year

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena

as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

AGRY 56000 - Soil Physics

Credit Hours: 3.00. Fundamentals of soil physics; transport of chemicals, heat, and gases; field spatial variability; principles and methods of physical analysis of soils; the influence of soil physical processes on environmental quality and agricultural production. Students having an understanding of introductory soil science will be suitably prepared.

Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

12-13 Credits

Spring 3rd Year

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

14-16 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

BTNY 30500 - Plant Evolution And Taxonomy

Credit Hours: 3.00. This course focuses on the systematics and evolution of land plants, with an emphasis on plant identification in both laboratory and field. Topics covered include the diversity and evolution of land plants, plant systematics and biogeography. This is a lab and field intensive course consisting of multiple field trips and hands-on laboratories. Students will master the skills required for plant identification anywhere in the

world.

Learning Outcomes: 1. Become familiar with locally important plant orders and families. 2. Learn the vegetative and floral characters (and the associated terminology) that are essential for the identification of flowering plants. 3. Become proficient with the use of keys so that you can quickly determine the scientific name of any plant. 4. Learn how DNA sequences are used to decipher phylogenetic relationships among plants. Credits: 3.00

15-16 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

NRES 38010 - Hazardous Waste Handling

Credit Hours: 3.00. This course trains individuals to stop the release or potential releases of hazardous substances. They have a more aggressive role than first responders at the operations level by approaching the point of the release to plug, patch, or otherwise stop it or manage offensive operations. This course satisfies the OSHA standards for completion of the 40-hour Hazardous Waste Operator/Emergency Response Technician certification, 29CFR1910.120. Topics covered include implementing an employer's emergency response plan; classification and identification of unknown materials using field survey instruments; functioning within the Incident Command System; specialized chemical protective equipment; hazard and risk assessment techniques; advanced product control operations; decontamination procedures; proper termination procedures; and basic chemical and toxicological terminology.

Learning Outcomes: 1. Analyze a response scene to stop the release or potential releases of hazardous substances. 2. Connect knowledge and awareness to meet OSHA requirements. (29 CFR 1910.120) for working on projects that involve the handling of hazardous materials. 3. Receive their 40-hour HAZWOPER Certification after successfully completing all requirements. Credits: 3.00

12-14 Credits

Natural Resources and Environmental Science: Sustainability Science Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze

data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear

regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining

what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Sustainability Science Concentration Courses (28 credits)

Required Concentration Courses (16 credits)

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and encourage the willing contributions of everyone. Credits: 3.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the

role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving

approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

Sustainability Science Concentration Selectives (12 credits)

Other Departmental/Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental

goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource

management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least

7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the

impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 .

Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of

differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish

and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell

components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human

nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations.

2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and

critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-19 credits)

Supplemental Information

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)

Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not

permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes

topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety

of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting

methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including

diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

15 Credits

Spring 2nd Year

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

SFS 30200 - Principles Of Sustainability

Credit Hours: 3.00. Principles of sustainability is an experiential (discussion/debate) course that delivers an expansive overview of the principles of sustainability as they relate to energy and resources, communities, and agriculture. Students will learn to understand and analyze different food and farming systems and how they relate to environmental, economic and social sustainability.

Learning Outcomes: 1. Know the global carbon cycle and understand the greenhouse effect. 2. Understand the concepts of the individual, populations, communities, ecosystems and biomes. 3. Understand the ecological processes of vegetation succession. 4. Understand the role of crop rotations, cover crops and other land management methods. 5. Understand the pathways of nutrient cycling in the soil and the biosphere; e.g. N, P, C cycles. 6. Have a broad understanding of the principles of sustainability, including agricultural sustainability. 7. Understand the importance of energy in society and in agricultural production systems. 8. Understand the importance of natural resources in society and in agricultural production, and the principles of their conservation. 9. Have a broad awareness of the role of agriculture in global society. 10. Understand the advantages and disadvantages of different approaches to food production. 11. Understand the principles of food marketing and sales. 12. Be able to communicate effectively verbally, including being able to prepare and deliver effective scientific papers and presentations. 13. Be able to perform, analyze and discuss supervised experiments. 14. Be able to conduct a competent literature search, including a search for primary literature, and also including the ability to find and assimilate information that will broaden understanding of subject areas by accessing material that is not specifically taught in class. 15. Be able to handle multiple tasks and deadline pressures. 16. Be able to work effectively with individuals from diverse cultures. 17. Have strong professional ethics and integrity. 18. Understand the importance of developing leadership skills. 19. Be able to work effectively in teams. Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and

regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the

resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

EEE 23000 - Engineering Economics And Environment

Credit Hours: 3.00. This course introduces life cycle analysis concepts; every process and material involved in an object's life is accounted for in a system boundary to quantify the effect an item has on the world's environment. Students will become familiar with how materials are sourced from nature, how they are processed into components, how those components are assembled into consumer items, how the consumer item continues to require resources, and how the item is eventually disposed. Particular focus is given to how each of these topics impacts societies and environments at both local and global scales.

Learning Outcomes: 1. Design engineering and manufacturing systems with reduced environmental and ecological impact using

industrial ecology principles. 2. Describe principles of life cycle analysis (LCA), including its different forms, its limitations, its endpoints, and the common tools, techniques, and databases available to assist in LCA. 3. Identify common relationships and dynamics in complex systems, including environmental systems, socio-economic systems, and engineered systems. 4. Conduct a limited life cycle analysis on an industrial product or process, with a defined analysis goal. 5. Quantify the physical inputs and outputs of specific engineering processes that comprise a product life cycle. 6. Demonstrate awareness of the roles and responsibilities of stakeholders in complex contemporary environmental issues. 7. Identify implicit and explicit impacts on various stakeholder groups from policies and decisions on environmental issues and engineering solutions. 8. Develop an equitable engineering design proposal. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

13-14 Credits

Spring 3rd Year

EEE 35500 - Engineering Environmental Sustainability (UCC: STS)

Credit Hours: 3.00. (CE 35500) An introduction to the examination of global-scale resource utilization, food, energy and commodity production, population dynamics, and their ecosystem impacts.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Students will be creative thinkers that can collect and analyze appropriate data and information, and perform necessary quantitative analysis to develop original and innovative management strategies for real-world sustainability problems. 2. Students will be able to individually and in teams skillfully communicate in writing, orally, and with multimedia their ideas and conclusions about managing sustainability issues in a manner that increases knowledge and understanding of the audience. 3. Students will be critical thinkers that can identify the environmental, social, political, and economic dimensions of technical challenges and evaluate their own and others' perspectives in forming logical opinions and conclusions. 4. Students will be able to effectively identify information needs, efficiently acquire appropriate information, and critically evaluate and use it in an ethical and scholarly fashion to gain understanding of and communicate about sustainability issues, challenges, and strategies. 5. Students will become global citizens and socially aware by gaining knowledge of diverse international and cultural perspectives and display social responsibility and leadership in managing sustainability issues, ultimately increasing their global literacy. 6. Students will learn how to be a productive team member, constructively evaluate their own and others' performances, resolve conflicts effectively and

encourage the willing contributions of everyone. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

13-16 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

14 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

12-15 Credits

Natural Resources and Environmental Science: Watershed Management Concentration, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (38-39 credits)

Required Major Courses (11 credits)

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS)

Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

Watershed Management Concentration Courses (27-28 credits)

Required Concentration Courses (15-16 credits)

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Credits: 3.00

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

NRES 33700 - Environmental Hydrology

Credit Hours: 3.00. (AGRY 33700) This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Learning Outcomes: 1. Become familiar with hydrological processes, interactions and their representations over scales from point to ""continental"" and times from seconds to years. The major emphasis is on surface and near surface phenomenon. 2. Gain qualitative and quantitative understanding of land surface water budgets and how they respond to environmental change. 3. Develop problem solving abilities on topics related to surface water hydrology. Credits: 3.00

NRES 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00 Credits: 1.00

NRES 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Discuss the complexity of involving stakeholders in decisions about

landscape management. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

HORT 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Demonstrate knowledge of a variety of participatory and facilitation techniques. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

Watershed Management Selective (12 credits)

Other Departmental/Program Course Requirements (62-67 credits)

AGEC 20300 - Introductory Microeconomics For Food And Agribusiness (UCC: BSS)

Credit Hours: 3.00. This course introduces the application of microeconomics as used by farms and agribusiness firms. The behavior of individual firms is evaluated as price and output are determined in various market structures (pure competition, pure monopoly, monopolistic competition, and oligopoly). Other topics include pricing and employment of resources, market failure and the social control of industry (government, economics policy, and regulation), cost and production theory.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 20400 - Introduction To Resource Economics And Environmental Policy (UCC: BSS)

Credit Hours: 3.00. The course provides an overview of microeconomic theory and its application to issues related to evaluating resource economic issues and environmental policy. Topics discussed include efficiency, sustainability, valuation, externalities, governmental policies, and benefit cost analysis.

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics, the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited

to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

FNR 22310 - Introduction To Environmental Policy (UCC: STS)

Credit Hours: 3.00. (POL 22300) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as

applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: Will update at a later date. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

ENGL 42000 - Business Writing

Credit Hours: 3.00. This course helps students become better business writers, across a wide range of audiences, for multiple purposes, and in a variety of media. This course engages business-related material with an awareness of audience needs and contexts. It prepares students to address problems in the workplace, social, or global levels.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Compose effective, field-specific business documents through a process of analysis and revision. 4. Create business documents in collaborative, distributed, and/or networked environments. 5. Adapt to workplace specific writing practices. Credits: 3.00

ENGL 42100 - Technical Writing

Credit Hours: 3.00. This course teaches the practice and principles of technical writing. The course emphasizes rhetorical approaches to research and writing, teaching concepts such as usability and accessibility. Students write diverse technical documents such as memos, technical reports, documentation and websites.

Learning Outcomes: 1. Use theories of rhetoric to develop texts, think critically, solve problems, and engage with the needs of diverse audiences. 2. Apply data-driven approaches to specific rhetorical contexts, problems, and situations. 3. Communicate complex technical information, processes and procedures in a variety of genres. 4. Compose effective, industry specific, technical documents that emphasize the importance of usability and accessibility for the rapidly changing field of technical writing. 5. Produce team-written technical projects for specific contexts and industries. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular

components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe,

explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of

STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems. Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ECON 25100 - Microeconomics (UCC: BSS)

Credit Hours: 3.00. Microeconomics studies the choices individuals make and the incentives that influence those choices. Emphasis is on the incentives that determine market prices and resource allocation. The role of public policy in influencing incentives and efficiency is also addressed. CTL:ISH 1042 Microeconomics

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Calculate economic costs and benefits relevant for making rational decisions. 2. Identify factors that influence demand, supply, and market equilibrium. 3. Evaluate efficiency and equity of market equilibrium and the role of government in achieving efficiency and equity. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

ENTM 20100 - Scientific And Technical Communication

Credit Hours: 3.00. Students gain a foundation for communicating science and insect biology at multiple levels through study and practice. Prior completion of a college-level composition course is strongly recommended.

Learning Outcomes: 1. Develop and practice skills to describe research and present results

and conclusions from research to peers to non-scientist audiences both in written and oral formats. 2. Understand the difference between scientific and science writing and effectively communicate science to various general public audiences both orally and through writing. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6.

Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

ASEC 58500 - Science Communication

Credit Hours: 3.00. This course utilizes foundational research and commentary from scholars to track the evolution of media and our ability as scientists to understand and effectively communicate these issues to a non-science audience. Science and technology are evolving faster than societies ability to understand, assimilate, and make policies to address these increasingly complex issues. As a result, controversies arise over issues such as climate change, forest management, genetically modified foods, energy choices, genetic engineering, nanotechnology, water management, and agricultural practices, etc. This course covers the range of issues in the field of science communication including: the nature of science, how to translate evidence for a lay audience, media practices, reporting and qualifying uncertainty, human psychology and belief systems, information processing, and the most current research for messaging science. We will work together to examine the foundational scholarly literature in this area and how it is/ or is not reflected in construction of popular media. You will use this knowledge to construct both compelling oral science narratives, and a science story for popular consumption.

Learning Outcomes: 1. Gain a foundational understanding of science communication theory. 2. Develop a working understanding of the psychology of the communication audience. 3. Utilize theory to analyze and deconstruct popular press stories. 4. Design strategies for diffusing controversial issues. 5. Evaluate the efficacy of communication strategies in current use, and in peer communication products. 6. Apply science communication theory in the design of both oral and written popular press stories. Credits: 3.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

ASEC 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in

science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

SFS 48500 - Environmental Communication

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues. Permission of instructor required if not Junior or Senior standing.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

NRES 48500 - Environmental Communications

Credit Hours: 3.00. This is an interactive learning course in science and environmental communication with a strong emphasis on development of practical writing and communication skills for students who will become professionals in environment or natural resources. The public primarily obtains environmental information through the media, as such, scientists need to develop the understanding and skills necessary to engage with a range of audiences through the design of effective communication products. This course provides a unique balance of communication theory and skills training in which students develop the confidence to meaningfully communicate environmental issues.

Learning Outcomes: 1. Develop a working understanding of the practical fundamentals of communicating complex environmental science to non-technical and technical audiences. 2. Apply foundational communication theory across a range of writing forms including academic writing form, explanatory short-form, poetry, white papers, and TED talks. 3. Analyze book-length environmental nonfiction to identify effective writing techniques and strategies. 4. Investigate strategies used in environmental and nature writing in poetry and fiction to engage audiences and write compelling science

stories. 5. Understand key elements of human nature (information processing, risk perceptions, social norms, etc.) that are contributing to environmental controversy and apply that knowledge in strategic design of communication products. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

ASEC 38500 - Communication Strategies For Controversial Issues In ANR

Credit Hours: 3.00. This course trains students to communicate about controversial science and emerging technology in contested environments. Additionally, the course covers public engagement principles for science topics and how to communicate risks in the context of agriculture, and natural resources science and technology.

Learning Outcomes: 1. Define and apply evidence-based science communication and public engagement models in communication of controversial science. 2. Identify a range of factors (individual, socio-cultural, economic, political) that contribute to social conflict and controversy over science or technology issues. 3. Explain impacts of different media platform on the effectiveness of science communication. 4. Define and apply conflict resolution skills in the context of a science or technology controversy. 5. Apply communication best practices when engaging on controversial science and emerging technology across diverse audiences. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use

evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (14-20 credits)

Supplemental List

Sample 4-Year Plan

Fall 1st Year

AGR 10100 - Introduction To The College Of Agriculture And Purdue University

Credit Hours: 0.50. Students are introduced to the College of Agriculture and Purdue University. Specific areas discussed include the diversity of career opportunities within agriculture, the relationships between different areas of agriculture, ethics,

the impact of undergraduate coursework, including the core curriculum, on scholarship and career preparation, and the challenges facing the food, agricultural, and natural resource system. The use of guest lecturers provides a networking opportunity for students. Enrollment in this course is restricted to beginning freshmen students. Course meets weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

AGR 12200 - Introduction To Natural Resources And Environmental Science Academic Programs

Credit Hours: 0.50. An introduction to the academic programs offered in Pre-Environmental Studies and Natural Resources and Environmental Science. Topics include, but are not limited to undergraduate plans of study, courses, experiential programs, internships, student organizations, career opportunities, academic policies, scholarships, and student services. Course meets during weeks 1-8.

Learning Outcomes: 1. Students will understand academic program options, academic rules and regulations, academic student services, scholarship offerings, career opportunities and services. Credits: 0.50

EDPS 31500 - Collaborative Leadership: Interpersonal Skills (UCC: OC)

Credit Hours: 3.00. The purpose of this course is to provide integrated study of listening as a collaborative leadership skill necessary for interpersonal and intrapersonal development. Focus is on the development of professional listening skills, and the understand of the role listening plays in collaborative leadership conflict resolution, interviewing, team building, and ethics.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: 1. Identify the essential elements of collaborative leadership. 2. Explain the importance of interpersonal and oral communication skills to the process of collaborative leadership. 3. Understand how interpersonal and oral communication skills interact with thoughts, feelings, and behaviors. 4. Explain the importance of interpersonal skills in the understanding basic human motivation. 5. Demonstrate solid interpersonal and oral communication skills in class presentations; skills related to initiating and sustaining positive and collegial relationships, engaging in difficult conversations, and conveying meaning. Credits: 3.00

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC)
Credits: 3.00

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational,

quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

AGRY 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (EAPS 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

EAPS 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, FNR 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

FNR 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, NRES 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental

science, resource management, conservation biology, and environmental geology. Credits: 3.00

NRES 12500 - Environmental Science And Conservation (UCC: STS)

Credit Hours: 3.00. (AGRY 12500, EAPS 12500, FNR 12500) Introduction to environmental science and conservation includes topics in ecological principles, conservation and natural resource management, human impacts on the environment, toxic waste disposal, climate change, energy, air and water pollution, environmental geology and geologic hazards.

University Core Curriculum (UCC): (UCC: STS) Learning Outcomes: 1. Describe the issues, facts and concepts central to a broad range of environmental and conservation topics. 2. Form opinions on controversial topics, explaining what they think we should do regarding topics in the news. 3. Describe the work done in five scientific disciplines, ecology, environmental science, resource management, conservation biology, and environmental geology. Credits: 3.00

SCLA 10200 - Transformative Texts, Critical Thinking And Communication II: Modern World (UCC: OC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This second course in the sequence introduces students to great texts from the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: OC) Learning Outcomes: 1. Demonstrate effective, professional delivery, designing and adapting appropriate verbal appeals through vocal intonation and non-verbal cues. 2. Distinguish and apply appropriate informative, persuasive, explanatory, interrogatory and argumentative strategies and techniques in the discussions and in formal presentations. 3. Organize presentations with effective supporting materials. 4. Locate and evaluate effective sources of information. 5. Engage critically with transformative texts, drawing on multiple perspectives, including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze

this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to

improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

SCLA 10100 - Transformative Texts, Critical Thinking And Communication I: Antiquity To Modernity (UCC: IL/WC)

Credit Hours: 3.00. The primary goal of the course is to provide students with a foundational knowledge of transformative literature from around the world as well as fundamental reading, writing, speaking and analytical skills. This first course in the sequence introduces students to great texts from antiquity to the birth of the modern era. Its goal is to create life-long learners, open to the world, and sensitive to other points of view. It exposes students from across the university to the ideas, skill-set and inspiration that animates from the liberal arts, and it also introduces them to liberal arts faculty.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Write with clarity, coherence, and concision in a variety of genres. 2. Demonstrate an importance of rhetorical situations and choices for a variety of audiences and contexts. 3. Demonstrate critical thinking about writing through reading, analysis, discussion, composing and revising texts in a range of genres. 4. Apply a clear understanding of the process of writing (including drafting, revising, editing, proofreading, and collaborating with others and providing feedback); and successfully organize, present, and

communicate meaning to fellow readers in at least 8,000 words of polished writing. 5. Identify, analyze, and evaluate the claims of a variety of print, digital, audio and visual sources. 6. Engage critically with transformative texts, drawing on multiple perspectives including the individual, the historical, and the contemporary. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15-17 Credits

Fall 2nd Year

AGRY 25500 - Soil Science

Credit Hours: 3.00. (NRES 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to develop sound responses to complex problems. 4. Demonstrate the ability to write and speak

with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

AGRY 27000 - Forest Soils

Credit Hours: 3.00. Development, distribution, and classification of soil profile; soil characteristics related to forest practices; nature and cause of soil differences; fertility and plant nutrition. Not available to students who have taken AGRY 25500 or NRES 25500.

Credits: 3.00

NRES 20000 - Introduction To Environmental Careers

Credit Hours: 1.00. This course offers an introduction to general developments and practices in the environmental arena. A presentation of environmental careers and aspects of those careers that may affect job satisfaction and commitment is the main focus of the course. Included is an overview of coursework that benefits particular careers. The course is designed to introduce students to the specialized environmental areas in which they may choose to work.

Credits: 1.00

NRES 25500 - Soil Science

Credit Hours: 3.00. (AGRY 25500) Differences in soils; soils genesis; physical, chemical, and biological properties of soils; relation of soils to problems of land use and pollution; soil management relative to tillage, erosion, drainage, moisture supply, temperature, aeration, fertility, and plant nutrition. Introduction to fertilizer chemistry and use. Not available to students who have taken AGRY 27000.

Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12.

Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BTNY 12000 - Principles Of Plant Biology I

Credit Hours: 4.00. This course is the first of a two-semester series that introduces fundamental biological concepts and prepares students for more specialized plant biology studies. Lectures and laboratory exercises will cover the topics of plant diversity, morphology, physiology, and ecology. Throughout the course, emphasis will be placed on how scientific data is collected and interpreted, and the lab component will perfect key observational skills in botany. Our goal is to provide essential foundational knowledge in plant biology for progression to upper-level courses.

Learning Outcomes: 1. Know the major groups of land plants and describe the life cycles of each of these groups. 2. Describe and identify the key features of a plant. 3. Identify and describe the properties of life and levels of organization among living organisms. 4. Explain how plants obtain and use resources, highlighting relationships between structure and function. 5. Recognize the factors that influence the abundance and distribution of plants. 6. Examine how environmental change impacts the physiology and ecology of plants. 7. Practice qualitative and quantitative analytical and communications skills. Credits: 4.00

14-15 Credits

Spring 2nd Year

AGRY 33800 - Environmental Field Skills

Credit Hours: 1.00. This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and

wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhanced understanding of physical, chemical, and biological hydrological processes. 2. Development of critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Development of technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encouragement of lifetime learning habits through practical problem solving. Credits: 1.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BTNY 12100 - Principles Of Plant Biology II

Credit Hours: 4.00. This course is an introduction to fundamental biological concepts designed to prepare students for more specialized study. Lectures and laboratory exercises will cover mechanisms and processes of genetics, molecular biology and cell biology. Our goal is to convey how these levels of organization are integrated. Throughout the course, emphasis will be made on the means by which scientific data is collected and interpreted, and key experiments performed in the lab component will be used to illustrate this process.

Learning Outcomes: 1. Understand the structure and function of nucleic acids in plants. 2. Understand the means by which genetic information is passed on from cell to cell and generation to generation. 3. Understand the ways that the genetic composition of plants can be altered and manipulated. 4. Identify and describe the properties of life and levels of organization among living organisms. 5. Outline the structure of biomolecules and relate their structure to function. 6. Identify basic cell components and discuss their cellular functions and relationships. 7. Explain how plants develop from a single cell into a complex organism. 8. Practice qualitative and quantitative analytic and communications skills. Credits: 4.00

NRES 33800 - Environmental Field Skills

Credit Hours: 1.00. (AGRY 33800) This practical, field-based laboratory course is designed to provide hands-on experience with environmental monitoring field techniques, including stream discharge measurements, slug tests, aquatic sampling, surveying and wetland delineations utilizing local sites and watersheds as the classroom.

Learning Outcomes: 1. Enhance understanding of physical, chemical, and biological hydrological process. 2. Develop critical thinking skills and the application of field methods and instrumentation used in evaluating hydrologic processes. 3. Develop technical communication skills and problem solving abilities on topics related to surface water hydrology. 4. Encourage lifetime learning habits through practical problem solving. Credits: 1.00

17 Credits

Fall 3rd Year

AGRY 45000 - Soil Conservation And Water Management

Credit Hours: 3.00. (NRES 45000) Principles of soil conservation with emphasis on control of soil erosion by wind and water; impact of soil management decisions on environment; soil-water-plant relations, includes agronomic aspects of water management for both irrigation and drainage.

Learning Outcomes: 1. Demonstrate proficiency in their chosen discipline that incorporates knowledge, skills, technology, and professional conduct. 2. Demonstrate use of the scientific method to identify problems, formulate and test hypotheses, conduct experiments and analyze data, and derive conclusions. 3. Demonstrate critical thinking by using data and reasoning to

develop sound responses to complex problems. 4. Demonstrate the ability to write and speak with effectiveness while considering audience and purpose. 5. Demonstrate the ability to work effectively as part of a problem-solving team. 6. Demonstrate knowledge of a range of cultures and an understanding of human values and points of view of other than their own. 7. Demonstrate ability to apply social, economic, political, and environmental principles to living in a global community. 8. Demonstrate awareness of civic responsibility to community and society at large. 9. Demonstrate skills necessary for lifelong learning. Credits: 3.00

NRES 42000 - Environmental Internship Reporting

Credit Hours: 1.00. Reporting on participation in government, industrial, or other internship program. Permission of department required.

Learning Outcomes: 1. Develop a basic understanding of plant, soil, environment, and climate principles. 2. Become capable in the implementation of strategies, which optimize the profitability, productivity, sustainability, and environmental stewardship as concurrently achievable goals. 3. Communicate effectively using electronic media. 4. Work effectively in a team situation either as leader or participant. 5. Possess and demonstrate high standards of achievement. 6. Able to define a problem (given a situation) identify the resources needed to solve it and their repositories and propose and evaluate different solutions based on the resources of the client. 7. Analyze and interpret simple research data with an understanding of basic statistical principles such as the mean, SE, F ration, LSD, and significance levels. Calculate and interpret a simple ANOVA, linear regression, and correlation. 8. Perform mathematical calculations appropriate to the profession, and interpret graphical and tabular information. Credits: 1.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ASM 54000 - Geographic Information System Application

Credit Hours: 3.00. Fundamentals of GIS analysis applied to environmental, agricultural, and engineering-related problems.

Topics include data sources, spatial analysis; projections; creating data and metadata, and conceptualizing and solving spatial problems using GIS.

Learning Outcomes: 1. Apply fundamental geographic information system concepts for organizing, symbolizing, and visualizing spatial and temporal data. 2. Demonstrate proficiency with spatial data manipulation methods for creating and editing geodatabases, geocoding, and performing geoprocessing operations on spatial data. 3. Apply spatial analysis tools to process vector and raster data for decision-making. 4. Create models to automate GIS workflow and build custom geoprocessing tools. 5. Construct user-friendly dashboards/web apps/StoryMaps for sharing developed solutions. 6. Research publicly available GIS data and use it for the final project or demonstrate Python programming skills to analyze publicly available data. Credits: 3.00

ILS 25000 - Introduction To Geographic Information Systems

Credit Hours: 3.00. Geographic Information Systems (GIS) plays an important role in many disciplines as a tool for data management, query, visualization, and analysis. It can be used for natural resource management, environmental studies, agriculture, as well as social and political studies. This course will introduce students the basic knowledge about GIS, including the fundamental concepts of GIS, data models and management strategies, as well as some basic spatial analysis skills. Practical work will be introduced and completed using Esri ArcGIS Pro software. Permission of department required.

Learning Outcomes: 1. Understand fundamental GIS concepts, data models. 2. Apply basic spatial analysis methods and applications. 3. Apply spatial thinking to solve problems. 4. Create professional maps, web maps, and mobile maps. 5. Apply GIS data skills. Credits: 3.00

13-14 Credits

Spring 3rd Year

AGRY 33700 - Environmental Hydrology

Credit Hours: 3.00. This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Credits: 3.00

FNR 37500 - Human Dimensions Of Natural Resource Management

Credit Hours: 3.00. An introduction to the human dimensions of forestry, wildlife, and recreation; students will learn how values, attitudes, community, and behavior relate to natural resource management and decision-making; various natural resource management stakeholders such as private landowners, natural resource agencies, the judiciary, and environmental and natural resource interest groups will be discussed; course will utilize case studies specific to Indiana and the Midwest; course includes weekly discussions during recitations.

Learning Outcomes: 1. Become familiar with key concepts and theories related to the human dimensions of natural resource management. 2. Become familiar with key methods that can be used to collect and analyze human dimensions data to inform natural resource management and environmental conservation decisions. 3. Identify various social, economic, political, and cultural factors that influence how people (particularly individuals) think about and act towards natural resources and the environment. 4. Identify potential strategies for informing and influencing human behaviors towards a more sustainable future. 5. Examine current natural resource management and conservation approaches/programs from a human-dimensions perspective critically and suggest well-informed alternatives/changes/additions to enhance management and conservation outcomes. Credits: 3.00

SOC 34400 - Environmental Sociology (UCC: BSS)

Credit Hours: 3.00. This course introduces students to the interplay between human societies and environmental problems. The most challenging environmental problems we

face are rooted in human activities. Why do some environmental problems come to be viewed as problems and others do not? How did environmental problems come to be viewed differently by different social groups? How do we motivate the necessary social support to address these problems? Answers to these kinds of questions and others are what we will consider in this class.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Develop students' ability to summarize (in both oral and written form) the key cultural and structural forces that shape how individuals view environmental problems and their solutions. 2. Develop their ability to engage in in-class discussions of the assigned readings in a way that contributes to everyone's understanding of the material. 3. Synthesize what they have learned from over the course to answer a novel question about the society-environment relationship. Credits: 3.00

NRES 33700 - Environmental Hydrology

Credit Hours: 3.00. (AGRY 33700) This course is designed to provide undergraduate students with both the basics of how water moves through the environment and current theories as to how hydrologic response is modified by environmental change at a variety of temporal and spatial scales.

Learning Outcomes: 1. Become familiar with hydrological processes, interactions and their representations over scales from point to ""continental"" and times from seconds to years. The major emphasis is on surface and near surface phenomenon. 2. Gain qualitative and quantitative understanding of land surface water budgets and how they respond to environmental change. 3. Develop problem solving abilities on topics related to surface water hydrology. Credits: 3.00

14-17 Credits

Fall 4th Year

AGEC 40600 - Natural Resource And Environmental Economics

Credit Hours: 3.00. (FNR 40600) Introduction to economic models of renewable and nonrenewable natural resources and the use of these models in the analysis of current resource use and environmental issues.

Learning Outcomes: 1. Define "social efficiency" and "cost-effectiveness" and discuss each concept's caveats in allocating environmental goods. 2. Identify externalities and understand the government's role in addressing them. 3. Apply basic cost-benefit analysis for environmental decision-making. 4. Understand the process of and justification for valuing environmental amenities. 5. Discuss the economic perspective on environmental sustainability. Credits: 3.00

FNR 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape-level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00

NRES 27000 - Landscape-Level Planning

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Credit Hours: 1.00. The main objective of this course is to teach students about natural resources planning with an emphasis on critical skills for developing landscape level management plans. This one credit course uses guest speakers, lectures, in-class activities, group presentations and take-home assignments to facilitate student learning.

Learning Outcomes: 1. Understand the role of

planning in natural resource management. 2. Communicate the importance of landscape level planning. 3. Write the key elements in a natural resource management plan. 4. Understand planning tools such as zoning, conservation easements, and grant funding. 5. Think through how to evaluate a plan. Credits: 1.00 Credits: 1.00

NRES 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Discuss the complexity of involving stakeholders in decisions about landscape management. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

HORT 57200 - Stakeholder Involvement In Landscape Management

Credit Hours: 2.00. Engaging the public in natural resource decision-making is an increasingly important and complex task. This course provides an overview of how to include diverse stakeholders in decision-making, collaboration, and conflict resolution through readings, class discussions, and role-plays.

Learning Outcomes: 1. Demonstrate knowledge of a variety of participatory and facilitation techniques. 2. Understand the factors that make collaborative management successful and unsuccessful. 3. Use proven techniques for resolving conflicts. 4. Demonstrate knowledge of a variety of participatory and facilitation techniques. Credits: 2.00

13-15 Credits

Spring 4th Year

NRES 49700 - Current Topics In Environmental Sciences

Credit Hours: 2.00. This course is part of the NRES capstone experience and helps students examine contemporary environmental issues through the diverse disciplinary lenses they have been exposed to through their NRES coursework.

Learning Outcomes: 1. Explain the issues, facts, and concepts central to contemporary environmental issues. 2. Apply scientific evidence to form ethically-grounded opinions on controversial environmental topics. 3. Assess proposed solutions to environmental problems. Credits: 2.00

12-14 Credits

Neurobiology and Physiology, BS

About the Program

Degree Requirements

Departmental/Program Major Courses (31-37 credits)

Biology Core (19 credits)

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and

metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms.
Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate

skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

BIOL 14503 - First Year Biology Lab: Disease Ecology-Honors

Credit Hours: 2.00. The course will engage students in authentic research and acquiring the necessary skills and concepts to be a successful biology major. Our research topic will be disease ecology in freshwater systems. Disease ecology is a growing field investigating the causes and effects of pathogen transmission and epidemics, primarily in natural populations. We will begin with a series of skill and knowledge-building laboratories, and then transition into student-led research projects that culminate in a presentation of the results in a poster session. Students will learn the fundamentals of disease ecology, basic laboratory techniques, how to perform scientific experiments, and gain experience communicating findings to other scientists and the public.

Learning Outcomes: 1. Perform basic laboratory techniques needed to succeed as a Biology major. 2. Formulate a testable question and hypothesis. 3. Design and conduct a laboratory study to address a research question. 4. Read and critique scientific journal articles. 5. Communicate scientific ideas and results through oral and written formats. Credits: 2.00

BIOL 14505 - First Year Biology Lab: Phages To Folds-Honors

Credit Hours: 2.00. Students will learn how to use bioinformatics to study a gene sequence of their choice from the local SEA-PHAGES program. Students will then use molecular biology and biophysical techniques to characterize their gene product. The goal of each project will be to gain insight into the 3-dimensional fold of each of these mysterious novel phage genes. Students will work in teams but will have their own individual project such that each student will learn the necessary skills to perform scientific experiments starting from the bioinformatics to cloning to purification to structural characterization to communicating their findings to others.

Learning Outcomes: 1. Acquire the fundamental skills and concepts necessary to be successful as a biology major and as a research scientist. 2. Learn how to perform basic laboratory techniques. 3. Learn to work effectively as a team. 4. Design and execute experiments. 5.

Evaluate and interpret data critically, read and discuss research articles, and to disseminate their research in written and oral formats. Credits: 2.00

BIOL 14504 - First Year Lab: Diet Disease And Immune System-Honors

Credit Hours: 2.00. We are what we eat! The food we put into our bodies not only gives us the nutrients, vitamins and minerals we need to live, but it can also influence other ways in which our bodies function, right down to how well our immune system works. The immune system plays a critical role in defending our body from infection, but can also contribute to autoimmune disease when the immune response becomes dysregulated. Importantly, autoimmune disease is currently skyrocketing in countries that consume a "Western Diet" (i.e., high salt, high sugar, low fiber), suggesting that these dietary components, or lack thereof, may contribute to dysregulation of the immune response. CD4+ T cells, a kind of immune cell, play an important role in the immune system as they control the balance between protective immunity and autoimmune disease. Recent evidence indicates a strong correlation between "Western Diet" and dysfunction of this important immune cell type. Therefore, our goal is to examine the effects of these dietary components on CD4+ T cell function and how this might contribute to autoimmune disease. Students will work in teams and cover a distinct subset of microbial or dietary components. As such, each student will learn the necessary skills to perform scientific experiments starting from the literature search, experimental design, carrying out controlled experiments, interpreting results and conveying the results to the greater scientific community.

Learning Outcomes: 1. Learn how to work in a real laboratory setting and acquire useful laboratory skills while learning how to develop a hypothesis, design experiments to test these hypotheses. 2. Learn how to present their findings to their peers and others in a written and oral format. 3. Develop skills to be able to read scientific literature in their topic area and discuss these findings with their peers. Credits: 2.00

Upper-Level Biology Coursework (12-18 Credits)

Intermediate Biology Selective (4 credits)

BIOL 32800 - Principles Of Physiology

Credit Hours: 4.00. This course is designed to provide students with an introduction to physiology with an emphasis on cellular mechanisms that underlie anatomical and physiological adaptations used by animals to survive in their habitat. Topics covered will range from cellular respiration to the physical limits of animal performance as we deconstruct and then reconstruct the body to examine how animals can live in extreme environments. Goals for this course are for students to gain a foundation in basic physiological principles, to learn about the integrative nature of the systems of animals, and to appreciate how and why animals have evolved and strategies to help them survive in their unique environment.

Learning Outcomes: 1. Learn the integrative nature of the functioning of different cells, tissues, organs, and organ systems in maintaining adequate conditions for the proper functioning of vertebrate animals. 2. Learn the detailed mechanisms underlying the function of selected physiological systems from the level of the macromolecules to the system as a whole (ex. Cardiovascular system). 3. Appreciate the conserved nature of the fundamental functioning of cells and systems across many different animals from invertebrates to vertebrates. 4. Gain practical experience with some selected systems in the laboratory. 5. Learn how to design and execute independent experiments and take the results from those experiments and analyze and orally present them to the class. 6. Learn how to work as part of a collaborative team. Credits: 4.00

Neurobiology & Physiology Selectives (6 credits)

BIOL 43600 - Neurobiology

Credit Hours: 3.00. This course will cover key aspects in molecular, cellular, and developmental neurobiology. Topics include: Cell biology of neurons and glia, electrophysiological properties of neurons, electrical and chemical signaling between neurons, synaptic integration and plasticity, development and regeneration of the nervous system, nervous system diseases. Up-to-date research findings and techniques will be included. A basic knowledge of cell biology and protein structure and

function is strongly recommended.

Learning Outcomes: 1. Understand the organization and function of the major cell types of the nervous system. 2. Understand the underlying mechanisms of membrane, local graded and action potentials. 3. Differentiate between electrical and chemical signaling. 4. Explain the steps of nervous system development. 5. Identify major parts of the nervous system and their function. 6. Understand the underlying causes of major nervous system diseases. Credits: 3.00

BIOL 53800 - Molecular, Cellular, And Developmental Neurobiology

Credit Hours: 3.00. Molecular mechanisms of neural cell biology and development are considered. Topics and readings are drawn from the current primary literature. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

BIOL 56200 - Neural Systems

Credit Hours: 3.00. (SLHS 50700, PSY 51200) Overview of the structure and function of neural systems including those involved with motor, somatosensory, visual, auditory, learning, memory, and higher cortical processes. Molecular and cellular aspects of neural function are integrated with discussion of relevant neuroanatomy. Background in cell biology, psychobiology, physiology or anatomy is recommended.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection, and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. Credits: 3.00

BIOL 51099 - Neural Mechanisms In Health And Disease

Credit Hours: 3.00. An examination of the mechanisms by which nervous systems process information in normal and pathologic states. Cellular and systems-level information processing will be studied with a focus on sensory and motor systems. Students will gain some hands-on experience in the analysis of neural data. Some neuroanatomy will be included to understand how nervous systems are organized. Pathological states such as Alzheimer's, autism, and aging will be studied, both in terms of understanding the systems and cellular deficits as well as examining potential solutions to improve the outcomes for these neural disorders.

Learning Outcomes: 1. Describe the organization of the mammalian nervous system, cellular neurophysiology, and neural plasticity. 2. Apply neural information processing principles to determine how external and internal variables drive neural activity and behavior. 3. Design experiments by selecting appropriate techniques and measurements in order to address an experimental question or hypothesis. 4. Analyze and interpret neural data, mainly neurophysiological data, to answer questions about neural coding and with respect to an experimental hypothesis. 5. Develop preliminary therapeutic solutions to neural disorders based on understanding neural mechanisms and devices used to measure or treat these disorders. Credits: 3.00

BIOL 57340 - Neurobiology Of Learning And Memory

Credit Hours: 3.00. How does our brain learn? How are our memories created? We will discuss a range of learning processes from cellular and molecular mechanisms to perception and behavior. We will look at the history of the key concepts and discoveries, including the technological advances, such as optogenetics. Most of the research discussed will be from animal studies.

Learning Outcomes: 1. Describe the cellular, molecular, and circuit-level mechanisms underlying learning and memory. 2. Evaluate

critically primary literature on learning and memory, with a focus on findings from animal models. 3. Demonstrate an understanding of how tools like patch clamp, optogenetics have advanced the study of neural processes related to learning and memory. 4. Relate neural mechanisms to behavioral outcomes, including how learning influences perception and decision-making. 5. Outline the historical progression of major discoveries in the neurobiology of learning and memory. 6. Apply course concepts to different topics in neuroscience, such as the development of therapies for memory-related disorders. Credits: 3.00

Biology Selective (for NRPH) (2-4 credits)

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 36700 - Principles Of Development

Credit Hours: 2.00. This course deals with the process by which genes in a fertilized egg control cell behavior in the embryo and so determine the nature of the animal or plant. The emphasis is on early development and the laying down of body plan and organ systems in various model systems (Drosophila, nematode, Arabidopsis, zebrafish, mouse, chick, and frog).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including

experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students who complete the CMD DS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 7. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. Credits: 2.00

BIOL 41500 - Introduction To Molecular Biology

Credit Hours: 3.00. An introduction to modern molecular biology techniques and how they are used to address current topics in gene regulation. Emphasis will be placed on experimental procedures and model systems, such as site-directed mutagenesis of isolated genes and their subsequent introduction into prokaryotic and eukaryotic cells. Topics will address the molecular control mechanisms associated with DNA replication, RNA transcription, RNA processing, and differential gene expression.

Credits: 3.00

BIOL 41600 - Viruses And Viral Disease

Credit Hours: 3.00. The objective of this course is to provide students with an introductory understanding of viruses and their impact on human health. The course will be divided into two sections. During the first section, we will discuss the cellular and organismal events that occur following virus infection, including viral entry, replication, modulation of cell biology by viral proteins, the host immune response to infection, evasion of the immune response by viruses, and resulting virus-induced disease. The emphasis of this first section will be on the general strategies used by viruses to establish and maintain infection in a population. In the second section, we will discuss in relative detail our current understanding of select important human viruses including influenza, HIV, smallpox, the herpesviruses, and tumor-causing viruses. The objective of this section will be to understand how the unique aspects of each virus's biology affect the outcome of infection with these pathogens. In addition to virus-associated diseases, we will discuss potential ways that viruses may provide symbiotic benefits to their hosts and thereby shape the course of human evolution. Throughout the course, we will emphasize societal and political aspects of virology and virus-derived technologies, including vaccine development, the use of viruses as gene therapy vectors, and the threat of viral bioterror of bio-error.

Credits: 3.00

BIOL 42000 - Eukaryotic Cell Biology

Credit Hours: 3.00. Composition, structure, regulation, and growth of eukaryotic cells.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collections and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Macromolecules: Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in

cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Scope: graduates will understand the chemical and physical principles that govern biochemical and physiological process. 10. Scope: graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 43600 - Neurobiology

Credit Hours: 3.00. This course will cover key aspects in molecular, cellular, and developmental neurobiology. Topics include: Cell biology of neurons and glia, electrophysiological properties of neurons, electrical and chemical signaling between neurons, synaptic integration and plasticity, development and regeneration of the nervous system, nervous system diseases. Up-to-date research findings and techniques will be included. A basic knowledge of cell biology and protein structure and function is strongly recommended.

Learning Outcomes: 1. Understand the organization and function of the major cell types of the nervous system. 2. Understand the underlying mechanisms of membrane, local graded and action potentials. 3. Differentiate between electrical and chemical signaling. 4. Explain the steps of nervous system development. 5. Identify major parts of the nervous system and their function. 6. Understand the underlying causes of major nervous system diseases. Credits: 3.00

BIOL 43800 - General Microbiology

Credit Hours: 3.00. An examination of microbial diversity that emphasizes the interrelationship of bacteria and their environments. This includes aspects of cell composition, metabolism, and growth of microorganisms.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Demonstrate knowledge of the path leading to specific careers in biology. 4. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 5. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 6. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 7. Able to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 8. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 9. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 3.00

BIOL 44400 - Human Medical Genetics

Credit Hours: 3.00. An intermediate-level survey course of human genetics with a balanced review of both Mendelian and

molecular aspects. Review of current development and application of DNA technology emphasized.

Learning Outcomes: 1. Describe the basic principles of human genetics in the context of human diseases. 2. Acquire the capability to comprehend and learn new discoveries in human medical genetics. 3. Develop a foundation to analyze social and ethical consequences of the advancement in human medical genetics. 4. Acquire the basic knowledge in human medical genetics to succeed in professional or graduate degrees in the medical fields. Credits: 3.00

BIOL 44600 - Molecular Bacterial Pathogenesis

Credit Hours: 3.00. This course will focus on the interface of classical cell biology and microbiology, with emphasis on the exploitation of mammalian host cell by medically relevant pathogens, such as Yersinia, Salmonella, and Listeria. This course will cover the molecular mechanisms of infectious diseases. It will introduce modern cellular microbial strategies for studying the complex interaction between pathogens and their host cells. Topics and readings will be prepared from the most current literature.

Credits: 3.00

BIOL 47800 - Introduction To Bioinformatics

Credit Hours: 3.00. (CS 47800) Bioinformatics is broadly defined as the study of molecular biological information, targeting particularly the enormous volume of DNA sequence and functional complexity embedded in entire genomes. Topics will include understanding the evolutionary organization of genes (genomics), the structure and function of gene products (proteomics), and the dynamics of gene expression in biological processes (transcriptomics). Inherently, bioinformatics is interdisciplinary, melding various applications of computational science with biology. This jointly taught course introduces analytical methods from biology, statistics and computer science that are necessary for bioinformatics investigations. The course is intended for junior and senior undergraduates from various science backgrounds. Our objective is to develop the skills of both tool users and tool designers in this important new field of research.

Learning Outcomes: 1. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 2. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 4. Demonstrate knowledge of the path leading to specific careers in biology. 5. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 6. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 7. Demonstrate an understanding of laboratory skills used in genetics. 8. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 9. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. Credits: 3.00

BIOL 48100 - Eukaryotic Genetics

Credit Hours: 3.00. This course presents the fundamental concepts of classical and modern molecular genetics in eukaryotic systems, using examples from the model genetic organisms, yeast, Drosophila, Caenorhabditis, Arabidopsis, maize, mice and humans. These concepts are applied to solving problems of genetic analysis. Recent advances in developmental, cancer, and behavioral genetics and genomics, and applications of genetic technology, are used to demonstrate the impact that modern genetics makes at the cutting edge of biological research.

Credits: 3.00

BIOL 48300 - Great Issues: Environmental And Conservation Biology

Credit Hours: 3.00. Concerned with the application of ecological principles to environmental issues, the course introduces

fundamental ecology, emphasizing the interplay of theoretical models, natural history, and experimentation. New research developments are stressed, with the outlook for application to environmental management and restoration. Whole-biosphere issues, such as the loss of biological diversity, frame a focus at the population level to understand local and global extinction and community stability. In-depth case studies of endangered ecosystems (both temperate and tropical), with computer modeling, field trips, and discussions of policy formulation, demonstrate the range of tools and information necessary to accomplish coexistence of humans with the rest of nature.

Credits: 3.00

BIOL 51600 - Molecular Biology Of Cancer

Credit Hours: 3.00. A detailed course examining the molecular mechanisms controlling the growth of animal cells. Emphasis will be placed on current experimental approaches to defining the molecular basis of growth regulation in developing systems and the uncontrolled proliferation of cells in metabolic disorders, such as cancer.

Credits: 3.00

BIOL 51700 - Molecular Biology: Proteins

Credit Hours: 2.00. Principles of protein three-dimensional architecture. The molecular and structural basis of protein folding, function, and evolution.

Credits: 2.00

BIOL 53300 - Medical Microbiology

Credit Hours: 3.00. Host-parasite relationships. Immunology. Bacteria and viruses associated with infectious diseases.

Credits: 3.00

BIOL 53700 - Immunobiology

Credit Hours: 3.00. Readings and discussion in the structural, cellular, and genetic basis of the immune response. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

BIOL 53800 - Molecular, Cellular, And Developmental Neurobiology

Credit Hours: 3.00. Molecular mechanisms of neural cell biology and development are considered. Topics and readings are drawn from the current primary literature. BIOL 42000 recommended as a prerequisite.

Credits: 3.00

BIOL 56200 - Neural Systems

Credit Hours: 3.00. (SLHS 50700, PSY 51200) Overview of the structure and function of neural systems including those involved with motor, somatosensory, visual, auditory, learning, memory, and higher cortical processes. Molecular and cellular aspects of neural function are integrated with discussion of relevant neuroanatomy. Background in cell biology, psychobiology, physiology or anatomy is recommended.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection, and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. Credits: 3.00

BIOL 58000 - Evolution

Credit Hours: 3.00. A study of evolution as a basic concept of the biological sciences; an examination of current methods of experimentation within the area, as well as evidences for the possible mechanisms of evolutionary change.

Credits: 3.00

BIOL 58705 - Animal Communication

Credit Hours: 3.00. This course will be a broad-scaled analysis of animal communication. Topics will include the physics of sound- and light-signal production, propagation and reception of signals, the use of communication as a means of information transfer, and the evolution of signaling systems. Mathematical principles are covered (e.g. in the evolution of signals), so some background in mathematics (e.g. calculus or algebra and introductory physics) is helpful.

Learning Outcomes: 1. Understand ways in which organisms interact ecologically with each other and their environment. 2. Understand how

evolutionary forces influence organisms to produce adaptations. 3. Acquire knowledge of the ways in which animals communicate with each other. 4. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 5. Familiar with taxonomic and phylogenetic relationships among organisms. 6. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 7. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design, collect data, statistically analyze data, and interpret results. 8. Demonstrate an in dept knowledge of nervous system function at the systems, cellular and molecular level. Credits: 3.00

BIOL 59200 - The Evolution Of Behavior

Credit Hours: 3.00. An investigation of behaviors as adaptations: specializations of sensory and motor mechanisms involved in behavior; animal communication systems; behavioral ecology; patterns of social behavior as solutions to ecological problems, such as predator avoidance and resource exploitation. Emphasis will be on theoretical principles; examples will be broadly comparative, ranging from microorganisms to mammals. Offered in alternate years.

Credits: 3.00

BIOL 56310 - Protein Bioinformatics

Credit Hours: 3.00. Accumulation of biological data, such as genome sequences, protein structures and sequences, metabolic pathways, opened up a new way of research in biology-bioinformatics. Through the survey of the various active research topics in bioinformatics, in this course we will learn bioinformatics databases, tools, and algorithms behind these tools. Special emphasis is placed on protein sequence and structure analyses. Covered topics will include methods for protein sequence comparison, protein structure comparison, protein structure prediction/modeling, protein docking prediction, protein function prediction, and protein network analysis.

Learning Outcomes: 1. Utilize biological database searches including protein and nucleotide sequences, motifs, and structures, and interpret results in statistically correct fashion. 2. Develop bioinformatics analysis pipeline that apply a series of appropriate bioinformatics tools with proper setting for predicting protein function and structures and interpret results correctly by knowing algorithms, strengths, and limitations of the tools used. 3. Construct the tertiary structure models of protein and protein complexes with appropriate software and predict the accuracy of the models built. 4. Apply functional analysis of gene networks and compute the statistical significance of results. 5. Discuss appropriateness of bioinformatics analyses in biology literature and propose alternative approaches that may work better than ones used in the literature. Credits: 3.00

BIOL 58210 - Ecological Statistics

Credit Hours: 3.00. This course covers topics that are useful for successfully designing and analyzing statistically observational and experimental studies in ecology, animal behavior, evolutionary biology, forestry, wildlife sciences, fisheries, etc. Some topics are: differences between hypotheses and predictions, design of an ecological study, general linear models, assumptions, different types of designs (factorial, nested, repeated measures, blocks, split-plots, etc.), fitting models to data, etc. The course will focus on the conceptual understanding of these topics (e.g., interpreting the results of statistical tests) and practice with statistical programs and real datasets.

Learning Outcomes: 1. Pose scientific questions, hypotheses, and predictions. 2. Plan and design ecological research projects. 3. Determine sample size requirements. 4. Use and interpret descriptive statistics. 5. Use general linear models and interpret their results. 6. Check for the assumptions of general linear models. 7. Manage data. 8. Understand the potential and limitations of statistics in ecological research. Credits: 3.00

BIOL 53601 - Biological And Structural Aspects Of Drug Design And Action

Credit Hours: 3.00. (BCHM 53600) This course is aimed at expanding students' fundamental interests in biology, chemistry

and biochemistry to how drugs work. The course will provide an overview of the modern day drug discovery pipeline and an in-depth look at the basic biology, structure, and mechanisms-of-action behind marketed therapeutics. The course will start with a historical account of the discovery of natural product drugs such as aspirin and penicillin and will then venture into the modern day era of drug discovery including structure-based drug design. We will explore different classes of antibiotics, antiviral, and anti-cancer drugs and their targets including small molecule drugs and modern biologics-based drugs.

Learning Outcomes: 1. Understand and communicate the site and mechanism-of-action of a drug. 2. Understand and communicate the relationship between the pharmacologic mechanism and the therapeutic use of a drug. 3. Understand and communicate the scientific basis for the therapeutic use of a drug. 4. Predict, verbally or in writing, the biological response, if any, from a given chemical structure. 5. Understand and communicate the relationship between the structural features of a compound and the physicochemical properties that might influence biological response or the design of new agents. 6. Predict, verbally or in writing, the biochemical mechanism-of-action of a biologically active substrate or compound from its chemical structure. 7. Communicate and describe the relationship between the chemical structure of a biologically active compound and the receptor or active binding site, using enzyme or receptor models. 8. Predict, verbally or in writing, the biological response resulting from the chemical alteration or biochemical pathways. 9. Discuss the relationship between in vitro reaction mechanisms and the structural features that alter the in vivo biotransformation of a drug. 10. Understand and communicate the pathophysiologic processes associated with a particular disease state, and how they might be affected by drug therapy. Credits: 3.00

BCHM 43400 - Medical Topics In Biochemistry

Credit Hours: 3.00. This course applies the principles of biochemistry and metabolic regulation to understand the diagnosis and treatment of human disease. The course emphasizes the biochemistry relevant to diabetes, blood disorders and the medical consequences of liver disease and aging. Roughly half of the class time is focused on small group activities including team-based learning and problem-based learning using patient cases. Students will search authoritative sources to discover links between biochemistry and clinical symptoms and communicate that information to their peers.

Learning Outcomes: 1. Understand mechanisms that regulate metabolic pathways within individual cells, tissues and organ systems in healthy and disease patients. 2. Predict biochemical and clinical effects given specific defects in a pathway. 3. Appreciate ethical issues facing life science professionals who perform research involving humans or human tissues. 4. Communicate scientific knowledge effectively to non-scientists. Credits: 3.00

BCHM 52100 - Comparative Genomics

Credit Hours: 3.00. The course provides an understanding of the forces that act on genome content and organization, and the ability to interpret genetic variation between genomes. Students will acquire skills to utilize public genome databases, visualize genomic regions/features of interest using a genome browser, and perform phylogenetic analysis. The knowledge gained is central within the fields of genetics, bioinformatics, microbiology, and evolutionary biology and have important applications in numerous related fields including medicine, biotechnology, agriculture, and ecology.

Learning Outcomes: 1. Understand the composition, organization and structure of genomes. 2. Understand processes that cause these genome features to change over time. 3. Interpret gene and genome information in common display formats. 4. Evaluate common methods used to interpret genetic variation between genomes. 5. Perform, present and discuss a research project in comparative genomics. Credits: 3.00

BIOL 32101 - Experimental Design And Quantitative Analysis Honors

Credit Hours: 3.00. This course is aimed at preparing students in experimental design and quantitative analysis specifically as

applied to Life Sciences in order to read the scientific literature critically, generate scientific questions, hypotheses and predictions, design research studies, analyze the data statistically, and communicate results. The course will use R and RStudio, which are open-source platforms that are increasingly used in the scientific community to analyze data quantitatively.

Learning Outcomes: 1. Understand the logic behind the scientific method in Life Sciences. 2. Be able to pose research questions, hypotheses, and predictions. 3. Understand the benefits and limitations of statistical testing. 4. Design a research study following experimental design principles. 5. Understand and critically assess data collection. 6. Interpret and visualize the results of statistical tests. 7. Communicate and present quantitative results effectively (i.e., writing the Results section of a scientific paper). 8. Run statistical analyses and generate publication quality figures in R. Credits: 3.00

BIOL 38700 - Macromolecules

Credit Hours: 2.00. The goal is to expose students to the world of macromolecules, their physicochemical properties, the influence of these properties on function and structure, and how these properties are determined and exploited. Permission of department required.

Learning Outcomes: 1. Describe the types of macromolecules. 2. Describe the biophysical and biochemical properties of macromolecules. 3. Describe how biophysical and biochemical properties are determined. 4. Describe how these physicochemical properties are exploited in various biotechniques. Credits: 2.00

BIOL 51099 - Neural Mechanisms In Health And Disease

Credit Hours: 3.00. An examination of the mechanisms by which nervous systems process information in normal and pathologic states. Cellular and systems-level information processing will be studied with a focus on sensory and motor systems. Students will gain some hands-on experience in the analysis of neural data. Some neuroanatomy will be included to understand how nervous systems are organized. Pathological states such as Alzheimer's, autism, and aging will be studied, both in terms of understanding the systems and cellular deficits as well as examining potential solutions to improve the outcomes for these neural disorders.

Learning Outcomes: 1. Describe the organization of the mammalian nervous system, cellular neurophysiology, and neural plasticity. 2. Apply neural information processing principles to determine how external and internal variables drive neural activity and behavior. 3. Design experiments by selecting appropriate techniques and measurements in order to address an experimental question or hypothesis. 4. Analyze and interpret neural data, mainly neurophysiological data, to answer questions about neural coding and with respect to an experimental hypothesis. 5. Develop preliminary therapeutic solutions to neural disorders based on understanding neural mechanisms and devices used to measure or treat these disorders. Credits: 3.00

BIOL 52905 - Disease Ecology

Credit Hours: 3.00. Study of the ecological and evolutionary complexity inherent to host-pathogen interactions. Includes case studies from a diverse array of systems, including plants, animals, aquatic and terrestrial systems. Emphasis is on the interactions between multiple hosts and pathogens within complex, dynamic environments. Introduction to parasite and pathogen diversity, host-pathogen coevolution, community ecology and the importance of pathogens in conservation and management.

Learning Outcomes: 1. Evaluate the roles played by the diversity of parasites and pathogens found in complex natural systems. 2. Apply the foundational principles of disease ecology - the importance of hosts, pathogens and the environment in disease dynamics - to understand disease dynamics in natural systems. 3. Evaluate the strengths and weaknesses of different modeling approaches in disease ecology. 4. Understand how disease models are used in management and conservation. 5. Apply both ecological and evolutionary theory to examine the impact of infectious disease on host populations, communities and ecosystems. 6. Demonstrate

an understanding of patterns in pathogen diversity and abundance across landscape to regional scales. 7. Articulate understanding of disease ecology through written and oral communication. 8. Demonstrate an understanding of the scientific literature and an ability to critically evaluate this research for an interdisciplinary topic. Credits: 3.00

BIOL 55101 - Theory Of Molecular Methods

Credit Hours: 3.00. This course will introduce upper-level undergraduate students and graduate students to the theory and practice of many commonly used molecular biology methods. Emphasis will be placed on understanding the theoretical basis for these techniques, their utility in various circumstances, and their limitations. Although taught as a lecture, students should be able to take this knowledge back to the laboratory to help them in their research efforts. The course will be as close as possible to a laboratory experience without being in an actual laboratory setting. This course is designed to prepare students for other in-depth scientific courses, for graduate rotations, and for future laboratory work. Exams will be experimental in nature (e.g., design an experiment to do something or in this type of situation, which technique/vector/etc. would best be used, and why). Permission of instructor required.

Learning Outcomes: 1. Have knowledge about the uses and limitations of various molecular biology techniques. 2. Understand the techniques and how to choose the best technique for a given circumstance. 3. Understand how to interpret the experimental results emanating from each technique. Credits: 3.00

BIOL 58601 - Ecology

Credit Hours: 3.00. This is an advanced ecology course that examines the ecological process and dynamics of populations, communities, and ecosystems. Topics include the physical, physiological, behavioral, and population genetic factors that influence how organisms interact with one another and their environment, the nature of population growth, and attributes of community structure. Course material integrates case studies from field and laboratory experiments, simulations, and theoretical models to understand life histories, species interactions, and community and ecosystem processes.

Learning Outcomes: 1. Apply ecological principles to interpret patterns of abundance and distribution of organisms in natural systems. 2. Use conceptual and mathematical models to predict the dynamics of populations and communities. 3. Critically evaluate the experimental design and data interpretation of ecological studies in the published literature. 4. Communicate scientific ideas and results through discussions and written assignments. Credits: 3.00

BIOL 51202 - Methods And Measures In Biophysical Chemistry

Credit Hours: 3.00. Biological applications of physical methods including absorption spectroscopy (UV-Vis, FTIR and Raman and CD spectroscopy), fluorescence spectroscopy and super high-resolution imaging, spin resonance methods (NMR and ESR spectroscopy), mass and thermodynamic based methods (thermophoresis, analytical ultracentrifugation, ITC and surface plasmon resonance) and diffraction/structural methods using NMR, cryo-EM and X-ray scattering/crystallography. Each topic is treated at an introductory level with examples from the literature. The course objective for students is to obtain a general understanding of the physical principles underlying each of the techniques, as well as the basic ability to apply the technique to biological systems of interest.

Learning Outcomes: 1. Understand basic biophysical principles and the biophysical approach to research. 2. Interpret biophysical data from real experimental examples in the literature. 3. Develop presentation skills. 4. Practice Team Cooperation. 5. Demonstrate an understanding of biophysical methods and how these are used in modern biological experiments. Credits: 3.00

BIOL 51606 - Pathways In Human Health And Disease

Credit Hours: 3.00. This course is intended for both upper-level undergraduate and graduate students. It will cover major intracellular signaling pathways in eukaryotes and their roles in human disease, with an emphasis on cancer but also touching on other major modern diseases such as COVID-19. We will explore avenues being pursued to target signaling mechanisms for therapeutic benefit. Topics include G protein-coupled receptors, receptor tyrosine kinases, nuclear hormone receptors, protein kinases and phosphatases, mTOR, the Wnt/β-catenin pathway, cell cycle control, DNA damage checkpoint control, regulated proteolysis, and programmed cell death. The course will be taught from current primary literature using a textbook as a background resource. Students will learn

how to read and interpret scientific data through regular lectures, extramural seminars, in-class presentations, and take-home assignments.

Learning Outcomes: 1. Identify common molecular mechanisms in major signal transduction pathways. 2. Understand methods commonly used to analyze signal transduction processes. 3. Appreciate how protein domains within signaling proteins impart selectivity by building up signaling pathways via protein protein-interactions. 4. Evaluate and critique data in the scientific literature or in lectures in the signal transduction/cell cycle fields. 5. Exhibit improved oral and written communication skills in the area of signal transduction research. Credits: 3.00

BIOL 51101 - Intro To X-Ray Crystallography

Credit Hours: 3.00. This course will provide an introduction to structure determination of macromolecules using X-ray crystallography and will attempt to balance theory and practice, consisting of ~60% lectures and ~40% lab modules. The course is divided into five 3-week modules covering (i) Crystallization, (ii) Data Collection, (iii) Molecular Replacement, (iv) Experimental Phasing, and (v) Model Building and Refinement, Validation, and Visualization. The goal of the course is to equip students with the necessary tools to develop and execute an X-ray crystallography project, starting from construct design to publication. By the end of the course, students should be familiar with the (i) structure determination pipeline, (ii) theory behind X-ray diffraction methods, (iii) methods for crystallization, (iv) phasing options for solving a crystal structure, and (v) contemporary crystallography software.

Learning Outcomes: 1. Learn the theory behind X-ray crystallography. 2. Learn how to use contemporary software that is used to solve structures and what that software are doing. 3. Gain hands-on experience in crystallization and handling crystals for data collection. 4. Gain hands-on experience collection data remotely from a synchrotron source and at a home source X-ray instrument. 5. Learn how to determine a structure using either molecular replacement and/or experimental phasing; and will learn how to prepare their results for a publication and deposition. Credits: 3.00

BIOL 41919 - Data Science For Biologists

Credit Hours: 3.00. All of us are drawn to real-world biological questions. Nevertheless, we might underestimate the hidden demand for computing skills to conduct the actual research. By nature, biological data is versatile, vast, complex, and noisy. Therefore, customized scripts are often needed for data processing, analyses, and visualization. Tools for data management and version control function as virtual lab books to ensure that the studies are 100% reproducible. This course is designed to equip students with practical programming skills via an array of biological case studies. Through hands-on computer labs, students will learn how to translate a biological question into logical thinking and write good code in R, perform scientific computing and visualization in R, and manage projects in an organized fashion. Permission from the department is required.

Learning Outcomes: 1. Understand basic computer programming knowledge and skills. 2. Manage and analyze common types of biological data. 3. Conduct reproducible research. 4. Perform data visualization in R, and design and test a hypothesis with a data-driven approach using provided datasets. Credits: 3.00

BIOL 57340 - Neurobiology Of Learning And Memory

Credit Hours: 3.00. How does our brain learn? How are our memories created? We will discuss a range of learning processes from cellular and molecular mechanisms to perception and behavior. We will look at the history of the key concepts and discoveries, including the technological advances, such as optogenetics. Most of the research discussed will be from animal studies.

Learning Outcomes: 1. Describe the cellular, molecular, and circuit-level mechanisms underlying learning and memory. 2. Evaluate critically primary literature on learning and memory, with a focus on findings from animal models. 3. Demonstrate an understanding of how tools like patch clamp, optogenetics have advanced the study of neural processes related to learning and memory. 4. Relate neural mechanisms to behavioral outcomes, including how learning influences perception and decision-making. 5. Outline the historical progression of major discoveries in the neurobiology of learning and memory. 6. Apply

course concepts to different topics in neuroscience, such as the development of therapies for memory-related disorders. Credits: 3.00

BIOL 58215 - Building The Tree Of Life: Phylogenetic Methods And Applications

Credit Hours: 3.00. The Tree of Life represents Earth's biodiversity and its history and forms the basis of all biological knowledge. Phylogenetic methods allow us to reconstruct the Tree of Life and infer the evolutionary history and relationships of genes and organisms. This knowledge, in turn, can be used to address questions of organismal classification, biogeography, community assembly, and macroevolution. This jointly taught course introduces tree thinking and its underlying algorithms of inferring phylogenies, with an emphasis on the various applications of phylogenetic methods to such topics as those listed above. Through a combination of lectures, computer labs, and discussion of primary literature, the course will provide hands-on experience with commonly used tools and their applications in research for senior undergraduate and graduate students from relevant science backgrounds. Permission from department is required.

Learning Outcomes: 1. Build and visualize phylogenetic trees with commonly used scientific software. 2. Conduct scientific analyses using phylogenetic methods in R, ask testable scientific questions. 3. Perform data mining of phylogenetic resources and utilize the phylogenetic tools to address scientific questions. Credits: 3.00

Base Lab Requirement (0-4 credits)

Other Departmental Requirements: (51-73 credits)

Chemistry (17 credits)

General Chemistry (5 credits)

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

Organic Chemistry (8 credits)

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

Biochemistry (4 credits)

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of

space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

College of Science Additional Requirements

Computing (2-4 credits)

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team

to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

CS 17700 - Programming With Multimedia Objects

Credit Hours: 4.00. Introduction to computers and programming: number representations, primitive data types and operations, basic control structures, programming applets and applications using graphical user interfaces, programming for detecting events and performing actions, processing multimedia objects such as images and sounds. Throughout the course, examples are drawn from a variety of fields in the natural sciences. Not open to CS majors with a grade of C or better in CS 18000 . Not open to non-CS majors with a grade of C or better in any course in computer programming.

Credits: 4.00

CS 18000 - Problem Solving And Object-Oriented Programming

Credit Hours: 4.00. Problem solving and algorithms, implementation of algorithms in a high level programming language, conditionals, the iterative approach and debugging, collections of data, searching and sorting, solving problems by decomposition, the object-oriented approach, subclasses of existing classes, handling exceptions that occur when the program is running, graphical user interfaces (GUIs), data stored in files, abstract data types, a glimpse at topics from other CS courses. Intended primarily for students majoring in computer sciences. Credit cannot be obtained for both CS 18000 and any of 15600, 15800 and 15900. Not open to students with credit in CS 24000.

Learning Outcomes: 1. Understand solving problems by analyzing the problem, designing an algorithm, and programming the solution. Credits: 4.00

TDM 10100 - The Data Mine Seminar I (UCC: IL)

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

TDM 10200 - The Data Mine Seminar II

Credit Hours: 1.00. The Data Mine is a supportive environment for students in any major from any background who want to learn some data science skills. Students will gain hands-on experience with computational tools for representing, extracting, manipulating, interpreting, transforming, and visualizing data, especially big data sets, and in effectively communicating insights about data. Topics include: the R environment, Python, visualizing data, UNIX, bash, regular expressions, SQL, XML and scraping data from the internet, as well as selected advanced topics, as time permits.

Learning Outcomes: 1. Discover data science and professional development opportunities in order to prepare for a career. 2. Explain the difference between research computing and basic personal computing data science capabilities in order to know which system is appropriate for a data science project. 3. Design efficient search strategies in order to acquire new data science skills. 4. Devise the most appropriate data science strategy in order to answer a research question. 5. Apply data science techniques in order to answer a research question about a big data set. Credits: 1.00

CS 17600 - Data Engineering In Python

Credit Hours: 3.00. The course introduces students to

programming fundamentals in Python, including loops, functions and different data types, and provides an introduction to data engineering including working with common data formats and learning the basics of data wrangling. Students will format, extract, clean, filter, transform, search, combine, summarize, aggregate, and visualize a diverse range of data sets. Python libraries including Matplotlib and Pandas are used.

Learning Outcomes: 1. Write Python code using loops, decision statements, and functions. 2. Explain how arguments are passed in Python functions and how the scope of variables impacts execution. 3. Use the operations on lists, tuples, and dictionaries to perform appropriate data manipulations. 4. Using Matplotlib, create informative plots and other data visualizations. Explain the key qualities of good visualizations. 5. Creating and manipulating DataFrames using Pandas. 6. Create Python code as well as methods in Pandas to select, search, change, and summarize data in tables. 7. Explain how to identify and fill in missing values in data. 8. Apply Pandas functions combine and merge datasets, perform a range of data aggregations, groupings and cross tabulations. 9. Given multiple data sets, demonstrate how to summarize, transform, combine the data sets, and aggregate and visualize the resulting data set. Credits: 3.00

Laboratory Science (8 credits)

Physics I

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

Physics II

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits,

thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

Mathematics (6-10 credits)

Calculus I

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 .

Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

Calculus II

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits:

5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

Statistics (3 credits)

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

Electives (10-37 credits)

GPA Requirements

Course Requirements and Notes

Sample 4-Year Plan

Fall 1st Year

BIOL 12100 - Biology I: Diversity, Ecology, And Behavior (UCC: SCI/STS)

Credit Hours: 2.00. Creates a framework for ordering biology by examining the unity and diversity of life on earth with an emphasis on ecology, genetics, population biology, evolution, and behavior.

University Core Curriculum (UCC): (UCC: SCI/STS) Credits: 2.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

CHM 12901 - General Chemistry With A Biological Focus (UCC: SCI)

Credit Hours: 5.00. An accelerated and comprehensive one-semester general chemistry course that emphasizes principles that are important in biological systems. This course is designed to cover the essential elements of general chemistry traditionally

covered in a two semester series. Topics to be covered include: Stoichiometry and chemical equations; atomic theory and structure; periodic properties; electronegativity; ionic and covalent bonding; non-covalent forces; bond energies; Lewis structures; molecular geometry; gases, liquids, and solids; solutions, quantitative equilibria in aqueous solution; acid/base chemistry and buffers; introductory thermodynamics; oxidation-reduction; electrochemical and membrane potential; colligative properties; chemical and enzyme kinetics; nuclear chemistry; coordination chemistry. One year of high school chemistry is required.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Develop an understanding of universal physical laws as they apply in chemistry. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data and to make quantitative/structural measurements and interpret results. Credits: 5.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

MA 16500 - Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 4.00. Introduction to differential and integral calculus of one variable, with applications. Conic sections. Designed for students who have had at least a one-semester calculus course in high school, with a grade of "A" or "B", but are not qualified to enter MA 16200 or MA 16600 or the advanced placement courses MA 17300 or the honors calculus course MA 18100. Demonstrated competence in college algebra and trigonometry. CTL:IMA 1602 Calculus - Long I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems. 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions. Credits: 4.00

16-19 Credits

Spring 1st Year

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16200 - Plane Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 5.00. Continuation of MA 16100 . Vectors in two and three dimensions, techniques of integration, infinite series, conic sections, polar coordinates, surfaces in three dimensions. Some schools or departments may allow only 4 credit hours toward graduation for this course.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of

homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 5.00

MA 16600 - Analytic Geometry And Calculus II (UCC: QR)

Credit Hours: 4.00. Continuation of MA 16500 . Vectors in two and three dimensions. Techniques of integration, infinite series, polar coordinates, surfaces in three dimensions. Not open to students with credit in MA 16200 . CTL:IMA 1603 Calculus - Long II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Apply techniques of integration (integration by parts, trigonometric substitution and partial fractions) to compute areas of planar regions, volumes of solids of revolution and areas of surfaces of revolution, work, moments and centers of mass of homogeneous laminas. 2. Apply tests of absolute convergence of series to find the interval of convergence of some power series. 3. Find the Taylor and Maclaurin series of some exponential, rational and trigonometric functions. 4. Use polar coordinates to make it possible to sketch the graphs of some curves. 5. Understand the definition of a Riemann sum, and should be able to apply elementary approximation methods of integration. Credits: 4.00

16-20 Credits

Fall 2nd Year

COM 21700 - Science Writing And Presentation (UCC: OC)

Credit Hours: 3.00. Students learn to effectively communicate scientific and technical information both verbally and in writing to a variety of audiences.

University Core Curriculum (UCC): (UCC: OC)
Learning Outcomes: Will update at a later date.
Credits: 3.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9.

Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

15-16 Credits

Spring 2nd Year

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of

multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms.
Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

BIOL 28600 - Introduction To Ecology And Evolution

Credit Hours: 2.00. Evolutionary processes and ecological principles associated with individuals, populations, communities, and ecosystems. Topics include genetic drift, natural selection, adaptation, life tables, population dynamics, competition, predation, biodiversity, and ecological stability, with emphasis on natural systems.

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Demonstrate knowledge of the path leading to specific careers in biology. 6. Understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Understand the principles of how energy is obtained, stored and used in biological processes.8. Understand the chemical and physical principles that govern biochemical and physiological processes.9. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability.10. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels.11. Demonstrate subject-matter competency, including the mastery of biological theories.12. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.13. Demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.14. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.15. Demonstrate knowledge of the path leading to specific careers in biology.16. Demonstrate subject-matter competency, including the mastery of biological theories.17. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science.18. Demonstrate the ability to discuss ethical issues in the application of

biological sciences, and the impact of science on society.19. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way.20. Demonstrate knowledge of the path leading to specific careers in biology.21. Understand ways in which organisms interact ecologically with each other and their environment. 22. Understand how evolutionary forces influence organisms to produce adaptations. 23. Acquire knowledge of the ways in which animals communicate with each other. 24. Exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 25. Exhibit proficiency in population and quantitative genetics. 26. Be familiar with taxonomic and phylogenetic relationships among organisms. 27. Extend basic ecological principles to species and ecosystem conservation. 28. Experience working with organisms in natural settings. 29. Learn to efficiently communicate scientific information or results from biological investigations using both oral and written methods. 30. Use and understand the scientific method, including how to generate hypotheses and predictions, develop an experimental design. Credits: 2.00

CHM 33900 - Biochemistry: A Molecular Approach

Credit Hours: 3.00. This is a comprehensive one-semester biochemistry course that emphasizes molecules and molecular reaction mechanisms, building upon the principles conveyed in general chemistry and organic chemistry. This course is designed to cover the essential elements of biochemistry traditionally covered in a two semester series. Topics to be covered include: Amino acids, peptides and proteins, molecular models and structure-function relationships, enzymes, enzyme kinetics and enzyme mechanisms, carbohydrates and carbohydrate metabolism, aerobic metabolism, lipids and membranes, lipid metabolism, nitrogen metabolism and integration and regulation of metabolism. Special emphasis will be placed on connections between biochemical principles and the fields of medicine, human health and disease, nutrition and biotechnology. This course should serve as excellent preparation for higher-level biochemistry courses as well as standardized pre-health professional exams. CHM 33900 was designed as the 4lh semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, this course is open to other students who meet the prerequisites. Learning Outcomes: 1. Demonstrate the ability to think as a scientist. 2. Demonstrate the ability to communicate well in writing. 3. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 4. Employ knowledge of the general components of prokaryotic and eukaryotic cells, such as molecular, microscopic, macroscopic, and three-dimensional structure, to explain how different components contribute to cellular and organismal function. 5. Demonstrate knowledge of how biomolecules contribute to the structure and function of cells.. 6. Demonstrate knowledge of molecular interactions and their importance in biological systems. 7. Demonstrate knowledge of the principles of chemical thermodynamics and kinetics that drive biological processes in the context of space (i.e., compartmentation) and time: enzyme-catalyzed reactions and metabolic pathways, regulation, integration, and the chemical logic of sequential reaction steps. 8. Recognize major types of functional groups and chemical reactions that occur in biological systems. 9. Apply understanding of the concepts of chemical reactivity and chemical kinetics to predict biochemical processes. 10. Apply knowledge of the chemistry of covalent carbon compounds to explain the molecular mechanisms of biochemical enzyme reactions. 11. Demonstrate knowledge of thermodynamic criteria for spontaneity of physical processes and chemical reactions and the relationship of thermodynamics to chemical equilibrium as they

apply to biological systems. 12. Explain maintenance of homeostasis in living organisms by using principles of mass transport, energy balance, and feedback and control systems. Credits: 3.00

CHM 33901 - Biochemistry Laboratory

Credit Hours: 1.00. CHM 33901 is a laboratory course based on two modules from the Undergraduate Research Inspired Experimental Chemistry Alternatives (URIECA) developed at MIT that are designed to introduce students to cutting-edge research topics in biochemistry. The course provides students with a research-inspired laboratory experience that introduces standard biochemical techniques in the context of investigating a current research topic, for example, acquired resistance to cancer drugs. Techniques include protein expression, purification, and gel analysis, PCR, site-directed mutagenesis, kinase activity assays, and protein structure viewing. CHM 33901 was designed as the 4th semester of the 1-2-1 competency-based curriculum transformation in chemistry as it applies to pre-health professional and life science students at Purdue. However, the course is open to other students who meet the prerequisites.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Develop an understanding of the scientific process. 3. Develop the ability to document scientific information and experimental data. 4. Demonstrate understanding of the process of scientific inquiry, and explain how scientific knowledge is discovered and validated. 5. Develop observational and interpretive skills through hands-on laboratory or field. 6. Demonstrate ability to measure with precision, accuracy, and safety. 7. Operate basic biochemistry laboratory instrumentation for scientific measurement. 8. Articulate scientific questions and hypotheses, design experiments, acquire data, perform data analysis, and present results in project-based research. 9. Apply knowledge of basic principles of chemistry and their applications to the understanding of biological systems. 10. Make quantitative/structural measurements and interpret results. 11. Demonstrate the ability to work on a team. 12. Demonstrate the ability to communicate well, both orally and in writing. Credits: 1.00

14 Credits

Fall 3rd Year

PHYS 17200 - Modern Mechanics (UCC: SCI)

Credit Hours: 4.00. Introductory calculus-based physics course using fundamental interactions between atoms to describe Newtonian mechanics, conservation laws, energy quantization, entropy, the kinetic theory of gases, and related topics in mechanics and thermodynamics. Emphasis is on using only a few fundamental principles to describe physical phenomena extending from nuclei to galaxies. 3-D graphical simulations and numerical problem solving by computer are employed by the student from the very beginning. CTL:IPS 1753 Calculus-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in mechanics and thermodynamics using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to mechanics and thermodynamics. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described

in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

13 Credits

Spring 3rd Year

BIOL 32800 - Principles Of Physiology

Credit Hours: 4.00. This course is designed to provide students with an introduction to physiology with an emphasis on cellular mechanisms that underlie anatomical and physiological adaptations used by animals to survive in their habitat. Topics covered will range from cellular respiration to the physical limits of animal performance as we deconstruct and then reconstruct the body to examine how animals can live in extreme environments. Goals for this course are for students to gain a foundation in basic physiological principles, to learn about the integrative nature of the systems of animals, and to appreciate how and why animals have evolved and strategies to help them survive in their unique environment.

Learning Outcomes: 1. Learn the integrative nature of the functioning of different cells, tissues, organs, and organ systems in maintaining adequate conditions for the proper functioning of vertebrate animals. 2. Learn the detailed mechanisms underlying the function of selected physiological systems from the level of the macromolecules to the system as a whole (ex. Cardiovascular system). 3. Appreciate the conserved nature of the fundamental functioning of cells and systems across many different animals from invertebrates to vertebrates. 4. Gain practical experience with some selected systems in the laboratory. 5. Learn how to design and execute independent experiments and take the results from those experiments and analyze and orally present them to the class. 6. Learn how to work as part of a collaborative team. Credits: 4.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 25200 - Electricity And Optics Laboratory

Credit Hours: 1.00. Selected experiments in electric fields, magnetic fields, steady-state and transient DC circuits, thermodynamics, and optics.

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate the ability to communicate well, both orally and in writing. 3. Demonstrate the ability to understand the role of scientific observation of Nature in uncovering the Laws of Physics. Credits: 1.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

STAT 50300 - Statistical Methods For Biology

Credit Hours: 3.00. Introductory statistical methods, with emphasis on applications in biology. Topics include descriptive statistics, binomial and normal distributions, confidence interval estimation, hypothesis testing, analysis of variance, introduction

to nonparametric testing, linear regression and correlation, goodness-of-fit tests, and contingency tables. Open only to majors related to the life sciences. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, STAT 30301, STAT 35000, STAT 35500, STAT 50100, and in no more than one of STAT 50300 and STAT 51100.

Learning Outcomes: 1. Students will be able to identify and choose appropriate ways to graphically and numerically summarize data. 2. Students will be able to use basic statistical methods to perform statistical inference and draw appropriate conclusions. 3. Students will understand the mathematical foundations of statistical inference for random samples so that they can study and utilize additional statistical methods. Credits: 3.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

14-16 Credits

Fall 4th Year

12 Credits

Spring 4th Year

12-18 Credits

Nuclear Engineering, BSNE

About the Program

Degree Requirements

Nuclear Engineering Major Courses (44 credits)

Required Major Courses (44 credits)

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized.

Credits: 2.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility.

Credits: 0.00

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

NUCL 30500 - Nuclear Engineering Undergraduate Laboratory II

Credit Hours: 2.00. Continuation of NUCL 20500 . Experiments with scintillation detectors, multichannel analyzers, neutron detectors, the subcritical pile, and the reactor will be performed. Measurements will be made to demonstrate neutron activation analysis techniques, neutron slowing down, neutron flux distributions, and the effects of control rods on neutron fluxes.

Credits: 2.00

NUCL 31000 - Introduction To Neutron Physics

Credit Hours: 3.00. Development of diffusion theory for neutrons. Neutron interactions and development of one-group neutron diffusion theory with point, plane, and fission sources. Application to one- and two-region reactors. Introduction to buckling, multiplication constants, critical size, neutron slowing down, and resonance capture. Applications using two-group theory.

Credits: 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design.

Credits: 3.00

NUCL 32500 - Nuclear Materials Laboratory

Credit Hours: 3.00. Nuclear materials laboratory that evaluates various characterization techniques and technologies, tensile properties, hardness, fracture toughness, microstructures, X-ray diffraction, electron microscopy, mechanical properties of thin-films, NDE techniques and data acquisition in materials characterization techniques.

Learning Outcomes: 1. Understanding of what materials are, and how they perform and fail. 2. Understand the conceptual tools dealing with materials phenomena. 3. Be able to communicate with professionals about materials problems. 4. Be able to address the limitations of materials in design, and improve them.

Credits: 3.00

NUCL 35000 - Nuclear Thermal-Hydraulics I

Credit Hours: 3.00. The first of an integrated two-course sequence introducing the concepts of nuclear reactor thermal transport and associated hydraulics with applications to design and safety. Macroscopic balances, dimensional analysis, and flow measurement. Fluid behavior, momentum transfer, and applications to reactor systems and design.

Credits: 3.00

NUCL 35100 - Nuclear Thermal-Hydraulics II

Credit Hours: 3.00. Emphasis is given to the fluid transport of heat from reactor fuel elements. Heat transfer in fluids, analogies, and applications to reactor coolant channel analysis. Two-phase flow and convective boiling. Radiative heat transfer. Applications to safety analysis and reactor design.

Credits: 3.00

NUCL 35500 - Nuclear Thermohydraulics Laboratory

Credit Hours: 3.00. Laboratory course corresponding to NUCL 35000 and NUCL 35100 . Various fluid flow and heat transfer phenomena applied to nuclear reactor systems and design.

Credits: 3.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800 .

Credits: 0.00

NUCL 40200 - Engineering Of Nuclear Power Systems

Credit Hours: 3.00. Principles and practice of power plant systems with design applications; thermal cycles, heat transport, mechanical designs, control, safety analysis, shielding analysis, fuel cycles; resources, optimization, options, waste management. Fusion and alternate energy sources.

Credits: 3.00

NUCL 42001 - Radiation Interaction With Materials And Applications

Credit Hours: 3.00. Fundamental of radiation interaction with materials and applications, types of radiation and radiation sources, physical mechanisms of radiation interaction with solids, radiation damage, ion mixing, applications in nuclear fission and fusion reactors, applications in materials synthesis.

Learning Outcomes: 1. Learn the types and sources of radiation. 2. Understand the physical mechanisms of radiation interaction with materials and model these interactions quantitatively. 3. Understand and model the phenomenon of radiation damage to bulk, surfaces and interfaces. 4. Relate the concepts of radiation damage to neutron interaction with solids in both fission and fusion reactors. 5. Understand the technological applications of radiation interaction with materials. Credits: 3.00

NUCL 44900 - Senior Design Proposal

Credit Hours: 1.00. The course outcome is the writing and presentation of a proposal for the senior design project, NUCL 45000 . The tasks include the selection of project design topics (various nuclear engineering components and systems designs), the selection of teams, introduction to design process, team management, communication, and engineering ethics, literature and patents survey, initiation of design activities and familiarization with design tools (for example software).

Credits: 1.00

NUCL 45000 - Design In Nuclear Engineering

Credit Hours: 3.00. Application of the design process to the project design topics identified in NUCL 44900 . The design process usually includes, but not limited to, mathematical modeling in design, neutronic, thermal-hydraulics and safety studies, risk assessment, economics, policy and regulation, environmental impact.

Credits: 3.00

NUCL 46000 - Introduction To Controlled Thermonuclear Fusion

Credit Hours: 3.00. Energy resources and the potential role of nuclear fusion. Ignition and breakeven conditions for fusion power plants. Particle and energy confinement in linear and toroidal magnetic fields. Review of magnetic and inertial confinement experiments and conceptual reactor configurations.

Credits: 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies.

Credits: 0.00

NUCL 41000 - Introduction To Reactor Theory And Applications

Credit Hours: 3.00. Intermediate treatment of reactor theory and its relevance to routine design engineering calculations, including introduction to transport theory, criticality evaluation, multi-group theory, isotopic depletion, and concludes with short overview of multi-level reactor design calculations, critical experiments, and treatment of neutronic uncertainties. List of Topics: Derivation of Boltzmann transport equation, and its reduction to steady state and time dependent diffusion equation. Introduction to multi-group theory, and evaluation of group parameters in both wide and narrow resonance approximations. Introduction to homogenization theory, and evaluation of lattice parameters. Evaluation of criticality condition for bare and reflected reactor geometries. Development of discretization techniques for the time-dependent multi-group diffusion theory equation. Reactor kinetics, reactivity coefficients and reactivity balance equation. Flowchart of multi-level reactor design calculations. Introduction to critical experiments and startup reactor physics test. Sources and treatment of uncertainties in reactor calculations.

Learning Outcomes: 1. Develop an understanding of reactor physics value for engineering design calculations, and to learn how it is applied to make engineering design decision regarding material choice, composition, type, and operating conditions to sustain and control chain reactor over reactor operating horizon. 2. Learn how to develop a computer code to solve a reactor physics problem.
Credits: 3.00

Other Departmental/Program Course Requirements (81-95 credits)

First-Year Engineering Requirements (29-39 credits)

Other Departmental Requirements (40-44 credits)

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

General Education Requirement (12 credits)

Supplemental List

Grade Requirements

GPA Requirements

Course Requirements and Notes

Pass/No Pass Policy

Transfer Credit Policy

Sample Nuclear Engineering Sample Plan of Study

Fall 2nd Year

ME 27000 - Basic Mechanics I

Credit Hours: 3.00. Vector operations, forces and couples. Free body diagrams, equilibrium of a particle and of rigid bodies. Distributed forces. Centers of gravity and centroids. Friction. Trusses, frames, and machines. Internal reactions resulting from axial, shear, torsional, and bending loading. Stress and strain analyses and elementary failure criteria.

Learning Outcomes: 1. Develop an understanding of static equilibrium and stresses in statically-determinate structures and how to apply them to engineering systems. 2. Learn a systematic approach to problem solving. 3. Foster effective mathematical and graphical communication skills. Credits: 3.00

NUCL 20000 - Introduction to Nuclear Engineering

Credit Hours: 3.00. A course designed to acquaint students with the field of nuclear engineering and design. Concepts of fission, fusion, radioactivity, and neutron physics are introduced. Modern applications of nuclear technology, including nuclear medicine, food preservation, space reactors and propulsion.

Learning Outcomes: 1. Demonstrate an ability to solve typical radiation and nuclear reactor calculations. 2. Demonstrate an understanding of the fundamental concepts and principles of nuclear engineering. 3. Understand and describe the societal impact of nuclear engineering and the need for nuclear education, regardless of career field. 4. Introduction to reactor physics. 5. Basic knowledge of radiation interaction with matter. 6. Application of nuclear energy in biomedical and industrial applications. Credits: 3.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility.

Credits: 0.00

CS 15900 - C Programming

Credit Hours: 3.00. Fundamental principles, concepts, and methods of programming in C, with emphasis on applications in the physical sciences and engineering. Basic problem solving and programming techniques; fundamental algorithms and data structures; and use of programming logic in solving engineering problems. Students are expected to complete assignments in a collaborative learning environment. Credit cannot be obtained for both CS 15900 and any of CS 15600, CS 15800 and CS 18000.

Learning Outcomes: 1. Understand the fundamental principles, concepts and methods of computer programming. 2. Use the C programming language to developing solutions in the domains of physical sciences, mathematics, and engineering. 3. Demonstrate

the ability to function as part of a technical team to generate a solution to a programming problem. 4. Analyze alternative algorithm designs to implement solutions that make efficient use of limited resources of the computer. Credits: 3.00

MA 26100 - Multivariate Calculus (UCC: QR)

Credit Hours: 4.00. Planes, lines, and curves in three dimensions. Differential calculus of several variables; multiple integrals. Introduction to vector calculus. Not open to students with credit in MA 17400 or 27100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Know the equations for lines, planes and quadric surfaces in three dimensional space, and understand how these equations relate to the geometry. 2. Understand the relationship between vector functions and parametrized motion; know how to calculate velocity, acceleration, arc length and curvature. 3. Know the meaning of partial derivatives and how to calculate them. Know the multivariable chain rule. 4. Know the meaning of the gradient, how to calculate it, and how to apply it to directional derivatives and maximum and minimum values. 5. Understand the meaning of double and triple integrals; know how to compute them and how to apply them. 6. Understand the meaning of vector fields and line integrals. Know Green's theorem and be able to apply it. 7. Understand the meaning of surface integrals and know how to calculate them. Know Stokes' theorem and be able to apply it. Credits: 4.00

ME 20000 - Thermodynamics I

Credit Hours: 3.00. First and second laws of thermodynamics, entropy, reversible and irreversible processes, properties of pure substances. Application to engineering problems.

Learning Outcomes: 1. Provide a thorough understanding of the basic concepts of thermodynamics, (i.e., 1st and 2nd law). 2. Apply the basic concepts of thermodynamics to the solution of practical problems. 3. Develop a systematic approach to problem-solving skills. 4. Cultivate a strong work ethic in students. Credits: 3.00

16-19 Credits

Spring 2nd Year

ME 27400 - Basic Mechanics II

Credit Hours: 3.00. Review and extension of particle motion to include energy and momentum principles. Planar kinematics of rigid bodies. Kinetics for planar motion of rigid bodies, including equations of motion and principles of energy and momentum. Three-dimensional kinematics and kinetics of rigid bodies. Linear vibrations, with emphasis on single-degree-of-freedom systems.

Credits: 3.00

NUCL 20500 - Nuclear Engineering Undergraduate Laboratory I

Credit Hours: 2.00. A laboratory course designed for the study of the properties of radiation, radioactive material, and radiation detectors. The hazards of radiation and safe handling techniques are emphasized.

Credits: 2.00

NUCL 27300 - Mechanics Of Materials

Credit Hours: 3.00. Analysis of stress and strain; equations of equilibrium and compatibility; stress-strain laws; extension, torsion, and bending of bars; membrane theory of pressure vessels; combined loading conditions; transformation of stresses and principal stresses; elastic stability, elected topics.

Credits: 3.00

NUCL 29800 - Sophomore Seminar

Credit Hours: 0.00. Career areas in nuclear engineering, job opportunities, areas of related study, topics of current interest, orientation, professional ethics, and responsibility.

Credits: 0.00

MA 26600 - Ordinary Differential Equations (UCC: QR)

Credit Hours: 3.00. First order equations, second and n'th order linear equations, series solutions, solution by Laplace transform, systems of linear equations. It is preferable but not required to take MA 26500 either first or concurrently. Not open to students

with credit in MA 26200, 27200, 36000, 36100, or 36600.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Understand the properties of and able to solve first-order differential equations, linear differential equations of second and higher orders, and linear systems of differential equations. 2. Understand and able to apply basic numerical methods for solving initial value problems. 3. Understand the properties of Laplace transforms and able to apply to solving differential equations and initial value problems. 4. Apply differential equations to mechanical, physical, and biological models. Credits: 3.00

PHYS 24100 - Electricity And Optics (UCC: SCI)

Credit Hours: 3.00. Electrostatics, current electricity, electromagnetism, magnetic properties of matter. Electromagnetic waves, geometrical and physical optics.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

PHYS 27200 - Electric And Magnetic Interactions (UCC: SCI)

Credit Hours: 4.00. Calculus-based physics course using concepts of electric and magnetic fields and an atomic description of matter to describe polarization, fields produced by charge distributions, potential, electrical circuits, magnetic forces, induction, and related topics, leading to Maxwell's equations and electromagnetic radiation and an introduction to waves and interference. 3-D graphical simulations and numerical problem solving by computer are employed throughout.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand and describe a wide range of physical phenomena in electricity and magnetism using only a few fundamental principles of physics. 2. Learn a unified approach that relates microscopic behavior to macroscopic behavior. 3. Model natural phenomena quantitatively. 4. Apply all this to a range of topics related to electricity and magnetism. Credits: 4.00

17-18 Credits

Fall 3rd Year

NUCL 30000 - Nuclear Structure And Radiation Interactions

Credit Hours: 3.00. Review of atomic properties and introduction to nuclear models. Discussion of radioactive decay and the interaction of nuclear radiation and reaction products with matter. Energetics and cross-sections of nuclear reactions with applications to problems typical of nuclear engineering.

Credits: 3.00

NUCL 32000 - Introduction To Materials For Nuclear Applications

Credit Hours: 3.00. Nuclear environments and materials selection for nuclear applications, bonding, crystal structure and symmetry, defects and irradiation, chemical thermodynamics, phase equilibria, phase transformations, and corrosion in nuclear systems and design.

Credits: 3.00

NUCL 32500 - Nuclear Materials Laboratory

Credit Hours: 3.00. Nuclear materials laboratory that evaluates various characterization techniques and technologies, tensile properties, hardness, fracture toughness, microstructures, X-ray diffraction, electron microscopy, mechanical properties of thin-films, NDE techniques and data acquisition in materials characterization techniques.

Learning Outcomes: 1. Understanding of what materials are, and how they perform and fail. 2. Understand the conceptual tools dealing with materials phenomena. 3. Be able to communicate with professionals about materials problems. 4. Be able to address the limitations of materials in design, and improve them. Credits: 3.00

NUCL 35000 - Nuclear Thermal-Hydraulics I

Credit Hours: 3.00. The first of an integrated two-course sequence introducing the concepts of nuclear reactor thermal transport and associated hydraulics with applications to design and safety. Macroscopic balances, dimensional analysis, and flow measurement. Fluid behavior, momentum transfer, and applications to reactor systems and design.

Credits: 3.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800 .

Credits: 0.00

MA 26500 - Linear Algebra (UCC: QR)

Credit Hours: 3.00. Introduction to linear algebra. Systems of linear equations, matrix algebra, vector spaces, determinants, eigenvalues and eigenvectors, diagonalization of matrices, applications. Not open to students with credit in MA 26200, 27200, 35000 or 35100.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Learn the basic properties of matrices. 2. Learn how to solve systems of linear equations. 3. Learn the basic properties of determinants. 4. Learn about linear independence, spanning sets and bases in the context of vector spaces. 5. Learn the theory of inner product spaces and how it applies to least-squares approximations. 6. Learn the theory of eigenvalues and eigenvectors and how it applies to systems of differential equations. Credits: 3.00

18 Credits

Spring 3rd Year

NUCL 31000 - Introduction To Neutron Physics

Credit Hours: 3.00. Development of diffusion theory for neutrons. Neutron interactions and development of one-group neutron diffusion theory with point, plane, and fission sources. Application to one- and two-region reactors. Introduction to buckling, multiplication constants, critical size, neutron slowing down, and resonance capture. Applications using two-group theory.

Credits: 3.00

NUCL 35100 - Nuclear Thermal-Hydraulics II

Credit Hours: 3.00. Emphasis is given to the fluid transport of heat from reactor fuel elements. Heat transfer in fluids, analogies, and applications to reactor coolant channel analysis. Two-phase flow and convective boiling. Radiative heat transfer. Applications to safety analysis and reactor design.

Credits: 3.00

NUCL 35500 - Nuclear Thermohydraulics Laboratory

Credit Hours: 3.00. Laboratory course corresponding to NUCL 35000 and NUCL 35100 . Various fluid flow and heat transfer phenomena applied to nuclear reactor systems and design.

Credits: 3.00

NUCL 39800 - Junior Seminar

Credit Hours: 0.00. Continuation of NUCL 29800 .

Credits: 0.00

ECE 20001 - Electrical Engineering Fundamentals I

Credit Hours: 3.00. This course covers fundamental concepts and applications for electrical and computer engineers as well as for engineers who need to gain a broad understanding of these disciplines. The course starts by the basic concepts of charge, current, and voltage as well as their expressions with regards to resistors and resistive circuits. Essential concepts, devices, theorems, and applications of direct-current (DC), 1st order, and alternating-current (AC) circuits are subsequently discussed. Besides electrical devices and circuits, basic electronic components including diodes and transistors as well as their primary applications are also discussed.

Learning Outcomes: 1. Ability to analyze linear resistive circuits. 2. Ability to analyze 1st order linear circuits with sources and/or passive elements. 3. Ability to analyze electronic circuits with diodes and transistors. Credits: 3.00

18 Credits

Fall 4th Year

NUCL 30500 - Nuclear Engineering Undergraduate Laboratory II

Credit Hours: 2.00. Continuation of NUCL 20500 . Experiments with scintillation detectors, multichannel analyzers, neutron detectors, the subcritical pile, and the reactor will be performed. Measurements will be made to demonstrate neutron activation analysis techniques, neutron slowing down, neutron flux distributions, and the effects of control rods on neutron fluxes.

Credits: 2.00

NUCL 40200 - Engineering Of Nuclear Power Systems

Credit Hours: 3.00. Principles and practice of power plant systems with design applications; thermal cycles, heat transport,

mechanical designs, control, safety analysis, shielding analysis, fuel cycles; resources, optimization, options, waste management. Fusion and alternate energy sources.

Credits: 3.00

NUCL 42001 - Radiation Interaction With Materials And Applications

Credit Hours: 3.00. Fundamental of radiation interaction with materials and applications, types of radiation and radiation sources, physical mechanisms of radiation interaction with solids, radiation damage, ion mixing, applications in nuclear fission and fusion reactors, applications in materials synthesis.

Learning Outcomes: 1. Learn the types and sources of radiation. 2. Understand the physical mechanisms of radiation interaction with materials and model these interactions quantitatively. 3. Understand and model the phenomenon of radiation damage to bulk, surfaces and interfaces. 4. Relate the concepts of radiation damage to neutron interaction with solids in both fission and fusion reactors. 5. Understand the technological applications of radiation interaction with materials. Credits: 3.00

NUCL 44900 - Senior Design Proposal

Credit Hours: 1.00. The course outcome is the writing and presentation of a proposal for the senior design project, NUCL 45000 . The tasks include the selection of project design topics (various nuclear engineering components and systems designs), the selection of teams, introduction to design process, team management, communication, and engineering ethics, literature and patents survey, initiation of design activities and familiarization with design tools (for example software).

Credits: 1.00

NUCL 46000 - Introduction To Controlled Thermonuclear Fusion

Credit Hours: 3.00. Energy resources and the potential role of nuclear fusion. Ignition and breakeven conditions for fusion power plants. Particle and energy confinement in linear and toroidal magnetic fields. Review of magnetic and inertial confinement experiments and conceptual reactor configurations.

Credits: 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies.

Credits: 0.00

NUCL 41000 - Introduction To Reactor Theory And Applications

Credit Hours: 3.00. Intermediate treatment of reactor theory and its relevance to routine design engineering calculations, including introduction to transport theory, criticality evaluation, multi-group theory, isotopic depletion, and concludes with short overview of multi-level reactor design calculations, critical experiments, and treatment of neutronic uncertainties. List of Topics: Derivation of Boltzmann transport equation, and its reduction to steady state and time dependent diffusion equation. Introduction to multi-group theory, and evaluation of group parameters in both wide and narrow resonance approximations. Introduction to homogenization theory, and evaluation of lattice parameters. Evaluation of criticality condition for bare and reflected reactor geometries. Development of discretization techniques for the time-dependent multi-group diffusion theory equation. Reactor kinetics, reactivity coefficients and reactivity balance equation. Flowchart of multi-level reactor design calculations. Introduction to critical experiments and startup reactor physics test. Sources and treatment of uncertainties in reactor calculations.

Learning Outcomes: 1. Develop an understanding of reactor physics value for engineering design calculations, and to learn how it is applied to make engineering design decision regarding material choice, composition, type, and operating conditions to sustain and control chain reactor over reactor operating horizon. 2. Learn how to develop a computer code to solve a reactor physics problem. Credits: 3.00

15 Credits

Spring 4th Year

NUCL 45000 - Design In Nuclear Engineering

Credit Hours: 3.00. Application of the design process to the project design topics identified in NUCL 44900 . The design process usually includes, but not limited to, mathematical modeling in design, neutronic, thermal-hydraulics and safety studies, risk assessment, economics, policy and regulation, environmental impact.

Credits: 3.00

NUCL 49800 - Senior Seminar

Credit Hours: 0.00. Lectures to acquaint the senior students with professional ethics, job opportunities, graduate schools, continuing study, and services of professional societies.

Credits: 0.00

12 Credits

Nursing, BSN

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (66 credits)

Nursing Courses Level I (23 credits)

NUR 10800 - Introduction To Nursing

Credit Hours: 1.00. Introduce students entering the nursing profession to foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements and responsibilities within the profession. Students are introduced to the rigor of the curriculum and begin to build a sense of community within the Purdue School of Nursing.

Learning Outcomes: 1. Explain the relationship between the Essentials of Baccalaureate Education for Professional Nursing Practice document and Purdue's baccalaureate nursing curriculum. 2. Describe the roles of the professional nurse in the healthcare delivery system. 3. Describe individuals, families, communities, and populations as consumers of nursing care. 4. Reflect upon personal and professional responsibilities in relation to the nursing profession. 5. Communicate in oral and written form at a professional level. 6. Identify personal behaviors necessary for success in an academic and professional career. 7. Engage in student and/or nursing organizations as an aspect of professional growth and development.

Credits: 1.00

NUR 21801 - Health Assessment And Essentials Of Nursing Practice I

Credit Hours: 5.00. Focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client centered safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients from the healthy to chronically ill populations. 2. Develop critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 3. Discuss the impact of evidence based nursing research in guiding practice. 4. Identify the effect of personal values and beliefs on professional practice. 5. Develop basic physical and psychosocial clinical assessment skills for the client across the lifespan, including interviewing techniques, and comprehensive history and physical exam. 6. Employ basic principles of documentation to describe clinical findings. 7. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 8. Use informatics appropriately in simulation and in the clinical setting. 9. Identify methods and resources for personal and professional growth.

Credits: 5.00

NUR 21901 - Pathopharmacology I

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort and the pharmacotherapies utilized as treatment for alterations and disease states. This introductory knowledge provides the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe primary regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations in body structure and function affecting homeostasis; metabolic processes; immune response; circulation; renal elimination; fluid/electrolyte and acid/base balance; sensory perception and comfort. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and comfort. 4. Idenify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contraindications, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22001 - Essentials Of Nursing Practice II

Credit Hours: 5.00. Continues to expand on the professional nursing role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients in the clinical setting. 2. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 3. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 4. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 5. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 6. Identify client adaption and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 5.00

NUR 22101 - Pathopharmocology II

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function and the pharmacotherapies utilized as treatment for alterations and disease states. This course builds on the learning objectives from Pathopharmacology I to provide the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe the primary regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 4. Identify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with

emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contradictions, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into the overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22201 - Population Health

Credit Hours: 2.00. A comprehensive introduction to population health concepts and practices through examination of philosophy, purpose, functions, activities and tools. Multiple determinants (genetics, cultural, social, and behavioral factors) that influence population health and illness are explored including the contribution of these factors to health disparities. Population-focused initiatives for health promotion and disease prevention are examined within the context of local to global public health systems.

Learning Outcomes: 1. Describe the context and scope of public health from a historical and modern perspective. 2. Describe the methodology used by public health to define and address population health issues. 3. Identify public health's interprofessional nature and the contributions of different disciplines to improving population health. 4. Describe the ethical, legal, organizational, financial, and structural aspects of the current US and selected global health care delivery systems. 5. Discuss the contribution that biostatistics, epidemiology, information technology, and evidence-based practice make in improving health and preventing, detecting and minimizing the impact of disease and injuries. 6. Explain how multiple determinants (genetics/genomics, social, behavioral, environmental factors) contribute to specific population health outcomes from a local to global perspective. 7. Describe the principles needed to understand population health issues including planning, implementing and evaluating interventions across the lifespan. 8. Identify public health's roles in addressing the needs of vulnerable populations and eliminating health disparities across the lifespan. Credits: 2.00

NUR 22301 - Foundations Of Research And Evidence-Based Practice (UCC: IL)

Credit Hours: 3.00. Students gain foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. Students learn the principles of research process and identify strengths and limitations of research articles in relation to EBP in nursing and healthcare.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently to Information Literacy Competency Standards for Higher Education. 3. Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical practice. 5. Examine economic, legal and ethical issues related to conducting research. Credits: 3.00

NUR 10900 - Introduction To Nursing II

Credit Hours: 1.00. Using knowledge acquired in NUR 10800 students will examine the profession of nursing and their role and responsibilities within the profession. Topics to be discussed include informatics and technology, the importance of professional communication in oral and written form, the global image of nursing, wellness and self-care, and preparation for progression into the sophomore year. Permission of department required.

Learning Outcomes: 1. Demonstrate the ability to communicate in oral and written form at a professional level. 2. Explore the roles of the professional nurse in both domestic and global healthcare delivery systems. 3. Examine the

role of social media and its impact on healthcare. 4. Identify components of effective and ineffective communication in the healthcare environment. 5. Discuss the use of informatics in documenting the management of patient care. 6. Identify skills and personal behaviors necessary for success in an academic and professional career. Credits: 1.00

Nursing Courses Level II (24 credits)

NUR 31401 - Health Alterations In Adults I

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of well-being as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in tissue integrity related to surgical interventions, cellular division, reproductive function, elimination, nutrition and sensory function that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision-making when caring for diverse populations of adults experiencing selected illnesses. 2. Utilize the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related (including gerontologic) pathophysiology when providing care to diverse populations of adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence- based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to client, client's family, and other members of the healthcare team. 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes. 10. Utilize patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31501 - Nursing Of Childbearing Families

Credit Hours: 5.00. Promotes the development of nursing skills when caring for families and their newborns during uncomplicated and/or complicated childbearing experiences within a variety of clinical settings. Emphasizes the study and application of the nursing process, integrating evidence based practice while meeting the health and safety needs of diverse childbearing families.

Learning Outcomes: 1. Integrate theory and evidence to guide nursing practice and clinical decision-making throughout the care of childbearing families. 2. Incorporate childbearing family participation throughout health promotion, disease prevention, and risk reduction processes. 3. Address the childbearing family's developmental, physiologic, and psychological needs. 4. Assess ethical, legal, and sociocultural influences on resource utilization and compassionate maternal-child health care delivery. 5. Design targeted plans of care via a partnership with childbearing families, intra- and interprofessional teams, professional organizations, and institutions. 6. Utilize information technology to enhance learning, practice, and communication. Credits: 5.00

NUR 31601 - Integration Seminar I

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and obstetrical diagnoses. Through the

course activities the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medical-surgical and obstetrical populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

NUR 31701 - Health Alterations In Adults II

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of wellbeing as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in health related to oxygenation, circulatory dynamics, endocrine regulation, neurological regulation, immune regulation and musculoskeletal dynamics that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision making when caring for diverse populations of adults experiencing selected illnesses. 2. Demonstrate appropriate use of the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related pathophysiology when providing care to adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence-based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to the client, client's family, and other members of the health care team 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes that emphasize client safety and evidence-based practice. 10. Use patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31801 - Psychiatric And Mental Health Nursing

Credit Hours: 5.00. Focuses on providing nursing care that supports mental health and the care of persons with mental illness while providing a conceptual integration of the nursing process, theories, and research from the biopsychosocial sciences and humanities. Demonstrates the relevance of psychiatric-mental health nursing concepts to all areas of professional practice.

Learning Outcomes: 1. Examine the effects of myths, stereotypes, stigma, values, beliefs and culture on the practice of psychiatric nursing. 2. Compare past, current, and projected systems in delivery of evidence based mental health care and its social implications. 3. Identify legal and ethical implications involved in the practice of psychiatric mental health nursing. 4. Utilize the nursing process in the phases ofthe therapeutic nurse-client relationship to delineate the complex needs of clients with psychiatric disorders.. 5. Identify the principles of communication and therapeutic relationships in the care of clients with psychiatric disorders. 6. Determine specific nursing care interventions

for acute and serious behavioral health issues that demonstrate developmentally and culturally appropriate strategies. 7. Utilize the ANA Standards of Psychiatric and Mental Health Nursing Practice as a basis for safe and competent care. 8. Incorporate theory, research and evidence from the psychobiological sciences, biological sciences, and humanities into an evidenced based practice approach to psychiatric nursing care. 9. Utilize client care technologies, information systems, and communication resources to access, organize and communicate information in a professional manner. 10. Establish therapeutic, collaborative relationships with members of the interdisciplinary treatment team. 11. Demonstrate personal and professional growth and skill development when providing evidence-based nursing care to clients with psychiatric disorders. Credits: 5.00

NUR 31901 - Integration Seminar II

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and psychiatric diagnoses. Through the course activities, the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medically and psychologically unstable populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

Nursing Courses Level III (19 credits)

NUR 41401 - Pediatric Nursing

Credit Hours: 5.00. Explores factors influencing the health and wellness of children and families. Students will apply principles, concepts and research from the health and human sciences to the care of children and families across the health-illness continuum. A structured clinical component focuses on clinical reasoning and evidence based practice. Students will provide family centered care to healthy, at risk and ill children across a variety of clinical settings.

Learning Outcomes: 1. Integrate family theories; growth and development; genomics; environmental and psychosocial factors in the care of children across the health-illness continuum. 2. Integrate nursing concepts into evidence based nursing practice for children and families across a variety of health care settings. 3. Apply knowledge of information technologies to improve health outcomes of children and families. 4. Evaluate environmental and psychosocial risk factors for children and families. 5. Adapt nursing care to families, recognizing their diverse needs, ethnicity, culture, and values. 6. Evaluate the collaborative role of the nurse with other health care disciplines in the provision of comprehensive nursing care for healthy, at risk, and ill children. 7. Demonstrate a spirit of inquiry, responsibility and accountability within legal, ethical, professional and organizational parameters. Credits: 5.00

NUR 41501 - Public Health Nursing

Credit Hours: 5.00. Utilize health promotion, maintenance, education and disease prevention in coordinating and providing population-focused care to individuals, families and aggregates in the community. A variety of clinical settings are used to offer students a broad, comprehensive perspective of public health nursing, a field that synthesizes content from nursing, social and public health sciences. Collaboration with the community and implementation of population-focused interventions foster critical thinking and independent decision making in the delivery of nursing care.

Learning Outcomes: 1. Synthesize concepts, theories, knowledge and practice from nursing, social and public health sciences. 2. Examine the structure, function, and influence of historical, political, social, environmental, cultural, and ethical factors to the health of individuals, families, and communities. 3. Collaborate with interdisciplinary healthcare and human service providers to address the health needs of individuals, families, and communities. 4. Utilize principles, concepts, models, theories and research to guide culturally sensitive nursing care and public health practice of individuals, families, and communities. 5. Explore the delivery of public health nursing services to diverse and vulnerable populations. 6. Formulate client teaching strategies that address the principles of disease prevention and health promotion to clients across the lifespan. 7. Evaluate interventions implemented using community and family resources to address mutually identified health needs of clients. 8. Use principles of caseload management, in the delivery of safe, quality public health nursing services that reflect legal, ethical, and professional standards. 9. Apply national health objectives in planning interventions to meet the individual, system, and community level needs of diverse populations. 10.Utilize health care technology to improve health outcomes of individuals, families, and communities. 11.Integrate the role of advocacy into the delivery of care to individuals, families, and communities. Credits: 5.00

NUR 41701 - Leadership In Nursing

Credit Hours: 3.00. Studies the components of nursing leadership and management functions with an emphasis on critical thinking, problem solving, communication, and team building within the context of experiential problem-based group projects. This course will provide specific practice and evaluation of strategic and financial planning, conflict management, delegation, and complex change. Competencies to be gained, at a novice level, include professional communication, sound ethical and legal judgments within personal and organizational frameworks, leadership skills in the management and evaluation of others, and an understanding of the drivers of healthcare change and finances.

Learning Outcomes: 1. Synthesize concepts of nursing leadership and management in relation to the role of the professional nurse, nurse leader, and manager in promoting safe and quality care. 2. Organize a quality improvement project by utilizing project management strategies, quality improvement principles, and evidence-based practices to promote system changes in healthcare delivery. 3. Utilize concepts of professional communication, delegation, and evaluation of healthcare team members with an awareness of ethical, professional, social, and legal issues implicit to nursing leadership and management. 4. Describes economic, policy, social, and organizational factors that influence the professional nurse and healthcare systems. 5. Evaluate the impact of professional and unprofessional behaviors on healthcare delivery and professional interactions and presentations through knowledge of nursing standards of excellence. Credits: 3.00

NUR 41001 - Issues In Professional Nursing

Credit Hours: 2.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues and key trends surrounding social determinants of health policy and economics, regulatory agencies, political action, cultural diversity, practice competency, nursing informatics and ethics are used as a framework. Permission of department required.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Evaluate historical components and current nursing practice that impact healthcare systems. 3. Demonstrate understanding of the impact of local, state, national and global regulations on healthcare trends and healthcare policy. 4.

Evaluate the impact that economic, political, cultural, and social concerns have on the role of professional nursing and the healthcare delivery system. 5. Articulate the value of pursuing practice excellence, life-long learning, engagement, self care, and resilience in professional nursing practice. 6. Utilize inquiry, analysis, information literacy, nursing informatics to address practice issues, ambiguity, and unpredictability in the healthcare systems. Credits: 2.00

NUR 42001 - Transition To Professional Nursing Practice

Credit Hours: 4.00. This course challenges students to use critical thinking and clinical reasoning to identify, prioritize and evaluate nursing interventions for clients with complex healthcare issues. Students interact with members of the healthcare team and clinical faculty to practice effective leadership, delegation and supervision of nursing students in clinical environments.

Learning Outcomes: 1. Apply sound clinical judgment, professional behavior, communication, collaboration and integration of best practice in clinical settings. Demonstrate/apply professional behavior, communication, collaboration and sound clinical judgment by integrating best practice in clinical settings. 2. Utilize the nursing process when caring for clients with complex healthcare needs. 3. Articulate the value of pursuing practice excellence, life-long learning, patient advocacy and engagement in professional nursing practice. 4. Demonstrate effective leadership, delegation and supervision when collaborating with members of the healthcare team. 5. Assume personal responsibility for professional growth. 6. Analyze system barriers that effect quality healthcare delivery in patients affected by complex conditions. Credits: 4.00

Other Departmental/Program Course Requirements (51-52 credits)

PSY 20100 - Introduction To Statistics In Psychology

Credit Hours: 3.00. An introduction to the development and application of statistical, quantitative, and measurement techniques pertinent to the psychological sciences. Fundamental concepts of numerical assignment, sampling theory, distribution functions, experimental design, inferential procedures, and statistical control. Should be taken at Purdue University, West Lafayette.

Learning Outcomes: 1. Understand basics of descriptive statistics and how to calculate them. 2. Understand foundational logic underlying inferential statistics (probability, sampling distributions, and the logic of hypothesis testing). 3. Understand statistical techniques used to evaluate competing hypotheses as used in psychology and other social sciences, and the circumstances under which they should be used. 4. Understand how to interpret results from SPSS, a software package that is commonly used in the field of psychology for statistical analysis. 5. Understand how to apply statistical reasoning and how to properly collect, describe, and interpret data. Credits: 3.00

SOC 22000 - Social Problems (UCC: BSS)

Credit Hours: 3.00. Contemporary problems at the community, society, and international levels, focusing on patterns of social organization and social change in American society, with concentration on such topics as technological militarism and war, poverty, racism, political protest, and cybernation. CTL:ISH 1061 Social Problems

University Core Curriculum (UCC): (UCC: BSS)
Learning Outcomes: 1. Describe the cultural, social, and historical dynamics that influence how we construct social problems. 2. Identify the strengths and weaknesses of contending explanations or interpretations of major social problems. 3. Critique proposed solutions to major social problems. Credits: 3.00

SOC 31000 - Race And Ethnicity

Credit Hours: 3.00. This course is a sociological examination and analysis of the presence and significance of race and ethnicity in our society. The purpose of this course is to provide

a foundation and critical framework for assessing the origins and manifestations of race and ethnicity. Race and ethnicity have historically been one basis for differentiation and stratification in the United States and other societies, and this persists today. In this course, we will examine the emergence of race and ethnicity as concepts, and how they shape our everyday lives. We will be guided by the following questions: Why do we study race and ethnicity? How and why are they relevant in our society? How do we experience race and ethnicity, and how has this changed over time? Topics include multiculturalism and diversity; media representations; racism and discrimination; colorism; racial hierarchies; immigration; and different domains of racial inequality.

Learning Outcomes: 1. Identify the role of race and ethnic identity in social and professional environments. 2. Identify, define and explain the Americanization process consistent with ethnic group's integration, assimilation, and/or acculturation into American status. 3. Become familiar with principle terms, concepts, and theories of the field of race and race relations. Credits: 3.00

SOC 34000 - General Social Psychology

Credit Hours: 3.00. Social influences on the individual and processes of social interaction. Individual attitudes and behavior as related to socialization, social norms, social roles, communication and propaganda, and other social influences. Among the interaction processes considered are interpersonal attraction, influence, leadership, cooperation, and conflict. Not open to students with credit in PSY 24000.

Learning Outcomes: 1. Develop an understanding of how politics has been approached and analyzed by sociologists over time, and an appreciation for the important thinkers and historical events that have shaped these approaches. 2. Identify specific areas of political polarization and political consensus in contemporary American politics, including where we find evidence of partisan asymmetry. 3. Demonstrate ability to develop and communicate sociological insights as they relate to political history and contemporary political dynamics, both in class and in written assignments. Credits: 3.00

SOC 37400 - Medical Sociology (UCC: BSS)

Credit Hours: 3.00. Medical sociology provides an overview of the social determinants of health and health disparities, the experience of illness and being a patient, the organization of the medical profession, and the health care system in the United States as well as other areas of the world.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Articulate the contours of health disparities in the contemporary US. 2. Hold an informed discussion about current debates surrounding the organization of the health care system. 3. Have a greater understanding of the experiences of people suffering from chronic illness. Credits: 3.00

SOC 38200 - Introduction To Statistics In Sociology

Credit Hours: 3.00. Introduction to the basic techniques of statistical analysis applicable to sociological data. Elementary descriptive statistics and statistical inference. Introduction to multivariate analysis.

Learning Outcomes: 1. Identify the relevance of statistics to everyday life. 2. Understand how descriptive and inferential statistics are used and described in sociological research. 3. Compute and interpret univariate and bivariate statistics. Credits: 3.00

SOC 41100 - Social Inequality

Credit Hours: 3.00. Examination of systems of class and caste, with special attention to the United States; status, occupation, income, and other elements in stratification.

Learning Outcomes: 1. Challenge misconceptions about the nature and origins of social inequalities. 2. Critically apply social inequality research to their own social environments. 3. Construct arguments about social inequalities' causes and consequences. Credits: 3.00

STAT 11300 - Statistics And Society (UCC: IL/STS)

Credit Hours: 3.00. This course is an introduction to statistical literacy and the cultivation of critical thinking skills. Statistical concepts are learned through practical application in the context of contemporary societal issues and debates. Some of the

concepts explored include the statistical problem-solving process, data collection methodologies such as surveys and experiments, the ethical considerations entailed in data acquisition, the relationship between variables, the assessment of validity and reliability in the measurement of variables, analysis and graphical representation of single and multiple variables, as well as statistical inference. Furthermore, the curriculum actively encourages the development of critical thinking abilities with a specific focus on data-related inquiries.

University Core Curriculum (UCC): (UCC: IL/STS) Learning Outcomes: 1. Distinguish between and qualify methods of data collection. 2. Interpret graphs and statistical analyses. 3. Express and calculate the likelihood of events. 4. Create a narrative from statistical analysis. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

General Courses

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology

Learning Outcomes: 1. Demonstrate an understanding of the historical, ethical, and cultural contexts of psychopathology. 2. Compare and contrast major historical and contemporary theoretical perspectives on psychopathology. 3. Demonstrate an understanding of the scientific bases of the etiology, assessment, classification, diagnosis, and treatment of psychopathology. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate

content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

Science Courses

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students

demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit

proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

Electives (2-3 credits)

Supplemental Lists

Grade Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

HDFS 21000 - Introduction To Human Development (UCC: BSS)

Credit Hours: 3.00. This course provides an introduction to the development of individuals from the prenatal period to adulthood and old age. Theories and research findings related to physical growth, cognitive and language development and social and emotional development will be discussed. CTL: Developmental Psychology.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Identify key physical, cognitive, emotional, and social characteristics at each life stage. 2. Identify the basic tenets of leading theories in human development. 3. Distinguish among prominent methods used in developmental research and identify their strengths and weaknesses. 4. Explain the relationships among different domains of development (i.e. biological, psychological, and social) and how they affect one another across the life course. 5. Make predictions about developmental outcomes that are grounded in theory. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

NUR 10800 - Introduction To Nursing

Credit Hours: 1.00. Introduce students entering the nursing profession to foundations of the baccalaureate nursing curriculum, including concepts, competencies, mandatory requirements and responsibilities within the profession. Students are introduced to the rigor of the curriculum and begin to build a sense of community within the Purdue School of Nursing.

Learning Outcomes: 1. Explain the relationship between the Essentials of Baccalaureate Education for Professional Nursing Practice document and Purdue's baccalaureate nursing curriculum. 2. Describe the roles of the professional nurse in the healthcare delivery system. 3. Describe individuals, families, communities, and populations as consumers of

nursing care. 4. Reflect upon personal and professional responsibilities in relation to the nursing profession. 5. Communicate in oral and written form at a professional level. 6. Identify personal behaviors necessary for success in an academic and professional career. 7. Engage in student and/or nursing organizations as an aspect of professional growth and development. Credits: 1.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve

problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

HONR 19903 - Interdisciplinary Approaches In Writing (UCC: IL/WC)

Credit Hours: 3.00. This course is a writing-intensive course in which students learn how to find, evaluate, and use credible information, how to express themselves well in a variety of different written genres, and how to write for different audiences.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. The ability to express themselves in writing clearly and concisely. 2. An understanding of different written genres and their characteristics. 3. An understanding of context and audience. 4. The ability to select and convey the appropriate content. 5. The ability to organize and format a written work. 6. An awareness and appreciation of writing style. 7. The ability to comment upon another's writing in a productive way. 8. The skills to improve their own writing through revision. 9. The ability to locate and evaluate credible information. 10. The ability to use and document information successfully and ethically. Credits: 3.00

14-15 Credits

Spring 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will

understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

NUR 10900 - Introduction To Nursing II

Credit Hours: 1.00. Using knowledge acquired in NUR 10800 students will examine the profession of nursing and their role and responsibilities within the profession. Topics to be discussed include informatics and technology, the importance of professional communication in oral and written form, the global image of nursing, wellness and self-care, and preparation for progression into the sophomore year. Permission of department required.

Learning Outcomes: 1. Demonstrate the ability to communicate in oral and written form at a professional level. 2. Explore the roles of the professional nurse in both domestic and global healthcare delivery systems. 3. Examine the role of social media and its impact on healthcare. 4. Identify components of effective and ineffective communication in the healthcare environment. 5. Discuss the use of informatics in documenting the management of patient care. 6. Identify skills and personal behaviors necessary for success in an academic and professional career. Credits: 1.00

17 Credits

Fall 2nd Year

NUTR 30300 - Essentials Of Nutrition (UCC: SCI)

Credit Hours: 3.00. Basic nutrition and its application in meeting nutritional needs of all ages. Credit not given for both FN 30300 and FN 31500. CTL: Human Nutrition

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Identify, describe, and explain the essential components of the diet and how they are used in the body to maintain health. 2. Identify, describe and explain the information and tools used for assessment of nutritional status. 3. Critically evaluate the quality of your own diet and identify how to improve for optimal health. 4. Identify and explain the link between chronic diseases and diet. 5. Identify and describe food safety guidelines and concerns. 6. Identify, describe, and explain specific nutritional needs throughout the life cycle. Credits: 3.00

NUR 21801 - Health Assessment And Essentials Of Nursing Practice I

Credit Hours: 5.00. Focuses on the beginning concepts and principles for the professional nurse while developing fundamental skills in a nursing process framework. Through lecture and clinical learners begin to apply skills in communication and assessment. Emphasis is placed on developing physical examination skills, obtaining health histories and performing client centered safe nursing care to meet basic healthcare needs in diverse populations across the lifespan.

Learning Outcomes: 1. Apply the nursing process to clients from the healthy to chronically ill populations. 2. Develop critical thinking skills relating to the practice of nursing in a variety of healthcare settings. 3. Discuss the impact of evidence based nursing research in guiding practice. 4. Identify the effect of personal values and beliefs on professional practice. 5. Develop basic physical and psychosocial clinical assessment skills for the client across the lifespan, including interviewing techniques, and comprehensive history and physical exam. 6. Employ basic principles of documentation to describe clinical findings. 7. Demonstrate ethical and legal accountability of professional nursing actions, including client confidentiality. 8. Use informatics appropriately in simulation and in the clinical setting. 9. Identify methods and resources for personal and professional growth. Credits: 5.00

NUR 21901 - Pathopharmacology I

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort and the pharmacotherapies utilized as treatment for alterations and disease states. This introductory knowledge provides the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe primary regulatory mechanisms affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and alteration in comfort. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations in body structure and function affecting homeostasis; metabolic processes; immune response; circulation; renal elimination; fluid/electrolyte and acid/base balance; sensory perception and comfort. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting homeostasis, metabolic processes, immune response, circulation, renal elimination, fluid/electrolyte and acid/base balance, sensory perception and comfort. 4. Idenify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contraindications, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22301 - Foundations Of Research And Evidence-Based Practice (UCC: IL)

Credit Hours: 3.00. Students gain foundational competencies for evidence-based practice (EBP), including computer literacy, information literacy, and professional communication. Students learn the principles of research process and identify strengths and limitations of research articles in relation to EBP in nursing and healthcare.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Describe the principles of research and the process of EBP in relation to nursing and healthcare. 2. Use information and information technologies ethically, legally, and proficiently to Information Literacy Competency Standards for Higher Education. 3. Explain the purpose and methodology of various types of quantitative and qualitative research designs in nursing and healthcare. 4. Evaluate the quality of research evidence to determine scientific merit, strengths and limitations relevant to clinical practice. 5.

Examine economic, legal and ethical issues related to conducting research. Credits: 3.00

14 Credits

Spring 2nd Year

PSY 35000 - Abnormal Psychology

Credit Hours: 3.00. Various forms of mental disorders from the standpoint of their origin, treatment, prevention, social significance, and relation to problems of normal human adjustment. CTL:ISH 1023 Abnormal Psychology

Learning Outcomes: 1. Demonstrate an understanding of the historical, ethical, and cultural contexts of psychopathology. 2. Compare and contrast major historical and contemporary theoretical perspectives on psychopathology. 3. Demonstrate an understanding of the scientific bases of the etiology, assessment, classification, diagnosis, and treatment of psychopathology. Credits: 3.00

NUR 22001 - Essentials Of Nursing Practice II

Credit Hours: 5.00. Continues to expand on the professional nursing role supported by fundamental concepts and principles of the nursing process in lecture and clinical settings. Learners apply communication, assessment and nursing skills while caring for the needs of clients in diverse populations across the lifespan.

Learning Outcomes: 1. Use beginning critical thinking and clinical judgment when providing safe, quality nursing care to patients in the clinical setting. 2. Apply culturally sensitive clinical interventions using evidence-based-practice (EBP). 3. Apply principles of physical assessment and history taking to develop plans of care using the nursing process for clients across the lifespan. 4. Evaluate the effectiveness of nursing interventions on short-term and long-term client goals. 5. Develop appropriate evaluation criteria to determine clinical outcomes that meet professional standards of care. 6. Identify client adaption and coping strategies when adjusting to changes along the health-wellness continuum. Credits: 5.00

NUR 22101 - Pathopharmocology II

Credit Hours: 3.00. An introduction to the study of underlying changes in primary physiologic regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function and the pharmacotherapies utilized as treatment for alterations and disease states. This course builds on the learning objectives from Pathopharmacology I to provide the foundation for the understanding and practice of general nursing.

Learning Outcomes: 1. Describe the primary regulatory mechanisms affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 2. Recognize the clinical manifestations of disease resulting from genetic/genomic and physiologic alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 3. Describe selected diagnostic, therapeutic and pharmacologic interventions in the prevention and treatment of alterations affecting respiratory, hematologic, endocrine, neurologic, neuromuscular, gastrointestinal and reproductive function. 4. Identify major drug classifications and pharmacokinetic processes utilized in the prevention and treatment of disease with emphasis on selected, frequently prescribed medications. 5. Identify primary indications, contradictions, mechanism of action, potential side effects and adverse reactions of frequently prescribed medications in order to integrate pharmacologic knowledge into the overall therapeutic plan for restoring or maintaining homeostasis. 6. Identify factors which contribute to safe medication practice, risk reduction and prevention of misuse or abuse of pharmacotherapy. Credits: 3.00

NUR 22201 - Population Health

Credit Hours: 2.00. A comprehensive introduction to population health concepts and practices through examination of philosophy, purpose, functions, activities and tools. Multiple determinants (genetics, cultural, social, and behavioral factors) that influence population health and illness are explored including the contribution of these factors to health disparities. Population-focused initiatives for health promotion and disease prevention are examined within the context of local to global public health systems.

Learning Outcomes: 1. Describe the context and scope of public health from a historical and modern perspective. 2. Describe the methodology used by public health to define and address population health issues. 3. Identify public health's interprofessional nature and the contributions of different disciplines to improving population health. 4. Describe the ethical, legal, organizational, financial, and structural aspects of the current US and selected global health care delivery systems. 5. Discuss the contribution that biostatistics, epidemiology, information technology, and evidence-based practice make in improving health and preventing, detecting and minimizing the impact of disease and injuries. 6. Explain how multiple determinants (genetics/genomics, social, behavioral, environmental factors) contribute to specific population health outcomes from a local to global perspective. 7. Describe the principles needed to understand population health issues including planning, implementing and evaluating interventions across the lifespan. 8. Identify public health's roles in addressing the needs of vulnerable populations and eliminating health disparities across the lifespan. Credits: 2.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems.

12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

17 Credits

Fall 3rd Year

NUR 31401 - Health Alterations In Adults I

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of well-being as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in tissue integrity related to surgical interventions, cellular division, reproductive function, elimination, nutrition and sensory function that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision-making when caring for diverse populations of adults experiencing selected illnesses. 2. Utilize the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related (including gerontologic) pathophysiology when providing care to diverse populations of adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence- based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to client, client's family, and other members of the healthcare team. 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes. 10. Utilize patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31501 - Nursing Of Childbearing Families

Credit Hours: 5.00. Promotes the development of nursing skills when caring for families and their newborns during uncomplicated and/or complicated childbearing experiences within a variety of clinical settings. Emphasizes the study and application of the nursing process, integrating evidence based practice while meeting the health and safety needs of diverse childbearing families.

Learning Outcomes: 1. Integrate theory and evidence to guide nursing practice and clinical decision-making throughout the care of childbearing families. 2. Incorporate childbearing family participation throughout health promotion, disease prevention, and risk reduction processes. 3. Address the childbearing family's developmental,

physiologic, and psychological needs. 4. Assess ethical, legal, and sociocultural influences on resource utilization and compassionate maternal-child health care delivery. 5. Design targeted plans of care via a partnership with childbearing families, intra- and interprofessional teams, professional organizations, and institutions. 6. Utilize information technology to enhance learning, practice, and communication. Credits: 5.00

NUR 31601 - Integration Seminar I

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and obstetrical diagnoses. Through the course activities the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medical-surgical and obstetrical populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

15 Credits

Spring 3rd Year

NUR 31701 - Health Alterations In Adults II

Credit Hours: 6.00. One of two courses focusing on providing nursing care to adults with an emphasis on the application of the nursing process to assist diverse populations reach their optimal level of wellbeing as they experience health care across the delivery system continuum. Emphasis will be on promoting clinical reasoning skills, integrating best practices, and ensuring patient safety. The course concentrates on adults experiencing alterations in health related to oxygenation, circulatory dynamics, endocrine regulation, neurological regulation, immune regulation and musculoskeletal dynamics that typically result in hospitalization.

Learning Outcomes: 1. Integrate theory and evidence from the sciences and humanities to inform practice and influence clinical decision making when caring for diverse populations of adults experiencing selected illnesses. 2. Demonstrate appropriate use of the nursing process to assist diverse populations of adults to optimize wellness and compensate for self-care deficits. 3. Integrate standards of practice, current clinical research findings, knowledge of genomics and age-related pathophysiology when providing care to adults experiencing health alterations. 4. Collaborate with members of the health care team in the promotion of wellness and self-care in diverse populations of adults. 5. Demonstrate personal and professional growth, and skill development when providing evidence-based, legal, ethical, compassionate, and culturally sensitive nursing care to adult clients. 6. Communicate transition of care needs of adult clients to the client, client's family, and other members of the health care team 7. Utilize principles of teaching and learning to educate adults across the continuum of care. 8. Monitor client outcomes to evaluate the effectiveness of psychobiological interventions. 9. Revise plans of care based on an ongoing evaluation of patient outcomes that emphasize client safety and evidence-based practice. 10. Use patient care technologies, information systems, and communication devices to access, retrieve, organize and communicate information in a professional manner. Credits: 6.00

NUR 31801 - Psychiatric And Mental Health Nursing

Credit Hours: 5.00. Focuses on providing nursing care that supports mental health and the care of persons with mental

illness while providing a conceptual integration of the nursing process, theories, and research from the biopsychosocial sciences and humanities. Demonstrates the relevance of psychiatric-mental health nursing concepts to all areas of professional practice.

Learning Outcomes: 1. Examine the effects of myths, stereotypes, stigma, values, beliefs and culture on the practice of psychiatric nursing. 2. Compare past, current, and projected systems in delivery of evidence based mental health care and its social implications. 3. Identify legal and ethical implications involved in the practice of psychiatric mental health nursing. 4. Utilize the nursing process in the phases ofthe therapeutic nurse-client relationship to delineate the complex needs of clients with psychiatric disorders.. 5. Identify the principles of communication and therapeutic relationships in the care of clients with psychiatric disorders. 6. Determine specific nursing care interventions for acute and serious behavioral health issues that demonstrate developmentally and culturally appropriate strategies. 7. Utilize the ANA Standards of Psychiatric and Mental Health Nursing Practice as a basis for safe and competent care. 8. Incorporate theory, research and evidence from the psychobiological sciences, biological sciences, and humanities into an evidenced based practice approach to psychiatric nursing care. 9. Utilize client care technologies, information systems, and communication resources to access, organize and communicate information in a professional manner. 10. Establish therapeutic, collaborative relationships with members of the interdisciplinary treatment team. 11. Demonstrate personal and professional growth and skill development when providing evidence-based nursing care to clients with psychiatric disorders. Credits: 5.00

NUR 31901 - Integration Seminar II

Credit Hours: 1.00. In this course, students will be challenged to identify appropriate nursing interventions for patients with a combination of medical and psychiatric diagnoses. Through the course activities, the students will be challenged to look at healthcare from a patient perspective.

Learning Outcomes: 1. Discuss the application of communication strategies in relationships with dynamic and complex patient populations. 2. Evaluate the use of critical thinking processes in one's nursing practice with medically and psychologically unstable populations. 3. Discuss effectiveness and efficiencies of implementation of health promotion strategies with assigned patients. 4. Apply ethical nursing principles to clinical practice experiences 5 Examine patient advocacy opportunities from clinical practice experiences. 6. Incorporate research evidence when discussing selected clinical nursing practice problems. Credits: 1.00

12 Credits

Fall 4th Year

NUR 41701 - Leadership In Nursing

Credit Hours: 3.00. Studies the components of nursing leadership and management functions with an emphasis on critical thinking, problem solving, communication, and team building within the context of experiential problem-based group projects. This course will provide specific practice and evaluation of strategic and financial planning, conflict management, delegation, and complex change. Competencies to be gained, at a novice level, include professional communication, sound ethical and legal judgments within personal and organizational frameworks, leadership skills in the management and evaluation of others, and an understanding of the drivers of healthcare change and finances.

Learning Outcomes: 1. Synthesize concepts of nursing leadership and management in relation to the role of the professional nurse, nurse leader, and manager in promoting safe and quality care. 2. Organize a quality improvement project by utilizing project management strategies, quality improvement principles, and evidence-based practices to promote system

changes in healthcare delivery. 3. Utilize concepts of professional communication, delegation, and evaluation of healthcare team members with an awareness of ethical, professional, social, and legal issues implicit to nursing leadership and management. 4. Describes economic, policy, social, and organizational factors that influence the professional nurse and healthcare systems. 5. Evaluate the impact of professional and unprofessional behaviors on healthcare delivery and professional interactions and presentations through knowledge of nursing standards of excellence. Credits: 3.00

NUR 41001 - Issues In Professional Nursing

Credit Hours: 2.00. Promotes the use of critical thinking, clinical reasoning, and active learning to analyze contemporary issues related to professional nursing practice. Issues and key trends surrounding social determinants of health policy and economics, regulatory agencies, political action, cultural diversity, practice competency, nursing informatics and ethics are used as a framework. Permission of department required.

Learning Outcomes: 1. Analyze standards of nursing care and regulations related to credentialing and certification. 2. Evaluate historical components and current nursing practice that impact healthcare systems. 3. Demonstrate understanding of the impact of local, state, national and global regulations on healthcare trends and healthcare policy. 4. Evaluate the impact that economic, political, cultural, and social concerns have on the role of professional nursing and the healthcare delivery system. 5. Articulate the value of pursuing practice excellence, life-long learning, engagement, self care, and resilience in professional nursing practice. 6. Utilize inquiry, analysis, information literacy, nursing informatics to address practice issues, ambiguity, and unpredictability in the healthcare systems. Credits: 2.00

NUR 42001 - Transition To Professional Nursing Practice

Credit Hours: 4.00. This course challenges students to use critical thinking and clinical reasoning to identify, prioritize and evaluate nursing interventions for clients with complex healthcare issues. Students interact with members of the healthcare team and clinical faculty to practice effective leadership, delegation and supervision of nursing students in clinical environments.

Learning Outcomes: 1. Apply sound clinical judgment, professional behavior, communication, collaboration and integration of best practice in clinical settings. Demonstrate/apply professional behavior, communication, collaboration and sound clinical judgment by integrating best practice in clinical settings. 2. Utilize the nursing process when caring for clients with complex healthcare needs. 3. Articulate the value of pursuing practice excellence, life-long learning, patient advocacy and engagement in professional nursing practice. 4. Demonstrate effective leadership, delegation and supervision when collaborating with members of the healthcare team. 5. Assume personal responsibility for professional growth. 6. Analyze system barriers that effect quality healthcare delivery in patients affected by complex conditions. Credits: 4.00

14-15 Credits

Spring 4th Year

NUR 41401 - Pediatric Nursing

Credit Hours: 5.00. Explores factors influencing the health and wellness of children and families. Students will apply principles, concepts and research from the health and human sciences to the care of children and families across the health-illness continuum. A structured clinical component focuses on clinical reasoning and evidence based practice. Students will provide family centered care to healthy, at risk and ill children across a variety of clinical settings.

Learning Outcomes: 1. Integrate family theories; growth and development; genomics;

environmental and psychosocial factors in the care of children across the health-illness continuum. 2. Integrate nursing concepts into evidence based nursing practice for children and families across a variety of health care settings. 3. Apply knowledge of information technologies to improve health outcomes of children and families. 4. Evaluate environmental and psychosocial risk factors for children and families. 5. Adapt nursing care to families, recognizing their diverse needs, ethnicity, culture, and values. 6. Evaluate the collaborative role of the nurse with other health care disciplines in the provision of comprehensive nursing care for healthy, at risk, and ill children. 7. Demonstrate a spirit of inquiry, responsibility and accountability within legal, ethical, professional and organizational parameters. Credits: 5.00

NUR 41501 - Public Health Nursing

Credit Hours: 5.00. Utilize health promotion, maintenance, education and disease prevention in coordinating and providing population-focused care to individuals, families and aggregates in the community. A variety of clinical settings are used to offer students a broad, comprehensive perspective of public health nursing, a field that synthesizes content from nursing, social and public health sciences. Collaboration with the community and implementation of population-focused interventions foster critical thinking and independent decision making in the delivery of nursing care.

Learning Outcomes: 1. Synthesize concepts, theories, knowledge and practice from nursing, social and public health sciences. 2. Examine the structure, function, and influence of historical, political, social, environmental, cultural, and ethical factors to the health of individuals, families, and communities. 3. Collaborate with interdisciplinary healthcare and human service providers to address the health needs of individuals, families, and communities. 4. Utilize principles, concepts, models, theories and research to guide culturally sensitive nursing care and public health practice of individuals, families, and communities. 5. Explore the delivery of public health nursing services to diverse and vulnerable populations. 6. Formulate client teaching strategies that address the principles of disease prevention and health promotion to clients across the lifespan. 7. Evaluate interventions implemented using community and family resources to address mutually identified health needs of clients. 8. Use principles of caseload management, in the delivery of safe, quality public health nursing services that reflect legal, ethical, and professional standards. 9. Apply national health objectives in planning interventions to meet the individual, system, and community level needs of diverse populations. 10.Utilize health care technology to improve health outcomes of individuals, families, and communities. 11.Integrate the role of advocacy into the delivery of care to individuals, families, and communities. Credits: 5.00

16 Credits

Program Learning Outcomes

Nutrition and Dietetics, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (99-107 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles,

policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10600 - Introduction To The Profession Of Dietetics

Credit Hours: 1.00. Overview of the dietetics profession, including standards, ethics, educational and employment opportunities, and professional credentialing. Spring semester offered only through distance learning.

Learning Outcomes: 1. Describe the profession of dietetics and future trends. 2. Recognize the education preparation needed to pursue careers in dietetics including different education models of becoming an entry-level dietitian. 3. Demonstrate knowledge of the supervised practice experience application process. 4. Identify the credentialing of dietetic practitioners. 5. Recognize the major professional organizations in dietetics such as the Academy of Nutrition and Dietetics, state affiliates and district dietetic associations, and dietetic practice groups and the roles of each. 6. Demonstrate the ability to develop a professional development portfolio, resume, and cover letter. 7. Develop an understanding of professionalism related to dietetics including interviewing skills, professional etiquette, professional ethics, and professional practice standards. 8. Develop skills for planning a career in dietetics such as self-assessment, goal setting, networking, job search strategies, and timeline establishment. Credits: 1.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 35000 - Dietetics Practicum In Quantity Food Production

Credit Hours: 1.00 to 3.00. Supervised on-the-job experience related to the food service management in health care facilities, schools, community programs, etc. Student is responsible for arrangement and approval of the experience through the supervising food service manager or dietitian and the course instructor. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge gained from coursework to actual work situations. 2. Develop skills related to management of food service. 3. Design and complete a project appropriate for a food service operation. Credits: 1.00 to 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood,

adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 41100 - Dietetics Career Planning

Credit Hours: 1.00. This course will prepare students to successfully apply and interview for dietetics supervised practice experience, jobs and graduate programs.

Learning Outcomes: 1. Students will prepare resumes, personal statements, and sample applications. 2. Students will use available resources to develop skills in interviewing. 3. Students will identify the steps and deadlines for applying to graduate school and supervised practice programs. Credits: 1.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the

cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 44200 - Foodservice Systems Management

Credit Hours: 3.00. Systems approach to foodservice management. Foodservice operations based on nutritional goals of the target market. Food sanitation and safety, management of human resources, and supervision. Emphasis on applications to health-care facilities.

Learning Outcomes: 1. Identify and describe the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 2. Apply management and business theories and principles to the development, marketing and delivery of programs or services. 3. Determine costs of services or operations, prepare a budget and interpret financial data. 4. Apply the principles of human resource management to different situations. 5. Apply safety principles related to food, personnel and consumers. Credits: 3.00

NUTR 48000 - Medical Nutrition Therapy I

Credit Hours: 4.00. Nutrition assessment in humans and introduction to the nutrition care process. Application of the nutrition care process to various disease states.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical evidence-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition therapy. Credits: 4.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training, motivation, job satisfaction, emotions, work stress, and leadership.

Learning Outcomes: 1. Provide instruction and covers material to assist students in obtaining a broad perspective on the field of Psychological Sciences. Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least

7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

HTM 31100 - Procurement Management For Foodservice

Credit Hours: 3.00. Identifies and describes food, supplies, and related merchandise used in the foodservice industry. Provides methods and criteria for recognizing quality, evaluating, specifying, purchasing, and inspecting these products. Discusses the use of technology in the purchasing component of the foodservice industry.

Learning Outcomes: 1. Explain foodservice procurement principles such as steps in the procurement process, procurement-menu relationship, quality standards, and vendor relations. 2. Explain factors impacting procurement decisions such as ethics, government regulations, global economic conditions, sustainability, distribution sales channels, technology, competitors, consumer behavior, and skills and knowledge of buyers. 3. Apply foodservice procurement principles, factors, and data analysis to formulate decisions related to product, quantity, price, supplier/producer/manufacturer, and inventory management. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes

an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of

Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical

processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and

behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the

community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

NUTR 12500 - Food Safety Certification And Career Development

Credit Hours: 1.00. Training in ServSafe food safety certification program.

Learning Outcomes: 1. Select appropriate food safety and sanitation practices according to ServSafe guidelines. 2. Assess professional development using resume and student portfolio. Credits: 1.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s)

to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s)

to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Other Departmental/Program Course Requirements (4-6 credits)

Electives (7-17 credits)

Course Requirements & Notes

Supplemental List

Grade Requirements

GPA Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10600 - Introduction To The Profession Of Dietetics

Credit Hours: 1.00. Overview of the dietetics profession, including standards, ethics, educational and employment opportunities, and professional credentialing. Spring semester offered only through distance learning.

Learning Outcomes: 1. Describe the profession of dietetics and future trends. 2. Recognize the education preparation needed to pursue careers in dietetics including different education models of becoming an entry-level dietitian. 3. Demonstrate knowledge of the supervised practice experience application process. 4. Identify the credentialing of dietetic

practitioners. 5. Recognize the major professional organizations in dietetics such as the Academy of Nutrition and Dietetics, state affiliates and district dietetic associations, and dietetic practice groups and the roles of each. 6. Demonstrate the ability to develop a professional development portfolio, resume, and cover letter. 7. Develop an understanding of professionalism related to dietetics including interviewing skills, professional etiquette, professional ethics, and professional practice standards. 8. Develop skills for planning a career in dietetics such as self-assessment, goal setting, networking, job search strategies, and timeline establishment. Credits: 1.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the

application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature,

measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital

instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

15-19 Credits

Spring 1st Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting

methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

16-17 Credits

Fall 2nd Year

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food,

nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

PSY 27200 - Introduction To Industrial-Organizational Psychology

Credit Hours: 3.00. Survey of psychological principles and research methods relevant to organizations and industry. Topics covered include research methodology, individual differences, personnel selection, performance measurement, training, motivation, job satisfaction, emotions, work stress, and leadership.

Learning Outcomes: 1. Provide instruction and covers material to assist students in obtaining a broad perspective on the field of Psychological Sciences. Credits: 3.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society.

13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

NUTR 12500 - Food Safety Certification And Career Development

Credit Hours: 1.00. Training in ServSafe food safety certification program.

Learning Outcomes: 1. Select appropriate food safety and sanitation practices according to ServSafe guidelines. 2. Assess professional development using resume and student portfolio. Credits: 1.00

17-18 Credits

Spring 2nd Year

HTM 31100 - Procurement Management For Foodservice

Credit Hours: 3.00. Identifies and describes food, supplies, and related merchandise used in the foodservice industry. Provides methods and criteria for recognizing quality, evaluating, specifying, purchasing, and inspecting these products. Discusses the use of technology in the purchasing component of the foodservice industry.

Learning Outcomes: 1. Explain foodservice procurement principles such as steps in the procurement process, procurement-menu relationship, quality standards, and vendor

relations. 2. Explain factors impacting procurement decisions such as ethics, government regulations, global economic conditions, sustainability, distribution sales channels, technology, competitors, consumer behavior, and skills and knowledge of buyers. 3. Apply foodservice procurement principles, factors, and data analysis to formulate decisions related to product, quantity, price, supplier/producer/manufacturer, and inventory management. Credits: 3.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be

familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

12-17 Credits

Fall 3rd Year

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication,

transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 35000 - Dietetics Practicum In Quantity Food Production

Credit Hours: 1.00 to 3.00. Supervised on-the-job experience related to the food service management in health care facilities, schools, community programs, etc. Student is responsible for arrangement and approval of the experience through the supervising food service manager or dietitian and the course instructor. Permission of instructor required.

Learning Outcomes: 1. Apply knowledge gained from coursework to actual work situations. 2. Develop skills related to management of food service. 3. Design and complete a project appropriate for a food service operation. Credits: 1.00 to 3.00

HTM 29101 - The John Purdue Room Restaurant Experience

Credit Hours: 2.00. Hospitality enterprises are complex, requiring experience in operations and customer service to ensure organizational success. The John Purdue Room (JPR) is uniquely positioned to provide students with experiential learning in a restaurant operation. Students rotate through staff and management positions in various roles. Production methods, equipment and product flow are covered in the back-of-the-house, while customer service and service recovery techniques are practiced in the front-of-the-house. Management skills learned and practiced in the JPR are transferable to all service industries.

Learning Outcomes: 1. Demonstrate the principles of exceptional customer service. 2. Demonstrate the styles of service, proper table set-up, and food presentation and delivery. 3. Demonstrate the appropriate use of food ingredients and preparation methods. 4. Demonstrate safe food handling, sanitation, and workplace safety practices. 5. Demonstrate effective teamwork, including professional behavior, cooperating with peers, and handling group dynamics. Credits: 2.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression

procedures, and understand correlation. Credits: 3.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

15-16 Credits

Spring 3rd Year

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related

problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

12-15 Credits

Fall 4th Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

NUTR 41100 - Dietetics Career Planning

Credit Hours: 1.00. This course will prepare students to successfully apply and interview for dietetics supervised practice experience, jobs and graduate programs.

Learning Outcomes: 1. Students will prepare resumes, personal statements, and sample applications. 2. Students will use available resources to develop skills in interviewing. 3. Students will identify the steps and deadlines for applying to graduate school and supervised practice programs. Credits: 1.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 48000 - Medical Nutrition Therapy I

Credit Hours: 4.00. Nutrition assessment in humans and introduction to the nutrition care process. Application of the nutrition care process to various disease states.

Learning Outcomes: 1. Demonstrate how to locate and interpret professional literature to make ethical evidence-based practice decisions. 2. Utilize current information technologies to locate evidence-based guidelines and protocols. 3. Locate and understand established guidelines to a professional practice scenario. 4. Identify the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 5. Utilize the nutrition care process to make decisions and to identify nutrition-related problems for medical nutrition therapy. Credits: 4.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making.

2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

12-15 Credits

Spring 4th Year

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 44200 - Foodservice Systems Management

Credit Hours: 3.00. Systems approach to foodservice management. Foodservice operations based on nutritional goals of the target market. Food sanitation and safety, management of human resources, and supervision. Emphasis on applications to health-care facilities.

Learning Outcomes: 1. Identify and describe the roles of others with whom the Registered Dietitian collaborates in the delivery of food and nutrition services. 2. Apply management and business theories and principles to the development, marketing and delivery of programs or services. 3. Determine costs of services or operations, prepare a budget and interpret financial data. 4. Apply the principles of human resource management to different situations. 5. Apply safety principles related to food, personnel and consumers. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

12-15 Credits

Nutrition Science, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (22-23 credits)

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities,

research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10700 - Introduction To Nutrition Science

Credit Hours: 1.00. An overview of professional opportunities for nutrition scientists. Introduces tools and resources available for becoming a nutrition scientist.

Learning Outcomes: 1. To identify and describe the current professional opportunities for nutrition scientists. 2. To comprehend the educational preparation necessary to pursue a career as a nutrition scientist. 3. To name and become knowledgeable about the functions of, and advantages of belonging to, major professional organizations in nutrition science such as the American Society of Nutrition. 4. To apply modern information technology to the problem of discovering scientifically valid nutrition science information. Credits: 1.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven

research projects. Credits: 1.00 to 3.00

NUTR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for Honors College and Department of Nutrition Science Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 45300 - Food Chemistry

Credit Hours: 4.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Recognize and predict how chemical structures and reactions influence sensory and analytical properties of food. 3. Explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives, and evaluate the validity of health controversies related to these ingredients. 5. Design, execute, and explain (via oral and written reports) a food experiment using the scientific method. Credits: 4.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 49700 - Honors Research Project

Credit Hours: 1.00 to 3.00. The completion of the independent honors research project for Honors College and Department of Nutrition Science Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Learning Outcomes: 1. Demonstrate critical thinking skills in nutrition science. 2. Present and defend hypothesis-driven research project. Credits: 1.00 to 3.00

NUTR 49600 - Evaluation Of Nutrition Science Research

Credit Hours: 3.00. Evaluation of nutrition science research as it relates to health and disease.

Learning Outcomes: 1. Distinguish between data and interpretation through the practice of reading, analyzing, critiquing, and discussing nutrition science research articles. 2. Access and integrate the contribution of multiple research studies to an area of nutrition science rresearch and its impact on health and disease. 3. Explain, orally and in writing, the evaluation of nutrition science research. 4. Identify and assess the validity of sensational nutrition science research presented in media. Credits: 3.00

Other Departmental/Program Course Requirements (75-82 credits)

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that

illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate

subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and

non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results,

and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of

macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern

genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)

Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary

functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

MA 16100 - Plane Analytic Geometry And Calculus I (UCC: QR)

Credit Hours: 5.00. Introduction to differential and integral calculus of one variable, with applications. Some schools or departments may allow only 4 credit hours toward graduation for this course. Designed for students who have not had at least a one-semester calculus course in high school, with a grade of "A" or "B". Not open to students with credit in MA 16500 . Demonstrated competence in college algebra and trigonometry.

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To compute limits and to apply limit laws. 2. To apply rules of differentiation to compute derivatives of elementary functions. 3. To sketch graphs of functions with the aid of differentiation techniques. 4. To find maxima and minima of functions; optimization problems 5. To compute integrals of some elementary functions and to apply the Fundamental Theorem of Calculus to compute areas of certain planar regions Credits: 5.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will

feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to

collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Electives (15-23 credits)

GPA Requirements

Course Requirements and Notes

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 10700 - Introduction To Nutrition Science

Credit Hours: 1.00. An overview of professional opportunities for nutrition scientists. Introduces tools and resources available for becoming a nutrition scientist.

Learning Outcomes: 1. To identify and describe the current professional opportunities for nutrition scientists. 2. To comprehend the educational preparation necessary to pursue a career as a nutrition scientist. 3. To name and become knowledgeable about the functions of, and advantages of belonging to, major professional organizations in nutrition science such as the American Society of Nutrition. 4. To apply modern information technology to the problem of discovering scientifically valid nutrition science information. Credits: 1.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide

constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data,

statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory

practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 13100 - Biology II: Development, Structure, And Function Of Organisms (UCC: SCI)

Credit Hours: 3.00. Principles of development of plants and animals and the relationship between the structure and function of selected systems of these organisms.

University Core Curriculum (UCC): (UCC: SCI)
Credits: 3.00

BIOL 13500 - First Year Biology Laboratory (UCC: SCI)

Credit Hours: 2.00. Laboratory exercises emphasizing student mastery of basic laboratory skills needed to succeed in the biological sciences; intended for beginning (first-year) biology majors.

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 2.00

MA 16020 - Applied Calculus II (UCC: QR)

Credit Hours: 3.00. This course covers techniques and applications of integration; infinite series; differentiation and integration of functions of several variables; maxima and minima, optimization; differential equations and initial value problems. CTL:IMA 1605 Calculus - Short II

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. Use techniques of integration to find areas between curves and compute volumes of solids of revolution. 2. Analyze the convergence of infinite series and power series, Taylor series expansions. 3. Compute derivatives of functions of several variables and use them to find maxima and minima of functions. 4. Perform multiple iterated integration. 5. Use differential equations for modeling simple real-life situations. 6. Solve first order linear initial value problems and separable equations. 7. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

14 Credits

Fall 2nd Year

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including

experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 23100 - Biology III: Cell Structure And Function

Credit Hours: 3.00. An introduction to modern cell biology through an examination of the physical and chemical properties that lead to an understanding of the molecular basis for cell function.

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 3. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 4. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Students will understand the principles of how energy is obtained, stored and used in biological processes. 7. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 8. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 9. Graduates will understand how chemical and biochemical processes relate to biological

function at the molecular, cellular, organismal, and higher levels. 10. Demonstrate proficiency with professional skills by practicing biologists including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 11. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. Credits: 3.00

BIOL 23200 - Laboratory In Biology III: Cell Structure And Function

Credit Hours: 2.00. Laboratory exercises designed to illustrate the properties, functions, and growth of prokaryotic and eukaryotic cells and to introduce the student to modern experimental methods used to study cells and their separated components.

Credits: 2.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25501 - Organic Chemistry For The Life Sciences Laboratory I

Credit Hours: 1.00. Laboratory experiments to accompany CHM 25500, illustrating methods of separation, instrumental methods of analysis, and the more common techniques and methods for preparing various types of organic compounds.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

14 Credits

Spring 2nd Year

AGRY 32000 - Genetics

Credit Hours: 3.00. The transmission of heritable traits; probability; genotypic-environmental interactions; chromosomal aberrations; polyploidy; gene mutations; genes in populations; the structure and function of nucleic acids; biochemical genetics; molecular genetics; coding.

Learning Outcomes: 1. Deduce and explain which sources of variation in heredity may apply in examples of biological phenomena. 2. Describe units of inheritance at the population, organismal and molecular levels when given information about a trait. 3. Distinguish single gene traits from polygenic traits and the influence of environment when given information about a trait. 4. Describe how selection influences genetic variation at the population level within applied genetic scenarios. 5. Correctly apply basic genetic calculations to solve classical genetic problems and explain the results. Credits: 3.00

AGRY 32100 - Genetics Laboratory

Credit Hours: 1.00. This course is a hands-on laboratory course that uses plants and microorganisms to demonstrate basic

concepts of classical, molecular, and modern genetics. This course is designed to provide students with fundamental knowledge and skills for conducting genetics and molecular biology laboratory experiments. Students will gain experience with methods including but not limited to gel electrophoresis, DNA extraction, PCR, cloning, restriction digest analysis, phenotypic analysis, DNA sequencing, bioinformatics, SNP genotyping, qualitative gene expression analysis, and quantitative gene expression analysis. Students will learn how to plan and validate their laboratory experiments. The goal of this course is to prepare students to confidently perform and interpret experimental results in future laboratory courses or careers.

Learning Outcomes: 1. Apply fundamental principles of genetics to modern methods of genetic analyses. 2. Plan, perform, and interpret classical genetics laboratory experiments and methods. 3. Identify and utilize bioinformatic genetics resources to plan and perform an experiment. Credits: 1.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 24100 - Biology IV: Genetics And Molecular Biology

Credit Hours: 3.00. An introduction to the principles of classical genetics and to molecular genetics. Topics covered are transmission of the genetic material (both in eukaryotes and prokaryotes); changes in the genetic material, structure, and function of the genetic material; and the manipulation of genetic material (recombinant DNA technology).

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and

metabolism. 3. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 4. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 5. Students who complete the CMB BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 6. Students who complete the CMB BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 7. Students will exhibit proficiency in population and quantitative genetics. 8. Students will demonstrate an understanding of concepts and theories of genetics. 9. Students will demonstrate an understanding of laboratory skills used in genetics. 10. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. Credits: 3.00

BIOL 24200 - Laboratory In Biology IV: Genetics And Molecular Biology

Credit Hours: 2.00. Experiments in classical and modern genetics and exercises to acquaint the students with basic techniques in molecular biology.

Credits: 2.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25601 - Organic Chemistry For The Life Sciences Laboratory II

Credit Hours: 1.00. A continuation of CHM 25501. Experiments are designed to illustrate principles discussed in CHM 25600.

Learning Outcomes: 1. Learn through practical experience the isolation, purification, and characterization of organic compounds through processes including liquid-liquid extraction, evaporation, solid-phase chromatography, distillation and infrared spectroscopy. 2. Learn through practical experience the use of simple methods to carry out reactions discussed in organic chemistry lectures and how to isolate and characterize the products. Credits: 1.00

16-17 Credits

Fall 3rd Year

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding

of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

BCHM 30900 - Biochemistry Laboratory

Credit Hours: 1.00. Experiments that introduce methods for analysis and separation of biological molecules and that illustrate the biochemical and metabolic concepts covered in BCHM 30700.

Credits: 1.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media. Credits: 4.00

PHYS 23300 - Physics For Life Sciences I

Credit Hours: 4.00. Physics For Life Sciences I builds upon prerequisite knowledge in college level biology, chemistry, and mathematics to present introductory physics that will be useful

for applying physical principles, insights, and problem solving approaches for students with life science majors. Content will feature the Newtonian framework with emphasis on friction, drag and viscosity, random motion and diffusion, fluid flow, the Coulomb force, molecular forces and bonding, momentum, conservation of energy, entropy, and the first and second laws of thermodynamics.

Learning Outcomes: 1. Understand how motion in realistic biological systems (e.g. cells, biomolecules) is governed by forces. 2. Understand how molecular binding is described in terms of energy. 3. Understand how diffusion is governed on a microscopic level. 4. Have insight into how the first and second laws of thermodynamics constrain basic processes in living systems. Credits: 4.00

15 Credits

Spring 3rd Year

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI) Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic

probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

PHYS 23400 - Physics For Life Sciences II

Credit Hours: 4.00. Physics For Life Sciences II builds upon prerequisite knowledge in college level biology, chemistry, and mathematics, as well as on Physics For Life Sciences I, to develop an understanding of how energy, entropy, enthalpy, and Boltzmann distributions affect the dynamics of living systems, of how electric fields and potentials are applied to fluids and membranes, and how the physics of harmonic oscillators, waves, sound, optics, photons, and quantized states are relevant to biological systems and the tools used for their study.

Learning Outcomes: 1. Understand the connection between microscopic phenomena and macroscopic consequences in terms of energy, entropy, and the laws of thermodynamics for biological systems. 2. Apply simple electrostatic principles to membrane potentials and other biological examples. 3. Understand how wave phenomena and quantized states are important for characterizing biomolecules. Credits: 4.00

15 Credits

Fall 4th Year

NUTR 39000 - Independent Undergraduate Research

Credit Hours: 1.00 to 3.00. Individual research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 39700 - Directed Honors Research

Credit Hours: 1.00 to 3.00. Directed independent honors research for Honors College and Department of Nutrition Science Honors Program students. Students must select a faculty advisor for the course. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 45300 - Food Chemistry

Credit Hours: 4.00. Application of fundamental laws and concepts of chemistry, physics, and biology to the properties, composition, and storage of foods.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Recognize and predict how chemical structures and reactions influence sensory and analytical properties of food. 3. Explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives, and evaluate the validity of health controversies related to these ingredients. 5. Design, execute,

and explain (via oral and written reports) a food experiment using the scientific method. Credits: 4.00

NUTR 49000 - Independent Undergraduate Research

Credit Hours: 1.00 to 4.00. Independent research projects undertaken with faculty supervision. Permission of instructor required.

Learning Outcomes: 1. Students will improve their critical thinking skills in nutrition science. 2. Students will conduct hypothesis-driven research projects. Credits: 1.00 to 4.00

NUTR 49700 - Honors Research Project

Credit Hours: 1.00 to 3.00. The completion of the independent honors research project for Honors College and Department of Nutrition Science Honors Program students. Must have an approved Honors Project Proposal. Permission of instructor required.

Learning Outcomes: 1. Demonstrate critical thinking skills in nutrition science. 2. Present and defend hypothesis-driven research project. Credits: 1.00 to 3.00

12-17 Credits

Spring 4th Year

NUTR 49600 - Evaluation Of Nutrition Science Research

Credit Hours: 3.00. Evaluation of nutrition science research as it relates to health and disease.

Learning Outcomes: 1. Distinguish between data and interpretation through the practice of reading, analyzing, critiquing, and discussing nutrition science research articles. 2. Access and integrate the contribution of multiple research studies to an area of nutrition science rresearch and its impact on health and disease. 3. Explain, orally and in writing, the evaluation of nutrition science research. 4. Identify and assess the validity of sensational nutrition science research presented in media. Credits: 3.00

13-18 Credits

Nutrition, Fitness, and Health, BS

About the Program

Degree Requirements

Departmental/Program Major Course Requirements (34 credits)

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the

""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate

the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 48800 - Topics In Nutrition, Fitness, And Health

Credit Hours: 3.00. This course critically evaluates the interrelationships between nutrition and exercise and their impact on physical performance and health. Concepts combining nutritional sciences and exercise physiology will be presented. Emerging science and controversies in the current literature will be discussed.

Learning Outcomes: 1. Value the integration of nutrition and exercise for human health promotion, especially related to dietary macronutrients and energy. 2. Discuss current controversial topics in nutrition and fitness and special topics. 3. Practice scientific literature searching, critical evaluation and interpretation of research, technical and scientific writing, and oral communication skills. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

Other Departmental/Program Course Requirements (66-75 credits)

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

HK 36800 - Exercise Physiology I

Credit Hours: 3.00. Physiological concepts and principles underlying human responses and adaptations to exercise stress. Included are selected methods and techniques of assessing physiological function in the laboratory setting.

Credits: 3.00

HK 42100 - Health Screening And Fitness Evaluation And Design

Credit Hours: 3.00. This course provides the learner with the knowledge and skills to successfully administer and interpret the results of health evaluations and fitness assessments for the purposes of analysis and the development of individualized exercise programs.

Learning Outcomes: 1. Apply specific physiological principles to individual physical health prescription: Cardiovascular Health, Body Composition, Posture, Muscular Strength,

Muscular Endurance, Flexibility, ROM. 2. Explain verbally identified fitness assessment tests as would to a client indicating what, why, and how they are each performed. 3. Administer pre-exercise screening questionnaire/informed consent and identify needs for a medical clearance. 4. Administer accurately identified fitness assessment tests to a client and classify results. Credits: 3.00

HK 42200 - Basic Concepts In Exercise Program Design

Credit Hours: 3.00. Introduces basic program design concepts and rationale to design fitness programs for healthy adults emphasizing cardiovascular training, strength training, flexibility training, and balance.

Learning Outcomes: 1. Design and implement a safe and effective warm up and cool down protocol specific to the individual. 2. Create and implement well-planned, individualized, and progressive resistance training programs. 3. Develop progressive and individualized cardiovascular training programs. 4. Describe the role of exercise in healthy weight management. 5. Apply the scientific concepts to design exercise programs to improve athletic performance and optimize fitness in non-athlete healthy persons. Credits: 3.00

HK 46800 - Advanced Exercise Physiology II

Credit Hours: 3.00. An advanced undergraduate course in the area of exercise and human performance. Further examination of the physiological mechanisms and theories involved in the exercise response.

Credits: 3.00

HK 46900 - Exercise Testing And Prescription In Special Populations

Credit Hours: 3.00. Examines responses to exercise testing and prescription in healthy adults compared to exercise responses and special considerations for individuals with chronic diseases and conditions and issues of concern to pregnant women, children, and older adults, among others.

Learning Outcomes: 1. Identify the difference in testing and prescription for individuals with chronic conditions. 2. Evaluate critically the risks and benefits associated with exercise participation. 3. Apply appropriate emergency procedures in various exercise settings. 4. Deliver unique exercise programs to special populations. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course

students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12.

Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students

demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods,

solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to construct arguments related to real-world issues. Credits: 3.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI)

Credits: 3.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations

in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical

and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

Electives (11-20 credits)

Supplemental List

GPA Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

NUTR 10500 - Nutrition In The 21st Century

Credit Hours: 1.00. Overview of the discipline of nutrition science including undergraduate and professional opportunities, research and critical thinking requirements.

Learning Outcomes: 1. Show an awareness of the scope of nutrition. 2. Relate approaches for studying nutrition. 3. Demonstrate basic knowledge and critical thinking skills. Credits: 1.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course

produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription,

protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

CHM 11100 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. A basic introduction to the principles of chemistry including matter and energy, nomenclature, measurement, atomic structure, nuclear chemistry, chemical bonding, stoichiometry, classification of chemical reactions, kinetics, equilibria, gas laws, liquids, and solids. CTL:IPS 1721 Elementary General Chemistry w/lab

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate skill in carrying out mathematical (e.g., algebraic, geometric, logical statistical) procedures flexibly, accurately, and efficiently to solve problems. 2. Explain how scientific explanations are formulated, tested and modified or validated. 3. Distinguish between scientific and non-scientific evidence and explanations. 4. Apply foundational knowledge and discipline-specific concepts to address issues or solve problems. 5. Apply basic observational, quantitative, or technological methods to gather data and generate evidence-based conclusions. 6. Use current models and theories to describe, explain, or predict natural phenomena. 7. Locate reliable sources of scientific evidence to

construct arguments related to real-world issues. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11530 - General Chemistry I - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11510. Topics covered can include safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Making connections between lab results and the theories/concepts learned in

lecture. Credits: 1.00

14-18 Credits

Spring 1st Year

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

CHM 11200 - General Chemistry (UCC: SCI)

Credit Hours: 3.00. Continuation of CHM 11100 . Liquids and solids; solutions; chemical kinetics; equilibrium; acids and bases; oxidation and reduction; electrochemistry; descriptive chemistry of the metals and nonmetals; introduction to organic chemistry; nuclear chemistry. Not available for credit toward graduation in the School of Science.

University Core Curriculum (UCC): (UCC: SCI) Credits: 3.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11630 - General Chemistry II - Virtual Laboratory (UCC: SCI)

Credit Hours: 1.00. Online laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibrium.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by use calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. Credits: 1.00

13-17 Credits

Fall 2nd Year

AGEC 21700 - Economics (UCC: BSS)

Credit Hours: 3.00. National economic problems such as unemployment, recessions, inflation, taxation, bank interest rates, the growth of government, monetary systems, and a rising national debt are discussed along with the principles, policies, and institutions for solving these macroeconomic problems.

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Apply knowledge of economic measurement, the economic model and the history of U.S. economic policy to analyze economic events, both personal and global, which occur during the rest of your life. Credits: 3.00

NUTR 20500 - Food Science I

Credit Hours: 3.00. Chemical and physical composition of foods: their changes during processing, storage, and preparation.

Learning Outcomes: 1. Gain a better understanding of food science and human nutrition. 2. Gain expertise in technical writing, research methodology, scientific literature searching, scientific methods, interpreting research, food technology, culinary techniques and terminology, food safety and sanitation, sensory evaluation, food ingredient functionality, and basic food preparation. Credits: 3.00

PSY 12000 - Elementary Psychology (UCC: BSS)

Credit Hours: 3.00. Introduction to the fundamental principles of psychology, covering particularly the topics of personality, intelligence, emotion, abnormal behavior, attention, perception, learning, memory, and thinking. As part of their learning experience, students participate in psychological experiments. CTL:ISH 1020 Introduction To Psychology

University Core Curriculum (UCC): (UCC: BSS) Credits: 3.00

SOC 10000 - Introductory Sociology (UCC: BSS)

Credit Hours: 3.00. A survey course designed to introduce the student to the scene of human society. Fundamental concepts, description, and analysis of society, culture, the socialization process, social institutions, and social change. Students of junior or senior standing should take SOC 31200, unless they are sociology or law and society majors. CTL:ISH 1060 Introduction To Sociology

University Core Curriculum (UCC): (UCC: BSS) Learning Outcomes: 1. Explain what it means to have a sociological imagination. 2. Use and evaluate theoretical and methodological tools sociologists use to study society. 3. Apply your sociological imagination to examine a variety of social behaviors and inequalities. Credits: 3.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and

maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 25500 - Organic Chemistry For The Life Sciences I

Credit Hours: 3.00. A study of aliphatic and aromatic hydrocarbons and their simple derivatives in terms of (a) structure, bonding, etc.; (b) general syntheses and reactions; and (c) a logical modern rationale for fundamental phenomena as supported by reactivity orders, orientation effects, stereochemistry, and relative rates. Recommended for biology majors.

Learning Outcomes: 1. Gain understanding of the fundamental principles of organic chemistry and to apply those principles to solve problems. 2. Observe the world on a molecular level and to understand how organic chemistry applies to biology and everyday life. 3. Understand at a fundamental level how molecules look and behave. 4. Relate the structure and reactivity of molecules to observable physical/chemical properties. 5. Describe Life Processes in terms of molecular phenomena. Credits: 3.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to

understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

ECON 21000 - Principles Of Economics (UCC: BSS)

Credit Hours: 3.00. This course presents the principles upon which the social science of economics is based. Specifically, it examines how individuals, firms, and the government interact through markets. It also examines several important macroeconomic issues including unemployment, inflation, international trade, and economic growth. Students are expected to be able to apply these economic principles to analyze current events, work decisions, and personal choices. CTL:ISH 1040 Introduction To Economics

University Core Curriculum (UCC): (UCC: BSS)

Learning Outcomes: 1. Identify costs and benefits involved in economic decision making. 2. Predict market equilibrium and changes in equilibrium. 3. Evaluate the efficiency of market equilibrium. 4. Express and interpret economic theories and data using various visual representations (e.g., graphs, tables, charts). 5. Calculate basic measures of macroeconomic performance and the forces that influence those measures. Credits: 3.00

16-17 Credits

Spring 2nd Year

NUTR 31500 - Fundamentals Of Nutrition

Credit Hours: 3.00. Basic principles of nutrition and their application in meeting nutritional needs during the life cycle.

Learning Outcomes: 1. Recognize the ""fundamentals of nutrition"". 2. Discuss substances in foods needed in adequate amounts for energy, growth, reproduction and health and explain the identity, acquisition, utilization, and excretion of nutrients. 3. Explain the science of nutrition which includes the action, interaction, and balance of food, nutrients and other substances within food in relation to health and disease. 4. Describe nutrient ingestion, digestion, absorption, transport, metabolism, interaction, storage, and excretion. 5. Show appropriate diet selection under different circumstances such as: different states of the life cycle, disease states, and in the prevention of chronic diseases. 6. Develop the groundwork for future courses where information learned in this course will be applied to the design of diet therapies or diet prescriptions, design of diet recommendations for general audiences, selection of our own diets, and understanding the mechanisms of action and interactions of nutrients. Credits: 3.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of

Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12. Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 25600 - Organic Chemistry For The Life Sciences II

Credit Hours: 3.00. A continuation of CHM 25500 with various functional groups such as the carboxyl, amino, etc., and including such polyfunctional natural products as carbohydrates and peptides.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate an understanding of the physical properties and a molecular understanding of chemical reactivity and materials. 3. Plan chemical transformations. 4. Recognize and understand chemical instrumentation and spectroscopy. Credits: 3.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL) Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations,

perform simple and multiple regression procedures, and understand correlation. Credits: 3.00

14-16 Credits

Fall 3rd Year

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

HK 36800 - Exercise Physiology I

Credit Hours: 3.00. Physiological concepts and principles underlying human responses and adaptations to exercise stress. Included are selected methods and techniques of assessing physiological function in the laboratory setting.

Credits: 3.00

NUTR 33000 - Diet Selection And Planning

Credit Hours: 3.00. Diet selection for health maintenance in culturally diverse populations based on current dietary guides with utilization of the computer for diet evaluation.

Learning Outcomes: 1. Identify and select evidence-based tools and methods for assessing, planning, and evaluating diets for individuals without special dietary needs. 2. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 3. Use current information technologies to locate and apply evidence-based guidelines and protocols. 4. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups. Credits: 3.00

NUTR 45400 - Food Chemistry Laboratory

Credit Hours: 2.00. From this course, students should be able to: Assess and interpret analytical and sensory properties of food; Assess how chemical structures and reactions influence sensory and analytical properties of food; Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques; Explain chemical function of food additives; Design, report on, and critique food experiments using the scientific method.

Learning Outcomes: 1. Assess and interpret analytical and sensory properties of food. 2. Assess how chemical structures and reactions influence sensory and analytical properties of food. 3. Demonstrate and explain physical and chemical reactions in foods/beverages during preparation and processing techniques. 4. Explain chemical function of food additives. 5. Design, report on, and critique food experiments using the scientific method. Credits: 2.00

12-13 Credits

Spring 3rd Year

HK 42100 - Health Screening And Fitness Evaluation And Design

Credit Hours: 3.00. This course provides the learner with the

knowledge and skills to successfully administer and interpret the results of health evaluations and fitness assessments for the purposes of analysis and the development of individualized exercise programs.

Learning Outcomes: 1. Apply specific physiological principles to individual physical health prescription: Cardiovascular Health, Body Composition, Posture, Muscular Strength, Muscular Endurance, Flexibility, ROM. 2. Explain verbally identified fitness assessment tests as would to a client indicating what, why, and how they are each performed. 3. Administer pre-exercise screening questionnaire/informed consent and identify needs for a medical clearance. 4. Administer accurately identified fitness assessment tests to a client and classify results. Credits: 3.00

HK 46800 - Advanced Exercise Physiology II

Credit Hours: 3.00. An advanced undergraduate course in the area of exercise and human performance. Further examination of the physiological mechanisms and theories involved in the exercise response.

Credits: 3.00

NUTR 33200 - Nutrition Counseling

Credit Hours: 3.00. Develop communication skills and counseling techniques necessary to elicit nutrition-related behavior changes in individuals.

Learning Outcomes: 1. Identify the nutrition professional's role and scope of practice in nutrition counseling. 2. Describe ethical considerations in nutrition counseling. 3. Describe the helping relationship and theories of behavior change. 4. Describe and apply counseling strategies to assist clients in behavior change. 5. Demonstrate understanding of the impact of age, gender, culture, literacy and personality on nutrition counseling. 6. Compare and contrast counseling skills best for the in-patient vs. the out-patient. 7. Describe and apply counseling strategies important to successful weight management, eating disorders, chronic disease and end of life. Credits: 3.00

NUTR 36500 - Physiology And Nutrition During The Life Cycle

Credit Hours: 3.00. Physiology and Nutrition During the Life Cycle explores the life stages of pregnancy, childhood, adulthood and older adulthood from physiological, social, and behavioral perspectives, focusing on the biological underpinnings of special nutritional needs for each life stage for optimal growth and development, maturation, aging, and overall health and well-being.

Learning Outcomes: 1. Describe physiological, social and behavioral components involved with human growth and development, maturation, and aging, seen in the life stages of pregnancy, childhood, adulthood and older adulthood and the impact on nutrition and health. 2. Describe special nutritional needs and recommended guidelines of the life stages of pregnancy, childhood, adulthood, and older adulthood. 3. Locate, interpret, evaluate and use professional literature to make ethical evidence-based practice decisions. 4. Use current information technologies to locate and apply evidence-based guidelines and protocols. 5. Demonstrate the ability to apply knowledge of the role of environment, food, and lifestyle choices to develop interventions to affect change and enhance wellness in diverse individuals and groups throughout the life cycle. Credits: 3.00

NUTR 43600 - Nutritional Assessment

Credit Hours: 2.00. Nutrition assessment in humans, including anthropometric, biochemical, clinical, and dietary assessment.

Learning Outcomes: 1. Explain, compare and contrast techniques used to assess the nutrition status of individuals and groups in clinical, community and research settings. 2. Utilize the nutrition care process to obtain, verify and interpret data, and ultimately, to make decisions about the nature and cause of nutrition-related problems. Credits: 2.00

NUTR 43700 - Macronutrient Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the macronutrients, carbohydrate, lipids and protein in humans integrating physiology, biochemistry, and nutrition with a focus on maintaining optimal health and preventing disease.

Learning Outcomes: 1. Describe the processes of digestion, absorption, utilization and function of macronutrients in humans. 2. Relate macronutrients to the regulation and processes of biochemical physiology. 3. Explain the cellular and molecular mechanisms related to macronutrient metabolism. 4. Identify the role of macronutrient metabolism in the etiology and pathophysiology of disease. Credits: 3.00

17 Credits

Fall 4th Year

HK 42200 - Basic Concepts In Exercise Program Design

Credit Hours: 3.00. Introduces basic program design concepts and rationale to design fitness programs for healthy adults emphasizing cardiovascular training, strength training, flexibility training, and balance.

Learning Outcomes: 1. Design and implement a safe and effective warm up and cool down protocol specific to the individual. 2. Create and implement well-planned, individualized, and progressive resistance training programs. 3. Develop progressive and individualized cardiovascular training programs. 4. Describe the role of exercise in healthy weight management. 5. Apply the scientific concepts to design exercise programs to improve athletic performance and optimize fitness in non-athlete healthy persons. Credits: 3.00

NUTR 43800 - Micronutrient And Phytochemical Metabolism In Human Health And Disease

Credit Hours: 3.00. Metabolism of the micronutrients and phytochemicals in humans integrating physiology, biochemistry and nutrition with a focus on maintaining optimal health and preventing disease.

Credits: 3.00

NUTR 48800 - Topics In Nutrition, Fitness, And Health

Credit Hours: 3.00. This course critically evaluates the interrelationships between nutrition and exercise and their impact on physical performance and health. Concepts combining nutritional sciences and exercise physiology will be presented. Emerging science and controversies in the current literature will be discussed.

Learning Outcomes: 1. Value the integration of nutrition and exercise for human health promotion, especially related to dietary macronutrients and energy. 2. Discuss current controversial topics in nutrition and fitness and special topics. 3. Practice scientific literature searching, critical evaluation and interpretation of research, technical and scientific writing, and oral communication skills. Credits: 3.00

13 Credits

Spring 4th Year

HK 46900 - Exercise Testing And Prescription In Special Populations

Credit Hours: 3.00. Examines responses to exercise testing and prescription in healthy adults compared to exercise responses and special considerations for individuals with chronic diseases and conditions and issues of concern to pregnant women, children, and older adults, among others.

Learning Outcomes: 1. Identify the difference in testing and prescription for individuals with chronic conditions. 2. Evaluate critically the risks and benefits associated with exercise participation. 3. Apply appropriate emergency procedures in various exercise settings. 4. Deliver unique exercise programs to special populations. Credits: 3.00

NUTR 42400 - Communication Techniques In Foods And Nutrition

Credit Hours: 3.00. Communication of foods and nutrition information to lay and professional audiences through oral, written, and mass media channels.

Learning Outcomes: 1. Students are able to

demonstrate how to locate, interpret, evaluate and use professional literature to make ethical evidence-based decisions. 2. Students are able to use current technologies to locate and apply evidence-based guidelines and protocols, such as the ADA Evidence Analysis Library, Cochrane Database of Systematic Reviews and the U.S. Department of Health and Human Services, Agency for Healthcare Research and Quality, National Guideline Clearinghouse Web sites. 3. Students are able to demonstrate effective and professional oral and written communication and documentation and use of current information technologies when communicating with individuals, groups and the public. 4. Students are able to demonstrate assertiveness, advocacy, and negotiation skills to the situation. 5. Students are able to develop an educational session or program/educational strategy for a target population. Credits: 3.00

NUTR 43000 - Public Health Nutrition

Credit Hours: 2.00. Assessment of nutritional needs of the community and the programs that service these needs.

Learning Outcomes: 1. Explain the impact of a public policy position on dietetics practice. 2. Explain the impact of health care policy and administration, different health care delivery systems and current reimbursement issues, policies and regulations on food and nutrition services. Credits: 2.00

13-17 Credits

Occupational and Environmental Health Sciences, BS

About the Program

Degree Requirements

Departmental/Major Course Requirements (93-94 credits)

BCHM 30700 - Biochemistry

Credit Hours: 3.00. Students will have an understanding of the following content areas: structure/function of amino acids, carbohydrates, lipids and nucleic acids; protein structure, function and purification; basic enzymology; replication, transcription and translation; intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. Students will also develop an appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy.

Learning Outcomes: 1. Understanding of the structure/function of amino acids, carbohydrates, lipids and nucleic acids. 2. Understanding of protein structure, function and purification. 3. Understanding of basic enzymology. 4. Understanding of replication, transcription and translation. 5. Understanding of intermediary metabolism including glycolysis, the citric acid cycle, oxidative phosphorylation, photosynthesis. 6. Appreciation for some of the contributions that have been made by biochemistry to society, including improvements to medicine, agriculture, and the economy. Credits: 3.00

PUBH 40500 - Principles Of Epidemiology

Credit Hours: 3.00. The study of the distribution of diseases in human populations and factors that influence these distributions.

Learning Outcomes: 1. Interpret results of statistical analyses found in public health studies. 2. Develop written and oral presentations based on statistical analyses for both public health professionals and educated lay audiences. 3. Identify key sources of data for epidemiological purposes. 4. Identify the principles and limitations of public health screening programs. 5. Describe a public health problem in terms of magnitude, person, place,

and time. 6. Explain the importance of epidemiology for informing scientific, ethical, economic, and political discussions of health issues. 7. Comprehend basic, ethical, and legal principles pertaining to the collection, use, and dissemination of epidemiological data. 8. Apply the basic terminology and definitions of epidemiology. 9. Calculate basic epidemiology measures. 10. Communicate epidemiologic information to lay and professional audiences. 11. Draw appropriate inferences from epidemiologic data. 12. Evaluate the strengths and limitations of epidemiologic reports. Credits: 3.00

HSCI 10100 - Introduction To The Health Sciences Professions

Credit Hours: 2.00. This course will present an overview of the fields in both the preventive, Public Health, as well as the clinical, Private Health, sides of the Allied Health Science Professions as it presents the holistic nature of health maintenance. Students will have the opportunity to hear from health professionals practicing in the allied health and preprofessional concentrations as well as from School of Health Sciences faculty in their areas of expertise in the fields of industrial hygiene, ergonomics, radiological sciences, toxicology and environmental health science.

Credits: 2.00

HSCI 20100 - Principles Of Public Health Science (UCC: STS)

Credit Hours: 3.00. This course begins with a definition of public health and a review of its history and its role in disease prevention. The basic tools of public health practice, vital statistics and epidemiology, are then presented. After gaining an understanding of how these tools are used in assessing the health status of a community, the etiology and control of infectious and non-infectious threats to our health will be examined. The course concludes with risk analysis as a basis for public health policy determination.

University Core Curriculum (UCC): (UCC: STS)
Credits: 3.00

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed.

Learning Outcomes: 1. Discuss the historical background of the fields of occupational and environmental health and events leading to the establishment of current related regulations. 2. Understand the major principles and terminology of toxicology, epidemiology, and environmental exposure assessment as they are applied to environmental and occupational health. 3. Understand the units of airborne contaminant concentration, and be able to perform basic calculations and conversions involving these concentrations. 4. Identify classes of environmental contaminants, their major health effects, and typical environments where they are of concern. 5. Understand the operations of OSHA, NIOSH, EPA, ACGIH, their important interactions with industry, and their principle types of regulations and/or guidelines. 6. Understand the use of different types of respiratory protective equipment. Credits: 3.00

HSCI 34600 - Industrial Hygiene Engineering Control

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Describe/understand different approaches for controlling exposures in the occupational environment, and give hypothetical and real situations in terms of the best control methods. 2. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a complete ventilation

system. 3. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 4. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to prevent it in the workplace. 5. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 6. Synthesize and apply knowledge of the IH paradigm (AREC) in analyzing practical industrial hygiene/occupational health problems. Credits: 4.00

HSCI 34800 - Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. Sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Explain the rationale of the sampling strategy. 2. Perform basic sampling procedures for certain gases, vapors, particulates, noise, and heat, including proper selection, set-up, and operation of equipment. 3. Summarize the basic principles of the sampling procedures and explain why they function as they do. 4. Describe the limitations of sampling and analysis in real-world situations and how to deal with them. 5. Collect, analyze, interpret, and summarize laboratory data into a well-written report. 6. Describe the advantages as well as the difficulties of working together on a team. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal,

and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting

and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 20400 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. Continuation of BIOL 20300 . Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students will demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 11. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 12.

Students demonstrate subject-matter competency, including the mastery of biological theories. 13. Demonstrate an understanding of concepts and theories of genetics. 14. Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

BIOL 22100 - Introduction To Microbiology

Credit Hours: 4.00. The isolation, growth, structure, function, heredity, identification, classification, and ecology of microorganisms; their role in nature; and significance to man. Not available for credit toward graduation for majors in the Department of Biological Sciences. CTL: Microbiology for the Health Sciences

Learning Outcomes: 1. Demonstrate subject-matter competency, including the mastery of biological theories. 2. Demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, and interpreting data in a meaningful way. 4. Be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 5. Understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 6. Understand the principles of how energy is obtained, stored and used in biological processes. 7. Understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 8. Understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal levels. 9. Understand how evolutionary forces influence organisms to produce adaptations. 10. Exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 11. Be familiar with taxonomic, ecological, and phylogenetic relationships among microorganisms including biogeochemical nutrient cycling, microbial diversity, and the biotechnological application of microbes to address environmental and energy problems. 12. Able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 13. Acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 14. Able to demonstrate technical competency in basic microbiological laboratory techniques and common molecular biology techniques that exploit the use of microbes. 15. Able to demonstrate an understanding of the scientific method including hypothesis generation and testing, data collection, analysis, and interpretation. 16. Demonstrate an understanding of prokaryotic cell structure and the major physiological processes of microorganisms that are critical for metabolism, function, and utilization of ecological niches. Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to

use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory

Credit Hours: 1.00. Laboratory experiments designed to accompany CHM 25700 and to illustrate methods of separation, identification, and preparation of selected organic molecules. Both CHM 25700 + 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Credits: 1.00

CHM 32100 - Analytical Chemistry I

Credit Hours: 4.00. Quantitative measurements on complex chemical systems that show matrix effects or require isolation of a component prior to its determination; general approaches to quantitative problems at the trace level; critical comparisons of competitive procedures with emphasis on principles of separation processes, including chromatography; recognition and evaluation of possible sources of error; approaches for optimizing conditions so as to minimize time and/or effort required to attain prescribed levels of accuracy and precision. Required of students majoring in chemistry.

Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR)
Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications related to life sciences, management and technology. Credits: 3.00

PHYS 22000 - General Physics (UCC: SCI)

Credit Hours: 4.00. Mechanics, heat, and sound, for students not specializing in physics. CTL:IPS 1751 Algebra-based Physics I

University Core Curriculum (UCC): (UCC: SCI)
Learning Outcomes: 1. Be familiar with the important modes of human thought that are the foundations of science. 2. Possess effective foundation skills: read, write, and speak with comprehension, clarity and precision; identify substantive knowledge and disciplinary methods; develop information literacy skills; reason quantitatively as means of gaining and creating knowledge and drawing reliable conclusions. 3. Demonstrate the ability to think critically and to solve problems using the foundation skills: evaluate their ideas and the ideas of others based upon disciplined reasoning; understand the traditions that have formed one's own and other cultures; be able to articulate their ideas in appropriate media.
Credits: 4.00

PHYS 22100 - General Physics (UCC: SCI)

Credit Hours: 4.00. Electricity, light, and modern physics, for students not specializing in physics. CTL:IPS 1752 Algebra-based Physics II

University Core Curriculum (UCC): (UCC: SCI)
Credits: 4.00

STAT 30100 - Elementary Statistical Methods (UCC: IL)

Credit Hours: 3.00. Introduction to statistical methods with applications to diverse fields. Emphasis on understanding and interpreting standard techniques. Data analysis for one and several variables, design of samples and experiments, basic probability, sampling distributions, confidence intervals and significance tests for means and proportions, correlation and regression. Software is used throughout. For statistics majors and minors, credit should be allowed in no more than one of STAT 30100, 35000, 50100, and in no more than one of STAT 50300 and STAT 51100. Prerequisite: college algebra.

University Core Curriculum (UCC): (UCC: IL)

Learning Outcomes: 1. Students will be introduced to statistical methods and be able to apply them to multiple fields of study. 2. Students will be able to understand, interpret standard statistical techniques, analyze data for one variable and for several variables, calculate and use confidence intervals and significance test for means and proportions, understand the design of samples and experiments, perform and understand basic probability calculations, perform simple and multiple regression procedures, and understand correlation.

Credits: 3.00

HSCI 54600 - Advanced Industrial Hygiene Control Technology

Credit Hours: 4.00. Study of the various techniques needed to control hazards in the workplace. Engineering controls are placed in effort to reduce or remove the hazard at the source by isolating the worker from the hazard. Major emphasis is placed on developing a working understanding of industrial ventilation, including basic principles of fluid flow, hood and duct design, and system balancing. Effects and control of the physical hazards of noise, vibration, and heat stress are addressed. A field trip to a major industry summarizes the course material.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros & cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand potential sources of indoor air quality problems, physical symptoms which may be experienced by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans, and balance/test such systems, culminating in the ability to design a small ventilation system.

Credits: 4.00

HSCI 54700 - Fundamentals Of Epidemiology

Credit Hours: 3.00. This course is an introduction to epidemiology, which is the study of the patterns, causes, and impact of disease in populations. Epidemiology is increasingly important for public health and clinical medicine research and policy. This course will discuss the basic principles and methods of epidemiology, including measurements of disease occurrence and association, study designs, and determination of causality. Contemporary examples will be used to illustrate the application of these concepts, with an emphasis on environmental causes of disease.

Learning Outcomes: 1. Describe major models of disease causation and prevention. 2. Calculate the extent of disease in populations. 3. Identify and utilize appropriate epidemiologic study designs. 4. Estimate the association between exposure and disease. 5. Differentiate between association and causation. 6. Explain and employ the use of epidemiologic tools in

public health and clinical practice. 7. Review and critique basic epidemiology studies. Credits: 3.00

HSCI 56000 - Toxicology

Credit Hours: 3.00. (MCMP 56000) Introduction to general principles of toxicology, target organ toxicity, and safety evaluation. Covers toxicity of metals, solvents, pesticides, gases, dusts, and food additives.

Credits: 3.00

HSCI 58000 - Occupational Biomechanics And Ergonomics

Credit Hours: 2.00. Occupational safety is a cross-disciplinary area concerned with protecting the safety, health and welfare of people engaged in work. Occupational ergonomics is a branch of science that focuses on optimizing the relationships between workers and their work environment. This course focuses on the principles and applications of safety and ergonomics as it applies to workers. The first part of the course will consist of lectures on the fundamentals of safety standards and liability and the development of work-related musculoskeletal disorders, ergonomic risk factors including work practices, tools and workstation design. The last part will consist of identification and use of safety and ergonomic controls to reduce and prevent work-related fatalities, injuries, and musculoskeletal disorders.

Learning Outcomes: 1. Describe ergonomic risk factors in the workplace. 2. Analyze work stations and identify ergonomic risk factors. 3. Develop solutions to minimize identified ergonomic risk factors. 4. Describe cumulative trauma disorders which may occur due to exposure to poor ergonomic conditions. 5. Explain how people perceive & understand information, and use this knowledge to improve work flow. Credits: 2.00

HSCI 22500 - Healthcare Leadership And Safety

Credit Hours: 3.00. This course will present topics related to effective leadership and management strategies within an organization. The course will focus on implementation of these strategies from a health and safety perspective. Specific leadership and management topics to be discussed include communication strategies, motivation, conflict management, negotiation, ethics, and professional development. In addition, important safety topics, such as fire & life safety, workplace violence, terrorism, hazard communication, and slip & fall hazards will also be addressed.

Learning Outcomes: 1. Discuss principles of and various levels of leadership. 2. Explain ethical issues in health & safety and justify a response to those issues. 3. Explain principles of motivation and effective application to health and safety leadership. 4. Relate conflict management approaches to workplace issues. 5. Develop a fire and life safety plan for the workplace. 6. Recognize situations in which violence may occur in the workplace and identify strategies to prevent incidents from occurring. Credits: 3.00

HSCI 11000 - Careers And Research In Occupational And Environmental Health

Credit Hours: 1.00. The goal of this course is to familiarize students to the variety of research and careers available within the broad field of environmental and occupational health. The course will focus on two areas: current research in occupational and environmental health and careers in occupational and environmental health. This content will be delivered through interactive lectures and discussions with a variety of guest speakers as well as HSCI faculty. Advice and guidance on applying for internships/jobs in the field will also be provided. A highlight of the event is a student/professional networking event which will be coordinated towards the end of the program.

Learning Outcomes: 1. Understand and apply key terms within occupational and environmental health. 2. Describe current research in occupational and environmental health. 3. Describe the extent and variety of careers available in occupational and environmental health. 4. Deliver an oral presentation about a contemporary issue in occupational and environmental health. Credits: 1.00

HSCI 35300 - Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization - protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and frontline employees. As such, the successful health and safety manager needs skill sets which transfer across organizational levels. This

course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the frontline employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the frontline employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the frontline employees and upper management together in their vision of a safe and healthy workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. 6. Demonstrate group and team building strategies as it relates to health and safety. Credits: 3.00

HSCI 52000 - Risk Assessment In Environmental Health

Credit Hours: 3.00. Risk assessment as used in environmental health is the scientific process used to determine the extent of human exposure to an environmental hazard, and the type and quantify of health effects that are likely to result from these exposures. Information derived from risk assessments are used as the basis for setting regulatory guidelines, determinations of whether a given situation is "safe" or "hazardous" throughout government and industry. This course will cover the process and steps needed to performing a risk assessment, how risk communication can be used to discuss results of a risk assessment, and the use of risk management as a tool to translate results of a risk assessment into policy.

Learning Outcomes: 1. Define risk assessment and describe the general processes and methods used for risk assessment. 2. Discuss and analyze how issues such as variability and uncertainty impact risk assessments. 3. Define risk communication and describe what features improve (or worsen) its effectiveness. 4. Describe the process of hazard management including its strengths and weaknesses in terms of ensuring protection of human health. 5. Perform a risk assessment on an environmental hazard and communicate the results of this assessment. Credits: 3.00

HSCI 55300 - Advanced Occupational Safety Management And Culture

Credit Hours: 3.00. The Occupational Health and Safety Manager assumes a critical role within an organization, protecting the employees from suffering work-related injuries, illnesses, and fatalities. This job requires a number of approaches to achieve this aim, including employee training, hazard identification and abatement, safety policy development, and incident investigation. The health and safety manager often forms a bridge between upper management and front line employees. As such, the successful health and safety manager needs to skill sets which transfer across organizational levels. This course will explore strategies managing an effective health and safety program within an organization. Management strategies will be viewed from multiple perspectives. In relation to the front line employee, topics will be explored to help engage employees in safe behaviors and dealing with situations in which failures occur, resulting in accidents. The upper management perspective will focus on the establishment of a safety management system and effective techniques for measuring and reporting safety performance. A final perspective will consider both the front line employee and upper management. This perspective will explore strategies to establish a positive safety culture within an organization to bring the front line employees and upper management together in their vision of a safe and health workplace.

Learning Outcomes: 1. Discuss strategies for creating a positive safety culture in an organization. 2. Conduct an accident investigation and root cause analysis. 3. Identify leading and lagging safety performance indicators. 4. Explain methods of conducting safety training in an organization. 5. Plan an effective safety management system for an organization. Credits: 3.00

HSCI 44400 - Exposure Assessment In OEHS

Credit Hours: 3.00. Exposure assessment is an essential component of Environmental Health Science and industrial hygiene. This course provides students basic scientific knowledge of exposure assessment, with emphasis on practical aspects of exposure science, including study design, data and measurement collection, data analysis, and results interpretation and presentation. Course topics include major exposure media and pathways (air, water, food, soil, etc.) and

important exposure routes (inhalation, ingestion, dermal absorption); exposure measurement and assessment; strengths and weaknesses of various exposure assessment techniques, how to link exposure assessment with environmental health, and human subject research in exposure studies. The course includes case studies and group projects. Students are expected to develop entry-level skills for designing exposure studies applicable to human exposure monitoring, epidemiologic investigations and health risk assessment.

Learning Outcomes: 1. Describe basic components of exposure assessment studies. 2. Design a study to conduct basic assessments of exposure to chemical hazards at workplace or in a community setting. 3. Obtain and analyze existing data, collect and analyze measurement data, prepare technical reports, and present results. 4. Discuss ethical and professional responsibilities in exposure studies. 5. Function effectively on a team that identify, evaluate and solve problems related to exposures in occupational and environmental settings. Credits: 3.00

HSCI 54400 - Advanced Topics In Exposure Assessment

Credit Hours: 2.00. The course will prepare students to use techniques of exposure assessment as it relates to environmental and occupational epidemiological studies as well as regulatory compliance at workplace and in community settings, risk science, and susceptibility factors. It will include exposure assessment study design, the strengths and weaknesses of various exposure assessment techniques, and how to link exposure assessment with occupational and environmental health. Core concepts to be covered include exposure variability and its implications for reconstructing historical exposures, the choice of exposure metric, surrogate measures and measurement errors, exposure modeling, and biomarkers of exposure. The course emphasizes critical and analytical discussions of seminal exposure assessment literature. Students are required to critically evaluate exposure assessment strategies in selected epidemiological studies from the peer-reviewed literature. Students participate in the class through presentations, class discussions, and a semester project.

Learning Outcomes: 1. Explain the nature of exposure problems in reconstructing historical exposures in occupational and non-occupational settings. 2. Recognize the implications of sparse and missing data and the choice of the exposure-response relationship. 3. Design a testable hypothesis and execute research activity to investigate exposure to environmental contaminants at workplace or in a community, and interpret data obtained from such studies. 4. Be aware of the modeling tools for quantifying exposures. 5. Evaluate critically exposure assessment strategies in occupational and environmental epidemiological studies and risk assessments. Credits: 2.00

HSCI 54800 - Advanced Industrial Hygiene Instrumentation Techniques

Credit Hours: 3.00. This course covers sophisticated field and laboratory instrumentation and techniques, sampling methodology for organic vapors, dust, fibers, noise, and heat; calibration and validation techniques; emphasis on critical analysis of data.

Learning Outcomes: 1. Use scientific and engineering principles to anticipate and recognize potential health hazards in the workplace. 2. Interpret the scientific literature and health data and apply these to the anticipating, recognition, evaluation and control of occupational hazards in the workplace. 3. Describe/understand different approaches for controlling exposures in the occupational environment and give hypothetical and real situations in terms of the best control methods and relative pros and cons. 4. Understand the physical and physiological aspects of heat stress and heat strain and apply this knowledge to prevent heat injury in the workplace. 5. Understand the potential sources of indoor air quality problems, physical symptoms which may be experiences by individuals exposed to various contaminants, and methods of improving the indoor environment. 6. Identify biological contaminants and methods of controlling exposure. 7. Understand the physical and physiological aspects of noise-induced hearing loss and apply this knowledge to assess exposure and prevent hearing loss in

the workplace. 8. Perform calculations of noise levels, noise doses and the effectiveness of noise control options. 9. Select and size the components of a local exhaust ventilation system: hoods, ductwork, air cleaners, fans and balance/test such systems, culminating in the ability to design a small ventilation system. Credits: 3.00

HSCI 58001 - Occupational Biomechanics And Ergonomics Laboratory

Credit Hours: 1.00. This course will be the laboratory component for HSCI 58000. Occupational Biomechanics and Ergonomics. Laboratory exercises will accompany and illustrate each topic discussed during the lecture course. An ergonomic project will allow the students to evaluate an individual performing a job and provide ergonomic recommendations to improve the work situation. The course will also emphasize report writing, teamwork, and communication skills.

Learning Outcomes: 1. Evaluate scientific literature to identify the strengths & weaknesses of study designs, interpretation of results, and implications for the future. 2. Display techniques for performing ergonomic measurements. 3. Evaluate ergonomic hazards of the workplace and make recommendations to correct the identified hazards. 4. Write professional quality reports summarizing laboratory procedures, clearly display experiment results, and interpret those results in the context of the principles learned in the HSCI 58000 lectures. Credits: 1.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

Other Departmental/Program Course Requirements (18-19 credits)

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least

7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

POL 22300 - Introduction To Environmental Policy (UCC: BSS/STS)

Credit Hours: 3.00. (FNR 22310) Study of decision making as modern societies attempt to cope with environmental and natural resources problems. Focuses on the American political system, with some attention to the international dimension. Current policies and issues will be examined.

University Core Curriculum (UCC): (UCC: BSS/STS) Learning Outcomes: 1. Learn fundamental principles, generalizations, and theories related to policy development, with a focus on environmental and natural resource policy. 2. Learn to apply course material to improve thinking, problem solving, and decisions relevant to natural resource and environmental issues. 3. Learn to analyze and critically evaluate ideas, arguments, and points of view. Credits: 3.00

Electives (7-9 credits)

Supplemental Lists

GPA Requirements

Pass/No Pass Policy

Sample 4-Year Plan

Fall 1st Year

HSCI 10100 - Introduction To The Health Sciences Professions

Credit Hours: 2.00. This course will present an overview of the fields in both the preventive, Public Health, as well as the clinical, Private Health, sides of the Allied Health Science Professions as it presents the holistic nature of health maintenance. Students will have the opportunity to hear from health professionals practicing in the allied health and preprofessional concentrations as well as from School of Health Sciences faculty in their areas of expertise in the fields of industrial hygiene, ergonomics, radiological sciences, toxicology and environmental health science.

Credits: 2.00

ENGL 10600 - First Year Composition With Conferences (UCC: IL/WC)

Credit Hours: 4.00. This 4-credit hour composition course

includes student-teacher conferences. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 4.00

ENGL 10800 - First Year Composition (UCC: IL/WC)

Credit Hours: 3.00. In this 3-credit hour composition course students should expect an emphasis on self-guided work. Students in this course produce between 7,500-11,500 words of polished writing (or 15,000-22,000 total words, including drafts or the equivalent). Within the course, students will learn to write with a rhetorical awareness of diverse audiences, situations, and contexts; critically think about writing and rhetoric through reading, analysis, and reflection; provide constructive feedback and incorporate feedback into their own writing; perform research and evaluate sources to support claims; and engage multiple digital technologies for different purposes.

University Core Curriculum (UCC): (UCC: IL/WC) Learning Outcomes: 1. Demonstrate rhetorical awareness of diverse audiences, situations, and contexts. 2. Compose a variety of texts in a range of forms, equaling at least 7,500-11,500 words of polished writing (or 15,000-22,000 words, including drafts). 3. Critically think about writing and rhetoric through reading, analysis, and reflection. 4. Provide constructive feedback to others and incorporate feedback into their writing. 5. Perform research and evaluate sources to support claims. 6. Engage multiple digital technologies to compose for different purposes. Credits: 3.00

BIOL 11000 - Fundamentals Of Biology I (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Principles of biology, focusing on diversity, ecology, evolution, and the development, structure, and function of organisms.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students demonstrate knowledge of the path leading to specific careers in biology. 6. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 7. Students will be familiar with the biogenesis, structure, and chemistry of the basic types of macromolecules important in cells: nucleic acids, proteins, and membranes, and with the organic and inorganic molecules important in cellular metabolism. 8. Students will understand the role of macromolecules in cellular processes

such as DNA replication, RNA transcription, protein translation, and metabolism. 9. Students will understand the principles of how energy is obtained, stored and used in biological processes. 10. Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 11. Students will understand the role of evolution of creating and modifying the macromolecular components of the cell, and in creating biological complexity and variability. 12. Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher levels. 13. Students who complete the CMD BS program will have a broad understanding of the compositions and formations of cellular structures, the molecular basis underlying cellular processes, and the links between diseases and aberrant gene functions. 14. Students who complete the CMD BS program will have a broad understanding of the principles governing the development of multi-cellular animals and plants. 15. Students will understand ways in which organisms interact ecologically with each other and their environment. 16. Students will understand how evolutionary forces influence organisms to produce adaptations. 17. Students will exhibit proficiency in population and community ecology, animal behavior, and evolutionary mechanisms. 18. Students will exhibit proficiency in population and quantitative genetics. 19. Students will be familiar with taxonomic and phylogenic relationships among organisms. 19. Students can extend basic ecological principles to species and ecosystem conservation. 20. Students will use and understand the scientific method, including how to generate hypotheses and predications, develop an experimental design, collect data, statistically analyze data, and interpret results. 21. Demonstrate an understanding of concepts and theories of genetics. 22. Students will exhibit proficiency in the physiology, biochemistry, and genetics of bacteria including diversity, metabolism, and gene expression regulation as well as key metabolic control mechanisms. 23. Students will be able to demonstrate knowledge of how evolutionary forces impact and shape microbial function and activity. 24. Students will acquire knowledge of disease-causing microorganisms that includes an understanding of humoral, cell-mediated and non-specific immune responses, as well as the molecular basis for bacterial and viral pathogenesis. 25. Students will be able to demonstrate an understanding of the scientific method including hypothesis generation Credits: 4.00

MA 16010 - Applied Calculus I (UCC: QR)

Credit Hours: 3.00. Topics include trigonometric and exponential functions; limits and differentiation, rules of differentiation, maxima, minima and optimization; curve sketching, integration, anti-derivatives, fundamental theorem of calculus. Properties of definite integrals and numerical methods. Applications to life, managerial and social sciences. CTL:IMA 1604 Calculus - Short I

University Core Curriculum (UCC): (UCC: QR) Learning Outcomes: 1. To create functional models and simplify difference quotients, compute limits of functions and apply limit laws. 2. To compute derivatives of elementary functions, including exponential, logarithmic and trigonometric functions, and apply rules of differentiation. 3. To sketch the graph of functions with the help of differentiation techniques, find maxima and minima of functions; optimization problems. 4. To computes integrals of some elementary functions and apply the Fundamental Theorem of Calculus. 5. Topics to be covered at a level required to perform standard applications

related to life sciences, management and technology. Credits: 3.00

CHM 11510 - General Chemistry I

Credit Hours: 3.00. The foundational general chemistry course for engineering, science, and some agricultural majors. Prior knowledge of chemistry is strongly suggested. Topics covered can include thermochemistry, nuclear chemistry, quantum theory and atomic structure, periodic trends, models in bonding, shapes of molecules, intermolecular forces, organic chemistry, synthetic and biological polymers, and phase changes.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical bonding, structure, reactions, and thermodynamics. Credits: 3.00

CHM 11520 - General Chemistry I - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11510. Topics covered can include lab safety, measurement, thermodynamics, quantitative analysis, stoichiometry, chromatography, and crystallography.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

16-17 Credits

Spring 1st Year

COM 11400 - Fundamentals Of Speech Communication (UCC: OC)

Credit Hours: 3.00. A study of communication theories as applied to speech; practical communicative experiences ranging from interpersonal communication and small group process through problem identification and solution in discussion to informative and persuasive speaking in standard speaker-audience situations. NOTE: Concurrent registration is not permitted for ENGL 10600 and COM 11400. CTL:ICM 1103 Fundamentals Of Public Speaking

University Core Curriculum (UCC): (UCC: OC) Credits: 3.00

BIOL 11100 - Fundamentals Of Biology II (UCC: SCI)

Credit Hours: 4.00. This course is designed primarily to provide an introduction to the principles of biology for students in agriculture and health sciences. Continuation of BIOL 11000 . Principles of biology, focusing on cell structure and function, molecular biology, and genetics.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Demonstrate the ability to think and function as a scientist. 2. Demonstrate depth in major. Credits: 4.00

HSCI 11000 - Careers And Research In Occupational And Environmental Health

Credit Hours: 1.00. The goal of this course is to familiarize students to the variety of research and careers available within the broad field of environmental and occupational health. The course will focus on two areas: current research in occupational and environmental health and careers in occupational and environmental health. This content will be delivered through interactive lectures and discussions with a variety of guest speakers as well as HSCI faculty. Advice and guidance on applying for internships/jobs in the field will also be provided. A highlight of the event is a student/professional networking event which will be coordinated towards the end of the program.

Learning Outcomes: 1. Understand and apply key terms within occupational and environmental health. 2. Describe current research in occupational and environmental health. 3. Describe the extent and variety of careers available in occupational and environmental health. 4. Deliver an oral presentation about a contemporary issue in occupational and environmental health. Credits: 1.00

CHM 11610 - General Chemistry II

Credit Hours: 3.00. A continuation of CHM 11510 (General Chemistry I). Topics covered can include solutions, quantitative equilibria in aqueous solutions, thermodynamics, oxidation-reduction and electrochemistry, chemical kinetics, qualitative analysis, and further descriptive chemistry of metals and nonmetals.

Learning Outcomes: 1. Use theory to understand/predict experimental observations. 2. Demonstrate and understand key concepts and principles in chemistry, including the basic theory involved in chemical reactions, thermodynamics, equilibrium, and kinetics. Credits: 3.00

CHM 11620 - General Chemistry II - Laboratory (UCC: SCI)

Credit Hours: 1.00. In-person laboratory class to accompany CHM 11610. Topics covered can include chemical reactions, thermodynamics, equilibrium, rates, kinetics, quantitative analysis, and acid-base equilibria.

University Core Curriculum (UCC): (UCC: SCI) Learning Outcomes: 1. Understand how scientific equipment and analog and/or digital instruments are used to obtain data measurements. 2. Understand safe laboratory practices and proper chemical hygiene methods associated with an experiment. 3. Develop observational skills during experiments to collect quality data and articulate observations in their laboratory reports. 4. Maintain ethical and trustworthy recordkeeping and reporting methods: recording data precisely, deciding on when a data set is kept or discarded for the experiments performed. 5. Analyze experimentally obtained data by using calculations and mathematical analysis techniques, such as graphical analysis of data sets. 6. Interpret experimental data and analyze this data using scientific models, concepts, representations, and equations. 7. Use evidenced-based reasoning to make claims and critique results. Make connections between lab results and the theories/concepts learned in lecture. 8. Use safe practices, proper chemical hygiene, and standard protocols while in a laboratory. 9. Collect and record digital data sets using modern data collection techniques including wireless data collection and cloud-based data storage. 10. Work with a partner(s) to accomplish laboratory work. 11. Experience chemistry in-person through direct use of chemicals, laboratory equipment, and instrumentation to complete a laboratory experiment. Credits: 1.00

15 Credits

Fall 2nd Year

HSCI 34500 - Introduction To Occupational And Environmental Health Sciences

Credit Hours: 3.00. Principles of occupational health (industrial hygiene) and environmental health as related to anticipation, recognition, evaluation, and control of hazards in the workplace and the surrounding community. Emphasis is on hazards of chemicals and their role in occupationally and environmentally

related diseases. Historical basis and current legislation are discussed. In addition, the principles of epidemiology, toxicology, exposure standards, and respiratory protection are addressed.

Learning Outcomes: 1. Discuss the historical background of the fields of occupational and environmental health and events leading to the establishment of current related regulations. 2. Understand the major principles and terminology of toxicology, epidemiology, and environmental exposure assessment as they are applied to environmental and occupational health. 3. Understand the units of airborne contaminant concentration, and be able to perform basic calculations and conversions involving these concentrations. 4. Identify classes of environmental contaminants, their major health effects, and typical environments where they are of concern. 5. Understand the operations of OSHA, NIOSH, EPA, ACGIH, their important interactions with industry, and their principle types of regulations and/or guidelines. 6. Understand the use of different types of respiratory protective equipment. Credits: 3.00

BIOL 20300 - Human Anatomy And Physiology (UCC: SCI)

Credit Hours: 4.00. A survey of normal structure and function of the human organism. The human is treated as an open system with the capacity to transport material, transform energy, and maintain a homeostatic state. The capacities and limitations of the human to cope with changes in the environment are emphasized. All major systems of the human body and their functions are examined in relation to the living organism. Integrated into the study of the human organism are laboratory exercises that emphasize the essentials of human anatomy and physiology. Not available for credit toward graduation for majors in the Department of Biological Sciences.

University Core Curriculum (UCC): (UCC: SCI)

Learning Outcomes: 1. Students demonstrate subject-matter competency, including the mastery of biological theories. 2. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 3. Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact science on society. 4. Students demonstrate skills in critical thinking. These skills include understanding scientific methods, solving biology-related problems, interpreting and analyzing primary literature in biology, and interpreting data in a meaningful way. 5. Students will understand how biochemistry contributes to improvements in human health, industry, and broader scientific understanding. 6. Cellular Processes: Students will understand the role of macromolecules in cellular processes such as DNA replication, RNA transcription, protein translation, and metabolism. 7. Energy: Students will understand the principles of how energy is obtained, stored and used in biological processes. 8. Scope: Graduates will understand the chemical and physical principles that govern biochemical and physiological processes. 9. Scope: Graduates will understand how chemical and biochemical processes relate to biological function at the molecular, cellular, organismal, and higher level. 10. Students demonstrate subject-matter competency, including the mastery of biological theories. 11. Students demonstrate proficiency with professional skills needed by practicing biologists, including experimental design and execution, biological techniques, data collection and documentation, communication of results, and responsible conduct of science. 12 Students demonstrate the ability to discuss ethical issues in the application of biological sciences, and the impact of science on society. 13 Students demonstrate subject-matter competency, including the mastery of biological theories. 14 Demonstrate an understanding of

concepts and theories of genetics. 15 Students will demonstrate an in depth knowledge of nervous system function at the systems, cellular and molecular level. Credits: 4.00

CHM 25700 - Organic Chemistry

Credit Hours: 4.00. Introductory organic chemistry. Emphasis is on structure, nomenclature, reactions, and theory as applied to simple organic compounds. This course is designed for students who require a one semester overview in preparation for biochemistry. Not recommended for majors in the College of Science. Both CHM 25700 + CHM 25701 = CTL:IPS 1723 Organic And Biochemistry w/lab

Learning Outcomes: 1. Students will be able to use theory to understand/predict experimental observations. 2. Students will be able to demonstrate an understanding of the physical properties and molecular understanding of chemical reactivity and materials. 3. Students will be able to plan and perform chemical transformations based on functional groups, stereochemistry, and reaction conditions. 4. Students will be familiar with IUPAC nomenclature for organic compounds. Credits: 4.00

CHM 25701 - Organic Chemistry Laboratory
